ENHANCING THE EFFECTS OF DIVERSITY AWARENESS TRAINING: A REVIEW OF THE RESEARCH LITERATURE Final Report
Jennifer G. Meyers Mar. 1995 28 p
(DOT/FAA/AM-95/10) Avail: CASI HC A03/MF A01

The projected changes in the demographic makeup of the workforce were primary influences in the spread of diversity awareness training in the private and public sector. One approach to training aims at changing personal attitudes and values to effect positive changes in treatment of others different from oneself (especially protected groups) in the workplace. The effectiveness of training or other interventions that focus on changes in attitudes to change behavior has not been clearly demonstrated. Training interventions need to use a combination of methods or strategies before, during, and after training to enhance the measurable benefits received from diversity awareness training and avoid the potential for 'white male backlash' and psychological risk among participants. Implementation of a training evaluation plan and a research program for identifying characteristics of effective training are also necessary to enhance training effectiveness in the longer term. ANALYSIS OF GROUP PERFORMANCE IN VISUAL SIGNAL DETECTION M.S. Thesis
Christopher J. Hays Jan. 1995 119 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289561; AFIT/CI/CIA/94-145) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This study analyzed how a group's decision making performance compared to the predicted performance of a statistically 'optimal' group on a visual signal detection task. The task was to decide, either individually or as a group, whether a stimulus display screen (composed of nine independent information sources) was representative of one of two possible normal distributions (signal or noise). Eight subjects were tested individually and as members of different sized groups. Sorkin and Dai's 1994 model of the Ideal Group was used to analyze the accuracy of group performance (d'(sub grp)). Consistent with the model of the Ideal Group, d'(sub grp) increased with the number of group members, but decreased with intermember correlation and task difficulty. The group decision process was assumed to be based on the group assigning different weights (emphasis) to each group members' input. Overall efficiency, a relative measure of actual performance compared to ideal performance, was relatively high for two-member groups but decreased as the group grew larger. Group weighting strategies appeared to be somewhat variable for the condition in which all sources of information presented to the members were equally valid. However, when the sources of information were unequal, the group appropriately assigned more weight to the group members with the more reliable information. Some interesting social interaction phenomena were theorized to take place during the group decision process. Social loafing, coordination loss, and outgoingness were examined as possible reasons for changes in group performance. Interestingly, the subjects received more weight when they acted as the spokesperson for the group compared to when they did not respond for the group. DTIC

CODES OF PROCESSING AND MULTIPLE RESOURCES: MODEL AND METHODOLOGY
Michael A. Stadler 1994 40 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289583) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The current multiple resources methodology was employed to test the spatial-verbal distinction in the Wickens multiple resources model. Twelve subjects participated in a timesharing experiment in which a verbal memory search task was paired with another verbal and a spatial task. Reaction time and error data were examined and revealed that the verbal-verbal combination was generally performed at greater cost and with more interference than the spatial-verbal one. The results were interpreted as general support for the multiple resources distinction between the two codes of processing. DTIC

This chapter has attempted to bring together the laboratory and field-based techniques currently in use to assess workload. No doubt, many specific procedures of interest to particular applications have been left out of this survey. In no sense is this meant to summarily exclude these from any list of valid workload assessment techniques. In fact, several of these are acknowledged to show considerable promise (e.g., occlusion techniques and respiratory rhythms). They are not discussed here partly because of space limitations and partly because a judgment had to be made concerning the practicality and general applicability of each measure. It is hoped that the inclusion of general references will serve to point the interested reader to the individual techniques not included here. Similarly, a class of techniques frequently used to assess workload was deliberately excluded from this chapter. Task analytic methods, particularly as they are used with computer models of whole missions or operations, constitute an important tool for workload investigations during design and other stages of aircraft and systems development. These techniques, however, are primarily off-line analyses that utilize the kind of laboratory and field data gathered with the techniques such as those described in this chapter. They provide an overall systems answer to the workload question and as such deserve separate treatment from highly specific workload measures. DTIC

SUBJECTIVE WORKLOAD ASSESSMENT IN A SPATIAL MEMORY TASK
F. T. Eggemeier and Michael A. Stadler Oct. 1994 5 p Prepared in cooperation with Systems Research Lab. Inc. Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289491) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Twelve subjects performed a spatial short-term memory task under several levels of difficulty and rated the workload associated with each using the Subjective Workload Assessment Technique (SWAT). SWAT ratings proved sensitive to two of the three difficulty manipulations in the memory task, and demonstrated greater sensitivity in this respect than either of two primary task measures that were employed. The results extend the applicability of SWAT to the type of spatial memory task used and, therefore, provide further support for the general applicability of SWAT as a workload measurement technique. LEARNING HAND/EYE COORDINATION BY AN ACTIVE OBSERVER. PART 1: ORGANIZING CENTERS Technical Report
Jean-Yves Herve Jul. 1994 74 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contracts DACA76-92-C-0009; N00014-93-1-0257)
(AD-A289502; CAR-TR-725; CS-TR-3319) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This report, the first of a three-part series, presents preliminary results in a study on the role of the active observer in the hand/eye coordination problem. It was shown elsewhere that the hand/eye coordination problem can be represented, for a given pose of the observer, by the singularities of a surface, the perceptual control surface (PCS). Small changes in the pose of the observer generally produce smooth deformations of the PCS. There are configurations, however, from which arbitrarily small modifications of the point of view result in profound changes in the topological nature of the PCS. This paper studies these bifurcation configurations and, furthermore, investigates the possibility of determining a priori displacements of the observer that can achieve a desired effect on the PCS such as simplifying its topology or reducing the number of singularities separating the current configuration from a goal to be reached. The result of this analysis takes the form of the 'family portrait' of all possible aspects of the PCS, indexed by the geometry of the manipulator and the pose of the observer relative to it. A hand/eye system is then completely coordinated - has 'learned its PCS' - when a 'portrait' has been matched with the experimental data gathered by the low-level controller. DTIC

DIAGNOSING CLOUDINESS FROM GLOBAL NUMERICAL WEATHER PREDICTION MODEL FORECASTS Final Report, Oct. 1991 - Sep. 1993
Donald C. Norquist, H. S. Muench, Donald L. Aiken, and Douglas C. Hahn 5 Jul. 1994 150 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AF Proj. 6670)
(AD-A289456; PL-TR-94-2211; ERP-1156) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

We investigated the utility of any information derivable from noncloud numerical weather prediction (NWP) model forecasts in inferring layer cloud amount distributions. This effort involved identifying and preparing a suitable source of the predictand (cloud amount), generating and preparing a suitable source of the predictors (NWP variables and geographic information), and combining them to form diagnostic relationships in a model output statistics approach. Both AFGWC RTNEPH cloud analyses and Phillips Laboratory Global Spectral Model (PL GSM) NWP forecasts were rendered on a 125 km equal-area grid in three cloud deck regimes (high, middle, low). Two statistical methods CLOUD CURVE ALGORITHM (CCA), a univariate method, and multiple linear regression (MLR) were used to relate the cloud amount to relative humidity (CCA) and to relative humidity and a large number of other NWP variables (MLR). The authors found that the CCA method preserves the sharpness of the cloud distribution while sacrificing skill, while MLR produced cloud diagnoses that were more skillful but less sharp. The methods fall short of the error level standards established by Air Force requirements, but show potential for useful cloud forecast skill upon further refinement. DTIC

VISUAL SYSTEM OPERATIONAL EVALUATION Final Report, 19 Feb. 1993 - 31 Jul. 1994
James E. Brown, Timothy J. Lincourt, Melissa J. Leos, Don R. Poe, and Gary S. Allard 31 Jul. 1994 113 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289173; ASC-TR-94-5030) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This evaluation was undertaken to identify the capability and limitations of current visual simulation to support low altitude flight training. Purpose was: (1) determine trainability of low altitude tasks on available visual display technology; (2) demonstrate current visual requirements; and (3) provide information and data to support future simulation acquisition decisions. Three visual simulation display technologies located at three different sites were evaluated: (1) dome display with head tracked area-of-interest, (2) rear-projection display, and (3) helmet mounted display. Highly experienced F-16C and F-15E instructor pilots evaluated each display technology. A standard list of evaluation tasks was used to evaluate each system in a mission context. Extensive questionnaires were completed and debriefings conducted to rate the training capability of the simulator to provide mission readiness (MR) and continuation training (CT) for operational aircrews (both wingman and flight leads). Major conclusions are (1) single ship air-to-ground tasks are trainable now with the right combination of database, image generator, and matched visual display system; and (2) current systems do not provide adequate resolution, contrast, and brightness to allow for dynamic air model assessment. USING VIRTUAL ACTIVE VISION TOOLS TO IMPROVE AUTONOMOUS DRIVING TASKS
Todd M. Jochem Oct. 1994 23 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(Contracts DACA76-89-C-0014; DAAE07-90-C-R059)
(AD-A289175; CMU-RI-TR-94-39) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

ALVINN is a simulated neural network for road following. In its most basic form, it is trained to take a subsampled, preprocessed video image as input, and produce a steering wheel position as output. ALVINN has demonstrated robust performance in a wide variety of situations, but is limited due to its lack of geometric models. Grafting geometric reasoning onto a nongeometric base would be difficult and would create a system with diluted capabilities. A much better approach is to leave the basic neural network intact, preserving its real-time performance and generalization capabilities, and to apply geometric transformations to the input image and the output steering vector. These transformations form a new set of tools and techniques called virtual active vision. The thesis for this work is: virtual active vision tools will improve the capabilities of neural network based autonomous driving systems. DTIC

PRACTICAL COLOR VISION TESTS FOR AIR TRAFFIC CONTROL APPLICANTS: EN ROUTE CENTER AND TERMINAL FACILITIES Final Report
Henry W. Mertens, Nelda J. Milburn, and William E. Collins Apr. 1995 15 p
(DOT/FAA/AM-95/13) Avail: CASI HC A03/MF A01

Two practical color vision tests were developed and validated for use in screening Air Traffic Control Specialist (ATCS) applicants for work at en route center or terminal facilities. The development of the tests involved careful reproduction/simulation of color-coded materials from the most demanding, safety critical color task performed in each type of facility. The tests were evaluated using 106 subjects with normal color vision and 85 with color vision deficiency. The en route center test, named the Flight Progress Strips Test (FPST), required the identification of critical red/black coding in computer printing and handwriting on flight progress strips. The terminal option test, named the Aviation Lights Test (ALT), simulated red/green/white aircraft lights that must be identified in night ATC tower operations. Color coding is a non-redundant source of safety-critical information in both tasks. The FPST was validated by direct comparison of responses to strip reproductions with responses to the original flight progress strips. Validity was high; Kappa = .91. The light point stimuli of the ALT were validated physically with a spectroradiometer. The test lights met the FAA and ICAO standards for colors of aircraft and aviation signal lights. The reliabilities of the FPST and ALT were estimated with Chronbach's alpha and were .93 and .98, respectively. The high job-relevance, validity, and reliability of these tests increases the effectiveness and fairness of ATCS color vision testing. Author

ROLE OF SOMATOSENSORY AND VESTIBULAR CUES IN ATTENUATING VISUALLY INDUCED HUMAN POSTURAL SWAY
Robert J. Peterka and Martha S. Benolken [1993] 32 p
(Grants NAG9-117; NAGw-3782; P60-DC-0207-02)
(NASA-CR-197845; NAS 1.26:197845) Avail: CASI HC A03/MF A01

The purpose was to determine the contribution of visual, vestibular, and somatosensory cues to the maintenance of stance in humans. Postural sway was induced by full field, sinusoidal visual surround rotations about an axis at the level of the ankle joints. The influences of vestibular and somatosensory cues were characterized by comparing postural sway in normal and bilateral vestibular absent subjects in conditions that provided either accurate or inaccurate somatosensory orientation information. In normal subjects, the amplitude of visually induced sway reached a saturation level as stimulus amplitude increased. The saturation amplitude decreased with increasing stimulus frequency. No saturation phenomena was observed in subjects with vestibular loss, implying that vestibular cues were responsible for the saturation phenomenon. For visually induced sways below the saturation level, the stimulus-response curves for both normal and vestibular loss subjects were nearly identical implying that (1) normal subjects were not using vestibular information to attenuate their visually induced sway, possibly because sway was below a vestibular-related threshold level, and (2) vestibular loss subjects did not utilize visual cues to a greater extent than normal subjects; that is, a fundamental change in visual system 'gain' was not used to compensate for a vestibular deficit. An unexpected finding was that the amplitude of body sway induced by visual surround motion could be almost three times greater than the amplitude of the visual stimulus in normals and vestibular loss subjects. This occurred in conditions where somatosensory cues were inaccurate and at low stimulus amplitudes. A control system model of visually induced postural sway was developed to explain this finding. For both subject groups, the amplitude of visually induced sway was smaller by a factor of about four in tests where somatosensory cues provided accurate versus inaccurate orientation information. This implied that (1) the vestibular loss subjects did not utilize somatosensory cues to a greater extent than normal subjects; that is, changes in somatosensory system 'gain' were not used to compensate for a vestibular deficit, and (2) the threshold for the use of vestibular cues in normals was apparently lower in test conditions where somatosensory cues were providing accurate orientation information. PILOT OPINIONS ON HIGH LEVEL FLIGHT DECK AUTOMATION ISSUES: TOWARD THE DEVELOPMENT OF A DESIGN PHILOSOPHY
Yvette J. Tenney, William H. Rogers, and Richard W. Pew May 1995 111 p
(Contract NAS1-18788; RTOP 505-64-13-21)
(NASA-CR-4669; NAS 1.26:4669) Avail: CASI HC A06/MF A02

There has been much concern in recent years about the rapid increase in automation on commercial flight decks. The survey was composed of three major sections. The first section asked pilots to rate different automation components that exist on the latest commercial aircraft regarding their obtrusiveness and the attention and effort required in using them. The second section addressed general 'automation philosophy' issues. The third section focused on issues related to levels and amount of automation. The results indicate that pilots of advanced aircraft like their automation, use it, and would welcome more automation. However, they also believe that automation has many disadvantages, especially fully autonomous automation. They want their automation to be simple and reliable and to produce predictable results. The biggest needs for higher levels of automation were in pre-flight, communication, systems management, and task management functions, planning as well as response tasks, and high workload situations. There is an irony and a challenge in the implications of these findings. On the one hand pilots would like new automation to be simple and reliable, but they need it to support the most complex part of the job--managing and planning tasks in high workload situations. THE EFFECTS OF CREW RESOURCE MANAGEMENT (CRM) TRAINING IN AIRLINE MAINTENANCE: RESULTS FOLLOWING THREE YEAR'S EXPERIENCE
J. C. Taylor and M. M. Robertson Jun. 1995 74 p
(Contract NCC2-812)
(NASA-CR-196696; A-950067; NAS 1.26:196696) Avail: CASI HC A04/MF A01

An airline maintenance department undertook a CRM training program to change its safety and operating culture. In 2 1/2 years this airline trained 2200 management staff and salaried professionals. Participants completed attitude surveys immediately before and after the training, as well as two months, six months, and one year afterward. On-site interviews were conducted to test and confirm the survey results. Comparing managers' attitudes immediately after their training with their pretraining attitudes showed significant improvement for three attitudes. A fourth attitude, assertiveness, improved significantly above the pretraining levels two months after training. The expected effect of the training on all four attitude scales did not change significantly thereafter. Participants' self-reported behaviors and interview comments confirmed their shift from passive to more active behaviors over time. Safety, efficiency, and dependability performance were measured before the onset of the training and for some 30 months afterward. Associations with subsequent performance were strongest with positive attitudes about sharing command (participation), assertiveness, and stress management when those attitudes were measured 2 and 12 months after the training. The two month follow-up survey results were especially strong and indicate that active behaviors learned from the CRM training consolidate and strengthen in the months immediately following training. (NASA-TM-108488; NAS 1.15:108488) Avail: CASI HC A04/MF A01

The Environmental Control and Life Support System (ECLSS) Life Test Program (ELTP) began with Trace Contaminant Control Subassembly (TCCS) Life Testing on November 9, 1992, at 0745. The purpose of the test, as stated in the NASA document 'Requirements for Trace Contaminant Control Subassembly High Temperature Catalytic Oxidizer Life Testing (Revision A)' was to 'provide for the long duration operation of the ECLSS TCCS HTCO (High Temperature Catalytic Oxidizer) at normal operating conditions... (and thus)... to determine the useful life of ECLSS hardware for use on long duration manned space missions.' Specifically, the test was designed to demonstrate thermal stability of the HTCO catalyst. The report details TCCS stability throughout the test. Graphs are included to aid in evaluating trends and subsystem anomalies. The report summarizes activities through the final day of testing, January 17, 1995 (test day 762). Author

A MATHEMATICAL FRAMEWORK FOR AN IMPROVED SEARCH MODEL Final Report, Sep. 1993 - Apr. 1994
Jeffrey Nicoll Oct. 1994 103 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DASW01-94-C-0054)
(AD-A288858; IDA-P-2901; IDA/HQ-93-44557) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Search is currently modeled for DOD applications by a single exponential function. The two adjustable parameters are the time constant, t, characterizing the exponential; and the long time detection probability, P. Deficiencies of the classical model are: (1) human performance data cannot typically be fit with a single exponent model; (2) the probability of detection for short times is less than that predicted by the classical model; and (3) the effects of multiple targets and clutter can only be included by adjusting the two-model parameters, which is performed in an ad hoc manner and over-constrains the model. This paper introduces a neoclassical model that includes three processes: (1) attending to the target; (2) random wandering around the scene; and (3) attending to other targets/clutter. An expression involving three exponents associated with the three processes is derived and special cases are described. The new model provides uniform treatment of multiple targets and false detections and allows for the separate descriptions of multiple times scales within the search process. Searches can be separated into single region, field-of-view search, and multiple region, field-of-regard search. Field-of-view search can be further subdivided into long searches during which the observer may examine many targets and short searches which are completed after a few target examinations. DTIC

PERFORMANCE ENHANCING RATION COMPONENTS PROGRAM: SUPPLEMENTAL CARBOHYDRATE TEST
T. C. Murphy, R. W. Hoyt, T. E. Jones, C. L. Gabaree, E. W. Askew, T. A. Skibinski, and M. L. Barkate (Louisiana State Univ., Baton Rouge, LA.) 28 Jun. 1994 44 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288560; USARIEM-T-2/95) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The Performance Enhancing Ration Components (PERC) project supports the Army Science and Technology Objective 'Nutritional Strategies to Enhance Soldier Performance.' The focus of the PERC project is to demonstrate, through nutrition intervention, enhancement of physical and/or mental performance in extreme environmental conditions or during sustained high-intensity work. In this PERC study, we examined the effects of a liquid carbohydrate (CR0) supplement on exercise endurance of Special Operations Forces (SOF) soldiers. The results of this study have encouraging implications in that they demonstrate that the sustainability and survivability of our combat forces can be enhanced through nutrition intervention. By tailoring the nutrient composition of the diet, environmental and battlefield stress may be attenuated and decrements in performance may be prevented. DTIC

US COAST GUARD HUMAN SYSTEMS INTEGRATION (HSI) PROCESS MODEL Final Report
Wayne Wright and Richard Hall Apr. 1994 222 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract MIPR-Z51100-2-E00416)
(AD-A289172; CGR/DC-11/94; CG-D-26-94) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The Coast Guard has identified a need to improve Human System Integration (HSI) in the planning, design, and development of new system acquisitions. A previous effort, 'U.S. Coast Guard Human Systems Integration Program Requirements Document,' revealed that HSI principles are not consistently applied throughout the acquisition process, and that a formal HSI program would ensure that human related issues are addressed during new system acquisitions. This report provides a recommended 'Process Model' for integrating the various elements of HSI (i.e., Manpower, Personnel, Training, Human Factors Engineering, and Safety/Health Hazards) into all new Coast Guard hardware acquisitions, including ships, aircraft, and all equipment / systems / subsystems fielded through the acquisition program. An evaluation was conducted to assess the strengths and weaknesses of existing HSI programs and determine whether elements of existing programs could be used in the Coast Guard environment. Based on this review, a process model was developed to integrate HSI into the Coast Guard acquisition process. DTIC

ENHANCED VISUAL USER INTERFACE SUPPORT FOR DOMAIN-ORIENTED APPLICATION COMPOSITION SYSTEMS Master's Thesis
Richard A. Guinto Dec. 1994 122 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289337; AFIT/GCS/ENG/94D-06) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This research refined the functionality and usability of a previously developed visual interface for a domain-oriented application composition system. The refinements incorporated more sophisticated user interface design concepts to reduce user workload. User workload was reduced through window reordering, menu redesign, and Human Computer Interaction techniques such as; combining repetitive procedures into single commands, reusing composition information whenever possible and deriving new information from existing information. The Software Refinery environment, including its visual interface tool INTERVISTA, was used to develop techniques for visualizing and manipulating objects contained in a formal knowledge base of objects. The interface was formally validated with digital logic-circuits, digital signal processing, event-driven logic-circuits, and cruise-missile domains. A comparative analysis of the application composition process with the previous visual interface was conducted to quantify the workload reduction realized by the new interface. Level of effort was measured as the number of user interactions (mouse or keyboard) required to compose an application. On average, application composition effort was reduced 34.0% for the test cases. DTIC

DEVELOPMENT OF INJURY PREVENTING HELMET SERVO-SUPPORT SYSTEM FOR HIGH PERFORMANCE AIRCRAFT Progress Report
Donald F. DeCleene 30 Dec. 1994 22 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-94-C-0179)
(AD-A289547) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The technical objective of this program is the development of a support system for the aviator's helmet wherein the load created by the helmet and helmet mounted equipment is removed from the aviator's head and is transferred directly to the aviator's seat and airframe. The Support system, while supporting the helmet load, shall be powered and controlled to move with the aviator's head such that the helmet is retained on the aviator's head in a normal manner. The support system shall provide freedom of head movement and allow the aviator to easily control the movement of his/her head, his/her helmet and the helmet mounted equipment. The technical objective of this program is being undertaken in the form of a multi-task program as outlined in the proposal. The objectives of the individual tasks are presented below. DTIC

DESIGN CONSIDERATIONS FOR FRANKTALK: A DISTRIBUTED GROUP SUPPORT SYSTEM Interim Report, Jan. 1992 - Jun. 1993
Kennon J. Moen, Michael Wolfe, and Alan R. Heminger Oct. 1994 25 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289386; AL/HR-TP-1994-0023) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This paper discusses design considerations for a prototype distributed group support system as well as an initial assessment of its demonstrated functionality. The system created enabled participants in a group process to interact with each other across time and distance. Pilot studies were performed to measure user acceptance and system effectiveness and usability. DTIC

AN IMAGE QUALITY ANALYSIS OF ANVIS-6 NIGHT VISION GOGGLES M.S. Thesis
Derek H. Abel Dec. 1994 76 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289398; AFIT/CI/CIA/94-146) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This study was undertaken in an effort to relate ANVIS-6 Night Vision Goggle image quality to user performance. The purpose was to determine which of five image quality metrics best related to performance tasks. The image quality metrics examined Modulation Transfer Function Area (MTFA), Integrated Contrast Sensitivity (ICS), Square Root Integral (SQRI), Resolution, and Signal-to-Noise Ratio (SNR). The performance tasks were detection and recognition of targets under various levels of moon illumination. The metric that best related to target detection was SNR. The SNR results are consistent with visual psychophysics and SNR effects. The metric that best related to target recognition was Resolution. The resolution results are consistent with the position that recognition performance improves for suprathreshold targets as resolving power increases. DTIC

MULTI-AGENT PERCEPTION FOR HUMAN/ROBOT INTERACTION: A FRAMEWORK FOR INTUITIVE TRAJECTORY MODIFICATION Technical Report
Richard M. Voyles, Jr. and Pradeep K. Khosla 15 Sep. 1994 25 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Grant NAG1-1075)
(AD-A289399; CMU-RI-TR-94-33) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

An application of distributed perception to a novel human/computer interface is presented. A multi-agent network has been applied to the task of modifying a robotic trajectory based on very sparse physical inputs from the user. The user conveys intentions by nudging the end effector, instrumented with a wrist force/torque sensor, in an intuitive manner. In response, each agent interprets these sparse inputs with the aid of a local, fuzzified, heuristic model of a particular parameter or trajectory shape. The agents then independently determine the confidence of their respective findings and distributed arbitration resolves the interpretation through voting. DTIC

MULTIPLE MODEL ADAPTIVE ESTIMATION AND HEAD MOTION TRACKING IN A VIRTUAL ENVIRONMENT: AN ENGINEERING APPROACH M.S. Thesis
James E. Russell Dec. 1994 195 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289299; AFIT/GCS/ENG/94D-21) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Software engineering tools and techniques were applied to design and implement an application that reduces lag typically present in virtual environment displays. The application was a Multiple Model Adaptive Estimator (MMAE), composed of three Kalman filters, that predicted head orientation one sample period into the future. The environment rendering software used these predictions to generate the environment display. Each of the filters in the MMAE was designed for a different assumed head motion type (benign, moderate, or heavy), which allowed the MMAE to adapt to changes in head movement characteristics. The use of Ada 9X as an implementation language for a virtual environment applications was also investigated. Ada 9X provides object-oriented features for design and development, and it also offers software engineering support that makes it preferable to C or C++ for the application developed. Two significant results were produced. The first is a performance baseline for the MMAE that can be used as a benchmark for future research in this area. The other is a performance-based comparison of equivalent Ada 9X and C++ graphics applications in which Ada 9X performance was practically identical to C++. This second result is somewhat surprising, and should be investigated further. DTIC

CREW ADAPTATION EVALUATION OF THE NORWEGIAN CREW CONCEPT (NOROREW) Final Report
Donald I. Tepas (Work Systems Research, Mansfield Center, CT.) and Antonio B. Carvalhais Sep. 1994 69 p Prepared in cooperation with Work Systems Research, Mansfield Center, CT Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288478; USCG-R/DC-27/94; USCG-D-23-94) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This report documents an Operational Test and Evaluation (OT&E) effort conducted to assess the feasibility of replacing select traditional small boat station shore-side facilities with live-aboard vessels. The success of such a concept is dependent on the crews' ability to adapt and cope with around-the-clock operations from a restricted work and living environment. Survey and log forms were used to collect continuous data on human factors variables, at both a traditional small boat station and an experimental live-aboard concept station, to assess the impact of the live-aboard concept on crew safety and well-being. Results of this evaluation indicate that all human factors variables were well within acceptable limits. The evaluation did not reveal any significant adverse effects on crew members which would prevent the use of the live-aboard concept in Coast Guard small boat stations which are similar to the one in the study. However, it was emphasized that although the results are positive, they may not reflect the reactions of crews in other Coast Guard small boat station environments. DTIC

GLOVED OPERATOR PERFORMANCE STUDY. THE EFFECTS OF HAND WEAR AND ELASTIC RESISTANCE OF A CONTROL DURING TRACKING PERFORMANCE Final Report
Glen Anderson, Jan Berkhout, Michael Granaas, and Sri Canakapalli May 1994 64 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DA Proj. 1L1-62716-AH-70)
(AD-A289405; ARL-CR-143) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This study was to test the effects of wearing gloves during tracking performance at different levels of elastic resistance in a control. Forty-eight undergraduate students served as subjects. Each group contained 16 subjects, one group for each level of control resistance. The control was a spring-centered displacement joystick with resistance settings of 0.12 and 1702. All subjects performed a compensatory tracking task both bare-handed and while wearing a leather and wool glove assembly. Results indicated that: (1) wearing gloves is detrimental to tracking performance for female subjects; (2) female subjects do not benefit from additional exposure to the task before performing the task with gloves as do male subjects; (3) high control resistance may have been beneficial for female subjects during the gloved condition; and (4) small handed female subjects do not perform as well as medium and large handed female subjects, nor as well as male subjects. MARSHALL SPACE FLIGHT CENTER SOLID WASTE CHARACTERIZATION AND RECYCLING IMPROVEMENT STUDY Final Report
Michael H. Eley, Lavonne Crews, Ben Johnston, David Lee, and James Colebaugh Apr. 1995 192 p Original contains color illustrations
(Contract NAS8-38609)
(NASA-CR-196594; NAS 1.26:196594; JRC-95-02) Avail: CASI HC A09/MF A02; 7 functional color pages

The MSFC Facilities Office, which is responsible for disposing of all waste generated by MSFC, issued a delivery order to the University of Alabama in Huntsville (UAH) to characterize current MSFC waste streams and to evaluate their existing recycling program. The purpose of the study was to define the nature, quantity, and types of waste produced and to generate ideas for improving the present recycling program. Specifically, the following tasks were to be performed: Identify various surplus and waste materials--as identified by the Contracting Officer's Technical Representative (COTR)--by source, location, and type; Analyze MSFC's current methods for handling, storage, transport, and disposition of waste and surplussed materials; Determine the composition of various surplus and waste materials as to type and quantities from various sources and locations; Analyze different methods for the disposition of various surplus and waste materials, including quality, quantity, preparation, transport cost, and value; Study possible alternatives to current methods of handling, storage, transport, and disposition of surplus and waste materials to improve the quality and quantities recycled or sold and to reduce and minimize the quantities of surplus and waste material currently being disposed of or stored; Provide recommendations for source and centralized segregation and aggregation of materials for recycling and/or disposition; and The analysis could include identification and laboratory level evaluation of methods and/or equipment, including capital costs, operating costs, maintenance requirements, life cycle and return on investment for systems to support the waste reduction program mission. FACTORS IN HUMAN-COMPUTER INTERFACE DESIGN (A PILOT STUDY) M.S. Thesis
Susan Stewart Dec. 1994 205 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288908; AFIT/GIR/LAR/94D-6) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The DOD has budgeted over $9.8 billion for 1995 for information technology, yet many government office workers let their existing systems sit idle. This thesis explores why these computers are sitting idle. This researcher's initial hypothesis was that certain features of the human-computer interface can positively or negatively affect efficiency, retention, and satisfaction level of workers. Although some research is being done in this area, interfaces continue to be of poor quality, especially in the DOD, where long procurement cycles, forced purchases, and limited budgets result in out-of-date software. Intuitively most programmers know the human-computer interface impacts on a person's ability to learn, but to what degree? This study is designed to test four basic human-computer interface features: color, white space, verb tense, and parallelism. In addition, it is designed to test the interaction between visual and linguistic features, color and verb tense, as well as between white space and parallelism. DTIC

AUTOMATIC LOCKING KNEE BRACE JOINT Patent Application
Bruce Weddendorf, inventor (to NASA) 17 Apr. 1995 17 p
(NASA-Case-MFS-28997-1; NAS 1.71:MFS-28997-1; US-Patent-Appl-SN-422961) Avail: CASI HC A03/MF A01

This invention is an apparatus for controlling the pivotal movement of a knee brace comprising a tang-and-clevis joint that has been uniquely modified. Both the tang and the clevis have a set of teeth that, when engaged, can lock the tang and the clevis together. In addition, the tang is biased away from the clevis. Consequently, when there is no axial force (i.e., body weight) on the tang, the tang is free to pivot within the clevis. However, when an axial force is exerted on the tang, the tang is pushed into the clevis, both sets of teeth engage, and the tang and the clevis lock together. NASA

HUMAN FACTORS IN AVIATION MAINTENANCE, PHASE 4 Progress Report, Apr. 1993 - Apr. 1994
William T. Shepherd May 1995 176 p Prepared in cooperation with Galaxy Scientific Corp., Atlanta, GA
(Contract DTFA01-94-C-01013)
(DOT/FAA/AM-95/14) Avail: CASI HC A09/MF A02

The fourth phase of research on human factors in aviation maintenance continued to look at the human's role in the aviation maintenance system via investigations, demonstrations, and evaluations of the research program outputs. This report describes the field evaluation plan for the Performance Enhancement System, a computer-based tool designed to aid Aviation Safety Inspectors in performing their oversight duties (Chapter 2). Chapter 3 describes the design of a computer-based workcard system. The report also discusses the development of an ergonomic audit program for visual inspection, which contains a method of choosing tasks to be audited, an audit checklist, and a computer program to evaluate check-list response against national and international standards (Chapter 4). Chapter 5 reports on an investigation of ergonomic factors that may cause increased inspector stress, fatigue, and workload, particularly in restrictive spaces that cause extreme postures. The continued development and expansion of the hypermedia information system is reported on in Chapter 6. Chapter 7 describes an investigation of individual differences in nondestructive inspection performance. Chapter 8 describes an investigation to determine the effect of an Intelligent Help Agent on the effectiveness of computer-based training. Chapter 9 reports on a joint CAA/FAA investigation of reliability in aircraft inspection in the United Kingdom and United States. Chapter 10 is a bibliographic overview of selected issues in designing computer-based training systems. Author

EVALUATION OF LASER-PROTECTIVE EYEWEAR DYES IN UVEX LENSES Final Report, Mar. - Jun. 1992
Leonard A. Levasseur, Joseph F. Roach, and Kathryne B. Brubaker Nov. 1994 20 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A290076; NATICK/TR-95/006) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Twenty-seven lenses of various dye combinations were received for testing from Uvex Corp. A previous contract from Uvex for Natick had failed the 240-hour Weatherometer test and this study was to determine which dye or which combination of dyes was responsible for this degradation. Dyes from different suppliers were incorporated into Uvex polycarbonate lenses. These dyes were laser blocking dyes obtained from Gentex, Polaroid, Barnes, Steadfast and Epolin (a Uvex dye) and used in various combinations within the lenses. These lenses were evaluated for optical density, visual transmittance, laser saturation, and solarization. Some of the lenses were tested in the weatherometer only. DTIC

PLANNING, DESIGN AND CONSTRUCTION OF THE CAVERN ARENA: HEATING, VENTILATION AND AIR CONDITIONING
H. M. Mathisen and D. W. Lee 29 Apr. 1994 8 p Prepared in cooperation with Hyundai Engineering and Construction
(PB95-196382; STF15-S94002) Avail: Issuing Activity (National Technical Information Service (NTIS))

This paper deals with problems connected with heating and ventilation of underground premises for public use. Some properties of rock and special problems connected with designing ventilation systems for underground spaces are first briefly discussed. The rest of the paper deals with design of ventilation and heating systems. The conclusion is that there are no large problems with heating and ventilation of underground premises, but there are still problems connected with, for instance, thermal properties of rock when water flows in the cracks. An optimum design demands better knowledge of these properties. NTIS

A prototype manikin with internal data acquisition system (MIDAS) has been developed and received by the US Army Aeromedical Research Laboratory. In addition to a novel design of the spinal column and pelvis of the Hybrid III automotive manikin, the new MIDAS includes a built-in signal conditioning and acquisition electronics. This report documents the initial modifications to the manikin and includes a description of the external software (MIDAS 3.0) for control, communication, and posttest downloading and analysis of the data. PERFORMANCE PREDICTION: A CASE STUDY USING A MULTI-RING KSR-1 MACHINE Final Report
Xian-He Sun (Louisiana State Univ., Baton Rouge, LA.) and Jianping Zhu (Mississippi State Univ., Mississippi State, MS.) Apr. 1995 22 p Presented at the 28th Hawaii International Conference on System Sciences, Jan. 1995 Submitted for publication
(Contract NAS1-19480; RTOP 505-90-52-01)
(NASA-CR-195066; NAS 1.26:195066; ICASE-95-24) Avail: CASI HC A03/MF A01

While computers with tens of thousands of processors have successfully delivered high performance power for solving some of the so-called 'grand-challenge' applications, the notion of scalability is becoming an important metric in the evaluation of parallel machine architectures and algorithms. In this study, the prediction of scalability and its application are carefully investigated. A simple formula is presented to show the relation between scalability, single processor computing power, and degradation of parallelism. A case study is conducted on a multi-ring KSR1 shared virtual memory machine. Experimental and theoretical results show that the influence of topology variation of an architecture is predictable. Therefore, the performance of an algorithm on a sophisticated, heirarchical architecture can be predicted and the best algorithm-machine combination can be selected for a given application. Author

(Contract F30602-89-D-0100)
(AD-A289511; RL-TR-94-196) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This report describes the Micro-Time Stress Measurement Device (TSMD) developed and delivered under this contract. The Micro-TSMD is a microprocessor controlled device to read the installed environmental sensors and record their results in a nonvolatile memory. It is contained in a hybrid package about 1 x 1.8 x 0.2 (inches), weighing less than an ounce. The TSMD contains sensors for temperature, mechanical vibration/shock, and DC voltage monitoring, including transients, and may be connected to external sensors. It requires external power. DTIC

A STUDY OF WORKSTATION COMPUTATIONAL PERFORMANCE FOR REAL-TIME FLIGHT SIMULATION
Jeffrey M. Maddalon and Jeff I. Cleveland, II Feb. 1995 10 p
(RTOP 505-90-53-02)
(NASA-TM-109184; NAS 1.15:109184) Avail: CASI HC A02/MF A01

With recent advances in microprocessor technology, some have suggested that modern workstations provide enough computational power to properly operate a real-time simulation. This paper presents the results of a computational benchmark, based on actual real-time flight simulation code used at Langley Research Center, which was executed on various workstation-class machines. The benchmark was executed on different machines from several companies including: CONVEX Computer Corporation, Cray Research, Digital Equipment Corporation, Hewlett-Packard, Intel, International Business Machines, Silicon Graphics, and Sun Microsystems. The machines are compared by their execution speed, computational accuracy, and porting effort. The results of this study show that the raw computational power needed for real-time simulation is now offered by workstations. Author

NASA DRYDEN FLOW VISUALIZATION FACILITY
John H. DelFrate Washington May 1995 29 p Original contains color illustrations
(RTOP 505-59-53)
(NASA-TM-4631; H-1972; NAS 1.15:4631) Avail: CASI HC A03/MF A01; 4 functional color pages

This report describes the Flow Visualization Facility at NASA Dryden Flight Research Center, Edwards, California. This water tunnel facility is used primarily for visualizing and analyzing vortical flows on aircraft models and other shapes at high-incidence angles. The tunnel is used extensively as a low-cost, diagnostic tool to help engineers understand complex flows over aircraft and other full-scale vehicles. The facility consists primarily of a closed-circuit water tunnel with a 16- x 24-in. vertical test section. Velocity of the flow through the test section can be varied from 0 to 10 in/sec; however, 3 in/sec provides optimum velocity for the majority of flow visualization applications. This velocity corresponds to a unit Reynolds number of 23,000/ft and a turbulence level over the majority of the test section below 0.5 percent. Flow visualization techniques described here include the dye tracer, laser light sheet, and shadowgraph. Limited correlation to full-scale flight data is shown. Author

VIRTUAL PROTOTYPING AS AN AID FOR CONTROL SYSTEM ANALYSIS M.S. Thesis
Arnold P. Selnick Sep. 1994 49 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288819) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Virtual Prototyping provides an opportunity for control engineers to observe and evaluate their designs in a 'real world' setting without the costs or risks associated with flight test. Designers Workbench is a computer aided design tool that allows a user to create, view, modify and animate three-dimensional databases. These may include instruments, avionics displays and any out-the-window applications such as runways or terrain. The dynamic behavior of specific elements can be observed by linking data to the desired element. In this way a realtime animation of the simulation can be generated. The animation provides another analysis tool for the designer, by representing data in a more intuitive environment. Data files from two separate controller simulations was used. Cockpit instrumentation was modelled and used for each animation to monitor the aircraft states. In addition, each animation had an out-the-window perspective to view the aircraft model as it flew the prescribed trajectory. DTIC

(Contract N62269-90-C-0412)
(AD-A288822) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This study was conducted by the Naval Air Warfare Center Aircraft Division (NAWCADWAR) to evaluate the Interactive Development Environments (IDE) software product known as the T tool. The evaluation was initiated at the request of NAVAIRSYSCOM AIR-54661 to determine the applicability of these tools to the SSA environment. The conduct of the evaluation spanned the time period from March 1994 through September 1994. A 'Plan for Testing the T tool for SSA' was presented to and approved by AIR-54661 in April, 1994. The T tool is a specification based test case generation tool. This means that a specification which describes the inputs and outputs of a process or module is the only basis for producing the test cases. T was previously evaluated by Christine Youngblut of the Institute for Defense Analysis (item h in Applicable Documents) who reported that StP/T is currently being used by various government organizations including the Naval Avionics Center, the Jet Propulsion Laboratories, Naval Coastal Systems Center and US. Army Forts Monmouth and Sill. DTIC

USING MACHINE LEARNING TO DERIVE EFFICIENT COST AND PERFORMANCE ESTIMATES IN VLSI CAD DESIGNS Ph.D. Thesis - Pittsburgh Univ.

Donald S. Gelosh Sep. 1994 194 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288254; AFIT/CI/CIA/94-038D) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Area and delay estimates facilitate effective decision-making ability in high level synthesis. Current estimation techniques focus on modeling the layout result and fail to deliver timely or accurate estimates. This thesis presents a novel approach to deriving these area and delay estimates by modeling the actions and activities of the layout tool, rather than the layout result. This approach uses machine learning techniques to analyze the input-to-output relationships that result from applying the target layout tool to an input design description and producing a layout as an output. This thesis describes a solution architecture using these machine learning techniques that captures the relationships between general design features and layout concepts. This solution architecture has the following characteristics. First, a set of several training designs captures the general design features. The target layout tool is run on the training designs and produces a set of actual layouts. The general design features and relative placement concepts from the actual layouts makes up a training set. The formulation of this training set is important to adequately describe the set of general design features and the associated layout concepts. Second, a machine learning system analyzes the training set looking for relationships between the design features and layout concepts. This analysis produces a model of the operation of the layout tool. Third, this model is applied to real designs to formulate area and delay estimates. This approach is found to produce accurate area and delay estimates very quickly, even for designs with several thousand gates. DTIC

As the size of software systems increases, the algorithms and data structures of the computation no longer constitute the major design problems. When systems are constructed from many components, the organization of the overall system-the software architecture-presents a new set of design problems. This level of design has been addressed in a number of ways, including informal diagrams and descriptive terms, module interconnection languages, templates, and frameworks for systems that serve the needs of specific domains, and formal models of component integration mechanisms. ANALYSIS OF HISTORICAL OCEANOGRAPHIC DATA ON A PERSONAL COMPUTER. PROGRAM MDS Final Report

Alvan Fisher, Jr. Oct. 1994 34 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288965; NRAD-TD-2703) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Program MDS uses an IBM-compatible personal computer to process and analyze temperature, salinity, and sound speed data in three formats: two-dimensional plots, histograms, and statistical computation and/or correlations. The data, extracted from the master oceanographic observation data set (MOODS) files maintained by the Naval Oceanographic Office, require prior reformatting to regional files for meaningful analysis. Graphic and printer output of these analyses provides valuable input needed to determine oceanic and acoustic properties of a desired area. DTIC

AN INTRODUCTION TO SOFTWARE ARCHITECTURE

David Garlan and Mary Shaw Jan. 1994 49 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F33615-93-1-1330)
(AD-A288356; CMU-CS-94-166) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

As the size of software systems increases, the algorithms and data structures of the computation no longer constitute the major design problems. When systems are constructed from many components, the organization of the overall system - the software architecture - presents a new set of design problems. This level of design has been addressed in a number of ways including informal diagrams and descriptive terms, module interconnection languages, templates and frameworks for systems that serve the needs of specific domains, and formal models of component integration mechanisms. In this paper we provide an introduction to the emerging field of software architecture. We begin by considering a number of common architectural styles upon which many systems are currently based and show how different styles can be combined in a single design. Then we present six case studies to illustrate how architectural representations can improve our understanding of complex software systems. Finally, we survey some of the outstanding problems in the field, and consider a few of the promising research directions. DTIC

APPLICATION-AWARE ADAPTATION FOR MOBILE COMPUTING

M. Satyanarayanan, Brian Noble, Puneet Kumar, and Morgan Price 28 Jul. 1994 9 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F19628-93-C-0193)
(AD-A288366; CMU-CS-94-183) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This paper identifies application-aware adaptation as an essential capability of mobile clients, and provides an overview of Odyssey, an architecture that supports this capability. Functionality that has hitherto been implemented monolithically must now be split between the operating system and individual applications. The role of the operating system is to sense external events, and to monitor and allocate scarce resources. In contrast, the role of individual applications is to adapt to changing conditions by using the information and resources provided by the operating system. DTIC

ACT ADAPTIVE FILTERS Report, Aug. 1989 - Jul. 1994

Siemak S. Tabrizi Sep. 1994 32 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288385; RL-TR-94-149) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This report investigates the Acoustic Charge Transport (ACT) Programmable Transversal Filter (PTF) with 128 taps each having a 5-bit tap precision. ACT devices can be used for Finite Impulse Response (FIR) adaptive filtering. The objective of this report is to document the implementation of an adaptive filter with ACT device using a Linear Random

Search (LRS) adaptive algorithm, and its performance. The LRS algorithm was evaluated for a single Continuous-Wave (CW) tone interferer, and its performance (null depth) was compared to theoretical predictions. Specifically, the rate of convergence and filter response after adaptation was simulated using MATLAB and the results were compared to that obtained experimentally. DTIC

Software project managers need tools to estimate and track project goals in a continuous fashion before, during, and after development of a system. In addition, they need an ability to compare the current project status with past project profiles to validate management intuition, identify problems, and then direct appropriate resources to the sources of problems. This paper describes a measurement-based approach to calculating the risk inherent in meeting project goals that leverages past project metrics and existing estimation and tracking models. We introduce the IV&V Goal/Questions/Metrics model, explain its use in the software development life cycle, and describe our attempts to validate the model through the reverse engineering of existing projects. OPERATING SYSTEM SUPPORT FOR COEXISTENCE OF REAL-TIME AND CONVENTIONAL SCHEDULING

David B. Golub 3 Nov. 1994 14 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(Contract DABT63-93-C-0054)

(AD-A288584; CMU-CS-94-212) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The advent of multimedia calls for new scheduling paradigms to handle the combination of time-critical and conventional applications present on many multimedia systems. The scheduler of the Mach 3.0 Microkernel has been rewritten to allow a wide spectrum of scheduling policies, from real-time through time-sharing to background, to be selected simultaneously for different tasks executing on the same processor. Scheduling policies can be set for a task or for individual threads within the task. The set of scheduling policies allowed on a processor or set of processors may be dynamically altered. Scheduling parameters can be set individually for each thread, task, or scheduling policy enabled on a processor. Each scheduling policy may have its own format for parameters; they are not limited to integer priorities. New scheduling policies may be configured into a kernel and may be ordered in any way desired. The resulting system provides enough flexibility for experimentation with new scheduling regimes, yet is efficient enough to allow a reasonable number of scheduling policies to coexist. When configured with both real-time and time-sharing schedulers, the system smoothly supports both conventional and time-critical applications. DTIC

SPECIFYING WEAK SETS

Jeannette M. Wing and David C. Steere Sep. 1994 21 p Sponsored by Digital Equipment Corp.; and IBM Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(Contracts F33615-90-C-1465; F19628-93-C-0193; F33615-93-1-1330; ARPA Order 7597; ARPA Order A700)

(AD-A288587; CMU-94-194) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

We present formal specifications of a new abstraction, weak sets, which can be used to alleviate high latencies when retrieving data from a wide-area information system like the World Wide Web. In the presence of failures, concurrency, and distribution, clients performing queries may observe behavior that is inconsistent with the stringent semantic requirements of mathematical sets. For example, an element retrieved and returned to the client may be subsequently deleted before the query terminates. We chose to specify formally the behavior of weak sets because we wanted to understand the varying degrees of inconsistency clients might be willing to tolerate and to understand the tradeoff between providing strong consistency guarantees and implementing weak sets efficiently. Our specification assertion language uses a novel construct that lets us model reachability explicitly; with it, we can distinguish between the existence of an object and its accessibility. The specifications were instrumental in understanding the design space, and we are currently implementing the most permissive of the specifications in several types of Unix systems. DTIC

A SYSTEM DYNAMICS BASED STUDY OF SOFTWARE REUSE AND ITS DETERMINANTS M.S. Thesis

Wayne Lee Aiken Sep. 1994 87 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(AD-A288578) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Software cost for DOD is a critical issue. Software reuse promises significant cost savings by using previously developed components thus increasing productivity. Quality is improved because these components are well designed, well documented, and well tested. This thesis studies the determinants of software reuse using a system dynamics computer model, the Dynamica Reuse Model, which simulates the activities of a software development organization engaged in organization-wide, systematic software reuse. Results indicate that setting goals of consumption and production of components too low will lead to a decreased reuse rate of turnover of personnel. In the area of consumption and production costs of reusable components, production costs are more critical. Regarding employee turnover, reuse is enhanced by a low rate of turnover of personnel. In establishing a successful reuse program, creating repository is an important factor and the study indicates there is a structurally stable repository value. Concerning the software development rate of components, a steady development rate leads to a more consistent reuse rate. DOD managers can now use these results in formulating policies concerning their systematic reuse program. DTIC

THE DEVELOPMENT OF A FEATURE-BASED CONCURRENT ENGINEERING SYSTEM Final Report, 1 Jan. 1992 - 31 Aug. 1994

Chin-Sheng Chen and Fred W. Swift 10 Oct. 1994 299 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(Contract MDA972-92-J-1008)

(AD-A288424) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This research project is aimed at development of a concurrent engineering system for integrated product and process development of machined component designs. Its main purpose is to evaluate the feasibility of implementation of a concurrent engineering system which provides both horizontal and vertical integration of CAD/CAM systems. The research and development of this project has been founded on concepts of form features and object-oriented computer techniques. The R&D tasks identified in the research project are: (1) feature definition and classification; (2) product data representation; (3) product information modeling; (4) manufacturing resources modeling; (5) producibility evaluation; (6) manufacturing process planning; and (7) NC program modeling. Throughout the entire project period, industrial practice and standards have been closely observed and incorporated in the development, when applicable. DTIC

A SOFTWARE BUS FOR THREAD OBJECTS

John R. Callahan and Dehuai Li Fairmont, WV [1995] 19 p
(Contracts NCCw-40; NAG5-2129; N01-LM-3-3525; MDA972-91-J-1022)
(NASA-CR-197764; NASA-IVV-95-005; NAS 1.26:197764; WVU-SRL-94-005; WVU-SCS-TR-95-5; CERC-TR-RN-94-001) Avail: CASI HC A03/MF A01

The authors have implemented a software bus for lightweight threads in an object-oriented programming environment that allows for rapid reconfiguration and reuse of thread objects in discrete-event simulation experiments. While previous research in object-oriented, parallel programming environments has focused on direct communication between threads, our lightweight software bus, called the MiniBus, provides a means to isolate threads from their contexts of execution by restricting communications between threads to message-passing via their local ports only. The software bus maintains a topology of connections between these ports. It routes, queues, and delivers messages according to this topology. This approach allows for rapid reconfiguration and reuse of thread objects in other systems without making changes to the specifications or source code. A layered approach that provides the needed transparency to developers is presented. Examples of using the MiniBus are given, and the value of bus architectures in building and conducting simulations of discrete-event systems is discussed. Author

MODAL EVENT CALCULUS IN LOLLI Research Report

Iliano Cervesato, Luca Chittaro (Udine Univ., Italy.), and Angelo Montanari (Udine Univ., Italy.) Oct. 1994 24 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Grant NSF CCR-93-03383)
(AD-A288544; CMU-CS-94-198) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This paper introduces two variants of the Event Calculus (EC) with relative timing of events: the Credulous and the Skeptical Event Calculus (CREC and SKEC respectively). A model that takes into account the dynamics of event ordering updates is constructed for EC. In this model, that appears to be a restriction of the usual model for the modal logic S4, CREC and SKEC are proved to be the modal counterparts of EC. It is then shown how a full propositional modal logic based on these calculi can be conveniently and elegantly coded by means of the linear logic programming language Lolli. DTIC

AUTOMATIC TEST DATA GENERATION TOOL FOR LARGE-SCALE SOFTWARE SYSTEMS Final Report

A. Kolawa, B. Strickland, and A. Hicken 26 May 1994 51 p Sponsored by BMDO Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DASG60-94-C-0051)
(AD-A289081) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The main Phase 1 goals were to: (1) Build a prototype of a TGS System which works with programs written in C. The prototype should have skeletons of the major algorithms which the tool will be using. (2) Assess if the approach which we proposed has a chance to become a real TGS tool, by running the prototype on chosen C programs. The goals of the Phase 1 were achieved. We produced a working prototype of the TgS tool. We implemented the major algorithms: symbolic execution, dynamic data-flow analysis, function minimization methods, heuristics random input generation. DTIC

COMPILER-ASSISTED DEBUGGING AND MULTIPLE INSTRUCTION RETRY Ph.D. Thesis

Shyh-Kweh Chen Nov. 1994 86 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract NAG1-613; N00014-90-J-1270)
(NASA-CR-197729; NAS 1.26:197729; AD-A288995; UILU-ENG-94-2241; CRHC-94-24) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Backward execution requires the saving of historic information concurrently with the normal execution in order for a program to roll back. There are several applications for which backward execution is useful. In an environment where reliability is a concern, it may be necessary to roll back the program to a previously executed state in case of system faults. Multiple instruction retry is an alternative to checkpointing for recovery from a transient processor failure, especially when the error detection latency is only a few cycles. Speculative execution can achieve significant speed up for superscalar architectures by utilizing instruction retry to roll back the computation above mispredicted branches. Debugging is another field that can benefit from backward execution. Allowing the user to undo several instructions at specific positions may facilitate program debugging. This thesis describes schemes that have been implemented for multiple instruction retry for both RISC- type scalar processors, and very long instruction word (VLIW) architectures. The thesis also presents approaches that incorporate backward execution into a debugger, at both the compiler and the debugger levels. DTIC

SUPERSONIC TRANSPORT GRID GENERATION, VALIDATION, AND OPTIMIZATION Final Report, 1993 - 31 Jan. 1995

Philip G. Aaronson Jan. 1995 15 p Original contains color illustrations
(Contract NCC2-522)
(NASA-CR-197752; NAS 1.26:197752; MCAT-95-03) Avail: CASI HC A03/MF A01; 1 functional color page

The ever present demand for reduced flight times has renewed interest in High Speed Civil Transports (HSCT). The need for an HSCT becomes especially apparent when the long distance, over-sea, high growth Pacific rim routes are considered. Crucial to any successful HSCT design are minimal environmental impact and economic viability. Vital is the transport's aerodynamic efficiency, ultimately effecting both the environmental impact and the operating cost. Optimization, including numerical optimization, coupled with the use of computational fluid dynamics (CFD) technology, has and will offer a significant improvement beyond traditional methods. A PARALLEL COMPLEXITY MODEL FOR FUNCTIONAL LANGUAGES

Guy Belloch and John Greiner 20 Oct. 1994 28 p Sponsored by NSF Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contracts F33615-93-1-1330; F19628-91-C-0168)
(AD-A288589; CMU-CS-94-196) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

A complexity model based on the A-calculus with an appropriate operational semantics in presented and related to various parallel machine models, including the PRAM and hypercube models. The model is used to study parallel algorithms in the context of sequential' functional languages and to relate these results to algorithms designed directly for parallel machine models. For example, the paper shows that equally good upper bounds can be achieved for merging two sorted sequences in the pure A-calculus with some arithmetic constants as in the EREW PRAM, when they are both mapped onto a more realistic machine such as a hypercube or butterfly network. In particular for n keys and p processors, they both result in an O(n/p + sq log p) time algorithm. These results argue that it is possible to get good parallelism in functional languages without adding explicitly parallel constructs. In fact, the lack of random access seems to be a bigger problem than the lack of parallelism. DTIC

USING SCR METHODS TO ANALYZE REQUIREMENTS DOCUMENTATION

John Callahan and Jeffery Morrison [1995] 5 p Presented at 4th International Naval Research Laboratory Software Cost Reduction Workshop,

Washington, DC, 29-30 Nov. 1994
(Contract NCCw-40)
(NASA-CR-197760; NASA-IVV-94-009; NAS 1.26:197760;
WVU-SRL-94-009; WVU-SCS-TR-95-9; CERC-TR-TM-94-009) Avail: CASI
HC A01/MF A01

Software Cost Reduction (SCR) methods are being utilized to analyze and verify selected parts of NASA's EOS-DIS Core System (ECS) requirements documentation. SCR is being used as a spot-inspection tool. Through this formal and systematic approach of the SCR requirements methods, insights as to whether the requirements are internally inconsistent or incomplete as the scenarios of intended usage evolve in the OC (Operations Concept) documentation. Thus, by modelling the scenarios and requirements as mode charts using the SCR methods, we have been able to identify problems within and between the documents.

DESIGN TOOL FOR MULTIPROCESSOR SCHEDULING AND EVALUATION OF ITERATIVE DATAFLOW ALGORITHMS

Robert L. Jones, III Apr. 1995 43 p
(RTOP 233-01-03)
(NASA-TP-3491; L-17408; NAS 1.60:3491) Avail: CASI HC A03/MF A01

A graph-theoretic design process and software tool is defined for selecting a multiprocessing scheduling solution for a class of computational problems. The problems of interest are those that can be described with a dataflow graph and are intended to be executed repetitively on a set of identical processors. Typical applications include signal processing and control law problems. Graph-search algorithms and analysis techniques are introduced and shown to effectively determine performance bounds, scheduling constraints, and resource requirements. The software tool applies the design process to a given problem and includes performance optimization through the inclusion of additional precedence constraints among the schedulable tasks.

HC A03/MF A01

Software integration is a growing area of concern for many programmers and software managers because the need to build new programs quickly from existing components is greater than ever. This includes building versions of software products for multiple hardware platforms and operating systems, building programs from components written in different languages, and building systems from components that must execute on different machines in a distributed network. The goal of software integration is to make building new programs from existing components more seamless -- programmers should pay minimal attention to the underlying configuration issues involved. Libraries of reusable components and classes are important tools but only partial solutions to software development problems. Even though software components may have compatible interfaces, there may be other reasons, such as differences between execution environments, why they cannot be integrated. Often, components must be adapted or reimplemented to fit into another application because of implementation differences -- they are implemented in different programming languages, dependent on different operating system resources, or must execute on different physical machines. The software packager is a tool that allows programmers to deal with interfaces between software components and ignore complex integration details. The packager takes modular descriptions of the structure of a software system written in the package specification language and produces an integration program in the form of a makefile. If complex integration tools are needed to integrate a set of components, such as remote procedure call stubs, their use is implied by the packager automatically and stub generation tools are invoked in the corresponding makefile. The programmer deals only with the components themselves and not the details of how to build the system on any given platform.

USER'S AND TEST CASE MANUAL FOR FEMATS

Arindam Chatterjee, John Volakis, Mike Nurnberger, and John Natzke 26 Apr. 1995 65 p Revised
(Grant NAG2-866)
(NASA-CR-197803; NAS 1.26:197803; UMICH-031155-3-T) Avail: CASI
HC A04/MF A01

The FEMATS program incorporates first-order edge-based finite elements and vector absorbing boundary conditions into the scattered field formulation for computation of the scattering from three-dimensional geometries. The code has been validated extensively for a large class of geometries containing inhomogeneities and satisfying transition conditions. For geometries that are too large for the workstation environment, the FEMATS code has been optimized to run on various supercomputers. Currently, FEMATS has been configured to run on the HP 9000 workstation, vectorized for the Cray Y-MP, and parallelized to run on the Kendall Square Research (KSR) architecture and the Intel Paragon.

A DECENTRALIZED SOFTWARE BUS BASED ON IP MULTICAS TING

John R. Callahan and Todd Montgomery Jan. 1995 15 p
(Contracts NCCw-40; NAG5-2129; MDA972-91-J-0102)
(NASA-CR-197768; NASA-IVV-94-001; NAS 1.26:197768;
WVU-SRL-94-001; WVU-SCS-TR-95-2; CERC-TR-TM-012) Avail: CASI
HC A03/MF A01

We describe decentralized reconfigurable implementation of a conference management system based on the low-level Internet Protocol (IP) multicasting protocol. IP multicasting allows low-cost, world-wide, two-way transmission of data between large numbers of conferencing participants through the Multicasting Backbone (MBone). Each conference is structured as a software bus -- a messaging system that provides a run-time interconnection model that acts as a separate agent (i.e., the bus) for routing, queuing, and delivering messages between distributed programs. Unlike the client-server interconnection model, the software bus model provides a level of indirection that enhances the flexibility and reconfigurability of a distributed system. Current software bus implementations like POLYLITH, however, rely on a centralized bus process and point-to-point protocols (i.e., TCP/IP) to route, queue, and deliver messages. We implement a software bus called the MULTIBUS that relies on a separate process only for routing and uses a reliable IP multicasting protocol for delivery of messages. The use of multicasting means that interconnections are independent of IP machine addresses. This approach allows reconfiguration of bus participants during system execution without notifying other participants of new IP addresses. The use of IP multicasting also permits an economy of scale in the number of participants. We describe the MULITIBUS protocol elements and show how our implementation performs better than centralized bus implementations.

HC A03/MF A01

Many computer programs cannot be easily integrated because their components are distributed and heterogeneous, i.e., they are implemented in diverse programming languages, use different data representation formats, or their runtime environments are incompatible. In many cases, programs are integrated by modifying their components or interposing mechanisms that handle communication and conversion tasks. For example, remote procedure call (RPC) helps integrate heterogeneous, distributed programs. When configuring such programs, however, mechanisms like RPC must be used explicitly by software developers in order to integrate collections of diverse components. Each collection may require a unique integration solution. This paper describes improvements to the concepts of software packaging and some of our experiences in constructing complex software systems from a wide variety of components in different execution environments. Software packaging is a process that automatically determines how to integrate a diverse collection of computer programs based on the types of components involved and the capabilities of available translators and adapters in an environment. Software packaging provides a context that relates such mechanisms to software integration processes and reduces the cost of configuring applications whose components are distributed or implemented in different programming languages. Our software packaging tool subsumes traditional integration tools like UNIX make by providing a rule-based approach to software integration that is independent of execution environments. Author

THE MULTIDIMENSIONAL SELF-ADAPTIVE GRID CODE, SAGE, VERSION 2

Carol B. Davies (Sterling Software, Inc., Palo Alto, CA.) and Ethiraj Venkatapathy (Thermoscience Inst., Moffett Field, CA.) Apr. 1995 74 p
(RTOP 242-10-01)
(NASA-TM-110350; A-950056; NAS 1.15:110350) Avail: CASI HC A04/MF A01

This new report on Version 2 of the SAGE code includes all the information in the original publication plus all upgrades and changes to the SAGE code since that time. The two most significant upgrades are the inclusion of a finite-volume option and the ability to adapt and manipulate zonal-matching multiple-grid files. In addition, the original SAGE code has been upgraded to Version 1.1 and includes all options mentioned in this report, with the exception of the multiple grid option and its associated features. Since Version 2 is a larger and more complex code, it is suggested (but not required) that Version 1.1 be used for single-grid applications. This document contains all the information required to run both versions of SAGE. The formulation of the adaption method is described in the first section of this document. The second section is presented in the form of a user guide that explains the input and execution of the code. The third section provides many examples. Successful application of the SAGE code in both two and three dimensions for the solution of various flow problems has proven the code to be robust, portable, and simple to use. Although the basic formulation follows the method of Nakahashi and Deiwert, many modifications have been made to facilitate the use of the self-adaptive grid method for complex grid structures. Modifications to the method and the simple but extensive input options make this a flexible and user-friendly code. The SAGE code can accommodate two-dimensional and three-dimensional, finite-difference and finite-volume, single grid, and zonal-matching multiple grid flow problems. Author (revised)

Finding the lowest-cost path through a graph of states is central to many problems, including route planning for a mobile robot. If arc costs change during the traverse, then the remainder of the path may need to be replanned. Such is the case for a sensor-equipped mobile robot with incomplete or inaccurate information about its environment. As the robot acquires additional information via its sensors, it has the opportunity to revise its plan to reduce the total cost of the traverse. If the prior information is grossly incomplete or inaccurate, the robot may discover useful information in nearly every piece of sensor data. During the replanning process, the robot must either stop and wait for the new path to be computed or continue to move in the wrong direction; therefore, rapid replanning is essential. This paper describes a new algorithm, D*, capable of planning optimal traverses in real-time through focussed state expansion. D* repairs plans quickly by taking advantage of the fact that most arc cost corrections occur in the vicinity of the robot and the path needs only to be replanned out to the robot's current state. D* can be used not only for route planning but for any graph-based cost optimization problem for which arc costs change during the traverse of the solution path. DTIC

PERFORMANCE AND POLICY DIMENSIONS IN INTERNET ROUTING

David L. Mills, Charles G. Boncelet, John G. Elias, Paul A. Schragger, Alden W. Jackson, and Ajit Thyagarajan Apr. 1995 33 p
(Contract NAG2-638; NSF NCR-93-01002; A30327-93)
(NASA-CR-197772; NAS 1.26:197772; TR-95-4-1) Avail: CASI HC A03/MF A01

The Internet Routing Project, referred to in this report as the 'Highball Project', has been investigating architectures suitable for networks spanning large geographic areas and capable of very high data rates. The Highball network architecture is based on a high speed crossbar switch and an adaptive, distributed, TDMA scheduling algorithm. The scheduling algorithm controls the instantaneous configuration and swell time of the switch, one of which is attached to each node. In order to send a single burst or a multi-burst packet, a reservation request is sent to all nodes. The scheduling algorithm then configures the switches immediately prior to the arrival of each burst, so it can be relayed immediately without requiring local storage. Reservations and housekeeping information are sent using a special broadcast-spanning-tree schedule. Progress to date in the Highball Project includes the design and testing of a suite of scheduling algorithms, construction of software reservation/scheduling simulators, and construction of a strawman hardware and software implementation. A prototype switch controller and timestamp generator have been completed and are in test. Detailed documentation on the algorithms, protocols and experiments conducted are given in various reports and papers published. Abstracts of this literature are included in the bibliography at the end of this report, which serves as an extended executive summary. Author

DEVELOPMENT AND ANALYSIS OF SCR REQUIREMENTS TABLES FOR SYSTEM SCENARIOS

John R. Callahan and Jeffery L. Morrison [1995] 17 p
(Contract NCCw-40; NAG5-2129)
(NASA-CR-197769; NASA-IVV-94-010; NAS 1.26:197769; WVU-SRL-94-010; WVU-SCS-TR-95-10; CERC-TR-RN-94-013) Avail: CASI HC A03/MF A01

We describe the use of scenarios to develop and refine requirement tables for parts of the Earth Observing System Data and Information System (EOSDIS). The National Aeronautics and Space Administration (NASA) is developing EOSDIS as part of its Mission-To-Planet-Earth (MTPE) project to accept instrument/platform observation requests from end-user scientists, schedule and perform requested observations of the Earth from space, collect and process the observed data, and distribute data to scientists and archives. Current requirements for the system are managed with tools that allow developers to trace the relationships between requirements and other development artifacts, including other requirements. In addition, the user community (e.g., earth and atmospheric scientists), in conjunction with NASA, has generated scenarios describing the actions of EOSDIS subsystems in response to user requests and other system activities. As part of a research effort in verification and validation techniques, this paper describes our efforts to develop requirements tables from these scenarios for the EOSDIS Core System (ECS). The tables specify event-driven mode transitions based on techniques developed by the Naval Research Lab's (NRL) Software Cost Reduction (SCR) project. The SCR approach has proven effective in specifying requirements for large systems in an unambiguous, terse format that enhance identification of incomplete and inconsistent requirements. We describe development of SCR tables from user scenarios and identify the strengths and weaknesses of our approach in contrast to the requirements tracing approach. We also evaluate the capabilities of both approach to respond to the volatility of requirements in large, complex systems. Author

A PROCESS IMPROVEMENT MODEL FOR SOFTWARE VERIFICATION AND VALIDATION

John Callahan and George Sabolish 1994 11 p Presented at the 19th Annual Software Engineering Workshop, Greenbelt, MD, 30 Nov. - 1 Dec. 1994
(Contract NCCw-40)

(NASA-CR-197761; NASA-IVV-94-008; NAS 1.26:197761; WVU-SRL-94-008; WVU-SCS-TR-95-8; CERC-TR-TM-94-008) Avail: CASI HC A03/MF A01

We describe ongoing work at the NASA Independent Verification and Validation (IV&V) Facility to establish a process improvement model for software verification and validation (V&V) organizations. This model, similar to those used by some software development organizations, uses measurement-based techniques to identify problem areas and introduce incremental improvements. We seek to replicate this model for organizations involved in V&V on large-scale software development projects such as EOS and Space Station. At the IV&V Facility, a university research group and V&V contractors are working together to collect metrics across projects in order to determine the effectiveness of V&V and improve its application. Since V&V processes are intimately tied to development processes, this paper also examines the repercussions for development organizations in large-scale efforts. Author

NEXT GENERATION CONTROLLER SPECIFICATION FOR AN OPEN SYSTEMS ARCHITECTURE STANDARD - OVERVIEW Final Report, Mar. 1989 - Aug. 1994

28 Sep. 1994 40 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F33615-89-C-5706)
(AD-A289507; WL-TR-94-8032) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This report describes an open architecture framework for advanced manufacturing controllers including machine tools, robotics, process control, and coordinate measurement. The methodology described is applicable to both system design as well as system retrofit applications. A component-based approach is used that allows system architectures to be developed from generic building blocks that address system requirements and resulting functionality requirements. Initial architectures are used to produce an 'application architecture' that addresses specific system messaging requirements. An 'application system' is then synthesized using off-the-shelf, reusable 'implementation components' for the application software. Hardware/software specific platform issues are addressed through the use of system 'profiles,' a convention adopted from the IEEE Portable Operating System Interface (POSIX) standard that is now gaining wide acceptance. A number of examples are provided demonstrating use of all aspects of the methodology on a typical machine tool controller application. Appendices provide details with respect to specific components, requirements, and domain models. DTIC

DO WE FULLY UNDERSTAND THE SYMMETRIC LANCZOS ALGORITHM YET?

Beresford N. Parlett 9 Jan. 1995 15 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-90-J-1372)
(AD-A289614) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Imagine that one has computed the real n-vectors b, Ab, A(exp 2)b,..., A(exp m-1)b where A is a real symmetric n x n matrix. Lanczos showed us in 1950 how to construct a much better basis for the (Krylov) space spanned by these power vectors and for little extra cost. The new basis (q(sub 1), q(sub 2), ..., q(sub m)) now called the Lanczos basis, has two nice properties: (1) it is orthonormal and (2) the representation of A's projection is a symmetric tridiagonal matrix T(sub m). Property (2) is synonymous with the three term recurrence governing the Lanczos vectors. Moreover, some of T(sub m)'s eigenvalues, called Ritz values hereafter, are excellent approximations to some of A's eigenvalues even when m is much less than n. In addition we can tell, with little expense, which Ritz values are also eigenvalues. One surprising implication of these properties is that it is easier to find the largest few eigenvalues of A than to solve Ax=b! When the Lanczos algorithm is implemented in a computer the user discovers an unpleasant fact. Property (1) fails completely for m as small as 20 or 30 and consequently the computed T(sub m)'s relation to A is unclear. Lanczos was aware of this blemish and proposed the obvious remedy: keep applying the Gram-Schmidt process to each new Lanczos vector as it is computed. The catch here is that all the (q(sub i)) must be kept handy whereas in exact arithmetic only the three latest Lanczos vectors are needed and earlier q's may be discarded. The arithmetic cost of this full reorthogonalization grows quadratically with m. So the hope of computing T(sub n) efficiently and accurately by the Lanczos algorithm was dashed and other methods prevailed. In exact arithmetic T(sub n) is similar to A and the algorithm stops. DIGITAL OPTICAL COMPUTING Final Report

S. Kupiec and H. J. Caulfield Oct. 1994 47 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F30602-92-C-0075)
(AD-A289395; RL-TR-94-194) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Within our previous report, we have described a digital computer architecture, the HOPLA, and algorithms that effectively exploit that architecture. Within the present report, we shall examine the theoretical performance of the HOPLA, implementing various configurations of the multi-read function. The present report consists of the following. The first section consists of a review of the semi-quantitative analysis of the N4 interconnect. In the next section, we apply this analysis to the case of the proposed HOPLA implementation. Proceeding with the results from this section, we then consider the required thresholds and reliability levels of the system under various operating conditions. Finally, we consider the effects of operation at very low power levels with an emphasis on the effects of shot noise. DTIC

EASY-SIM: A VISUAL SIMULATION SYSTEM SOFTWARE ARCHITECTURE WITH AN Ada 9X APPLICATION FRAMEWORK M.S. Thesis

Jordan R. Kayloe Dec. 1994 162 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289325; AFIT/GCS/ENG/94D-11) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Software architectures increase productivity when used as the basis for developing applications in a problem domain. This thesis describes the creation of Easy-Sim, an object-oriented software architecture for visual simulation systems, and its corresponding implementation as an application framework in Ada 9X. The research built upon ObjectSim, an existing object-oriented simulation architecture implemented as a application framework. Both ObjectSim and Easy-Sim operate on Silicon Graphics platforms and use the IRIS Performer graphics programming library. Easy-Sim is implemented using version 1.83 of the GNAT compiler. The investigation for this thesis involved honing ObjectSim's design, implementing the improved result in both C++ and Ada 9X, and developing applications to compare the two versions. The study achieved two main objectives: producing Easy-Sim as an improved visual simulation system architecture by building on ObjectSim's experience, and producing a visual simulation system application from Easy-Sim in Ada 9X that performs at a level comparable to the same application built in C++. USER-CENTRIC DEVELOPMENT. VERSION 01.00.04 Technical Report

Christine Haapala and James Kirby, Jr. Dec. 1994 55 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract MDA972-92-J-1018)
(AD-A289363; SPC-94061-CMC) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This technical report describes a case study of at least three software development projects that have employed user-centric software development (UCD). Characteristics of UCD are: (1) The software development team includes some of those who will use the software. (2) The user is an equal participant with the developers in making development decisions. The software development team develops the software using an iterative enhancement approach. A series of versions of the software is developed and delivered with feedback from users of earlier versions of the software driving development of later versions. Results of the case study were obtained by posing a set of questions to those participating in UCD as developers, users, or managers. The questions, captured as a set of assertions, were used to test a theory of UCD. The results describe how a particular software development paradigm was practiced, the advantages and disadvantages of using the paradigm, technology transfer issues, and opportunities for research and technology advancements. The intended audience for this technical report consists of: Technologists interested in evaluating, comparing, improving, and supporting software development methods and processes; and Practitioners responsible for selecting the software development methods and processes that software development projects will employ. REFERENCE MANUAL: NAIVE PHYSICS SIMULATOR
M. Fraunberg, P. Lampio, T. Raety, P. Salonen, and J. Tuomas 1994 93 p See also PB93-187276
(PB95-184917; TKO-C70) Avail: CASI HC A05/MF A01

The Naive Physics Simulator simulates physical systems, of which state can be described with a fixed set of quantities at each moment of time. The physical system is defined using variables, which represent different properties of the system. The dependencies between the variables are represented using physical laws. These laws are formalized using first-order predicate logic which is augmented with two new constructs increasing the expressive power of the language. The simulator is implemented using Prolog 3 language for logic programming. The Naive Physics Simulator can be used to analyze electric circuits, static or dynamic spring systems and block systems, for example. The circuits may contain diodes, resistors, coils, capacitors, and current or voltage sources. The block system consists of regular blocks lying on an inclined plane. The simulator tries to find out if the system collapses. The spring system consists of balls (mass centers), which are connected to each other using elastic springs. The balls may vibrate (dynamic system) or we may calculate only the elongations of the springs (static system). NTIS

PREDICTING PROTEIN STRUCTURE USING PARALLEL GENETIC ALGORITHMS M.S. Thesis
George H. Gates, Jr. Dec. 1994 122 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289305; AFIT/GCS/ENG/94D-03) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The protein folding problem is a biochemistry Grand Challenge problem. The challenge is to reliably predict natural three-dimensional structures of polypeptides. Genetic algorithms (GA's) are robust, semi-optimal search techniques modeling natural evolutionary processes. Fast messy GA's (fmGA's) are variants of messy GA's that reduce the exponential time complexity to polynomial. This investigation evaluates the merits of parallel SGA's and fmGA's for minimizing the potential energy of a pentapeptide, (Met)-enkephalin. AFIT's energy model is compared to a similar model in a commercial package called QUANTA. Differences between the two models are identified and resolved to enhance GA's abilities to correctly fold molecules. The steps required to unify the behavior of the two implementations is presented. The effectiveness of SGA' while minimizing the potential energy of (Met)-enkephalin is shown to be highly dependent on the choice of population size and mutation rate. It is also demonstrated that choosing parameters from the Schaffer's proposed guidelines cause SGA' to realize near-optimal performance on this particular application. Parallel SGA's are capable of finding near-optimal conformations of (Met)-enkephalin. Parallel fmGA's should ultimately find better solutions in less time. The experiments performed in this investigation determine limitations of parallel SGA's and fmGA's applied to polypeptide energy minimization. DTIC

GRAYSCALE/RESOLUTION TRADE-OFF FOR TEXT: MODEL PREDICTIONS AND PSYCHOPHYSICAL RESULTS FOR LETTER CONFUSION AND LETTER DISCRIMINATION Final Report, Oct. 1992 - Mar. 1995
Jennifer Gille (Western Aerospace Labs., Inc., Moffett Field, CA.), Russel Martin (Xerox Palo Alto Research Center, CA.), Jeffrey Lubin (David Sarnoff Research Center, Princeton, NJ.), and James Larimer (National Aeronautics and Space Administration. Ames Research Center, Moffett Field, CA.) 30 Mar. 1995 10 p
(Contract NCC2-777)
(NASA-CR-197784; NAS 1.26:197784) Avail: CASI HC A02/MF A01

In a series of papers presented in 1994, we examined the grayscale/resolution trade-off for natural images displayed on devices with discrete pixellation, such as AMLCD's. In the present paper we extend this study by examining the grayscale/resolution trade-off for text images on discrete-pixel displays. Halftoning in printing is an example of the grayscale/resolution trade-off. In printing, spatial resolution is sacrificed to produce grayscale. Another example of this trade-off is the inherent low-pass spatial filter of a CRT, caused by the point-spread function of the electron beam in the phosphor layer. On a CRT, sharp image edges are blurred by this inherent low-pass filtering, and the block noise created by spatial quantization is greatly reduced. A third example of this trade-off is text anti-aliasing, where grayscale is used to improve letter shape, size and location when rendered at a low spatial resolution. There are additional implications for display system design from the grayscale/resolution trade-off. For example, reduced grayscale can reduce system costs by requiring less complexity in the framestore, allowing the use of lower cost drivers, potentially increasing data transfer rates in the image subsystem, and simplifying the manufacturing processes that are used to construct the active matrix for AMLCD (active-matrix liquid-crystal display) or AMTFEL (active-matrix thin-film electroluminescent) devices. Therefore, the study of these trade-offs is important for display designers and manufacturing and systems engineers who wish to create the highest performance, lowest cost device possible. Our strategy for investigating this trade-off is to generate a set of simple test images, manipulate grayscale and resolution, predict discrimination performance using the ViDEOS(Sarnoff) Human Vision Model, conduct an empirical study of discrimination using psychophysical procedures, and verify the computational results using the psychophysical results. UNIFICATION OF LARCH AND Z-BASED OBJECT MODELS TO SUPPORT ALGEBRAICALLY-BASED DESIGN REFINEMENT: THE Z PERSPECTIVE M.S. Thesis
Kathleen M. Wabiszewski Dec. 1994 215 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289234; AFIT/GCS/ENG/94D-24) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This research established a foundation for formalizing the evolution of based object models to theories, part of a dual approach for formally extending object-oriented analysis models using the Z and LARCH languages. For the initial phase, a comprehensive, consistent, and correct Z language parser was implemented within the SOFTWARE REFINERY(TM) Programming Environment. The Z parser produced abstract syntax trees (AST's) of objects, thereby forming the basis for analyzing the similarities and differences between the based and LARCH-based object representations. The second phase used the analysis of the two languages to identify fundamental core constructs that consisted of similar syntactic and semantic notions of signatures and axioms for describing a problem domain, thereby forming a canonical framework for formal object representations. This canonical framework provides a front-end for producing design refinement artifacts such as synthesis diagrams, theorem proving sentences and interface languages. The final phase of the process demonstrated the feasibility of interface language generation by establishing an executable framework that mapped Z into the SOFTWARE REFINERY(TM) Environment to rapidly prototype object-oriented Z specifications. HIGH PERFORMANCE HARDWARE AND SOFTWARE FOR PATTERN RECOGNITION AND IMAGE PROCESSING Research and Development Status Report, 1 Sep. - 30 Nov. 1994
Wendell A. Henry 19 Dec. 1994 5 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-93-C-0234)
(AD-A289153) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The CNAPS Development Environment consists of several software tools required by the software developer. These are: CNAPS application program interface; CNAPS-C compiler; CNAPS assembler; CNAPS source-level debugger (command-line interface); and CNAPS source-level debugger (graphical interface). Initial porting of the first three tools was completed in Phase 1. Phase 2 tasks include the porting of the remaining two tools as well as enhancing the first three tools to integrate them with the source-level debugger. Effort on the Phase 2 tasks has commenced and good progress has been made during this reporting period. The CNAPS compiler, assembler, and application program interface have been enhanced to integrate with the source-level debugger. The source-level debugger with a command-line interface has been ported to the Windows 3.x environment and is undergoing testing and bug fixing. DTIC

A GENERAL OBJECT MODEL TRANSFORMATION SYSTEM M.S. Thesis
John P. Mullaney Dec. 1994 85 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289289; AFIT/GCS/ENG/94D-18) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Cecil and Fullenkamp developed a program that transforms knowledge captured in an object-model in one environment into a different object-model in a different environment. This program worked well for the intended purpose, but if one of the object-models is replaced by a different object-model then this transformation program has to be re-engineered. As the object-modeling paradigm becomes more prevalent, many systems are experiencing this problem. The primary goal of this research was to determine what reusable knowledge could be extracted from these types of program and used to build a general object-model transformer that generalizes such transformation programs. Toward this end, we analyzed several cases of object-model transformations, designed a generic version of an object-model transformer, and implemented and tested a prototype transformer. The research results provide an approach to analyzing the problem, designing a solution, and transformation templates for various aspects of a solution strategy. These results should be extremely beneficial to software engineers designing object-model transformation systems. DTIC

EFFICIENT GENERATION OF COUNTEREXAMPLES AND WITNESSES IN SYMBOLIC MODEL CHECKING
E. Clarke, O. Grumberg (Technion - Israel Inst. of Tech., Haifa, Israel.), K. McMillan (Cadence Berkeley Labs., Berkeley, CA.), and X. Zhao Oct. 1994 20 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F33615-93-1-1330)
(AD-A288583; CMU-CS-94-204) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Model checking is an automatic technique for verifying sequential circuit designs and protocols. An efficient search procedure is used to determine whether or not the specification is satisfied. If it is not satisfied, our technique will produce a counterexample execution trace that shows the cause of the problem. Although finding counterexamples is extremely important, there is no description of how to do this in the literature on model checking. We describe an efficient algorithm to produce counterexamples and witnesses for symbolic model checking algorithms. This algorithm is used in the SMV model checker and works quite well in practice. We also discuss how to extend our technique to more complicated specifications. This extension makes it possible to find counterexamples for verification procedures based on showing language containment between various types of w-automata. DTIC

N95-27150 Naval Postgraduate School, Monterey, CA.
DESIGN AND IMPLEMENTATION OF A SOFTWARE COMMUNICATION ARCHITECTURE FOR THE JANUS-3D VISUALIZER M.S. Thesis
Christopher S. Upson Sep. 1994 77 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288509) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

During the National Guard's mobilization for Desert Shield/Desert Storm, deficiencies were noted in the command and control skills of battalion and brigade level units. The major problem addressed by this research was to improve these skills by developing a software communication architecture that would allow events occurring in two dimensions in the Janus Combat Modeler to be seen in three dimensions on a visualization tool called the Janus-3D Visualizer over both local ethernet and wide area telephonic networks. The challenge was to minimize network latency along with providing accurate data in order to maintain the time and space coherence of the simulation. The approach taken was to first determine where the needed information resided in the Janus modeler. Next, a protocol was developed to extract the information and send it to the Janus-3D Visualizer over the local network for viewing. Finally, a protocol was developed to transmit this information over a telephonic network upon request in order for it to be viewed 010 a remote Janus-3D Visualizer. As a result of this work, Janus battles can be viewed in three dimensions and in real time by brigade and battalion commanders and their staffs without having to spend valuable training funds to move everyone to a single location. National Guard units can now use the Janus modeler more often and more realistically in order to improve command, control, and communication skills. DTIC

COMPUTER SYSTEMS DIVISION SOFTWARE SYSTEM METRICS APPROACH
S. K. Hoting and R. J. Costello Jul. 1994 13 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F04701-93-C-0094)
(AD-A288837; TR-94(4904)-3; SMC-TR-94-43) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Over the decades, the increasing use of software has enabled construction and deployment of ever more capable space systems for SMC. However, managing, controlling, and participating in software development for such software-intensive systems is a difficult and error-prone task that is exacerbated by the lack of meaningful data on key products and processes. Such data should provide visibility into the health and status of the evolving software system, assist in early identification of current and potential problem areas, and aid in predicting such software system characteristics as reliability, maintainability, cost, and schedule. Until recently, comprehensive data collection analysis methods which treat software as an integral part of a larger system have not been available. This report introduces a software system metrics approach that has been developed for this purpose. The report discusses the utility of the approach, key concepts for applying metrics to software-intensive systems, and basic metrics planning guidelines. It also introduces a set of recommended metrics that cover both the system and the software throughout the life cycle. A complete description of the metrics approach, associated contractual guidelines, and detailed descriptions of several of the recommended metrics are the subject of a forthcoming TOR. DTIC

OVERVIEW OF MEGAPROGRAMMING COURSE: LECTURES AND EEXERCISES. VERSION 02.00.03 Final Technical Report
Steve Wartik Feb. 1994 113 p
(Contract MDA972-92-J-1018)
(AD-A286723; SPC-93028-CMC) Avail: CASI HC A06/MF A02

This is a short course that introduces megaprogramming concepts. The Teacher Notes for the Overview of Megaprogramming Course complement the lecture and exercise material (ADA 276169). They explain concepts from the lectures in more depth than is possible in the lectures' slide-oriented format. They also discuss the relevance of megaprogramming in today's and tomorrow's industry. They can help teachers understand the importance of the course. The Teacher Notes are tied closely to the rest of the material. They draw heavily on the examples from the lectures and laboratory, giving references to specific slides. An appendix relates each slide to sections in the Teacher Notes. This helps instructors understand the slides as they prepare their lectures. DTIC

ADVANCED FLIGHT COMPUTER. SPECIAL STUDY Final Report, Apr. 1994 - Feb. 1995

Dennis Coo Mar. 1995 54 p
(Contract NASA Order L-40679-D; RTOP 233-01-03-23; F29601-89-C-0089)
(NASA-CR-198165; NAS 1.26:198165) Avail: CASI HC A04/MF A01

This report documents a special study to define a 32-bit radiation hardened, SEU tolerant flight computer architecture, and to investigate current or near-term technologies and development efforts that contribute to the Advanced Flight Computer (AFC) design and development. An AFC processing node architecture is defined. Each node may consist of a multi-chip processor as needed. The modular, building block approach uses VLSI technology and packaging methods that demonstrate a feasible AFC module in 1998 that meets that AFC goals. The defined architecture and approach demonstrate a clear low-risk, low-cost path to the 1998 production goal, with intermediate prototypes in 1996. Author

A COMPARISON OF ERROR CATEGORIZATION SCHEMES FOR USE IN SOFTWARE SYSTEM SAFETY PROGRAMS M.S. Thesis

Richard Escobedo and Jim Thomas Dec. 1994 93 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288741; AFIT/GSS/LAR/94D-1) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Software safety is becoming increasingly important in the development of DOD advanced weapon systems. To make software safer, hazard conditions must be avoided along with the errors that accompany them. The first step in identifying errors is classifying error data. The area of software error classification is not as advanced as other software development areas. The technical literature lacks examples of comprehensive taxonomies that can be applied to various computer software domains and applications. The predominant approach is to organize errors into categories particular to the program currently in work. The typical error scheme is made of narrow categories that are not interrelated. Errors have been classified by symptom, by cause, by life cycle phase, by severity, and by software control. The focus of this research was to determine the best way to classify errors in order to aid system safety in software development. The research identified common areas used in industry that aid in error classification. A telephone survey of experts in safety and software was used to obtain input on the most effective classification schemes. The research also proposed a taxonomy that will be ideal for DOD software development. Since software is becoming a larger part of advanced weapon systems, development of error-free and safe software to operate and support these weapon systems is increasingly important. DTIC

A HIGH PERFORMANCE TOTALLY ORDERED MULTICAST PROTOCOL

Todd Montgomery, Brian Whetten (California Univ., Berkeley, CA.), and Simon Kaplan (Illinois Univ., Champaign, IL.) [1995] 32 p
(Contract NCCw-40)
(NASA-CR-197765; NASA-IVV-94-004; NAS 1.26:197765; WVU-SRL-94-004; WVU-SCS-TR-95-4; CERC-TR-RN-94-010) Avail: CASI HC A03/MF A01

This paper presents the Reliable Multicast Protocol (RMP). RMP provides a totally ordered, reliable, atomic multicast service on top of an unreliable multicast datagram service such as IP Multicasting. RMP is fully and symmetrically distributed so that no site bears un undue portion of the communication load. RMP provides a wide range of guarantees, from unreliable delivery to totally ordered delivery, to K-resilient, majority resilient, and totally resilient atomic delivery. These QoS guarantees are selectable on a per packet basis. RMP provides many communication options, including virtual synchrony, a publisher/subscriber model of message delivery, an implicit naming service, mutually exclusive handlers for messages, and mutually exclusive locks. It has commonly been held that a large performance penalty must be paid in order to implement total ordering -- RMP discounts this. On SparcStation 10's on a 1250 KB/sec Ethernet, RMP provides totally ordered packet delivery to one destination at 842 KB/sec throughput and with 3.1 ms packet latency. The performance stays roughly constant independent of the number of destinations. For two or more destinations on a LAN, RMP provides higher throughput than any protocol that does not use multicast or broadcast. Author

RING-PLANE TRAVELING-WAVE TUBE SLOW-WAVE CIRCUIT DESIGN SIMULATIONS AT V-BAND FREQUENCIES

Carol L. Kory (Analex Corp., Brook Park, OH.) and Jeffrey D. Wilson Jun. 1995 12 p Presented at the 1995 International Conference on Plasma Science, Madison, Wisconsin, 5-8 Jun. 1995 ; sponsored by IEEE Original contains color illustrations
(RTOP 235-01-0A)
(NASA-TM-106949; E-9687; NAS 1.15:106949) Avail: CASI HC A03/MF A01; 2 functional color pages

The V-Band frequency range of 59-64 GHz is a region of the millimeter-wave spectrum that has been designated for intersatellite communications. As a first effort to develop a high-efficiency V-band TWT, variations on a ring-plane slow-wave circuit were computationally investigated to develop an alternative to the more conventional ferruled coupled-cavity circuit. The ring-plane circuit was chosen because of its high interaction impedance, large beam aperture, and excellent thermal dissipation properties. Despite the high-power capabilities of the ring-plane TWT, disadvantages of low bandwidth and high voltage requirements have until now prevented its acceptance outside the laboratory. In this paper, we use the three-dimensional electromagnetic simulation code MAFIA to investigate methods of increasing the bandwidth and lowering the operating voltage. Dispersion, impedance, and attenuation calculations for various geometric variations and loading distributions were performed. Based on the results of the variations, a circuit termed the finned-ladder TWT slowwave circuit was designed and is compared here to the scaled ring-plane prototype and the conventional ferruled coupled-cavity TWT circuit over the V-band frequency range. SOLVING RECURSIVE DOMAIN EQUATIONS WITH ENRICHED CATEGORIES Ph.D. Thesis

Kim Ritter Wagner Jul. 1994 107 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289358; CMU-CS-94-159) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Both pre-orders and metric spaces have been used at various times as a foundation for the solution of recursive domain equations in the area of denotational semantics. In both cases the central theorem states that a 'converging' sequence of 'complete' domains/spaces with 'continuous' retraction pairs between them has a limit in the category of complete domains/spaces with retraction pairs as morphisms. The pre-order version was discovered first by Scott in 1969, and is referred to as Scott's inverse limit theorem. The metric version was mainly developed by de Bakker and Zucker and refined and generalized by America and Rutten. The theorem in both its versions provides the main tool for solving recursive domain equations. The proofs of the two versions of the theorem look astonishingly similar, but until now the preconditions for the pre-order and the metric versions have seemed to be fundamentally different. In this thesis the authors establish a more general theory of domains based on the notions of enriched categories, and prove Scott's inverse limit theorem in this theory. The metric and pre-order versions are special cases, obtained just by using different logics as parameter to the general theory. DTIC

A SPECTRAL ALGORITHM FOR THE SERIATION PROBLEM
J. E. Atkins, E. G. Boman, and B. Hendrickson Nov. 1994 16 p
Presented at the Symposium on Theory of Computing, Las Vegas, NV, 29 May - 1 Jun. 1995
(Contract DE-AC04-94AL-85000)
(DE95-004775; SAND-94-3082C; CONF-9505145-1) Avail: CASI HC A03/MF A01

Given a set of objects and a correlation function f reflecting the desire for two items to be near each other, find all sequences (pi) of the items so that correlation preferences are preserved; that is if (pi)(i) less than (pi)(j) less than (pi)(k) then f(i,j) greater than or equal to f(i,k) and f(j,k) greater than or equal to f(i,k). This seriation problem has numerous applications, for instance, solving it yields a solution to the consecutive ones problem. We present a spectral algorithm for this problem that has a number of interesting features. Whereas most previous applications of spectral techniques provided bounds or heuristics, our result is an algorithm for a nontrivial combinatorial problem. Our analysis introduces powerful tools from matrix theory to the theoretical computer science community. Also, spectral methods are being applied as heuristics for a variety of sequencing problems and our result helps explain and justify these applications. Although the worst case running time for our approach is not competitive with that of existing methods for well posed problem instances, unlike combinatorial approaches our algorithm remains a credible heuristic for the important cases where there are errors in the data. A VIDEO STRIP CHART PROGRAM
N. L. Jones 1994 2 p Presented at the 1994 Symposium of the North Eastern Accelerator Personnel (SNEAP-94), Kalamazoo, MI, 12-15 Oct. 1994
(Contract DE-AC05-84OR-21400)
(DE95-006389; CONF-9410294-2) Avail: CASI HC A01/MF A01

A strip chart recorder has been utilized for trend analysis of the Oak Ridge National Laboratory EN tandem since 1987. At the EN, the author could not afford the nice eight channel thermal pen recorder that was used at the 25 URC. He had to suffice with two channel fiber tip or capillary pen type recorders retrieved from salvage and maintained with parts from other salvaged recorders. After cycling through several machines that eventually became completely unserviceable, a search for a new thermal recorder was begun. As much as he hates to write computer code, he decided to try his hand at getting an old data acquisition unit, that had been retrieved several years ago from salvage, to meet his needs. A BASIC language compiler was used because time was not available to learn a more advanced language. While attempting to increase acquisition and scroll speed on the 6 MHz 80286 that the code was first developed on, it became apparent that scrolling only the first small portion of the screen at high speed and then averaging that region and histogramming the average provided both the speed necessary for capturing fairly short duration events, and a trend record without use of back scrolling and disk storage routines. This turned out to be quite sufficient. DOE

SCIENTIFIC STATISTICS AND GRAPHICS ON THE MACINTOSH
S. L. Grotch Sep. 1994 14 p Presented at the American Geophysical Union/Paclim Workshop, Asilomar, CA, 19-22 Apr. 1994
(Contract W-7405-eng-48)
(DE95-006445; UCRL-JC-116492; CONF-9404237-1) Avail: CASI HC A03/MF A01

In many organizations scientists have ready access to more than one computer, often both a workstation (e.g., SUN, HIP, SGI) as well as a Macintosh or other PC. The scientist commonly uses the work station for 'number-crunching' and data analysis whereas the Macintosh is relegated to either word processing or serves as a 'dumb terminal' to a larger mainframe computer. In an informal poll of the author's colleagues, very few of them used their Macintoshes for either statistical analysis or for graphical data display. The author believes that this state of affairs is particularly unfortunate because over the last few years both the computational capability, and even more so, the software availability for the Macintosh have become quite formidable. In some instances, very powerful tools are now available on the Macintosh that may not exist (or be far too costly) on the so-called 'high end' workstations. Many scientists are simply unaware of the wealth of extremely useful, 'off-the-shelf' software that already exists on the Macintosh for scientific graphical and statistical analysis. This paper is a very personal view illustrating several such software packages that have proved valuable in the author's own work in the analysis and display of climatic datasets. It is not meant to be either an all-inclusive enumeration, nor is it to be taken as an endorsement of these products as the 'best' of their class. Rather, it has been found, through extensive use that these few packages were generally capable of satisfying his particular needs for both statistical analysis and graphical data display. In the limited space available, the focus will be on some of the more novel features found to be of value. DOE

FDTD-ANT USER MANUAL Final Report
Martin L. Zimmerman Cleveland, OH NASA May 1995 18 p
(Contract NAS3-25776; RTOP 235-01-0C)
(NASA-CR-195444; E-9492; NAS 1.26:195444) Avail: CASI HC A03/MF A01

This manual explains the theory and operation of the finite-difference time domain code FDTD-ANT developed by Analex Corporation at the NASA Lewis Research Center in Cleveland, Ohio. This code can be used for solving electromagnetic problems that are electrically small or medium (on the order of 1 to 50 cubic wavelengths). Calculated parameters include transmission line impedance, relative effective permittivity, antenna input impedance, and far-field patterns in both the time and frequency domains. The maximum problem size may be adjusted according to the computer used. This code has been run on the DEC VAX and 486 PC's and on workstations such as the Sun Sparc and the IBM RS/6000. Author

GENERALIZED CNF SATISFIABILITY, LOCAL REDUCTIONS AND COMPLEXITY OF SUCCINCTLY SPECIFIED PROBLEMS
M. V. Marathe, H. B. Hunt, III, R. E. Stearns, and V. Radhakrishnan 1995 20 p Presented at the 10th IEEE Annual Conference on Structures in Complexity Theory, Las Vegas, NV, May 1995
(Contract W-7405-eng-36)
(DE95-006343; LA-UR-95-22; CONF-9505175-1) Avail: CASI HC A03/MF A01

We study the complexity and efficient approximability of various decision, counting, and optimization problems when instances are specified using (1) the one-dimensional finite periodic narrow specifications of Wanke, (2) the two-way infinite one-dimensional narrow periodic (sometimes called dynamic) specifications of Karp and Orlin et al., and (3) the hierarchical specification language of Lengauer et al. We outline how generalized CNF satisfiability problems and local reductions can be used to obtain both hardness and easiness results for a number of decision, counting, optimization, and approximate optimization problems when instances are specified as in (1), (2), or (3). As corollaries we obtain a number of new PSPACE-hardness and #PSPACE-hardness results and a number of new polynomial time approximation algorithms for natural PSPACE-hard optimization problems. In particular assuming P not equal to PSPACE, we characterize completely the complexities of the generalized CNF satisfiability problems SAT(S) of Schaefer, when instances are specified as in (1), (2), or (3). PC SOFTWARE GRAPHICS TOOL FOR CONCEPTUAL DESIGN OF SPACE/PLANETARY ELECTRICAL POWER SYSTEMS
Long V. Truong Apr. 1995 9 p Presented at the 30th Intersociety Energy Conversion Engineering Conference, Orlando, FL, 31 Jul. - 4 Aug. 1995; sponsored by ASME, IEEE, AIChE, ANS, SAE, ACS, and AIAA
(RTOP 323-12-07)
(NASA-TM-106908; E-9610; NAS 1.15:106908; IECEC-95-387) Avail: CASI HC A02/MF A01

This paper describes the Decision Support System (DSS), a personal computer software graphics tool for designing conceptual space and/or planetary electrical power systems. By using the DSS, users can obtain desirable system design and operating parameters, such as system weight, electrical distribution efficiency, and bus power. With this tool, a large-scale specific power system was designed in a matter of days. It is an excellent tool to help designers make tradeoffs between system components, hardware architectures, and operation parameters in the early stages of the design cycle. The DSS is a user-friendly, menu-driven tool with online help and a custom graphical user interface. An example design and results are illustrated for a typical space power system with multiple types of power sources, frequencies, energy storage systems, and loads. Author

A NEW ALGORITHM FOR GENERATING HIGHLY ACCURATE BENCHMARK SOLUTIONS TO TRANSPORT TEST PROBLEMS

Y. Y. Azmy 1995 10 p Presented at the International Conference on Mathematics and Computations, Reactor Physics, and Environmental Analyses, Portland, OR, 30 Apr. - 4 May 1995
(Contract DE-AC05-84OR-21400)
(DE95-007397; CONF-950420-20) Avail: CASI HC A02/MF A01

We present a new algorithm for solving the neutron transport equation in its discrete-variable form. The new algorithm is based on computing the full matrix relating the scalar flux spatial moments in all cells to the fixed neutron source spatial moments, foregoing the need to compute the angular flux spatial moments, and thereby eliminating the need for sweeping the spatial mesh in each discrete-angular direction. The matrix equation is solved exactly in test cases, producing a solution vector that is free from iteration convergence error, and subject only to truncation and roundoff errors. Our algorithm is designed to provide method developers with a quick and simple solution scheme to test their new methods on difficult test problems without the need to develop sophisticated solution, e.g. acceleration, algorithms before establishing the worthiness of their innovation. We demonstrate the utility of the new algorithm by applying it to the Arbitrarily High Order Transport Nodal (AHOT-N) method, and using it to solve Burre's Test Problem, a suite of benchmark problems that covers a large region in parameter space. Our results provide highly accurate benchmark solutions, that can be distributed electronically and used to verify the pointwise accuracy of other solution methods and algorithms. DOE

EDGE DETECTION BY NONLINEAR DYNAMICS

Yiu-Fai Wong Jul. 1994 9 p Presented at the VCIP 1994: Visual Communications and Image Processing, Chicago, IL, 25-28 Sep. 1994
(Contract W-7405-eng-48)
(DE95-008076; UCRL-JC-116696; CONF-9409311-1) Avail: CASI HC A02/MF A01

We demonstrate how the formulation of a nonlinear scale-space filter can be used for edge detection and junction analysis. By casting edge-preserving filtering in terms of maximizing information content subject to an average cost function, the computed cost at each pixel location becomes a local measure of edgeness. This computation depends on a single scale parameter and the given image data. Unlike previous approaches which require careful tuning of the filter kernels for various types of edges, our scheme is general enough to be able to handle different edges, such as lines, step-edges, corners and junctions. Anisotropy in the data is handled automatically by the nonlinear dynamics. DOE

AUTOMATED REMEDIAL ASSESSMENT METHODOLOGY SOFTWARE SYSTEM

M. Whiting, M. Wilkins, and D. Stiles Nov. 1994 10 p Presented at the Conference on Development and Application of Computer Techniques To Environmental Studies: Envirosoft '94, San Francisco, CA, 16-18 Nov. 1994
(Contract DE-AC06-76RL-01830)
(DE95-007287; PNL-SA-24754; CONF-941113-2) Avail: CASI HC A02/MF A01

The Automated Remedial Analysis Methodology (ARAM) software system has been developed by the Pacific Northwest Laboratory to assist the U.S. Department of Energy (DOE) in evaluating cleanup options for over 10,000 contaminated sites across the DOE complex. The automated methodology comprises modules for decision logic diagrams, technology applicability and effectiveness rules, mass balance equations, cost and labor estimating factors and equations, and contaminant stream routing. ARAM is used to select technologies for meeting cleanup targets; to determine the effectiveness of the technologies in destroying, removing, or immobilizing contaminants; to decide the nature and amount of secondary waste requiring further treatment; and to estimate the cost and labor involved when applying technologies. TEACHING INTERDISCIPLINARY COMPUTATIONAL SCIENCE FROM AN ELECTRONIC BOOK ON THE INTERNET

C. E. Oliver, M. R. Strayer, and V. M. Umar (Vanderbilt Univ., Nashville, TN.) 1994 5 p Presented at the Frontiers in Education Conference, San Jose, CA, 3-6 Nov. 1994
(Contract DE-AC05-84OR-21400)
(DE95-006525; CONF-9411137-2) Avail: CASI HC A01/MF A01

The advances in high performance computing technology have led to great changes in the way applied and pure sciences are being carried out. These advances have left curricula at the graduate level in many disciplines omitting a whole body of essential research tools that students have to seek out on their own to carry out their research. In many cases the skills are not difficult to assimilate and the student develops the required knowledge during the process of carrying out research. Usually this is not a systematic approach, and it often leaves the student with a fragmented knowledge of some of the increasingly important concepts and areas relating to computing. By offering a general introduction and overview to networks, computer architectures, scientific visualization, programming languages, a variety of operating systems and hypertext authoring tools students get a broad comprehensive view of modern high performance computing methodologies. Students from all disciplines benefit from such a course. The survey of such tools is ideally suited for an interdisciplinary curriculum. As high performance computing becomes an essential component of the University curriculum, instructors need to be prepared to incorporate these concepts and methods in their own research and curricula. At this point in time educators are uncertain as to how to proceed, and there appears to be a lack of consensus on the curriculum for computational science. The Computational Science Education Project was initiated in Sep. 1991, by the Department of Energy to develop a syllabus for teaching interdisciplinary computational science. The interdisciplinary nature of the project is intended to contribute to national technological competitiveness by producing a body of graduates with the necessary skills to operate effectively in high performance computing environments. DOE

WEIGHTING THE RECURSIVE SPECTRAL BISECTION ALGORITHM FOR UNSTRUCTURED GRIDS

D. Allen, E. Dube, and G. Rodrigue (California Univ., Davis, CA.) Sep. 1994 2 p Presented at the 7th Society for Industrial and Applied Mathematics (SIAM) Conference on Parallel Processing for Scientific Computing, San Francisco, CA, 15-17 Feb. 1995
(Contract W-7405-eng-48)
(DE95-008080; UCRL-JC-118624; CONF-950212-7) Avail: CASI HC A01/MF A01

When solving partial differential equations numerically on parallel computers it is desirable to decompose the domain on which we are solving the equations in such a way as to equalize the workload among the processors while minimizing the communications between them. This is equivalent to finding a partition of the graph representing the calculation into equal subgraphs cutting as few edges as possible. One such algorithm in use is the recursive spectral bisection algorithm (RSB). This algorithm can be shown to arise from rounding to feasibility the solution to relaxation of the following problem: Minimize f(x) = x(sup t)Lx, subject to x(sup t)e = 0, x(sub i) is a member of the set (-1,1) where L is the Laplacian matrix of the graph. The objective function counts the number of edges cut by the partition by a vector x. It can be the case however that the partition generated by the RSB does not have some desired feature. We extend the RSB algorithm to handle those cases. One extension is to modify the RSB algorithm to provide for the weighting of edges. This minimizes the total cost of edges cut by a partition rather than minimizing the number of edges as done in the RSB algorithm. Derived from text

THE DETECTION AND TRACKING OF MOTION BY MEANS OF TIME-SPACE PATTERN MODELLING USING RANDOM FIELDS Ph.D. Thesis [DETEKCJA I SLEDZENIE RUCHU PRZY UZYCIU CZASOWO-PRZESTRZENNEGO MODELOWANIA OBRAZOW ZA POMOCA POL LOSOWYCH]
Adam Kurianski Cooperative Publishing House Ltd. 7 Dec. 1994 90 p In POLISH
(ISSN 0208-5658)
(IFTR-37/1994) Avail: Issuing Activity (Polish Academy of Sciences, Warsaw, Poland)

The dissertation presented deals with issues of motion detection and tracking, by means of a computer vision system, using statistical models called Markov fields. From a formal point of view, the above subjects belong to computer image analysis sometimes also called computer vision. The fast-paced technical advances in the field of computer hardware in recent years, associated with a significant increase in information processing capacities, made the time required for computer motion analysis cease to be an unsurpassable obstacle. The number of potential applications is very large, from traffic monitoring to microbe motion analysis to designing vehicles or objects moving without human supervision. Each of the above-mentioned applications is associated with an overwhelming number of particular problems that must be resolved. This is actually the reason for the extent of the broadly comprehended computer motion analysis. Detection and tracking are only two of the many particular issues.

AN AUTOMATED COST UNCERTAINTY PROGRAM M.S. Thesis
Dale N. Fletcher Sep. 1994 115 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288747; AFIT/GCA/LAS/94S-4) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The purpose of this research was to develop a menu driven, computer program that implemented methodologies for cost uncertainty analysis. Cost uncertainties have been quantified using either simulation techniques or through heuristic means. Simulation techniques require time to run the required number of iterations. Current computer based heuristic methods do not check correlation matrices for consistency nor do they enable the analyst to perform queries. This research resulted in the development of an automated heuristic cost uncertainty program which alleviates the limitations of current computer programs. The program contains a file editor for creating and modifying data files, a cost uncertainty module for computing decile level total system cost probabilities and a query function. The FORTRAN computer program is completely menu driven for ease of use.

ADVANCED EDUCATIONAL METHODS IN THE DEPARTMENT OF DEFENSE: APPLICATION OF CASE THEORY AND COMPUTER-ASSISTED INSTRUCTION TO BUSINESS PROCESS REENGINEERING M.S. Thesis
Brian A. Brown, Susan M. Brown, and Karen L. Cook Dec. 1994 100 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288881; AFIT/GIR/LAR/94D-2) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The goal of this research was to create a computer-assisted instruction (CAI) prototype tutorial to teach the fundamental principles of integrated, computer-aided manufacturing definition activity modeling (IDEFO), a component of business process reengineering within the Department of Defense. To accomplish this, the authors evaluated current instructional material related to IDEFO, then adapted the material to a computerized learning environment using the Authorware Professional(TM) authoring software and a hybrid methodology which incorporated elements both of instructional design and software development. One of the most notable characteristics of this hybrid model was a series of iterations at each phase of development, which eliminated the need for retroactive modifications at successive development phases. The objectives for this study were accomplished by completing a literature review, identifying learning objectives and testing strategies, creating a prototype tutorial using authoring software, incorporating a case study, and then operationally testing the prototype. Analysis of this research is limited to a discussion of the results of a qualitative survey provided to evaluators of the prototype. In general, the results of the survey indicated acceptance of CAI as a method of instruction and provided recommendations for improving the tutorial.

A CORRELATIONAL STUDY OF THE SEI'S CAPABILITY MATURITY MODEL AND SOFTWARE DEVELOPMENT PERFORMANCE IN DOD CONTRACTS
Robert M. Flowe and James B. Thordahl Dec. 1994 301 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288890; AFIT/GSS/LAR/94D-2) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The Software Engineering Institute's (SEI's) Capability Maturity Model (CMM) is to measure an organization's software development process maturity. The Department of Defense (DOD) has adopted this model with the belief that a more mature software development process will result in a more successful software subject. Although there is a growing body of anecdotal evidence supporting this presumed correlation, there is empirical evidence. Thus, the goal of our research was to determine the nature of the correlation, if any, between software process maturity and software project success, where process maturity is based on a CMM rating and success based on the parameters of cost and schedule. To investigate this correlation we identified software unique aimed CMM rating information on the contractor, collected cost and schedule data from a time frame and schedule of the rating, and interviewed project personnel to collect project context information. Using plots of cost performance versus rating level and nonparametric statistical techniques we found that, within our dataset, a correlation does exist between software development process maturity and project performance. The nature of this appears to be improved cost and schedule performance with higher software process maturity.

Recovering three-dimensional information from a visual scene requires producing the disparity map of matched stereo images. The matching approach discussed in this paper involves the Metropolis algorithm, a simulated annealing technique. Although simple in principle, this stochastic optimization technique requires immense computational resources. Adapting the algorithm for parallel computing is discussed and demonstrated for several computer architectures. DTIC

In an on-going set of commercial off-the-shelf (COTS) tool integration experiments being conducted by the CASE Environments Project, we have integrated a set of CASE tools using a combination of data integration mechanisms (PCTE Object Management System (OMS) and UNIX file system) and control integration mechanisms (Broadcast Message Server (BMS) of HP SoftBench). One of the key issues addressed in our work is the extent to which the integration of CASE tools can be independent of particular integration framework technology products. This report describes a task to examine interoperability aspects of the control integration component of the integration framework. The major conclusion from our work is that it is possible to integrate CASE tools using a message-passing approach that is independent of the integration framework product used. This report describes the activities an organization must undertake to integrate CASE tools in order to ensure the interoperation of message-passing integration products. The report also includes a set of lessons learned concerning the experiments we carried out. DTIC

BUILDING AN ELECTRONIC BOOK ON THE INTERNET. CSEP:AN INTERDISCIPLINARY SYLLABUS FOR TEACHING COMPUTATIONAL SCIENCE AT THE GRADUATE LEVEL

C. E. Oliver, M. R. Strayer, and V. M. Umar (Vanderbilt Univ., Nashville, TN.) 1994 5 p Presented at the Frontiers in Education Conference, San Jose, CA, 3-6 Nov. 1994
(Contract DE-AC05-84OR-21400)
(DE95-006526; CONF-9411137-3) Avail: CASI HC A01/MF A01

The Computational Science Education Project was initiated in Sep. 1991, by the Department of Energy to develop a syllabus for teaching interdisciplinary computational science. CSEP has two major activities. The writing and maintenance of an electronic book (e-book) and educational outreach to the computational science communities through presentations at professional society meetings, journal articles, and by training educators. The interdisciplinary nature of the project is intended to contribute to national technological competitiveness by producing a body of graduates with the necessary skills to operate effectively in high performance computing environments. The educational outreach guides and supports instructors in developing computational science courses and curricula at their institutions. The CSEP e-book provides valuable teaching material around which educators have built. The outreach not only introduces new educators to CSEP, but also establishes a synergistic relationship between CSEP authors, reviewers and users. DOE

SOFTWARE TECHNOLOGY FOR ADAPTABLE, RELIABLE SYSTEMS (STARS). AdaWise USER'S MANUAL Technical Report

C. A. Barbasch 2 Sep. 1994 44 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F19628-93-C-0130)
(AD-A289655; STARS-AC-C006/001/01) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Ada is a high-level language with features to support program reliability and maintenance. An Ada compiler will detect many potential programming errors or non-portabilities that other languages would require a separate analysis tool to detect. However, the Ada language definition includes rules that Ada programs are required to obey, but that compilers are not required to enforce, either at compile-time or at execution-time. An Ada program that violates one or more of these rules can have unpredictable behavior, or can have different effects with different compilers or in different execution environments. DTIC

TWO IMPLEMENTATION RELATIONS AND THE CORRECTNESS OF COMMUNICATING REPLICATED PROCESSES Technical Report Series

M. Koutny, L. V. Mancini, and G. Pappalardo Oct. 1994 54 p See also PB92-192350 Prepared in cooperation with Universita di Reggio and Genoa Univ.
(PB95-195640; TRS-491) Copyright Avail: Issuing Activity (National Technical Information Service (NTIS))

This paper studies the correctness of distributed systems made up of replicated processes that communicate by message passing. Processes are described within the divergence model of Communicating Sequential Processes (CSP). The notion of correctness introduced is based on a relation that formally expresses the conformance of an implementation process with the target process it is intended to implement. A weak and strong case of such relations are introduced, aimed at treating acyclic and cyclic process networks respectively. Both allow the study of partial as well as total correctness of implementations, and may cope with non-deterministic targets and implementations. We then show how a target process may be implemented (in the formal sense introduced) by replicating it in a set of copies, a majority of which is non-faulty. NTIS

NEXT GENERATION CONTROLLER SPECIFICATION FOR AN OPEN SYSTEMS ARCHITECTURE STANDARD Final Report, Mar. 1989 - Aug. 1994

28 Sep. 1994 315 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F33615-89-C-5706)
(AD-A289567; WL-TR-94-8033) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This report describes an open architecture framework for advanced manufacturing controllers including machine tools, robotics, process control, and coordinate measurement. The methodology described is applicable to both system design as well as system retrofit applications. A component-based approach is used that allows system architectures to the developed from generic building blocks that address system requirements and resulting functionality requirements. Initial architectures are used to produce an application architecture that addresses specific system messaging requirement. An application system is then synthesized using off-the-shelf, reusable implementation components for the application software. Hardware-software specific platform issues are addressed through the use of system profiles, a convention adopted form the IEEE Portable Operating System Interface (POSIX) standard that is now gaining wide acceptance. A number of examples are provided demonstrating use of all aspects of the methodology on a typical machine tool controller application. Appendices provide details with respect to specific components, requirements, and domain models. DTIC

USING COLETTE. (A SIMPLE GUIDE)

S. M. King and R. K. Heenan Jan. 1995 22 p See also PB90-209453
(PB95-195806; RAL-95-005) Avail: Issuing Activity (National Technical Information Service (NTIS))

COLETTE is the name of the data reduction computer program for the LOQ Small-Angle Neutron Scattering (SANS) instrument at the ISIS Spallation Neutron Source. The ISIS data display and manipulation program, GENIE(c), was not designed to handle two-dimensional datasets, an essential operation in the processing of SANS data. COLETTE runs on top of, and thereby incorporates, GENIE(c). Data 'workspaces' are shared between COLETTE and GENIE(c). This means that a COLETTE user can 'shell' into GENIE(c) and use all of its functionality and then return to the COLETTE session without any loss of data. However, for reasons of speed and ease of use COLETTE effectively functions independently of GENIE(c): it has its own command set and its own data input and output routines. COLETTE is designed to run on the Digital Equipment Corporation (DEC) VAX family of computers under Digital's VMS (Version 5.x or higher) or Open VMS (Version 6.1 or higher) operating systems. COLETTE also requires DEC GKS (Graphical Kernel System) Version 4.2 or higher. (Note: DEC GKS Version 5.0 is incompatible with GENIE(c). The next compatible version is GKS 5.2). At the time of writing COLETTE does not run on DEC Alpha computers (even those running Open VMS). NTIS

The advent of supercomputers with many computational nodes each with its own independent memory makes possible extremely fast computations. The author's work, as part of the US High Performance Computing and Communications Program (HPCCP), is focused on the development of electronic structure techniques for the solution of Grand Challenge-size molecules containing hundreds of atoms. Their efforts have resulted in a fully scalable Direct- self-consistent field (SCF) program that is portable and efficient. This code, named NWCHEM, is built around a distributed-data model. This distributed data is managed by a software package called Global Arrays developed within the HPCCP. They present performance results for Direct-SCF calculations of interest to the consortium. Parallel computing offers an attractive means for high-performance computing to alleviate the current bottleneck in speedup potential of large application codes for practical problem solving. The challenge of actual implementation, however, can be significant. The objective of this report is to address the issue of porting and parallelizing a Computational Fluid Dynamics (CFD) application code on several supercomputing platforms such as Cray C-90, Cray Y-MP, KSRl, CM-S and Intel PARAGON. This overall objective is achieved through first emulating the application code by conducting a model test code, in an effort to understand the influence of data structure on the code performance. The conclusions derived from this are then utilized to restructure the 2-D/3-D CFD code such that the final version is transportable to a wider class of platforms. DTIC

Solution of partial differential equations by either the finite element or the finite difference methods often requires the solution of large, sparse linear systems. When the coefficient matrices associated with these linear systems are symmetric and positive definite, the systems are often solved iteratively using the preconditioned conjugate gradient method. We have developed a new class of preconditioners, which we call support tree preconditioners, that are based on the connectivity of the graphs corresponding to the coefficient matrices of the linear systems. These new preconditioners have the advantage of being well-structured for parallel implementation, both in construction and in evaluation. In this paper, we evaluate the performance of support tree preconditioners by comparing them against two common types of preconditioners: those arising from diagonal scaling, and from the incomplete Cholesky decomposition. We solved linear systems corresponding to both regular and irregular meshes on the Cray C-90 using all three preconditioners and monitored the number of iterations required to converge, and the total time taken by the iterative processes. We show empirically that the convergence properties of support tree preconditioners are similar, and superior in many cases, to those of incomplete Cholesky preconditioners, which in turn are superior to those of diagonal scaling. Support tree preconditioners require less overall storage, less work per iteration, and yield better parallel performance than incomplete Cholesky preconditioners. In terms of total execution time, support tree preconditioners outperform both diagonal scaling and incomplete Cholesky preconditioners. Hence, support tree preconditioners provide a powerful, practical tool for the solution of large sparse systems of equations on vector and parallel machines. DTIC

GRAIN SIZE MANAGEMENT IN REPETITIVE TASK GRAPHS FOR MULTIPROCESSOR COMPUTER SCHEDULING M.S. Thesis
Greg L. Negelspach Sep. 1994 56 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288575) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Optimal scheduling of parallel programs onto multiprocessor computers is an exponentially hard problem. Because of this, most scheduling algorithms in use today rely on heuristics to determine the best balance of computation and communication costs. However, because of the NP-hard nature of the problem, these heuristics have become very complex. We are concerned with a specific instance of the problem, throughput scheduling, which aims to optimize the completion rate of repetitive programs, expressed as task graphs, for which the computational and communication needs of the tasks are known in advance. We propose a simpler approach for finding better schedules, which involves testing different grain size modified versions of the task graph to find the one that results in the highest throughput for the given scheduling algorithm. Our heuristic works by alternately fusing or fissioning selected tasks of the graph then evaluating the modified task graph by measuring the expected throughput of its resultant schedule. Because of the generality of this approach, it can be applied to any scheduling algorithm that does not already include grain size modification. We test the new heuristic using a simulation of the Navy's new standard digital signal processor, the AN/UYS-2, and using various task graphs and scheduling algorithms. We show that this practical approach to scheduling can increase throughput of the Largest Process Time first algorithm by at least 16 percent for our model computer configured with four, eight, or sixteen processors. AN ARCHITECTURE FOR OPTIMAL ALL-TO-ALL PERSONALIZED COMMUNICATION
Susan Hinrichs, Corey Kosak, David R. OHallaron, Thomas M. Stricker, and Riichiro Take Sep. 1994 33 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contracts N00039-93-C-0152; F49620-92-J-0131)
(AD-A288532; CMU-CS-94-140) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

In all-to-all personalized communication (AAPC), every node of a parallel system sends a potentially unique packet to every other node. AAPC is an important primitive operation for modem parallel compilers, since it is used to redistribute data structures during parallel computations. As an extremely dense communication pattern, AAPC causes congestion in many types of networks and therefore executes very poorly on general purpose, asynchronous message passing routers. We present and evaluate a network architecture that executes all-to-all communication optimally on a two-dimensional torus. The router combines optimal partitions of the AAPC step with a self-synchronizing switching mechanism integrated into a conventional wormhole router. Optimality is achieved by routing along shortest paths while fully utilizing all links. A simple hardware addition for synchronized message switching can guarantee optimal AAPC routing in many existing network architectures. The flexible communication agent of the iWarp VLSI component allowed us to implement an efficient prototype for the evaluation of the hardware complexity as well as possible software overheads. The measured performance on an 8 x 8 torus exceeded 2 GigaBytes/sec or 80% of the limit set by the raw speed of the interconnects. We make a quantitative comparison of the AAPC router with a conventional message passing system. The potential gain of such a router for larger parallel programs is illustrated with the example of a two-dimensional Fast Fourier Transform. DTIC

MINIMIZING THE IMPACT OF SYNCHRONIZATION OVERHEAD IN PARALLEL DISCRETE EVENT SIMULATIONS M.S. Thesis
Andrew C. Walton 14 Dec. 1994 145 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289278; AFIT/GCS/ENG/94D-25) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

A Parallel Discrete Event Simulation Coprocessor was designed for conservative synchronization protocols and was implemented in software using some of a parallel computer's nodes to act as coprocessors. The coprocessor was designed to offload synchronization overhead and next event queue management from the nodes running the simulation. The coprocessor was designed to accelerate simulations based on the Simulation Protocol Evaluation on a Concurrent Testbed with ReUsable Modules (SPECTRUM) environment. The research was conducted in three steps: (1) the SPECTRUM environment was ported from an Intel iPSC/2 to an Intel Paragon XP/S; (2) the coprocessor was designed; and (3) the simulations were timed, with and without the coprocessor. In some cases, the coprocessor provided up to a 2.5 times speedup. DTIC

We have made progress in several areas this quarter. Highlights include: high-level software: public release of Sather 1.0, and major progress on pSather; low-level software - design of 'bare die' test software to be used for actual chip testing; applications - a complete speech recognition application running with the Torrent instruction simulator; network hardware - a new network interface test chip running at 300 Mbits/second; system hardware - completion of the SPERT circuit board design and layout; analog very large scale integration (VLSI) - a new communications protocol for connecting multiple chips efficiently. In addition to the scientific and technical work, we had the occasion to present a summary of our work at two events. At the dedication day for the new U.C. Berkeley Computer Science building, Soda Hall, over 50 visitors from academia, industry and government stopped by our four exhibits showing highlights of the CNS-1 project. DTIC

SIMULATING A MULTI-TARGET ACOUSTIC ARRAY ON THE INTEL PARAGON M.S. Thesis
Charles A. Jones Oct. 1994 84 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contracts DAAH04-94-G-0267; DAAL03-91-G-0039)
(AD-A288443; TR-108) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This thesis is built around a parallel programming project which simulates the recordings of a linear array of hydrophones in the presence of several sources of acoustic signals (targets). Simulation of multi-target data with appropriate modeling of multipath, path refraction, and local and distant noise sources is a useful and relatively sophisticated modeling chore. The signal suites include multiple frequency narrow band signals, broad-band flow noise, and randomly generated transient signals. The noise suites include coherent and incoherent Gaussian noise, impulsive noise, and continental shelf reverberation. This project is of interest from a parallel programming viewpoint because it uses the Paragon as a true Multiple Instruction Multiple Data (MIMD) machine with three types of nodes: (1) a manager node, (2) target nodes, and (3) hydrophone nodes. The target nodes are responsible for generating the signal suites, transient noise, and the coherent noise. The hydrophone nodes are responsible for calculation of multipath, refraction and time delay as well as adding the local incoherent noise suite. While this simulation can be used as a stand-alone application, it also will form the foundation for a much larger, more sophisticated simulation, namely producing a virtual Command Information Center (CIC). XTP AS A TRANSPORT PROTOCOL FOR DISTRIBUTED PARALLEL PROCESSING
W. T. Strayer, M. J. Lewis, and R. E. Cline, Jr. 1994 11 p Presented at the 1994 USENIX Conference, Oakland, CA, 1-2 Aug. 1994
(Contracts DE-AC04-76DP-00789; DE-AC04-94AL-85000)
(DE95-004992; SAND-94-8628C; CONF-9408119-2) Avail: CASI HC A03/MF A01

The Xpress Transfer Protocol (XTP) is a flexible transport layer protocol designed to provide efficient service without dictating the communication paradigm or the delivery characteristics that qualify the paradigm. XTP provides the tools to build communication services appropriate to the application. Current data delivery solutions for many popular cluster computing environments use TCP and UDP. We examine TCP, UDP, and XTP with respect to the communication characteristics typical of parallel applications. We perform measurements of end-to-end latency for several paradigms important to cluster computing. An implementation of XTP is shown to be comparable to TCP in end-to-end latency on preestablished connections, and does better for paradigms where connections must be constructed on the fly. DOE

LANGUAGE CONSTRUCTS AND RUNTIME SYSTEMS FOR COMPOSITIONAL PARALLEL PROGRAMMING
Ian Foster and Carl Kesselman (California Inst. of Tech., Pasadena, CA.) 1995 12 p Presented at the CONPAR Conference, Linz, Austria,15-18 Aug. 1994
(Contract W-31-109-eng-38)
(DE95-008298; ANL/MCS/CP-85720; CONF-9408222-1) Avail: CASI HC A03/MF A01

In task-parallel programs, diverse activities can take place concurrently, and communication and synchronization patterns are complex and not easily predictable. Previous work has identified compositionality as an important design principle for task-parallel programs. In this paper, we discuss alternative approaches to the realization of this principle. We first provide a review and critical analysis of Strand, an early compositional programming language. We examine the strengths of the Strand approach and also its weaknesses, which we attribute primarily to the use of a specialized language. Then, we present an alternative programming language framework that overcomes these weaknesses. This framework uses simple extensions to existing sequential languages (C++ and Fortran) and a common runtime system to provide a basis for the construction of large, task-parallel programs. We also discuss the runtime system techniques required to support these languages on parallel and distributed computer systems. DOE

A NEW SHARED-MEMORY PROGRAMMING PARADIGM FOR MOLECULAR DYNAMICS SIMULATIONS ON THE INTEL PARAGON
E. F. DAzevedo and C. H. Romine Dec. 1994 62 p
(Contract DE-AC05-84OR-21400)
(DE95-007289; ORNL/TM-12890) Avail: CASI HC A04/MF A01

This report describes the use of shared memory emulation with DOLIB (Distributed Object Library) to simplify parallel programming on the Intel Paragon. A molecular dynamics application is used as an example to illustrate the use of the DOLIB shared memory library. SOTON-PAR, a parallel molecular dynamics code with explicit message-passing using a Lennard-Jones 6-12 potential, is rewritten using DOLIB primitives. The resulting code has no explicit message primitives and resembles a serial code. The new code can perform dynamic load balancing and achieves better performance than the original parallel code with explicit message-passing. DOE

USING THE SCALABLE NONLINEAR EQUATIONS SOLVERS PACKAGE
W. D. Gropp, L. C. McInnes, and B. F. Smith Feb. 1995 56 p
(Contract W-31-109-eng-38)
(DE95-008323; ANL/MCS-TM-193) Avail: CASI HC A04/MF A01

SNES (Scalable Nonlinear Equations Solvers) is a software package for the numerical solution of large-scale systems of nonlinear equations on both uniprocessors and parallel architectures. SNES also contains a component for the solution of unconstrained minimization problems, called SUMS (Scalable Unconstrained Minimization Solvers). Newton-like methods, which are known for their efficiency and robustness, constitute the core of the package. As part of the multilevel PETSc library, SNES incorporates many features and options from other parts of PETSc. In keeping with the spirit of the PETSc library, the nonlinear solution routines are data-structure-neutral, making them flexible and easily extensible. This users guide contains a detailed description of uniprocessor usage of SNES, with some added comments regarding multiprocessor usage. At this time the parallel version is undergoing refinement and extension, as we work toward a common interface for the uniprocessor and parallel cases. Thus, forthcoming versions of the software will contain additional features, and changes to parallel interface may result at any time. The new parallel version will employ the MPI (Message Passing Interface) standard for interprocessor communication. Since most of these details will be hidden, users will need to perform only minimal message-passing programming. DOE

(Contract DE-AC04-94AL-85000)
(DE95-007717; SAND-94-3096) Avail: CASI HC A03/MF A01

Supercomputing '94, a high-performance computing and communications conference, was held November 14th through 18th, 1994 in Washington

DC. For the past four years, Sandia National Laboratories has used this conference to showcase and focus its communications and networking endeavors. At the 1994 conference, Sandia built a Switched Multimegabit Data Service (SMDS) network running at 44.736 megabits per second linking its private SMDS network between its facilities in Albuquerque, New Mexico and Livermore, California to the convention center in Washington, D.C. For the show, the network was also extended from Sandia, New Mexico to Los Alamos National Laboratory and from Sandia, California to Lawrence Livermore National Laboratory. This paper documents and describes this network and how it was used at the conference. DOE

SIMULATOR REPORT FOR SCI SYSTEMS WITH HIC-ROUTER
J. Bothner and E. Kristiansen 14 Sep. 1994 34 p
(PB95-196580; STF31-A94038) Avail: Issuing Activity (National Technical Information Service (NTIS))

The report presents a simulator for studying the use of Heterogenous Interprocessor Communication (HIC) technology to connect together Scalable Coherent Interface (SCI) rings. In other words, HIC technology is used to transport SCI packets. HIC is part of the European Open Microprocessor Systems Initiative (OMI) program. It is a definition of a link in various ranges of cost and performance. SCIs main attributes are strong mechanisms in a multiprocessor environment and speed. NTIS

PARALLEL BLOCK IMPLICIT INTEGRATION TECHNIQUE FOR TRAJECTORY PARALLELISM
Alan E. Rufty Dec. 1994 39 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288961; NSWCDD/TR-94/217) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This report describes the evaluation of a Parallel Block Implicit (PBI) integration technique in a simplified missile trajectory. This project was carried out to ascertain the suitability of PBI techniques when modest amounts of parallelism are available; that is, when 3 to 10 processors are allocated per missile trajectory. The PBI technique was first evaluated on a serial mainframe computer before it was implemented in parallel on an INMOS TRANSPUTER with four parallel central processing units. While the serial implementation of the four-node PBI technique indicated that a speedup of a factor of three to four was possible with ideal hardware, in practice only a modest gain (approximately 30 percent) was obtained because of systems-related overhead. PRACTICAL CONSIDERATIONS FOR NETWORK ADDRESSING USING CIDR Journal Article
H. Eidnes 26 Sep. 1994 7 p
(PB95-195335; STF13-S94006) Avail: Issuing Activity (National Technical Information Service (NTIS))

Due to the continually increasing popularity of the Transmission Control Protocol/Internet Protocol (TCP/IP) protocol suite, the Internet community is currently facing three related major problems: The Class B address space is in danger of exhaustion; The Internet routing explosion is a problem for those routers on the Internet that do not use a default route and have to carry a routing entry for each and every network they need connectivity to; Eventual exhaustion of the entire IP address space is a real, though not imminent danger. The proposed solution is through the deployment of two mechanisms: (1) Development of new routing protocols for interdomain routing, implementing Classless Inter-Domain Routing (CIDR); (2) Start to assign IP network numbers based on the Internet topology, in order to make effective use of CIDR routing technology. SCALABLE MULTICAST TREE CONSTRUCTION FOR WIDE AREA NETWORKS M.S. Thesis
James Eric Klinker Sep. 1994 114 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288318) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

In this thesis, we address the problem of multicast tree construction with guaranteed quality of service (QoS) in networks with asymmetric link costs. We describe a protocol to locate distribution centers for an interaction based on network load and participant location. We then describe the protocol for constructing a shared tree around the selected center. We compare the quality of the resultant trees on large hypothetical networks with that of source based trees. Additional comparisons are made with other multicast techniques such as Protocol Independent Multicasting (PIM) and Core Based Trees (CBT). Our results show that the shared trees built using our approach represent a significant improvement over other techniques when the network topology contains a large degree of asymmetry in link cost. This makes our approach the most general of all other techniques proposed to date. DTIC

SELF-ORGANIZING ARTIFICIAL NEURAL NETWORKS IN DYNAMIC SYSTEMS MODELING AND CONTROL Ph.D. Thesis
Heikki Hyoetyniemi Nov. 1994 141 p
(ISSN 0356-0872)
(PB95-185120; ISBN-951-22-2362-7) Avail: CASI HC A07/MF A02

This thesis discusses the potential of self-organizing networks applied to the modeling and control of dynamic systems. A general framework is created for self-organizing networks applications that is especially suited to control engineering. Apart from the traditional time-domain features, linear operators can be mapped in the network. Efficient algorithms are derived for adapting the parameters in the self-organizing net. These algorithms are motivated as solutions to well-founded optimization problems. Two prototypical approaches to realizing controllers based on the neural network representations are presented with simple application examples. The theoretical problems of combining self-organizing networks with dynamic systems are discussed extensively. The algorithms that are derived for self-organization are not limited only to control engineering applications. On the other hand, the theoretical analyses of dynamic systems are not limited to neural networks applications--for example, the identification algorithms and the results achieved on the systems identifiability are applicable to the general parameter estimation tasks. ROBUST HYBRID STATE-SPACE SELF-TUNING CONTROL USING DUAL-RATE SAMPLING Final Report, 1 May 1991 - 31 Aug. 1994
L. S. Shieh and C. K. Koc 31 Aug. 1994 10 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DAAL03-91-G-0106)
(AD-A288359; ARO-28511.27-MA) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This report presents a hybrid state-space self-tuner using a new dual-rate sampling scheme for digital adaptive control of continuous-time uncertain linear systems. A state-space-based recursive least-squares algorithm, together with a variable forgetting factor, is used for direct estimation of both the equivalent discrete-time uncertain linear system parameters and associated discrete-time state of a continuous-time uncertain linear system from the sampled input and output data. An analog optimal regional pole-placement design method is used for designing an optimal observer-based analoque controller. A sub-optimal observer-based digital controller is then designed from the designed analoque controller using digital redesign technique. To enhance the robustness of parameter identification and state estimation algorithms, a dynamic bound for a class of uncertain bilinear parameters and a fast-rate digital controller are developed at each fast-sampling period. Also, to accommodate computation loads and computation delay for developing the advance hybrid self-tuner, the designed analoque controller and observer gains are both updated at each slow-sampling period. This control technique has been successfully applied to benchmark control problems. DTIC

ENCODING USER-DEFINED PROBLEMS WITH SIPE-2 Report, Jun. 1993 - Mar. 1994
Karen M. Alguire Oct. 1994 44 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AF Proj. 5581)
(AD-A288390; RL-TR-94-165) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This report describes work related to some experiments performed at Rome Laboratory with generative planners. The main objective of the project was to provide an understanding of generative planners and familiarization with two different generative planners, O-Plan2 and SIPE-2. The approach was to become proficient in the use of the generative planning systems to define and solve new problems representative of basic planning capability requirements. The Missionaries and Cannibals (MC) puzzle was selected as a starting point because of its simplicity and it deals with simple numerical calculations, an aspect we felt was relevant to application interests. This report focuses on the work with SIPE-2, specifically, our experience encoding the MC puzzle. The process of encoding problems in general is also addressed for providing guidance in defining and solving user-defined problems with SIPE-2. DTIC

Significant progress was made in a number of aspects of stochastic and discrete event systems. A controlled switching diffusion model was developed to study systems with multiple modes or failure modes, such as aircraft with multiple operating modes, the hierarchical control of flexible manufacturing systems, and large scale interconnected power networks. In addition, a number of other optimal stochastic control problems with long time horizans were solved. An important problem in the adaptive control of a finite state Markov chain was solved, and significant progress was made along more general directions. New results on the risk-sensitive control of hidden Markov processes were obtained. Motivated by applications in hierarchical intelligent control, some important problems in the area of discrete event systems were solved. DTIC

THE 1994 IEEE-IMS WORKSHOP ON INFORMATION THEORY AND STATISTICS
29 Oct. 1994 111 p Workshop held in Alexandria, VA, 27-29 Oct. 1994; sponsored by IEEE Information Theory Society Institute of Mathematical Statistics Sponsored by the Office of Naval Research; the National Security Agency; and the National Science Foundation Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288808) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The idea of a workshop on information theory and statistics was born from a recent series of exciting interactions between researchers from both communities covering a wide range of topics including data compression, complexity, Markov fields, large deviations, nonparametrics and sampling and wavelets. Our aim has been to provide a forum for the presentation and discussion of new technical results at the interface of these two disciplines. We hope that this Workshop will be the first of a series of many which will serve to promote a better understanding of the interplay between information theory and statistics. DTIC

Completed work on this grant analyzes problems of 3-D vision, visual search, spatial mapping, planning and action, all of which utilize spatial representations to control adaptive behaviors in real time. Highlights include significant contributions towards solving the classical figure-ground problem for biological vision, the problem of self-organizing body-centered spatial representations for movement planning and spatial orientation, and the problem of carrying out fast visual search for targets among multiple distractors. New research directions include projects which have been developed to frontally attack core problems concerning how a rapidly moving agent can self-organize spatial representations, use these representations for real-time movement planning, and transform spatial movement plans into appropriate motor commands for movement control and real-time navigation. Specific projects include retinal image processing, formation of egocentric maps of object positions from optic flow, detection of moving objects from optic flow, integration of egocentric and allocentric representations for autonomous navigation, and investigation of spatial reference frames and transformations between frames for real-time flexible speech articulator control. This chapter provides an overview of Artificial Intelligence (AI) technology, one of the more complex applications of digital systems. This chapter examines AI-based technology, focusing on three fields: neural networks, 'fuzzy' logic, and Expert Systems. This chapter provides the reader with the background and a basic understanding of the fundamental at those fields. Another section examines aspects of the AI development environment, including languages, tools, and AI-based hardware components. Some of the proposed aviation-related applications for both civil and military aircraft, including pilot assistants and diagnostic aids, are surveyed. Additionally, certification issues, including regulations, guidelines, and verification and validation techniques are examined. Human factors issues relating to the use of this technology are identified and reviewed. In addition, this chapter identifies safety issues and concerns over the use of this technology in airborne systems. DTIC

A GAIN SCHEDULING OPTIMIZATION METHOD USING GENETIC ALGORITHMS M.S. Thesis
Robert C. Martin, IV Dec. 1994 153 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289306; AFIT/GAE/ENY/94D-3) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Gain scheduling, the traditional method of providing adaptive control to a nonlinear system, has long been an ad hoc design process. Until recently, little theoretical guidance directed this practitioners' art. For this reason a systematic study of this design process and its potential for optimization has never been accomplished. Additionally, the nonlinearities and the large search space involved in gain scheduling also precluded such an optimization study. Traditionally, the gain scheduling process has been some variation of a linear interpolation between discrete design points. By using powerful non-traditional optimization tools such as genetic algorithms there are ways of improving this design process. This thesis utilizes the power of genetic algorithms to optimally design a gain schedule. First, a design methodology is validated on a simple pole placement problem, then demonstrated for an F-18 Super-maneuverable Fighter. From this experience, a general gain scheduling design process is developed and presented. DTIC

SURVEY AND IMPLEMENTATION OF COMMERCIAL MANUAL CONTROLLERS FOR A GENERIC TELEROBOTICS ARCHITECTURE M.S. Thesis
Thomas E. Deeter Dec. 1994 128 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289215; AFIT/GE/ENG/94D-04) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The purpose of this study is to determine an input device for the Air Force's generic telerobotics architecture for large aircraft maintenance and repair. One area of concern is the human to machine interface, more specifically, which manual controller should be used for the specified tasks in this architecture. The authors mailed a survey to 68 companies in order to compile a list of possible input devices that the telerobotics architecture could use. Thirty-two companies responded which gave enough data to generate a list that described the physical traits of the input devices. The required tasks were divided into actions and analyzed to generate a list of traits required by an input device. Both the task analysis and device listings were combined mathematically to form a performance table which revealed the possible devices that could perform each individual action. To aid in development of the Air Force's generic telerobotics architecture, four input devices were integrated into a VME based operating system called CHIMERA. These four devices represent the four different sensor types that are currently available in today's market. The first device is a mouse which relays position changes of the mouse to the computer. The second device is a joystick that can be used in two different ways. The joystick can measure position data of the hand position or it can measure the displacement of the hand from the center of the total movement. The third device is a six degree- of-freedom (DOF) spaceball that measures the amount of force for position data and rotational data. The fourth device is a Schilling manual controller which has a one-to-one mapping from the controller joints to the manipulator joints. DTIC

NEXT GENERATION REAL-TIME SYSTEMS: INVESTIGATING THE POTENTIAL OF PARTIAL-SOLUTION TASKS M.S. Thesis
Robert E. Caley Dec. 1994 139 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289203; AFIT/GCS/ENG/94D-01) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

While the cyclic executive and fixed-priority scheduling strategies have been sufficient to handle traditional real-time requirements. They are insufficient for dealing with the complexities of next-generation real-time systems. New methods of intelligent control must be developed for guaranteeing on-time task completion for real-time systems that are faced with unpredictable and dynamically changing requirements. Implementing real-time processes as partial-solution tasks is one technique that may be beneficial. This type of task, when combined with intelligent control, has the potential for increasing pre-runtime schedulability, system maintainability, and runtime robustness. This research investigates the benefits of partial-solution tasks by experimentally measuring the change in performance of 11 simulated real-time systems when converted from all-or-nothing tasks to partial-solution tasks. Results from the experiments indicate that partial-solution tasks have the potential to decrease missed deadlines and increase a systems' average solution quality. The results also suggest that best performance gains can be achieved using Optimistic partial-solution tasks where the bulk of solution quality is achieved early during task execution. The framework used in this research was developed to measure the general case performance characteristics of partial-solution tasks. As a by-product, the research resulted in a framework that can also be used to measure specific case characteristics. DTIC

A MODIFIED BACKPROPAGATION ALGORITHM FOR TRAINING NEURAL NETWORKS ON DATA WITH ERROR BARS
K. A. Gernoth and J. W. Clark Aug. 1994 41 p
(DE95-608729; IC-94/229) Avail: CASI HC A03/MF A01 (US Sales Only)

A method is proposed for training multilayer feedforward neural networks on data contaminated with noise. Specifically, we consider the case that the artificial neural system is required to learn a physical mapping when the available values of the target variable are subject to experimental uncertainties, but are characterized by error bars. The proposed method, based on maximum likelihood criterion for parameter estimation, involves simple modifications of the on-line backpropagation learning algorithm. These include incorporation of the error-bar assignments in a pattern-specific learning rate, together with epochal updating of a new measure of model accuracy that replaces the usual mean-square error. The extended backpropagation algorithm is successfully tested on two problems relevant to the modeling of atomic-mass systematics by neural networks. Provided the underlying mapping is reasonably smooth, neural nets trained with the new procedure are able to learn the true function to a good approximation even in the presence of high levels of Gaussian noise. ELVIS: EIGENVECTORS FOR LAND VEHICLE IMAGE SYSTEM
John A. Hancock and Charles E. Thorpe Dec. 1994 26 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contracts DACA76-89-C-0014; DAAB07-90-C-R059)
(AD-A289297; CMU-RI-TR-94-43) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

ELVIS (Eigenvectors for Land Vehicle Image System) is a road-following system designed to drive the CMU Navlabs. It is based on ALVINN, the neural network road-following system built by Dean Pomerleau at CMU. ALVINN provided the motivation for creating ELVIS: although ALVINN is successful, it is not entirely clear why the system works. ELVIS is an attempt to more fully understand ALVINN and to determine whether it is possible to design a system that can rival ALVINN using the same input and output, but without using a neural network. Like ALVINN, ELVIS observes the road through a video camera and observes human steering response through encoders mounted on the steering column. After a few minutes of observing the human trainer, ELVIS can take control. ELVIS learns the eigenvectors of the image and steering training set via principal component analysis. These eigenvectors roughly correspond to the primary features of the image set and their correlations to steering. Road-following is then performed by projecting new images onto the previously calculated eigenspace. ELVIS architecture and experiments will be discussed as well as implications for eigenvector-based systems and how they compare with neural network-based systems. DTIC

HIGHER-ORDER PROBABILISTIC PERCEPTRONS AS BAYESIAN INFERENCE ENGINES
J. W. Clark, K. A. Gernoth, and M. L. Ristig Aug. 1994 10 p
(DE95-608730; IC-94/236) Avail: CASI HC A02/MF A01 (US Sales Only)

This letter makes explicit a structural connection between the Bayes optimal classifier operating on K binary input variables and corresponding two-layer perceptron having normalized output activities and couplings from input to output units of all orders up to K. Given a large and unbiased training set and an effective learning algorithm, such a neural network should be able to learn the statistics of the classification problem and match the a posteriori probabilities given by the Bayes optimal classifier.

OPTIMAL CONTROL OF TWO QUEUES IN SERIES
M. S. Moustafa and R. M. Mohammed Aug. 1994 15 p
(DE95-608731; IC-94/256) Avail: CASI HC A03/MF A01 (US Sales Only)

We give a fairly complete survey of the available results on the control of arrival and service rates for both single queue and networks of queues. We also study two M/M/1 queues in series. At the first queue, the arrival and the service rates are chosen in pair from a finite set whenever the queue lengths at both queues change. Each choice has a switching cost depending on the chosen rates and the queue lengths. At the second queue, the arrival and the service rates are fixed. Our objective is to find a policy for dynamically choosing rates, based on the current rates and queues lengths that minimizes the expected total discounted cost over a finite horizon; numerical results are given. REDUCING NETWORK DEPTH IN THE CASCADE-CORRELATION LEARNING ARCHITECTURE
Shumeet Baluja and Scott E. Fahlman 17 Oct. 1994 12 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-93-1-0806; NSF IRI-92-14873)
(AD-A289352; CMU-CS-94-209) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The Cascade-Correlation learning algorithm constructs a multi-layer artificial neural network as it learns to perform a given task. The resulting network's size and topology are chosen specifically for this task. In the resulting 'cascade' networks, each new hidden unit receives incoming connections from all input and pre-existing hidden units. In effect, each new unit adds a new layer to the network. This allows Cascade-Correlation to create complex feature detectors, but it typically results in a network that is deeper, in terms of the longest path from input to output, than is necessary to solve the problem efficiently. In this paper we investigate a simple variation of Cascade-Correlation that will build deep nets if necessary, but that is biased toward minimizing network depth. We demonstrate empirically, across a range of problems, that this simple technique can reduce network depth, often dramatically. However, we show that this technique does not, in general, reduce the total number of weights or improve the generalization ability of the resulting networks. DTIC

HEAD RELATED TRANSFER FUNCTION APPROXIMATION USING NEURAL NETWORKS M.S. Thesis
John K. Millhouse Dec. 1994 156 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289422; AFIT/GE/ENG/94D-21) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This thesis determines whether an artificial neural network (ANN) can approximate the Armstrong Aerospace Medical Research Laboratories (AAMRL) head related transfer functions (HRTF) data obtained from research at AAMRL during the fall of 1988. The first test determines whether HRTF lends any support in sound localization when compared to no HRTF (Interaural Time Delay only). There is a statistically significant interaction between the location of the sound and whether the HRTF or no HRTF is used. When this interaction is removed using the alternate F.Value, the statistics give the result of equal means for the filters and azimuth. This means that at certain angles of azimuth, the HRTF either provides no advantage at all or hinders localization capabilities. Adding in the corrections for reversals changes the results to where the means of the azimuth are not statistically equal. The reversal corrections will inherently reduce the error results. However, comparing the number of reversals indicates an advantage of using the HRTF over no HRTF. The second test determines whether HRTF and ANN lend the same amount of information in sound localization when compared to each other. With reversal corrections included, a statistical advantage is not indicated, and the means of the two filters are statistically equal. Also there is a statistically significant interaction between the location of the sound and whether the AAMRL HRTF or ANN HRTF is used. Comparing the number of reversals does not indicate a large difference between the AAMRL HRTF and the RBF HRTF. DTIC

N95-27293 Air Force Inst. of Tech., Wright-Patterson AFB, OH. School of Engineering.
AN ANALYSIS OF BAYESIAN NETWORKS AS CLASSIFIERS M.S. Thesis
Gregory C. Ahlquist Dec. 1994 198 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289316; AFIT/GCE/ENG/94D-01) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

An analysis of Bayesian networks as classifiers is presented. This analysis results in an algorithm and several tools related to Bayesian network classifiers. The tools calculate and display the decision regions for two level Bayesian network classifiers. They collectively provide an approach to analyze the effects of changing network parameters on the network's decision regions. The algorithm defines a Bayesian network classifier to solve traditional classification problems. The algorithm is data driven, meaning that the resulting Bayesian network classifier is uniquely tuned to the classification problem at hand. Also, the algorithm contains procedures for defining the topology of a Bayesian network classifier and for precisely deriving the required conditional probabilities. A brief tutorial on Bayesian networks is also presented. DTIC

APPLYING AI TOOLS TO OPERATIONAL SPACE ENVIRONMENTAL ANALYSIS
Mike Krajnak, Lisa Jesse, and John Mucks (Rome Lab., Griffiss AFB, NY.) *In* NASA. Goddard Space Flight Center, The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 3-13 (For primary document see N95-27375 09-63)
Avail: CASI HC A03/MF A03

The U.S. Air Force and National Oceanic Atmospheric Agency (NOAA) space environmental operations centers are facing increasingly complex challenges meeting the needs of their growing user community. These centers provide current space environmental information and short term forecasts of geomagnetic activity. Recent advances in modeling and data access have provided sophisticated tools for making accurate and timely forecasts, but have introduced new problems associated with handling and analyzing large quantities of complex data. AI (Artificial Intelligence) techniques have been considered as potential solutions to some of these problems. Fielding AI systems has proven more difficult than expected, in part because of operational constraints. Using systems which have been demonstrated successfully in the operational environment will provide a basis for a useful data fusion and analysis capability. Our approach uses a general purpose AI system already in operational use within the military intelligence community, called the Temporal Analysis System (TAS). TAS is an operational suite of tools supporting data processing, data visualization, historical analysis, situation assessment and predictive analysis. TAS includes expert system tools to analyze incoming events for indications of particular situations and predicts future activity. The expert system operates on a knowledge base of temporal patterns encoded using a knowledge representation called Temporal Transition Models (TTM's) and an event database maintained by the other TAS tools. The system also includes a robust knowledge acquisition and maintenance tool for creating TTM's using a graphical specification language. The ability to manipulate TTM's in a graphical format gives non-computer specialists an intuitive way of accessing and editing the knowledge base. To support space environmental analyses, we used TAS's ability to define domain specific event analysis abstractions. The prototype system defines events covering reports of natural phenomena such as solar flares, bursts, geomagnetic storms, and five others pertinent to space environmental analysis. With our preliminary event definitions we experimented with TAS's support for temporal pattern analysis using X-ray flare and geomagnetic storm forecasts as case studies. We are currently working on a framework for integrating advanced graphics and space environmental models into this analytical environment. Author

AN ARCHITECTURE AND PROTOCOL FOR COMMUNICATIONS SATELLITE CONSTELLATIONS REGARDED AS MULTI-AGENT SYSTEMS

c18

Craig A. Lindley *In* NASA. Goddard Space Flight Center, The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 15-28 (For primary document see N95-27375 09-63)
Avail: CASI HC A03/MF A03

This paper presents an architecture for satellites regarded as intercommunicating agents. The architecture is based upon a postmodern paradigm of artificial intelligence in which represented knowledge is regarded as text, inference procedures are regarded as social discourse and decision making conventions and the semantics of representations are grounded in the situated behaviour and activity of agents. A particular protocol is described for agent participation in distributed search and retrieval operations conducted as joint activities. Author

Avail: CASI HC A03/MF A03

Users and programmers of small systems typically do not have the skills needed to design a database schema from an English description of a problem. This paper describes a system that automatically designs databases for such small applications from English descriptions provided by end-users. Although the system has been motivated by the space applications at Kennedy Space Center, and portions of it have been designed with that idea in mind, it can be applied to different situations. The system consists of two major components: a natural language understander and a problem-solver. The paper describes briefly the knowledge representation structures constructed by the natural language understander, and, then, explains the problem-solver in detail. Author

A USER-SYSTEM INTERFACE AGENT

Nagi T. Wakim, Sadanand Srivastava, Mehdi Bousaidi, and Gin-Hua Goh *In* NASA. Goddard Space Flight Center, The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 45-55 (For primary document see N95-27375 09-63)
Avail: CASI HC A03/MF A03

Agent-based technologies answer to several challenges posed by additional information processing requirements in today's computing environments. In particular, (1) users desire interaction with computing devices in a mode which is similar to that used between people, (2) the efficiency and successful completion of information processing tasks often require a high-level of expertise in complex and multiple domains, (3) information processing tasks often require handling of large volumes of data and, therefore, continuous and endless processing activities. The concept of an agent is an attempt to address these new challenges by introducing information processing environments in which (1) users can communicate with a system in a natural way, (2) an agent is a specialist and a self-learner and, therefore, it qualifies to be trusted to perform tasks independent of the human user, and (3) an agent is an entity that is continuously active performing tasks that are either delegated to it or self-imposed. The work described in this paper focuses on the development of an interface agent for users of a complex information processing environment (IPE). This activity is part of an on-going effort to build a model for developing agent-based information systems. Such systems will be highly applicable to environments which require a high degree of automation, such as, flight control operations and/or processing of large volumes of data in complex domains, such as the EOSDIS environment and other multidisciplinary, scientific data systems. The concept of an agent as an information processing entity is fully described with emphasis on characteristics of special interest to the User-System Interface Agent (USIA). Issues such as agent 'existence' and 'qualification' are discussed in this paper. Based on a definition of an agent and its main characteristics, we propose an architecture for the development of interface agents for users of an IPE that is agent-oriented and whose resources are likely to be distributed and heterogeneous in nature. The architecture of USIA is outlined in two main components: (1) the user interface which is concerned with issues as user dialog and interaction, user modeling, and adaptation to user profile, and (2) the system interface part which deals with identification of IPE capabilities, task understanding and feasibility assessment, and task delegation and coordination of assistant agents. BUILDING AN ADAPTIVE AGENT TO MONITOR AND REPAIR THE ELECTRICAL POWER SYSTEM OF AN ORBITAL SATELLITE

Gheorghe Tecuci, Michael R. Hieb, and Tomasz Dybala *In* NASA. Goddard Space Flight Center, The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 57-71 (For primary document see N95-27375 09-63)
Avail: CASI HC A03/MF A03

Over several years we have developed a multistrategy apprenticeship learning methodology for building knowledge-based systems. Recently we have developed and applied our methodology to building intelligent agents. This methodology allows a subject matter expert to build an agent in the same way in which the expert would teach a human apprentice. The expert will give the agent specific examples of problems and solutions, explanations of these solutions, or supervise the agent as it solves new problems. During such interactions, the agent learns general rules and concepts, continuously extending and improving its knowledge base. In this paper we present initial results on applying this methodology to build an intelligent adaptive agent for monitoring and repair of the electrical power system of an orbital satellite, stressing the interaction with the expert during apprenticeship learning. LIMITS TO GROUND CONTROL IN AUTONOMOUS SPACECRAFT

Alfred D. M. Wan, Peter J. Braspenning, and Gerrard A. W. Vreeswijk *In* NASA. Goddard Space Flight Center, The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 75-89 (For primary document see N95-27375 09-63)
Avail: CASI HC A03/MF A03

In this paper the autonomy concept used by ESA and NASA is critically evaluated. Moreover, a more proper ground control/spacecraft organizational structure is proposed on the basis of a new, more elaborated concept of autonomy. In an extended theoretical discussion its definitional properties and functionalities are established. The rather basic property of adaptivity leads to the categorization of behaviour into the modes of satisfaction and avoidance behaviour. However, the autonomy property with the most profound consequences is goal-robustness. The mechanism that implements goal-robustness tests newly generated goals and externally received goals on consistency with high-level goals. If goals appear not to be good instantiations or more acceptable replacements of existing goals, they are rejected. This means that ground control has to cooperate with the spacecraft instead of (intermittently) commanding it. Author

INTEGRATED PLANNING AND SCHEDULING FOR EARTH SCIENCE DATA PROCESSING **c82**
Mark Boddy (Honeywell Technology Center, Minneapolis, MN.), Jim White (Honeywell Technology Center, Minneapolis, MN.), Robert Goldman (Honeywell Technology Center, Minneapolis, MN.), and Nick Short, Jr. *In its* The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 91-101 (For primary document see N95-27375 09-63)
Avail: CASI HC A03/MF A03

Several current NASA programs such as the EOSDIS Core System (ECS) have data processing and data management requirements that call for an integrated planning and scheduling capability. In this paper, we describe the experience of applying advanced scheduling technology operationally, in terms of what was accomplished, lessons learned, and what remains to be done in order to achieve similar successes in ECS and other programs. We discuss the importance and benefits of advanced scheduling tools, and our progress toward realizing them, through examples and illustrations based on ECS requirements. The first part of the paper focuses on the Data Archive and Distribution (DADS) V0 Scheduler. We then discuss system integration issues ranging from communication with the scheduler to the monitoring of system events and re-scheduling in response to them. The challenge of adapting the scheduler to domain-specific features and scheduling policies is also considered. Extrapolation to the ECS domain raises issues of integrating scheduling with a product-generation planner (such as PlaSTiC), and implementing conditional planning in an operational system. We conclude by briefly noting ongoing technology development and deployment projects being undertaken by HTC and the ISTB. Derived from text

A SUSTAINABLE GENETIC ALGORITHM FOR SATELLITE RESOURCE ALLOCATION **c61**
R. J. Abbott (California State Univ., Los Angeles, CA.), M. L. Campbell, and W. C. Krenz *In* NASA. Goddard Space Flight Center, The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 103-117 (For primary document see N95-27375 09-63)
Avail: CASI HC A03/MF A03

A hybrid genetic algorithm is used to schedule tasks for 8 satellites, which can be modelled as a robot whose task is to retrieve objects from a two dimensional field. The objective is to find a schedule that maximizes the value of objects retrieved. Typical of the real-world tasks to which this corresponds is the scheduling of ground contacts for a communications satellite. An important feature of our application is that the amount of time available for running the scheduler is not necessarily known in advance. This requires that the scheduler produce reasonably good results after a short period but that it also continue to improve its results if allowed to run for a longer period. We satisfy this requirement by developing what we call a sustainable genetic algorithm. Author

A RULE-BASED SHELL TO HIERARCHICALLY ORGANIZE HST OBSERVATIONS **c82**
Ashim Bose and Andrew Gerb *In* NASA. Goddard Space Flight Center, The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 119-130 (For primary document see N95-27375 09-63)
Avail: CASI HC A03/MF A03

An observing program on the Hubble Space Telescope (HST) is described in terms of exposures that are obtained by one or more of the instruments onboard the HST. These exposures are organized into a hierarchy of structures for purposes of efficient scheduling of observations. The process by which exposures get organized into the higher-level structures is called merging. This process relies on rules to determine which observations can be 'merged' into the same higher level structure, and which cannot. The TRANSformation expert system converts proposals for astronomical observations with HST into detailed observing plans. The conversion process includes the task of merging. Within TRANS, we have implemented a declarative shell to facilitate merging. This shell offers the following features: (1) an easy way of specifying rules on when to merge and when not to merge, (2) a straightforward priority mechanism for resolving conflicts among rules, (3) an explanation facility for recording the merging history, (4) a report generating mechanism to help users understand the reasons for merging, and (5) a self-documenting mechanism that documents all the merging rules that have been defined in the shell, ordered by priority. The merging shell is implemented using an object-oriented paradigm in CLOS. It has been a part of operational TRANS (after extensive testing) since July 1993. It has fulfilled all performance expectations, and has considerably simplified the process of implementing new or changed requirements for merging. The users are pleased with its report-generating and self-documenting features. Author

STABLE ADAPTIVE NEUROCONTROLLERS FOR SPACECRAFT AND SPACE ROBOTS
Robert M. Sanner *In* NASA. Goddard Space Flight Center, The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 131-142 (For primary document see N95-27375 09-63)
Avail: CASI HC A03/MF A03

This paper reviews recently developed techniques of adaptive nonlinear control using neural networks, and demonstrates their application to two important practical problems in orbital operations. An adaptive neurocontroller is first developed for spacecraft attitude control applications, and then the same design, slightly modified, is shown to be effective in the control of free-floating orbital manipulators. The algorithms discussed have guaranteed stability and convergence properties, and thus constitute viable alternatives to existing control methodologies. Simulation results are presented demonstrating the performance of each algorithm with representative dynamic models. Author

FUZZY LOGIC TECHNIQUES FOR RENDEZVOUS AND DOCKING OF TWO GEOSTATIONARY SATELLITES
Guillermo Ortega *In* NASA. Goddard Space Flight Center, The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 143-152 (For primary document see N95-27375 09-63)
Avail: CASI HC A02/MF A03

Large assemblings in space require the ability to manage rendezvous and docking operations. In future these techniques will be required for the gradual build up of big telecommunication platforms in the geostationary orbit. The paper discusses the use of fuzzy logic to model and implement a control system for the docking/berthing of two satellites in geostationary orbit. The system mounted in a chaser vehicle determines the actual state of both satellites and generates torques to execute maneuvers to establish the structural latching. The paper describes the proximity operations to collocate the two satellites in the same orbital window, the fuzzy guidance and navigation of the chaser approaching the target and the final Fuzzy berthing. The fuzzy logic system represents a knowledge based controller that realizes the close loop operations autonomously replacing the conventional control algorithms. The goal is to produce smooth control actions in the proximity of the target and during the docking to avoid disturbance torques in the final assembly orbit. The knowledge of the fuzzy controller consists of a data base of rules and the definitions of the fuzzy sets. The knowledge of an experienced spacecraft controller is captured into a set of rules forming the Rules Data Base. Author

IMPROVED REDUCED-RESOLUTION SATELLITE IMAGERY **c61**
James Ellison and Jaime Milstein *In* NASA. Goddard Space Flight Center, The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 163-178 (For primary document see N95-27375 09-63)
Avail: CASI HC A03/MF A03

The resolution of satellite imagery is often traded-off to satisfy transmission time and bandwidth, memory, and display limitations. Although there are many ways to achieve the same reduction in resolution, algorithms vary in their ability to preserve the visual quality of the original imagery. These issues are investigated in the context of the Landsat browse system, which permits the user to preview a reduced resolution version of a Landsat image. Wavelets-based techniques for resolution reduction are proposed as alternatives to subsampling used in the current system. Experts judged imagery generated by the wavelets-based methods visually superior, confirming initial quantitative results. In particular, compared to subsampling, the wavelets-based techniques were much less likely to obscure roads, transmission lines, and other linear features present in the original image, introduce artifacts and noise, and otherwise reduce the usefulness of the image. The wavelets-based techniques afford multiple levels of resolution reduction and computational speed. This study is applicable to a wide range of reduced resolution applications in satellite imaging systems, including low resolution display, spaceborne browse, emergency image transmission, and real-time video downlinking. RECONSTRUCTION OF AN INFRARED BAND OF METEOROLOGICAL SATELLITE IMAGERY WITH ABDUCTIVE NETWORKS **c47**
Harvey A. Singer, John E. Cockayne, and Peter L. Versteegen *In* NASA. Goddard Space Flight Center, The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 179-191 (For primary document see N95-27375 09-63)
(SAIC-94/1062) Avail: CASI HC A03/MF A03

As the current fleet of meteorological satellites age, the accuracy of the imagery sensed on a spectral channel of the image scanning system is continually and progressively degraded by noise. In time, that data may even become unusable. We describe a novel approach to the reconstruction of the noisy satellite imagery according to empirical functional relationships that tie the spectral channels together. Abductive networks are applied to automatically learn the empirical functional relationships between the data sensed on the other spectral channels to calculate the data that should have been sensed on the corrupted channel. Using imagery unaffected by noise, it is demonstrated that abductive networks correctly predict the noise-free observed data. Author

Avail: CASI HC A03/MF A03

For about a decade model-based reasoning has been propounded by a number of researchers. Maybe one of the most convincing arguments in favor of this kind of reasoning has been given by Davis in his paper on diagnosis from first principles (Davis 1984). Following their guidelines we have developed a system to verify the behavior of a satellite-based instrument GOME (which will be measuring Ozone concentrations in the near future (1995)). We start by giving a description of model-based monitoring. Besides recognizing that something is wrong, we also like to find the cause for misbehaving automatically. Therefore, we show how the monitoring technique can be extended to model-based diagnosis. Author

(Grant NAG5-2686)
Avail: CASI HC A03/MF A03

The variability of AVHRR calibration coefficient in time was analyzed using algorithms of linear and non-linear time series analysis. Specifically we have used the spline trend modeling, autoregressive process analysis, incremental neural network learning algorithm and redundancy functional testing. The analysis performed on available AVHRR data sets revealed that (1) the calibration data have nonlinear dependencies, (2) the calibration data depend strongly on the target temperature, (3) both calibration coefficients and the temperature time series can be modeled, in the first approximation, as autonomous dynamical systems, (4) the high frequency residuals of the analyzed data sets can be best modeled as an autoregressive process of the 10th degree. We have dealt with a nonlinear identification problem and the problem of noise filtering (data smoothing). The system identification and filtering are significant problems for AVHRR data sets. The algorithms outlined in this study can be used for the future EOS missions. Prediction and smoothing algorithms for time series of calibration data provide a functional characterization of the data. Those algorithms can be particularly useful when calibration data are incomplete or sparse. Author

A FUZZY LOGIC INTELLIGENT DIAGNOSTIC SYSTEM FOR SPACECRAFT INTEGRATED VEHICLE HEALTH MANAGEMENT
G. Gordon Wu *In* NASA. Goddard Space Flight Center, The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 221-227 (For primary document see N95-27375 09-63)
(Contract NAS9-19266)
Avail: CASI HC A02/MF A03

Due to the complexity of future space missions and the large amount of data involved, greater autonomy in data processing is demanded for mission operations, training, and vehicle health management. In this paper, we develop a fuzzy logic intelligent diagnostic system to perform data reduction, data analysis, and fault diagnosis for spacecraft vehicle health management applications. The diagnostic system contains a data filter and an inference engine. The data filter is designed to intelligently select only the necessary data for analysis, while the inference engine is designed for failure detection, warning, and decision on corrective actions using fuzzy logic synthesis. Due to its adaptive nature and on-line learning ability, the diagnostic system is capable of dealing with environmental noise, uncertainties, conflict information, and sensor faults. Author

Avail: CASI HC A02/MF A03

The University of California at Berkeley's (UCB) Center for Extreme Ultraviolet Astrophysics (CEA), in conjunction with NASA's Ames Research Center (ARC), has implemented an autonomous monitoring system in the Extreme Ultraviolet Explorer (EUVE) science operations center (ESOC). The implementation was driven by a need to reduce operations costs and has allowed the ESOC to move from continuous, three-shift, human-tended monitoring of the science payload to a one-shift operation in which the off shifts are monitored by an autonomous anomaly detection system. This system includes Eworks, an artificial intelligence (AI) payload telemetry monitoring package based on RTworks, and Epage, an automatic paging system to notify ESOC personnel of detected anomalies. In this age of shrinking NASA budgets, the lessons learned on the EUVE project are useful to other NASA missions looking for ways to reduce their operations budgets. The process of knowledge capture, from the payload controllers for implementation in an expert system, is directly applicable to any mission considering a transition to autonomous monitoring in their control center. The collaboration with ARC demonstrates how a project with limited programming resources can expand the breadth of its goals without incurring the high cost of hiring additional, dedicated programmers. This dispersal of expertise across NASA centers allows future missions to easily access experts for collaborative efforts of their own. Even the criterion used to choose an expert system has widespread impacts on the implementation, including the completion time and the final cost. In this paper we discuss, from inception to completion, the areas where our experiences in moving from three shifts to one shift may offer insights for other NASA missions.

COMPREHENSION AND RETRIEVAL OF FAILURE CASES IN AIRBORNE OBSERVATORIES c12

Sergio J. Alvarado and Kenrick J. Mock *In* NASA. Goddard Space Flight Center, The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 237-251 (For primary document see N95-27375 09-63)
(Contract NCA2-721)
Avail: CASI HC A03/MF A03

This paper describes research dealing with the computational problem of analyzing and repairing failures of electronic and mechanical systems of telescopes in NASA's airborne observatories, such as KAO (Kuiper Airborne Observatory) and SOFIA (Stratospheric Observatory for Infrared Astronomy). The research has resulted in the development of an experimental system that acquires knowledge of failure analysis from input text, and answers questions regarding failure detection and correction. The system's design builds upon previous work on text comprehension and question answering, including: knowledge representation for conceptual analysis of failure descriptions, strategies for mapping natural language into conceptual representations, case-based reasoning strategies for memory organization and indexing, and strategies for memory search and retrieval. These techniques have been combined into a model that accounts for: (a) how to build a knowledge base of system failures and repair procedures from descriptions that appear in telescope-operators' logbooks and FMEA (failure modes and effects analysis) manuals; and (b) how to use that knowledge base to search and retrieve answers to questions about causes and effects of failures, as well as diagnosis and repair procedures. This model has been implemented in FANSYS (Failure ANalysis SYStem), a prototype text comprehension and question answering program for failure analysis.

LIMAP is a programming system oriented toward efficient information manipulation over fixed finite domains, and quantification over paths and predicates. A generalization of Warshall's Algorithm to precompute paths in a sparse matrix representation of semantic nets is employed to allow questions involving paths between components to be posed and answered easily. LIMAP's ability to cache all paths between two components in a matrix cell proved to be a computational obstacle, however, when the semantic net grew to realistic size. The present paper describes a means of mitigating this combinatorial explosion to an extent that makes the use of the LIMAP representation feasible for problems of significant size. The technique we describe radically reduces the size of the search space in which LIMAP must operate; semantic nets of more than 500 nodes have been attacked successfully. Furthermore, it appears that the procedure described is applicable not only to LIMAP, but to a number of other combinatorially explosive search space problems found in AI as well.

REAL-TIME VALUE-DRIVEN DIAGNOSIS

Bruce DAmbrosio *In* NASA. Goddard Space Flight Center, The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 263-278 (For primary document see N95-27375 09-63)
(Contract NSF 91-00530)
Avail: CASI HC A03/MF A03

Diagnosis is often thought of as an isolated task in theoretical reasoning (reasoning with the goal of updating our beliefs about the world). We present a decision-theoretic interpretation of diagnosis as a task in practical reasoning (reasoning with the goal of acting in the world), and sketch components of our approach to this task. These components include an abstract problem description, a decision-theoretic model of the basic task, a set of inference methods suitable for evaluating the decision representation in real-time, and a control architecture to provide the needed continuing coordination between the agent and its environment. A principal contribution of this work is the representation and inference methods we have developed, which extend previously available probabilistic inference methods and narrow, somewhat, the gap between probabilistic and logical models of diagnosis.

A LINGUISTIC GEOMETRY FOR 3D STRATEGIC PLANNING

Boris Stilman *In* NASA. Goddard Space Flight Center, The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies May 1995 p 279-295 (For primary document see N95-27375 09-63)
Avail: CASI HC A03/MF A03

This paper is a new step in the development and application of the Linguistic Geometry. This formal theory is intended to discover the inner properties of human expert heuristics, which have been successful in a certain class of complex control systems, and apply them to different systems. In this paper we investigate heuristics extracted in the form of hierarchical networks of planning paths of autonomous agents. Employing Linguistic Geometry tools the dynamic hierarchy of networks is represented as a hierarchy of formal attribute languages. The main ideas of this methodology are shown in this paper on the new pilot example of the solution of the extremely complex 3D optimization problem of strategic planning for the space combat of autonomous vehicles. This example demonstrates deep and highly selective search in comparison with conventional search algorithms.

IMPROVED NUMERICAL SOLUTION OF MIXED H2/H(INFINITY) OPTIMIZATION WITH APPLICATIONS M.S. Thesis

Linda D. Smith Dec. 1994 171 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(AD-A289315; AFIT/GAE/ENY/94D-01) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This study improved the numerical optimization technique used to compute mixed H2/H(infinity) controllers. The run time to generate the full curve of an H2/H(infinity) design was reduced by a factor of almost 200 for a specific example. This was accomplished by improving gradient calculations, upgrading the H infinity norm calculation to capture multiple peaks in the singular value plot and using routines that minimized processing time. The optimization routine used was the MATLAB 'CONSTR' Sequential Quadratic Programming (SQP) routine. This SQP routine was compared to a FORTRAN SQP numerical optimizer, IMSL/DNCONG. The method was applied to an F-16 SISO example and a missile MIMO example. The mixed H2/H(infinity) controller for both these examples are compared to previous controller designs created using the LQG/LTR technique. DTIC

NEURAL NETWORK ERROR COMPENSATION OF MACHINE TOOLS Final Report, 12 May - 12 Nov. 1994

Christopher D. Mize, John C. Ziegert, and N. Srinivasa 16 Dec. 1994 51 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F33615-94-C-4438)
(AD-A289300; Rept-0001AF) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Thermally induced errors have been identified as a major contributor to the overall inaccuracy of machine tools. The main objective of this research was to provide a fast and accurate method for identifying and compensating these errors. A direct workspace identification technique was adopted where the total error at cutting tool is measured directly using a new calibration device called the Laser Ball Bar. This device was used in conjunction with a neural network to rapidly build a model of the mach tool for a thermal duty cycle that simulated machining of large workpieces. The overall prediction accuracy of the network was found to be within 3 microns. The network was then integrated with a PC based error compensation system. Final the performance of the overall system was tested by machining test parts under a variety thermal conditions. Substantial improvements in the accuracy of the machined parts were achieved using the error compensation system. DTIC

COGNITIVE NETWORKS FOR ATR: THE ROLES OF BIFURCATION AND CHAOS Quarterly Report No. 2, 1 Oct. 1994 - 1 Jan. 1995

N. H. Farhat 19 Dec. 1994 5 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-94-1-0931)
(AD-A289010) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

In previous work we established the importance of developing neural networks that compute with diverse attractors as means for introducing cognition in neural networks. Cognition is the ability of a network to distinguish, on its own, between novel and familiar objects, the latter being the set of objects on which the network is trained and the former being the set of all objects never seen by the network before. Bifurcation between different kinds of attractors in such cognitive networks is the mechanism by which cognition is achieved. Cognition is essential in networks intended to operate in complex uncontrolled environment like that encountered in most automated target recognition (ATR) scenarios. For these reasons we began exploring neural net models that could exhibit all three types of attractors: point, periodic, and chaotic. There is mounting evidence from biology to indicate that the study of such networks can help understand higher-level brain functions such as feature-linking, cognition, separation of object from background, inferencing, and other higher-level functions and can lead to the development of higher-level neural networks with enhanced capabilities. WAVELET ANALYSIS AND ITS APPLICATIONS Final Report, 1 Apr. 1993 - 30 Nov. 1994

Charles K. Chui 24 Jan. 1995 5 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DAAH04-93-G-0047)
(AD-A291735; ARO-31003.1-MA-SDI) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Time-frequency localization is one of the most essential features of the wavelet transform. It was shown that while high order Daubechies and Battle-Lemarie wavelets give poor time-frequency localizations, the Chui-Wang spline-wavelets provide asymptotically optimal time-frequency windows. On the other hand, we also showed that by using the scale 3 instead of 2, symmetry can be achieved by orthonormal wavelets with compact support. Multivariate wavelets, particularly those with matrix dilation, were studied, and the theory of oversampling frames was extended to this setting. Interpolating wavelets have distributional duals that lead to the notion of functional wavelet transform. Other extensions required a study of the stability issue and algorithmic construction in multivariate splines. Applications to systems theory lead to the study of Hankel approximation and localization of neural networks. DTIC

ALLIANCE: AN ARCHITECTURE FOR FAULT TOLERANT, COOPERATIVE CONTROL OF HETEROGENEOUS MOBILE ROBOTS

L. E. Parker 1995 9 p Presented at the IEEE/RSJ/GI International Conference on Intelligent Robots and Systems (IROS), Munich, Germany, 12-16 Sep. 1994
(Contract DE-AC05-84OR-21400)
(DE95-007374; CONF-9409306-1) Avail: CASI HC A02/MF A01

This research addresses the problem of achieving fault tolerant cooperation within small- to medium-sized teams of heterogeneous mobile robots. The author describes a novel behavior-based, fully distributed architecture, called ALLIANCE, that utilizes adaptive action selection to achieve fault tolerant cooperative control in robot missions involving loosely coupled, largely independent tasks. The robots in this architecture possess a variety of high-level functions that they can perform during a mission, and must at all times select an appropriate action based on the requirements of the mission, the activities of other robots, the current environmental conditions, and their own internal states. Since such cooperative teams often work in dynamic and unpredictable environments, the software architecture allows the team members to respond robustly and reliably to unexpected environmental changes and modifications in the robot team that may occur due to mechanical failure, the learning of new skills, or the addition or removal of robots from the team by human intervention. After presenting ALLIANCE, the author describes in detail experimental results of an implementation of this architecture on a team of physical mobile robots performing a cooperative box pushing demonstration. These experiments illustrate the ability of ALLIANCE to achieve adaptive, fault-tolerant cooperative control amidst dynamic changes in the capabilities of the robot team. DOE

BILATERAL FORCE FEEDBACK FOR HYDRAULICALLY ACTUATED SYSTEMS M.S. Thesis

Gregory S. Johnson Dec. 1994 120 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A291632) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This thesis report discusses the design, construction, and experimentation of force feedback in one and two degrees of freedom, hydraulically actuated systems. A master hydraulic unit is used to positionally control a remotely located slave hydraulic unit. An obstruction in the path of the slave unit is used as a force control to the master unit, reducing the power assist to the operator. An analysis was conducted to predict the performance and stability of the system for various amplifier gain settings. One and two degrees of freedom models were constructed to verify the analysis and to physically observe the force feedback. DTIC

These notes were written for an introductory course on the application of multigrid methods to elliptic and hyperbolic partial differential equations for engineers, physicists and applied mathematicians. The use of more advanced mathematical tools, such as functional analysis, is avoided. The course is intended to be accessible to a wide audience of users of computational methods. We restrict ourselves to finite volume and finite difference discretization. The basic principles are given. Smoothing methods and Fourier smoothing analysis are reviewed. The fundamental multigrid algorithm is studied. The smoothing and coarse grid approximation properties are discussed. Multigrid schedules and structured programming of multigrid algorithms are treated. Robustness and efficiency are considered. Author

THE fBm INTERPOLATOR Final Report
Andrew B. Martinez 4 Nov. 1994 16 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DA Proj. R03-5)
(AD-A288996; NRL-MR/7441-93-7079) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

A technique for interpolating an irregularly sampled multidimensional field is presented. The method assumes that the field to be interpolated is a fractional Brownian motion surface with additive measurement error. There are several advantages to this method: data sets with different mean-squared measurement errors can be optimally merged, and the variance of the estimator can be easily computed at each interpolation point. An iterative algorithm is given for implementing the estimator with the advantage of allowing a stopping rule to be used to terminate the iteration after a predetermined level of performance is achieved. Furthermore, at each stage, multiple points can be tested, the resulting performance evaluated, and that point which most decreases the variance of the estimator selected. Using the iterative algorithm produces a low order estimator based on a small, carefully selected set of points with a reasonable level of performance. DTIC

GENERAL PURPOSE FINITE ELEMENT SOLVER
J. Freund and A. Lempinen Oct. 1994 82 p
(ISSN 1237-4903)
(PB95-185062; ISBN-951-22-2334-1) Avail: CASI HC A05/MF A01

The manual describes a finite element method based program for second order partial differential equations. The program handles sets of non-linear non-stationary problems; and it can be used to solve problems of elliptic, parabolic and hyperbolic type whenever a proper weak (weighted residual) formulation is known. Similar approximations are used for all of the unknowns, which means that the burden for stability will be on the weak form. As spatial and temporal coordinates are handled truly on the same footing, the treatment of moving domain or boundaries is straightforward. The constituent parts of the solution method are explained in detail. Then the solution algorithm showing how to put the parts together is given in pseudo language. Only the finite element solver part of the program is considered here. The selected algorithm led to a quite compact solver consisting of about 3,000 lines of FORTRAN 77. NTIS

HYPERKAEHLER METRICS ASSOCIATED TO COMPACT LIE GROUPS
Andrew Dancer and Andrew Swann (Odense Univ., Denmark.) Dec. 1994 16 p
(PB95-185161; IHES/M/94/66) Avail: CASI HC A03/MF A01

In this paper we study a moduli space of solutions to Nahm's equations. We recall that a hyperkahler structure on a manifold is a quadruple (g, I, J, K), where g is a Riemannian metric and I, J, K are complex structures satisfying the quaternionic relations IJ = K = -IJ etc., and such that (g, I), (g, J), (g, K) are Kahler structures. One can show that such a metric g is necessarily Ricci-flat, and in fact all the hyperkahler metrics we discuss are also complete. NTIS

COMPACTIFICATION OF MODULI SPACES OF MONOPOLES
R. G. Wang Nov. 1994 28 p See also PB95-165528
(PB95-185179; IHES/M/94/57) Avail: CASI HC A03/MF A01

In 1987, A. Floer suggested that Yang-Mills-Higgs theory should be studied on asymptotically Euclidean 3-manifolds M and it has been proved a rich subject in recent years. The focus of interest is the geometry of the moduli space of monopoles on M and its applications. To apply the theory of monopoles to study the topology of M, a main problem is the non-compactness of moduli space M(sub m, sup k). Although it is clearly clarified, M(sub m, sup k) itself seems not to have an immediate, natural compactification. The problem is discussed in this paper. NTIS

YANG-BAXTER TYPE EQUATIONS AND POSETS OF MAXIMAL CHAINS
R. J. Lawrence (Michigan Univ., Ann Arbor, MI.) Nov. 1994 33 p
Presented at the 3rd Ann Arbor Conference on Combinatories and Algebra, Ann Arbor, MI, 8-12 Jun. 1994
(PB95-185195; IHES/M/94/59) Avail: CASI HC A03/MF A01

The usual Yang-Baxter equation may be viewed as a commutativity relation on faces of a permutahedron. These polyhedra are related via extension posets to certain arrangements of hyperplanes and their vertices are in 1-1 correspondence with maximal chains in the Boolean poset B(sub n). In this paper, similar constructions are performed in one dimension higher, the associated algebraic relations replacing the Yang-Baxter equation being similar to the permutahedron equation. The geometric structure of the poset of maximal chains in S (sub(alpha sub 1)) X...X S (sub (alpha sub k)) is discussed in some detail, and cell types are found to be classified by a poset of 'partitions of partitions' in much the same way as those for permutahedra are classified by ordinary partitions. GENERALIZED SCHWARZIANS IN SEVERAL VARIABLES AND MOEBIUS INVARIANT DIFFERENTIAL OPERATORS
Robert Molzon (Kentucky Univ., Lexington, KY.) and Hirotaka Tamanoi (Kentucky Univ., Lexington, KY.) Dec. 1994 49 p
(PB95-185211; IHES/M/94/64) Avail: CASI HC A03/MF A01

We introduce certain Mobius invariant differential operators in several variables, which in many ways correctly generalize the classical Schwarzian derivative in one variable. We show that these generalized Schwarzians generate the entire set of Mobius invariant differential operators acting on local biholomorphisms. We then prove the composition formula for generalized Schwarzians from the point of view of connections in vector bundles. We also give the necessary and sufficient condition to prescribe generalized Schwarzians and give the formula for the solution. NTIS

ADAPTIVE FINITE ELEMENT METHOD I: SOLUTION ALGORITHM AND COMPUTATIONAL EXAMPLES Final Report

J. M. Coyle and J. E. Flaherty Aug. 1994 57 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288979; ARCCB-TR-94033) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

An adaptive finite element method is developed to solve initial boundary value problems for vector systems of parabolic partial differential equations in one space dimension and time. The differential equations are discretized in space using piecewise linear finite element approximations. Superconvergence properties and quadratic polynomials are used to derive a computationally inexpensive approximation to the spatial component of the error. This technique is coupled with time integration schemes of successively higher orders to obtain an approximation of the temporal and total discretization errors. These approximate errors are used to control an adaptive mesh refinement strategy. Refinement is performed in space, time, or both space and time depending on the dominant component of the error estimate. A computer code coupling this refinement strategy and stable mesh movement has been written and applied to a number of problems. These computations confirm that proper mesh movement can reduce the computational efforts associated with mesh refinement. DTIC

THE METHOD OF SPACE-TIME CONSERVATION ELEMENT AND SOLUTION ELEMENT-APPLICATIONS TO ONE-DIMENSIONAL AND TWO-DIMENSIONAL TIME-MARCHING FLOW PROBLEMS

Sin-Chung Chang, Xiao-Yen Wang (Colorado Univ., Boulder, CO.), and Chuen-Yen Chow (Colorado Univ., Boulder, CO.) May 1995 37 p Presented at the 12th Computational Fluid Dynamics Conference, San Diego, CA, 19-22 Jun. 1995; sponsored by AIAA
(RTOP 505-62-52)
(NASA-TM-106915; E-9623; NAS 1.15:106915; AIAA Paper 95-1754)
Avail: CASI HC A03/MF A01

A nontraditional numerical method for solving conservation laws is being developed. The new method is designed from a physicist's perspective, i.e., its development is based more on physics than numerics. Even though it uses only the simplest approximation techniques, a 2D time-marching Euler solver developed recently using the new method is capable of generating nearly perfect solutions for a 2D shock reflection problem used by Helen Yee and others. Moreover, a recent application of this solver to computational aeroacoustics (CAA) problems reveals that: (1) accuracy of its results is comparable to that of a 6th order compact difference scheme even though nominally the current solver is only of 2nd-order accuracy; (2) generally, the non-reflecting boundary condition can be implemented in a simple way without involving characteristic variables; and (3) most importantly, the current solver is capable of handling both continuous and discontinuous flows very well and thus provides a unique numerical tool for solving those flow problems where the interactions between sound waves and shocks are important, such as the noise field around a supersonic over- or under-expansion jet. CONTRIBUTION TO THE OPTIMAL SHAPE DESIGN OF TWO-DIMENSIONAL INTERNAL FLOWS WITH EMBEDDED SHOCKS

Angelo Iollo (Politecnico di Torino, Torino, Italy.) and Manuel D. Salas (National Aeronautics and Space Administration. Langley Research Center, Hampton, VA.) Mar. 1995 23 p Submitted for publication
(Contract NAS1-19480; RTOP 505-90-52-01)
(NASA-CR-195062; NAS 1.26:195062; ICASE-95-20) Avail: CASI HC A03/MF A01

We explore the practicability of optimal shape design for flows modeled by the Euler equations. We define a functional whose minimum represents the optimality condition. The gradient of the functional with respect to the geometry is calculated with the Lagrange multipliers, which are determined by solving a co-state equation. The optimization problem is then examined by comparing the performance of several gradient-based optimization algorithms. In this formulation, the flow field can be computed to an arbitrary order of accuracy. Finally, some results for internal flows with embedded shocks are presented, including a case for which the solution to the inverse problem does not belong to the design space. Author

CONTROL-FLOW ANALYSIS AND TYPE SYSTEMS

Nevin Heintze Dec. 1994 20 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F19628-91-C-0168; ARPA Order 8313)
(AD-A289338; CMU-CS-94-227; CMU-CS-FOX-94-09) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

We establish a series of equivalences between type systems and control-flow analyses. Specifically, we take four type systems from the literature (involving simple types, subtypes and recursion) and conservatively enrich them to reason about control-flow information. Similarly, we take four standard control-flow systems and conservatively enrich them to reason about type consistency. Our main result is that for each type system, there is a control-flow system with equivalent reasoning power. In essence, type systems and control-flow analysis can be viewed as complementary approaches for addressing questions of type consistency and control-flow. DTIC

RANDOM RELAXATION OF FIXED POINT ITERATION

M. Verkama Oct. 1994 17 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(PB95-185013; RR-A54) Avail: CASI HC A03

This paper considers a stochastic fixed point iteration where each coordinate is updated with a certain probability and otherwise left unchanged. The iteration is interesting from the viewpoint of parallel distributed computation because the realized sequences belong to the class of asynchronous fixed point iterations. It is demonstrated with a linear system that the convergence conditions for randomly relaxed iterations are less stringent than their asynchronous counterparts, and that they can illuminate the tightness of the convergence conditions for asynchronous iterations, which are typically worst-case conditions. A 3D AGGLOMERATION MULTIGRID SOLVER FOR THE REYNOLDS-AVERAGED NAVIER-STOKES EQUATIONS ON UNSTRUCTURED MESHES Final Report
D. J. Marvriplis and V. Venkatakrishnan Apr. 1995 30 p
(Contract NAS1-19480; RTOP 505-90-52-01)
(NASA-CR-195073; NAS 1.26:195073; ICASE-95-30) Avail: CASI HC A03/MF A01

An agglomeration multigrid strategy is developed and implemented for the solution of three-dimensional steady viscous flows. The method enables convergence acceleration with minimal additional memory overheads, and is completely automated, in that it can deal with grids of arbitrary construction. The multigrid technique is validated by comparing the delivered convergence rates with those obtained by a previously developed overset-mesh multigrid approach, and by demonstrating grid independent convergence rates for aerodynamic problems on very large grids. Prospects for further increases in multigrid efficiency for high-Reynolds number viscous flows on highly stretched meshes are discussed. Author

SOME COMMUTATIVITY THEOREMS FOR A CERTAIN CLASS OF RINGS
M. A. Khan Aug. 1994 14 p
(DE95-608750; IC-94/235) Avail: CASI HC A03/MF A01 (US Sales Only)

We first establish the commutativity theorem for semiprime ring satisfying the polynomial identity (x(sup n), y) x(sup r) = +/- y(sup s) (x, y(sup m)) y(sup t) for all x,y in R, where m, n, r, s, and t are fixed nonnegative integers, and further, we investigate commutativity of rings with unity under some additional hypothesis. It is also shown that the above result is true for s-unital. We provide some counter examples which show that the hypothesis of our theorems are not altogether superfluous. The results generalize some of the well-known commutativity theorems for rings which are right s-unital. DOE

THE COMPARISON OF P(SUB 1) AND SIMPLIFIED P(SUB 2) SYNTHETIC ACCELERATION FOR ITERATIVE METHODS IN TRANSPORT SOLUTIONS
Taewan Noh and Warren F. Miller 1994 12 p Presented at the International Conference on Mathematics and Computations, Reactor Physics, and Environmental Analyses, Portland, OR, 30 Apr. - 4 May 1995
(Contract W-7405-eng-36)
(DE94-018306; LA-UR-94-2848; CONF-950420-1) Avail: CASI HC A03/MF A01

Using an operator form of a synthetic acceleration method, we derive the P(sub 1) and a new second-moment P(sub 2) acceleration schemes. We analyze the convergence rate of each scheme by performing a Fourier analysis. The second-moment P(sub 2) acceleration outperforms an earlier third-moment P(sub 2) acceleration method by Miller and Larsen. However, it is still less efficient than P(sub 1) acceleration (diffusion synthetic acceleration: DSA). These results confirm that one cannot simply assume that replacement of the DSA method with a higher order operator will lead to a smaller spectral radius. We get similar results for the P(sub 1) and simplified P(sub 2) acceleration in two-dimensional x-y geometry. DOE

A significant number of analytical problems (for example, abnormal-environment safety analysis) depend on data that are partly or mostly subjective. Since fuzzy algebra depends on subjective operands, we have been investigating its applicability to these forms of assessment, particularly for portraying uncertainty in the results of PRA (probabilistic risk analysis) and in risk-analysis-aided decision-making. Since analysis results can be a major contributor to a safety-measure decision process, risk management depends on relating uncertainty to only known (not assumed) information. The uncertainties due to abnormal environments are even more challenging than those in normal-environment safety assessments; and therefore require an even more judicious approach. Fuzzy algebra matches these requirements well. One of the most useful aspects of this work is that we have shown the potential for significant differences (especially in perceived margin relative to a decision threshold) between fuzzy assessment and probabilistic assessment based on subtle factors inherent in the choice of probability distribution models. We have also shown the relation of fuzzy algebra assessment to 'bounds' analysis, as well as a description of how analyses can migrate from bounds analysis to fuzzy-algebra analysis, and to probabilistic analysis as information about the process to be analyzed is obtained. Instructive examples are used to illustrate the points. DOE

MULTIGRID TECHNIQUES FOR UNSTRUCTURED MESHES Final Report

D. J. Mavriplis Apr. 1995 62 p Presented at the 26th Computational Fluid Dynamics Lecture Series Program, Rhode-Saint-Genese, Belgium, 13-17 Mar. 1995
(Contract NAS1-19480; RTOP 505-90-52-01)
(NASA-CR-195070; NAS 1.26:195070; ICASE-95-27) Avail: CASI HC A04/MF A01

An overview of current multigrid techniques for unstructured meshes is given. The basic principles of the multigrid approach are first outlined. Application of these principles to unstructured mesh problems is then described, illustrating various different approaches, and giving examples of practical applications. Advanced multigrid topics, such as the use of algebraic multigrid methods, and the combination of multigrid techniques with adaptive meshing strategies are dealt with in subsequent sections. These represent current areas of research, and the unresolved issues are discussed. The presentation is organized in an educational manner, for readers familiar with computational fluid dynamics, wishing to learn more about current unstructured mesh techniques. Author

THE ASSEMBLY TOWER AND SOME CATEGORICAL AND ALGEBRAIC ASPECTS OF FRAME THEORY Ph.D. Thesis

J. Todd Wilson May 1994 138 p Sponsored in part by the Johannes Kepler Universitat Linz and the Medlar Project Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289360; CMU-CS-94-186) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This thesis studies the framework arising in the algebraic and categorical description of general (or point-set) topology. Classically, a topological space is a set with structure, the structure being its collection of open sets, which taken together determine an abstract notion of proximity. The collection of all such open sets forms a special kind of complete lattice, and it is a class of complete lattices (frames) motivated by these examples that is the focus of algebraic study-in short, one dispenses with the points and studies the algebra of open sets. This method has had successes not only in general topology, but has also found application in such diverse areas as logic, topos theory, and even computer science. It is not these specific areas of application, however, with which the thesis is primarily concerned; rather, it is that part of the theory which they all share: the category of frames. This category has as a sub-category the category of complete Boolean algebras, and these two categories stand in much the same relation as do the categories of topological spaces and sets. As with sets and spaces, complete Boolean algebras are in some ways better behaved categorically than frames, and so the former provides a potential source of information about the latter. For the purpose of obtaining this information, a construction for frames, called the assembly tower and present already at the beginnings of the subject, is studied systematically and, in this way, found to be a key tool for uncovering both structural and and algebraic properties of frames. AN INVARIANT MEASURE FOR A NONLINEAR SCHROEDINGER EQUATION

P. E. Zhidkov 1994 20 p
(DE95-610166; JINR-R-5-94-199) Avail: CASI HC A03/MF A01 (US Sales Only)

We construct an invariant measure for the dynamical system generated by a nonlinear Schroedinger equation. Conditions of the boundedness of the measure constructed are obtained. The result allows us to apply the Poincare recurrence theorem which (partially) explains the Fermi-Pasta-Ulam phenomenon well-known in the theory of nonlinear waves. DOE

PROOFS OF CONTRACTED LENGTH NON-COVARIANCE

V. N. Streltsov 1994 4 p
(DE95-610175; JINR-D-2-94-179) Avail: CASI HC A01/MF A01 (US Sales Only)

Different proofs of contracted length non-covariance are discussed. The way based on the establishment of interval inconstancy (dependence on velocity) seems to be the most convincing one. It is stressed that the known non-covariance of the electromagnetic field energy and momentum of a moving charge (the problem 4/3) is a direct consequence of contracted length non-covariance. DOE

THE ORIGIN OF SPURIOUS SOLUTIONS IN COMPUTATIONAL ELECTROMAGNETICS

Bo-nan Jiang, Jie Wu, and L. A. Povinelli May 1995 46 p
(Contract NCC3-370; RTOP 505-90-5K)
(NASA-TM-106921; E-9633; ICOMP-95-8; NAS 1.15:106921) Avail: CASI HC A03/MF A01

The origin of spurious solutions in computational electromagnetics, which violate the divergence equations, is deeply rooted in a misconception about the first-order Maxwell's equations and in an incorrect derivation and use of the curl-curl equations. The divergence equations must be always included in the first-order Maxwell's equations to maintain the ellipticity of the system in the space domain and to guarantee the uniqueness of the solution and/or the accuracy of the numerical solutions. The div-curl method and the least-squares method provide rigorous derivation of the equivalent second-order Maxwell's equations and their boundary conditions. The node-based least-squares finite element method (LSFEM) is recommended for solving the first-order full Maxwell equations directly. Examples of the numerical solutions by LSFEM for time-harmonic problems are given to demonstrate that the LSFEM is free of spurious solutions. Author

SCALING OF LOCALIZATION LENGTH OF A QUASI 1D SYSTEM WITH LONGITUDINAL BOUNDARY ROUGHNESS

Kar Gupta Abhijit and A. K. Sen (Saha Inst. of Nuclear Physics, Calcutta, India.) Aug. 1994 9 p
(DE95-609148; IC-94/213) Avail: CASI HC A02/MF A01 (US Sales Only)

We introduce irregularities on one of the longitudinal boundaries of a quasi 1D strip which has no bulk disorder. We calculate the localization length of such a system within the scope of tight-binding formalism and see how it behaves with the roughness introduced on the boundary and with the strip-width. We find that localization length scales with a composite one parameter. DOE

TWO-BODY BOUND STATES AND THE BETHE-SALPETER EQUATION
M. Pichowsky, M. Kennedy (New Hampshire Univ., Durham, NH.), and M. Strickland (Duke Univ., Durham, NC.) 18 Jan. 1995 28 p Presented at the HUGS At CEBAF '94, Hampton, VA, 31 May - 17 Jun. 1994
(Contract W-31-109-eng-38)
(DE95-008302; ANL/PHY/CP-85493; CONF-9405297-1) Avail: CASI HC A03/MF A01

The Bethe-Salpeter formalism is used to study two-body bound states within a scalar theory: two scalar fields interacting via the exchange of a third massless scalar field. The Schwinger-Dyson equation is derived using functional and diagrammatic techniques, and the Bethe-Salpeter equation is obtained in an analogous way, showing it to be a two-particle generalization of the Schwinger-Dyson equation. The authors also present a numerical method for solving the Bethe-Salpeter equation without three-dimensional reduction. The ground and first excited state masses and wavefunctions are computed within the ladder approximation and space-like form factors are calculated. DOE

ONE DIMENSIONAL GLOBAL AND LOCAL SOLUTION FOR ICRF HEATING
C. Y. Wang, D. B. Batchelor, E. F. Jaeger, and M. D. Carter Feb. 1995 30 p
(Contract DE-AC05-84OR-21400)
(DE95-007984; ORNL/TM-12923) Avail: CASI HC A03/MF A01

A numerical code GLOSI (Global and Local One-dimensional Solution for Ion cyclotron range of frequencies (ICRF) heating) is developed to solve one-dimensional wave equations resulting from the use of radio frequency (RF) waves to heat plasmas. The code uses a finite difference method. Due to its numerical stability, the code can be used to find both global and local solutions when imposed with appropriate boundary conditions. Three types of boundary conditions are introduced to describe wave scattering, antenna wave excitation, and fixed tangential wave magnetic field. The scattering boundary conditions are especially useful for local solutions. The antenna wave excitation boundary conditions can be used to excite fast and slow waves in a plasma. The tangential magnetic field boundary conditions are used to calculate impedance matrices, which describe plasma and antenna coupling and can be used by an antenna code to calculate antenna loading. These three types of boundary conditions can also be combined to describe various physical situations in RF plasma heating. The code also includes plasma thermal effects and calculates collisionless power absorption and kinetic energy flux. The plasma current density is approximated by a second-order Larmor radius expansion, which results in a sixth-order ordinary differential equation. DOE

A METHOD FOR GENERATING SKEWED RANDOM NUMBERS USING TWO OVERLAPPING UNIFORM DISTRIBUTIONS
Donald L. Ermak and John S. Nasstrom (EG and G Energy Measurements, Inc., Pleasanton, CA.) Feb. 1995 31 p Submitted for publication
(Contract W-7405-eng-48)
(DE95-008747; UCRL-ID-120424) Avail: CASI HC A03/MF A01

The objective was to implement and evaluate a method for generating skewed random numbers using a combination of uniform random numbers. The method provides a simple and accurate way of generating skewed random numbers from the specified first three moments without an a priori specification of the probability density function. We describe the procedure for generating skewed random numbers from uniform random numbers, and show that it accurately produces random numbers with the desired first three moments over a range of skewness values. We also show that in the limit of zero skewness, the distribution of random numbers is an accurate approximation to the Gaussian probability density function. DOE

A CASE STUDY IN AUTOMATED THEOREM PROVING: A DIFFICULT PROBLEM ABOUT COMMUTATORS
W. McCune Feb. 1995 12 p
(Contract W-31-109-eng-38)
(DE95-008392; ANL/MCS-TM-202) Avail: CASI HC A03/MF A01

This paper shows how the automated deduction system OTTER was used to prove the group theory theorem chi(exp 3) = e implies (((y, z), u), v) = e, where e is the identity, and (chi, y) is is the commutator chi'y'(chi)y. This is a difficult problem for automated provers, and several lengthy searches were run before a proof was found. Problem formulation and search strategy played a key role in the success. I believe that ours is the first automated proof of the theorem. DOE

CORSSTOL: CYLINDER OPTIMIZATION OF RINGS, SKIN, AND STRINGERS WITH TOLERANCE SENSITIVITY
J. Finckenor and M. Bevill Washington May 1995 37 p
(NASA-TP-3551; M-779; NAS 1.60:3551) Avail: CASI HC A03/MF A01

Cylinder Optimization of Rings, Skin, and Stringers with Tolerance (CORSSTOL) sensitivity is a design optimization program incorporating a method to examine the effects of user-provided manufacturing tolerances on weight and failure. CORSSTOL gives designers a tool to determine tolerances based on need. This is a decisive way to choose the best design among several manufacturing methods with differing capabilities and costs. CORSSTOL initially optimizes a stringer-stiffened cylinder for weight without tolerances. The skin and stringer geometry are varied, subject to stress and buckling constraints. Then the same analysis and optimization routines are used to minimize the maximum material condition weight subject to the least favorable combination of tolerances. The adjusted optimum dimensions are provided with the weight and constraint sensitivities of each design variable. The designer can immediately identify critical tolerances. The safety of parts made out of tolerance can also be determined. During design and development of weight-critical systems, design/analysis tools that provide product-oriented results are of vital significance. The development of this program and methodology provides designers with an effective cost- and weight-saving design tool. The tolerance sensitivity method can be applied to any system defined by a set of deterministic equations. Author

APPLICATIONS OF BOUNDARY ELEMENT METHODS ON THE INTEL PARAGON
D. E. Womble, D. S. Greenberg, S. R. Wheat, R. E. Benner, M. S. Ingber (New Mexico Univ., Albuquerque, NM.), G. Henry (INTEL Corp., Beaverton, OR.), and S. Gutpa (INTEL Corp., Beaverton, OR.) 1994 7 p Presented at the Supercomputing 1994 Meeting, Washington, DC, 14-18 Nov. 1994
(Contract DE-AC04-94AL-85000)
(DE94-014135; SAND-94-1566C; CONF-941118-5) Avail: CASI HC A02/MF A01

This paper describes three applications of the boundary element method and their implementations on the Intel Paragon supercomputer. Each of these applications sustains over 99 Gflops/s based on wall-clock time for the entire application and an actual count of flops executed; one application sustains over 140 Gflops/s. These implementations are production quality: each accepts the description of an arbitrary geometry as input and computes the solution to a problem of commercial and research interest. The serial versions of the codes used in one of our applications are in commercial and government use at over forty-five sites for one code and at almost 200 sites for the second code. The common kernel for these applications is a dense equation solver based on LU factorization. It is generally accepted that good performance can be achieved by dense matrix algorithms, but achieving the excellent performance demonstrated here required the development of a variety of special techniques to take full advantage of the power of the Intel Paragon. REMARKS ON THE GROWTH OF THE RESOLVENT OPERATORS FOR POWER BOUNDED OPERATORS
O. Nevanlinna Dec. 1994 26 p
(PB95-195418; RR-A-340) Avail: CASI HC A03/MF A01

In this paper the author discusses some quantitative aspects related to power bounded operators T and to the decay of T(sup n)(T-1). First, if the decay of T(sup n)(T-1) is as fast as O(1/n) then quite strong conclusions can be made. The situation can be thought of as a discrete version of analytic semigroups; the author tries to motivate this in section 1 by demonstrating the similarity and lack of it between power boundedness of T and uniform boundedness of e(sup t)(sup cT-1) where c is a constant of modulus 1 and t greater than 0. Section 2 then contains the main result in this direction. Secondly, the so called Kreiss matrix theorem relates bounds for the powers to bounds for the resolvent. The estimate is proportional to the dimension of the space and thus has as such no generalization to operators. However, qualitatively such a result holds in Banach spaces for e.g. Riesz operators: if the resolvent satisfies the resolvent condition, then the operator is power bounded (but without an estimate). The author introduces in section 3 a growth function for bounded operators. This allows one to obtain a result of the form: if the resolvent condition holds and if the growth function is finite at 1, then the powers are bounded and can be estimated. In section 4, in addition to the Kreiss matrix theorem, two other applications of the growth function are given. NTIS

A METHOD FOR SIMULATING CORRELATED RANDOM VARIABLES FROM PARTIALLY SPECIFIED DISTRIBUTIONS Final Report, Jan. - Oct. 1994
Philip M. Lurie and Matthew S. Goldberg Oct. 1994 27 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288820; IDA-P-2998) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Historical data from which to develop reliable estimates of the statistical relationships among cost elements are often scarce. Typically, information comes from many different subject-matter experts, who provide at most the moments (mean or median or mode, and possibly variance), distributional form (e.g., beta or triangular), bounds (lowest and highest possible cost), if applicable, and correlation matrix. Eliciting a fully specified multivariate distribution for the entire set of cost elements comprising a system is usually impossible. Therefore, an algorithm is needed for simulating correlated random variables from partially specified, non-normal distributions. This paper presents such an algorithm and explains how it was developed. DTIC

FILTERED KERNEL DENSITY ESTIMATION

David J. Marchette (Naval Surface Warfare Center, Dahlgren, VA.), Carey E. Priebe (Johns Hopkins Univ., Baltimore, MD.), George W. Rogers (Naval Surface Warfare Center, Dahlgren, VA.), and Jeffrey L. Solka (Naval Surface Warfare Center, Dahlgren, VA.) Oct. 1994 36 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contracts N00014-93-1-0527; N00014-92-J-1303; DAAH04-94-G-0267; DAAL03-94-G-0039)
(AD-A288293; TR-104) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

A modification of the kernel estimator for density estimation is proposed which allows the incorporation of local information about the smoothness of the density. The estimator used a small set of local bandwidths rather than a single global one as in the standard kernel estimator. It uses a set of filtering functions which determines the extent of influence of the local bandwidths. Various versions of the idea are discussed. The estimator is shown to be consistent and is illustrated by comparison to the single bandwidth kernel estimator for the case in which the filter functions are derived from finite mixture models. DTIC

PARALLELIZING LOCALLY-WEIGHTED REGRESSION

Julia Corbin Fauntleroy and Edward J. Wegman Oct. 1994 22 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contracts N00014-92-J-1303; N00014-93-I-0527; DAAH04-94-G-2067; DAAL03-91-G-0039)
(AD-A288294; TR-102) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This paper focuses on a nonparametric regression technique known as locally-weighted regression or LOESS. LOESS is a computationally intensive technique which makes it naturally amenable to exploiting high performance computers. In this paper, we explore domain decomposition techniques for LOESS and study the performance of our algorithm on an Intel Paragon XP/S A4 machine. We study both speedup and efficiency as a function of the number of nodes. Certain segments of the LOESS computation are shown to be fruitfully parallelized while others are essentially sequential and cannot be parallelized effectively. DTIC

A METHOD TO DETERMINE THE STRUCTURE OF AN UNKNOWN MIXTURE USING THE AKAIKE INFORMATION CRITERION AND THE BOOTSTRAP

Jeffrey L. Solka (Naval Surface Warfare Center, Dahlgren, VA.), Edward J. Wegman, Carey E. Priebe (Johns Hopkins Univ., Baltimore, MD.), Wendy L. Poston (Naval Surface Warfare Center, Dahlgren, VA.), and George W. Rogers (Naval Surface Warfare Center, Dahlgren, VA.) Oct. 1994 30 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contracts N00014-92-J-1303; N00014-93-1-0527; DAAH04-94-G-0267; DAAL03-91-G-0039)
(AD-A288295; TR-105) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Given i.i.d. observations x1,x2,x3,,,,xn drawn from a mixture of normal terms one is often interested in determining the number of terms in the mixture and their defining parameters. Although the problem of determining the number of terms is intractable under the most general assumptions there is hope of elucidating the mixture structure given appropriate caveats on the underlying mixture. This paper examines a new approach to this problem based on the use of Akaike Information Criterion (AIC) based pruning of data driven mixture models which are obtained from resampled data sets. Results of the application of this procedure to artificially generated and real world data sets are provided. DTIC

FAST MULTIDIMENSIONAL DENSITY ESTIMATION BASED ON RANDOM-WIDTH BINS

Leonard B. Hearne and Edward J. Wegman Oct. 1994 10 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contracts N00014-92-J-1303; MDA904-92-H-3082; DAAL03-91-G-0039; NSF DMS-90-02237)
(AD-A288286) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Histogram-type density estimators have some notable computational advantages over other forms of density estimation by virtue of the WARPing algorithm. However, traditional fixed-bin-width have less than satisfactory smoothing properties, being too coarse in regions of high density and too fine in regions of low density. Scott (1992) suggests the ASH algorithm as a means of overcoming these problems, but the ASH algorithm is computationally intensive, somewhat negating the benefits of WARPing. Wegman (1975) proposed a variable bin-width technique for one dimensional density estimators and used sieve type methods to show strong consistency results that did not depend on smoothness properties of the underlying density. In this paper, we extend the idea to high-dimensional, variable bin-width meshes. The boundaries of the bins are determined by a random subsampling of the observations. An extension of the WARPing algorithm may still be used for fast computation. We give combinatorial arguments for calculating the number of bins and also the conditional expectation and variance of the number of observations per bin. Conditional on the random hyper-rectangular tessellation, we calculate the maximum likelihood density estimator. DTIC

NONLINEAR SCALESPACE VIA HIERARCHICAL STATISTICAL MODELING Technical Report

David Shulman and Tomas Brodsky Oct. 1994 28 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-93-1-0257)
(AD-A289057; CAR-TR-742; CS-TR-3366) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Nonlinear scalespace should be based on a hierarchical statistical model of the image intensity function. This model should contain an explicit representation of the multiscale structure of edges and corners. Using this model we can have a non-ad-hoc basis for computing the parameters we need to determine how much smoothing we should do at points that appear to be edge points. We also have a basis for computing the apparent error in our scalespace calculations. Hierarchical statistical modeling is a technique that can be applied to other problems in low-level vision, but in this introductory paper we just present the application of our scalespace theory to image smoothing. Here we submit the final report for research carried out at the Department of Statistics, University of Missouri-Columbia during the period October 1, 1992 - July 31, 1994. During this period the Principal Investigator, A. P. Basu, along with his collaborators considered a number of problems in reliability theory. A. P. Basu edited the research monograph Advances in Reliability. Six refereed papers also were published. The titles of these papers are given below: (1) Life Testing and Reliability Estimation with Asymmetric Loss Function; (2) On a test for exponentiality against Monotone Failure Rate; (3) Bayesian Approach to Some Problems in Life Testing and Reliability Estimation; (4) Characterizations of a Family of Bivariate Exponential Distribution; (5) Bayesian Reliability of Stress-Strength Systems; and (6) Some Problems of Safe Dose Estimation. EMBEDOLOGY AND NEURAL ESTIMATION FOR TIME SERIES PREDICTION M.S. Thesis

Robert E. Garza Dec. 1994 179 p Limited Reproducibility: More than

20% of this document may be affected by microfiche quality
(AD-A289312; AFIT/GE/ENG/94D-11) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Time series prediction has widespread application, ranging from predicting the stock market to trying to predict future locations of scud missiles. Recent work by Sauer and Casdagli has developed into the embedology theorem, which sets forth the procedures for state space manipulation and reconstruction for time series prediction. This includes embedding the time series into a higher dimensional space in order to form an attractor, a structure defined by the embedded vectors. Embedology is combined with neural technologies in an effort to create a more accurate prediction algorithm. These algorithms consist of embedology, neural networks, Euclidean space nearest neighbors, and spectral estimation techniques in an effort to surpass the prediction accuracy of conventional methods. Local linear training methods are also examined through the use of the nearest neighbors as the training set for a neural network. Fusion methodologies are also examined in an attempt to combine several algorithms in order to increase prediction accuracy. The results of these experiments determine that the neural network algorithms have the best individual prediction accuracies, and both fusion methodologies can determine the best performance. The performance of the nearest neighbor trained neural network validates the applicability of the local linear training set. DTIC

PROBABILISTIC GROWTH MODEL
K. Eloranta Nov. 1994 20 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(PB95-185054; RR-A-338) Avail: CASI HC A03

We study a one-parameter family of probabilistic cellular automata on square and triangular lattices. Above a critical parameter value, a new dominant invariant phase appears, resulting in domain growth. In the growth regime, a second critical threshold is found, above which the expanding domains facet. This phenomenon is shown to be equivalent to a certain one-dimensional directed percolation problem studied by Domany and Kinzel. Tight bounds are given to the critical probabilities which depend on the lattice. These models are of special interest as their behavior corresponds extremely closely to that of certain simple purely deterministic cellular automata. NTIS

GENERALIZED PROBABILISTIC REASONING AND EMPIRICAL STUDIES ON COMPUTATIONAL EFFICIENCY AND SCALABILITY M.S. Thesis
Eric P. Baenen Dec. 1994 77 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289185; AFIT/GCE/ENG/94D-02) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Expert systems are tools that can be very useful for diagnostic purposes; however current methods of storing and reasoning with knowledge have significant limitations. One set of limitations involves how to store and manipulate uncertain knowledge: much of the knowledge we are dealing with has some degree of uncertainty. These limitations include lack of complete information, not being able to model cyclic information, and limitations on the size and complexity of the problems to be solved. If expert systems are ever going to be able to tackle significant real world problems then these deficiencies must be corrected. This paper describes a new method of reasoning with uncertain knowledge which improves the computational efficiency as well as scalability over current methods. The cornerstone of this method involves incorporating and exploiting information about the structure of the knowledge representation to reduce the problem size and complexity. Additionally, a new knowledge representation is discussed that will further increase the capability of expert systems to model a wider variety of real world problems. Finally, benchmarking studies of the new algorithm against the old have led to insights into the graph structure of very large knowledge bases. DTIC

Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This work focuses on the use of truncated Gaussian distributions as models for bounded data measurements that are constrained to appear between fixed limits. The authors prove that the truncated Gaussian can be viewed as a maximum entropy distribution for truncated bounded data, when mean and covariance are given. The characteristic function for the truncated Gaussian is presented; from this, algorithms are derived for calculation of mean, variance, summation, application of Bayes rule and filtering with truncated Gaussians. As an example of the power of their methods, a derivation of the disparity constraint (used in computer vision) from their models is described. The authors' approach complements results in Statistics, but their proposal is not only to use the truncated Gaussian as a model for selected data; they propose to model measurements as fundamentally in terms of truncated Gaussians. FITTING: SUBROUTINE TO FIT FOUR-MOMENT PROBABILITY DISTRIBUTIONS TO DATA
S. R. Winterstein, C. H. Lange, and S. Kumar (Stanford Univ., CA.) Jan. 1995 44 p
(Contract DE-AC04-94AL-85000)
(DE95-007722; SAND-94-3039) Avail: CASI HC A03/MF A01

FITTING is a Fortran subroutine that constructs a smooth, generalized four-parameter probability distribution model. It is fit to the first four statistical moments of the random variable X (i.e., average values of X, X(exp 2), X(exp 3), and X(exp 4)) which can be calculated from data using the associated subroutine CALMOM. The generalized model is produced from a cubic distortion of the parent model, calibrated to match the first four moments of the data. This four-moment matching is intended to provide models that are more faithful to the data in the upper tail of the distribution. Examples are shown for two specific cases. DOE

DISTRIBUTED COMPUTATION OF PARETO SOLUTIONS FOR TWO DECISION MAKERS
Harri Ehtamo, Markku Verkama, and Raimo P. Haemaelaeinen Oct. 1994 24 p Sponsored by Vano Tanner Foundation; Finnish Cultural Foundation; Swedish Foundation of Culture in Finland; and Academy of Finland
(ISSN 0782-2030)
(PB95-185047; ISBN-951-22-2337-6) Avail: CASI HC A03/MF A01

The problem of computing Pareto optimal solutions with distributed methods is considered in games with two decision makers (DMs). Distributed computation schemes do not require the DM's to know each others' objective functions. Such procedures are especially relevant in real life situations where the DM's are unwilling or unable to disclose their goals. Problems of this kind include negotiations as well as hierarchical optimization of large-scale systems. NTIS

DISTRIBUTED COMPUTATION OF PARETO SOLUTIONS IN N-PLAYER GAMES
M. Verkama, H. Ehtamo, and R. P. Haemaelaeinen Oct. 1994 30 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(PB95-185039; ISBN-951-22-2338-4) Avail: Issuing Activity (National Technical Information Service (NTIS))

The problem of computing Pareto optimal solutions with distributed algorithms is considered in N-player games. We shall first formulate a new geometric problem for finding Pareto solutions. It involves solving joint tangents for the players' objective functions. This problem can then be solved with distributed iterative methods, and two such methods are presented. The principal results are related to the analysis of the geometric problem. We give conditions under which its solutions are Pareto optimal, characterize the solutions, and prove an existence theorem. There are two important reasons for the interest in distributed algorithms. First, they can carry computational advantages over centralized schemes. Second, they can be used in situations where the players do not know each others' objective functions. NTIS

DISTRIBUTED METHODS AND PROCESSES IN GAMES OF INCOMPLETE INFORMATION Ph.D. Thesis
M. Verkama Oct. 1994 21 p
(PB95-184842; ISBN-951-22-2340-6) Avail: CASI HC A03/MF A01

One factor limiting the applicability of game theory has been the inadequacy of computational tools for handling real world problems where decision makers have incomplete information. The thesis presents the first approach to computing Pareto optimal game solutions under such circumstances, and thus opens new research possibilities. Moreover, the reachability of Pareto optimal agreements in negotiations is studied under realistic assumptions about information. The methods developed in the thesis may find applications in problems where independent decision makers, each having limited information about the situation, need to cooperate or to reach a joint decision. Another main topic of the thesis is the illumination of the interdisciplinary nature of this problem type. The third topic is the stability of asynchronous iterations that are relevant in game-related reaction processes and in distributed computation. This volume contains a summary of the thesis and lists the titles of the six papers included in PB95-184859. NTIS

NONEXISTENCE OF BILIPSCHITZ PARAMETERIZATIONS AND GEOMETRIC PROBLEMS ABOUT A(SUB INFINITY) WEIGHTS
Stephen Semmes Oct. 1994 45 p
(PB95-185187; IHES/M/94/54) Avail: CASI HC A03/MF A01

How one can recognize when a metric space is bilipschitz equivalent to a Euclidean space is considered. One should not take the abstraction of metric spaces too seriously here; subsets of R(sup n) are already quite interesting. It is easy to generate geometric conditions which are necessary for bilipschitz equivalence, but it is not clear that such conditions should ever be sufficient. The main point of this paper is that the optimistic conjectures about the existence of bilipschitz parameterizations are wrong. In other words, there are spaces whose geometry is very similar to, but still distinct from, Euclidean geometry. Related questions of bilipschitz equivalence and embeddings are addressed for metric spaces obtained by deforming the Euclidean metric on R(sup n) using an A(sub infinity) weight. NTIS

CRUSHING SINGULARITIES IN SPACETIMES WITH SPHERICAL, PLANE AND HYPERBOLIC SYMMETRY

A. D. Rendall Oct. 1994 21 p Prepared in cooperation with Max-Planck-Inst. Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(PB95-190146; IHES/P/94/55) Avail: CASI HC A03

It is shown that the initial singularities in spatially compact spacetimes with spherical, plane or hyperbolic symmetry admitting a compact constant mean curvature hypersurface are crushing singularities when the matter content of spacetime is described by the Vlasov equation (collisionless matter) or the wave equation (massless scalar field). In the spherically symmetric case, it is further shown that if the spacetime admits a maximal slice, then there are crushing singularities both in the past and in the future. The essential properties of the matter models chosen are that their energy-momentum tensors satisfy certain inequalities and that they do not develop singularities in a given regular background spacetime. PHOTON ROCKETS AND GRAVITATIONAL RADIATION

T. Damour Nov. 1994 22 p Submitted for publication
(PB95-190161; IHES/P/94/60) Avail: CASI HC A03/MF A01

The absence of gravitational radiation in Kinnersley's 'photon rocket' solution of Einstein's equations is clarified by studying the mathematically well-defined problem of point-like photon rockets in Minkowski space (i.e. massive particles emitting null fluid anisotropically and accelerating because of the recoil). We explicitly compute the (uniquely defined) linearized retarded gravitational waves emitted by such objects, which are the coherent superposition of the gravitational waves generated by the motion of the massive point-like rocket and of those generated by the energy-momentum distribution of the photon fluid. In the special case (corresponding to Kinnersley's solution) where the anisotropy of the photon emission is purely dipolar, we find that the gravitational wave amplitude generated by the energy-momentum of the photons exactly cancels the usual $1/r$ gravitational wave amplitude generated by the accelerated motion of the rocket. More general photon anisotropies would, however, generate genuine gravitational radiation at infinity. Our explicit calculations show the compatibility between the non-radiative character of Kinnersley's solution and the currently used gravitational wave generation formalisms based on post-Minkowskian perturbation theory. COORDINATES OF THE QUANTUM PLANE AS q-TENSOR OPERATORS IN U(SUB q) (su(2) * su(2))

L. C. Biedenharn and M. A. Lohe (Northern Territory Univ., Casuarina, Australia.) 13 Jan. 1995 18 p
(Contract DE-FG03-93ER-40757)
(DE95-007100; DOE/ER-40757/058) Avail: CASI HC A03/MF A01

The relation between the set of transformations M(sub q)(2) of the quantum plane and the quantum universal enveloping algebra U(sub q)(u(2)) is investigated by constructing representations of the factor algebra U(sub q) (u(2) * u(2)). The non-commuting coordinates of M(sub q)(2), on which U(sub q)(2) * U(sub q)(2) acts, are realized as q-spinors with respect to each U(sub q)(u(2)) algebra. The representation matrices of U(sub q)(2) are constructed as polynomials in these spinor components. This construction allows a derivation of the commutation relations of the noncommuting coordinates of M(sub q)(2) directly from properties of U(sub q)(u(2)). The generalization of these results to U(sub q)(u(n)) and M(sub q)(n) is also discussed. DOE

ABSOLUTE LOGICS Thesis

Jyrki Akkanen and Olli Lehto, ed. 1995 87 p Repr. from Annales Academie Scientiarum Fennice, Series A. 1: Mathematica Dissertationes, 100 (Helsinki, Finland), 1995 p 1-83
(ISSN 0355-0087)
(ISBN-951-41-0775-6) Copyright Avail: Issuing Activity (Helsinki Univ., Helsinki, Finland)

An abstract logic is a formal language which describes mathematical structures. its syntax is formulated by defining which objects are sentences; a semantics for the sentences is introduced by defining when a sentence is true in a structure. Often the semantic overrides the syntax: one is more concerned about the expressive power of a logic than about what objects the sentences really are. However, when necessary, a metatheory is introduced to make things clear in this respect, too. The most used metatheory is set theory: sentences and structures are sets, and abstract logics are defined by set-theoretical predicates. A logic is said to be absolute if its syntax is persistent (every object which is a sentence in a set-theoretical universe is a sentence in extensions of the universe), and if its semantics are absolute (the truth of a sentence in a structure is independent of the set-theoretical universe). In a sense, absoluteness is an abstract notion of 'first-order'. The set-theoretical methods are most useful when applied to absolute logics, especially to those absolute relative to a standard set theory. The first part of this work presents concepts in order to fix terminology and to lay a firm foundation for this study. The second part discusses and proves the absoluteness of several logics. The third part presents the new construction method for translating sentences of an absolute logic into sentences of L(sub infinity omega), a game quantifier logic, or into sentences of the infinitely deep language M(sub infinity infinity). The final part of this work presents applications of this construction method. Derived from text

THE PHENOMENA OF SUBHARMONIC BIFURCATIONS, RUNAWAY, AND TRANSITION TO CHAOS IN A NON-LINEAR OSCILLATOR: PERTURBATION METHODS AND A NUMERICAL EXPERIMENT Ph.D. Thesis [ZJAWISKA BIFURKACJI SUBHARMONICZNYCH, UCIECZKI I PRZEJSCIA DO CHAOSU W NIELINIOWYM OSCYLATORZE METODY PERTURBACYJNE A EKSPERYMENT NUMERCZNY]
Krzysztof L. Janicki Cooperative Publishing House Ltd. Jul. 1994 128 p In POLISH
(ISSN 0208-5658)
(IFTR-16/1994) Avail: Issuing Activity

The importance of non-linear dynamic systems has grown significantly in recent years. And this statement does not merely apply to the development of the discipline per se, but most importantly to the extension of its concepts and results to other sciences, including engineering, biology, and economics. Its results which have demonstrated the complexity of the behavior of relatively simple systems have been especially spectacular. These advances have given researchers the hope that relatively compact non-linear mathematical models might be used for largely qualitative descriptions of a variety of complex phenomena such as hydrodynamic instabilities, population dynamics, or ship disasters. Studies of simple models also seem to constitute a necessary preliminary step for gaining knowledge of the phenomena which occur in more complex systems.

(PB95-185237; NPL-QU-104) Copyright Avail: Issuing Activity (National Technical Information Service (NTIS))

The paper presents the results of an intercomparison between 3 triple point of water cells circulated by the Bureau International des Poids et Measures (BIPM), and a cell which is one of those used as a reference cell at the National Physical Laboratory (NPL). All 4 cells were prepared, stored and measured in the manner normally adopted at NPL. The results of the intercomparison show that over the course of about 6 weeks the temperatures of the 3 circulated cells generally agreed within 0.20 mK, with a maximum difference of 0.27(7) mK. Over the same period, the total variations of temperature measured in the 3 individual cells were 0.04 mK, 0.08 mK and 0.18 mK, respectively; the NPL cell varied by 0.10 mK. Gallium point measurements made over a similar period confirmed that these differences were partly due to small drifts in the thermometer resistance or in the measuring system. NTIS

VIBRATION CONTROL USING CHAOTIC MOTION STABILIZERS Final Report, Jun. - Dec. 1994
David L. Don and Edward S. Regan 20 Dec. 1994 30 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DASG60-94-C-0059)
(AD-A289576) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Chaotic motion stabilizers transform chaotic behavior into predictable periodic motion. Our product enhances the performance of active damping systems, eliminates the need for damping devices in some applications, and increases the variability of passive damping methods. We have based our product on the observance that chaotic attractors typically have infinite numbers of unstable periodic orbits. The device attempts to stabilize existing orbits in the attractor - not create new ones. The process is straight forward. First, determine unstable periodic orbits embedded in the chaotic attractor. Examine these orbits and choose ones that yield improved system performance. Finally, tailor small-time dependent parameter perturbations to stabilize the orbit. To make the necessary system parameter changes that transform chaotic motion into periodic motion, we will utilize electrorheological (ER) materials. For Phase 1 research we modeled the behavior of an ER magnetoelastic system and incorporated our control algorithm into the model. We then compared the theoretical results with experimental testing where similarities were observed. DTIC

The results of mathematical simulation of three-dimensional magnetic field of spectrometric magnet SP-40, which is the important part of the experimental setup EXCHARM, are presented. The aims of the communication are the comparison of numerical analysis with data of the measurements and the investigation of distribution of the magnetic field near end region. It has been shown that, in limits of length of the magnet, the computed by program MSFE3D main relative field component and the results of the measurement are agreed on OZ axis with the accuracy approximately equal 10(exp -3). The computations also showed that the absolute values of the relative field components B(sub x)/B(sub 0) and B(sub z)/B(sub 0) near the magnet end are less than 2.7% and 4% accordingly. DOE

VECTOR ALGORITHMS FOR SOLVING 3D NONLINEAR MAGNETOSTATIC PROBLEMS
E. P. Zhidkov, M. B. Yuldasheva, and O. I. Yuldashev 1994 18 p
(DE95-608737; JINR-R-11-94-161) Avail: CASI HC A03/MF A01 (US Sales Only)

The differential formulation of the magnetostatic problem using two scalar potentials is considered. The discretization by finite element method reduces the problem to system of the nonlinear equations with sparse matrix. To solve the system some iteration process is used and on each iteration step the solving linearized system is required. For this purpose the vector algorithms are elaborated based on the incomplete Choleski factorization with conjugate gradient method. The use of combination of natural and suggested multicolor ordering of unknowns in the nodes of regular grid allowed one to keep the good qualities of the preconditioner and essentially to increase the degree of vectorization of matrix-vector multiplication and of solving the system with preconditioner. The advantages of the suggested approach are demonstrated on the example of three-dimensional spectrometric magnet field simulation on vector computer CONVEX C 120. The comparison of the computed results for grid consisting of 42120 nodes, when the suggested vector algorithms and the standard algorithms compiled with the vector option are used, showed that the processor time of solving the nonlinear system in the first case is 2.3 times less than in second case. A NEW METHOD OF EVALUATING THE EXPLICIT MAGNETIC-STATE-DEPENDENT ENERGY IN SEMI-EMPIRICAL CALCULATIONS OF IRON Final Report, Jul. 1994
Genrich L. Krasko Nov. 1994 20 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289098; ARL-TR-650) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The existing semi-empirical methods for use in atomic computer simulations in iron (such as various modifications of the Embedded Atom Method) have not explicitly taken account of the ferromagnetism per se. Rather, the adjustable parameters just have been fitted to mechanical and thermal properties of iron. However, when the magnetic properties are essential in affecting localized atomic behavior (e.g. in the vicinity of crystal defects), these methods may be inadequate. To remedy the situation, a procedure is suggested of explicitly calculating the magnetic contribution to the energy of individual atoms, as a function of their atomic environment. The method uses the Stoner approach, as previously developed in, and a data base obtained by the LMTO-Stoner calculations on BCC Fe under hydrostatic and tetragonal deformations, and Fe free surfaces. The procedure may be incorporated in any semi-empirical method: the ferromagnetic contributions to the bulk moduli, C11, C12 and C44 are easily calculated and may be subsequently used in adjusting the semi-empirical Method parameters. Preliminary testing shows a good agreement with the magnetic properties obtained by the LMTO-Stoner calculations. DTIC

Historically, the term inductance, as it relates to magnets, has been relatively obscure at Fermilab. Confusion resulted from the typical engineering approach to the matter, whereby distinction may not have been made between analytical and beam line magnets, and distribution transformers. The latter always have a laminated core to reduce eddy currents which makes their inductance in a transitional state very close to that in a steady state. This is true only if the core material is not in saturation, which is once again the case for transformers, but not for magnets, especially the analytical ones. Based on the traditional 'transformer' thinking, an incorrect method to measure magnet inductance was initially employed. The characteristics of a tank circuit including the magnet under test were observed. Then based on the resonant frequency and quality factor, the inductance was calculated. This method represents a very valuable tool for magnet testing where you can compare newly built magnets to a reference magnet and see if there is any difference. Although electrically correct, this method unfortunately does not reveal any valuable information which could be used to anticipate the magnet behavior under the normal working conditions. Another method of measuring inductance, based on a freewheeling discharge of the magnet, is also widely used in the Lab. To measure the inductance, a magnet is powered from a small power supply from 100 A up to 200 A, then the power is turned off and the current decay in the magnet is recorded. Based on the dc resistance measurements and the magnet current decay data, one can determine the magnet inductance. In order to do so, the inductance is assumed to be constant and current decay is assumed to be exponential. To find out how well the effective inductance represents the real process taking place in the magnet was one of the purposes of the experiment. DOE

The magnetization and deflection profiles of magnetic clusters in a Stern-Gerlach magnet are calculated for conditions under which the magnetic moment is fixed in the intrinsic frame of the cluster, and the clusters enter the magnetic field adiabatically. The predicted magnetization is monotonic in the Langevin parameter, the ratio of magnetic energy (mu)(sub 0)B to thermal energy k(sub B)T. In low field the average magnetization is 2/3 of the Langevin function. The high-field moment approaches saturation asymptotically as B(sup -1/2) instead of the B(sup -1) dependence in the Langevin function. DOE

SPACE PHYSICS EDUCATIONAL OUTREACH Final Report
Richard A. Copeland May 1995 12 p
(Contract NASw-4621; NAGw-3673; SRI Proj. 4854)
(NASA-CR-198649; NAS 1.26:198649; MP-95-068) Avail: CASI HC A03/MF A01

The goal of this Space Physics Educational Outreach project was to develop a laboratory experiment and classroom lecture on Earth's aurora for use in lower division college physics courses, with the particular aim of implementing the experiment and lecture at Saint Mary's College of California. The strategy is to teach physics in the context of an interesting natural phenomenon by investigating the physical principles that are important in Earth's aurora, including motion of charged particles in electric and magnetic fields, particle collisions and chemical reactions, and atomic and molecular spectroscopy. As a by-product, the undergraduate students would develop an appreciation for naturally occurring space physics phenomena.

(DE95-007948; UCRL-ID-118981) Avail: CASI HC A03/MF A01

It is shown that, for an idealized rotor with identical magnetic bearings of negligible mass, precession and rotation are decoupled from the center-of-mass motion so that stabilization of whirl instabilities can be designed independent of tilt. The bearing torques that cause whirl also apply torques on the free-body-rotational motion in a tilted state. The rotational equations of motion including these torques are given in the paper. An approximate solution for a special case suggests the possibility of tilt instability above a critical frequency. DOE

PERFORMANCE ANALYSIS OF BULLET TRAJECTORY ESTIMATION: APPROACH, SIMULATION, AND EXPERIMENTS
L. C. Ng and T. J. Karr Nov. 1994 35 p
(Contract W-7405-eng-48)
(DE95-007949; UCRL-ID-119289) Avail: CASI HC A03/MF A01

This paper describes an approach to estimate a bullet's trajectory from a time sequence of angles-only observations from a high-speed camera, and analyzes its performance. The technique is based on fitting a ballistic model of a bullet in flight along with unknown source location parameters to a time series of angular observations. The theory is developed to precisely reconstruct, from firing range geometry, the actual bullet trajectory as it appeared on the focal plane array and in real space. A metric for measuring the effective trajectory track error is also presented. Detailed Monte-Carlo simulations assuming different bullet ranges, shot-angles, camera frame rates, and angular noise show that angular track error can be as small as 100 micro rad for a 2 meter rad/pixel sensor. It is also shown that if actual values of bullet ballistic parameters were available, the bullet s source location variables, and the angles of flight information could also be determined. DOE

TEMPERATURE DEPENDENCE OF THE STATIC DIELECTRIC RESPONSE IN A Q1D ELECTRON GAS
J. Tutor, P. Pajon, and F. Comas Aug. 1994 8 p
(DE95-609269; IC-94/222) Avail: CASI HC A02/MF A01 (US Sales Only)

We show results for the Static Polarization and Static Dielectric Function of a Q1DEG (Quasi-One-Dimensional-Electron-Gas) in the finite temperature case. Calculations are made in a Lindhard-like approach considering the Q1DEG of a semiconductor Quantum-Wire including some simplifying assumptions of the electron band structure. Temperature dependence is discussed using two different approaches: the Maldague's approximation and the 'exact' calculation considering Fermi-Dirac statistics directly. Both kinds of results are compared in details in the low temperature range. DOE

VISUALIZATION OF FINITE ELEMENT MODEL SOLUTIONS FOR DEFIBRILLATION VOLTAGE AND CURRENT DISTRIBUTIONS M.S. Thesis
Steven J. Jantz Dec. 1994 70 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289836; AFIT/CI/CIA/94-161) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The objective of this project was to begin filling the need for visualization. A set of tools has been developed to aid in analyzing the results of our FEM computations. Tools facilitating the display of both scalar and vector quantities were included. The toolset was developed utilizing the graphics routines and features available in a commercial scientific visualization package - the Application Visualization System (AVS) . The attempt was made to give the user as much control over the visualization environment as possible with a minimum amount of knowledge of the underlying software. The project was begun on an IBM RS6OOO computer. During the toolset development, the work was ported to a SUN SPARCstation 20 and it was completed there. This thesis describes the development of these visualization tools for use in the AVS environment. DTIC

(IFTR-18/1994) Avail: Issuing Activity (Polish Academy of Sciences, Warsaw, Poland)

This article contains the results of studies of the generation of self-excited oscillations in a duct with closed branches. The study involved measuring the frequency and amplitude of acoustic oscillations in three different experimental systems, namely a duct with one branch, a duct with two differently oriented branches, and a duct with three branches. Tests of the duct with two branches revealed that significant variations of the frequency of the oscillations occur in the same ranges of branch lengths where the excitation of acoustic oscillations occurs in the case of a duct with a single branch. This means that these frequency variations are due to feedback between the acoustic signals in the two branches. For certain branch lengths, this effect either results in greater or lower amplitude for the oscillations. This is especially obvious for a duct with three branches, where with certain branch lengths the oscillations are either greatly amplified (about 5 dB) or completely damped (about 25 dB for the discrete component). Under damping conditions, the reduction in the overall noise level in the duct is approximately 15 dB. Transl. by Schreiber Translations Inc.

This document describes the theoretical methods used in the rotorcraft noise prediction system (ROTONET), which is a part of the NASA Aircraft Noise Prediction Program (ANOPP). The ANOPP code consists of an executive, database manager, and prediction modules for jet engine, propeller, and rotor noise. The ROTONET subsystem contains modules for the prediction of rotor airloads and performance with momentum theory and prescribed wake aerodynamics, rotor tone noise with compact chordwise and full-surface solutions to the Ffowcs-Williams-Hawkings equations, semiempirical airfoil broadband noise, and turbulence ingestion broadband noise. Flight dynamics, atmosphere propagation, and noise metric calculations are covered in NASA TM-83199, Parts 1, 2, and 3. Author

A FINITE ELEMENT PROPAGATION MODEL FOR EXTRACTING NORMAL INCIDENCE IMPEDANCE IN NONPROGRESSIVE ACOUSTIC WAVE FIELDS
Willie R. Watson, Michael G. Jones (Lockheed Engineering and Sciences Co., Hampton, VA.), Sharon E. Tanner, and Tony L. Parrott Apr. 1995 21 p
(RTOP 537-02-22-02)
(NASA-TM-110160; NAS 1.15:110160) Avail: CASI HC A03/MF A01

A propagation model method for extracting the normal incidence impedance of an acoustic material installed as a finite length segment in a wall of a duct carrying a nonprogressive wave field is presented. The method recasts the determination of the unknown impedance as the minimization of the normalized wall pressure error function. A finite element propagation model is combined with a coarse/fine grid impedance plane search technique to extract the impedance of the material. Results are presented for three different materials for which the impedance is known. For each material, the input data required for the prediction scheme was computed from modal theory and then contaminated by random error. The finite element method reproduces the known impedance of each material almost exactly for random errors typical of those found in many measurement environments. Thus, the method developed here provides a means for determining the impedance of materials in a nonprogressirve wave environment such as that usually encountered in a commercial aircraft engine and most laboratory settings. An ultrasonic system for determining the quality of concrete under water without inaccuracies caused by electromagnetic interference from the ultrasonic generator. An ultrasonic generator applies pulses to the concrete. An ultrasonic detector detects the ultrasonic pulses and produces corresponding signals that are indicative of ultrasonic pulses that have passed through the material. Signal processing circuitry processes the signals to determine the transit time of the ultrasonic pulses through the material. The signal processing circuitry is disabled for a predetermined time after application of each ultrasonic pulse to the material to prevent noise produced by the means for applying ultrasonic pulses to the material from entering the signal processing circuitry and causing spurious measurements. (IFTR-40/1994) Avail: Issuing Activity (Polish Academy of Sciences, Warsaw, Poland)

Porous media are a subject of research in a variety of scientific disciplines, including physics, mechanics, electrical engineering, materials science, and acoustics. The subject of this article is a comparison of the methods used in theoretical mechanics with standard acoustic methods. The authors start by examining the method of static averaging of the mechanical properties of porous media. This method makes it possible to determine substitute static moduli of elasticity, which, however, does not meet the needs of acoustics. More suitable methods include the dynamic methods developed in the works of J. Lewandowski, among others. These methods are based on a motion equation in which the tensor of elasticity is assigned a complex value which accounts for the medium's dynamic properties and losses. The transition from a complex tensor of elasticity to the velocity and damping of an acoustic wave poses no particular problems. On the backdrop of the theory of porous materials used in mechanics, the authors present their own theory for the acoustic properties of these materials. They call it the theory of 'compound obstacles', which initially examines the interference offered by a solitary inclusion in a homogeneous medium to the propagation of an acoustic wave. This is followed by the calculation of the interference caused by a group of inclusions using the concept of the density of obstacles. In turn, this leads to general formulas for acoustic wave velocity and damping as functions of obstacle density. The authors consider examples of a spherical inclusion in a liquid and a hollow spheroidal inclusion in a solid. The article also contains the results of experiments conducted to verify the 'compound obstacles' theory. The authors measured the velocity of an ultrasound wave in electrical engineering porcelain with varying degrees of porosity and in glycerine in which glass balls were suspended. UNCERTAINTIES IN THE CALIBRATION OF HYDROPHONES AT NPL BY THE THREE-TRANSDUCER SPHERICAL-WAVE RECIPROCITY METHOD IN THE FREQUENCY RANGE 10 kHz ON 500 kHz
S. P. Robinson and G. R. Dore Nov. 1994 58 p
(PB95-185245; NPL-RSA(EXT)0054) Avail: Issuing Activity (National Technical Information Service (NTIS))

A description is given of the calibration of hydrophones at NPL by the method of three-transducer spherical-wave reciprocity in the frequency range 10-500 kHz. This is used as the primary standard method for the calibration of hydrophones for underwater acoustics. An assessment is given of the sources of uncertainty present in the method and it is shown that with careful implementation, it is possible to calibrate reference hydrophones over this frequency range to an accuracy of +/- 0.5 dB or better (expressed for a confidence probability of 95%). In addition, a comparison has been made of hydrophone calibrations performed by the reciprocity method and the method of optical interferometry, in the frequency range 200-500 kHz. The comparison has shown agreement within the combined uncertainties of the two methods. NTIS

Predictions are made for the noise radiation from supersonic, coaxial jets. These predictions are based on the assumption that the noise radiation in the downstream direction of supersonic jets is dominated by sound generated by instability waves with supersonic phase velocities relative to ambient. Since the analysis requires a known mean flow and the coaxial jet mean flow is not described easily in terms of analytical functions, a numerical prediction is made for its development. The compressible, Reynolds averaged, boundary layer equations are solved with a modified mixing length turbulence model. The model has been calibrated to account for compressibility and temperature effects on the rate of mixing. Both normal and inverted velocity profile jets are considered. Predictions are made for the differences between the noise radiated by coaxial jets with difference operating conditions and a single reference jet with the same thrust, mass flow, and exit area. The effects of area ratio changes and simulated enhanced mixing on noise radiation are also considered. Author

A NUMERICAL STUDY OF FUNDAMENTAL SHOCK NOISE MECHANISMS Ph.D. Thesis - Cornell Univ.
Kristine R. Meadows May 1995 193 p Original contains color illustrations
(NASA-TM-110608; NAS 1.15:110608) Copyright Avail: CASI HC A09/MF A03; 17 functional color pages

The results of this thesis demonstrate that direct numerical simulation can predict sound generation in unsteady aerodynamic flows containing shock waves. Shock waves can be significant sources of sound in high speed jet flows, on helicopter blades, and in supersonic combustion inlets. Direct computation of sound permits the prediction of noise levels in the preliminary design stage and can be used as a tool to focus experimental studies, thereby reducing cost and increasing the probability of a successfully quiet product in less time. This thesis reveals and investigates two mechanisms fundamental to sound generation by shocked flows: shock motion and shock deformation. Shock motion is modeled by the interaction of a sound wave with a shock. During the interaction, the shock wave begins to move and the sound pressure is amplified as the wave passes through the shock. The numerical approach presented in this thesis is validated by the comparison of results obtained in a quasi-one dimensional simulation with linear theory. Analysis of the perturbation energy demonstrated for the first time that acoustic energy is generated by the interaction. Shock deformation is investigated by the numerical simulation of a ring vortex interacting with a shock. This interaction models the passage of turbulent structures through the shock wave. The simulation demonstrates that both acoustic waves and contact surfaces are generated downstream during the interaction. Analysis demonstrates that the acoustic wave spreads cylindrically, that the sound intensity is highly directional, and that the sound pressure level increases significantly with increasing shock strength. The effect of shock strength on sound pressure level is consistent with experimental observations of shock noise, indicating that the interaction of a ring vortex with a shock wave correctly models a dominant mechanism of shock noise generation. The design and performance of a ground-based acoustic sensor system for the detection of subsonic jet-powered aircraft is described and specified. The acoustic detection system performance criteria will subsequently be used to determine target detection ranges for the subject contract. Although the defined system has never been built and demonstrated in the field, the design parameters were chosen on the basis of achievable technology and overall system practicality. Areas where additional information is needed to substantiate the design are identified. Author

EVALUATION OF A DOUBLY-SWEPT BLADE TIP FOR ROTORCRAFT NOISE REDUCTION Report, 20 Nov. 1990 - 15 Oct. 1992
Brian E. Wake and T. Alan Egolf Oct. 1992 65 p
(Contract NAS1-19143)
(NASA-CR-189677; NAS 1.26:189677) Avail: CASI HC A04/MF A01

A computational study was performed for a doubly-swept rotor blade tip to determine its benefit for high-speed impulsive (HSI) and blade-vortex interaction (BVI) noise. This design consists of aft and forward sweep. For the HSI-noise computations, unsteady Euler calculations were performed for several variations to a rotor blade geometry. A doubly-swept planform was predicted to increase the delocalizing Mach number to 0.94 (representative of a 200+ kt helicopter). For the BVI-noise problem, it had been hypothesized that the doubly-swept blade tip, by producing a leading-edge vortex, would reduce the tip-vortex effect on BVI noise. A procedure was used in which the tip vortex velocity profile computed by a Navier-Stokes solver was used to compute the inflow associated with BVI. This inflow was used by a Euler solver to compute the unsteady pressures for an acoustic analysis. The results of this study were inconclusive due to the difficulty in accurately predicting the viscous tip vortex downstream of the blade. Also, for the condition studied, no leading-edge vortex formed at the tip. Author

Earlier work has shown that the acceleration sensitivity of contoured SC-cut quartz resonators vanishes for perfect symmetry of the resonator plus support system. Since it is impossible to construct such a configuration in practice, a stiffened structure which reduces the increase in acceleration sensitivity with fabrication error hag been investigated. Calculations of the increase in acceleration sensitivity with fabrication error have been performed. The calculations reveal that a rectangular support configuration with an aspect ratio of 1.5 oriented in a specific direction yields optimal results. The calculations also show that two clips should be used on each of the large sides with one on each of the small sides. Optimal clip sizes and spacings between the clips were established. The use of this stiffened configuration should enable consistently low acceleration sensitivities to be obtained. Analyses of flat and contoured quartz resonators with beveled edges has been performed. The influence of the contouring and the beveling on the radial dependence of the modes was obtained. DTIC

New ultrasonic modeling findings are presented contributing to ten fundamental problems related to low-frequency seismoacoustic wave phenomena resulting from the interaction of underwater acoustic waves with heterogeneous elastic boundaries such as the ice cover and/or ocean bottom. The results are described in ten independent sections covering the following problems: (1) backscattering of Scholte waves and grazing underwater acoustic waves by a trench at a liquid/solid interface; (2) explanation for observed underwater acoustic backscatter from the Canada Basin near 73.2 deg N, 139 deg W where recent bathymetric charts do not reveal the existence of large bathymetric highs nearby; (3) effect of a thin low-velocity layer underneath a floating plate on flexural wave dispersion; (4) effect of viscous waves from suspended particles in a thin layer under sea ice on low-frequency underwater acoustic wave reflectivity; (5) comparison of experimental and theoretical results on the dispersion of antisymmetric edge waves along apex of truncated elastic wedge; (6) wave propagation along apex of free and immersed elastic wedge with range-dependent apex angle and cross section; (7) shear wave coupling to ice cores; (8) ultrasonic characterization of sea ice cores; (9) monostatic seismic profiling using scattering from 45 deg oblique cylindrical hole in ice plate using one compressional transducer; and (10) sea ice finger-rafting and ice thickness. NOISE EXPOSURE REDUCTION OF ADVANCED HIGH-LIFT SYSTEMS
Stephen W. Haffner May 1995 22 p
(Contract NAS1-20090; RTOP 538-03-15-01)
(NASA-CR-195077; NAS 1.26:195077) Avail: CASI HC A03/MF A01

The purpose of NASA Contract NAS1-20090 Task 3 was to investigate the potential for noise reduction that would result from improving the high-lift performance of conventional subsonic transports. The study showed that an increase in lift-to-drag ratio of 15 percent would reduce certification noise levels by about 2 EPNdB on approach, 1.5 EPNdB on cutback, and zero EPNdB on sideline. In most cases, noise contour areas would be reduced by 10 to 20 percent. Author

This paper describes that the method of spatial sequence to be transformed into time sequence is used to measure the complete picture of the a-f curve that is of realtime. series and stability. This method is also used to measure dynamical process of variation in distribution of relative intensity of light, which varies with plate current as Bragg's diffraction. The experimental results coincide with the theory of acousto-optics interaction. DTIC

ATOMIC AND ELECTRONIC STRUCTURE OF CLUSTERS FROM CAR-PARRINELLO METHOD
Vijay Kumar Jun. 1994 53 p Sponsored by the International Atomic Energy Agency and the United Nations Educational Scientific and Cultural Organization
(DE94-634463; IC-94/127) Avail: CASI HC A04/MF A01 (US Sales Only)

With the development of ab-initio molecular dynamics method, it has now become possible to study the static and dynamical properties of clusters containing up to a few tens of atoms. Here I present a review of the method within the framework of the density functional theory and pseudopotential approach to represent the electron-ion interaction and discuss some of its applications to clusters. Particular attention is focussed on the structure and bonding properties of clusters as a function of their size. Applications to clusters of alkali metals and Al, non-metal - metal transition in divalent metal clusters, molecular clusters of carbon and Sb are discussed in detail. Some results are also presented on mixed clusters. DOE

ENERGY TRANSFER FROM EXCITED NITRENES AT HIGH DENSITY Final Report
Robert D. Coombe 4 Nov. 1994 23 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F49620-93-1-0187)
(AD-A288352; AFOSR-94-0753TR) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This report describes the results of a sixteen month program which supplemented a broader effort dealing with reactions and energy transfer processes of excited nitrenes (AFOSR grant no. F4962O-92-J-027O). This supplemental program was directed specifically toward the generation of NCl(a(1)delta) at high densities, and its energy transfer process with iodine atoms. In one task, NCl(a(1)delta) was created by pulsed photolysis of ClN3. This effort was quite successful in that high densities of both NCl(a(1)delta) and excited I(5()2P) were generated. A second task involved continuous generation of NCl(a(1)delta) by the H + NCl3 reaction in a fast discharge-flow reactor. Although high densities of reagents were achieved, the yield of NCl(a)1)delta) was small. Extensive modeling indicated that the low yield was likely caused by loss of NCl(a(1)delta), NCl3, or NCl2 at the reactor walls. DTIC

TOWARD MOLECULAR SELECTIVITY WITH CHEMICALLY MODIFIED ELECTRODES: CAN ELECTROACTIVITY AND PERMEABILITY THROUGH AN OVERLAYING METALLOPOLYMER FILM BE CONTROLLED VIA RATIONAL MANIPULATION OF INTERNAL ARCHITECTURE?
Susan G. Yan and Joseph T. Hupp 30 Nov. 1994 26 p Submitted for publication Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-91-J-1035)
(AD-A288719; TR-21) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Metallopolymeric films featuring widely varying metal-to-metal linkage lengths have been prepared via a combination of oxidative and reductive electropolymerization schemes. Each of the film materials exhibits strong size selective permeability behavior towards molecular reactants - providing a primitive physical basis, therefore, for selectivity with respect to reactivity at an underlying electrode. Surprisingly, the observed molecular size cutoffs are essentially independent of film composition, implying that a uniform molecular cavity or pore size exists. Attempts to modify effective pore sizes by introducing large ligand substituents (phenyl groups) at the monomer synthesis stage have failed to alter the pattern of size selectivity. We speculate that: (1) potential pore size expansion effects expected from linkage length extension are offset by enhanced cross linking, and/or (2) electrolyte anion templating effects during film synthesis may be defining the effective minimum pore size, thereby yielding uniform permeation size cutoffs. DETECTION OF CHARGED PARTICLES IN SUPERFLUID HELIUM Ph.D. Thesis
Simon R. Bandler Dec. 1994 143 p Prepared in cooperation with Brown Univ., Providence, RI
(Contract DE-FG02-88ER-40452)
(DE95-007354; DOE/ER-40452/11) Avail: CASI HC A07/MF A02

This thesis is concerned with the use of a large superfluid helium detector for the detection of solar neutrinos. A small-scale prototype of this type of detector has been constructed and tested. In this thesis the author discussed in detail the design of the apparatus, the experiments which have been carried out, and what has been learned about the important physical processes involved in this type of detector. These processes

include the anisotropic generation of phonons and rotons by the recoiling particle, the propagation of the phonons and rotons in the liquid, the evaporation process at the liquid surface, and the adsorption of the helium atoms onto the wafers. In addition he discusses the generation and detection of fluorescent photons from recoiling particles. The implications of these results to the design of a full-scale detector of neutrinos are discussed.

(Contract F49620-94-1-0075)
(AD-A288975; AFOSR-94-0762TR) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The chemisorption mechanisms of Cl2, Br2, and I2 on Si(100) 2x1 are very similar while those of F2 and O2 are very distinct. For the heavy diatomic halogens (Cl2, Br2, and I2), the sticking probability increases with incident translation energies above 0.1 eV, and the largest initial sticking probabilities are obtained at the highest incident energies, with So equal to 95-100% for I2 and Br2, and 80-85% for Cl2. At low incident energies the initial sticking probability, So decreases with increasing surface temperature while at high incident energies the sticking probability is independent of surface temperature. In addition, for Cl2 very low energy molecular beams can be prepared, and the sticking probability is observed to decrease with increasing incident energies between 0.02 eV and 0.06 eV. Therefore, all three heavy diatomic halogens can adsorb via precursor - mediated chemisorption at low incident translational energy and via direct - activated chemisorption activated chemisorption at high incident translational energy 1,2. The main goals in the previous grant period have been to develop new, more effective methods for performing accurate ab initio electronic structure calculations and to use these methods for the prediction of molecular structure, bonding and reactivity, especially for main group species and reactions of interest to the Air Force. From the theoretical point of view, the principle accomplishments have been extensive development of approaches and codes for performing electronic structure calculations in parallel, continued development of methods for interfacing electronic structure calculations with dynamics, initial studies of the possibility of splicing together different levels of electronic structure theory, and the development of a new model for treating solvation. Applications have ranged from the development of very accurate and extensive potential energy surfaces for A +HB reactions (to interface with the experiments) to the role of catalysts in the hydrosilation reaction to extensive studies of reactions involved in both main group and transition metal chemical vapor deposition (CVD) to broad-based studies of cage molecules (using our new parallel capabilities) that are potential precursors for new materials electronic and optical devices and catalysts. A new area that we have entered into is a series of systematic calculations on transition metal(TM)-main group (MG) compounds and their roles and catalysts and in such important area as CVD. DTIC

The neutron emission rate of a small Cf-252 fission source, incorporated into a fission counter, has been measured by two different methods. The fission rate of the source was measured at Physikalisch-Technische Bundesanstalt (PTB), the neutron emission rate being obtained by means of the neutron multiplicity factor nu(bar). The manganese sulphate bath method was used at the National Physical Laboratory (NPL) to determine the total neutron emission from the chamber assembly. Agreement between the two independent methods was found to be within 1%. NTIS

EXTENDED LINEAR ION TRAP FREQUENCY STANDARD APPARATUS Patent Application
John D. Prestage, inventor (to NASA) (Jet Propulsion Lab., California Inst. of Tech., Pasadena, CA.) 12 May 1994 42 p
(NASA-Case-NPO-19081-1-CU; NAS 1.71:NPO-19081-1-CU; US-Patent-Appl-SN-246041) Avail: CASI HC A03/MF A01

A linear ion trap for frequency standard applications is provided with a plurality of trapping rods equally spaced and applied quadruple rf voltages for radial confinement of atomic ions and biased level pins at each end for axial confinement of the ions. The trapping rods are divided into two linear ion trap regions by a gap in each rod in a common radial plane to provide dc discontinuity, thus dc isolating one region from the other. A first region for ion-loading and preparation fluorescence is biased with a dc voltage to transport ions into a second region for resonance frequency comparison with a local oscillator derived frequency while the second region is held at zero voltage. The dc bias voltage of the regions is reversed for transporting the ions back into the first region for fluorescence measurement. The dual mode cycle is repeated continuously for comparison and feedback control of the local oscillator derived frequency. Only the second region requires magnetic shielding for the resonance function which is sensitive to any ambient magnetic fields. NASA

MEASUREMENT OF N2(+) MOBILITY He VIA FOURIER TRANSFORM EMISSION SPECTROSCOPY M.S. Thesis
Patrick D. Kee Dec. 1994 105 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289266; AFIT/GAP/EN/94D-4) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Recently, Hong and Miller used Fourier Transform Emission (FTE) spectroscopy to determine the N2+ mobility in helium by relating the observed Doppler shift of the N2+ (B-X) transition to the measured electric field in the discharge as determined by probes. In order to establish the technique in-house, this effort duplicated that experiment and investigated the sensitivity and utility of the method. Doppler shift measurements in this experiment disagreed significantly with those reported by Hong and Miller. Attempts to reduce the data (and thus determine the mobility) using a model developed by Hong and Miller were unsuccessful. The model did not qualitatively or quantitatively describe the Doppler shifts observed in this work. At this time, an explanation of the differences between the two experiments is not known. Possibilities include effects of striations on the Doppler shift measurements, competition between one- and two-step excitation of the N2+ (B-X) state, and failure to interpret the Hong and Miller model correctly. Subsequent attempts to model Hong and Miller's own data (taken from their figures) yielded mobility parameters which disagreed with their published results. DTIC

RADON INTEGRAL MEASUREMENT SYSTEM Ph.D. Thesis [SISTEMA DE MEDICION INTEGRAL DE RADON]
J. M. GarciaH 1994 240 p In SPANISH
(DE95-608074; INIS-mf-14401) Avail: CASI HC A11/MF A03 (US Sales Only)

The Radon Integral Measurement System (SMIR) is a device designed specially to detect, count and store data relating to the acquisition of alpha particles emitted by Radon-222 coming from underground. The system includes a detection chamber, a radiation detector, a digital system with battery backup and an auxiliary photovoltaic cell. A personal computer fixes the mode in which the system works, transmitting the commands to the system by the serial port. The heart of the system is a microprocessor working with interrupts by hardware. Every external device of the microprocessor sends its own interrupt request and the microprocessor handles the interrupts with a defined priority. The system uses a real time clock, compatible with the microprocessor, to take care of the real timing and date of the acquisition. A non volatile RAM is used to store data of two bytes every 15 minutes with 41 days as a maximum. After the setting up the system with the computer, it can operate by itself for up 41 days in the working mode without the loss of any data. If the memory is full, incoming data will be written in the first location of the memory. The memory is divided into pages corresponding to a different day of the acquisition. The counting time for every acquisition can be programmed by the user from 15 minutes to 65535 minutes, but it is recommended that the time should not reach the limit of 65535 counts in every acquisition period. We can take information from the system without affecting the acquisition process in the field by using a lap top computer, the information can then be stored in a file. There is a program in the computer that can show the information in a table of values or in a bar graph. DOE

ATOMIC STRUCTURE AND BONDING OF BORON-INDUCED RECONSTRUCTIONS ON Si(001) Interim Technical Report
Yajun Wang, Robert J. Hamers, and Efthimios Kaxiras 20 Dec. 1994 17 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-91-J-1629)
(AD-A289187; UWIS/DC-22) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Scanning tunneling microscopy and tunneling spectroscopy have been used to investigate the local structural and electronic properties of boron-induced reconstructions on Si(001). Thermal decomposition of diborane produces three ordered reconstructions, which arise from ordered arrangements of three structural subunits, with a local boron coverage of 1/2 monolayer. A structural model is proposed which accounts for the observed STM features. The principal structural subunit is shown to be an ordered arrangement of four boron atoms at substitutional sites in the first bulk-like silicon layer, which is then capped with ordered arrangements of silicon dimers and dimer vacancies. STUDY OF PARITY AND TIME REVERSAL VIOLATION IN NEUTRON-NUCLEUS INTERACTIONS
Yi-Fen Yen, J. D. Bowman, C. M. Frankle, and B. E. Crawford 1994 17 p Presented at the International Symposia on High Energy Spin Physics and Polarization Phenomena in Nuclear Physics, Bloomington, IN, 15-22 Sep. 1994
(Contract W-7405-eng-36)
(DE95-005158; LA-UR-94-4242; CONF-9409103-14) Avail: CASI HC A03/MF A01

The parity and time-reversal symmetries can be studied in neutron-nucleus interactions. Parity non-conserving asymmetries have been observed for many p-wave resonances in a compound nucleus and measurements were performed on several nuclei in the mass region of A approximately 100 and A approximately 230. The statistical model of the compound nucleus provides a theoretical basis for extracting mean-squared matrix elements from the experimental asymmetry data, and for interpreting the mean-squared matrix elements. The constraints on the weak meson-exchange couplings calculated from the compound-nucleus asymmetry data agree qualitatively with the results from few-body and light-nuclei experiments. The tests of time-reversal invariance in various experiments using thermal, epithermal and MeV neutrons are being developed. DOE

PROGRAMMING FOR TIME RESOLVED SPECTRUM IN PULSE RADIOLYSIS EXPERIMENTS
C. A. Betty, M. S. Panajkar (Bhabha Atomic Research Centre, Bombay, India.), and N. D. Shirke (Bhabha Atomic Research Centre, Bombay, India.) 1993 19 p
(DE95-607929; BARC-1993/E/021) Avail: CASI HC A03/MF A01 (US Sales Only)

A user friendly program in Pascal has been developed for data acquisition and subsequent processing of time resolved spectra of transient species produced in pulse radiolysis experiments. The salient features of the program are thiocyanate dosimetry and spectrum acquisition. The thiocyanate dosimetry is carried out to normalize experimental conditions to a standard value as determined by computing absorbance of the transient signal CNS(sub -2) that is produced from thiocyanate solution by a 7 MeV electron pulse. Spectrum acquisition allows the acquisition of the time resolved data at 20 different time points and subsequent display of the plots of absorbance vs. wavelength for the desired time points during the experiment. It is also possible to plot single time point spectrum as well as superimposed spectra for different time points. Printing, editing and merging facilities are also provided. DOE

PHYSICS WITH RELATIVISTIC HEAVY IONS: QGP AND OTHER DELICACIES
G. R. Young 1995 16 p Presented at the Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM, 2-6 Aug. 1994
(Contract DE-AC05-84OR-21400)
(DE95-007014; CONF-940816-89) Avail: CASI HC A03/MF A01

Conditions favorable to formation and observation of a deconfined state of quarks and gluons, often called the quark-gluon plasma (QGP), are thought to exist following the collision of very heavy nuclei at center-of-mass energies exceeding several tens of GeV/nucleon. The Relativistic Heavy Ion Collider under construction at BNL since 1991 is designed to provide such collisions at energies up to (square root of s)/A = 200 GeV. Two large dedicated experiments are being built to operate there; these two experiments take rather different approaches to the problem of classifying such collisions and probing for signals of QGP formation. Two smaller experiments are proposed to focus on specific aspects of these collisions. Recent developments in the understanding of the initial state formed in such collisions include, particularly, the possible rapid equilibration of the gluon density, leading in an equilibrium picture to such high temperatures that sizable thermal excitation of charm becomes probable. Recent theoretical conjectures have focussed on the possible formation of a disordered chiral condensate following chiral symmetry restoration in heavy-nucleus collisions, which might be a consequence of nonequilibrium deexcitation of a dense partonic state. We calculate the contribution from nonlocal vacuum condensates of quark fields to the hadronic part of the photon structure function F(sub 2)(x) in the operator product expansion approach to QCD and as a result we obtain a substantial improvement of the agreement with experimental data for the standard value of the parameter lambda(sub q)(sup 2) = (anti-qD(sup 2)q)/(anti-qq) approx. 0.5 GeV(sup 2). A NOTE ON THE CONSTITUENT QUARK RESONANCES
Kuang-Ta Chao and Hanqing Zheng Sep. 1994 6 p
(DE95-608831; IC-94/275) Avail: CASI HC A02/MF A01 (US Sales Only)

If there exists a constituent quark resonance, we find that, by using the Adler-Weisberger relation and the finite-energy sum rule for pion quark scattering, it must be very massive and have a large decay width. Our results indicate that the presence of the constituent quark excitations does not contradict the observed low lying hadron spectrum. DOE

MODEL INDEPENDENT CONSTRAINTS ON ANOMALOUS GAUGE BOSON SELF-COUPLINGS FROM e(+)e(-) COLLIDERS WITH LONGITUDINALLY POLARIZED BEAMS
A. A. Pankov and N. Paver (Trieste Univ., Italy.) Sep. 1994 15 p
(DE95-608844; IC-94/274; UTS-DTF-94-10) Avail: CASI HC A03/MF A01 (US Sales Only)

We explore the possibility of deriving model independent limits on the anomalous trilinear electroweak gauge boson couplings from high energy e(+)e(-) yields W(+)W(-), by combining the cross sections for the different initial and final states polarizations integrated with suitable kinematical cuts. In the case of the CP conserving couplings the limits can be disentangled, and are given by simple mathematical expressions. Numerical results show the advantages of this approach, in particular the important role of polarization in improving the bound. DOE

DETECTING ALPHA PARTICLES THROUGH SCINTILLATION IN POROUS MATERIALS M.S. Thesis
Martin E. Keillor Dec. 1994 114 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289313; AFIT/GAP/ENP/94D-05) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This thesis presents the results of a preliminary study of parameters essential to the development of a scintillation flow-cell detector with improved characteristics over existing cells. Such a detector with better than 10% alpha energy resolution could provide in situ capability to detect and identify important alpha-emitting radionuclides in dilute aqueous solutions. Gel-silica is a potential candidate that may provide the needed improvement in resolution while maintaining 100% detection efficiency; however, gel-silica with useful light output is yet to be developed. As a step toward realizing the system described, the dependence of alpha detection efficiency and intrinsic energy resolution on the phase dimensions in heterogeneous scintillation detectors is examined. Two main areas of this research are: (1) computer modeling of the geometric detection efficiency and intrinsic energy resolution in porous glass scintillation detectors, and (2) experiments designed to test model predictions and provide data on the detection of alphas in porous glass structures. Experimental emphasis is on alpha detection in gel-silica filled with liquid scintillant. Results show that phase dimensions must be considered in constructing a flow-cell detector for alpha spectroscopy, and that the dimensions available in gel-silica provide for excellent intrinsic energy resolution, as well as 100% detection efficiency. IMPLICATIONS OF HORIZONTAL SYMMETRIES ON BARYON NUMBER VIOLATION IN SUPERSYMMETRIC MODELS

V. Ben-Hamo and Y. Nir Aug. 1994 11 p
(DE95-610202; WIS-PH-94-34; Hep-ph-9408315) Avail: CASI HC A03/MF A01 (US Sales Only)

The smallness of the quark and lepton parameters and the hierarchy between them could be the result of selection rules due to a horizontal symmetry broken by a small parameter. The same selection rules apply to baryon number violating terms. Consequently, the problem of baryon number violation in supersymmetry may be solved naturally, without invoking any especially-designed extra symmetry. This mechanism is efficient enough even for low-scale flavor physics. Proton decay is likely to be dominated by the modes K(+)bar-nu(sub i) or K(o) mu(+) (e(+)), and may proceed at observable rates. TRANSVERSE TAU POLARIZATION IN INCLUSIVE BAR-B YIELDS TAU BAR-NU X DECAYS

Y. Grossman and Z. Ligeti (California Inst. of Tech., Pasadena, CA.) Sep. 1994 12 p
(DE95-610325; WIS-PH-94-39; CALT-68-1952; Hep-ph-9409418) Avail: CASI HC A03/MF A01 (US Sales Only)

We calculate, in the framework of multi Higgs doublet models, the C P violating transverse tau polarization, P perpendicular, in inclusive semileptonic B meson decays. We find that P perpendicular diverges at Omicron(1/m(exp 2)(sub b)) of the heavy quark expansion. We discuss the physical reasons for this divergence and show how to regularize it. We find large 1/m(exp 2)(sub b) corrections that can suppress the C P asymmetry is a(sub CP) approx. 0.34. We discuss how the allowed range is expected to change in the future. DOE

SEARCH FOR SUSY AT CDF

Teruki Kamon Sep. 1994 7 p Presented at the 8th Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM, 2-6 Aug. 1994 Sponsored by the National Science Foundation, the Italian Instituto Nazionale di Fisica Nucleare; the Ministry of Education, Science and Culture of Japan; the Natural Sciences and Engineering ResearchCouncil of Canada; the National Science Council of the Republic of China; the A.P. Sloan Foundation; and the Alexander von Humboldt-Stiftung
(Contract DE-AC02-76CH-03000)
(DE95-005109; FNAL/C-94/270-E; CONF-940816-86) Avail: CASI HC A02/MF A01

We have searched supersymmetry (SUSY) using trilepton events in p(bar p) collisions at (radical)s = 1.8 TeV. In the Minimal Supersymmetric Standard Model (MSSM), trilepton events are expected from chargino-neutralino ((tilde (chi))(sub 1)(sup (+/-))(tilde (chi))(sub 2)(sup o)) pair production, with subsequent decay into leptons. In all possible combinations of electron and muon channels in 19 pb(sup -1)data, we observe no events which pass our trilepton selection criteria. Assuming the GUT hypothesis within the framework of the MSSM, our preliminary analysis excludes M((tilde (chi))(sub 1)(sup (+/-))(tilde (chi))(sub 2)(sup o)) less than 46 Ge0/c(sup 2) for -500 less than (mu) less than -400 GeV, 2.0 less than tan (beta) less than 15.0, and M((bar q)) = 1.2 (times) M((bar g)). ATOMIC PHYSICS WITH HIGHLY CHARGED IONS Progress Report

Patrick Richard Aug. 1994 126 p
(Contract DE-FG02-86ER-13491)
(DE95-007325; DOE/ER-13491/709) Avail: CASI HC A07/MF A02

The study of inelastic collision phenomena with highly charged projectile ions and the interpretation of spectral features resulting from these collisions remain as the major focal points in the atomic physics research at the

J.R. Macdonald Laboratory, Kansas State University, Manhattan, Kansas. The title of the research project, 'Atomic Physics with Highly Charged Ions,' speaks to these points. The experimental work in the past few years has divided into collisions at high velocity using the primary beams from the tandem and LINAC accelerators and collisions at low velocity using the CRYEBIS facility. Theoretical calculations have been performed to accurately describe inelastic scattering processes of the one-electron and many-electron type, and to accurately predict atomic transition energies and intensities for x rays and Auger electrons. Brief research summaries are given for the following: (1) electron production in ion-atom collisions; (2) role of electron-electron interactions in two-electron processes; (3) multi-electron processes; (4) collisions with excited, aligned, Rydberg targets; (5) ion-ion collisions; (6) ion-molecule collisions; (7) ion-atom collision theory; and (8) ion-surface interactions. OBSERVATIONS OF CEF-SPLIT INTERMULTIPLET TRANSITIONS IN OPTICALLY OPAQUE EuBa2Cu3O7 USING INELASTIC NEUTRON SCATTERING
U. Staub, L. Soderholm, R. Osborn, E. Balcar (Atominstitut der Oesterreichischen Hochschulen, Vienna, Austria.), and V. Trunov (Saint Petersburg Nuclear Physics Inst., Saint Petersburg, Russia.) 1995 7 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract W-31-109-eng-38)
(DE95-007135; ANL/CHM/CP-85153; CONF-941144-70) Avail: CASI HC A02/MF A01

Inelastic neutron scattering (INS) results on the intermultiplet transitions J=0 (yields) 1 and J=l (yields) 2 in optically opaque EuBa2Cu3O7 are reported. Whereas these multiplets are split by the crystalline electric field (CEF), their low J values are influenced to first order only by the 2 second-order (J=l) and additional fourth-order (J=2) CEF parameters. B(sub 0)(sup 2), B2(sup 2) and the spin-orbit coupling parameter were obtained by fitting the splitting of the J=1 multiplet and the energy separation between the J=0 and 1 multiplets. The J=0 to 1 splitting observed here is smaller than previously seen by optical spectroscopic studies on a variety of transparent, ionic compounds, necessitating fitting of the free-ion parameter. Additional spectroscopic information on the J=2 multiplet indicates that additional fitting of free ion parameters must be included to adequately model the observed low energy separation between the two lowest J-multiplets. Preliminary calculation on the Q-dependence of the CEF split J=0 to 1 transitions and the comparison with observations are presented. DOE

INTEGRATING THE QMR METHOD WITH FIRST PRINCIPLES MATERIAL SCIENCE APPLICATION CODE
N. M. Nachtigal, W. A. Shelton, G. M. Stocks, D. M. C. Nicholson, and Y. Wang 1995 6 p Presented at the 7th Society for Industrial and Applied Mathematics (SIAM) Conference on Parallel Processing for Scientific Computing, San Francisco, CA, 15-17 Feb. 1995
(Contract DE-AC05-84OR-21400)
(DE95-007380; CONF-950212-5) Avail: CASI HC A02/MF A01

First principles methods are used to aid the material designers and metallurgists in the investigation and design of new materials. These methods suffer from a divergent O(N(sup 3)) scaling which restricts the problem sizes that can be addressed. It will be demonstrated that the O(N(sup 3)) scaling problem can be overcome by employing real-space multiple scattering techniques to calculate the scattering properties, combined with the QMR algorithm. By incorporating the QMR method into our real-sp ce multiple scattering code, we observed O(N) scaling for the large problem sizes of interest. This advancement will provide researchers with the necessary tools to treat large systems. DOE

INTERMEDIATE ENERGY NEUTRONS AT WNR. SPIN-ISOSPIN AND ENERGY DEPENDENCE OF THE NN INTERACTION AND THE NUCLEAR RESPONSE
T. N. Taddeucci 1995 12 p Presented at the DNP/NSAC Town Meeting on Nuclear Physics With Intermediate Energy and High-energy Hadron Probes, Chicago, IL, 29-30 Jan. 1995
(Contract W-7405-eng-36)
(DE95-006291; LA-UR-95-373; CONF-950165-1) Avail: CASI HC A03/MF A01

This report summarizes results of nuclear physics studies using intermediate energy (50-800 MeV) neutron probes carried out over the past five years using the Neutron Time-of-Flight (NTOF) Facility and Optically-Pumped Ion Source (OPPIS) at LAMPF and the 'white' neutron source at the Weapons Neutron Research (WNR) facility. LAMPF did significant work in polarization transfer, while WNR took advantage of the wide neutron energy spectrum available to study energy dependent effects. The major focus of experiments with intermediate energy neutron probes for the next five years will be to explore fundamental details of the spin-isospin and energy dependence of the NN interaction and the nuclear response. To achieve this goal, the WNR white neutron source will be used for nucleon-nucleon and nucleon-nucleus interaction studies over a broad continuous range of incident neutron energy. Measurement of polarization observables using polarized targets or polarized beam should be possible, and will add an important extra dimension to these studies. DOE

ATOMISTIC CALCULATIONS OF HYDROGEN INTERACTIONS WITH NI3AI GRAIN BOUNDARIES AND NI/NI/NI3AI INTERFACES
M. I. Baskes, J. E. Angelo, and N. R. Moody 1995 14 p Presented at the 5th International Conference on Hydrogen Effects on Material Behavior, Moran, WY, 11-15 Sep. 1994
(Contracts DE-AC04-94AL-85000; DE-AC04-76DR-00789)
(DE95-006497; SAND-94-8741C; CONF-940945-7) Avail: CASI HC A03/MF A01

Embedded Atom Method (EAM) potentials have been developed for the Ni/Al/H system. The potentials have been fit to numerous properties of this system. For example, these potentials represent the structural and elastic properties of bulk Ni, Al, Ni3Al, and NiAl quite well. In addition the potentials describe the solution and migration behavior of hydrogen in both nickel and aluminum. A number of calculations using these potentials have been performed. It is found that hydrogen strongly prefers sites in Ni3Al that are surrounded by 6 Ni atoms. Calculations of the trapping of hydrogen to a number of grain boundaries in Ni3Al have been performed as a function of hydrogen chemical potential at room temperature. The failure of these bicrystals under tensile stress has been examined and will be compared to the failure of pure Ni3Al boundaries. Boundaries containing a preponderance of nickel are severely weakened by hydrogen. In order to investigate the potential embrittlement of gamma/gamma(prime) alloys, trapping of hydrogen to a spherical Ni3Al precipitate in nickel as a function of chemical potential at room temperature has been calculated. It appears that the boundary is not a strong trap for hydrogen, hence embrittlement in these alloys is not primarily due to interactions of hydrogen with the gamma/gamma(prime) interface. DOE

SEARCH FOR THE TOP QUARK IN DILEPTON DECAY MODES AT D(PHI)
S. J. Wimpenny (California Univ., Riverside, CA.) Feb. 1995 5 p Presented at the 27th International Conference on High Energy Physics, Glasgow, England, 21-27 Jul. 1994
(Contract DE-AC02-76CH-03000)
(DE95-007764; FNAL/C-95/016-E; CONF-940722-43) Avail: CASI HC A01/MF A01

The authors present preliminary results on the search for the top quark in p(bar p) collisions at (radical)s = 1.8 TeV by the D0 collaboration at the Fermilab Tevatron. The results are based on an integrated luminosity of 13.5 pb(sup -1) of data collected by the D0 detector during the 1992-3 Tevatron collider run. They have searched for Standard Model t(bar t) decays into the dilepton decay modes ee + X, e(mu) + X and (mu)(mu) + X. No significant signal is observed for top quark production in these channels. They find one candidate event in the e(mu) + X channel and no events in the other two channels with an estimated non-top background of 0.76 (+-) 0.16 events. DOE

STRUCTURAL OXIDATION STATE STUDIES OF THE MANGANESE CLUSTER IN THE OXYGEN EVOLVING COMPLEX OF PHOTOSYSTEM II Ph.D. Thesis
Wenchuan Liang Nov. 1994 158 p
(Contract DE-AC03-76SF-00098)
(DE95-008488; LBL-36632) Avail: CASI HC A08/MF A02

X-ray absorption spectroscopy (XAS) was performed on Photosystem II (PSII)-enriched membranes prepared from spinach to explore: (1) the correlation between structure and magnetic spin state of the Mn cluster in the oxygen evolving complex (OEC) in the S(sub 2) state; and (2) the oxidation state changes of the Mn cluster in the flash-induced S-states. The structure of the Mn cluster in the S(sub 2) state with the g approx. 4electron paramagnetic resonance (EPR) signal (S(sub 2)-g4 state) was compared with that in the S(sub 2) state with multiline signal (S(sub 2)-MLS state) and the S(sub 1) state. The S(sub 2)-g4 state has a higher XAS inflection point energy than that of the S(sub 1) state, indicating the oxidation of Mn in the advance from the S(sub 1) to the S(sub 2)-g4 state. Differences in the edge shape and in the extended X-ray absorption fine structure (EXAFS) show that the structure of the Mn cluster in the S(sub 2)-g4 state is different from that in the S(sub 2)-MLS or the S(sub 1) state. In the S(sub 2)-g4 state, the second shell of backscatterers from the Mn absorber contains two Mn-Mn distances of 2.73 angstrom and 2.85 angstrom. Very little distance disorder exists in the second shell of the S(sub 1) or S(sub 2)-MLS states. The third shell of the S(sub 2)-g4 state at about 3.3 angstrom also contains increased heterogeneity relative to that of the S(sub 2)-MLS or the S(sub 1) state. Various S-states were prepared at room-temperature by saturating, single-turnover flashes. The flash-dependent oscillation in the amplitude of the MLS was used to characterize the S-state composition and to construct (pure) S-state Mn K-edge spectra. The edge position shifts to higher energy by 1.8 eV upon the S(sub 1) yields S(sub 2) transition. DOE

EXCITED CHARM STATES
Shekhar Shukla 1994 14 p Presented at the 2nd International Workshop on Heavy Quark Physics in Fixed Targets, Charlottesville, VA, 6-10 Oct. 1994
(Contract DE-AC02-76CH-03000)
(DE95-005749; FNAL/C-94/401; CONF-9410285-2) Avail: CASI HC A03/MF A01

Characteristics of mass spectra and decays of orbitally excited charm mesons and baryons, expected on the basis of quark models and Heavy Quark Symmetry, are briefly described. The difficulties associated with measurements on these excited states are discussed. The accuracy and reliability of currently available experimental information is examined. The reasons, for the widely accepted spin-parity assignments to the observed excited mesons and baryons, are stated. Finally, the experimental data, with the accepted spin-parity assignments, is compared with expectations based on quark models and Heavy Quark Symmetry. DOE

EXPERIMENTAL DETERMINATION OF CLUSTER GEOMETRICAL STRUCTURE
S. J. Riley 1995 23 p Presented at the Workshop on Clusters and Nanostructured Materials, Bhubaneswar, India, 29 Dec. 1994 - 4 Jan. 1995
(Contract W-31-109-eng-38)
(DE95-007089; ANL/CHM/CP-83631; CONF-941257-1) Avail: CASI HC A03/MF A01

Chemical probes have been developed to provide insight into the geometrical structure of isolated transition metal clusters. By determining as a function of cluster size the number of adsorbate molecules that saturate a cluster, and/or the binding energy of molecules to cluster surfaces,

it is often possible to propose geometrical structures consistent with the experimental observations. The authors review recent studies of the reactions of cobalt, nickel, and copper clusters with ammonia, water, and nitrogen that provide structural information. It is found that small (between 50 and 150 atoms) cobalt, nickel, and copper clusters generally adopt icosahedral packing. However, for even smaller (less than 20 atoms) clusters, cobalt and nickel differ in their structure. The authors also see evidence for adsorbate-induced structural changes. These changes may allow the properties of materials fabricated from such clusters to be tailored to specific needs. A preliminary illustration of the dramatic effect that heteroatoms can have on metal cluster chemical properties is presented.

SEARCH FOR SUPERSYMMETRY AND LEPTOQUARK STATES AT FNAL
Sharon Hagopian Sep. 1994 4 p Presented at the 27th International Conference on High Energy Physics, Glasgow, Scotland, 21-27 Jul. 1994
(Contract DE-AC02-76CH-03000)
(DE95-003381; FNAL/C-94/331-E; CONF-940722-32) Avail: CASI HC A01/MF A01

Searches have been made for first generation scalar and vector leptoquarks by the D0 collaboration and for second generation scalar leptoquarks by the CDF collaboration. The data sample is from the 1992-93 p bar-p run at radical s = 1.8 TeV at the Fermilab Tevatron Collider. Assuming that leptoquarks are pair produced and decay into charged leptons and quarks with branching fraction beta, mass limits at the 95% Confidence Level (CL) have been obtained. For first generation scalar leptoquarks the lower mass limit is 130 GeV/c(exp 2) for beta = 1.0 and 116 GeV/c(exp 2) for beta = 0.5. For first generation vector leptoquarks with kappa, the anomalous coupling, of 1.0 and beta = 1.0, the lower mass limit is 240 GeV/c(exp 2) and for kappa = 1.0, beta = 0.5, the lower mass limit is 240 GeV/c(exp 2). For kappa = 0 and beta = 1.0, the lower mass limits is 190 GeV/c(exp 2) and for kappa = 0, beta = 0.5, the lower mass limit is 185 GeV/c(exp 2). For second generation scalar leptoquarks, the mass limits are 133 GeV/c(exp 2) for beta = 1.0 and 98 GeV/c(exp 2) for beta = 0.5. A search for squarks and gluinos, predicted by Supersymmetric models, was made by D0 in the three or more jets plus E(sub t) channel. The number of events observed was consistent with background. For heavy squarks, a lower gluino mass limit of 146 GeV/c(exp 2) was obtained, and for equal squark and gluino masses a mass limit of 205 GeV/c(exp 2) was obtained at the 95% CL. DOE

A STUDY OF EVENTS WITH LARGE TOTAL TRANSVERSE ENERGY PRODUCED IN PROTON-ANTIPROTON COLLISIONS AT (RADICAL)s = 1.8 TeV
Henryk Piekarz Sep. 1994 7 p Presented at the Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM, 2-6 Aug. 1994
(Contract DE-AC02-76CH-03000)
(DE95-003382; FNAL/C-94/330-E; CONF-940816-61) Avail: CASI HC A02/MF A01

Properties of events originating from proton-antiproton interactions in which the total transverse energy, Sigma(E(sub T)), of the event exceeded 400 GeV are presented. These events were produced at the Fermilab Tevatron Collider operating at a center-of-mass energy of 1.8 TeV and recorded in the D0 detector. The authors describe their analysis method which minimizes the effect of multiple interactions in the data sample. Based on a data sample of 5.45 +/- 0.65 pb(sup -1), the topology of these hard scattering events as well as preliminary results for the cross-section, d sigma/d Sigma(E(sub T)), are presented and discussed.

A DIAGRAM TECHNIQUE FOR STRONGLY INTERACTING FERMION SYSTEMS. ONE-AND TWO-BAND HUBBARD MODELS
V. A. Moskalenko, S. P. Cojocaru, and M. I. Vladimir (Academy of Sciences, USSR, Moscow, USSR.) Jul. 1994 34 p
(DE95-609437; IC-94/182) Avail: CASI HC A03/MF A01 (US Sales Only)

The basic notions of a diagram method for the one-band Hubbard model, including Green functions, generalized Wick theorem and Dyson equation are discussed. The study of Mott-Hubbard and superconducting transitions is based on a localized approximation for the irreducible two-particle Green function. A similar technique is developed for the two-band Hubbard model which is more closely related to the structure of CuO2 planes of high-Tc superconductors and to find the criterion of metal-insulator transition. ON THE PHYSICS OF ION RING GENERATION FOR THE STABILIZATION OF FRX DISCHARGES Final Report
H. Fleischmann 1995 36 p
(Contract DE-AC02-76ET-53017)
(DE95-007105; DOE/ET-53017/T3) Avail: CASI HC A03/MF A01

As envisioned in the respective proposals, the author's work over the final periods of this contract centered on experimental and related theoretical investigations of the physics of the generation of ion rings which might be used for a tilt stabilization of FRX rings, with experiments centering around the new MICE equipment constructed during the earlier parts of the work. In particular, the work mainly consisted of the following: (1) investigations concerning the operation of the ion beam driver constructed earlier, especially of the magnetically insulated ion diode and possible improvements of that diode; (2) theoretical analyses on the propagation and neutralization of the ion beam during its injection into the confinement tank; and (3) experimental investigations on the physics of ion beam injection and ring formation in the MICE device; in these latter experiments very significant discrepancies of various observed data and those predicted from single-particle orbit calculations were found. Unfortunately, the work could not be completed due to stop in funding, but a semiquantitative analysis of these discrepancies indicated insufficient space charge neutralization of the ion beam in the tank and/or charge-exchange effects in the diode are considered the most likely reasons. In contrast to claims by its authors, a similar discrepancy also was found in the published data of the earlier IREX experiment. The results of their investigations, which together with the design and construction of the equipment provided the basis for two PhD theses, will be briefly described in this report; the full details can be obtained from the two theses. HIGH PRESSURE OPTICAL STUDIES OF SEMICONDUCTORS AND HETEROSTRUCTURES Final Report
H. R. Chandrasekhar 1995 14 p
(Contract DE-FG02-89ER-45402)
(DE95-007119; DOE/ER-45402/T1) Avail: CASI HC A03/MF A01

The authors have studied the effects of hydrostatic pressure on the confined transitions in quantum well heterostructures, using lattice matched GaAs/Al(x)GaAs(1-x)As, strained layer narrow band gap GaSb/AlSb and In(x)Ga(1-x)As/GaAs, and strained layer wide gap Zn(1-x)Cd(x)Se/ZnSe as examples. Precise values of the energies, pressure coefficients and band alignments are determined. In strained epilayers the interfacial strains, deformation potential constants and compressibilities are deduced. Strain compensation, structural stability and phase transitions are probed. The authors have observed a novel type of Fano resonance of excitons in GaAs associated with the (Gamma) conduction band as they hybridize with the X and L continua via electron-phonon coupling. This effect is used to extract the intervalley electron-phonon deformation potential D(sub (Gamma)X) to be 10.7 (+/-) 0.7 eV/(angstrom). They have observed a new electron trap state in Al(0.3)Ga(0.7)As doped with silicon at pressure of 60 kbar. They postulate that this new trap state has a large lattice relaxation with the trap energy well above the X CB. These trap states may be present in all Al(x)Ga(x)As materials and may be dominant at large x values (0.7 less than x less than 1). DOE

HYDROGEN-LIKE ATOM IN LASER FIELD: INVARIANT ATOMIC PARAMETERS IN THE GROUND STATE
I. V. Bondarev and S. A. Kuten (Belarussian State Univ., Minsk, Belarus.) Jul. 1994 15 p
(DE95-609036; IC-94/217) Avail: CASI HC A03/MF A01 (US Sales Only)

The invariant atomic parameters (dynamical vector and tensor polarizabilities) of hydrogen-like atom in the ground 1S(sub 1/2) state are calculated analytically by means of the Laplace transform of the radial Schroedinger equation. The obtained analytical expressions have been written in the compact form as a sum of linear and squared combinations of Gauss hypergeometric functions (sub 2)F(sub 1). The frequency dependence of the invariant atomic parameters is analyzed. DOE

SINGLE MOLECULE DETECTION USING CHARGE-COUPLED DEVICE ARRAY TECHNOLOGY Final Report
M. B. Denton Apr. 1994 17 p
(Contract DE-FG02-90ER-60986)
(DE95-006425; DOE/ER-60986/T2) Avail: CASI HC A03/MF A01

An ultra sensitive technique for the detection of fluorescent species in a flowing stream has been developed. The extension of this technique to the detection of fluorescently tagged nucleotides will be a significant benefit to one of the novel approaches for DNA sequencing being developed at Los Alamos National Laboratories. The detection scheme is based on a novel mode of operating a charge-coupled device (CCD) which greatly enhances the discrimination between fluorescence from the analyte and the background Raman scattering from the solvent. Register shifts between rows in the CCD are synchronized with the sample flow velocity so that fluorescence from a single species is collected in a single moving charge packet occupying an area approaching that of a single pixel while the background is spread evenly among a large number of pixels. This research has demonstrated that this technique is highly effective for the detection of fluorescently labelled latex microspheres. With additional development, the authors believe that this technique will achieve single molecule detection. DOE

REFLECTION OF NEUTRONS FROM AN OPTICAL GRATING
Alan E. Munter, S. Adenwalla, G. F. Felcher, and X. L. Zhou (Massachusetts Inst. of Tech., Cambridge, MA.) Dec. 1994 5 p Presented at the 1994 Fall Meeting of the Materials Research Society, Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract W-31-109-eng-38)
(DE95-007145; ANL/MSD/CP-85268; CONF-941144-79) Avail: CASI HC A01/MF A01

Specular and off-specular neutron intensities were measured at grazing incidence from an optical grating. The periodicity of the grating was determined from the locations of the intensity peaks in the off-specular data. An analysis of the widths of the off-specular intensity peaks showed that the effect of the coherence length of the neutron beam on the determination of a surface length scale (approximately)30 (mu)m was negligible compared to that of the instrument resolution. Although the structure of an optical grating used in this paper is simple, it has served to illustrate the simple relationship between the off-specular data structure and the real-space properties. For more general rough systems, a practical theoretical model will be needed to relate the off-specular data to the real-space roughness structure so that the diffusive data can be analyzed. Owing to the intrinsic complexity of diffuse scattering, the development of such a theoretical model will be a significant technical challenge, and its solution will constitute a major breakthrough in the development of the diffuse reflectivity technique for rough surface/interface characterization. MEASUREMENT OF PARTICLE TRANSPORT COEFFICIENTS ON ALCATOR C-MOD Ph.D. Thesis
T. C. T. Luke Oct. 1994 171 p
(Contract DE-AC02-78ET-51013)
(DE95-007763; DOE/ET-51013/307; PFC/RR-94-12) Avail: CASI HC A08/MF A02

The goal of this thesis was to study the behavior of the plasma transport during the divertor detachment in order to explain the central electron density rise. The measurement of particle transport coefficients requires sophisticated diagnostic tools. A two color interferometer system was developed and installed on Alcator C-Mod to measure the electron density with high spatial (approximately) 2 cm and high temporal (less than or equal to 1.0 ms) resolution. The system consists of 10 CO2 (10.6 micrometer) and 4 HeNe (.6328 micrometer) chords that are used to measure the line integrated density to within 0.08 CO2 degrees or 2.3 x 10(exp 16)/sq m theoretically. Using the two color interferometer, a series of gas puffing experiments were conducted. The density was varied above and below the threshold density for detachment at a constant magnetic field and plasma current. Using a gas modulation technique, the particle diffusion, D, and the convective velocity, V, were determined. Profiles were inverted using a SVD inversion and the transport coefficients were extracted with a time regression analysis and a transport simulation analysis. Results from each analysis were in good agreement. Measured profiles of the coefficients increased with the radius and the values were consistent with measurements from other experiments. The values exceeded neoclassical predictions by a factor of 10. The profiles also exhibited an inverse dependence with plasma density. The scaling of both attached and detached plasmas agreed well with this inverse scaling. This result and the lack of change in the energy and impurity transport indicate that there was no change in the underlying transport processes after detachment. DOE

ALPHA CHARACTERIZATION INSIDE PIPES USING ION-TRANSPORT TECHNOLOGY
S. P. Rojas, M. W. Rawool-Sullivan, K. G. Williams, and J. A. Vaccarella 1995 9 p Presented at the Waste Management '95, Tucson, AZ, 26 Feb. - 2 Mar. 1995
(Contract W-7405-eng-36)
(DE95-007869; LA-UR-95-174; CONF-950216-69) Avail: CASI HC A02/MF A01

Many DOE facilities have several miles of waste pipe systems that are internally contaminated with various and often undetermined radio nuclides. Unfortunately, currently acceptable alpha detection technologies are inefficient, time consuming, and do not address the problems presented by small diameter or curved pipes. In general, the problem of detecting alpha contamination on the inside surface of pipes is complicated by the fact that alphas do not penetrate the pipe walls. Unlike their conventional counterparts, alpha detectors based on ion transport technology sense alpha particles by collecting the ions created in ambient air as the particle loses its kinetic energy. The ions inside the pipe are transported by a fan-generated air current to an electrode inside the detector, which is attached to one end of the pipe. The collected charge at the electrode is proportional to the number of ions created inside the pipe, which in turn is proportional to the number of alphas emitted. Typically, monitoring for alpha contamination inside pipes or ductwork involves disrupting the operation to access as much surface area as possible for standard alpha monitoring. The detector based on ion transport technology effectively minimizes such disruption and in many circumstances will allow for in situ monitoring of a system that might otherwise not be practically accessible to standard methods. DOE

SUPERSYMMETRY AND LIGHT QUARK MASSES IN A REALISTIC SUPERSTRING MODEL
Edi Halyo Aug. 1994 15 p
(DE95-610201; WIS-PH-94-29) Avail: CASI HC A03/MF A01 (US Sales Only)

We show that supersymmetry can be broken mainly by hidden matter condensates in the observable matter direction in generic superstring models. This happens only when the fields whose VEV's give masses to hidden matter do not decouple at the condensation scale. We find how the parameters of the string model and the vacuum determine whether supersymmetry is broken mainly by hidden matter or gaugino condensates and in the matter or moduli direction. DOE

ERROR ANALYSIS OF THE QUARTIC NODAL EXPANSION METHOD FOR SLAB GEOMETRY
R. C. Penland (North Carolina Univ., Raleigh, NC.), P. J. Turinsky (North Carolina Univ., Raleigh, NC.), and Y. Y. Azmy 1995 10 p Presented at the International Conference on Mathematics and Computations, Reactor Physics, and Environmental Analyses, Portland, OR, 30 Apr. - 4 May 1995
(Contract DE-AC05-84OR-21400)
(DE95-007373; CONF-950420-19) Avail: CASI HC A02/MF A01

This paper presents an analysis of the quartic polynomial Nodal Expansion Method (NEM) for one-dimensional neutron diffusion calculations. As part of an ongoing effort to develop an adaptive mesh refinement strategy for use in state-of-the-art nodal kinetics codes, we derive a priori error bounds on the computed solution for uniform meshes and validate them using a simple test problem. Predicted error bounds are found to be greater than computed maximum absolute errors by no more than a factor of six allowing mesh size selection to reflect desired accuracy. We also quantify the rapid convergence in the NEM computed solution as a function of mesh size. DOE

OFF-SPECULAR SCATTERING IN NEUTRON REFLECTOMETRY
R. Pynn, S. M. Baker, G. Smith, and M. Fitzsimmons 1995 22 p Presented at the Workshop on Neutron Applications in Materials Science and Engineering, Chalk River, Canada, 17 Aug. 1994
(Contract W-7405-eng-36)
(DE95-007835; LA-UR-95-754; CONF-9408211-1) Avail: CASI HC A03/MF A01

When neutrons are scattered at small angles from planar, laterally homogeneous, stratified media, only specular (mirror like) reflection is observed. Sample inhomogeneities, such as interfacial roughness or voids, give rise to off-specular scattering which has been observed in many experiments with neutrons and x-rays. The easiest way to describe this scattering theoretically is based on the distorted-wave Born approximation (DWBA), which uses the neutron wavefunctions that describe reflection from a smooth surface as the basis functions for perturbation theory. From the DWBA one may obtain a number of qualitative results which are supported by experiment. Examples include the Yoneda fringes observed in reflection experiments with microscopically rough surfaces and the constant-q(sub z) fringes observed for multilayers with correlated, rough interfaces. One must, however, use the DWBA with care. When the correlation range within the reflecting interfaces is large--for example, when a surface is composed of misoriented facets--the approximation breaks down. Some authors have also reported a lack of quantitative agreement between versions of the DWBA calculations and the scattering observed with microscopically rough surfaces. A remarkable feature of neutron (or x-ray) reflectometry is the length scales that are probed within reflecting surfaces. These range from a few hundred Angstroms up to several microns, allowing neutron scattering to probe objects of a size normally visible by optical microscopy! The intent of this paper is to provide a simple description of scattering from rough surfaces that is accessible to a wide audience. Mathematical completeness is sacrificed in favor of intuitive arguments and experimental examples. DOE

Lee (Houston Univ., TX.) 16 Sep. 1994 29 p Presented at the Neutron Scattering, Sendai, Japan, 11-14 Oct. 1994 Sponsored by Martin Marietta Energy Systems, Inc.
(Contract DE-AC05-84OR-21400)
(DE95-007028; CONF-9410165-11) Avail: CASI HC A03/MF A01

Triple-axis spectrometry has been used to determine the magnetic excitations in YBa2Cu3O7. Polarized measurements at 100 K show the scattering consists of a peak near 40 MeV superposed on a small relatively flat background. The 40-MeV peak is found to be sharp in energy and anisotropic in momentum occupying a square portion of the Cu-O reciprocal lattice plane. The temperature dependence of the scattering is identical at the square side and corner. Polarized measurements show that the small background scattering observed at 100 K disappears below the superconducting transition. Resonant absorption measurements made to examine the Cu phonons show that no changes in the phonons occur at the superconducting transition. DOE

PROBING STRONGLY-INTERACTING ELECTROWEAK DYNAMICS THROUGH W(+)W(-)/ZZ RATIOS AT FUTURE E(+)E(-) COLLIDERS
V. Barger, Kingman Cheung, T. Han, and R. J. N. Phillips Jan. 1995 32 p Prepared in cooperation with California Univ., Davis, CA; Wisconsin Univ., Madison, WI; and Rutherford Appleton Lab., Chilton, England
(Contracts DE-FG03-93ER-40757; DE-FG03-91ER-40674; DE-FG02-95ER-40896)
(DE95-007202; DOE/ER-40757/061; UCD-95-2; RAL-95-003) Avail: CASI HC A03/MF A01

The authors point out that the ratio of W(+)W(-) yields W(+)W(-) and W(+)W(-) yields ZZ cross sections is a sensitive probe of the dynamics of electroweak symmetry breaking, in the CM energy region square root of s(sub ww) approximately greater than 1 TeV where vector boson scattering may well become strong. They suggest ways in which this ratio can be extracted at a 1.5 TeV e(+)e(-) linear collider, using W(+/-), Z yields jj hadronic decays and relying on dijet mass resolution to provide statistical discrimination between W(+/-) and Z. WW fusion processes studied here are unique for exploring scalar resonances of mass about 1 TeV and are complementary to studies via the direct channel e(+)e(-) yields W(+)W(-) for the vector and nonresonant cases. With an integrated luminosity of 200 fb(exp -1), the signals obtained are statistically significant. Comparison with a study of e(-)e(-) yields nu nu W(-)W(-) process is made. Enhancements of the signal rate from using a polarized electron beam, or at a 2 TeV e(+)e(-) linear collider and possible higher energy mu(+) mu(-) colliders, are also presented. DOE

The new colliding-beam heavy-ion accelerators, designed to investigate nuclear matter at high temperatures and densities, have motivated great interest during the last decade concerning possible new electromagnetic phenomena. One of the most interesting of these processes is the sparking of the vacuum to produce lepton-antilepton pairs. The process of electron capture from vacuum pair production is a principal beam-loss mechanism for highly charged relativistic ions in a storage ring, and thus must be considered in the design and the operation of these machines. In this paper, I present calculated impact-parameter-dependent probabilities and cross sections for muon capture from vacuum production in collisions of relativistic heavy ions by solving the time-dependent Dirac equation in unrestricted three-dimensional space using lattice-collocation techniques. Calculations are performed for muonpair production with capture into the K-shell in collisions of Au-197 + Au-197 at collider kinetic energies of 2 GeV per nucleon. DOE

At the Oak Ridge Multicharged Ion Source Facility, an experimental atomic collisions physics program is centered around a recently upgraded Electron Cyclotron Resonance (ECR) multicharged ion source. The 10 GHz CAPRICE source has been in operation since October 22, 1992, and has provided more intense, higher charge ion beams than our previous ECR ion source. Intense metallic beams have recently become available with the installation of a metallic oven on the source. In addition to measurements of electron-impact excitation, carried out in collaboration with the Joint Institute for Laboratory Astrophysics (JILA), experiments are presently on-line to study electron-impact ionization, low-energy ion-atom collisions, and ion-surface interactions. A brief summary of our various activities with an emphasis on the new capabilities is presented. DOE

INFRARED SPECTROSCOPY OF NONCLASSICAL IONS AND THEIR COMPLEXES Ph.D. Thesis
D. W. Boo Jan. 1995 190 p
(Contract DE-AC03-76SF-00098)
(DE95-008487; LBL-36702) Avail: CASI HC A09/MF A02

This thesis describes an infrared spectroscopic study on the structures and dynamics of the nonclassical ions and their complexes, using ion trap vibrational predissociation spectroscopy. Chapter One provides an introduction to the experimental apparatus used in this work. Chapter Two describes the previous theoretical and experimental works on the carbonium ion CH(5+) and infrared spectroscopic and theoretical works on CH(5+). CH(5+) was predicted to scramble constantly without possessing a stable structure. In Chapter Three, the infrared spectroscopy for the molecular hydrogen solvated carbonium ions CH(5+)(H2)(sub n) (n=1-6) in the frequency region of 2700-4200/sq cm are presented and compared with the results of ab initio molecular dynamics simulation on CH(5+)(H2)(sub n) (n=0-3). The results suggested that the scrambling of CH(5+) slowed down considerably by the stabilization effects of the solvent H2 molecules, and it was completely frozen out when the first three H2 molecules were bound to the core CH(5+). Chapter Four presents the complete infrared spectra for the solvated carbonium ions, CH(5+)(A)(x)(B)(y) A,B=H2, Ar, N2, CH4 : x,y=(0-5) in the frequency region of 2500-3200/cm. As the binding affinities of the solvent molecules and the number of the solvent molecules in the clusters increased, the scrambling of CH(5+) slowed down substantially. The structures of the solvated carbonium ions and the evidence for rapid proton transfer in CH(5+)(CH4) were also presented. Chapter Five presents the vib-rotational spectrum for the H-H stretching mode of the silanium ion SiH(5+). The results suggested that SiH(5+) can be described as a complex of SiH(3+) and a freely internally rotating H2, analogous to, but distinct from CH(5+). DOE

POLARIZATION AS A PROBE TO THE PRODUCTION MECHANISMS OF CHARMONIUM IN (pi)N COLLISIONS
W. K. Tang, S. J. Brodsky, M. Vaenttinen (Helsinki Univ., Helsinki, Finland.), and P. Hoyer (Helsinki Univ., Helsinki, Finland.) Jul. 1994 8 p Presented at the Workshop on the Future of High Sensitivity Charm Experiments, Batavia, IL, 7-9 Jun. 1994
(Contract DE-AC03-76SF-00515)
(DE95-008136; SU-SLAC-PUB-6576; CONF-9406242-6) Avail: CASI HC A02/MF A01

Measurements of the polarization of J/(psi) produced in pion-nucleus collisions are in disagreement with leading twist QCD prediction where J/(psi) is observed to have negligible polarization whereas theory predicts substantial polarization. The authors argue that this discrepancy cannot be due to poorly known structure functions nor the relative production rates of J/(psi) and (chi)(sub j). The disagreement between theory and experiment suggests important higher twist corrections, as has earlier been surmised from the anomalous non-factorized nuclear A-dependence of the J/(psi) cross section. PRECISE MEASUREMENT OF THE LEFT-RIGHT CROSS SECTION ASYMMETRY IN Z BOSON PRODUCTION BY e(+)e(-) COLLISIONS
A. Lath (Massachusetts Inst. of Tech., Cambridge, MA.) Sep. 1994 4 p Presented at the Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM, 2-6 Aug. 1994
(Contract DE-AC03-76SF-00515)
(DE95-008591; SU-SLAC-PUB-6667; CONF-940816-90) Avail: CASI HC A01/MF A01

The authors present a precise measurement of the left-right cross section asymmetry (A(sub LR)) for Z boson production by e(+)e(-) collisions. The measurement was performed at a center-of-mass energy of 91.26 GeV with the SLD detector at the SLAC Linear Collider (SLC). The luminosity-weighted average polarization of the SLC electron beam was (63.0 +/- 1.1)%. Using a sample of 49,392 Z decays, they measure A(sub LR) to be 0.1628 +/- 0.0071 (stat.) +/- 0.0028(syst.) which determines the effective weak mixing angle to be sin(sup 2) (theta)(sub W)(sup eff) = 0.2292 +/- 0.0009(stat.) +/- 0.0004(syst.). They combine this result with the result obtained in 1992 and obtain sin(sup 2) (theta)(sub W)(sup eff) = 0.2294 +/- 0.0010, which constitutes the best measurement of sin(sup 2) (theta)(sub W)(sup eff) in a single experiment presently available. DOE

(DE95-008316; BNL-61487; CONF-950172-1) Avail: CASI HC A03/MF A01

We discuss the stability of multiply strange baryonic systems, in the context of a mean field approach obtained from an underlying set of phenomenological meson-baryon interactions. The coupling parameters which determine the conventional sigma + omega mean fields (Hartree potentials) seen by various baryon species (N, lambda, Xi) in the many-body system are constrained by reproducing the trend of observed binding energies of single particle (N, lambda, Xi) states, as well as the energy per particle and density of non- strange nuclear matter. We also consider additional scalar (sigma*) and vector (phi) fields which couple strongly to strange baryons. The couplings of these fields are adjusted to produce strong hyperon-hyperon interactions, as suggested by the data on (Lambda)(Lambda) hypernuclei. Extrapolating this approach to systems of large strangeness S, we find a broad class of objects composed of neutrons, protons, Lambda's and Xi's, which are stable against strong decay. In these systems, the presence of filled Lambda orbitals blocks the strong decay (Xi)N yields (Lambda)(Lambda), leading to a strangeness fraction f(sub s) = (absolute value of S)/A approximately equal to 1, density rho approximately equal to (2 - 3)(sub rho), and charge fraction f(sub q) in the range -0.1less than q/A less than 0.1, comparable to that of hypothetical stable strange quark matter ('strangelets'), but with a low binding energy per particle E(sub B)/A approximately equal to -10 to -20 MeV. Such weakly bound multi-strange objects can be stable for very large A, unlike ordinary nuclei, since the Coulomb repulsion generated by the protons is largely cancelled by the presence of a comparable number of (Xi)'s, leading to a small net charge (positive or negative) of order A(sup 1/3). ON IONIC CHARGE DISTRIBUTIONS OF HEAVY EVAPORATION RESIDUES PASSING THROUGH A CARBON FOIL
R. N. Sagajdak and A. V. Eremin 1993 10 p Submitted for publication
(DE94-629016; JINR-E-7-93-356) Avail: CASI HC A02/MF A01 (US Sales Only)

Parameters of the ionic charge distributions, i.e. mean charge values and charge distribution widths, for very heavy (Z greater than or equal to 53) ions passing through a carbon foil were analyzed from the view point of applicability of known empirical systematics. Strong deviations (up to 60%) for experimental mean charge values were obtained from those deduced from empirical formulae at energies of ions less than 0.1 MeV/a mu. Corrections providing a general agreement with the experimental data within of +/- 6% at the energies of ions 0.001 less than or equal E less than or equal 10 MeV/a mu to the formula of Shima et al. are proposed. New systematics of the widths for charge distributions is also presented. The obtained systematics were used in ion-optical calculations of transportation of evaporation residues through the electrostatic recoil separator VASSILISSA. DOE

SENSOR FOR MEASURING THE ATOMIC FRACTION IN HIGHLY DISSOCIATED HYDROGEN
W. L. Gardner 1994 16 p Presented at the 41th Annual American Vacuum Society Symposium, Denver, CO, 24-28 Oct. 1994
(Contract DE-AC05-84OR-21400)
(DE95-006531; CONF-941001-13) Avail: CASI HC A03/MF A01

Atomic hydrogen is a very important constituent for processes ranging from cleaning oxide from GaAs and annealing amorphous silicon to the deposition of diamond. Because the usual techniques for measuring atomic fraction are either expensive and cumbersome to use, or unsuitable for application to highly dissociated hydrogen, a specially designed sensor was developed. Sensor design is based on a diffusion tube with noncatalytic walls, having one end open to the atom source and a catalytic closure at the other end. The sensor is simple and inexpensive to fabricate, and determining atom density is straightforward. Sensor design also inhibits thermal runaway, which occurs when atom density is high enough to impart enough recombination energy to the non-catalytic surface to substantially raise its temperature. While recombination coefficients for such surfaces are very low near room temperature, they increase nearly exponentially with temperature unless actively cooled. With the use of a straightforward calibration scheme to determine the variation in species fraction along the diffusion tube, the atomic fraction at the tube opening is determined. Design strategy, implementation considerations, and calibration method are presented. In addition, data obtained from an atomic hydrogen source are compared to relevant published data. DOE

THE HIGH ENERGY BEHAVIOR OF THE FORWARD SCATTERING PARAMETERS – (SIGMA)(SUB TOT), (RHO), AND B
Martin M. Block, F. Halzen (Wisconsin Univ., Madison, WI.), B. Margolis (McGill Univ., Montreal, Quebec.), and A. R. White Oct. 1994 12 p Presented at the 24th International Symposium on Multiparticle Dynamics, Vietri sul Mare, Italy, 12-19 Sep. 1994 Prepared in cooperation with Northwestern Univ., Evanston, IL
(Contracts W-31-109-eng-38; DE-AC02-76ER-02289; DE-AC02-76ER-00088)
(DE95-007075; ANL/HEP/CP-94-81; CONF-9409257-4) Avail: CASI HC A03/MF A01

Utilizing the most recent experimental data, the authors reanalyze high energy (anti p)p and pp data, using, two distinct (and dissimilar) analysis techniques: (1) asymptotic amplitude analysis, under the assumption that they have reached 'asymptopia'; and (2) an eikonal model whose amplitudes are designed to mimic real QCD amplitudes. The former gives strong evidence for a log(s/s(sub o)) dependence at current energies and not log(sup 2)(s/s(sub o)), and demonstrates that odderons are not necessary to explain the experimental data. The latter gives a unitary model for extrapolation into true 'asymptopia' from current energies, allowing the authors to predict the values of the total cross section at future supercolliders. Using the QCD-model, they obtain (sigma)(sub tot)(16 TeV) = 109 (+/-) 4 mb and (sigma)(sub tot)(40 TeV) = 124 (+/-) 4 mb. DOE

COSMIC RAY TEST RESULTS OF THE D0 PROTOTYPE SCINTILLATING FIBER TRACKER
D. Adams (Rice Univ., Houston, TX.), I. Bertram (Rice Univ., Houston, TX.), M. Adams (Illinois Univ., Chicago, IL.), M. Chung (Illinois Univ., Chicago, IL.), B. Baumbaugh (Notre Dame Univ., IN.), and A. Bross Jan. 1995 10 p Presented at the 4th International Conference on Advanced Technology and Particle Physics, Como, Italy, 3-7 Oct. 1994
(Contract DE-AC02-76CH-03000)
(DE95-007215; FNAL/C-95/012-E; CONF-941060-4) Avail: CASI HC A02/MF A01

The performance of a large scale scintillating fiber tracker with VLPC readout has been studied in a cosmic-ray test. Approximately 9.6 photoelectrons per single layer per trigger were detected at a VLPC bias voltage of 6.5V. The doublet efficiency was nearly 100% at a 0.1% noise level and a position resolution of about 140 micron was measured. The authors also studied the relationship between VLPC performance and VLPC bias voltage by measuring single fiber efficiency as a function of VLPC bias in the range 6.2V to 7.0V at a fixed temperature of 6.5 K. They observed no significant variation in VLPC performance within this bias range. DOE

N95-28245# Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems.
SOME ASPECTS OF THE OZI-RULE VIOLATION IN THE REACTION ANTI-pp YIELDS PHI PI(0)
D. Buzatu and F. M. Lev 1994 26 p
(DE95-608853; JINR-E-4-94-158) Avail: CASI HC A03/MF A01 (US Sales Only)

We consider the problem whether the violation of the OZI-rule in the reaction anti-pp yields phi pi(0) can be explained as the effect of rescattering in the processes anti-pp yields (K* anti-K + anti-K* K) yields K anti-K pi(0) yields phi pi(0) and/or anti-p p yields rho(+) rho(-) yields rho(+) pi(-) + rho(-) pi(+) pi(0) yields phi pi(0). If this effect is important then it is possible to give theoretical predictions concerning the energy dependence of the quantity BR(anti-p p yields phi pi(0))/BR(anti-p p yields K* anti-K) and the value of this quantity in the annihilation at rest from the P state. At the same time the analogous effect in the reaction anti-p p yields f(sub 2)'pi(0) is negligible. DOE

NEUTRINO OSCILLATIONS IN STRONG MAGNETIC FIELDS
G. G. Likhachev (Moscow State Univ., Russia.) and A. I. Studenikin Jul. 1994 8 p
(DE95-608876; IC-94/170) Avail: CASI HC A02/MF A01 (US Sales Only)

Neutrino conversion processes between two neutrino species and the corresponding oscillations induced by strong magnetic fields are considered. The value of the critical strength of magnetic field B(sub cr) as a function of characteristics of neutrinos in vacuum (Delta m(sup 2)(sub nu), mixing angle theta), effective particle density of matter n(sub eff), neutrino (transition) magnetic moment mu-tilde and energy E is introduced. It is shown that the neutrino conversion and oscillations effects induced by magnetic fields B greater or equal than B(sub cr) are important and may result in the depletion of the initial type of nu's in the bunch. A possible increase of these effects in the case when neutrinos pass through a sudden decrease of density of matter ('cross-boundary effect') and applications to neutrinos from neutron stars and supernova are discussed. DOE

N95-28251# International Centre for Theoretical Physics, Trieste (Italy).
QUANTUM EFFECTS INDUCED BY A GAP IN THE SPECTRUM OF ATOM-BATH COUPLING CONSTANTS: FREEZING OF ATOMIC DECAY AND MONOCHROMATIC COLLECTIVE RADIATION
D. S. Mogilevtsev and S. Ya. Kilin (Akademiya Nauk BSSR, Minsk, Russia.) Aug. 1994 29 p
(DE95-609037; IC-94/219) Avail: CASI HC A03/MF A01 (US Sales Only)

A specific kind of inhibition of atomic decay ('freezing' of decay) and intense monochromatic collective radiation are predicted for a single two-level atom and for a system of atoms interacting with the field bath having the gap in the spectrum of coupling constants. DOE

SEARCH FOR DEEPLY BOUND PIONIC ATOMS WITH HIGH-PURITY GERMANIUM TAGGING SPECTROMETER
B. A. Chernyshev (Moscow Physical-Engineering Inst., Russia.), M. G. Gornov (Moscow Physical-Engineering Inst., Russia.), V. N. Grebenev (Moscow Physical-Engineering Inst., Russia.), Yu. B. Gurov (Moscow Physical-Engineering Inst., Russia.), R. R. Shafigulin, S. V. Dovgun, S. L. Katulina, and V. G. Sandukovskij 1994 6 p
(DE95-609072; JINR-E-13-94-198) Avail: CASI HC A02/MF A01 (US Sales Only)

The experimental search and study of the deeply bound pionic atoms of xenon are proposed. The levels of pionic atoms produced in two-body channels of the reaction (sub N)Xe(d, He-3)(sub (N-1)) Xe(sub (pi))-can be identified by observing peaks in the He-3 energy spectrum measured at Theta = 0 deg where the cross section must reach the largest value. It is supposed that the experiment will be carried out with the zero-angle high-purity germanium spectrometer ('tagging system' of WASA) at the CELSIUS storage ring. The estimations show that an experimental run of about 100 hours will be enough for the observation of pionic atoms if the production cross section is not less than several micro b/sr/MeV. DOE

TRANSPORT SIMULATION OF NEGATIVE MAGNETIC SHEAR DISCHARGES
H. St.John, T. S. Taylor, Y. R. Lin-Liu, and A. D. Turnbull Oct. 1994 12 p Presented at the 15th International Conference on Plasma Physics and Controlled Nuclear Fusion Research, Seville, Spain, 26 Sep. - 1 Oct. 1994
(Contract DE-AC03-89ER-51114; GA Proj. 3466)
(DE95-003941; GA-A-21847; IAEA-CN-60/D-D-II-8; CONF-940933-20)
Avail: CASI HC A03/MF A01

In the present work the authors present simulations which show that the hollow current profile can be maintained in quasi-steady state through a self-consistently determined combination of bootstrap current and neutral beam and rf current drive. Controllability of the q profile is demonstrated by eliminating low m/n mode number instabilities from these discharges by maintaining q greater than 1.5 at all times, starting from appropriate initial conditions. At moderately high beta(sub p), the bootstrap current can be a substantial fraction of the total current and the ability to maintain the proper total current density profile depends on the bootstrap current profile and the availability of suitable localized heating and current drive. In these simulations, they use electron cyclotron heating, ion cyclotron heating, and electron cyclotron and fast wave current drive. The ability to maintain the profiles is demonstrated using several energy transport models. Self-consistent transport simulations are used to model the SSC discharges using the ONETWO transport code coupled to RF heating and current drive packages FASTWAVE and TORAY. To accurately model inductive and driven current profile evolution, the additional source terms that arise in Faraday's law due to internal flux surface motion are included by coupling the transport calculations to a fixed boundary equilibrium code. To test the sensitivity of the results to the transport model used, they model DIII-D discharges using thermal conductivities consistent with improved confinement DIII-D discharges, and with the Rebut-Lallia-Watkins model of energy transport. EXTENDED LINEAR ION TRAP FREQUENCY STANDARD APPARATUS Patent
John D. Prestage, inventor (to NASA) (Jet Propulsion Lab., California Inst. of Tech., Pasadena, CA.) 30 May 1995 42 p Filed 13 May 1994 Prepared in cooperation with Jet Propulsion Lab., California Inst. of Tech., Pasadena, CA
(NASA-Case-NPO-19081-1-CU; US-Patent-5,420,549;
US-Patent-Appl-SN-246041; US-Patent-Class-331-94.1;
US-Patent-Class-331-3; US-Patent-Class-324-304;
Int-Patent-Class-H03L-7/26) Avail: US Patent and Trademark Office

A linear ion trap for frequency standard applications is provided with a plurality of trapping rods equally spaced and applied quadruple rf voltages for radial confinement of atomic ions and biased level pins at each end for axial confinement of the ions. The trapping rods are divided into two linear ion trap regions by a gap in each rod in a common radial plane to provide dc discontinuity, thus dc isolating one region from the other. A first region for ion-loading and preparation fluorescence is biased with a dc voltage to transport ions into a second region for resonance frequency comparison with a local oscillator derived frequency while the second region is held at zero voltage. The dc bias voltage of the regions is reversed for transporting the ions back into the first region for fluorescence measurement. The dual mode cycle is repeated continuously for comparison and feedback control of the local oscillator derived frequency. Only the second region requires magnetic shielding for the resonance function which is sensitive to any ambient magnetic fields.

(DE95-007701; BNL-61378; CONF-9410248-2) Avail: CASI HC A03/MF A01

Lattice approach to weak matrix elements is reviewed. Recent progress in treating heavy quarks on the lattice is briefly discussed. Illustrative sample of results obtained so far is given. Among them I elaborate on B(sub K), line integral of B and B yields K*(sub gamma). Experimental implications especially with regard to constraints on the Standard Model (i.e. Wolfenstein) parameters, V(sub td) measurements and expectations for B(sub s)- bar-B(sub s), oscillations are briefly discussed. RECENT STATUS IN THE SEARCH FOR THE QUARK-GLUON PLASMA
Cheuk-Yin Wong 1995 15 p Presented at the International Symposium on Medium Energy Physics, Beijing, China, 22-26 Aug. 1994
(Contract DE-AC05-84OR-21400)
(DE95-007036; CONF-9408185-2) Avail: CASI HC A03/MF A01

The author reviews recent experimental results in the search for the quark-gluon plasma. Because the magnitudes of many signals for the plasma are directly proportional to the reaction cross sections, the author examines the corrections to the commonly used lowest-order cross sections. The author finds that the corrections are often significant and should be properly taken into account. The use of dileptons and photons with large transverse momenta is suggested as a means to study the boundary of the quark-gluon plasma. DOE

B-PHYSICS RESULTS FROM D0
D. Hedin (University of Northern Illinois, De Kalb, IL.) and L. Markosky (Arizona Univ., Tucson, AZ.) Dec. 1994 5 p Presented at the 27th International Conference on High Energy Physics, Glasgow, Scotland, 21-27 Jul. 1994
(Contract DE-AC02-76CH-03000)
(DE95-005126; FNAL/C-94/415-E; CONF-940722-42) Avail: CASI HC A01/MF A01

We report on preliminary measurements of the inclusive single muon and dimuon cross sections in p(bar p) collisions at (radical)s = 1.8 TeV using the D0 detector at the Fermilab collider. From these results, we extract the cross section for b-quark production for the kinematic range (vert bar)yb(vert bar) less than 1.0 and 6 less than p(sub t)(sup b) less than 50 GeV/c. We also report measurements on the J/(psi) production, and correlations between muons in dimuon events. DOE

HIGH ENERGY DENSITY SYSTEMS IN CRYOGENIC MEDIA: THE PRODUCTION AND REACTIONS OF ATOMS AND RADICALS Final Report, 21 May 1990 - 1 Oct. 1994
Eric Weitz Nov. 1994 44 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F29601-91-C-0016)
(AD-A289818; PL-TR-94-3050) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The work in this study has been directed towards developing an understanding of the factors that affect the production and storage of energetic species in a cryogenic environment and to evaluate the feasibility of employing such a medium for use as a high energy density material. Matrix isolation techniques have been employed to produce and attempt to store reactive species, specifically atoms in cryogenic solids, with a focus on storage of O and H atoms. Factors that must be considered in optimizing the storage of photolytically produced atoms include: matrix temperature, photolysis wavelength, spin state of the atoms, reactions with co-fragments and parent, the relative mass of the photofragments, and diffusion and photoinduced diffusion of the photofragments and/or the parent molecule. The interplay between these factors and their effect on atom storage is considered. O atom storage in solid Xe at a 32 mmolar concentration has been achieved with a number of enumerated strategies possible for increasing this concentration. H atoms have been successfully isolated and are stable in solid Xe for days at a temperature of 10 K. Progress directed towards storing O atoms in solid O2 is reported on. DTIC

A measurement of the strong coupling constant alpha(sub s) using the event-shape variable y(sub 3) (the differential two-jet rate) in the reaction e(+)e(-) yields hadrons is presented. The analysis is based on data from the TPC/Two-Gamma detector at the PEP e(+)e(-) storage ring taken between 1984 and 1986 at a center-of-mass energy of E(sub cm) = 29 GeV. A value of alpha(sub s)(29 GeV) = 0.160 +/- 0.012 is obtained, where the error is the quadratic sum of experimental and theoretical uncertainties. The procedure for determining alpha(sub s) is the same as that used by the ALEPH and TOPAZ experiments, which allows for a consistent comparison of the alpha(sub s) values obtained at different center-of-mass energies. The observed energy dependence 'running' of alpha(sub s) is found to be in good agreement with the QCD prediction, and is clearly incompatible with a constant value. DOE

RESONANT COHERENT EXCITATION OF N6(+) AND Mg11(+) IN PLANAR CHANNELING: ANISOTROPIES IN IONIZATION PROBABILITIES AND X-RAY EMISSION
S. Datz, P. F. Dittner, H. F. Krause, C. R. Vane, O. H. Crawford, J. S. Forster, G. S. Ball, W. G. Davies, and J. S. Geiger 1994 24 p Presented at the 10th International Workshop of Inelastic Ion-Surface Collisions, Grand Targhee Resort, WY, 8-12 Aug. 1994
(Contract DE-AC05-84OR-21400)
(DE95-006732; CONF-9408150-3) Avail: CASI HC A03/MF A01

The thrust of the conference in which this paper is presented is toward inelastic interactions of ions with surfaces. The work described in this paper deals with inelastic interactions of ions in planar channeling inside the crystal. The authors are, however, not too far off the mark because the planar channeling potential is made up from the sum of two (sheet) surface potentials. For the nitrogen experiment, a beam of N(6+) ions at an energy of 3.25 MeV/amu was supplied by the ORNL EN Tandem accelerator. After suitable collimation, it was passed through an Au crystal (1,800 angstrom thick). The emergent charge-state distribution was analyzed by electrostatic deflection followed by a solid-state position-sensitive detector. Charge states 5, 6 and 7 were simultaneously detected. In the case of Mg(11+) the beam was supplied at an energy of 25 MeV/amu by the CSCC Tandem Cyclotron Facility at Chalk River, Canada, and passed through an Ni crystal 4,000 angstrom thick which was epitaxially grown with the surface parallel to a (100) plane. The beam was charge state analyzed by a Q3D magnetic analyzer in which charges 11+ and 12+ were registered. At the energy in question, almost no 10+ fraction is visible. Two Si(Li) X-ray detectors aimed at 90 deg and 45 deg recorded the emission of Mg(11+) Ly alpha (n = 2 yields n = 1) X-rays. In conclusion, there is strong evidence that once a given ionic state is excited, a large fraction of the ions remain in that state and are either ionized or radiate from that state. The result is counter to the expectation that electron-ion collisions in the channel would have a large enough cross section to destroy the alignment before either of these two events could take place. At this point, the reasons for the observed retention of anisotropy are open to conjecture. DOE

NONLINEAR DYNAMICS OF A COHERENT POLARITON-BIEXCITON SYSTEM
Nguyen Trung Dan and Vo Tinh (Hue Coll., Viet Nam.) Aug. 1994 16 p
(DE95-609150; IC-94/230) Avail: CASI HC A03/MF A01 (US Sales Only)

The nonlinear dynamics of a coherent interacting polariton-biexciton system in optically excited semiconductors is investigated. We consider the case when two macroscopically coherent modes - a lower branch polariton and a biexciton existing simultaneously in a direct-gap semiconductor. The conditions for exhibiting optical bistability in stationary regime are obtained. Numerical simulation for the nonlinear dynamics equations of the system is also carried out. DOE

CRITICAL BEHAVIOUR OF SPIN MODELS: A TRANSFER-MATRIX APPROACH Ph.D. Thesis
Y. M. M. Knops 27 Oct. 1994 137 p Sponsored by Stichting voor Fundamenteel Onderzoek der Materie, and Nederlandse Organisatie voor Wetenschappelijk Onderzoek
(PB95-192456) Avail: CASI HC A07/MF A02

This thesis presents a study of several two-dimensional models. Critical and multicritical behavior are considered of the q-state Potts model, the O(n) model (variables are n-component vectors) and the fully frustrated XY model (O(2) model with frustration). These models are introduced in section 1.3. In chapter 2 we study the phase diagram of a generalized q-state Potts model with multispin interactions. In chapter 3 we describe a method to obtain some critical branches of the O(n) model on the triangular lattice. Chapter 4 contains an interpretation for the exotic exponents, exponents with a conformal classification but just outside the unitary grid, which describes the thermodynamic singularities. In Chapter 5 we describe a different kind of spin model; the fully frustrated XY model. Apart from a discrete Ising-like degree of freedom (the chirality) this model has also a continuous degree of freedom (the XY spin). Therefore, two kinds of phase transitions are expected, which happen to be at the same temperature. NTIS

PRODUCTION AND DECAY OF HYBRID MESONS BY FLUX-TUBE BREAKING
F. E. Close and P. R. Page Nov. 1994 24 p Prepared in cooperation with Oxford Univ.
(PB95-192837; RAL-94-116) Avail: Issuing Activity (National Technical Information Service (NTIS))

An analytic calculation of the breaking of excited chromoelectric flux-tubes is performed in a harmonic oscillator approximation and applied to predict the dynamics of all J(sup PC) low-lying gluonic excitations of mesons (hybrids). Widths, branching ratios and production dynamics of some recently discovered J(sup PC) = 1(- +), 0(- +), and 1(- -) mesons are found to be in remarkable agreement with these results. We introduce the selection rules that can be used to understand the systematics of numerical decay calculations, and we find possible significant breaking of these rules for specific channels that may enable enhanced production and detection of hybrids. MUON SPIN RELAXATION IN FERROMAGNETS: THEORETICAL RESULTS FOR PARAMAGNETIC EuO AND EuS
S. W. Lovesey and E. Engdahl Nov. 1994 20 p See also PB95-192878
(PB95-192860; RAL-94-121) Avail: Issuing Activity (National Technical Information Service (NTIS))

The relaxation rate for depolarization of a positive muon implanted in an isotropic magnetic salt with ferromagnetic exchange interactions is studied theoretically, on the basis of the coupled-mode theory of critical and paramagnetic spin fluctuations and a full numerical evaluation of the dipole field experienced by the muon. The main findings from studies of realistic models of EuO and EuS are (1) a significant dependence of the relaxation rate, lambda, on the assumed position of the implanted muon and (2) a monotonic temperature dependence, with lambda approx xi(sup 3/2) in the approach to the critical temperature at which the correlation length, xi, diverges. In contrast, previous results for a model of an isotropic magnet with an antiferromagnetic exchange, RbMnF3, show that lambda for this magnet is not a monotonic function of the temperature, and in the precursor region to T(c) lambda increases with decreasing temperature with a power law behavior lambda approx xi(sup 1/2). The calculated values of lambda for EuO are consistent with data from preliminary experiments on the same salt. NTIS

MUON SPIN RELAXATION IN ANTIFERROMAGNETS: A STUDY OF RbMnF3 BASED ON THE COUPLED-MODE THEORY OF PARAMAGNETIC AND CRITICAL SPIN FLUCTUATIONS
S. W. Lovesey, E. Balcar, and A. Cuccoli Oct. 1994 34 p See also PB95-192860 Prepared in cooperation with Atominstitut der Oesterreichischen Univ., and Florence Univ.
(PB95-192878; RAL-94-110) Avail: Issuing Activity (National Technical Information Service (NTIS))

The relaxation rate for the depolarization of a positive muon implanted in an antiferromagnetically coupled Heisenberg magnet is studied on the basis of a coupled-mode theory of critical and paramagnetic spin fluctuations, which gives overall an unrivaled account of spin fluctuations. The paper includes the first comprehensive treatment of the dipole field that couples the muon and atomic (spin) magnetic moments. An analytical calculation of the relaxation rate is feasible in the vicinity of the critical temperature, because of the dominant role of the critical fluctuations, whereas in general numerical methods are required to calculate the spin response function and the dipole field. In the approach to the critical temperature, the muon relaxation rate increases as the square root of the correlation length. Results for the isotropic antiferromagnet RbMnF3 demonstrate that, the relaxation rate is not a monotonic function of the temperature, and the magnitude and temperature variation of the relaxation rate depend to a significant degree on the site of the implanted muon. A theoretical framework for the interpretation of the muon relaxation rate is reviewed in a set of appendices. NTIS

OPTIMIZATION STRATEGIES FOR MOLECULAR DYNAMICS PROGRAMS ON CRAY COMPUTERS AND SCALAR WORK STATIONS Final Report, Aug. - Dec. 1993
Michael J. Unekis and Betsy M. Rice Dec. 1994 42 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289574; ARL-TR-661) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

We present results of timing runs and different optimization strategies for a prototype molecular dynamics program that simulates shock waves in a two-dimensional (2-D) model of a reactive energetic solid. The performance of the program may be improved substantially by simple changes to the Fortran or by employing various vendor-supplied compiler optimizations. The optimum strategy varies among the machines used and will vary depending upon the details of the program. The effect of various compiler options and vendor-supplied subroutine calls is demonstrated. Comparison is made between two scalar workstations (IBM RS/6000 Model 370 and Model 530) and several Cray supercomputers (X-MP/48, Y-MP8/128, and C-90/16256). We find that for a scientific application program dominated by sequential, scalar statements, a relatively inexpensive high-end work station such as the IBM RS/60006 RISC series will outperform single processor performance of the Cray X-MP/48 and perform competitively with single processor performance of the Y-MP8/128 and C-9O/16256. FUTURE OPPORTUNITIES AND PRESENT POSSIBILITIES FOR COHERENT INELASTIC SINGLE CRYSTAL MEASUREMENTS ON PULSED NEUTRON SOURCES
M. Hagan, U. Steigenberger, C. Petrillo, and F. Sacchetti Jan. 1995 32 p
(PB95-195798; RAL-95-006) Avail: Issuing Activity (National Technical Information Service (NTIS))

The triple axis spectrometer (TAS) has long been the mainstay for measuring excitations in single crystal samples. In a recent paper, Dorner has claimed that the TAS would be the instrument of choice for such measurements at any future high flux spallation neutron source. However, a comparison of the operational characteristics of a TAS and those of direct and indirect geometry time of flight spectrometers for this type of measurement at a pulsed source shows that the TAS would not in fact be a particularly competitive instrument for this purpose. PROPOSED HIGH SPEED PELLET INJECTION SYSTEM HIPEL FOR LARGE HELICAL DEVICE
S. Sudo, M. Kanno (Kobe Steel Ltd., Japan.), H. Kaneko, S. Saka (Kobe Steel Ltd., Japan.), T. Shirai (Kyoto Univ., Uji, Japan.), and T. Baba Nov. 1993 18 p Presented at the IEEE/NPSS 15th Symposium on Fusion Engineering, Cape Cod, MA, 1993
(ISSN 0915-633X)
(NIFS-255) Avail: CASI HC A03/MF A01

From the results of the simulation study including pellet ablation and 1-D transport code, it is found that a high speed pellet injector with pellet velocity of more than 3 km/s is necessary for the penetration of the pellet with diameter of 3 mm into the core region under the expected plasma condition of Large Helical Device (LHD) of heliotron/stellarator type with superconducting coils at NIFS in Japan. Therefore, a two stage pellet injector was constructed and tested successfully in order to obtain the pellet velocity range of 3 km/s. Based upon the above results, a high speed flexible multiple-pellet injection system 'HIPEL' for LHD is proposed. HIPEL consists of independent 10 two-stage gun barrels and 10 single-stage gun barrels. It has multi purposes such as refueling and flexible density profile control, diagnostics and other functions. SIGNATURES OF HIGGS-TRIPLET REPRESENTATIONS AT TeV-e(+)e(-) COLLIDERS
Kingman Cheung, R. J. N. Phillips, and A. Pilaftsis Nov. 1994 20 p
(Contract DE-FG03-93ER-40757)
(DE95-007201; DOE/ER-40757/057; RAL-94-119) Avail: CASI HC A03/MF A01

The authors investigate the potential of future TeV linear e(+)e(-) colliders to observe singly-charged Higgs bosons (H(+/-) via the coupling H(+/-)W(-/+))Z, which would signal the existence of exotic Higgs representations. In the context of a Higgs-triplet model compatible with the electroweak oblique parameters, they estimate the cross section for producing charged Higgs-triplet bosons that couple predominantly to W and Z bosons in 0.5-2 TeV-e(+)e(-) colliders. The principal backgrounds are evaluated and the viability of the signal is discussed and illustrated. DOE

(Contract DE-AC02-76CH-03000)
(DE95-007216; FNAL/C-95/005; CONF-9409258-3) Avail: CASI HC A02/MF A01

The past fifteen years have witnessed a remarkable development of methods for analyzing single particle orbit dynamics in accelerators. Unlike their more classic counterparts, which act upon differential equations, these methods proceed by manipulating Poincare maps directly. This attribute makes them well matched for studying accelerators whose physics is most naturally modelled in terms of maps, an observation that has been championed most vigorously by Forest. In the following sections the author sketchs a little background, explains some of the physics underlying these techniques, and discusses the best computing strategy for implementing them in conjunction with modeling accelerators. CAS CERN ACCELERATOR SCHOOL 5TH GENERAL ACCELERATOR PHYSICS COURSE
S. Turner, ed. 26 Jan. 1994 537 p Course held in Jyvaeskylae, Finland, 7-18 Sep. 1992
(ISSN 0007-8328)
(DE95-608324; CERN-94-01-Vol-2; CONF-9209485; ISBN 92-9083-058-1)
Avail: CASI HC A23/MF A04 (US Sales Only)

The fifth CERN Accelerator School (CAS) basic course on General Accelerator Physics was given at the University of Jyvaeskylae, Finland, from 7 to 18 September 1992. Its syllabus was based on the previous similar courses held at Gif-sur-Yvette in 1984, Aarhus 1986, Salamanca 1988 and Juelich 1990, and whose proceedings were published as CERN Reports 85-19, 87-10, 89-05 and 91-04, respectively. However, certain topics were treated in a different way, improved or extended, while new subjects were introduced. As far as the proceedings of this school are concerned the opportunity was taken not only to include the lectures presented but also to select and revise the most appropriate chapters from the previous similar schools. In this way the present volumes constitute a rather complete introduction to all aspects of the design and construction of particle accelerators, including optics, emittance, luminosity, longitudinal and transverse beam dynamics, insertions, chromaticity, transfer lines, resonances, accelerating structures, tune shifts, coasting beams, lifetime, synchrotron radiation, radiation damping, beam-beam effects, diagnostics, cooling, ion and positron sources, RF and vacuum systems, injection and extraction, conventional, permanent and superconducting magnets, cyclotrons, RF linear accelerators, microtrons, as well as applications of particle accelerators (including therapy) and the history of accelerators. See hints under the relevant topics. DOE

The use of energetic electrons (and other leptons) to probe the structure of hadronic matter has had a long and extremely successful history. We begin with a quick pictorial review and then introduce the Quark Parton Model with its prediction of scaling for deep inelastic ep yields eX and nu N yields mu X scattering. Here by 'scaling' we mean that the structure functions F(sub i)(x, Q(sup 2)) depend only on the Bjorken variable x, and not on Q(sup 2). A study of the QCD-improved parton model is preceded by an introductory discussion of QCD, renormalization, and the running of the coupling constant alpha(sub s). We indicate how the running of alpha(sub s), governed by the universal beta function, can, in principle, sum all the logarithmic ultraviolet divergences associated with the quark-gluon vertices. In an analogous way we indicate how universal running parton densities, governed by Altarelli-Parisi evolution equations, can, in principle, sum all the logarithmic initial state collinear singularities. ABRASION-ABLATION MODEL FOR NEUTRON PRODUCTION IN HEAVY ION REACTIONS

Francis A. Cucinotta, John W. Wilson, and Lawrence W. Townsend Jun. 1995 16 p
(RTOP 199-45-16-12)
(NASA-TM-4656; L-17455; NAS 1.15:4656) Avail: CASI HC A03/MF A01

In heavy ion reactions, neutron production at forward angles is observed to occur with a Gaussian shape that is centered near the beam energy and extends to energies well above that of the beam. This paper presents an abrasion-ablation model for making quantitative predictions of the neutron spectrum. To describe neutrons produced from the abrasion step of the reaction where the projectile and target overlap, the authors use the Glauber model and include effects of final-state interactions. They then use the prefragment mass distribution from abrasion with a statistical evaporation model to estimate the neutron spectrum resulting from ablation. Measurements of neutron production from Ne and Nb beams are compared with calculations, and good agreement is found. Author

HEAT PIPE COOLED REACTORS FOR MULTI-KILOWATT SPACE POWER SUPPLIES

W. A. Ranken and M. G. Houts 1995 7 p Presented at the 9th International Heat Pipe Conference, Albuquerque, NM, 1-5 May 1995
(Contract W-7405-eng-36)
(DE95-005211; LA-UR-94-4199; CONF-9505155-1) Avail: CASI HC A02/MF A01

Three nuclear reactor space power system designs are described that demonstrate how the use of high temperature heat pipes for reactor heat transport, combined with direct conversion of heat to electricity, can result in eliminating pumped heat transport loops for both primary reactor cooling and heat rejection. The result is a significant reduction in system complexity that leads to very low mass systems with high reliability, especially in the power range of 1 to 20 kWe. In addition to removing heat exchangers, electromagnetic pumps, and coolant expansion chambers, the heat pipe/direct conversion combination provides such capabilities as startup from the frozen state, automatic rejection of reactor decay heat in the event of emergency or accidental reactor shutdown, and the elimination of single point failures in the reactor cooling system. The power system designs described include a thermoelectric system that can produce 1 to 2 kWe, a bimodal modification of this system to increase its power level to 5 kWe and incorporate high temperature hydrogen propulsion capability, and a moderated thermionic reactor concept with 5 to 20 kWe power output that is based on beryllium modules that thermally couple cylindrical thermionic fuel elements (TFE's) to radiator heat pipes. MONOLITHIC ELECTRONICS FOR NUCLEAR AND HIGH-ENERGY PHYSICS EXPERIMENTS

G. R. Young 1994 11 p Presented at the Intersections of Particle and Nuclear Physics, St. Petersburg, FL, 31 May - 6 Jun. 1994
(Contract DE-AC05-84OR-21400)
(DE95-005393; CONF-940514-19) Avail: CASI HC A03/MF A01

Electronic instrumentation for large fixed-target and collider experiments is rapidly moving to the use of highly integrated electronics wherever it is cost effective. This trend is aided by the development of circuit building blocks useful for nuclear and high-energy physics instrumentation and has accelerated recently with the development of monolithic silicon chips with multiple functions on one substrate. Examples of recent developments are given, together with remarks on the rationale for use of monolithic electronics and economic considerations. DOE

CRAB CROSSING IN A GAMMA-GAMMA COLLIDER

M. Xie, K. J. Kim, and A. Sessler Aug. 1994 8 p Presented at the Workshop on Gamma-gamma Colliders, Berkeley, CA, 28-31 Mar. 1994
(Contract DE-AC03-76SF-00098)
(DE95-006580; LBL-35997; CONF-940351-6) Avail: CASI HC A02/MF A01

The crabbing of an incident photon beam from a laser, and the electron beam with which it interacts at the conversion point, is shown to have the same efficiency as in head-on Compton scattering, but with the advantages of a crossing geometry. The resulting gamma-ray beam is also crabbed, which allows for a crossing collision point, while maintaining the luminosity at the same value it would have in a head-on collision. DOE

HIGH ENERGY ELECTRON BEAMS FOR CERAMIC JOINING

B. N. Turman, S. J. Glass, J. A. Halbleib, D. R. Helmich, R. E. Loehman, and J. R. Clifford (Titan Corp., Albuquerque, NM.) 1994 11 p Presented at the SPIE 1995: SPIE Conference on Optics, Electro-Optics, and Laser Application in Science, Engineering and Medicine, San Jose, CA, 5-10 Feb. 1995
(Contract DE-AC04-94AL-85000)
(DE95-006316; SAND-94-2145C; CONF-950226-4) Avail: CASI HC A03/MF A01

Joining of structural ceramics is possible using high melting point metals such as Mo and Pt that are heated with a high energy electron beam, with the potential for high temperature joining. A 10 MeV electron beam can penetrate through 1 cm of ceramic, offering the possibility of buried interface joining. Because of transient heating and the lower heat capacity of the metal relative to the ceramic, a pulsed high power beam has the potential for melting the metal without decomposing or melting the ceramic. We have demonstrated the feasibility of the process with a series of 10 MeV, 1 kW electron beam experiments. Shear strengths up to 28 MPa have been measured. This strength is comparable to that reported in the literature for bonding silicon nitride to molybdenum with copper-silver-titanium braze, but weaker than that reported for Si3N4-Si3N4 with gold-nickel braze. The bonding mechanism appears to be a thin silicide layer. DOE

ACCELERATION THEOREMS

R. Palmer Jun. 1994 12 p Presented at the Advanced Accelerator Concepts Workshop, Lake Geneva, WI, 13-18 Jun. 1994
(Contracts DE-AC02-76CH-00016; DE-AC03-76SF-00515)
(DE95-007300; BNL-61317; CONF-940681-8) Avail: CASI HC A03/MF A01

Electromagnetic fields can be separated into near and far components. Near fields are extensions of static fields. They do not radiate, and they fall off more rapidly from a source than far fields. Near fields can accelerate particles, but the ratio of acceleration to source fields at a distance R is always less than R/lambda or 1, whichever is smaller. Far fields can be represented as sums of plane parallel, transversely polarized waves that travel at the velocity of light. A single such wave in a vacuum cannot give continuous acceleration, and it is shown that no sum of such waves can give net first order acceleration. This theorem is proven in three different ways, each method showing a different aspect of the situation. DOE

BUBBLE FUSION: PRELIMINARY ESTIMATES

R. A. Krakowski 1995 21 p
(Contract W-7405-eng-36)
(DE95-006337; LA-UR-95-100) Avail: CASI HC A03/MF A01

The collapse of a gas-filled bubble in disequilibrium (i.e., internal pressure much less than external pressure) can occur with a significant focusing of energy onto the entrapped gas in the form of pressure-volume work and/or acoustical shocks; the resulting heating can be sufficient to cause ionization and the emission of atomic radiations. The suggestion that extreme conditions necessary for thermonuclear fusion to occur may be possible has been examined parametrically in terms of the ratio of initial bubble pressure relative to that required for equilibrium. In this sense, the disequilibrium bubble is viewed as a three-dimensional 'sling shot' that is 'loaded' to an extent allowed by the maximum level of disequilibrium that can stably be achieved. Values of this disequilibrium ratio in the range 10(exp -5) to 10(exp -6) are predicted by an idealized bubble-dynamics model as necessary to achieve conditions where nuclear fusion of deuterium-tritium might be observed. Harmonic and aharmonic pressurizations/decompressions are examined as means to achieve the required levels of disequilibrium required to create fusion conditions. A number of phenomena not included in the analysis reported herein could enhance or reduce the small levels of nuclear fusions predicted. DOE

COUPLING IN THE TEVATRON

N. M. Gelfand Dec. 1994 36 p
(Contract DE-AC02-76CH-03000)
(DE95-005129; FNAL-TM-1916) Avail: CASI HC A03/MF A01

The performance of the Fermilab Tevatron Collider at the commencement of run Ib was far below expectations. After a frustrating period of several months, a low-beta quad downstream of the interaction point at B0 was found to be rolled. This rolled quadrupole coupled the horizontal and vertical motion of the Tevatron beams. It also made matching the beam from the Main Ring to the Tevatron impossible, resulting in emittance blow up on injection. The net result of the roll was a significant reduction in the Tevatron luminosity. When the roll in the quadrupole was corrected the performance of the Tevatron improved dramatically. This note will discuss the experimental data indicating the presence of coupling and subsequent calculations which show how coupling can affect the luminosity. It is not intended to exhaust a discussion of coupling, which hopefully will be understood well enough to be discussed in a subsequent note. DOE

SILICON SUBSYSTEM MECHANICAL ENGINEERING CLOSEOUT REPORT FOR THE SOLENOIDAL DETECTOR COLLABORATION

J. Hanlon, R. W. Christensen, G. Hayman, D. C. Jones, R. Ross, W. Wilds, S. Yeamans, and H. J. Ziock 1995 60 p
(Contract W-7405-eng-36)
(DE95-006336; LA-UR-95-156) Avail: CASI HC A04/MF A01

The authors' group at Los Alamos National Laboratory was responsible for the mechanical engineering of the silicon tracking system of the Solenoidal Detector Collaboration (SDC) experiment of the Superconducting Super Collider (SSC) project. The responsibility included the overall design of the system from the mechanical point of view, development and integration of the cooling system, which was required to remove the heat generated by the front-end electronics, assembly of the system to extremely tight tolerances, and verification that the construction and operational stability and alignment tolerances would be met. In addition to the mechanical engineering work, they also performed activation, background, and shielding studies for the SSC program. Much of the work they performed was potentially useful for other future high energy physics (HEP) projects. This report describes the closeout work that was performed for the Los Alamos SDC project. Four major tasks were identified for completion: (1) integration of the semi-automated assembly station being developed and construction of a precision part to demonstrate solutions to important general assembly problems (the station was designed to build precision silicon tracker subassemblies); (2) build a state-of-the-art TV holography (TVH) system to use for detector assembly stability tests; (3) design, build, and test a water based cooling system for a full silicon shell prototype; and (4) complete and oocument the activation, background, and shielding studies, which is covered in a separate report. DOE

POLARIZING MATTER AND ANTIMATTER: A NEW METHOD Final Report

Y. Onel Dec. 1994 62 p
(Contract DE-FG02-91ER-40644)
(DE95-007109; DOE/ER-40644/T1) Avail: CASI HC A04/MF A01

Several years ago a self-polarization effect for stored (anti-)protons and ions was investigated theoretically. The effect is based on the well-known Stern-Gerlach effect in gradient fields. The aim of the ongoing measurements at the Indiana University Cyclotron Facility (IUCF) is to verify experimentally the various assumptions on which this effect is based. The final goal is to demonstrate this new polarization effect. The proposed effect could be a powerful tool to produce polarized stored hadron beams both in the low-energy range and at SSC and LHC energies. In this progress report the authors will describe the progress in three parts: (1) experimental work at IUCF Cooler Ring; (2) the extensive computer simulations of the spin stability for the IUCF Cooler Ring; and (3) theoretical studies. DOE

SOME NOTES ON LONG-RANGE BEAM-BEAM EFFECTS FOR THE 2 TeV COLLIDER

M. J. Syphers 1994 5 p Presented at the Workshop on Future Hadron Facilities in the United States, Bloomington, IN, 6-10 Jul. 1994
(Contract DE-AC02-76CH-00016)
(DE95-006771; BNL-61291; CONF-9407128-3) Avail: CASI HC A01/MF A01

The 2 TeV (bar p)-p collider discussed at this workshop would necessarily have hundreds of long-range interactions between the counter-rotating bunches and some of the low-order effects of these interactions are estimated below. We discuss in this paper how the helical orbit around the accelerator will help alleviate some of these effects, though the tune spread due to the long-range interactions will be present. DOE

THE CDF UPGRADE

C. Newman-Holmes Jan. 1995 9 p Presented at the 4th International Conference on Advanced Technology and Particle Physics, Como, Italy, 3-7 Oct. 1994
(Contract DE-AC02-76CH-03000)
(DE95-006683; FNAL/C-95/003-E; CONF-941060-2) Avail: CASI HC A02/MF A01

The Collider Detector at Fermilab (CDF) has been used to study proton-antiproton collisions at the Fermilab Tevatron since 1985. Over the years, the detector has evolved steadily to increase its physics capability and to keep pace with improvements to the Tevatron. Fermilab is currently building a new Main Injector accelerator which will lead to even larger luminosity values. This paper describes upgrades to CDF that will allow one to exploit the higher luminosity of the Main Injector. DOE

SKEW CHROMATICITY
S. Peggs and G. F. Dell 1994 22 p Presented at the Collective Effects in Large Hadron Collider Conference, Montreux, Switzerland, 17-22 Oct. 1994
(Contract DE-AC02-76CH-00016)
(DE95-007677; BNL-61420; CONF-9410315-1) Avail: CASI HC A03/MF A01

The on-momentum description of linear coupling between horizontal and vertical betatron motion is extended to include off-momentum particles, introducing a vector quantity called the 'skew chromaticity.' This vector tends to be long in large superconducting storage rings, where it restricts the available working space in the tune plane, and modifies collective effect stability criteria. Skew chromaticity measurements at the Cornell Electron Storage Ring (CESR) and at the Fermilab Tevatron are reported, as well as tracking results from the Relativistic Heavy Ion Collider (RHIC). The observation of anomalous head-tail beam losses near the tune diagonal in the Tevatron are explained in terms of the extended theory, including modified criteria for head-tail stability. These results are confirmed in head-tail simulations. Sources of skew chromaticity are investigated. DOE

BEAM-BEAM INTERACTION WORKING GROUP SUMMARY
R. H. Siemann 1995 6 p Presented at the Workshop on Nonlinear Dynamics in Particle Accelerators: Theory and Experiments, Arcidosso, Italy, 4-9 Sep. 1994
(Contract DE-AC03-76SF-00515)
(DE95-007824; SU-SLAC-PUB-95-6763; CONF-9409258-4) Avail: CASI HC A02/MF A01

The limit in hadron colliders is understood phenomenologically. The beam-beam interaction produces nonlinear resonances and makes the transverse tunes amplitude dependent. Tune spreads result from the latter, and as long as these tune spreads do not overlap low order resonances, the lifetime and performance is acceptable. Experience is that tenth and sometimes twelfth order resonances must be avoided, and the hadron collider limit corresponds roughly to the space available between resonances of that and lower order when operating near the coupling resonance. The beam-beam interaction in e(+)e(-) colliders is not understood well. This affects the performance of existing colliders and could lead to surprises in new ones. For example. a substantial amount of operator tuning is usually required to reach the performance limit given above, and this tuning has to be repeated after each major shutdown. The usual interpretation is that colliding beam performance is sensitive to small lattice errors, and these are being reduced during tuning. It is natural to ask what these errors are, how can a lattice be characterized to minimize tuning time, and what aspects of a lattice should receive particular attention when a new collider is being designed. The answers to this type of question are not known, and developing ideas for calculations, simulations and experiments that could illuminate the details of the beam-beam interaction was the primary working group activity. DOE

MEASUREMENT OF WAKEFIELD SUPPRESSION IN A DETUNED X-BAND ACCELERATOR STRUCTURE
C. Adolphsen, K. Bane, T. Higo, K. Kubo, R. Miller, R. Ruth, K. Thompson, and J. Wang Aug. 1994 4 p Presented at the 17th International LINAC Conference, Tsukuba, Japan, 21-26 Aug. 1994
(Contract DE-AC03-76SF-00515)
(DE95-008592; SU-SLAC-PUB-6629; CONF-9408125-49) Avail: CASI HC A01/MF A01

Research is underway at SLAC to develop accelerator structures for a next generation linear collider. A full-scale prototype X-band structure has been built in which the dipole mode frequencies were detuned to suppress the long-range transverse wakefield by about two orders of magnitude. To verify that the detuning works as expected, a facility to measure the long-range wakefield, called the Accelerator Structure SETup, or ASSET, was constructed in the SLAC Linear Collider (SLC). This paper presents the results from the measurement of the prototype X-band structure with this facility. DOE

OPTICAL DESIGN AND PERFORMANCE OF THE INELASTIC SCATTERING BEAMLINE AT THE NATIONAL SYNCHROTRON LIGHT SOURCE
C. C. Kao, D. P. Siddons, T. Oversluizen, J. B. Hastings, K. Hamalainen, and M. Krisch (European Synchrotron Radiation Facility, Grenoble, France.) 1994 13 p Presented at the International Meeting on Synchrotron Radiation Instrumentation, Stony Brook, NY, 18-22 Jul. 1994
(Contract DE-AC02-76CH-00016)
(DE95-007679; BNL-61410; CONF-940714-50) Avail: CASI HC A03/MF A01

Phase 1 of the X21 beamline at the National Synchrotron Light Source was commissioned during 1993. The research program at the X21 beamline is focused on the study of electronic excitations in condensed matter with total energy resolution of 0.1 eV to 1.0 eV. The source is a 27 pole hybrid wiggler. A water-cooled horizontal focusing Si(220) monochromator and a spherically bent Si(444) analyzer were installed and commissioned. At 8 keV the energy resolution of the monochromator is about 0.7 eV, and the energy resolution of the analyzer is about 0.1 eV. Results from several selected experiments are also discussed. DOE

RECENT HIGH-SPEED BALLISTICS EXPERIMENTS AT ORNL
S. K. Combs, M. J. Gouge, L. R. Baylor, P. W. Fisher, C. A. Foster, C. R. Foust, S. L. Milora, and A. L. Qualls 1994 14 p Presented at the 45th Aeroballistic Range Association (ARA) Meeting, Huntsville, AL, 10-14 Oct. 1994
(Contract DE-AC05-84OR-21400)
(DE95-006534; CONF-9410305-1) Avail: CASI HC A03/MF A01

Oak Ridge National Laboratory (ORNL) has been developing pellet injectors for plasma fueling experiments on magnetic confinement devices for almost 20 years. With these devices, pellets (1 to 8 mm in diameter) composed of hydrogen isotopes are formed (at temperatures less than 20 K) and typically accelerated to speeds of (approximately) 1.0 to 2.0 km/s for injection into plasmas of experimental fusion devices. A variety of pellet injector designs have been developed at ORNL, including repeating pneumatic injectors (single- and multiple-barrel light gas guns) that can inject up to hundreds of pellets for long-pulse plasma operation. The repeating pneumatic injectors are of particular importance because long-pulse fueling is required for present large experimental fusion devices, with steady-state operation the objective for future fusion reactors. In this paper, recent advancements in the development of repeating pneumatic injectors are described, including (1) a small-bore (1.8-mm), high-firing-rate (10-Hz) version of a single-stage light gas gun; (2) a repeating single-stage light gas gun for 8-mm-diam tritium pellets; (3) a repeating two-stage light gas gun for operation at higher pellet velocities; and (4) a steady-state hydrogen extruder feed system. McGinnis 23 Dec. 1994 23 p
(Contract DE-AC02-76CH-03000)
(DE95-005750; FNAL-TM-1920) Avail: CASI HC A03/MF A01

Following completion of the Fermilab Main Injector, it is expected that the Tevatron proton-antiproton collider will be operating at a luminosity in excess of 5 x 10(exp 31)/sq cm/sec with 36 proton and antiproton bunches spaced at 396 nsec. At this luminosity, each of the experimental detectors will see approximately 1.3 interactions per crossing. Potential improvements to the collider low beta and rf systems could push the luminosity beyond 10 x 10(exp 31)/sq cm/sec, resulting in more than three interactions per crossing if the bunch separation is left unchanged. This paper discusses issues related to moving to approx. 100 bunch operation, with bunch spacings of 132 nsec, in the Tevatron. Specific scenarios and associated hardware requirements are described. PIPELINED FIRST-LEVEL TRIGGER FOR THE H1 FORWARD-MUON SPECTROMETER
T. Ahmed, J. D. Dowell, N. Ellis, J. Garvey, and P. Jovanovic Jan. 1995 29 p Prepared in cooperation with Birmingham Univ.
(PB95-196242; RAL-94-126) Avail: Issuing Activity (National Technical Information Service (NTIS))

We have built a fast, pipelined first-level trigger processor for the H1 experiment at HERA. The trigger finds tracks in the forward-muon spectrometer which point back to the interaction vertex. The inputs to the trigger come from drift chambers with a 6-cm drift space corresponding to maximum drift time of 1.2 microsec. These chambers consist of two layers of drift cells whose staggered configuration makes it possible to extract the time at which a particle traversed the chambers to better than one HERA bunch-crossing period, 96 ns. The trigger hardware exploits this characteristic in a real-time operation, and is able to find pointing tracks and associate them to production in a specific electron-proton crossing. NTIS

An area detection device for use with x-ray or ultraviolet radiation wherein light from an integrating device is passed through an optical fiber to fall on a phosphor-containing film which is capable of storing a diffraction pattern formed by the transmission of x-rays or ultraviolet radiation through a sample when the diffraction pattern is projected onto the film and also being capable of fluorescing in correspondence to the diffraction pattern. Fluoresced light from the film is directed back along the fiber and into the integrating device and is fed from the integrating device to photomultiplier which sends a signal from which the diffraction pattern can be detected.

SOOT PARTICLE DENSITY DETERMINATION FROM A LASER EXTINCTION MULTIPASS TECHNIQUE M.S. Thesis
Gregory E. Glaros Sep. 1994 46 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00421-94-WR-01539)
(AD-A288551) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Methods of measuring soot particle densities have been of interest for several decades. Plume signature determination of both rocket and air-breathing engines is of concern when applied to pollution and theater missile ballistic defense strategies. Application of non-intrusive traditional techniques employing Bouguer's law relied on Sauter mean diameter statistical deviation and the probability density function in order to compensate for the ambiguities present in the extension of classical Mie theory. Our investigation developed an apparatus which will determine soot particle densities by measuring extinction from absorption of light energy transmitted through an exhaust plume. The method used was a two-pass technique using an optical phase conjugator (OPC) which returned the non-absorbed portion of light energy. When the apparatus was used with a retroreflector, it produced accurate results but did not compensate for thermal blooming or beam steering. Characteristics of a photorefractive crystal used in the OPC process allowed for the return of an incident beam corrected for aberrations. Although the OPC returned the phase conjugate of the incident beam its size precluded the return of all of the transmitted data because data was lost on the blossomed beam. DTIC

PRELIMINARY DESIGN STUDY OF THE BEAM COLLAPSER AND CERTAIN OPTOMECHANICAL ASPECTS OF THE SIDEROSTAT
1994 125 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288423) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Four topics were studied during this phase of the design of the USNO astrometric interferometer: (1) the optical configuration of the beam collapser; (2) the mirror mount for the primary mirror of the beam collapser; (3) the beam collapser structure, and (4) bearings for use in the siderostat. A Gregorian beam collapser configuration, with a 750-mm diameter f/2.7 primary mirror, a 1 16-mm diameter secondary mirror, with a radius of curvature of 623 mm, and a vertex-to-vertex spacing 2337 mm is recommended. Use of a Gregorian beam collapser reduces optical fabrication costs, with a small impact in overall system length and weight. A solid primary mirror, 100-mm thick and oversized, with a 85% mm diameter, is the simplest and most economical mirror to fabricate and mount. A roller chain would provide radial support for the primary mirror; a six-point whiffle tree located outside the optical clear aperture would provide axial support. A modified Serrurier truss connects the secondary mirror to the primary mirror; the upper forward section of the truss is removed to allow better sky coverage for the siderostat. Use of a modified Serrurier truss permits testing of the system in the optical axis horizontal position, and without loss of alignment in the 100 down position. In addition, this type of truss is center supported, permitting the use of a tapered pier to minimize concrete volume on site. Spacing from the primary mirror to the secondary mirror, a critical parameter for system performance, is controlled by a pair of metering rods made from the same type of material as the optics. Rolling element bearings, oil pad bearings, and air bearings were considered for use in the siderostat. Although an extensive literature survey was performed, and a number of vendors contacted, it is not yet established which bearings are optimum for the siderostat. DTIC

FABRICATION OF LONG WAVELENGTH ARRAY BY IN-SITU MOLECULAR BEAM EPITAXY Monthly Report No. 1
12 Dec. 1994 3 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DAAB07-91-C-K762)

(AD-A288599) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

In this reporting period, we have designed and constructed the major components of a MBE system for fabrication of long wavelength IR (LWIR) detector arrays. Among these components, the high temperature effusion cells were specially designed for alkaline earth fluoride (CaF2 and BaF2) growth. In the meantime, several multiple-layered fluoride films were grown on Si substrate to test out their crystallinities. The purpose of introducing the fluoride epilayers in this project is to form a buffer layer to accommodate a large lattice mismatch between LWIR detector layer and Si substrate. Since the growth of fluoride epilayers requires high source temperature (1200 C - 1300 C) to obtain reasonable growth rates (0.3 - 2A/sec), the specially designed effusion cell has been made. The designed structure and the power consumption of the high temperature effusion cell is shown, measured, and plotted versus the cell temperature. The shadowed area provides the applicable cell temperature ranges required for the fluoride epilayer growth. Our data show that the power consumption corresponding to the shadowed area is still at a feasible level. DTIC

STUDY OF FREQUENCY DOUBLING ANTIREFLECTION COATING

Mingli Wang and Zhengxiu Fan 15 Dec. 1994 19 p Transl. into ENGLISH from Houang Hshu (China), v. 16, no. 3, 1992 p 167-172 Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(AD-A289634; NAIC-ID(RS)T-0102-93) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This article carries out detailed study and discussion, both theoretically and in terms of experimentation, on frequency doubling dual wavelength increased transparency or antireflection films or coatings. It puts forth film or coating series designs and error analysis, as well as production processes, and solves problems of film or coating uniformity and waveband width. DTIC

SOLID-STATE IMAGE SENSOR WITH FOCAL-PLANE DIGITAL PHOTON-COUNTING PIXEL ARRAY Patent Application

Eric R. Fossum, inventor (to NASA) (Jet Propulsion Lab., California Inst. of Tech., Pasadena, CA.) and Bedabrata Pain, inventor (to NASA) (Jet Propulsion Lab., California Inst. of Tech., Pasadena, CA.) 12 Jan. 1995 67 p

(NASA-Case-NPO-18518-1-CU; NAS 1.71:NPO-18518-1-CU; US-Patent-Appl-SN-372640) Avail: CASI HC A04/MF A01

A photosensitive layer such as a-Si for a UV/visible wavelength band is provided for low light level imaging with at least a separate CMOS amplifier directly connected to each PIN photodetector diode to provide a focal-plane array of NxN pixels, and preferably a separate photon-counting CMOS circuit directly connected to each CMOS amplifier, although one row of counters may be time shared for reading out the photon flux rate of each diode in the array, together with a buffer memory for storing all rows of the NxN image frame before transfer to suitable storage. All CMOS circuitry is preferably fabricated in the same silicon layer as the PIN photodetector diode for a monolithic structure, but when the wavelength band of interest requires photosensitive material different from silicon, the focal-plane array may be fabricated separately on a different semiconductor layer bump-bonded or otherwise bonded for a virtually monolithic structure with one free terminal of each diode directly connected to the input terminal of its CMOS amplifier and digital counter for integration of the photon flux rate at each photodetector of the array. AN ILLUMINATION PLANNER FOR LAMBERTIAN POLYHEDRAL OBJECTS

Fredric Solomon and Katsushi Ikeuchi 4 Oct. 1994 39 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(Contract F33615-90-C-1465; ARPA Order 7597)

(AD-A289332; CMU-RI-TR-94-26) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The measurement of shape is a basic object inspection task. We use a noncontact method to determine shape called photometric stereo. The method uses three light sources which sequentially illuminate the object under inspection and a video camera for taking intensity images of the object. A significant problem with using photometric stereo is determining where to place the three light sources and the video camera. In order to solve this problem, we have developed an illumination planner that determines how to position the three light sources and the video camera around the object. The planner determines how to position light sources around an object so that we illuminate a specified set of faces in an efficient manner, and so that we obtain an accurate measurement. We predict the uncertainty in our measurements due to sensor noise by performing a statistical simulation in our planner. This gives us the capability to determine when a measured shape differs in a statistically significant way from what we expect. From a high level, our planner has three major inputs: the CAD model of the object to be inspected, a noise model for our sensor, and a reflectance model for the object to be inspected. We have experimentally verified that the plans generated by the planner are valid and accurate. In most cases, the uncertainty predictions made by the planner were accurate to within 10%. DTIC

FRAME SELECTION PERFORMANCE LIMITS FOR STATISTICAL IMAGE RECONSTRUCTION OF ADAPTIVE OPTICS COMPENSATED IMAGES M.S. Thesis

Stephen D. Ford Dec. 1994 200 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(AD-A289240; AFIT/GEO/ENP/94D-03) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The U.S. Air Force uses adaptive optics systems to collect images of extended objects beyond the atmosphere. These systems use wavefront sensors and deformable mirrors to compensate for atmospheric turbulence induced aberrations. Adaptive optics greatly enhance image quality, however, wavefront aberrations are not completely eliminated. Therefore, post-detection processing techniques are employed to further improve the compensated images. Typically, many short exposure images are collected, recentered to compensate for tilt, and then averaged to overcome randomness in the images and improve signal-to-noise ratio. Experience shows that some short exposure images in a data set are better than others. Frame selection exploits this fact by using a quality metric to discard low quality frames. A composite image is then created by averaging only the best frames. Performance limits associated with the frame selection technique are investigated in this thesis. Limits imposed by photon noise result in a minimum object brightness of visual magnitude +8 for point sources and +4 for a typical satellite model. Effective average point spread functions for point source and extended objects after frame selection processing are almost identical across a wide range of conditions. This discovery allows the use of deconvolution techniques to sharpen images after using the frame selection technique. A new post-detection processing method, frame weighting, is investigated and may offer some improvement for dim objects during poor atmospheric seeing. Frame selection is demonstrated for the first time on actual imagery from an adaptive optics system. Data analysis indicates that signal-to-noise ratio improvements are degraded for exposure times longer than that allowed to 'freeze' individual realizations of the turbulence effects. DTIC

ROC ANALYSIS OF IR SEGMENTATION TECHNIQUES M.S. Thesis

Georgia K. Harrup Dec. 1994 112 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(AD-A289252; AFIT/GE/ENG/94D-15) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Receiver Operating Characteristic (ROC) curves are used to compare the effectiveness of IR image processing techniques. Two non-parametric error estimation techniques (k-Nearest Neighbor and Parzen Window) are used to create estimates of the probability density functions for the data. These pdfs are used in the creation of the ROC curves for both resubstitution and leave-one-out estimates. These estimates generate the upper and lower bounds, respectively, on the ROC curves. The ROC curve analysis is performed on the outputs of various image processing techniques and the resulting ROC curves are used to compare the techniques. Of the image processing techniques used in this thesis, the close minus open (CMO) morphological filter operation produced the best results. DTIC

MOMENT AND HYPERGEOMETRIC FILTERS FOR HIGH PRECISION COMPUTATION OF FOCUS, STEREO AND OPTICAL FLOW Technical Report
Yalin Xiong and Steven A. Shafer Sep. 1994 79 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289293; CMU-RI-TR-94-28) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Many low level visual computation problems such as focus, stereo, optical flow, etc. can be formulated as problems of extracting one or more parameters of a non-stationary transformation between two images. Because of the non-stationary nature, finite-width windows are widely used in various algorithms to extract spatially local information from images. While the choice of window width has a very profound impact on the quality of results of algorithms, there has been no quantitative way to measure or eliminate the negative effects of finite-width windows. To address this problem, we introduce two sets of filters, 'moment' filters and 'hypergeometric' filters. Due to their recursive properties, these filters allow the effects of finite-width windows and foreshortening to be explicitly analyzed and eliminated. We develop one paradigm to solve general one-parameter extraction problems using moment filters, and another one to solve general multiple parameter extraction problem using hypergeometric filters. We apply these paradigms to problems of focus and stereo, in which one parameter is extracted at every pixel location, and optical flow, in which two parameters are extracted. We demonstrate that our algorithms based on moment filters and hypergeometric filters achieve much higher precision than other techniques. DTIC

SPECIFICATION OF THE FIGURE AND FINISH OF EUV MIRRORS IN TERMS OF PERFORMANCE REQUIREMENTS, REVISED NOV. 1994
E. L. Church and P. Z. Takacs Nov. 1994 6 p Presented at the Optical Society of America Conference on Extreme Ultraviolet Lithography, Monterey, CA, 19-21 Sep. 1994
(Contract DE-AC02-76CH-00016)
(DE95-005689; BNL-60902-Rev-11/94; CONF-9409177-4-Rev-11/94) Avail: CASI HC A02/MF A01

All manufacturing processes involve errors. In the case of bare and multilayer mirrors these unavoidable errors introduce near-field fluctuations in the reflected wavefront which propagate to the far field and degrade imaging performance. In order to specify manufacturing tolerances in terms of performance requirements we must know the connection between the two -- the finish-function relationship. This paper discusses the form of that relationship derived using elementary statistical diffraction theory. It tells us what statistical properties of the surface errors are relevant, it spells out the important role of the system parameters for EUV mirrors which is absent for conventional mirrors, and it leads to simple good-bad tests for mirror quality. These results are an extension of previous work in this area. DOE

PHOTOEMISSION AND OPTICAL PROPERTIES OF C60 FULLERITES
Eric L. Shirley (National Inst. of Standards and Technology, Gaithersburg, MD.) and Steven G. Louie Aug. 1994 15 p Presented at the Quantum Theory of Real Materials, Berkeley, CA, 13 Aug. 1994 Sponsored in part by the Miller Inst. for Basic Research in Science
(Contracts DE-AC03-76SF-00098; NSF DMR-91-20269; W-7405-eng-48)
(DE95-006588; LBL-36517; CONF-9408212-1) Avail: CASI HC A03/MF A01

A theory is presented for excitations in undoped, solid C60 involving addition or removal of an electron, as well as creation of an electron-hole pair. Excitation energies are computed using a quasiparticle description of electrons and holes, plus a model for electron-hole interactions. Results are compared with those of direct and inverse photoelectron and optical absorption spectroscopy studies. Reasonable agreement is found in such comparisons, while more complete modeling of experimental spectra might include neglected matrix-element and vibrational effects. These results give values for simple, conceptual parameters, such as a molecular Hubbard U. Some results could also be relevant in doped fullerites. DOE

OBSERVATION OF NONLINEAR RESONANCES IN THE ADVANCED LIGHT SOURCE
D. Robin, H. Collins, W. Decking, G. Portmann, L. Schachinger, and A. Zholents Sep. 1994 6 p Presented at the Workshop on Nonlinear Dynamics in Particle Accelerators: Theory and Experiments, Arcidosso, Italy, 4-9 Sep. 1994 Sponsored in part by the German Academic Exchange Service
(Contract DE-AC03-76SF-00098)
(DE95-006561; LBL-36427; CONF-9409258-6) Avail: CASI HC A02/MF A01

Observations of nonlinear resonances in the Advanced Light Source have been made by scanning betatron tunes and observing count rates in a beam-loss radiation monitor placed down stream of a beam scraper. The authors have found that it is possible to see structural resonances which are unallowed as well as those which are allowed by the ring's natural 12-fold symmetry. By systematically breaking the amount of symmetry they see that the widths of the unallowed resonances grow while the widths of the allowed resonances do not. In this paper the authors briefly discuss the importance of symmetry and its effect on resonances in the design of the ALS. Next they describe their experimental setup and discuss the performance of the beam loss monitor which they used to view the resonances. They then present scans of the tune space where one can see the presence of the structural resonances and their evolution when the lattice symmetry is systematically broken. DOE

MEASUREMENT OF HIGH ACIDITY USING A RENEWABLE-REAGENT FIBER OPTIC SENSOR
K. J. Kuhn and J. T. Dyke 1995 24 p Presented at the International Forum Process Analytical Chemistry (IFPAC), Houston, TX, 22-25 Jan. 1995
(Contract W-7405-eng-36)
(DE95-006327; LA-UR-95-191; CONF-950158-1) Avail: CASI HC A03/MF A01

The renewable-reagent sensor concept was initially developed to address shortcomings in fiber optic chemical sensors dependent on immobilized, reversible reagents to produce analyte specific responses. The renewable-reagent sensor incorporates semi-selective membranes, analyte specific reagents, and remote spectroscopic detection to extract selective responses. While renewable-reagent fiber optic sensors have been demonstrated for a number of chemical sensing applications, the transfer of laboratory prototypes to real world applications require devices which oversample the measurement matrix to differentiate among environmental and analyte specific response components. For example, optical sensors which acquire broadband rather than single wavelength spectroscopic data provide diagnostics regarding the identity of and measurement error associated with matrix interferences. The following describes the fabrication and evaluation of two renewable-reagent fiber optic sensor designs for the measurement of HNO3 in the 0.1 M to 10.0 M concentration range. Both sensor designs employ an internal pH indicator reagent and broadband visible spectroscopic detection to characterize HNO3 concentration. DOE

DISPLAY SYSTEM EMPLOYING ACOUSTO-OPTIC TUNABLE FILTER Patent

James L. Lambert, inventor (to NASA) (Jet Propulsion Lab., California Inst. of Tech., Pasadena, CA.) 25 Apr. 1995 10 p Filed 7 Jun. 1993 Supersedes N94-15933 (32 - 3, p 1190)
(Contract NAS7-918)
(NASA-Case-NPO-18736-1-CU; US-Patent-5,410,371; US-Patent-Appl-SN-073235; US-Patent-Class-348-769; US-Patent-Class-348-754; US-Patent-Class-359-285; Int-Patent-Class-H04N-5/74) Avail: US Patent and Trademark Office

An acousto-optic tunable filter (AOTF) is employed to generate a display by driving the AOTF with a RF electrical signal comprising modulated red, green, and blue video scan line signals and scanning the AOTF with a linearly polarized, pulsed light beam, resulting in encoding of color video columns (scan lines) of an input video image into vertical columns of the AOTF output beam. The AOTF is illuminated periodically as each acoustically-encoded scan line fills the cell aperture of the AOTF. A polarizing beam splitter removes the unused first order beam component of the AOTF output and, if desired, overlays a real world scene on the output plane. Resolutions as high as 30,000 lines are possible, providing holographic display capability.

FUNDAMENTAL CONCEPTS OF INTEGRATED AND FIBER OPTIC SENSORS

Margaret L. Tuma May 1995 37 p
(RTOP 505-62-50)
(NASA-TM-106920; E-9632; NAS 1.15:106920) Avail: CASI HC A03/MF A01

This chapter discusses fiber optic and integrated optic sensor concepts. Unfortunately, there is no standard method to categorize these sensor concepts. Here, fiber optic and integrated optic sensor concepts will be categorized by the primary modulation technique. These modulation techniques have been classified as: intensity, phase, wavelength, polarization, and time/frequency modulation. All modulate the output light with respect to changes in the physical or chemical property to be measured. Each primary modulation technique is then divided into fiber optic and integrated optic sections which are treated independently. For each sensor concept, possible sensor applications are discussed. The sensors and references discussed are not exhaustive, but sufficient to give the reader an overview of sensor concepts developed to date. Sensor multiplexing techniques such as wavelength division, time division, and frequency division will not be discussed as they are beyond the scope of this report. Author

INVESTIGATION OF THE COLLISION LINE BROADENING PROBLEM AS APPLICABLE TO THE NASA OPTICAL PLUME ANOMALY DETECTION (OPAD) SYSTEM, PHASE 1 Final Report

Timothy C. Dean and Carl A. Ventrice 31 May 1995 39 p
(Grant NAG8-206)
(NASA-CR-198605; NAS 1.26:198605; D-V-95-1) Avail: CASI HC A03/MF A01

As a final report for phase 1 of the project, the researchers are submitting to the Tennessee Tech Office of Research the following two papers (reprinted in this report): 'Collision Line Broadening Effects on Spectrometric Data from the Optical Plume Anomaly System (OPAD),' presented at the 30th AIAA/ASME/SAE/ASEE Joint Propulsion Conference, 27-29 June 1994, and 'Calculation of Collision Cross Sections for Atomic Line Broadening in the Plume of the Space Shuttle Main Engine (SSME),' presented at the IEEE Southeastcon '95, 26-29 March 1995. These papers fully state the problem and the progress made up to the end of NASA Fiscal Year 1994. The NASA OPAD system was devised to predict concentrations of anomalous species in the plume of the Space Shuttle Main Engine (SSME) through analysis of spectrometric data. The self absorption of the radiation of these plume anomalies is highly dependent on the line shape of the atomic transition of interest. The Collision Line Broadening paper discusses the methods used to predict line shapes of atomic transitions in the environment of a rocket plume. The Voigt profile is used as the line shape factor since both Doppler and collisional line broadening are significant. Methods used to determine the collisional cross sections are discussed and the results are given and compared with experimental data. These collisional cross sections are then incorporated into the current self absorbing radiative model and the predicted spectrum is compared to actual spectral data collected from the Stennis Space Center Diagnostic Test Facility rocket engine. The second paper included in this report investigates an analytical method for determining the cross sections for collision line broadening by molecular perturbers, using effective central force interaction potentials. These cross sections are determined for several atomic species with H2, one of the principal constituents of the SSME plume environment, and compared with experimental data.

NONLINEAR OPTICAL MICROSCOPY FOR IMAGING THIN FILMS AND SURFACES

L. B. Smilowitz, D. W. McBranch, and J. M. Robinson 1995 12 p Presented at the SPIE 1995: SPIE Conference on Optics, Electro-optics, and Laser Application in Science, Engineering and Medicine, San Jose, CA, 5-10 Feb. 1995
(Contract W-7405-eng-36)
(DE95-007872; LA-UR-95-405; CONF-950226-22) Avail: CASI HC A03/MF A01

We have used the inherent surface sensitivity of second harmonic generation to develop an instrument for nonlinear optical microscopy of surfaces and interfaces. We have demonstrated the use of several nonlinear optical responses for imaging thin films. The second harmonic response of a thin film of C60 has been used to image patterned films. Two photon absorption light induced fluorescence has been used to image patterned thin films of Rhodamine 6G. Applications of nonlinear optical microscopy include the imaging of charge injection and photoinduced charge transfer between layers in semiconductor heterojunction devices as well as across membranes in biological systems. DEVELOPMENT OF AN OPTICAL TRAP AS AN ULTRA-SENSITIVE ANALYTICAL TOOL

D. J. Vieira, V. Sandberg, D. Tupa, J. M. Wouters, R. Guckert (Justus Liebig-Univ., Giessen, Germany.), and D. W. Preston (California State Univ., Hayward, CA.) 1995 7 p Presented at the SPIE '95: SPIE Conference on Optics, Electro-optics, and Laser Application in Science, Engineering and Medicine, San Jose, CA, 5-10 Feb. 1995
(Contract W-7405-eng-36)
(DE95-007843; LA-UR-95-837; CONF-950226-16) Avail: CASI HC A02/MF A01

The use of an optical trap for the quantitative detection of small numbers of radioactive atoms is featured. Presently under construction is a system consisting of a high-efficiency magneto-optical trap (MOT) coupled to a mass separator. Mass-separated samples will be implanted into a thin platinum foil, subsequently released from the foil by heating, and resonantly trapped in the MOT. The number of atoms in the trap will be quantitatively deduced from the amplitude of the fluorescence signal. Measurements for different isotopes are planned by appropriately shifting the trapping and repumping laser frequencies of the optical trap. Our initial investigations will concentrate on the determination of trace amounts of Cs-135 and Cs-137. DOE

OPTICAL IMPLEMENTATION OF INNER PRODUCT NEURAL ASSOCIATIVE MEMORY Patent

Hua-Kuang Liu, inventor (to NASA) 2 May 1995 9 p Filed 8 Feb. 1994
(NASA-Case-NPO-18491-2-CU; US-Patent-5,412,755;
US-Patent-Appl-SN-195737; US-Patent-Class-395-25;
Int-Patent-Class-G06F-15/18) Avail: US Patent and Trademark Office

An optical implementation of an inner-product neural associative memory is realized with a first spatial light modulator for entering an initial two-dimensional N-tuple vector and for entering a thresholded output vector image after each iteration until convergence is reached, and a second spatial light modulator for entering M weighted vectors of inner-product scalars multiplied with each of the M stored vectors, where the inner-product scalars are produced by multiplication of the initial input vector in the first iterative cycle (and thresholded vectors in subsequent iterative cycles) with each of the M stored vectors, and the weighted vectors are produced by multiplication of the scalars with corresponding ones of the stored vectors. A Hughes liquid crystal light valve is used for the dual function of summing the weighted vectors and thresholding the sum vector. The thresholded vector is then entered through the first spatial light modulator for reiteration of the process cycle until convergence is reached.

CRYOGENIC BRDF MEASUREMENTS AT 10.6 MICROMETERS AND 0.63 MICROMETERS ON CONTAMINATED MIRRORS Final Report, Oct. 1993 - Sep. 1994

B. L. Seiber, R. J. Bryson, W. T. Bertrand, and B. E. Wood Feb. 1995 88 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A291611; AEDC-TR-94-16) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Effects of contaminants on optical surface are concern for space-based systems. Many systems contain cryogenic optical systems that operate at temperatures where gases condense. This study presents experimental results of the effects of condensed gases and spacecraft contaminants on highly polished (superpolished) mirror surfaces cooled, under vacuum to temperatures near 16 K and 70 K. After condensing contaminants on the mirror, the change in the bidirectional reflectance distribution function (BRDF) was obtained at wavelengths of 10.6 and 0.6328 um for various contaminant thicknesses up to 15 um. For a mirror surface of 16 K, BRDF changes for the following contaminant films were obtained: air, N_2, O_2, H_2O, CO, CO_2, and Ar. For a mirror surface near 70 K, the BRDF changes from condensed films of the following outgassing effluents were measured: RS12M polycyanate, Nusil CV2500 silicone, Solithane 113/Cl 13-300 urethane, RTVS60 silicone, and 1120. In addition, using measured optical properties and the thin-film interference theory-based computer program CALCRT, the spectral reflectance of an 80 K aluminum mirror was calculated for H_2O, CO and RTV560. This report was sponsored by the Ballistic Missile Defense Organization (BMDO) through Johns Hopkins Applied Physics Laboratory (JHU/APL) and by the Jet Propulsion Laboratory (JPL) Space Environmental Effects Program. RETROFITTING A FINE-POINTING SYSTEM TO SATELLITE OPTICS

R. O. Woods 1994 9 p Presented at the 29th Aerospace Mechanisms Symposium, Houston, TX, 17-19 May 1995 See also N95-27277
(Contract DE-AC04-94AL-85000)
(DE95-004529; SAND-94-2920C; CONF-9505124-1) Avail: CASI HC A02/MF A01

This paper describes a system that was added to an existing satellite-borne telescope design for the purpose of compensating the boresight errors that had been observed in earlier flights of similar instruments. Those errors had been found to be caused by thermal distortion of the spaceframe. This retrofit design was subject to severe volume restrictions because it was fitted into an already tightly-packaged instrument envelope. It was found practical to improve the basic design by converting a redundant structure into a statically-determinate one. It was also possible to use portions of the mechanical actuation system to facilitate the position encoding needed for computer interfacing. DOE

PERTURBATIONS ON EFFECTIVE INDEX OF REFRACTION FROM PRISM COUPLING Report No. 66

Stephen L. Kwiatkowski and Alan R. Mickelson Feb. 1995 52 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contracts N00014-92-J-1190; DAAL03-92-G-0289; NSF ECS-90-15752)
(AD-A291700) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

We investigate the accuracy and precision of effective index of refraction measurements using prism coupling. The coupling gap's geometry is critical to predicting the accuracy and resolution of measurements. We provide experimental evidence that there are advantages to using high coupling pressures that yield long coupling lengths. Furthermore, effective index perturbations vary with mode number in some cases. We present and evaluate an experimental technique aimed at reducing the effects of perturbation and find that it may not be applicable to all situations. We extend a previous model of prism coupling to include a finite coupling length. This allows us to explain some of our experimental observations of m-line characteristics. We find disagreements between previous models when predicting effective index perturbations. Also, we introduce an alternative model of prism coupling based upon a local normal-mode expansion and present its preliminary numerical results. Finally, our results indicate that using prism coupling to measure effective index beyond the fourth decimal place will require additional experimental techniques and theoretical models. DTIC

DESIGN AND FABRICATION OF A DIAMOND-TURNED HYBRID DIFFRACTIVE/REFRACTIVE SINGLET FOR VISIBLE APPLICATIONS AT ORNL

B. E. Bernacki, A. C. Miller, and L. C. Maxey 1995 15 p Presented at the Conference on Manufacturing Redstone Arsenal, Huntsville, AL, 1-2 Nov. 1994
(Contract DE-AC05-84OR-21400)
(DE95-007007; CONF-9411198-1) Avail: CASI HC A03/MF A01

Hybrid diffractive/refractive optics can be fabricated using traditional lithographic methods involving masks or holographic techniques as well as direct-write approaches that include electron-beam lithography, single-point diamond turning, and laser beam lithography. Only the direct-write methods have proven to be practical in producing continuous-form diffractive surfaces, or kinoforms, and among these methods, only diamond turning can easily produce large kinoforms on curved base surfaces. In this paper, we describe design and fabrication issues for a hybrid singlet produced by single-point diamond turning that functions in the visible portion of the spectrum and takes advantage of all of the degrees of freedom available from diamond turning: aspheric front surface to control spherical aberration; curved rear surface for elimination of coma; and kinoform surface placed on either curved base surface for control of primary chromatic aberration. NONLINEAR OPTICAL STUDIES OF SURFACES
Y. R. Shen Jul. 1994 8 p Presented at the Surface Studies By Nonlinear Optical Spectroscopy Conference, Kassel, Germany, 29 May - 2 Jun. 1994
(Contract DE-AC03-76SF-00098)
(DE95-006574; LBL-35991; CONF-9405289-1) Avail: CASI HC A02/MF A01

The possibility of using nonlinear optical processes for surface studies has attracted increasing attention in recent years. Optical second harmonic generation (SHG) and sum frequency generation (SFG), in particular, have been well accepted as viable surface probes. They have many advantages over the conventional techniques. By nature, they are highly surface-specific and has a submonolayer sensitivity. As coherent optical processes, they are capable of in-situ probing of surfaces in hostile environment as well as applicable to all interfaces accessible by light. With ultrafast pump laser pulses, they can be employed to study surface dynamic processes with a subpicosecond time resolution. These advantages have opened the door to many exciting research opportunities in surface science and technology. This paper gives a brief overview of this fast-growing new area of research. Optical SHG from a surface was first studied theoretically and experimentally in the sixties. Even the submonolayer surface sensitivity of the process was noticed fairly early. The success was, however, limited because of difficulties in controlling the experimental conditions. It was not until the early 1980's that the potential of the process for surface analysis was duly recognized. The first surface study by SHG was actually motivated by the then active search for an understanding of the intriguing surface enhanced Raman scattering (SERS). It had been suspected that the enhancement in SERS mainly came from the local-field enhancement due to local plasmon resonances and pointing rod effect on rough metal surfaces. In our view, Raman scattering is a two-photon process and is therefore a nonlinear optical effect. DOE

Using methods associated with Zernicke's polynomial expansion, we discussed atmospheric dispersion effects in dual wavelength adaptive optics systems. On the basis of dual frequency correlations associated with phase expansion coefficients, we solved for residual phase errors produced by atmospheric dispersion. The results clearly showed that, although atmospheric dispersion will cause phase compensation to be imperfect, the use, however, of light sources with wavelengths even shorter than the transmitting lasers as beacons, and, in conjunction with that, taking the product of the amount of beacon phase distortion and the specific value of the ratio (lambda 2)/(lambda 1) (the beacon wavelength/ transmitted wavelength) to be the phase predistortion, it is possible to rectify relatively well the phase distortion of transmitted light beams. It is shown that an intense short laser pulse propagating through a semiconductor plasma will generate longitudinal Langmuir waves in its wake. The measurable wake field can be used as a diagnostic to study nonlinear optical phenomena. For narrow gap semiconductors (for examples InSb) with Kane-type dispersion relation, the system can simulate, at currently available laser powers, the physics underlying wake-field accelerators. In the study of plasma collection by obstacles in a tokamak edge plasma, the effect of anomalous transport have been examined using an extension of the 2D fluid code developed here previously (Appendices A and B). The origin of the anomalous transport is assumed to be a randomly fluctuating electric field such as would be caused by drift waves. As before, the magnetic field is assumed to be uniform and perpendicular to the obstacle, which is taken to be an infinite strip. In the absence of ambient plasma flow, the numerical results indicate that ion viscous heating is important near the tip of the obstacle, where there is a large velocity gradient in the flow. For typical plasma parameters, the maximum ion temperature near the tip is up to 85% higher than the ambient ion temperature. When there is a subsonic plasma flow past the obstacle, the numerical results indicate that, near the tip of the obstacle, the ions on the downstream side are hotter than those on the upstream side. Furthermore, the ion density is higher on the upstream side. A detailed report of this work has been prepared and will be submitted as part of the Annual Progress Report. Recently, the 2D parallel electrostatic plasma particle-in-cell (PIC) code has been upgraded to a 2D fully electromagnetic PIC code. This code has been successfully tested on the JPL/Caltech Mark III Hypercube concurrent computers and can be used to simulate interactions of electromagnetic waves with a magnetized plasma. It is currently applied to investigate the decay of large amplitude Alfven waves, such as those observed in the solar wind. Large amplitude Alfven waves, propagating parallel to the magnetic field, are predicted to decay into obliquely propagating daughter waves and standing magnetosonic waves. Results from the simulations will be compared with theoretical predictions.Moreover, it will be possible to study the influence of kinetic effects on the decy instability which are very difficult to included in analytic models. RADIATION PRODUCTION FROM STAGNATING COMPACT TOROIDS EMPLOYING A NONEQUILIBRIUM RADIATION DIFFUSION MODEL Final Report, Sep. 1990 - May 1994
Melissa R. Douglas Dec. 1994 260 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289602; PL-TR-94-1126) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The stagnation of a high Z, high velocity compact toroidal plasma against a stationary object has been shown computationally to be an efficient radiation source. To obtain a better understanding of the stagnation process and the influence of various prestagnation properties on radiation production, the 2 1/2 dimensional radiation magnetohydrodynamic code, MACH2, was used to simulate the stagnation physics. To perform these calculations, a flux-limited non-equilibrium radiation diffusion model was incorporated into the MACH2 code. In this model the radiation field evolves separately from the material components of the fluid and is described by a Plankian distribution at the radiation temperature, TR. This introduced a dynamic equation for the radiation field and modifications to both the momentum and electron energy equations. A flux-limited version of the radiative conductivity was formulated to extend this model into the optically thin regime. Detailed benchmarking of the radiation diffusion and electron-radiation coupling using a set of radiation MHD test problems was conducted. DTIC

MHD computations of DC helicity injection in tokamak-like configurations show current drive with no 'loop voltage' in a resistive, pressureless plasma. The self-consistently generated current profiles are unstable to resistive modes that partially relax the profile through the MHD dynamo mechanism. The current driven by the fluctuations leads to closed contours of average poloidal flux. However, the 1% fluctuation level is large enough to produce a region of stochastic magnetic field. A limited Lundquist number (S) scan from 2.5 x 10(exp 3) to 4 x 10(exp 4) indicates that both the fluctuation level and relaxation increase with S. DOE

Conventional linear stability analyses may fail for fluid systems with an indefinite free energy functional. When such a system is linearly stable, it is said to possess negative energy modes. Instability may then occur either via dissipation of the negative energy modes, or nonlinearly via resonant wave-wave coupling, leading to explosive growth. In the dissipationless case, it is conjectured that intrinsic chaotic behavior may allow initially nonresonant systems to reach resonance by diffusion in phase space. In this and a companion paper, this phenomenon is demonstrated for a simple equilibrium involving cold counterstreaming ions. The system is described in the fluid approximation by a Hamiltonian functional and associated noncanonical Poisson bracket. By Fourier decomposition and appropriate coordinate transformations, the Hamiltonian for the perturbed energy is expressed in action-angle form. The normal modes correspond to Doppler-shifted ion-acoustic waves of positive and negative energy. Nonlinear coupling leads to decay instability via two-wave interactions, and to either decay or explosive instability via three-wave interactions. These instabilities are described for various (integrable) systems of waves interacting via single nonlinear terms. This discussion provides the foundation for the treatment of nonintegrable systems in the companion paper. DOE

HIGH-DENSITY PLASMA SOURCE FOR LARGE-AREA CHEMICAL VAPOR DEPOSITION OF DIAMOND FILMS Monthly Report, 1 Nov. - 30 Nov. 1994
Xing Chen 15 Dec. 1994 4 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-94-C-0199)
(AD-A289053) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

During this program Science Research Laboratory (SRL) and the Plasma Processing Group in the Department of Chemical Engineering at MIT are developing a large-area, directed plasma/atomic beam source for diamond deposition. The plasma source is based on an inductively-driven plasma accelerator that efficiently produces a high density (1014-1017 cu cm) plasma over an area of 0.1-1 sq m. The goal of this effort is to experimentally demonstrate the technical feasibility of employing the plasma source for high-throughput diamond deposition, through characterization of plasma parameters and preliminary diamond deposition experiments. A reactor design study will also be completed during Phase 1, leading to an engineering design of a large-area plasma reactor for Phase H implementation. The period of performance is from 30 September 1994 to 31 March 1995. DTIC

(DE95-007248; DOE/ID-13220/T3) Avail: CASI HC A03/MF A01

The objective of the grant is to develop a method of spraying materials on a substrate in a controlled manner to eliminate the waste inherent in present plating processes. The process under consideration is magnetically controlled plasma spraying. The project continues to be on schedule. The field equations have been developed and were reported in the April-June 1994 Progress Report. The equations for the external magnetic field were reported in the July-September 1994 progress report. The field equations have been cast in a format that allows solution using Finite Element (FE) techniques. The development of the computer code that will allow evaluation of the proposed technique and design of an experiment to prove the proposed process is underway. DOE

EVALUATION OF CURRENT DRIVE REQUIREMENTS AND OPERATING CHARACTERISTICS OF A HIGH BOOTSTRAP FRACTION ADVANCED TOKAMAK REACTOR
W. A. Houlberg and S. E. Attenberger 1995 6 p Presented at the 11th Topical Meeting on the Technology of Fusion Energy, New Orleans, LA, 19-24 Jun. 1994
(Contract DE-AC05-84OR-21400)
(DE95-007041; CONF-940630-54) Avail: CASI HC A02/MF A01

The reactor potential of some advanced physics operating modes proposed for the TPX physics program are examined. A moderate aspect ratio (A = 4.5 as in TPX), 2 GW reactor is analyzed because of its potential for steady-state, noninductive operation with high bootstrap current fraction. Particle, energy, and toroidal current equations are evolved to steady-state conditions using the 1 1/2-D time-dependent WHIST transport code. The solutions are therefore consistent with particle, energy, and current sources and assumed transport models. Fast wave current drive (FWCD) provides the axial seed current. The bootstrap current typically provides 80-90% of the current, while feedback on the lower hybrid current drive (LHCD) power maintains the total current. The sensitivity of the plasma power amplification factor, Q equivalent to P(sub fus)/P(sub aux), to variations in the plasma properties is examined. The auxiliary current drive power, P(sub aux) = P(sub LH) + P(sub FW); bootstrap current fraction; current drive efficiency; and other parameters are evaluated. The plasma is thermodynamically stable for the energy confinement model assumed (a multiple of ITER89P). The FWCD and LHCD sources provide attractive control possibilities, not only for the current profile, but also for the total fusion power since the gain on the incremental auxiliary power is typically 10-30 in these calculations when overall Q approximately equals 30. INDIRECTLY DRIVEN TARGETS FOR IGNITION
D. C. Wilson and W. J. Krauser 1994 5 p Presented at the ECLIM 23: Laser Interaction With Matter, Oxford, England, 19-23 Sep. 1994
(Contracts W-7405-eng-36; W-7405-eng-48)
(DE95-006451; LA-UR-94-3115; CONF-9409226-4) Avail: CASI HC A01/MF A01

Both Los Alamos and Lawrence Livermore Laboratories have studied capsule and laser driven target designs for the National Ignition Facility. The current hohlraum design is a 2.76mm radius, 9.5mm long gold cylinder with 1.39mm radius laser entrance holes covered by 1 micro m thick plastic foils. Laser beams strike the inside cylinder wall from two separate cones with a peak power less than 400 TW. The problem with a pressure pulse caused by wall plasma stagnating on axis has been overcome by filling the hohlraum with gas. Currently this is equi-molar hydrogen-helium gas at 0.83 mg/cc density. One capsule uses a 160 micro m plastic ablator doped with oxygen and bromine surrounding an 80 micro m thick DT ice layer with an inner radius of 0.87 mm. Los Alamos integrated calculations of the hohlraum and this capsule using 1.4 MJ of laser energy achieve yields of 4.9 MJ using LTE atomic physics, and 3.5 MJ with non-LTE. This confirms Livermore calculations of ignition. For radiation driven implosions, a beryllium ablator offers a viable alternative to plastic. It is strong enough to contain high DT pressures. Copper, soluble at required levels, is an excellent dopant to add opacity. A beryllium capsule with a 155 micro m thick ablator doped with 0.9 atom% copper, and the same inner dimensions as the plastic capsule, placed in a similar hohlraum , yields 6.9 MJ with LTE. Although these calculations show the designs are sensitive, they add to the confidence that NIF can achieve ignition. Using their best integrated calculations which are not yet fully optimized, they confirm Livermore calculations of ignition with a plastic capsule, and have added an alternate capsule design with a beryllium ablator. ENERGETIC PARTICLE DESTABILIZATION OF SHEAR ALFVEN WAVES IN STELLARATORS AND TOKAMAKS
D. A. Spong, B. A. Carreras, C. L. Hedrick, J. N. Leboeuf, and A. Weller (Max-Planck-Inst. fuer Plasmaphysik, Garching, Germany.) 1994 55 p Presented at the 15th International Conference on Plasma Physics and Controlled Nuclear Fusion Research, Seville, Spain, 26 Sep. - 1 Oct. 1994
(Contract DE-AC05-84OR-21400)
(DE95-006393; CONF-940933-26; IAEA-CN-60/D-P-II-3) Avail: CASI HC A04/MF A01

An important issue for ignited devices is the resonant destabilization of shear Alfven waves by energetic populations. These instabilities have been observed in a variety of toroidal plasma experiments in recent years, including: beam-destabilized toroidal Alfven instabilities (TAE) in low magnetic field tokamaks, ICRF destabilized TAE's in higher field tokamaks, and global Alfven instabilities (GAE) in low shear stellarators. In addition, excitation and study of these modes is a significant goal of the TFIR-DT program and a component of the ITER physics tasks. The authors have developed a gyrofluid model which includes the wave-particle resonances necessary to excite such instabilities. The TAE linear mode structure is calculated nonperturbatively, including many of the relevant damping mechanisms, such as: continuum damping, non-ideal effects (ion FLR and electron collisionality), and ion/electron Landau damping. This model has been applied to both linear and nonlinear regimes for a range of experimental cases using measured profiles. DOE

FAST WAVE CURRENT DRIVE IN D3-D
C. C. Petty, R. W. Callis, S. C. Chiu, J. S. deGrassie, C. B. Forest, R. L. Freeman, P. Gohil, R. W. Harvey, H. Ikezi, and Y. -R. Lin-Liu et al Feb. 1995 10 p Presented at the Meeting of the Division of Plasma Physics of the American Physical Society, Minneapolis, MN, 7-11 Nov. 1994
(Contracts DE-AC03-89ER-51114; W-7405-eng-48)
(DE95-007582; GA-A-21904; CONF-941101-4) Avail: CASI HC A02/MF A01

The non-inductive current drive from fast Alfven waves launched by a directional four-element antenna was measured in the D3-D tokamak. The fast wave frequency (60 MHz) was eight times the deuterium cyclotron frequency at the plasma center. An array of RF pickup loops at several locations around the torus was used to verify the directivity of the four-element antenna. Complete non-inductive current drive was achieved using a combination of fast wave current drive (FWCD) and electron cyclotron current drive (ECCD) in discharges for which the total plasma current was inductively ramped down from 400 to 170 kA. For discharges with steady plasma current, up to 110 kA of FWCD was inferred from an analysis of the loop voltage, with a maximum non-inductive current (FWCD, ECCD, and bootstrap) of 195 out of 310 kA. The FWCD efficiency increased linearly with central electron temperature. For low current discharges, the FWCD efficiency was degraded due to incomplete fast wave damping. The experimental FWCD was found to agree with predictions from the CURRAY ray-tracing code only when a parasitic loss of 4% per pass was included in the modeling along with multiple pass damping. The nonlinear nature of the plasma turbulence, as measured by bicoherence analysis, has been studied in stellarator (ATF and W7AS) and tokamak (PBXM) devices. In ATF, little nonlinear interaction is found in the scrape-off layer region whereas the strength of the coupling is enhanced in the edge plasma region where the level of fluctuations is consistent with the theoretical expectations from resistive interchange modes. In W7AS the level of bicoherence is significantly smaller than in ATF. The comparison ATF/W7AS/PBXM suggests the important role of the magnetic shear to determine nonlinear behavior of the turbulence. The level of bicoherence also depends on the plasma conditions: in particular, it increases at the H-mode transition. The comparison between the nonlinear behavior of the turbulence in tokamaks and stellarators allows experimental verification of theoretical turbulence models. DOE

PHYSICS ASSESSMENT OF STELLARATORS AS FUSION POWER PLANTS
J. F. Lyon, J. A. Rome, P. R. Garabedian (New York Univ., New York, NY.), D. T. Anderson (Wisconsin Univ., Madison, WI.), and S. L. Painter (Australian National Univ., Canberra, Australia.) 1995 8 p Presented at the 15th International Conference on Plasma Physics and Controlled Nuclear Fusion Research, Seville, 26 Sep. - 1 Oct. 1994
(Contract DE-AC05-84OR-21400)
(DE95-007045; CONF-940933-28; IAEA-CN-60/F-1-I-4) Avail: CASI HC A02/MF A01

Four different stellarator configurations (a compact torsatron, a new modular torsatron, Helias, and a new modular Helias-like heliac) were analyzed as fusion power plants and compared with the second-stability ARIES-4 tokamak. The device and plasma parameters were determined by minimizing the projected cost of electricity subject to various constraints. The stellarators were competitive with ARIES-4 for a range of assumptions on confinement models, alpha-particle losses, and beta. One dimensional power balance equations were solved for both Lackner-Gottardi confinement scaling with an assumed n(sub e)(r) and for helical-ripple-induced transport with both assumed and calculated forms for n(sub e)(r) and E(sub r)(r). DITHERING TRANSITIONS IN RESISTIVE PRESSURE-GRADIENT-DRIVEN TURBULENCE
L. Garcia (Madrid Univ., Spain.), B. A. Carreras, V. E. Lynch, and P. H. Diamond (California Univ., San Diego, CA.) 1994 7 p Presented at the 15th International Conference on Plasma Physics and Controlled Nuclear Fusion Researh, Seville, Spain, 26 Sep. - 1 Oct. 1994
(Contracts DE-AC05-84OR-21400; DE-FG03-88ER-53275)
(DE95-006737; CONF-940933-27; IAEA-CN-60/D-P-I-12) Avail: CASI HC A02/MF A01

A self-consistent model of the L to H transition has been derived from coupled nonlinear envelope equations for the fluctuation level, and radial electric field shear, E(prime)(sub r). This model is based on general properties of the coupling between turbulence and averaged sheared flows. To extract these generic properties several turbulence models have been investigated. Here, some of the results obtained with the resistive pressure-gradient-driven turbulence are presented with special emphasis on the structure of the Reynolds stress and the existence of limit cycle solutions. (DE95-006741; CONF-9407126-3) Avail: CASI HC A02/MF A01

The study of plasma turbulence and transport is a complex problem of critical importance for fusion-relevant plasmas. To this day, the fluid treatment of plasma dynamics is the best approach to realistic physics at the high resolution required for certain experimentally relevant calculations. Core and edge turbulence in a magnetic fusion device have been modeled using state-of-the-art, nonlinear, three-dimensional, initial-value fluid and gyrofluid codes. Parallel implementation of these models on diverse platforms--vector parallel (National Energy Research Supercomputer Center's CRAY Y-MP C90), massively parallel (Intel Paragon XP/S 35), and serial parallel (clusters of high-performance workstations using the Parallel Virtual Machine protocol)--offers a variety of paths to high resolution and significant improvements in real-time efficiency, each with its own advantages. The largest and most efficient calculations have been performed at the 200 Mword memory limit on the C90 in dedicated mode, where an overlap of 12 to 13 out of a maximum of 16 processors has been achieved with a gyrofluid model of core fluctuations. The richness of the physics captured by these calculations is commensurate with the increased resolution and efficiency and is limited only by the ingenuity brought to the analysis of the massive amounts of data generated. THE ROLE OF MICROPROCESSES IN MACROSCALE MAGNETOTAIL DYNAMICS
Joachim Birn, S. Peter Gary, and Michael Hesse (National Aeronautics and Space Administration. Goddard Space Flight Center, Greenbelt, MD.) 1995 22 p Presented at the 1994 Huntsville Workshop on Coupling of Micro- and Mesoscale Processes in Space Plasma Transport, Guntersville, AL, 16-19 Oct. 1995
(Contract W-7405-eng-36)
(DE95-006288; LA-UR-95-416; CONF-9410243-2) Avail: CASI HC A03/MF A01

Microphysical processes influence the behavior of macroscopic variables and hence the dynamical processes on larger scales through the isotropization of the pressure tensor and through anomalous transport processes which affect the conservation and transport of momentum, energy, and magnetic flux. Using MHD simulations of the dynamic evolution of the magnetotail with deviations from ideal, isotropic, and isentropic MHD, it is demonstrated that each of these deviations may have drastic effects on the stability and dynamic behavior of the magnetotail. NEUTRAL GAS COMPRESSION IN THE ALCATOR C-MOD DIVERTOR. EXPERIMENTAL OBSERVATIONS
A. Niemczewski, B. LaBombard, B. Lipschultz, and G. McCracken Nov. 1994 21 p Presented at the Meeting of the Division of Plasma Physics of the American Physical Society, Minneapolis, MN, 7-11 Nov. 1994
(Contract DE-AC02-78ET-51013)
(DE95-007762; DOE/ET-51013/308; PFC/RR-94-13; CONF-941101-6)
Avail: CASI HC A03/MF A01

One of the high heat flux solutions envisioned for ITER is the gas target divertor. This scheme requires high neutral pressure to be sustained in the divertor chamber with a minimal effect on the pressure in the main tokamak chamber (i.e. high gas compression). The neutral gas compression has been studied in the Alcator C-Mod closed divertor under various central and edge plasma conditions. The neutral pressure measured by a fast, in-situ, ionization gauge, installed behind the divertor target plate was compared with the midplane pressure, measured by a shielded Bayard-Alpert gauge. Divertor pressures up to 30 mTorr with compression factors p(sub div)/p(sub mid) less than or equal to 70 have been observed. It has been found that the neutral pressure in the divertor does not depend strongly on the fueling location but rather on the core plasma density and the resulting divertor plasma regime. Divertor detachment leads to a considerable drop in the compression ratio, suggesting a partial 'unplugging' of the divertor volume. An examination of the local particle flux balance in the divertor indicates that the single most important factor determining divertor pressure and compression is the private-flux plasma channel opacity to neutrals. DOE

FLUCTUATIONS IN HIGH BETA(SUB p) PLASMAS IN DIII-D
T. A. Casper, M. S. Chu (California Univ., Irvine, CA.), and C. P. Gohil (California Univ., Irvine, CA.) Jun. 1994 7 p Presented at the 21st EPS Conference on Controlled Fusion and Plasma Physics, Montpellier, France, 27 Jun. - 1 Jul. 1994
(Contract W-7405-eng-48)
(DE95-008071; UCRL-JC-116862; CONF-9406270-4) Avail: CASI HC A02/MF A01

In our investigation of improved confinement in high poloidal beta (beta(sub p) = 2 to 4) advanced tokamak experiments, coincident with q(sub 0) rising above 2, we observe the internal MHD activity to evolve from an m/n = 2/1 to a 3/1 structure consistent with the GATO code stability analysis. The plasma eventually evolves to a quiescent state at which time the stored energy increases, mostly as a result of improved particle confinement. The measured plasma pressure profiles during this time are also calculated to be stable to high-n ballooning modes consistent with operation of the core in the second stable regime. The sustained improvement in confinement is ultimately limited by our ability to control the toroidal current profile of which the bootstrap current contributes a large fraction (up to 80%). DOE

GLOBAL DYNAMO IN A REVERSED FIELD PINCH PLASMA
K. I. Sato, A. Nagata, S. Kubota, T. Ando, H. Arimoto, T. Amano, K. Saito, S. Shiina, A. Matsuoka, and M. Nagatsu et al Oct. 1993 23 p
(DE94-765441; PSC-31) Avail: CASI HC A03/MF A01

We found that an RFP dynamo uniformly generates most of the toroidal flux along the toroidal direction in an RFP plasma with a high magnetic Reynolds (S) number. Hereafter we call it the global dynamo. The toroidal flux generated by the global dynamo is proportional to the plasma current. The effective inductance (proportional constant) increases with the S number and is kept at a constant value against the change of the plasma current. This means that the pinch parameter Theta is held constant; that is, the global dynamo has a self-organizing effect sustaining a particular RFP magnetic field configuration. By comparison with simulation results and analysis of magnetic fluctuations. We confirmed that the global dynamo is generated by the single helicity m (poloidal mode number) = 1 mode alone. DOE

BURST OF ENERGETIC IONS FROM REVERSED FIELD PINCH PLASMA
A. Matsuoka, M. Sugawara, Y. Kondoh (Gunma Univ., Kiryu, Japan.), K. Aoto, K. I. Sato, S. Kubota, H. Arimoto, A. Nagata, M. Nagatsu, and S. Masamune Nov. 1993 29 p
(DE94-765447; PSC-32) Avail: CASI HC A03/MF A01

In a reversed field pinch (RFP), behavior of edge plasma is investigated by an energy analyzer and movable electrostatic probes scanning from the boundary of the core plasma to 122 mm outside in order to separate effects of ions and electrons. We clearly confirmed the behavior of the edge plasma and found that the energetic ions with a monochromatic energy distribution of about 3 keV were emitted from the core plasma. Its particle flux is 10(exp 17) - 10(exp 18) cm(exp -2) sec(exp -1). The energetic ion burst does not synchronize with the RFP dynamo. It is accompanied with the generation of the island overlapping. DOE

EXPERIMENTAL ASPECTS OF EFFECTS OF HIGH-ENERGY PARTICLES ON ALFVEN MODES
W. W. Heidbrink (California Univ., Irvine, CA.) Oct. 1994 16 p Presented at the ISPP Workshop on the Theory of Fusion Plasmas, Varenna, Italy, 22-26 Aug. 1994
(Contract DE-AC03-89ER-51114)
(DE95-003383; GA-A-21811; CONF-9408176-3) Avail: CASI HC A03/MF A01

Global Alfven modes are observed in a number of tokamaks, including DIII-D and TFTR. Instabilities occur during neutral-beam injection and during fast-wave ICRF heating, and may recently have been observed during alpha-particle heating. Identification of toroidicity-induced Alfven eigenmodes (TAE) is based primarily on the scaling of the real frequency of the mode. Other modes, including the beta-induced Alfven eigenmode (BAE), are also observed. The stability threshold of TAE modes agree (to within a factor of two) with theoretical predictions. Toroidal mode numbers of n = 2-6 are usually most unstable, as theoretically expected. Measurements of the poloidal and radial mode structure are consistent with theoretical predictions, but the uncertainties are large. Both TAE and BAE modes can cause large, concentrated losses of fast ions. Phenomenologically, beam-driven Alfven modes usually 'saturate' through bursts that expel beam ions, while modes observed during ICPF heating approach a steady saturation amplitude. DOE

FLUCTUATIONS AND TRANSPORT IN FUSION PLASMAS Final Report
R. W. Gould and P. C. Liewer 1995 20 p
(Contract DE-FG03-84ER-53173)
(DE95-007111; DOE/ER-53173/T6) Avail: CASI HC A03/MF A01

The energy confinement in tokamaks in thought to be limited by transport caused by plasma turbulence. Three dimensional plasma particle-in-cell (PIC) codes are used to model the turbulent transport in tokamaks to attempt to understand this phenomena so that tokamaks can be made more efficient. Presently, hundreds of hours of Cray time are used to model these experiments and much bigger and longer runs are desired, to model a large tokamak with realistic parameters is beyond the capability of existing sequential supercomputers. Parallel supercomputers might be a cost effect tool for performing such large scale 3D tokamak simulations. The goal of the work was to develop algorithms for performing PIC codes on coarse-grained message passing parallel computers and to evaluate the performance of such parallel computers on PIC codes. This algorithm would be used in a large scale PIC production code such as the UCLA 3D gyrokinetic code. DOE

In the authors' research for the period of September 30, 1993 through December 31, 1994, they have upgraded their equipment in anticipation of the restart of the upgraded lasers at the University of Rochester Laboratory for Laser Energetics/National Laser User Facility (LLE/NLUF) and elsewhere. As a direct result of cooperation with Dr. Paul Jaanimagi of LLE, they have modified the cathode on a LLE-designed front-illuminated streak camera so as to operate over a wavelength range extending from the x-ray (greater or equal 0.3 nm) into the vacuum ultraviolet (greater 100 nm) spectral regions. They have accomplished this with (coated) screen cathodes which permit the photoelectrons to freely penetrate through the openings after emission from the mesh surfaces. Such cathodes were studied, compared and optimized. In anticipation of the development of these long-wavelength photocathodes, they assembled and tested a xuv flat-field streak spectrograph using a varied-spacing grating and covering the 4-30 nm wavelength region. They successfully obtained spectra of highly-ionized boron and carbon. They have also installed a new 300 grooves/mm, 4.2 deg blazed grating in their 'McPig' microchannel plate equipped grazing incidence spectrograph, and obtained test spectra extending from 3 to 140 nm wavelength. The behavior of the scrape-off layer (SOL) region in tokamaks is believed to play an important role determining the overall device performance. In addition, control of the exhaust power has become one of the most important issues in the design of future devices such as ITER and TPX. This paper presents the results of application of 2-D fluid models to the DII-D tokamak, and research into the importance of processes which are inadequately treated in the fluid models. Comparison of measured and simulated profiles of SOL plasma parameters suggest the physics model contained in the UEDGE code is sufficient to simulate plasmas which are attached to the divertor plates. Experimental evidence suggests the presence of enhanced plasma recombination and momentum removal leading to the existence of detached plasma states. UEDGE simulation of these plasmas obtains a bifurcation to a low temperature plasma at the divertor, but the plasma remains attached. Understanding the physics of this detachment is important for the design of future devices. Analytic studies of the behavior of SOL plasmas enhance our understanding beyond that achieved with fluid modeling. Analysis of the effect of drifts on sheath structure suggest these drifts may play a role in the detachment process. Analysis of the turbulent-transport equations indicate a bifurcation which is qualitatively similar to the experimentally different behavior of the L- and H-mode SOL. Electrostatic simulations of conducting wall modes suggest possible control of the SOL width by biasing. DOE

This paper presents work to develop benchmarked theoretical models of scrape-off-layer (SOL) characteristics in diverted tokamaks by comparing shot simulations using the UEDGE plasma fluid and DEGAS neutral transport codes to measurements of the DIII-D SOL plasma. The experimental data include the radial profiles of n(sub e) T(sub e), and T(sub i), the divertor exhaust power, the intensity of H(sub alpha) emission, and profiles of the radiated power. A very simple model of the anomalous perpendicular transport rates produces consistency between the calculated and measured radial profiles of the divertor power, and of the midplane densities and temperatures. Experimentally, the measured exhaust power is now 80-90% of the input power. The simulated peak power on the outer leg of the divertor floor is now within 20% of the measured power. Various sensitivities of these comparisons to model assumptions are described. Finally, these benchmarked models have been used to examine the effects of various baffle configurations for the Radiative Divertor Upgrade in DIII-D. DOE

The effect of a subsonic toroidal flow on the linear magnetohydrodynamic stability of a tokamak plasma surrounded by an external resistive wall is studied. A complex non-self-adjoint eigenvalue problem for the stability of general kink and tearing modes is formulated, solved numerically, and applied to high (beta) tokamaks. Results indicate that toroidal plasma flow, in conjunction with dissipation in the plasma, can open a window of stability for the position of the external wall. In this window, stable plasma beta values can significantly exceed those predicted by the Troyon scaling law with no wall. Computations utilizing experimental data indicate good agreement with observations. DOE

Differentially rotating disks are subject to the axisymmetric instability for perfectly conducting plasma in the presence of poloidal magnetic fields. For nonaxisymmetric perturbations, the authors find localized unstable eigenmodes whose eigenfunction is confined between two Alfven singularities at omega(d) = +/- omega(A), where omega(d) is the Doppler-shifted wave frequency, and omega(A) = k(parallel bars)v(A) is the Alfven frequency. The radial width of the unstable eigenfunction is Delta x approximately to omega(A)/(Ak(y)), where A is the Oort's constant, and k(y) is the azimuthal wave number. The growth rate of the fundamental mode is larger for smaller value of k(y)/k(z). The maximum growth rate when k(y)/k(z) approximately 0.1 is approximately 0.2 Omega for the Keplerian disk with local angular velocity Omega. It is found that the purely growing mode disappears when k(y)/k(z) greater than 0.12. In a perfectly conducting disk, the instability grows even when the seed magnetic field is infinitesimal. Inclusion of the resistivity, however, leads to the appearance of an instability threshold. When the resistivity eta depends on the instability-induced turbulent magnetic fields delta B as eta ((delta B(exp 2))), the marginal stability condition self-consistently determines the alpha parameter of the angular momentum transport due to the magnetic stress. For fully ionized disks, the magnetic viscosity parameter alpha(B) is between 0.001 and 1. The authors' three-dimensional MHD simulation confirms these unstable eigenmodes. It also shows that the alpha parameter observed in simulation is between 0.01 and 1, in agreement with theory. The observationally required smaller alpha in the quiescent phase of accretion disks in dwarf novae may be explained by the decreased ionization due to the temperature drop. DOE

Recent laser-produced plasma experiments have relied on spectroscopic comparisons with models to infer plasma temperatures. Here, the technique is applied to study thermal radiation transfer experiments. The transmission model combines high-quality atomic data with an ionization balance obtained from systematic expansions of the grand canonical ensemble. The latter avoids the ad hoc cutoffs required in free energy minimization schemes and includes Coulomb corrections usually neglected in other models. It is shown that the improved equation of state significantly affects inferred temperatures at the higher densities expected in the heat flow experiments. Even though good agreement is obtained between the experimental and theoretical transmission spectrum, the experimental uncertainties are sufficiently large that is compromises the intended bench marking of the thermal transport models. (DE95-008595; SU-SLAC-PUB-95-6756; CONF-940681-11) Avail: CASI HC A02/MF A01

The authors intend to carry out a series of plasma lens experiments at the Final Focus Test Beam facility at SLAC. These experiments will be the first to study the focusing of particle beams by plasma focusing devices in the parameter regime of interest for high energy colliders, and is expected to lead to plasma lens designs capable of unprecedented spot sizes. Plasma focusing of positron beams will be attempted for the first time. They will study the effects of lens aberrations due to various lens imperfections. Several approaches will be applied to create the plasma required including laser ionization and beam induced tunneling ionization of a working gas-the latter which has never been observed before. The compactness of the device should prove to be of interest for applications at the SLC and the next generation linear colliders. DOE

In this paper the authors summarize recent progress on DIII-D in developing techniques for divertor power and particle control relevant to next generation tokamaks such as the proposed ITER and TPX devices. Density control and helium removal by divertor pumping have been demonstrated for the first time in high confinement ELMing H-mode discharges (tau is approximately 2 times tau(sub ITER-89P)) following installation of a divertor cryopumping system. The peak divertor heat flux in similar H-mode discharges has been reduced through production of a radiating mantle with neon or argon puffing (reductions of 3-5). A number of diagnostics have been added to improve the understanding of the physical processes involved. They are now designing modified double-null divertor structures for DIII-D that will provide improved particle control for high-triangularity VH-mode plasmas while at the same time allowing for gas puffing to reduce the divertor heat flux. The TPX design stipulates that the ion-cyclotron resonance frequency (ICRF) antenna must have a Faraday screen (FS). The author considers here possible low Z coatings for the screen, as well as sputtering behavior of the Ni and Ti substrates. The theory of RF-induced sputtering has been developed, and follows those theoretical approaches. The author's emphasis will be on both impurity generation as a possible source of increased Z(sub eff), and also on actual erosion-lifetime of the materials under worst case conditions. DOE

ORDERED ONE-COMPONENT PLASMAS: PHASE TRANSITIONS, NORMAL MODES, LARGE SYSTEMS, AND EXPERIMENTS IN A STORAGE RING
J. P. Schiffer 1994 13 p Presented at the Non Neutral Plasma

Physics, Berkeley, CA, 17-20 Jul. 1994
(Contract W-31-109-eng-38)
(DE95-007077; ANL/PHY/CP-85173; CONF-9407163-1) Avail: CASI HC A03/MF A01

The property of cold one-component plasmas, confined by external forces, to form an ordered array has been known for some time both from simulations and from experiment. The purpose of this talk is to summarize some recent work on simulations and some new experimental results. The author discusses some experimental work on real storage rings, magnetic storage devices in which partials circulate with large kinetic energies and for which laser cooling is used on partially ionized ions to attain temperatures ten or more orders of magnitude lower than their kinetic energies. WALL STABILIZATION OF ROTATING HIGH (BETA) DISCHARGES IN D3-D
A. D. Turnbull, T. S. Taylor, and E. J. Strait Oct. 1994 12 p Presented at the 15th International Conference on Plasma Physics and Controlled Nuclear Fusion Research, Madrid, Spain, 26 Sep. - 1 Oct. 1994
(Contracts DE-AC03-89ER-51114; DE-FG03-92ER-54150; W-7405-eng-48)
(DE95-008207; GA-A-21819; CONF-940933-37) Avail: CASI HC A03/MF A01

Wall stabilization of the ideal $n = 1$ external kink mode is shown to be possible in high (beta), rotating D3-D plasmas for times much longer than the resistive wall penetration time. The gain in (ss) can be more than 30% above the calculated stability limit with no wall stabilization. Stabilization from the resistive wall is found to require plasma rotation speeds of several kHz; otherwise, unstable locked or slowly rotating modes appear, with growth times of the order of the wall penetration time, which ultimately lead to termination of the discharge. The slowly rotating modes have the characteristics expected of the theoretically predicted resistive wall mode in an ideal plasma. DOE

THEORETICAL ASPECTS OF ENERGY CONFINEMENT IN SPHEROMAKS
T. K. Fowler 16 Nov. 1994 10 p Presented at the Workshop on Establishing the Hysics Basis Needed To Access the Potential of Compact Toroidal Reactors, Oak Ridge, TN, 19-31 Jul. 1994
(Contract W-7405-eng-48)
(DE95-008079; UCRL-JC-119307; CONF-9407169-1) Avail: CASI HC A02/MF A01

It is shown that, despite the poor global energy confinement observed in spheromak experiments to date, the long-term prospects may be favorable as spheromaks are scaled to larger size and higher temperatures. The present performance is traced to excessive magnetic energy loss at the edge compared to tokamaks and heat transport due to magnetic fluctuations, both of which should scale away as the temperature increases. DOE

OPERATING POINTS AND FEEDBACK CONTROL OF PLASMA CHARACTERISTICS IN TOKAMAKS WITH FULL CURRENT DRIVE
D. W. Swain, S. E. Attenberger, W. A. Houlberg, P. T. Bonoli (Massachusetts Inst. of Tech., Cambridge, MA.), and W. M. Nevins (Lawrence Livermore National Lab., Livermore, CA.) 1994 5 p Presented at the 18th European Symposium on Fusion Technology, Karlsruhe, Germany, 22-26 Aug. 1994
(Contracts DE-AC05-84OR-21400; DE-AC02-76CH-03073)
(DE95-007037; CONF-940843-15) Avail: CASI HC A01/MF A01

Tokamak operation using advanced tokamak modes with steady-state current drive may provide better performance, thereby improving the prospects of power-producing fusion reactors. Scenarios for such operation in TPX and in an ITER-like scale-up of TPX are modeled. Results indicate that the heating and current drive power and feedback control requirements may be achievable. TOKAMAK ETE ENGINEERING PRELIMINARY PROJECT [ANTEPROJETO DE ENGENHARIA DO TOKAMAK ETE]
Gerson Otto Ludwig Nov. 1993 53 p In PORTUGUESE
(INPE-5529-PRE/1796) Avail: CASI HC A04/MF A01

This report introduces the tokamak ETE engineering preliminary project (Spheric Toroidal Experiment of the Associated Laboratory of Plasma of the National Institute for Space Research (LAP/INPE). The tokamak ETE appears to be a machine of small proportions, or spheric tokamak, which was created by the ETA project (Advanced Toroidal Experiment), developed in 1986 by the Associated Laboratory of Plasma. This project presented several unknown characteristics at the time, and, in 1987, the tokamak ETE was approved as the main experiment in the field of fusion to be built at the future National Laboratory of Plasma (LNP). However, when it became clear that the implementation of the National Laboratory of Plasma would not take place in a short period of time, the National Laboratory of Plasma proposed the construction of the Proto-ETA in 1988, which would be utilized as a prototype for the ETA machine at a much smaller cost. The conceptual project and the tokamak Proto-ETA engineering preliminary project were developed with the intense participation of national and foreign specialists during a series of work meetings which took place in 1989 and 1990. Even though the project was rendered important, unfortunately, it did not have the backing of the financial institutions for its implementation. At the end of 1990, the Proto-ETA was utilized as the foundation for the design of the tokamak TBR-E which kept the main characteristics of the spheric tokamak, and it was proposed as a joint endeavor of the largest active groups in the field of experimental physics of plasma in the country. Again, it was verified that there would not be any means to build an important machine like Proto-ETA or TBR-E. In the middle of 1991, therefore, the Associated Laboratory of Plasma began to work on the development of the current project, based on the premise that it would be necessary to utilize available energy sources at an extremely reduced cost and to make the most of the material and human resources of the institution. PELLET INJECTOR RESEARCH AND DEVELOPMENT AT ORNL
S. K. Combs, G. C. Barber, and L. R. Baylor 1994 5 p Presented at the 18th European Symposium on Fusion Technology, Karlsruhe, Germany, 22-26 Aug. 1994
(Contract DE-AC05-84OR-21400)
(DE95-006736; CONF-940843-14) Avail: CASI HC A01/MF A01

Oak Ridge National Laboratory has been developing pellet injectors for plasma fueling experiments on magnetic confinement devices for more than 15 years. Recent major applications of the ORNL development program include: (1) a tritium-compatible four-shot pneumatic injector for the Tokamak Fusion Test Reactor; (2) a centrifuge pellet injector for the Tore Supra tokamak, and most recently; (3) a three-barrel repeating pneumatic injector for the DIII-D tokamak. In addition to applications, ORNL is developing advanced technologies, including high-speed pellet injectors, tritium injectors, and long-pulse pellet feed systems. The high-speed research involves a collaboration between ORNL and ENEA-Frascati in the development of a repeating two-stage light gas gun based on an extrusion-type pellet feed system. Construction of a new tritium-compatible, extruder-based repeating pneumatic injector (8-mm-diam) is complete and will replace the pipe gun in the original tritium proof-of-principle experiment. The development of a steady-state feed system in which three standard extruders operate in tandem is under way. These research and development activities are relevant to the International Thermonuclear Experimental Reactor and are briefly described in this paper. DOE

SIMULATION OF BURNING TOKAMAK PLASMAS

M. J. Mantsinen 2 Dec. 1994 118 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(PB95-195426; TKK-F-B155) Avail: CASI HC A06

In this thesis, time-dependent behavior of near-term experimental DT tokamak-fusion reactors and advanced D(3)He-tokamaks is studied. To do this, a zero-dimensional (volume-averaged using prescribed profiles for plasma parameters) time-dependent particle and power balance code has been developed. The predictions of the code are compared with experimental data and with transport calculations of a higher dimensionality. In all comparisons, a good agreement is found. The advantage of a zero-dimensional code, as compared to higher-dimensional transport codes, is the possibility to quickly scan the interdependencies between reactor parameters. The structure of the thesis is as follows: In Chapter 2, an overview on tokamak physics relevant to burning plasmas is presented and the tokamaks considered in the thesis are introduced. In Chapter 3 the zero-dimensional model for the simulations is described and in Chapter 4 results from the simulations are presented. In Chapter 5, the zero-dimensional calculations are compared with experiments and higher-dimensional transport calculations. In Chapter 6, transport of charged fusion products and cyclotron radiation are included in the zero-dimensional model, and their effects on the plasma behavior are studied. Chapter 7 consists of conclusions and a discussion. NTIS

RESONANT PHOTOEMISSION STUDIES OF THICKNESS DEPENDENCE OF THE UNOCCUPIED Gd 5d BANDS
P. A. Dowben, Dongqi Li (Argonne National Lab., IL.), Jiandi Zhang, and M. Onellion (Wisconsin Univ., Madison, WI.) 1994 14 p Presented at the 41st Annual American Vacuum Society Symposium, Denver, CO, 24-28 Oct. 1994 Submitted for publication
(Contract W-31-109-eng-38; NSF DMR-92-21655)
(DE95-004127; ANL/MSD/CP-84783; CONF-941001-8) Avail: CASI HC A03/MF A01

Ultrathin Gd films have been studied with constant initial-state spectroscopy (CIS) of photoemission utilizing linearly polarized light of synchrotron radiation. The photoemission cross-section of the 5d surface state near E(sub F) shows strong photon energy dependence, i.e. sharp peaks in CIS spectra near the Gd 5p(sub 1/2) adsorption edge. These peaks originate from resonant photoemission processes involving the occupied 5p and unoccupied 5d levels of the surface atoms. The symmetry of the unoccupied states were determined experimentally by changing the polarization of light, where p-polarized light excites only to the unoccupied d(sub z(sup 2)) or d(sub xz,yz) states and s-polarized light to all the d states including d(sub x(sup 2) - (sup 2)) and d(sub xy) states. Based on the symmetry assignments, the lower bound of the exchange splitting of the Gd 5d(sub z(sup 2)) surface state can be abstracted, which increases when the thickness of Gd film decreases and reach maximum at the monolayer limit. ROTOR PHASES IN COMPOUND SEMICONDUCTORS
David Long Price, Marie-Louise Saboungi, and W. Spencer Howells (Rutherford Appleton Lab., Chilton, England.) Nov. 1994 16 p Presented at the Neutron Scattering Conference, Sendai, Japan, 11-14 Oct. 1994 Submitted for publication
(Contract W-31-109-eng-38)
(DE95-004139; ANL/MSD/CP-84837; CONF-9410165-9) Avail: CASI HC A03/MF A01

Quasi-elastic neutron scattering is used to study the disordering processes in two classes of semiconductor: 1-4 Zintl compounds and the phosphorus-selenium system. Two alkali-metal-polyvalent metal Zintl compounds, CsPb and NaSn, exhibit a two-stage melting process with high-temperature solid phases characterized by rapid dynamical disorder. In CsPb this disorder is clearly associated with rapid reorientations of polyanions with the cations participating in the dynamical disorder on the same time scale. In NaSn the disorder is associated with fast reorientations of the polyanions closely coupled to a slower migration of the cations. The two high-temperature solid phases of the molecular crystal P4Se3 are confirmed to be rotor phases with small but significant differences in the reorientational motions in the two phases. DOE

The facile thermolysis of Cl2GaP(SiMe3)22 to eliminate Me3 SiX and yield nanocrystalline GaP has been studied via thermal gravimetric analysis (TGA) and it has been found that the Me3SiCl is eliminated in a step-wise manner. Also, the new ternary single-source precursor Ga2(As,P)C13n has been synthesized and thermolyzed to yield the ternary 3-5 GaAsxPy. In addition, nanocrystalline GaAs and GaP, prepared by the Kher/Wells low temperature solution phase method, have been studied by transmission electron microscopy (TEM) and, in the TEM's of both, the lattice fringes of nanocrystalline material are clearly evident. Using a host of analytical techniques, it has been shown that the GaAs has crystalline regions of 12 +/- 2 nm. In addition, efforts in immobilization of particles have involved all binary permutations of In and Ga phosphides and arsenides. The materials have been cast onto electrode surfaces from volatile solvents to give uniform deposits. Dispersions can also be created in the presence of monomers which are subsequently electropolymerized to prepare composite films. In an STM plot of InAs immobilized in a poly(pyrrole) film, the nanocrystals appear as yellow dots embedded in the brown film, indicating that they extend above the film, and/or have a higher conductivity than the polymer. In 1986, superconductivity was discovered in a perovskite-type material at an unprecedentedly high temperature. As no satisfactory theory describing high-Tc superconductivity has been developed and since not all the perovskite phases exhibiting superconducting properties have been explored, the field is still the focus of active research. This work strives to promote the basic understanding of the high-Tc superconducting materials. It is suggested that the results obtained here are part of those boundary conditions that any successful theory of high-Tc superconductivity must take into account. This overview begins with a survey of the various phases studied in the work, followed by the theory behind the methods used to characterize the materials. Finally the experimental conditions and the results are presented. NTIS

The one aspect of the field of liquid crystals which remains largely undeveloped is the supermolecular dimension of self ordering oligomers and polymers. In our opinion it is here that many of the potential opportunities exist for truly novel materials. An example of super-molecular chemistry is the use of liquid crystallinity as a tool to form molecular object polymers of persistent shape. This will be illustrated through the bulk synthesis of two-dimensional (2D) polymers which may be described as nanometer-thick flat objects. One exciting observation has been the formation of 'macroscopic' films from the layered assemblies with two completely different surfaces which reflect directly the chemical nature of opposite surfaces of the 'molecular' assemblies. Other systems give rise to films with remarkably stable nonlinear optical properties and high thresholds for laser damage. A different example to be described by the lecture is that of discrete molecular aggregates of rodcoil polymers which form superlattices and melt into liquid crystalline phases. These systems should be of interest in the manufacturing of patterned surfaces for a wide variety of technologies. DTIC

Beta(3C)-SiC nucleation and 2H-SiC step flow growth have been achieved on 2H-AlN thin film templates using gas-source (GS) MBE and C2H4/ Si2H6 gas flow ratios of 1 and 5, respectively. In addition, thin epitaxial films of AlN and SiC/AlN multilayers have been grown by plasma-assisted, GSMBE at 1050 C using Si2H6, C2H4 and N2. RHEED and high-resolution TEM revealed monocrystalline layers and pseudomorphic interfacial relationships at the substrate/film and the film/film interfaces. X-ray rocking curve measurements on the (0002) Bragg peak of the AlN films indicate they are the highest quality ever reported. Auger spectroscopy, TEM and electron energy loss spectroscopy have been used to show that the solid solubility between AlN and SiC is very limited below 1950 C. Results regarding the high temperature growth and the use of graded buffer layers for optimizing the microstructural quality of GaN grown by ECR-assisted GSMBE is also reported. The use of supersonic jets (SSJ) to produce GaN thin films has also been incorporated into this program. Highly oriented wurtzite GaN(001) films were grown on sapphire(0001) in the temperature range of 500 C to 650 C by SSJ. The film growth was controlled by the decomposition rate of NH3. Growth rates as high as 4.5microns/hr were achieved. The films had a columnar morphology. DTIC

The project has evolved to that of using Green's functions to predict properties of deep defects in narrow gap materials. Deep defects are now defined as originating from short range potentials and are often located near the middle of the energy gap. They are important because they affect the lifetime of charge carriers and hence the switching time of transistors. We are now moving into the arena of predicting formation energies of deep defects. This will also allow us to make predictions about the relative concentrations of the defects that could be expected at a given temperature. The narrow gap materials mercury cadmium telluride (MCT), mercury zinc telluride (MZT), and mercury zinc selenide (MZS) are of interest to NASA because they have commercial value for infrared detecting materials, and because there is a good possibility that they can be grown better in a microgravity environment. The uniform growth of these crystals on earth is difficult because of convection (caused by solute depletion just ahead of the growing interface, and also due to thermal gradients). In general it is very difficult to grow crystals with both radial and axial homogeneity. Derived from text

MATERIALS RESEARCH SOCIETY SYMPOSIUM PROCEEDINGS. VOLUME 339: DIAMOND, SiC AND NITRIDE WIDE BANDGAP SEMICONDUCTORS

Calvin H. Carter (Cree Research, Inc., Durham, NC.), Gennady Gildenblat (Pennsylvania State Univ., University Park, PA.), Shuji Nakamura (Nichia Chemical Industries Ltd., Tokushima, Japan.), and Robert J. Nemanich (North Carolina State Univ., Raleigh, NC.) 8 Apr. 1994 754 p Symposium held in San Francisco, CA, 4-8 Apr. 1994 Sponsored by the US Navy Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(AD-A288690) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This symposium was directed toward the potential of using diamond, SiC, and nitride wide bandgap semiconductors. The symposium emphasized materials issues related to the semiconducting properties of these wide bandgap materials. Both experimental and theoretical studies were presented. Solid advances were reported in the growth techniques of all three materials groups. Contributions demonstrated the critical importance of surfaces, interfaces, doping, defects, and impurities Reports demonstrated potential device applications ranging from unique electronic devices to blue/UV light emitters/detectors and even novel structures employing a negative electron affinity. The overall theme of the symposium was that materials research into wide bandgap semiconductors will make available exciting new applications, and that we are just beginning to understand the potential of these materials. [DEMONSTRATION OF PHOTO-ASSISTED TUNNELING PROCESS ACROSS THE COULOMB BLOCKADE ENERGY GAP IN MESOSCOPIC TUNNEL JUNCTIONS] Annual Report, 15 Sep. 1993 - 14 Sep. 1994
M. Tinkham 14 Sep. 1994 4 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contracts N00014-93-1-1134; N00014-89-J-1565)
(AD-A289534) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The specific project demonstrates the photon-assisted tunneling process across the Coulomb blockade energy gap in mesoscopic tunnel junctions. Photon-assisted tunneling is well established in conventional macroscopic tunnel junctions, and forms the basis of very sensitive millimeter wave detectors for astrophysics applications. In this case, the photons supply the energy needed to tunnel in the presence of the superconducting energy gap, which is a single-particle property. We are trying to see if the same Tien-Gordon formalism that describes this process can also be applied to the case of the Coulomb blockade, where the energy barrier stems from the charging energy of an electron on a mesoscopic metallic island, which is a collective property of the configuration, not of a single electron's energy levels. BORON-INDUCED RECONSTRUCTIONS OF Si(100) INVESTIGATED BY SCANNING TUNNELING MICROSCOPY Interim Technical Report
Yajun Wang and Robert J. Hamers 20 Dec. 1994 15 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-91-J-1629)
(AD-A289222; TR-23) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The local geometric and electronic structures of boron-induced reconstructions produced by thermal decomposition of diborane and decaborane on Si(001) has been investigated using scanning tunneling microscopy. STM images show that boron induces several related reconstructions, arising from ordered arrangements of simple structural subunits. These boron-induced atomic rearrangements order even at very low boron exposures, leading to a striking spatial segregation of boron on the surface. Similar reconstructions are observed using diborane and decaborane as boron precursors. Annealing at 1000 Kelvin for 90 seconds substantially improves the surface ordering, without significant diffusion of boron from the surface to the bulk. DTIC

Through the DEPSCoR program, this grant allowed Auburn University to acquire a dedicated workstation to simulate properties of semiconductors and their alloys. We have acquired a HP9000/735 workstation (named SOLID) with sufficient speed, memory, storage, and graphic capability to perform realistic simulations. The biggest advantage of having this machine is that we are not constrained by the turn-around and CPU time imposed by a general-purpose supercomputer. Since the installation of this machine in January 1994, we have made progress in several directions. These include (1) obtaining criteria for convergence in molecular-dynamic (MD) simulations of disordered zincblende alloys, (2) obtaining accurate information about bond lengths and excess energies of disordered zincblende alloys, (3) achieving a reliable method for obtaining bulk alloy free energies and phase diagrams from finite-size Monte-Carlo (MC) simulations, and (4) establishing an effective iterative method for calculating the density matrix in an order-N algorithm. In the last step we have demonstrated the validity of the density matrix approach. Using this method, we do not need to diagonalize the one electron Hamiltonian. Thus the computing time is reduced from N(exp 3) to N, where N is the number of atoms per unit cell used in the simulation. These studies have demonstrated the ability of SOLID for performing realistic MD and MC simulations. These results are being used to investigate a new class of III-V infrared materials and the wide-gap semiconductors SiC, GaN, AlN, and their alloys. DTIC

MICROWAVE CHARACTERIZATION OF SUB-MICRON N- AND P-CHANNEL MOSFET'S FABRICATED WITH THIN FILM SILICON-ON-SAPPHIRE
C. E. Chang, P. M. Asbeck, P. R. delaHoussaye, G. Imthurn, and G. A. Garcia Jun. 1994 6 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289296) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This paper reports on microwave characteristics for n- and p- MOS transistors fabricated with thin-film Silicon-on-Sapphire technology. The gates were defined with I-line optical lithography, and ranged down to 0.5 micrometer (drawn dimension). The f sub t values of the transistors reach 22 GHz for the n-channel structures and 21 GEz for the p- channel devices. The PMOS results are significantly higher than found with other Si or III-V technologies, and can potentially lead to high performance complementary microwave circuits. Small signal transistor models are similar to the ones for GaAs FETs. Dependence of model parameters on gate length were determined. DTIC

ATOMICALLY RESOLVED STM STUDY OF THE ADSORPTION AND DISSOCIATION OF METHYL CHLORIDE ON Si(001) Interim Technical Report
Michael Bronikowski and Robert J. Hamers 20 Dec. 1994 24 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-91-J-1629)
(AD-A289218; TR-25) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The authors have studied the room-temperature adsorption and dissociation of methyl chloride (CH3Cl) on Si(001) using Scanning Tunneling Microscopy (STM). Fragments are identified by the symmetry of their binding on the underlying Si(001) lattice. Methyl chloride adsorbs dissociatively at room temperature, yielding a methyl group and a chlorine atom bound to the surface. Chlorine atoms bind in a variety of geometries, the most common being two chlorine atoms bonded to a single silicon dimer (silicon monochloride dimers). When the surface is heated to 150 C, all Cl rearranges to this monochloride-type bonding configuration, and images reveal the beginnings of monochloride island formation. The Cl:CH3 ratio on the surface is found to be approximately 2:1, implying that not all methyl groups are bound to the surface in the reaction. Consideration of the relative bond strengths involved leads us to propose a reaction mechanism in which the surface sometimes abstracts a Cl atom from the CH3Cl molecule, ejecting a methyl group back into the vacuum. SURFACE ENERGY DRIVEN CRYSTALLIZATION OF AMORPHOUS Ni69Cr14P17 ALLOY
G. Schumacher, N. Wanderka, and R. P. Wahi Nov. 1994 6 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract W-31-109-eng-38)
(DE95-005543; ANL/MSD/CP-83327; CONF-941144-55) Avail: CASI HC A02/MF A01

Amorphous Ni69Cr14P17 specimens thinned for transmission electron microscopy have been studied in situ during thermal treatment. In the thinnest regions of the specimens (thickness d less than 50 nm), a metastable hexagonal (Ni,Cr)(sub 3)P phase nucleates at the perforation edge with the c-axis perpendicular to the specimen surface. The crystal width of this phase grows linearly with time. Above 530 C the hexagonal phase transforms into a stable b.c.t. (Ni,Cr)(sub 3)P phase. It is concluded that the surface and grain boundary energies dominate nucleation and growth. DOE

TEMPERATURE DEPENDENCE OF ION-BEAM-INDUCED AMORPHIZATION IN (BETA)-SiC

W. J. Weber and L. M. Wang Feb. 1995 15 p Presented at the 9th International Conference on Ion Beam Modification of Materials, Canberra, Australia, 5-10 Feb. 1995
(Contract DE-AC06-76RL-01830)
(DE95-007164; PNL-SA-25545; CONF-950220-1) Avail: CASI HC A03/MF A01

The ion-beam-induced crystalline-to-amorphous transition in monolithic (beta)-SIC has been studied as a function of irradiation temperature using the HVEM-Tandem Facility at Argonne National Laboratory. Specimens were irradiated with 1.5 MeV Xe(+) ions over the temperature range from 40 to 550 K, and the evolution of the amorphous state was followed in situ using the HVEM. At 40 K, the displacement dose for complete amorphization in (beta)-SIC is 0.34 dpa and increases with temperature in two stages. The simultaneous recovery process associated with the high-temperature stage (above 100 K) has an activation energy of 0.097 +/- 0.019 eV. The critical temperature above which complete amorphization does not occur is 498 K under these irradiation conditions. DOE

DNA DENATURATION THROUGH A MODEL OF THE PARTITION POINTS ON A ONE-DIMENSIONAL LATTICE
R. Mejdani and H. Huseini Aug. 1994 12 p
(DE95-607909; IC-94/227) Avail: CASI HC A03/MF A01 (US Sales Only)

We have shown that by using a model of the partition points gas on a one-dimensional lattice, we can study, besides the saturation curves obtained before for the enzyme kinetics, also the denaturation process, i.e. the breaking of the hydrogen bonds connecting the two strands, under treatment by heat of DNA. We think that this model, as a very simple model and mathematically transparent, can be advantageous for pedagogic goals or other theoretical investigations in chemistry or modern biology. DOE

HALL EFFECT AND RESISTIVITY IN THE NORMAL STATE OF HIGH-T(SUB c) CUPRATES IN THE ELECTRON-FRACTON MODEL
Q. Jiang, Z. H. Zhang, X. B. Wang, D. C. Tian, and T. Chui Aug. 1994 15 p
(DE95-610612; IC-94/239) Avail: CASI HC A03/MF A01 (US Sales Only)

Based on the electron-fracton interaction, the Hall effect and resistivity in the normal states of high-T(sub c) oxides are calculated by solving the quantum transport equations. The numerical results show that, under certain conditions, the inplane resistivity exhibits a nearly temperature dependence and the Hall angle exhibits a quadratic temperature dependence. DOE

GROWTH, CHARACTERIZATION AND DEVICE DEVELOPMENT IN MONOCRYSTALLINE DIAMOND FILMS Quarterly Technical Report, 1 Oct. - 31 Dec. 1994
Robert F. Davis, Jeffrey T. Glass, and R. J. Nemanich Dec. 1994 18 p Sponsored by the Ballistic Missile Defense Organization/Innovative Science and Technology program Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-93-1-0437)
(AD-A289356) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Bias-enhanced nucleation (BEN) has been employed with TiC(111) substrates for the disposition of oriented diamond particles. The orientation of all the particles was the same, as observed via SEM. Some particles showed evidence of azimuthal twist and tilt, most likely due to the approx. 18% lattice mismatch with the TiC. Raman spectra exhibited a strong feature at 1332 cm(exp -1) indicative of diamond, and smaller features at 1480 cm(exp -1) and 1602 cm(exp -1) due to sp(2)-bonded carbon. An increase in the duration of the BEN step and a reduction in the twinning are expected to increase the density of oriented particles. An optical analysis of the strain fields of point and line defects, and the distributions of these defects as well as the distribution of the optical centers in the diamond films has also been conducted. The nitrogen optical centers were uniformly distributed. Calculations indicated that line-type defects are far more detrimental to the stress than point defects. DTIC

NEUTRON DIFFRACTION STUDIES ON RECRYSTALLIZATION OF SOLUTION DERIVED LEAD ZIRCONATE TITANATES
B. Morosin, B. A. Tuttle, J. A. Voigt, A. C. Lawson (Los Alamos National Lab., NM.), and G. H. Kwei (Lawrence Livermore National Lab., Livermore, CA.) 1994 6 p Presented at the Annual Meeting of the Division of High Polymer Physics of the American Physical Society, San Jose, CA, 20-24 Mar. 1995
(Contracts DE-AC04-94AL-85000; W-7405-eng-36; W-31-109-eng-38; DE-AC04-76DP-00789)
(DE95-004771; SAND-94-2986C; CONF-950380-1) Avail: CASI HC A02/MF A01

We performed neutron powder diffraction on solution-derived lead zirconate titanates (PZT). Three compositions, PZT 45/55, PZT 20/80 and PbTiO3, were investigated. The materials were annealed so that the perovskite phase had just begun to grow from the precursor phase. In our materials this precursor phase is the pyrochlore rather than fluorite phase. The results show that in the pyrochlore phase, the (Ti,Zr) and the Pb are ordered in their crystallographic sites while the O are essentially disordered in both of the two usual pyrochlore anion sites. STOICHIOMETRY, STRUCTURE, AND PROPERTIES OF La2NiO(4+(DELTA)) AND La(2-x)Sr(x)NiO(4+/-(DELTA))
D. J. Buttrey, V. Sachan, J. M. Tranquada, and J. E. Lorenzo 1995 7 p Presented at the 7th International Symposium on Superconductivity, Kita Kiyushu, Japan, 8-11 Nov. 1994
(Contract DE-AC02-76CH-00016)
(DE95-007682; BNL-61393; CONF-941176-2) Avail: CASI HC A02/MF A01

The oxygen content phase diagram of La2NiO(4+(delta)) has been studied in detail using x ray and neutron diffraction data from well-characterized specimens. There are numerous phase separations and phase transitions which are observed with changes in temperature and composition. The complexity of the phase diagram arises primarily from oxygen defect interactions, however the authors have also obtained evidence for coupled charge and spin ordering at (delta) = 0.125 corresponding to organization of holes into ordered domain walls. These domain walls act as antiphase boundaries between stripes of antiferromagnetically ordered nickel moments. Neutron scattering data on Sr-substituted compositions with well-defined oxygen content indicate incommensurate charge and spin correlations closely related to those in the x=0, (delta) = 0.125 composition. The incommensurability approaches 1/4 and the correlation length increases as the hole concentration approaches p = x+2(delta) = 0.25. DOE

CRYSTAL STRUCTURE, SHORT-RANGE OXYGEN DEFECTS, AND WATER ADSORPTION IN La- AND Nd-MODIFIED ZrO2
C. K. Loong, J. W. Richardson, Jr., L. E. Iton, and M. Ozawa (Nagoya Inst. of Tech., Japan.) 1995 7 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract W-31-109-eng-38)
(DE95-007134; ANL/IPNS/CP-83321; CONF-941144-71) Avail: CASI HC A02/MF A01

Doping Rare-earth (RE) elements to ZrO2 helps stabilize the cubic and tetragonal phases and improves resistance to thermal shock and sintering at high temperatures. Since a RE ion has a lower valency 3(+) than Zr ion 4(+), oxygen vacancies are formed to preserve electroneutrality. We have studied the crystal structure of La(0.1)Zr(0.9)O(1.95) and Nd(0.1)Zr(0.9)O(1.95) by neutron diffraction and examined the associated oxygen defects by a Fourier transform of the filtered residual diffuse scattering. The hydration process was investigated by inelastic neutron-scattering measurements of the hydrogen vibrational density of states of the surface hydroxyl groups and physisorbed water on these fine powders. We compare the O-H stretch vibrations for samples from with only surface hydroxyl groups to multilayer coverage of water molecules. The decreasing energies and increasing widths of the O-H stretch bands with increasing H2O coverage indicate the influence of hydrogen bonding on the motion of water molecules. Similar elastic and inelastic experiments were also performed on a high surface-area pure ZrO2 powder. DOE

Iida (Ochanomizu Women's Univ., Tokyo, Japan.), M. Tanaka (Ochanomizu Women's Univ., Tokyo, Japan.), and J. W. Cable 1 Aug. 1994 12 p Presented at the Neutron Scattering, Sendai, Japan, 11-14 Oct. 1994
(Contract DE-AC05-84OR-21400)
(DE95-006627; CONF-9410165-14) Avail: CASI HC A03/MF A01

Crystal structure of stoichiometric YFe2O4 powder was studied by high-resolution neutron diffraction at room temperature, 225 K and 80 K. Rietveld refinements of the diffraction patterns give reasonable fits with space group R(bar 3)m (hexagonal) for room temperature, and with P(bar 1) (triclinic) for 225 K. However, the 80 K pattern cannot be fitted at all with the same triclinic symmetry, indicating that the structure is much more complicated. The magnetic reflection has been separated from those complex nuclear peaks by the polarization analysis. The magnetic structure is also fairly complicated both at 225 K and at 80 K. DOE

CHARACTERIZATION OF COLLISION CASCADE DAMAGE IN Ca2La8(SiO4)6O2 BY HRTEM
W. J. Weber and L. M. Wang Dec. 1994 6 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract DE-AC06-76RL-01830)
(DE95-005719; PNL-SA-25554; CONF-941144-45) Avail: CASI HC A02/MF A01

Ca2La8(SiO4)6O2 thin crystals become amorphous under ion beam irradiation. The ion dose required for complete amorphization of the thin crystal (critical amorphization dose, D(sub c)) increased with the increasing irradiation temperature and decreased with ion mass at elevated temperatures. Samples irradiated with 1-1.5 MeV Ar(+), Kr(+) and Xe(+) ions to doses much lower than D(sub c), in the temperature range from 20 to 498 K were used for a detailed HRTEM study to better understand the amorphization process. The residual collision cascade damage after irradiation appeared as manometer scale amorphous domains. The images of these domains are extremely sensitive to the sample thickness. Small domains of cascade size were only found at the very thin edge of the sample. In thicker regions, amorphous domains appear after higher doses as the result of cascade overlap in projection. At higher temperatures, the observed amorphous domains are smaller indicating thermal recovery at the amorphous/crystalline interface. The amorphous domains are also larger in size after irradiation with ions of higher mass at a fixed ion dose. These results are consistent with the D(sub c) temperature curves determined by in situ TEM with the HVEM-Tandem Facility at Argonne National Laboratory. The width of the amorphous rim along the edge of the specimen grew with increasing ion dose suggesting that amorphization also proceeds from the sample surface. Images of the collision cascade damage were compared to the cascade sizes calculated with the TRIM code. Some digitally acquired HRTEM images of the cascade damage were processed to reveal more detailed information. DOE

SURFACE CRYSTALLIZATION AND THIN FILM MELTING IN NORMAL ALKANES
X. Z. Wu and H. H. Shao 1994 12 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract DE-AC02-76CH-00016)
(DE95-006694; BNL-61312; CONF-941144-57) Avail: CASI HC A03/MF A01

Normal alkanes of carbon number n greater than 14 exhibit surface crystallization at their liquid-vapor interface. This has been investigated with x-ray reflectivity, grazing incidence scattering and surface tension measurements. The structure and thermodynamics of the surface layer is consistent with a monolayer of the bulk rotator phase occurring at the surface above the bulk melting temperature. On the other hand, thin films of alkanes on SiO2, exhibit a reduction of the melting temperature. The surface crystalline phase is observed for carbon number n greater than 14. The vanishing of surface phase for small n may be due to a transition from surface freezing to surface melting behavior. These measurements can yield the relative surface energies of the various phases. DOE

CHARACTERIZATION OF WAFER CHARGING MECHANISMS AND OXIDE SURVIVAL PREDICTION METHODOLOGY
Wes Lukaszek (Stanford Univ., CA.), William Dixon (Stanford Univ., CA.), Michael Vella, Cleston Messick (National Semiconductor Corp., West Jordan, UT.), Steve Reno (National Semiconductor Corp., West Jordan, UT.), and Jay Shideler (National Semiconductor Corp., West Jordan, UT.) Apr. 1994 12 p Presented at the International Reliability Physics Symposium, San Jose, CA, 11-14 Apr. 1994
(Contract DE-AC03-76SF-00098)
(DE95-006583; LBL-35961; CONF-940453-5) Avail: CASI HC A03/MF A01

Unipolar, EEPROM-based peak potential sensors and current sensors have been used to characterize the I-V relationship of charging transients which devices normally experience during the course of ion implantation. The results indicate that the charging sources may appear to behave like current-sources or voltage-sources, depending on the impedance of the load. This behavior may be understood in terms of plasma concepts. The ability to empirically characterize the I-V characteristics of charging sources using the CHARM-2 monitor wafers opens the way for prediction of failure rates of oxides subjected to specific processes, if the oxide Q(sub bd) distributions are known. SYNCHROTRON X-RAY SCATTERING STUDIES AT MINERAL-WATER INTERFACES
Ronald P. Chiarello and Neil C. Sturchio 1995 6 p Presented at the 1994 Fall Meeting of the Materials Research Society, Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract W-31-109-eng-38)
(DE95-008303; ANL/CMT/CP-85560; CONF-941144-88) Avail: CASI HC A02/MF A01

Synchrotron X-ray scattering techniques provide a powerful tool for the in situ study of atomic scale processes occurring at solid-liquid interfaces. We have applied these techniques to characterize and study reactions at mineral-water interfaces. Here we present two examples. The first is the characterization of the calcite (CaCO3)(101'4) cleavage surface, in equilibrium with deionized water, by crystal truncation rod measurements. The second is the in situ study of the heteroepitaxial growth of otavite (CdCO3) on the calcite (101'4) cleavage surface. The results of such studies will lead to significant progress in understanding mineral-water interface geochemistry. DOE

NUMERICAL STUDY OF THE SINGLET-TRIPLET MODEL FOR CUPRATE SUPERCONDUCTORS
M. E. Simon and A. A. Aligia Aug. 1994 20 p
(DE95-609438; IC-94/208) Avail: CASI HC A03/MF A01 (US Sales Only)

We perform a low-energy reduction of the three-band Hubbard

Hamiltonian (H(sub 3b)), keeping in the relevant Hilbert subspace not only local singlets (Zhang-Rice singlets), but also triple states between Cu holes and O holes at the Wannier function of the same site, with x(sup 2) - y(sup 2) symmetry. We solve exactly the resulting Hamiltonian in a system of 2 x 2 unit cells. We find that the local triplet states can be practically neglected for finite O-Cu on-site energy difference (Delta), very large Cu on-site Coulomb repulsion U(sub d), and O-O hopping t(sub pp)=0. This fact is in contrast with the mapping of H(sub 3b) to a one-band model using non-orthogonal singlets, which is very accurate when the Cu(+) configuration can be neglected. Although the amount of local triplet states in the low-energy eigenstates is in general small, it increases with t(sub pp) and for large t(sub pp) it is necessary to introduce higher order corrections in the one-band model to accurately represent the low-energy physics. In all cases even when local triplets are not important, the t-J model should be supplemented with other terms to describe the lowest energy levels. We also discuss briefly the effect of non-bonding O orbitals. DOE

Futamoto (Hitachi Ltd., Tokyo, Japan.) Jul. 1994 4 p Presented at the Magnetic Recording Conference, Tokyo, Japan, 10-14 Oct. 1994
(Contract DE-AC03-76SF-00098)
(DE95-004681; LBL-35986; CONF-9410278-1) Avail: CASI HC A01/MF A01

Highly c-axis oriented, single crystal films of Co(1-x)Cr(x) (0 less than or equal to x less than 0.3) have been grown epitaxially on mica substrates by e-beam evaporation. Films grown on Ru underlayers have an average grain size of 50-80 nm, negligibe fcc content, and very narrow c-axis dispersions. For Co films (x = 0), the as-grown magnetization structure are mainly 180 degree domain walls with a uniform distribution of cross-ties for thinner samples (less than or equal to 300 Angstrom), while thicker (greater than 400 Angstrom) ones show stripe domains. These images were analyzed in detail to measure the wall widths and associated energy densities for as-grown, remanent, and ac-magnetized samples. As expected, the magnetic properties of these films are composition dependent. However, for any Cr concentration, these films exhibit the largest saturation magnetization when compared with either sputtered or evaporated samples. This enhancement can be attributed to a nanometer-scale segregation of Cr, which in these samples could be particularly aided by the diffusion on the close-packed planes of the films with very narrow c-axis dispersions. Preliminary x-ray microanalysis and NMR data support this interpretation. DOE

MOLECULAR DYNAMICS SIMULATIONS OF GAY-BERNE NEMATIC LIQUID CRYSTAL: ELASTIC PROPERTIES FROM DIRECT CORRELATION FUNCTIONS

J. Stelzer, H. R. Trebin (Stuttgart Univ., Germany.), and L. Longa Aug. 1994 27 p
(DE95-609149; IC-94/220) Avail: CASI HC A03/MF A01 (US Sales Only)

We report NVT and NPT molecular dynamics simulations of a Gay-Berne nematic liquid crystal using generalization of recently proposed algorithm by Toxvaerd (Phys. Rev. E47, 343, 1993). On the basis of these simulations the Oseen-Zoher-Frank elastic constants K(sub 11), K(sub 22) and K(sub 33) as well as the surface constants K(sub 13) and K(sub 24) have been calculated within the framework of the direct correlation function approach of Lipkin et al. (J. Chem. Phys. 82, 472 (1985)). The angular coefficients of the direct pair correlation function, which enter the final formulas, have been determined from the computer simulation data for the pair correlation function of the nematic by combining the Ornstein-Zernike relation and the Wienier-Hopf factorization scheme. The unoriented nematic approximation has been assumed when constructing the reference, isotropic state of Lipkin et al. By an extensive study of the model over a wide range of temperatures, densities and pressures a very detailed information has been provided about elastic behaviour of the Gay-Berne nematic. Interestingly, it is found that the results for the surface elastic constants are qualitatively different than those obtained with the help of analytical approximations for the isotropic, direct pair correlation function. For example, the values of the surface elastic constants are negative and an order of magnitude smaller than the bulk elasticity. DOE

OBSERVATION OF ASYMMETRICAL TWO-CONE VAVILOV-CHERENKOV RADIATION IN BIAXIAL CRYSTAL OF TRIGLYCINESULPHATE EMITTED BY 658 MeV PROTONS PASSING ALONG BI NORMAL

V. P. Zrelov, V. P. Lupiltsev, and J. Ruzicka (Comenius Univ., Bratislava, Czechoslovakia.) 1993 11 p Submitted for publication
(DE94-629017; JINR-R-1-93-213) Avail: CASI HC A03/MF A01 (US Sales Only)

The paper deals with the directivity and polarization properties of the Vavilov-Cherenkov radiation (VChR) produced in passage of 658 MeV protons along an optical axis (bi normal) crystal of triglycinesulphate (TGS). The azimuthal distribution of the radiation turned out to be rather peculiar. First, it was asymmetrical about the plane running through the velocity vector of the beam particles perpendicularly to the plane of optical axes (POA). This VChR asymmetry was not observed in three earlier studied cases of 660 MeV protons passing through the main dielectric axes of a biaxial TGS crystal (i.e. when particles move along the small and the large bisectrix and perpendicularly to the plane of optical axes). Secondly, the azimuthal distribution of the VChR has a form of two symmetrical semi cones with different cone angles (their sections perpendicular to the proton beam axis resemble half-horseshoes inserted into each with their arcs outward). It also appeared that the outer VChR cone, F(sub -), is practically polarized only in the POA, while the inner cone, F(sub +), has more complicated polarization, i.e. in the angular region phi approx. 90 deg perpendicularly to the POA. Formulae are obtained for radiation directivity at any angle phi for this asymmetrical two-cone radiation. Comparison of the VChR emission angles calculated by these formulae and measured in experiment shows good agreement (within the measurement errors for the azimuthal) wave distribution of F(sub +) (inner cone) and some systematic excess (approx. 0.5 deg) for wave angles of F(sub -) (outer cone). TECHNICAL PROGRESS REPORT TO THE DEPARTMENT OF ENERGY ON THE SOLID STATE SCIENCES COMMITTEE (SSSC)

1995 6 p
(Contract DE-FG05-91ER-45442)
(DE95-007113; DOE/ER-45442/T1) Avail: CASI HC A02/MF A01

The Solid State Sciences Committee (SSSC) of the National Research Council (NRC) is charged with monitoring the health of the field of materials science in the United States. Accordingly, the Committee identifies and examines both broad and specific issues affecting the field. Regular meetings, teleconferences, briefings from agencies and the scientific community, the formation of study panels to prepare reports, and special forums are among the mechanisms used by the SSSC to meet its charge. This progress report presents a review of SSSC activities from May 1, 1992 through April 30, 1993. The details of prior activities are discussed in earlier reports. During the above period, the SSSC has continued to track and participate, when requested, in the development of a Federal initiative on advanced materials and processing. Specifically, the SSSC is presently planning the 1993 SSSC Forum (to be cosponsored with the National Materials Advisory Board (NMAB) and the Washington Materials Forum (WNM)). The thrust will be to highlight the Federal Advanced Materials and Processing Program (AMPP). In keeping with its charge to identify and highlight specific areas for scientific and technological opportunities, the SSSC continued to oversee the conduct of a study on biomolecular materials. Preliminary plans also have been developed for studies on neutron scattering science, on ultrasmall devices, and on molecular routes to materials. DOE

CRYSTAL AND MAGNETIC STRUCTURE OF STOICHIOMETRIC YFe2O4

S. Katano (Japan Atomic Energy Research Inst., Tokai, Japan.), S. Funahashi (Japan Atomic Energy Research Inst., Tokai, Japan.), T. Matsumoto (National Research Inst. for Metals, Tsukuba, Japan.), J. Iida (Ochanomizu Women's Univ., Tokyo, Japan.), M. Tanaka (Ochanomizu Women's Univ., Tokyo, Japan.), and J. W. Cable 1 Aug. 1994 12 p Presented at the Neutron Scattering, Sendai, Japan, 11-14 Oct. 1994

(Contract DE-AC05-84OR-21400)

(DE95-006627; CONF-9410165-14) Avail: CASI HC A03/MF A01

Crystal structure of stoichiometric YFe2O4 powder was studied by high-resolution neutron diffraction at room temperature, 225 K and 80 K. Rietveld refinements of the diffraction patterns give reasonable fits with space group R(bar 3)m (hexagonal) for room temperature, and with P(bar 1) (triclinic) for 225 K. However, the 80 K pattern cannot be fitted at all with the same triclinic symmetry, indicating that the structure is much more complicated. The magnetic reflection has been separated from those complex nuclear peaks by the polarization analysis. The magnetic structure is also fairly complicated both at 225 K and at 80 K. DOE

CHARACTERIZATION OF COLLISION CASCADE DAMAGE IN Ca2La8(SiO4)6O2 BY HRTEM

W. J. Weber and L. M. Wang Dec. 1994 6 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994

(Contract DE-AC06-76RL-01830)

(DE95-005719; PNL-SA-25554; CONF-941144-45) Avail: CASI HC A02/MF A01

Ca2La8(SiO4)6O2 thin crystals become amorphous under ion beam irradiation. The ion dose required for complete amorphization of the thin crystal (critical amorphization dose, D(sub c)) increased with the increasing irradiation temperature and decreased with ion mass at elevated temperatures. Samples irradiated with 1-1.5 MeV Ar(+), Kr(+) and Xe(+) ions to doses much lower than D(sub c), in the temperature range from 20 to 498 K were used for a detailed HRTEM study to better understand the amorphization process. The residual collision cascade damage after irradiation appeared as manometer scale amorphous domains. The images of these domains are extremely sensitive to the sample thickness. Small domains of cascade size were only found at the very thin edge of the sample. In thicker regions, amorphous domains appear after higher doses as the result of cascade overlap in projection. At higher temperatures, the observed amorphous domains are smaller indicating thermal recovery at the amorphous/crystalline interface. The amorphous domains are also larger in size after irradiation with ions of higher mass at a fixed ion dose. These results are consistent with the D(sub c) temperature curves determined by in situ TEM with the HVEM-Tandem Facility at Argonne National Laboratory. The width of the amorphous rim along the edge of the specimen grew with increasing ion dose suggesting that amorphization also proceeds from the sample surface. Images of the collision cascade damage were compared to the cascade sizes calculated with the TRIM code. Some digitally acquired HRTEM images of the cascade damage were processed to reveal more detailed information. DOE

SURFACE CRYSTALLIZATION AND THIN FILM MELTING IN NORMAL ALKANES

X. Z. Wu and H. H. Shao 1994 12 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994

(Contract DE-AC02-76CH-00016)

(DE95-006694; BNL-61312; CONF-941144-57) Avail: CASI HC A03/MF A01

Normal alkanes of carbon number n greater than 14 exhibit surface crystallization at their liquid-vapor interface. This has been investigated with x-ray reflectivity, grazing incidence scattering and surface tension measurements. The structure and thermodynamics of the surface layer is consistent with a monolayer of the bulk rotator phase occurring at the surface above the bulk melting temperature. On the other hand, thin films of alkanes on SiO2, exhibit a reduction of the melting temperature. The surface crystalline phase is observed for carbon number n greater than 14. The vanishing of surface phase for small n may be due to a transition from surface freezing to surface melting behavior. These measurements can yield the relative surface energies of the various phases. DOE

CHARACTERIZATION OF WAFER CHARGING MECHANISMS AND OXIDE SURVIVAL PREDICTION METHODOLOGY

Wes Lukaszek (Stanford Univ., CA.), William Dixon (Stanford Univ., CA.), Michael Vella, Cleston Messick (National Semiconductor Corp., West Jordan, UT.), Steve Reno (National Semiconductor Corp., West Jordan, UT.), and Jay Shideler (National Semiconductor Corp., West Jordan, UT.) Apr. 1994 12 p Presented at the International Reliability Physics Symposium, San Jose, CA, 11-14 Apr. 1994

(Contract DE-AC03-76SF-00098)

(DE95-006583; LBL-35961; CONF-940453-5) Avail: CASI HC A03/MF A01

Unipolar, EEPROM-based peak potential sensors and current sensors have been used to characterize the I-V relationship of charging transients which devices normally experience during the course of ion implantation. The results indicate that the charging sources may appear to behave like current-sources or voltage-sources, depending on the impedance of the load. This behavior may be understood in terms of plasma concepts. The ability to empirically characterize the I-V characteristics of charging sources using the CHARM-2 monitor wafers opens the way for prediction of failure rates of oxides subjected to specific processes, if the oxide Q(sub bd) distributions are known. SYNCHROTRON X-RAY SCATTERING STUDIES AT MINERAL-WATER INTERFACES

Ronald P. Chiarello and Neil C. Sturchio 1995 6 p Presented at the 1994 Fall Meeting of the Materials Research Society, Boston, MA, 28 Nov. - 2 Dec. 1994

(Contract W-31-109-eng-38)

(DE95-008303; ANL/CMT/CP-85560; CONF-941144-88) Avail: CASI HC A02/MF A01

Synchrotron X-ray scattering techniques provide a powerful tool for the in situ study of atomic scale processes occurring at solid-liquid interfaces. We have applied these techniques to characterize and study reactions at mineral-water interfaces. Here we present two examples. The first is the characterization of the calcite (CaCO3)(101'4) cleavage surface, in equilibrium with deionized water, by crystal truncation rod measurements. The second is the in situ study of the heteroepitaxial growth of otavite (CdCO3) on the calcite (101'4) cleavage surface. The results of such studies will lead to significant progress in understanding mineral-water interface geochemistry. DOE

NUMERICAL STUDY OF THE SINGLET-TRIPLET MODEL FOR CUPRATE SUPERCONDUCTORS

M. E. Simon and A. A. Aligia Aug. 1994 20 p

(DE95-609438; IC-94/208) Avail: CASI HC A03/MF A01 (US Sales Only)

We perform a low-energy reduction of the three-band Hubbard

Hamiltonian (H(sub 3b)), keeping in the relevant Hilbert subspace not only local singlets (Zhang-Rice singlets), but also triple states between Cu holes and O holes at the Wannier function of the same site, with x(sup 2) - y(sup 2) symmetry. We solve exactly the resulting Hamiltonian in a system of 2 x 2 unit cells. We find that the local triplet states can be practically neglected for finite O-Cu on-site energy difference (Delta), very large Cu on-site Coulomb repulsion U(sub d), and O-O hopping t(sub pp)=0. This fact is in contrast with the mapping of H(sub 3b) to a one-band model using non-orthogonal singlets, which is very accurate when the Cu(+) configuration can be neglected. Although the amount of local triplet states in the low-energy eigenstates is in general small, it increases with t(sub pp) and for large t(sub pp) it is necessary to introduce higher order corrections in the one-band model to accurately represent the low-energy physics. In all cases even when local triplets are not important, the t-J model should be supplemented with other terms to describe the lowest energy levels. We also discuss briefly the effect of non-bonding O orbitals. DOE

Futamoto (Hitachi Ltd., Tokyo, Japan.) Jul. 1994 4 p Presented at the Magnetic Recording Conference, Tokyo, Japan, 10-14 Oct. 1994
(Contract DE-AC03-76SF-00098)
(DE95-004681; LBL-35986; CONF-9410278-1) Avail: CASI HC A01/MF A01

Highly c-axis oriented, single crystal films of Co(1-x)Cr(x) (0 less than or equal to x less than 0.3) have been grown epitaxially on mica substrates by e-beam evaporation. Films grown on Ru underlayers have an average grain size of 50-80 nm, negligibe fcc content, and very narrow c-axis dispersions. For Co films (x = 0), the as-grown magnetization structure are mainly 180 degree domain walls with a uniform distribution of cross-ties for thinner samples (less than or equal to 300 Angstrom), while thicker (greater than 400 Angstrom) ones show stripe domains. These images were analyzed in detail to measure the wall widths and associated energy densities for as-grown, remanent, and ac-magnetized samples. As expected, the magnetic properties of these films are composition dependent. However, for any Cr concentration, these films exhibit the largest saturation magnetization when compared with either sputtered or evaporated samples. This enhancement can be attributed to a nanometer-scale segregation of Cr, which in these samples could be particularly aided by the diffusion on the close-packed planes of the films with very narrow c-axis dispersions. Preliminary x-ray microanalysis and NMR data support this interpretation. DOE

MOLECULAR DYNAMICS SIMULATIONS OF GAY-BERNE NEMATIC LIQUID CRYSTAL: ELASTIC PROPERTIES FROM DIRECT CORRELATION FUNCTIONS

J. Stelzer, H. R. Trebin (Stuttgart Univ., Germany.), and L. Longa Aug. 1994 27 p
(DE95-609149; IC-94/220) Avail: CASI HC A03/MF A01 (US Sales Only)

We report NVT and NPT molecular dynamics simulations of a Gay-Berne nematic liquid crystal using generalization of recently proposed algorithm by Toxvaerd (Phys. Rev. E47, 343, 1993). On the basis of these simulations the Oseen-Zoher-Frank elastic constants K(sub 11), K(sub 22) and K(sub 33) as well as the surface constants K(sub 13) and K(sub 24) have been calculated within the framework of the direct correlation function approach of Lipkin et al. (J. Chem. Phys. 82, 472 (1985)). The angular coefficients of the direct pair correlation function, which enter the final formulas, have been determined from the computer simulation data for the pair correlation function of the nematic by combining the Ornstein-Zernike relation and the Wienier-Hopf factorization scheme. The unoriented nematic approximation has been assumed when constructing the reference, isotropic state of Lipkin et al. By an extensive study of the model over a wide range of temperatures, densities and pressures a very detailed information has been provided about elastic behaviour of the Gay-Berne nematic. Interestingly, it is found that the results for the surface elastic constants are qualitatively different than those obtained with the help of analytical approximations for the isotropic, direct pair correlation function. For example, the values of the surface elastic constants are negative and an order of magnitude smaller than the bulk elasticity. DOE

OBSERVATION OF ASYMMETRICAL TWO-CONE VAVILOV-CHERENKOV RADIATION IN BIAXIAL CRYSTAL OF TRIGLYCINESULPHATE EMITTED BY 658 MeV PROTONS PASSING ALONG BI NORMAL

V. P. Zrelov, V. P. Lupiltsev, and J. Ruzicka (Comenius Univ., Bratislava, Czechoslovakia.) 1993 11 p Submitted for publication
(DE94-629017; JINR-R-1-93-213) Avail: CASI HC A03/MF A01 (US Sales Only)

The paper deals with the directivity and polarization properties of the Vavilov-Cherenkov radiation (VChR) produced in passage of 658 MeV protons along an optical axis (bi normal) crystal of triglycinesulphate (TGS). The azimuthal distribution of the radiation turned out to be rather peculiar. First, it was asymmetrical about the plane running through the velocity vector of the beam particles perpendicularly to the plane of optical axes (POA). This VChR asymmetry was not observed in three earlier studied cases of 660 MeV protons passing through the main dielectric axes of a biaxial TGS crystal (i.e. when particles move along the small and the large bisectrix and perpendicularly to the plane of optical axes). Secondly, the azimuthal distribution of the VChR has a form of two symmetrical semi cones with different cone angles (their sections perpendicular to the proton beam axis resemble half-horseshoes inserted into each with their arcs outward). It also appeared that the outer VChR cone, F(sub -), is practically polarized only in the POA, while the inner cone, F(sub +), has more complicated polarization, i.e. in the angular region phi approx. 90 deg perpendicularly to the POA. Formulae are obtained for radiation directivity at any angle phi for this asymmetrical two-cone radiation. Comparison of the VChR emission angles calculated by these formulae and measured in experiment shows good agreement (within the measurement errors for the azimuthal) wave distribution of F(sub +) (inner cone) and some systematic excess (approx. 0.5 deg) for wave angles of F(sub -) (outer cone). DOE

TECHNICAL PROGRESS REPORT TO THE DEPARTMENT OF ENERGY ON THE SOLID STATE SCIENCES COMMITTEE (SSSC)

1995 6 p
(Contract DE-FG05-91ER-45442)
(DE95-007113; DOE/ER-45442/T1) Avail: CASI HC A02/MF A01

The Solid State Sciences Committee (SSSC) of the National Research Council (NRC) is charged with monitoring the health of the field of materials science in the United States. Accordingly, the Committee identifies and examines both broad and specific issues affecting the field. Regular meetings, teleconferences, briefings from agencies and the scientific community, the formation of study panels to prepare reports, and special forums are among the mechanisms used by the SSSC to meet its charge. This progress report presents a review of SSSC activities from May 1, 1992 through April 30, 1993. The details of prior activities are discussed in earlier reports. During the above period, the SSSC has continued to track and participate, when requested, in the development of a Federal initiative on advanced materials and processing. Specifically, the SSSC is presently planning the 1993 SSSC Forum (to be cosponsored with the National Materials Advisory Board (NMAB) and the Washington Materials Forum (WNM)). The thrust will be to highlight the Federal Advanced Materials and Processing Program (AMPP). In keeping with its charge to identify and highlight specific areas for scientific and technological opportunities, the SSSC continued to oversee the conduct of a study on biomolecular materials. Preliminary plans also have been developed for studies on neutron scattering science, on ultrasmall devices, and on molecular routes to materials. DOE

(DE95-008370; BNL-61459; CONF-941144-89) Avail: CASI HC A01/MF A01

Single crystal neutron diffraction techniques have been employed to study the evolution of magnetic structures in RNi2B2C compounds in an attempt to understand the relationship between magnetic ordering and superconductivity in several members of this series. For HoNi2B2C, below the superconducting transition (T(sub c) = 8 K), an incommensurate magnetic structure characterized by two wave vectors (0.585 a(*) and 0.915 c(*)) is found in a narrow temperature range between 4.7 K and 6 K. This is the same temperature range where bulk measurements find a deep minimum in the upper critical field, H(sub c2). Below 4.7 K, HoNi2B2C is a simple collinear antiferromagnet. ErNi2B2C (T(sub c) = 11 K) orders in an incommensurate modulated antiferromagnetic state characterized by an ordering wave vector 0.553 a(*) below 7 K, which coexists with superconductivity. DOE

Kalanov (Institute of Nuclear Physics, Tashkent, Uzbekistan.), M. A. Kirk, and K. C. Goretta Dec. 1994 6 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract W-31-109-eng-38)
(DE95-007098; ANL/MSD/CP-83324; CONF-941144-62) Avail: CASI HC A02/MF A01

A study of structural and superconducting characteristics of YBa2Cu3O(7-x) ceramics sintered after and in the course of gamma-irradiation is reported. Using x-diffraction and SEM analyses and transport measurements, it has been shown that mainly the subsurface layer of crystallites and intergrain contacts are affected by the irradiation by means of sorption/desorption of oxygen and ordering/disordering in oxygen sublattice, which depends on gamma dose rate and dose. The irradiation provides the sintering process with an additional superthermal energy to form the orthorhombic well-ordered structure and to obtain dense ceramics possessing strong intergrain contacts and improved and stable superconducting properties. THE DIFFUSION PROPERTIES OF ION IMPLANTED SPECIES IN SELECTED TARGET MATERIALS
G. D. Alton, J. Dellwo, H. K. Carter, J. Kormicki, G. diBartolo, J. C. Batchelder, J. Breitenbach, J. A. Chediak, K. Jentoff-Nilsen, and S. Ichikawa 1995 14 p Presented at the 4th International Conference on Applications of Nuclear Techniques: Neutrons and Their Applications, Crete, Greece, 12-18 Jun. 1994
(Contract DE-AC05-84OR-21400)
(DE95-007006; CONF-9406176-5) Avail: CASI HC A03/MF A01

Experiments important to the future success of the Holifield Radioactive Ion Beam Facility (HRIBF) are in progress at the Oak Ridge National Laboratory which are designed to select the most appropriate target material for generating a particular radioactive ion beam (RIB). The 25-MV HHIRF tandem accelerator is used to implant stable complements of interesting radioactive elements into refractory targets mounted in a high-temperature FEBIAD ion source which is 'on-line' at the UNISOR facility. The intensity versus time of implanted species, which diffuse from the high-temperature target material (approximately 1700 C) and are ionized in the FEBIAD ion source, is used to determine release times for a particular projectile/target material combination. From such release data, diffusion coefficients can be derived by fitting the theoretical results obtained by computational solution of Fick's second equation to experimental data. The diffusion coefficient can be used subsequently to predict the release properties of the particular element from the same material in other target geometries and at other temperatures, provided that the activation energy is also known. Diffusion coefficients for Cl implanted into and diffused from CeS and Zr5Si3 and As, Br, and Se implanted into and diffused from Zr5Ge3 have been derived from the resulting intensity versus time profiles. Brief descriptions of the experimental apparatus and procedures utilized in the present experiments and plans for future related experiments are presented. DOE

DETERMINATION OF PHASE TRANSITIONS IN A LYOTROPIC LIQUID CRYSTAL BY POSITRON ANNIHILATION TECHNIQUE Ph.D. Thesis
V. M. Castillo 1994 80 p
(DE95-609162; INIS-MF-14400) Avail: CASI HC A05/MF A01 (US Sales Only)

Positron annihilation technique was used to determine the phase transitions in a lyotropic liquid crystal, as a function of temperature. Seven different concentrations of the surfactant cetyl dimethyl ethyl ammonium bromide were studied. The liquid crystal studied consisted of a binary system, formed by the surfactant and water. Positron annihilation technique has a very high sensitivity toward changes in the microstructure, in condensed matter; this is useful in order to detect the temperatures at which phase transitions occur and the number of these, in a liquid crystalline system. Thus, phase transitions are related with changes occurred in the ortho-positronium parameters: lifetime (tau(sub 3)) and intensity of formation (I(sub 3)). Six different kinds of phases were detected in the system studied in a temperature range of 35 to 140 C; those phases were: hexagonal, hexagonal-lamellae, lamellae, lamellae-cubic, nematic, and anisotropic. Using optical microscopes the textures of these phases were assigned. DOE

MULTIFRACTAL CHARACTER OF THE ELECTRONIC STATES IN DISORDERED TWO-DIMENSIONAL SYSTEMS
N. Tit and M. Schreiber (Mainz Univ., Germany.) Aug. 1994 28 p
(DE95-609153; IC-94/246) Avail: CASI HC A03/MF A01 (US Sales Only)

The nature of electronic states in disordered two-dimensional (2D) systems is investigated. To this aim, we present our calculations of both density of states and dc-conductivity for square lattices modelling the Anderson Hamiltonian with on-site energies randomly chosen from a box distribution of width W. For weak disorder (W), the eigenfunctions calculated by means of the Lanczos diagonalization algorithm display spatial fluctuations reflecting their (multi)fractal behaviour. For increasing disorder or energy the observed increase of the curdling of the wavefunction reflects its stronger localization. Our dc-conductivity results suggest a critical fractal dimension d(sup *)(sub c)=1.48 +/- 0.05 todiscriminate between the exponentially and the power-law localized states. Consequences of the localization on transport properties are also discussed. DOE

AN INVESTIGATION OF THE CHEMICAL AND PHYSICAL PROPERTIES OF PRISTINE, ELECTROCHROMICALLY DAMAGED, AND PHOTOCHROMICALLY DAMAGED KTiOPO4 (KTP) USING SURFACE ANALYTICAL AND OPTICAL SPECTROSCOPIC TECHNIQUES
J. R. Quagliano, R. R. Petrin, T. C. Trujillo, N. J. Cockroft, M. T. Paffett, C. J. Maggiore, and J. C. Jacco 1995 9 p Presented at the Advanced Solid-state Laser Conference, Memphis, TN, 29 Jan. - 1 Feb. 1995
(Contract W-7405-eng-36)
(DE95-007865; LA-UR-95-684; CONF-950101-4) Avail: CASI HC A02/MF A01

A variety of experimental techniques were employed to study the properties of electrochromically (EC) damaged, photochromically (PC) damaged, and pristine KTiOP04 (KTP). Additionally, nonlinear optical calculations were performed to complement the experimental work in an effort to elucidate the respective mechanisms operative in producing EC and PC damage to KTP. Several independent experiments indicate that there is Ti deficiency in the EC damaged material, which is due to migration of these ions to the electrode surface. The laser experiments indicate that UV radiation can produce reversible PC damage. UV-producing SFG processes accidentally occurring in SHG cut KTP may lead to macroscopic damage. It must be emphasized that a fundamentally different mechanism is responsible for EC damaged versus PC damaged KTP. DOE

One of the major objectives of this program was to modify the triglycine sulfate (TGS) crystals with suitable dopants and variants to achieve better pyroelectric properties and improved infrared detectivities (D(sup *)), and higher Curie transition temperature compared to undoped TGS crystals. Towards these objectives, many promising dopants, both inorganic and organic, were investigated in the last few years. These dopants gave significant improvement in the D(sup *) value of the infrared detectors fabricated from the grown crystals with no significant increase in the Curie temperature (49 C). The IR detectors were fabricated at EDO/Barnes Engineering Division, Shelton, CT. In the last one year many TGS crystals doped with urea were grown using the low temperature solution crystal growth facility. It is found that doping with urea, the normalized growth yield increased significantly compared to pure TGS crystals and there is an improvement in the pyroelectric and dielectric constant values of doped crystals. This gave a significant increase in the materials figure of merits. The Vicker's hardness of 10 wt percent urea doped crystals is found to be about three times higher in the (010) direction compared to undoped crystals. This report describes in detail the results of urea doped TGS crystals. Derived from text

(DE95-007493; DOE/ER-45329/1) Avail: CASI HC A02/MF A01

This report highlights the advances in the understanding of phase separation and atomic ordering in mixed III-V layers. Specifically, the following issues were addressed in the grant period (August 1987 to February 1992): (1) bulk vs surface phase separation; (2) influence of growth technique on phase separation; (3) origin of coarse contrast modulations; (4) influence of dopant diffusion on phase separated microstructures; (5) influence of annealing on carrier mobility in InGaAsP layers; (6) co-existence of CuPt-type ordering and phase separation; (7) influence of growth conditions on ordering; (8) influence of surface reconstruction on atomic ordering. (DE95-007864; LA-UR-95-677; CONF-940968-1) Avail: CASI HC A03/MF A01

NMR and neutron diffraction measurements reveal that macroscopic phase separation and the tetragonal to orthorhombic (TO) structural phase coincide at two distinct points in the temperature-doping phase plot for oxygen doped La2CuO(4+delta). Thus the TO phase line coincides with the phase separation line. This is evidence that the macroscopic phase separation is inhibited in the tetragonal phase. We propose that the interstitial oxygen has higher mobility in the orthorhombic phase and that insufficient mobility suppresses macroscopic phase separation in the tetragonal phase. Neutron diffraction measurements also reveal superlattice peaks which indicate ordering of the interstitial oxygen. Our NMR measurements, have demonstrated a distribution of tilts of the CuO6 octahedra. We propose a sawtooth modulation of the octahedral tilt in which the sign of the tilt changes when the tilt reaches a maximum value can explain this distribution. The large openings in the La-O layer resulting from the abrupt switch of the sign of the tilt provide an attractive location for the interstitial oxygen. This mechanism would lead to stripe ordering of the interstitial oxygen. DOE

SOLID STATE SINTERING OF SILICON NITRIDE ARL-CR-114 Final Report
John Mangels and Bilijana Mikijelj Sep. 1994 78 p Prepared in cooperation with Ceradyne, Inc., Cost a Mesa, CA Sponsored by Martin Marietta Energy Systems, Inc.
(Contracts DE-AC05-84OR-21400; DE-IA05-840R-21411)
(DE95-007291; ORNL/M-4021) Avail: CASI HC A05/MF A01

This report describes the development of Si3N4 material compositions in the Si3N4-Y2O3-SiO2-Mo2C system with good high temperature stress rupture properties which could be used in engine components. Two distinct processing routes were examined in the course of the program: SSN and SRBSN. SRBSN was chosen for material property optimization. After characterization of two optimized compositions in the above system, demonstration engine components (exhaust valve blanks) were manufactured using the established processing procedures. Dimensional tolerance capabilities of the process were established and material properties of the components were shown to be comparable to those established during material development. DOE

FORMATION OF ANISOTROPIC Tl-1212, Tl-2212, Tl-1223 AND Tl-2223 PARTICLES USING AEROSOL FLOW REACTED POWDERS
M. Paranthaman, A. Goyal, D. E. Heatherly, and D. M. Kroeger 1994 4 p Presented at the Applied Superconductivity Conference, Boston, MA, 16-21 Oct. 1994 Sponsored by Martin Marietta Energy Systems, Inc.
(Contract DE-AC05-84OR-21400)
(DE95-007400; CONF-941013-28) Avail: CASI HC A01/MF A01

Highly anisotropic particles of Tl-1212, Tl-2212, Tl-1223 and Tl-2223 superconductors were grown. The Tl-free precursor powders with the compositions Ba1Ca2Cu3Ag(0.37)O6 and Ba2Ca2Cu3Ag(0.37)O7 were prepared using an aerosol flow reactor. These precursor powders were then post-annealed in 0.1 atm oxygen at 700 C for 4h to reduce the carbon present and mixed with Tl2O3 (typical composition of Tl(x);x = 0.6-1.0). The Tl-containing powders were heated in sealed gold tubes between 650-890 C for various times. X ray diffraction showed that the Tl-2212 and Tl-2223 phases were stable over a wide range of temperatures. Scanning electron microscopy showed evidence for the presence of high aspect-ratio particles. These highly anisotropic particles may be of interest for the preparation of powder-in-tube and other powder deposited conductors, for current leads, and for grain alignment studies. DOE

COHERENT V2O3 PRECIPITATES IN ALPHA-Al2O3CO- IMPLANTED WITH VANADIUM AND OXYGEN
Laurence A. Gea, L. A. Boatner, J. D. Budai, and Janet Rankin (Brown Univ., Providence, RI.) 1994 6 p Presented at the 1994 Fall Meeting of the Materials Research Society, Boston, MA, 28 Nov. - 2 Dec. 1994
(Contract DE-AC05-84OR-21400)
(DE95-007404; CONF-941144-74) Avail: CASI HC A02/MF A01

The oxides of vanadium VO2 and V2O3 are of fundamental and practical interest since they undergo structural phase transitions during which large variations in their optical and electronic properties are observed. In the present work, the authors report the formation of buried precipitates of V2O3 in sapphire by ion implantation and thermal annealing. It was found that the co-implantation of oxygen and vanadium was required in order to form nanophase V2O3 precipitates. Additionally, these precipitates, which formed only following an anneal of the co-implanted sample under reducing conditions, are coherent with the sapphire lattice. Two epitaxial relationships were observed: (0001)V2O3 //(0001) (alpha)-Al2O3 and (11-20)V2O3//(0001) (alpha)-Al2O3. This finding is in agreement with results obtained elsewhere for thin films of V2O3 deposited on c-axis-oriented sapphire. DOE

LOW TEMPERATURE CARRIER TRANSPORT PROPERTIES IN ISOTOPICALLY CONTROLLED GERMANIUM Ph.D. Thesis
K. Itoh Dec. 1994 193 p
(Contract DE-AC03-76SF-00098)
(DE95-008489; LBL-36683) Avail: CASI HC A09/MF A03

Investigations of electronic and optical properties of semiconductors often require specimens with extremely homogeneous dopant distributions and precisely controlled net-carrier concentrations and compensation ratios. The previous difficulties in fabricating such samples are overcome as reported in this thesis by growing high-purity Ge single crystals of controlled Ge-75 and Ge-70 isotopic compositions, and doping these crystals by the neutron transmutation doping (NTD) technique. The resulting net-impurity concentrations and the compensation ratios are precisely determined by the thermal neutron fluence and the (Ge-74)/(Ge-70) ratios of the starting Ge materials, respectively. This method also guarantees unprecedented doping uniformity. Using such samples the authors have conducted four types of electron (hole) transport studies probing the nature of (1) free carrier scattering by neutral impurities, (2) free carrier scattering by ionized impurities, (3) low temperature hopping conduction, and (4) free carrier transport in samples close to the metal-insulator transition. CONTROL OF THIN FILM PROCESSING BEHAVIOR THROUGH PRECURSOR STRUCTURAL MODIFICATIONS
R. W. Schwartz, J. A. Voigt, T. J. Boyle, T. A. Christenson, and C. D. Buchheit 1995 15 p Presented at the 19th Annual Conference on Advanced Ceramics, Materials and Structures, Cocoa Beach, FL, 9-12 Jan. 1995
(Contract DE-AC04-94AL-85000)
(DE95-006468; SAND-95-0090C; CONF-950129-2) Avail: CASI HC A03/MF A01

In the sol-gel processing of ceramic thin films it has been frequently noted that the processing behavior, microstructure and properties of the films are dependent on the nature of the coating solution. In an attempt to understand such thin film processing-property relationships, the authors have systematically investigated the effects of varying the precursor nature on thin film densification and crystallization for ZrO2 and TiO2 films. Metal alkoxide starting compounds, e.g., zirconium n-butoxide (center dot) n-butanol and titanium i-propoxide, were reacted with acetic acid and 2,4-pentanedione to prepare coating solutions for thin film deposition. The use of these chelating ligands resulted in solution oligomeric species of different nature. Studies of thin film processing indicated that film processing characteristics, i.e., consolidation, densification and crystallization, were strongly dependent on solution precursor nature. Ligand steric size, pyrolysis behavior, extent of chelation, and precursor reactivity were found to be key variables in controlling film processing characteristics. DOE

A CORRELATED WALKS' THEORY FOR DNA DENATURATION
R. Mejdani Aug. 1994 13 p Prepared in cooperation with the Univ. of Tirana, Tirana, Albania
(DE95-607910; IC-94/228) Avail: CASI HC A03/MF A01 (US Sales Only)

We have shown that by using a correlated Walks' theory for the lattice gas model on a one-dimensional lattice, we can study, beside the saturation curves obtained before for the enzyme kinetics, also the DNA denaturation process. In the limit of no interactions between sites the equation for melting curves of DNA reduces to the random model equation. Thus our leads naturally to this classical equation in the limiting case. DOE

PLASMA SOURCE ION IMPLANTATION OF AMMONIA INTO ELECTROPLATED CHROMIUM
J. T. Scheuer, K. C. Walter, D. J. Rej, M. Nastasi, and J. P. Blanchard (Wisconsin Univ., Madison, WI.) 1995 7 p Presented at the Annual Meeting and Exhibition of the Minerals, Metals and Materials Society, Las Vegas, NV, 12-16 Feb. 1995
(Contract W-7405-eng-36)
(DE95-006275; LA-UR-95-341; CONF-950201-4) Avail: CASI HC A02/MF A01

Ammonia gas (NH3) has been used as a nitrogen source for plasma source ion implantation processing of electroplated chromium. No evidence was found of increased hydrogen concentrations in the bulk material, implying that ammonia can be used without risking hydrogen embrittlement. The retained nitrogen dose of 2.1 x 10(exp 17)N-at/sq cm is sufficient to increase the surface hardness of electroplated Cr by 24% and decrease the wear rate by a factor of 4. DOE

CAVITY FORMATION AND IMPURITY GETTERING IN He-IMPLANTED Si
D. M. Follstaedt, S. M. Myers, G. A. Petersen, and J. W. Medernach 1994 36 p Presented at the Annual Meeting and Exhibition of the Minerals, Metals and Materials Society, Las Vegas, NV, 12-16 Feb. 1995
(Contract DE-AC04-94AL-85000)
(DE95-007744; SAND-94-2049C; CONF-950201-3) Avail: CASI HC A03/MF A01

Cavity microstructures formed in Si after ion implantation of He and annealing at 700 C or above are examined with cross-section transmission electron microscopy. A threshold concentration of 1.6 at.% He is identified to form cavities that survive such anneals. The cavities coarsen with a constant volume of 15 nm(exp 3)/nm(exp 2) (per wafer surface area), corresponding to approximately 0.75 lattice sites per implanted He atom. The internal area of the cavities is 3-7 times that of the wafer surface area for fluences of 1 x 10(exp 17) He/cm(exp 2). Transition metal atoms (Cu, Ni, Co, Fe, Au) are shown to be strongly trapped (1.5-2.2 eV) on the cavity walls by chemisorption. Whereas Cu, Au and Ni are bound more strongly to the cavity sites than to their respective precipitated phases, Co and Fe are more strongly bound to their silicides; nonetheless, appreciable trapping of Co and Fe does occur in equilibrium with the silicides. Cavity trapping appears to be an effective gettering mechanism at low impurity levels, as needed to meet future microelectronics device requirements. DOE

LOW RESISTIVITY OHMIC CONTACTS TO MODERATELY DOPED n-GaAs WITH LOW TEMPERATURE PROCESSING
M. L. Lovejoy, A. J. Howard, K. R. Zavadil, D. J. Rieger, R. J. Shul, and P. A. Barnes 1994 16 p Presented at the 41st Annual American Vacuum Society Symposium, Denver, CO, 24-28 Oct. 1994
(Contract DE-AC04-94AL-85000)
(DE95-008507; SAND-94-1367C; CONF-941001-14) Avail: CASI HC A03/MF A01

A low-temperature process for forming ohmic contacts to moderately doped GaAs has been optimized using a PdGe metallization scheme. Minimum specific contact resistivity of 1.5 x 10(exp -6)/sq cm has been obtained with a low anneal temperature of 250 C. Results for optimizing both time and temperature are reported and compared to GeAu n-GaAs contacts. Material compositions was analyzed by x ray photoelectron spectroscopy and circuit metal interconnect contact resistivity to the low-temperature processed PdGe contacts is reported. For the lowest temperature anneals considered, excess Ge on the ohmic contact layer is suspected of degrading interconnect metal contacts, while higher temperature anneals permitted interconnect metal formation with negligible contact resistivity. Atomic force microscopy measurements showed that the PdGe surface morphology is much more uniform than standard GeAu contacts. DOE

VACANCY RELATED DEFECTS IN THIN FILM Pb(Zr,Ti)O3 MATERIALS
A. Krishnan (Michigan Technological Univ., Houghton, MI.), D. J. Keeble (Michigan Technological Univ., Houghton, MI.), R. Ramesh (Bell Communications Research, Inc., Red Bank, NJ.), W. L. Warren (Sandia National Labs., Albuquerque, NM.), B. A. Tuttle (Sandia National Labs., Albuquerque, NM.), R. L. Pfeffer (Army Research Lab., Fort Monmouth, NJ.), B. Nielsen, and K. G. Lynn 1994 6 p Presented at the 1994 Fall Meeting of the Materials Research Society (MRS), Boston, MA, 28 Nov. - 2 Dec. 1994
(Contracts DE-AC02-76CH-00016; DE-AC04-94AL-85000)
(DE95-007696; BNL-60717; CONF-941144-65) Avail: CASI HC A02/MF A01

Positron annihilation techniques have been applied to characterize vacancy-related defects in ferroelectric thin film structures. Variable energy positron beam measurements were carried out on doped and undoped Pb(Zr,Ti)O3 (PZT) samples subjected to different post-deposition cool down and anneal conditions. The PZT was deposited by sol-gel with either with platinum or RuO2 electrodes, or by laser ablation with La(0.5)Sr(0.5)CoO3 electrodes. The RuO2 and La(0.5)Sr(0.5)CoO3 electrode samples showed a smaller S-parameter compared to those deposited with Pt electrodes consistent with an improved PZT layer quality. For laser ablated samples cooled in a reducing ambient an increase in S-parameter for both the PZT and La(0.5)Sr(0.5)CoO3 layers was observed indicating an increase in neutral or negatively charged open-volume defects. DOE

[RESEARCH ACTIVITIES OF THE SOLID STATE SCIENCES COMMITTEE IN THE DEVELOPMENT OF A FEDERAL INITIATIVE ON ADVANCED MATERIALS AND PROCESSING] Technical Progress Report, 1 May 1992 - 30 Apr. 1993
Ronald Taylor 1995 6 p
(Contract DE-FG05-91ER-45442)
(DE95-009328; DOE/ER-45442/T2) Avail: CASI HC A02/MF A01

The Solid State Sciences Committee (SSSC) of the National Research Council (NRC) is charged with monitoring the health of the field of materials science in the United States. Accordingly, the committee identifies and examines both broad and specific issues affecting the field. Regular meetings, teleconferences, briefings from agencies and the scientific community, the formation of study panels to prepare reports, and special forums are among the mechanisms used by the SSSC to meet its charge. This progress report presents a review of SSSC activities from May 1, 1992 through April 30, 1993. The details of prior activities are discussed in earlier reports. During the above period, the SSSC has continued to track and participate, when requested, in the development of a federal initiative on advanced materials and processing. Specifically, the SSSC is presently planning the 1993 SSSC Forum (to be cosponsored with the National Materials Advisory Board (NMAB) and the Washington Materials Forum (WMF)). The thrust will be to highlight the Federal Advanced Materials and Processing Program (AMPP). In keeping with its charge to identify and highlight specific areas for scientific and technological opportunities, the SSSC continued to oversee the conduct of a study on biomolecular materials. Preliminary plans also were developed for a study on neutron science; however, further activity is pending. A proposed study on ultrasmall devices has been expanded and absorbed into a broader context; the Board on Physics and Astronomy (BPA), with SSSC participation, is preparing to hold a program initiation meeting to evaluate the need for a study on information technology and hardware. THE REAL STRUCTURE OF COLUMNAR PINNING CENTERS IN HEAVY-ION-IRRADIATED CUPRATE SUPERCONDUCTORS
D. O. Welch, Y. Zhu, and R. C. Budhani (Indian Inst. of Tech., Kanpur.) 1995 4 p Presented at the Topical Conference on the Critical State in Superconductors, Honolulu, HI, 24-26 Oct. 1994
(Contract DE-AC02-76CH-00016)
(DE95-003948; BNL-60429; CONF-941014-2) Avail: CASI HC A01/MF A01

There has been considerable recent interest in the use of columnar defects produced by irradiation with energetic heavy ions to raise the irreversibility line and improve the critical current density of cuprate superconductors. In the interpretation and theoretical modeling of the flux-pinning characteristics of heavy-ion tracks, it is generally assumed that they are simply columns of non-superconducting material. In this paper we present a more realistic description, based both on resistivity measurements and on detailed, quantitative transmission electron microscope methods (both imaging and analytical studies), of the nature of heavy-ion damage, including defects, disorder, strain fields, and oxygen deficiencies in the matrix of the superconductor surrounding the amorphous columns. The presence of such disorder appears to be a consequence of the mechanism of track formation, which involves partial epitaxial regrowth of a molten region which follows the passage of sufficiently energetic ions. DOE

CHEMICAL AND ELECTRICAL PROPERTIES OF CAVITIES IN SILICON AND GERMANIUM
S. M. Myers, D. M. Follstaedt, G. A. Petersen, C. H. Seager, H. J. Stein, and W. R. Wampler 1994 23 p Presented at the 9th International Conference on Ion Beam Modification of Materials, Canberra, Australia, 5-10 Feb. 1995
(Contract DE-AC04-94AL-85000)
(DE95-006812; SAND-94-2299C; CONF-950220-4) Avail: CASI HC A03/MF A01

Cavities were formed in Si and Ge by He ion implantation and annealing, and resultant chemical and electrical properties were investigated. The dissociation energies for Si-H and Ge-H surface monohydride bonds were determined, showing that H chemisorption on Si is energetically stable with respect H2 gas whereas H chemisorption on Ge is not. Cavity walls in Si were found to trap transition metals strongly, suggesting application to impurity gettering in devices. Measurement and modeling of cavity electrical properties elucidated surface electronic states and indicated a potential for controlled electrical isolation in devices. DOE

TOPOLOGICAL DENSITY AND INSTANTONS ON A LATTICE
J. Grandy (Ohio State Univ., Columbus, OH.) and R. Gupta 1995 3 p Presented at the Lattice '94, Bielefeld, Germany, 25 Sep. - 1 Oct. 1994
(Contract W-7405-eng-36)
(DE95-006348; LA-UR-95-73; CONF-9409269-7) Avail: CASI HC A01/MF A01

The authors present an update on the study of topological structure of QCD. Issues addressed include a comparison between the plaquette and the geometric methods of calculating the topological density. They show that the improved gauge action based on square root of 3 blocking transformation suppresses the formation of topologically charged dislocations with low action. Using a cooling method they identify the instantons location, estimate their size and density, and calculate the renormalization constant Z(sub Q) for the plaquette method. DOE

FEMTOSECOND OPO'S AT 3 MICRONS AND BEYOND: DESIGN AND PERFORMANCE ISSUES RELATED TO THE CRYSTAL PROPERTIES OF KTP AND SIMILAR MATERIALS
G. R. Holtom, R. A. Crowell, and L. K. Cheng (Du Pont de Nemours, E. I. and Co., Wilmington, DE.) Feb. 1995 6 p Presented at the SPIE '95: SPIE Conference on Optics, Electro-optics, and Laser Application in Science, Engineering and Medicine, San Jose, CA, 5-10 Feb. 1995
(Contract DE-AC06-76RL-01830)
(DE95-007286; PNL-SA-25742; CONF-950226-7) Avail: CASI HC A02/MF A01

Femtosecond optical parametric oscillators (OPO's), synchronously pumped by Ti:Sapphire lasers, operating in the near infrared (IR) region are an important light source now under active development. The authors report the results of Ti:Sapphire synchronously pumped noncritically phase matched femtosecond OPO's that are based upon several crystals from the KTP (KTiOPO4) family. The newly developed nonlinear crystal niobium doped KTP (Nb:KTP) has a greater birefringence than undoped KTP and is shown to extend the wavelength farther into the mid-IR. The authors report the first operation of a femtosecond OPO utilizing the solid-solution grown crystal Nb:KTP. Additionally, it is shown that CTA is very useful in mid-IR angle tuned OPO's. DOE

THE OFF-CENTER EFFECT ON THE DIFFUSION COEFFICIENT OF Cu(+) AND Li(+) IN THE KCl LATTICE
F. Despa Jul. 1994 24 p
(DE95-609146; IC-94/176) Avail: CASI HC A03/MF A01 (US Sales Only)

It is well known that the diffusion coefficients of the Cu(+) cation in the NaCl and KCl lattices exceeds by three or four orders of magnitude the corresponding self-diffusion coefficients in the intrinsic temperature regions. This fast diffusion of the Cu(+) has been explained in many papers as an interstitial diffusion although the optical spectra do not confirm the existence of interstitial Cu(+). In this paper we propose a new mechanism for fast diffusion. The model assumes that the equilibrium positions of the cationic impurities are noncentral and that the diffusion proceeds by hopping across the potential barrier along the nonlinear paths with the highest probability. The main result shows that the off-center position enhances considerably the diffusion. Theoretical diffusion coefficients have been obtained by modelling the potential barrier. Changes of the configuration entropy and the vibration spectra due to the presence of the noncentral impurity have been included in the model. We proceeded in the Li(+) cation case as in the case of Cu(+) cation. We emphasize the good agreement of the model with the experimental data and we show that if the impurity is placed close to the central site the due diffusion coefficient is close to that for the cationic self-diffusion. DOE

(AD-A289092) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Residual surface contaminants were removed from vicinal 6H-SiC(0001) surfaces in UHV via high temperature annealing in SiH4. Characterization via AES, EELS, LEED, XPS, and UPS was conducted. At T greater than 850 C, the surface oxide was rapidly removed. Exposure to approx. 400 Langmuir (10(exp -6) Torr(dot)liter/s) of SiH4 resulted in complete surface oxide removal and a nearly stoichiometric (l x l) 6H-SiC surface suitable for ALE of SiC. Further exposure resulted in a (3 x 3)R30 deg Si-rich reconstructed surface. Subsequent annealing in UHV resulted in a (square root of 3 x square root of 3)R30 deg Si deficient/graphitic reconstructed surface. The first set of wafers containing HBT device structures were fabricated on SiC films grown via ALE. No transistor activity was detected. Electrical characterization and SEM showed the most likely fault to be inaccurate etching of the SiC emitter. Nucleation and growth of oriented diamond particles on seeded, group of zone axes (0001) oriented single crystal Co substrates was achieved via multi-step, hot-filament CVD process involving seeding, annealing, nucleation and growth. Diamond particles oriented group of zone axes (111) were obtained. Micro-Raman showed a FWHM of 4.3/cm. A very weak graphitic peak was observed on regions of the substrate not covered by the diamond particles. A nucleation model has been proposed. Initial results showed that CeO2 film grows epitaxially on (111) Si substrates. The CeO2 films had density of interfacial traps and fixed oxide charge values comparable to that of amorphous SiO2/Si. HETEROSTRUCTURES AND INFRARED EMITTERS WITH COMPRESSED InAsSb LAYERS
S. R. Kurtz and R. M. Biefeld 1995 7 p Presented at the International Conference on Narrow Gap Semiconductors, Santa Fe, NM, 9-12 Jan. 1995
(Contract DE-AC04-94AL-85000)
(DE95-008157; SAND-94-2478C; CONF-950167-1) Avail: CASI HC A02/MF A01

An overview is presented of strained InAsSb heterostructures and infrared emitters. InAsSb/InGaAs strained-layer superlattices (SLS) and InAsSb quantum wells were characterized using magneto-photoluminescence and compared with unstrained InAsSb and InAs alloys. In heterostructures with biaxially compressed InAsSb, large quantum confinement energies were observed, and the holes exhibited a decrease in effective mass, approaching that of the electrons. This study demonstrates that the electrons and holes in the InAsSb heterostructures are confined in the InAsSb layers, and the band offsets are type I. A large increase in the Auger-1 threshold energy should accompany the strain-induced change in valence-band symmetry of the InAsSb layers. Correspondingly, the InAsSb heterostructures display high radiative efficiencies and increased activation energies for nonradiative recombination compared with the unstrained alloys. LED's and L-mrs with InAsSb heterostructure active regions are described. InAsSb/InGaAs SLS LED's operating at 300 K at wavelengths less than or equal to 5 pm have been demonstrated. Optically pumped InAsSb/InGaAs SLS lasers, with InPSb cladding, had a maximum operating temperature of 100 K. DOE

The relaxation of molecular impurities in glasses has been gaining attention in recent years, partly due to the availability of novel spectroscopic techniques in the infrared region, including the development of powerful tunable infrared lasers needed to excite the vibrational transitions that are about 4 orders of magnitude weaker than electronic transitions. In general, glassy hosts offer the possibility to study the influence of a distribution the local environments on the static and dynamic properties of impurity atoms and molecules. Both persistent hole burning and picosecond IR pump-probe measurements show that the low temperature vibrational relaxation time of SH in As2S3 is also quite fast (approximately 10(exp-10) sec) even though temperature dependent measurements indicate that it corresponds to a seven phonon process. Equally interesting is that the relaxation time varies by a factor 6 across the inhomogeneously broadened band indicating a site-dependent interaction of the molecule with the host. A temperature dependence study indicated that the stretch mode relaxes through a multi-vibrational decay into modes of the glass host. We have also investigated the site-dependent vibrational relaxation dynamics of the OH molecular impurity in amorphous SiO2. At low temperatures, a short relaxation time of the order of 10(exp-10) sec is found that varies strongly across the inhomogeneously broadened absorption line, decreasing with increasing perturbation of the molecule by the host, similar to the results observed from As2S3:SH. A simple relation between the vibrational lifetime and the site-dependent frequency shift is found for both defect: glass systems by assuming that the molecule-host coupling determines both the shift of the vibrational frequency and the relaxation dynamics. (DE95-007403; CONF-941144-76) Avail: CASI HC A02/MF A01

NiB, monoclinic Ni4B3, Ni2B and Ni3B were prepared by arc-melting and their room-temperature crystal structures were refined by Rietveld analysis of neutron powder diffraction data. The NiB refinement is altogether new data. Although the B atoms in NiB form characteristic zigzag chains, the primary coordination of each atom by atoms of the other kind is similar and distinctively sevenfold, with one short (2.117 angstrom), two intermediate (2.152 angstrom), and four long (2.163 angstrom) bonds. Other samples with stoichiometries (YC)(n)Ni2B2, n = 3, 4, did not yield single-phase material, but both x-ray and neutron powder diffraction suggest that the n = 4 structure is present in both of these samples. Phase-pure samples of these homologues may require non-stoichiometry and a more controlled thermal history than is attainable by arc melting. To screen samples for superconductivity, ac susceptibility measurements were made using the mutual inductance method with ac signal of 200 Hz. DOE

SURFACE STRUCTURE OF MX-CHAINS STUDIED BY ATOMIC FORCE MICROSCOPY
G. Bar, B. Scott, S. R. Johnson, G. S. Kanner, and B. I. Swanson 1995 3 p Presented at the International Conference on Synthetic Metals (ICSM '94), Seoul, Korea, Aug. 1994
(Contract W-7405-eng-36)
(DE95-007881; LA-UR-95-539; CONF-9408219-1) Avail: CASI HC A01/MF A01

The surfaces of mixed-valence halogen-bridged transition metal linear chain compounds (Pt(en)2)(Pt(en))2(X(1-y)X'(y))2 (ClO4)(sub 4) (X, X' = Cl, Br, or I; en = C2H8N2; y = 0.0 - 1.0) were examined by atomic force microscopy (AFM). The AFM images are consistent with the surfaces expected from the bulk crystal structure. The surface unit cell parameters of the images correspond to the lattice constants of the bulk crystals. The patterns of the atomic-scale AFM images are dominated by the most protruded H atoms of the en ligands and the most protruded O atoms of the ClO4(-) anions. DOE

Riley, Jr. (American Superconductor Corp., Westborough, MA.) 1995 27 p Presented at the 7th Conference on Superconductivity and Applications, Buffalo, NY, 7-9 Sep. 1994
(Contract DE-AC05-84OR-21400)
(DE95-007004; CONF-940926-5) Avail: CASI HC A03/MF A01

The orientations of hundreds of contiguous grains in high J(C) TlBa2Ca2Cu3O(x) deposits and (Bi, Pb)2 Sr2Ca2Cu3O(y) powder-in-tube tapes have been determined from electron back scatter diffraction patterns (EBSP). The misorientation angles and axes of rotation (angle/axis pairs) for grain boundaries connecting these grains were calculated. For both materials the population of low angle boundaries was found to be much larger than expected from calculations based on the macroscopic texture. The TlBa2Ca2Cu3O(x) deposits exhibit pronounced local texture which has been defined by EBSP and x-ray diffraction. Locally grains show significant in-plane (a-axis) alignment even though macroscopically a-axes are random, indicating the presence of colonies of grains with similar a-axis orientations. In (Bi, Pb)2 Sr2Ca2Cu3O(x) tapes no local texture was observed. In both materials the existence of connected networks of small angle grain boundaries can be inferred. Coincident site lattice (CSL) grain boundaries are also present in higher than expected numbers. Grain boundary energy thus appears to play a significant role in enhancing the population of potentially strongly-linked boundaries. We propose that long range strongly-linked conduction occurs through a percolative network small angle (and perhaps CSL) grain boundaries. DOE

SUBHARMONIC PHONON TRANSMISSION AND KAPITZA CONDUCTANCE BETWEEN CRYSTALS WITH VERY DIFFERENT VIBRATIONAL SPECTRA
Y. A. Kosevich Aug. 1994 12 p
(DE95-609151; IC-94/231) Avail: CASI HC A03/MF A01 (US Sales Only)

The low frequency resonant intrinsic vibrational modes are predicted to exist at the interface between two crystals with strongly different elastic properties. The interface resonant mode can stimulate the subharmonic nonlinear transmission of acoustic phonons and generation of the phonons with frequencies multiple to the resonant frequency. These inelastic processes can substantially contribute to the Kapitza thermal boundary conductance between solids with very different vibrational spectra (such as diamond and soft crystal) and to the thermal conductance across a helium-solid interface also. THE IN SITU OBSERVATION OF EPITAXIAL DIAMOND THIN FILM NUCLEATION AND GROWTH USING EMISSION ELECTRON MICROSCOPY Semiannual Technical Report, 1 Jan. - 30 Jun. 1994
Martin E. Kordesch 2 Jan. 1995 70 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract N00014-91-J-1596)
(AD-A289841) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

A variety of natural and chemical vapor deposited diamond surfaces have been imaged using a photoelectron emission microscope and synchrotron radiation in the 4-18 eV and 250-350 eV range. Both images and spatially resolved total electron yield curves were acquired simultaneously. Near-edge spectra at the carbon 1s edge show a resonance due to graphite; the image intensity varies uniformly in proportion to the C 1s edge intensity. In the 4-18 eV range, no sharp features related to a photoemission threshold were observed below 7 eV in the electron yield curves on any of the specimens. The image contrast was not strongly dependent on the illumination energy. Natural type 2a diamond showed severe charging effects. DTIC

ANALYTIC FORMULAE FOR THE HARTREE-FOCK ORDER PARAMETER AT ARBITRARY p/q FILLING FACTORS FOR THE 2DEG IN A MAGNETIC FIELD
Alejandro CaboMontesdeOca Jul. 1994 15 p
(DE95-607805; IC-94/183) Avail: CASI HC A03/MF A01 (US Sales Only)

Analytic expressions for order parameters are given for the previously introduced general class of Hartree Fock states at arbitrary filling factors nu =p/q for odd q values. The order parameters are expressed as sums of magnetic translations eigenvalues over the filled single electron states. Simple summation formulae for the band spectra in terms of the same eigenvalues are also presented. The energy per particle at nu =1/3 is calculated for various states differing in the way of filling of the 1/3 of the orbitals. The calculated energies are not competing with the usual charge-density wave (CDW) results. However the high degree of electron overlapping allows for the next corrections to modify this situation. The discussion suggests these Hartree-Fock Slater determinants as interesting alternatives for the Tao-Thouless parent states which may correct their anomalous symmetry and correlation functions properties. DOE

THERMODYNAMICS OF AQUEOUS ELECTROLYTES AT HIGH TEMPERATURES BY THE ISOPIESTIC TECHNIQUE
H. F. Holmes and R. E. Mesmer 1994 16 p Presented at the Conference on Properties of Water and Steam, Orlando, FL, 12 Sep. 1994
(Contract DE-AC05-84OR-21400)
(DE95-006747; CONF-9409219-4) Avail: CASI HC A03/MF A01

Excess thermodynamic properties of a wide variety of aqueous electrolyte solutions at elevated temperatures have been determined with the ORNL high-temperature isopiestic facility. This unique experimental apparatus provides very precise results over the useful temperature range of 110 to 250 C. The isopiestic method is a comparative technique which, in the present case, uses the Pitzer-Peiper-Busey formulation for NaCl(aq) as the reference electrolyte. At elevated temperatures the ion-interaction model of Pitzer continues to be the most useful description of the experimental results. The authors experimental program has included the alkali metal chlorides, sulfates, hydroxides, bromides, and bisulfates, the alkaline earth metal chlorides, and several specific compounds of scientific and practical interest. Numerous common-ion mixed electrolyte solutions have also been investigated in this program. In general, the activity coefficients of all the studied electrolytes decrease with increasing temperature. However, prominent differences between members of the same family remain, particularly when considered as the excess Gibbs free energy. The tendency for ion association increases with increasing temperature and becomes a factor at the higher temperatures. Trends and specific effects are illustrated with examples taken from the database generated in their high-temperature thermodynamic program. DOE

THE GLUON PROPAGATOR IN NON-ABELIAN WEIZSAECKER-WILLIAMS FIELDS
A. Ayala, J. Jalilian-Marian, L. McLerran, and R. Venugopalan Jan. 1995 23 p
(Contract DE-FG06-90ER-40561)
(DE95-006877; DOE/ER-40561/175) Avail: CASI HC A03/MF A01

The authors carefully compute the gluon propagator in the background of a non-Abelian Weizsaecker-Williams field. This background field is generated by the valence quarks in very large nuclei. They find contact terms in the small fluctuation equations of motion which induce corrections to a previously incorrect result for the gluon propagator in such a background field. The well known problem of the Hermiticity of certain operators in Light Cone gauge is resolved for the Weizsaecker-Williams background field. This is achieved by working in a gauge where singular terms in the equations of motion are absent and then gauge transforming the small fluctuation fields to Light Cone gauge. DOE

REALIZATION OF VECTOR FIELDS FOR QUANTUM GROUPS AS PSEUDODIFFERENTIAL OPERATORS ON QUANTUM SPACES
Chong-Sun Chu and B. Zumino 24 Jan. 1995 16 p Presented at the 20th International Conference on Group Theory Methods in Physics, Toyonak, 24 Jan. 1995
(Contract DE-AC03-76SF-00098)
(DE95-008485; LBL-36746; CONF-950175-1) Avail: CASI HC A03/MF A01

The vector fields of the quantum Lie algebra are described for the quantum groups GL(sub q)(n), SL(sub q)(N) and SO(sub q)(N) as pseudodifferential operators on the linear quantum spaces covariant under the corresponding quantum group. Their expressions are simple and compact. It is pointed out that these vector fields satisfy certain characteristic polynomial identities. The real forms SU(sub q)(N) and SO(sub q)(N,R) are discussed in detail. DOE

BIT-STRING PHYSICS: A NOVEL THEORY OF EVERYTHING
H. P. Noyes Aug. 1994 8 p Presented at PhysComp 1994: Workshop on Physics and Computation, Dallas, TX, 17-20 Nov. 1994
(Contract DE-AC03-76SF-00515)
(DE95-005941; SU-SLAC-PUB-6509; CONF-9411171-1) Avail: CASI HC A02/MF A01

We encode the quantum numbers of the standard model of quarks and leptons using constructed bitstrings of length 256. These label a grouting universe of bit-strings of growing length that eventually construct a finite and discrete space-time with reasonable cosmological properties. Coupling constants and mass ratios, computed from closure under XOR and a statistical hypothesis, using only (h bar), c and m(sub p) to fix our units of mass, length and time in terms of standard (meterkilogram-second) metrology, agree with the first four to seven significant figures of accepted experimental results. Finite and discrete conservation laws and commutation relations insure the essential characteristics of relativistic quantum mechanics, including particle-antiparticle pair creation. The correspondence limit in (free space) Maxwell electromagnetism and Einstein gravitation is consistent with the Feynman-Dyson-Tanimura proof. DOE

T. Damour Nov. 1994 17 p Prepared in cooperation with Observatoire de Paris, France
(PB95-190179; IHES/P/94/61) Avail: CASI HC A03/MF A01

The confrontation between General Relativity and experimental results, notably binary pulsar data, is summarized and its significance discussed. The agreement between experiment and theory is numerically very impressive. However, some recent theoretical findings (existence of non-perturbative strong-field effects, natural cosmological attraction toward zero scalar couplings) suggest that the present agreement between Einstein's theory and experiment might be a red herring and provide new motivations for improving the experimental tests of gravity. QUANTUM RETRODICTION AND CAUSALITY PRINCIPLE
M. I. Shirokov 1994 12 p
(DE94-628438; JINR-E-4-94-4) Avail: CASI HC A03/MF A01 (US Sales Only)

Quantum mechanics is factually a predictive science. But quantum retrodiction may also be needed, e.g., for the experimental verification of the validity of the Schroedinger equation for the wave function in the past if the present state is given. It is shown that in the retrodictive analog of the prediction the measurement must be replaced by another physical process called the retromeasurement. In this process, the reduction of a state vector into eigenvectors of a measured observable must proceed in the opposite direction of time as compared to the usual reduction. Examples of such processes are unknown. Moreover, they are shown to be forbidden by the causality principle stating that the later event cannot influence the earlier one. So quantum retrodiction seems to be unrealizable. It is demonstrated that the approach to the retrodiction given by S.Watanabe and F.Belinfante must be considered as an unsatisfactory ersatz of retrodicting. DOE

TASK 4 SUPPORTING TECHNOLOGY. DENSIFICATION REQUIREMENTS DEFINITION AND TEST OBJECTIVES. PROPELLANT DENSIFICATION REQUIREMENTS DEFINITION
Tibor Lak and D. P. Weeks 30 May 1995 22 p
(Contract NCC8-79)
(NASA-CR-198629; NAS 1.26:198629; SSD95D0241) Avail: CASI HC A03/MF A01

The primary challenge of the X-33 CAN is to build and test a prototype LO2 and LH2 densification ground support equipment (GSE) unit, and perform tank thermodynamic testing within the 15 month phase 1 period. The LO2 and LH2 propellant densification system will be scaled for the IPTD LO2 and LH2 tank configurations. The IPTD tanks were selected for the propellant technology demonstration because of the potential benefits to the phase 1 plan: tanks will be built in time to support thermodynamic testing; minimum cost; minimum schedule risk; future testing at MSFC will build on phase 1 data base; and densification system will be available to support X-33 and RLV engine test at IPTD. The objective of the task 1 effort is to define the preliminary requirements of the propellant densification GSE and tank recirculation system. The key densification system design parameters to be established in Task 1 are: recirculation flow rate; heat exchanger inlet temperature; heat exchanger outlet temperature; maximum heat rejection rate; vent flow rate (GN2 and GH2); densification time; and tank pressure level. AUTOMATICALLY SELECTING AND USING PRIMARY EFFECTS IN PLANNING: THEORY AND EXPERIMENTS
Eugene Fink and Qiang Yang Oct. 1994 41 p Sponsored in part by the Natural Science and Engineering Research Council of Canada Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F33615-93-1-1330)
(AD-A289347; CMU-CS-94-206) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Using primary effects of operators in planning is an effective approach to reducing planning time and improving solution quality. However, the characterization of 'good' primary effects has remained at an informal level. In addition, no method has previously been known to automatically learn the primary effects of operators from a given domain specification. In this paper we formalize the use of primary effects in planning, present a criterion for selecting useful primary effects that guarantee the efficiency and completeness of planning, and prove the near-optimality of solutions found by planning with primary effects. Based on the formalization, we describe an inductive learning algorithm that automatically selects primary effects of operators. We show that the learning algorithm performs efficiently, producing plans that are near-optimal with high probability. We also empirically demonstrate the effectiveness of the learned primary effects in reducing search. DTIC

STEP (STandard for the Exchange of Product Model Data) is an innovative software tool that allows the exchange of data between different programming systems to occur and helps speed up the designing in various process industries. This exchange occurs easily between those companies that have STEP, and many industries and government agencies are requiring that their vendors utilize STEP in their computer aided design projects, such as in the areas of mechanical, aeronautical, and electrical engineering. STEP allows the process of concurrent engineering to occur and increases the quality of the design product. One example of the STEP program is the Boeing 777, the first paperless airplane. CASI

(DE95-007873; LA-UR-95-420; CONF-950216-71) Avail: CASI HC A02/MF A01

Los Alamos National Laboratory (LANL or the Laboratory) is developing and implementing a comprehensive, Integrated Standards-Based Management System (ISBMS) to enhance environmental, safety, and health (ESH) compliance efforts and streamline management of ESH throughout the Laboratory. The Laboratory recognizes that to be competitive in today's business environment and attractive to potential Partnerships, Laboratory operations must be efficient and cost-effective. The Laboratory also realizes potential growth opportunities for developing ESH as a strength in providing new or improved services to its customers. Overall, the Laboratory desires to establish and build upon an ESH management system which ensures continuous improvement in protecting public health and safety and the environment and which fosters a working relationship with stakeholders. A team of process experts from the LANL Environmental Management (EM) Program Office, worked with management system consultants, and the Department of Energy (DOE) to develop an ESH management systems process to compare current LANL ESH management Systems and programs against leading industry standards. The process enabled the Laboratory to gauge its performance in each of the following areas: Planning and Policy Setting; Systems and Procedures; Implementation and Education; and Monitoring and Reporting. The information gathered on ESH management systems enabled LANL to pinpoint and prioritize opportunities for improvement in the provision of ESH services throughout the Laboratory and ultimately overall ESH compliance. LONG TERM DISTRIBUTED FILE REFERENCE TRACING: IMPLEMENTATION AND EXPERIENCE
L. Mummert and M. Satyanarayanan Nov. 1994 32 p Sponsored by Digital Equipment Corp.; and IBM Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F19628-93-C-0193; NSF ECD-89-07068)
(AD-A288585; CMU-CS-94-213) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

DFSTrace is a system to collect and analyze long-term file reference data in a distributed UNIX workstation environment. The design of DFSTrace is unique in that it pays particular attention to efficiency, extensibility, and the logistics of long-term trace data collection in a distributed environment. The components of DFSTrace are a set of kernel hooks, a kernel buffer mechanism, a data extraction agent, a set of collection servers, and post-processing tools. Our experience with DFSTrace has been highly positive. Tracing has been virtually unnoticeable, degrading performance 3-7%, depending on the level of detail of tracing. We have collected file reference traces from approximately 30 workstations continuously for over two years. We have implemented a post-processing library to provide a convenient programmer interface to the traces, and have created an on-line database of results from a suite of analysis programs to aid trace selection. Our data has been used for a wide variety of purposes, including file system studies, performance measurement and tuning, and debugging. Extensions of DFSTrace have enabled its use in applications such as field reliability testing and determining disk geometry. This paper presents the design, implementation, and evaluation of DFSTrace and associated tools, and describes how they have been used. DTIC

FLEXIBLE AND SAFE RESOLUTION OF FILE CONFLICTS
Puneet Kumar and Mahadev Satyanarayanan Nov. 1994 16 p Submitted for publication Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F19628-93-C-0193)
(AD-A289342; CMU-CS-94-214) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

In this paper we describe the support provided by the Coda File System for transparent resolution of conflicts arising from concurrent updates to a file in different network partitions. Such partitions often occur in mobile computing environments. Coda provides a framework for invoking customized pieces of code called application-specific resolvers (ASR's) that encapsulate the knowledge needed for file resolution. If resolution succeeds, the user notices nothing more than a slight performance delay. Only if resolution fails does the user have to resort to manual repair. Our design combines a rule-based approach to ASR selection with transactional encapsulation of ASR execution. This paper shows how such an approach leads to flexible and efficient file resolution without loss of security or robustness. DTIC

ANALYSIS, DESIGN AND IMPLEMENTATION OF A DATABASE SYSTEM FOR THE SYSTEMS MANAGEMENT CURRICULUM OFFICE M.S. Thesis
Sufian I. Althawadi and Barry D. Hubbard Sep. 1994 142 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289656) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The Systems Management Curricular Office at the Naval Postgraduate School is burdened with the enormous administrative task of managing files for over 500 students. In a time of drastic military downsizing and funding cuts, this task will require more work of a smaller staff with less money. The burden of paper management could be lessened through automation of record keeping, while increasing efficiency and effectiveness. Valuable time for the students could be saved through elimination of excessive paperwork which they were required to prepare. Based on requirements from the Systems Management Curricular Office, this thesis designs and implements a database management system. The primary objective is to allow the incoming class of students to enroll using this system instead of traditional paper forms, enabling the staff to focus on more non-administrative tasks. This system will store, sort and compare data relevant to all students while minimizing the need to maintain hardcopy files. Additionally, the staff will be able to query reports and generate letters with minimal effort. The system is also analyzed to determine possible enhancements that could be added in the future. The Systems Management Database Systems (SMDS) is designed using Borland's PARADOX version 4.0. DTIC

A DEMONSTRATION OF CLIENT/SERVER TECHNOLOGY USING REMOTE PROCEDURE CALLS FOR AN APPLICATION OF FILE MIGRATION FOR MOVING RECORDS BASED ON LOCATION M.S. Thesis
Andrea Miller 1 Dec. 1994 65 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289391) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Client/Server Computing is one of the newest technologies in distributed systems. It allows different computers to communicate and share resources. The idea is relatively simple however, the underlying factors make it difficult. This paper explores the use of remote procedure calls (RPC) to create a distributed, client/server application. The presentation includes a discussion of RPC along with a simple application that introduces the reader to RPC. Finally, an application in the area of file migration is presented. The program is designed to receive a requested file from the user, it then accesses a file to find the location of the requested record and then the record is retrieved. For the purpose of the simulation the file is transferred when it is located in a different place than that of its owner. While this is not a complex file migration algorithm it lends itself to such applications as moving personnel records, dynamically, so that they reside in the same location as their owner in order to facilitate communication and reduce costs. Similarly, another application might involve having medical records follow a person from place to place. It is easy to see that client/server computing has the potential to be powerful and tools such as remote procedure calls are essential to this technology. DTIC

THE RE-ENGINEERING OF THE AIR FORCE INSTITUTE OF TECHNOLOGY STUDENT INFORMATION SYSTEM M.S. Thesis
Douglas J. Wu Dec. 1994 142 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289426; AFIT/GCS/ENG/94D-27) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This research describes the design and implementation issues associated with re-engineering the Air Force Institute of Technology Student Information System (AFITSIS). Currently, AFITSIS executes on aging relational database technology and has unfriendly user interface mechanisms. The two research objectives met were to research current AFITSIS requirements, design, and implementation, and use object-oriented methods to design an alternative implementation based on proposed object database management system standards. This research explores how AFITSIS performance and capabilities might be enhanced by taking advantage of new object-oriented software engineering techniques. One of the primary benefits of this research is a detailed object modeling technique analysis and design that may be used as a foundation for upgrading the current AFITSIS. DTIC

A DEMONSTRATION OF CLIENT-SERVER TECHNOLOGY USING REMOTE PROCEDURE CALLS WITH AN APPLICATION OF FILE MIGRATION FOR MOVING RECORDS BASED ON TIME M.S. Thesis
Andrew C. Jank Dec. 1994 71 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289392; AFIT/CI/CIA/94-155) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

As the computing resources of the world are quickly becoming integrated into a vast network of interconnected machines, client/server technology is becoming more prevalent as a method to utilize unused resources and to distribute complex systems. Remote Procedure Calls (RPC's) serve as one of the means to implement this technology. This report, combined with those produced by 2nd Lt. Andrea Miller and 2nd Lt. Eric DeLange, provide an overview of both the complexity and the benefits of using RPC in a distributed environment. The report initially investigates the fundamentals of RPC and follows with a discourse of RPC's suitability for implementation as a means for computer-integrated file migration. The report presents an application involving RPC for timed file migration and concludes with a discussion of implementing user-friendly front-ends to hide the complex nature of RPC from the user. This specific application investigates the applicability of RPC to developing a distributed file migration application. The application allows the user to access files that may reside on various hosts by querying a central database for a file's location via RPC. Some of the files, however, are dynamically relocated, based on a timing procedure. This could be very advantageous for global organizations that maintain a core set of organization files that must be accessed at a specific time of day (which, of course varies, depending on the time zone of the requester). SEMANTIC HETEROGENEITY IN DATABASE AND DATA DICTIONARY INTEGRATION FOR COMMAND AND CONTROL SYSTEMS
M. G. Ceruti and M. N. Kamel Oct. 1994 27 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289180) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Semantic heterogeneity has been investigated in connection with the database and data dictionary integration efforts that support Command, Control, Communications and Intelligence (C3I) systems. Based on this investigation, a systematic approach to the resolution of semantic heterogeneity has been developed and illustrated with examples derived from the component C3I system databases in a federation. A methodology is introduced for resolving semantic conflicts to construct a tightly coupled federated database system by facilitating the development of a global schema derived from the individual schemas of the component databases. This methodology of resolving semantic conflicts results in the formation and modification of synonym-homonym groups (SHG), a concept introduced and developed in the paper. A detailed analysis using a three-phased procedure is introduced, with each phase exploring semantic heterogeneity at progressively finer levels of information granularity. For the purpose of illustration, the simplest case of a two-component database integration into a tightly coupled federated database system is considered, but the methodology can be generalized to include three or more component databases in a federated system. It also can be applied in the case of a fully merged database integration involving any number of component databases. A variety of inconsistencies were identified using the heuristics implemented in the algorithm. Resolutions of the problems arising from semantic heterogeneity are suggested, and directions for future research are explored. DTIC

SCALABILITY IN PRODUCTION SYSTEM PROGRAMS Ph.D. Thesis
Anurag Acharya 1994 368 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289345; CMU-CS-94-211) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Production system programs have been notorious for their inability to handle large data sets. The primary cause of their poor scalability is the combinatorial explosion in the number of possible matches which arises from the need to match conjunctive conditions where each conjunct can match the whole data set. This dissertation investigates two approaches for handling large data sets in production system programs - scalable parallelism and scalable match algorithms. The primary limitation on parallelism in production system programs is the data-dependent nature of the computation combined with a lack of information about the run-time contents of the tuple-space. This dissertation argues that effective parallelization of production system programs requires information about the run-time contents of the tuple-space. Results from a simulation study show that simple extensions to existing production system languages can provide sufficient information to parallelize a wide variety of programs. These results also show that, in general, there is no program-independent bound on the speedup that can be achieved by parallel production system programs and that speedups in such programs can scale with data set size. The story we're about to tell is true and the names have not been changed to protect the innocent because BCS Richland, Inc. (BCSR), a subsidiary of the Boeing Company, is proud of its metamorphosis from the ugly duckling of computer support to the shining swan-like star of the Help Desk industry. The transformation occurred in the midst of an all but antiquated computer technology environment, rapid technology changes, low employee morale, and high amount of customer frustration. BCSR, located at the Hanford site in the southeastern corner of Washington State, provides information resource management and computer support to the Department of Energy (DOE) complex located at the site. The primary mission of DOE is environmental restoration and waste clean-up. End User Support (EUS), an organization within BCSR, is tasked with all aspects of microcomputer support, both hardware and software. EUS efficiently and effectively supports approximately 12,000 computer users across the entire 560 square mile site. With a small staff of 50 consultants and technicians, EUS provides support to a diverse customer base that includes engineers and scientists, as well as financial personnel, managers, and clerical support. But it wasn't always this way. BCSR management recognized it and empowered the EUS staff to make the necessary changes. DOE

Quality situation assessment and decision making require access to multiple sources of data and information. The question facing today's analyst is not so much 'Is the data I need to do my work available?' as 'How can I get to the data I need to make an informed decision?' Insufficient accessibility to data exists for many large corporations and government agencies. By utilizing current advances in computer technology, today's situation analysts have a wealth of information at their disposal. There are many potential solutions to the information accessibility problem using today's technology. The United States Department of Energy (US-DOE) faced this situation when dealing with the problem of high level radioactive waste (HLW) tanks in the United States. The result of their efforts has been the creation of the Tank Waste Information Network System - TWINS. The TWINS solution combines many technologies to address problems in several areas such as user interfaces, transparent access to multiple data sources, and integrated data access. Data related to the HLW tank complex is currently distributed throughout several US-DOE installations. Over time, each installation has adopted its own set of standards for information management, hardware, and software platforms. These factors contribute to the complexity of accessing information in a manner that enhances the performance and decision making process of the analysts. This paper presents one approach taken by the US-DOE to resolve the problem of distributed, heterogeneous, multimedia information management through the development of multilevel architectural controls and access mechanisms for the HLW Tank complex. The information system architecture developed for the US-DOE by the TWINS effort is one that is adaptable to other problem domains and uses. DOE

A CASE FOR DYNAMIC SETS IN OPERATING SYSTEMS
David Steere and M. Satyanarayanan 30 Nov. 1994 20 p Sponsored in part by the IBM Corp., Digital Equipment Corp., and Intel Corp. Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F196828-93-C-0193)
(AD-A289354; CMU-CS-94-216) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

Recent trends have exposed three key problems in today's operating systems. The first is the emergence of I/O latency as the dominant factor in the performance of many applications. The second is the need to cope with mobile communication environments where bandwidth and latency may be highly variable. The third is the importance of search activity to locating files of interest in a distributed system. In this paper we describe a single unifying abstraction called dynamic sets which can offer substantial benefits in the solution of these problems. These benefits include greater opportunity in the I/O subsystem to aggressively exploit prefetching and parallelism, as well as support for associative naming to complement the hierarchical naming in typical file systems. This paper motivates dynamic sets, presents the design of a system that embodies this abstraction, and evaluates a prototype implementation of the system via measurements and an analytical model. DEVELOPMENT AND IMPLEMENTATION OF AN ELECTRONIC LIBRARY TOUR FOR THE NASA LANGLEY TECHNICAL LIBRARY M.S. Thesis, North Carlolna Univ., Jul. 1994
Nancy A. Rinker Jul. 1994 66 p
(NASA-TM-110619; NAS 1.15:110619) Avail: CASI HC A04/MF A01

The role of librarians today is drastically influenced by the changing nature of information and library services. The museum-like libraries of yesterday are a thing of the past: today's libraries are bustling with life, activity, and the sounds of new technologies. Libraries are replacing their paper card catalogs with state-of-the-art online systems, which provide faster and more comprehensive search capabilities. Even the resources themselves are changing. New formats for information, such as CD-ROM's, are becoming popular for all types of publications, from bibliographic tools to encyclopedias to electronic journals, even replacing print materials completely in some cases. Today it is almost impossible to walk into a library and find the information you need without coming into contact with at least one computer system. Librarians are not only struggling to keep up with the technological advancements of the day, but they are becoming information intermediaries: they must teach library users how to use all of the new systems and electronic resources. Not surprisingly, bibliographic instruction itself has taken on a new look and feel in these electronically advanced libraries. Many libraries are experimenting with the development of expert systems and other computer aided instruction interfaces for teaching patrons how to use the library and its resources. One popular type of interface in library instruction programs is hypertext, which utilizes 'stacks' or linked pages of information. Hypertext stacks can incorporate color graphics along with text to provide a more interesting interface and entice users into trying out the system. Another advantage of hypertext is that it is generally easy to use, even for those unfamiliar with computers. As such, it lends itself well to application in libraries, which often serve a broad range of clientele. This paper will discuss the design, development, and implementation of a hypertext library tour in a special library setting. The library featured in the electronic library tour is the National Aeronautics and Space Administration's Technical Library at Langley Research Center in Hampton, Virginia. Derived from text

THE SUNRISE PROJECT: AN R&D PROJECT FOR A NATIONAL INFORMATION INFRASTRUCTURE PROTOTYPE
Juhnyoung Lee 1995 14 p
(Contract W-7405-eng-36)
(DE95-006340; LA-UR-95-35) Avail: CASI HC A03/MF A01

Sunrise is a Los Alamos National Laboratory (LANL) project started in October 1993. It is intended to a prototype National Information Infrastructure (NII) development project. A main focus of Sunrise is to tie together enabling technologies (networking, object-oriented distributed computing, graphical interfaces, security, multimedia technologies, and data mining technologies) with several specific applications. A diverse set of application areas was chosen to ensure that the solutions developed in the project are as generic as possible. Some of the application areas are materials modeling, medical records and image analysis, transportation simulations, and education. This paper provides a description of Sunrise and a view of the architecture and objectives of this evolving project. The primary objectives of Sunrise are three-fold: (1) to develop common information-enabling tools for advanced scientific research and its applications to industry; (2) to enhance the capabilities of important research programs at the laboratory; and (3) to define a new way of collaboration between computer science and industrially relevant research. REAL-TIME DATA COMPRESSION USING A FIXED HUFFMAN ENCODING SCHEME
R. E. Kidner Jan. 1995 40 p
(Contract DE-AC04-94AL-85000)
(DE95-006159; SAND-94-3172) Avail: CASI HC A03/MF A01

A common limitation to performance in data acquisition systems is storage of the collected data. Compressing the data would increase the amount of data that could be stored. However, most compression routines require that the data be collected and analyzed before compression is performed. Also, these compression routines often store the information required for decompression along with the data, thus decreasing the storage available for data. One solution to this problem is to create an encoding tree known to both the encoder and the decoder based on apriori knowledge of the data. Once the tree is created, optimal encoding schemes such as the Huffman algorithm may be used on the data as it is being collected. In this way the data is compressed as each byte is received and there is no overhead associated with storing decompression data. In this paper the idea of using a fixed Huffman tree is explored and the results are compared to a defacto standard in data compression, PKZIP. DOE

BROWSING THE WORLD WIDE WEB FROM BEHIND A FIREWALL
R. W. Simons 1995 9 p Presented at the DOE Computer Security Training Conference, Milwaukee, WI, 2-4 May 1995
(Contract DE-AC04-94AL-85000)
(DE95-006805; SAND-95-0121C; CONF-9505162-1) Avail: CASI HC A02/MF A01

The World Wide Web provides a unified method of access to various information services on the Internet via a variety of protocols. Mosaic and other browsers give users a graphical interface to the Web that is easier to use and more visually pleasing than any other common Internet information service today. The availability of information via the Web and the number of users accessing it have both grown rapidly in the last year. The interest and investment of commercial firms in this technology suggest that in the near future, access to the Web may become as necessary to doing business as a telephone. This is problematical for organizations that use firewalls to protect their internal networks from the Internet. Allowing all the protocols and types of information found in the Web to pass their firewall will certainly increase the risk of attack by hackers on the Internet. But not allowing access to the Web could be even more dangerous, as frustrated users of the internal network are either unable to do their jobs, or find creative new ways to get around the firewall. The solution to this dilemma adopted at Sandia National Laboratories is described. Discussion also covers risks of accessing the Web, design alternatives considered, and trade-offs used to find the proper balance between access and protection. DOE

APPLICATION OF A GEOGRAPHIC INFORMATION SYSTEM FOR RADIOLOGIC EMERGENCY RESPONSE
R. G. Best and J. F. Doyle 1995 5 p Presented at the 5th ANS Topical Meeting on Emergency Preparedness and Response, Savannah, GA, 18-21 Apr. 1995
(Contract DE-AC08-93NV-11265)
(DE95-007624; EGG-11265-1123; CONF-950430-4) Avail: CASI HC A01/MF A01

A geographic information system (GIS) is a multifunctional analytical tool that can be used to compile available data and derive information. A GIS is a computerized database management system for the capture, storage, retrieval, analysis, and display of spatial data. Maps are the most common type of spatial data, but any type of data that can be referenced by an x-y location or geographic coordinate can be used in a GIS. In a radiological emergency, it is critical that data of all types be rapidly compiled into a common format in order to make accurate observations and informed decisions. Developing a baseline GIS for nuclear facilities would offer a significant incentive for all organizations to contribute to and utilize this powerful data management tool. The system being developed could integrate all elements of emergency planning, from the initial protective actions based on models through the emergency monitoring phase, and finally ending with the complex reentry and recovery phase. Within the Federal Radiological Monitoring and Assessment Center (FRMAC), there is a continuing effort to improve the data management and communication process. To demonstrate the potential of GIS for emergency response, the system has been utilized in interagency FRMAC exercises. An interactive GIS system has been deployed and used to analyze the available spatial data to help determine the impact of a hypothetical radiological release and to develop mitigation plans. For this application, both hardcopy and real-time spatial displays were generated with the GIS. Composite maps with different sizes, scales, and themes were produced to support the exercises. DOE

PROJECT RECORDS INFORMATION SYSTEM (PRIS) USER'S MANUAL, REVISION 3
R. K. Schwarz, ed. Jan. 1995 80 p
(Contract DE-AC05-84OR-21400)
(DE95-008330; K/CSD/TM-93-Rev-3) Avail: CASI HC A05/MF A01

The Project Records Information System (PRIS) is an interactive system developed for the Information Management Services (IMS) of Martin Marietta Energy Systems, Inc., to perform indexing, maintenance, and retrieval of information about Engineering project record documents for which they are responsible. This PRIS User's Manual provides instruction on the use of this system. Section 2.0 of this manual presents an overview of PRIS, describing the system's purpose; the data that it handles; functions it performs; hardware, software, and access; and help and error functions. Section 3.0 describes the interactive menu-driven operation of PRIS. Appendixes A, B, and C contain help screens, report descriptions, and the data dictionary, respectively. DOE

MANAGING ELECTRONIC RECORDS: A GUIDELINE
J. G. Stewart 25 Oct. 1994 6 p Presented at the Office of Scientific and Technical Information INFOTECH '94, Oak Ridge, TN, 25-26 Oct. 1994
(Contract DE-AC05-84OR-21400)
(DE95-007038; CONF-9410141-7) Avail: CASI HC A02/MF A01

A committee at Martin Marietta Energy Systems (MMES) has drafted a guideline to assist offices in the management of electronic records. This paper will address the activities surrounding its creating. The guideline is for use by creators, users, and custodians of any type of electronic information. The guideline supports and supplements requirements from DOE and the National Archives and Records Administration (NARA), other internal processes such as system reviews, and the comprehensive records management program. While an in-house publication, it could prove useful to other organizations implementing an electronic records management program. DOE

EVALUATION OF AN AIR FORCE INFORMATION RESOURCES MANAGEMENT (IRM) OVERVIEW COURSE M.S. Thesis
Joseph L. Cox and Brenda R. Forcht Dec. 1994 102 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A288746; AFIT/GIR/LAR/94D-3) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The federal government has passed laws and issued directives recognizing that information is a valuable national resource. To help assure that Air Force information managers are capable of implementing policy in support of such laws and directives, the Secretary of the Air Force's Directorate of Information Management (SAF/AAI) directed a team from the Air Force Institute of Technology (AFIT) to design and construct an exportable course to provide an overview of information resources management (IRM) concepts and principles. Such an IRM overview course was completed in the Summer of 1994. The authors evaluated this course quantitatively and qualitatively. During a pilot administration of the course, the authors used a quantitative measurement instrument and a pre-test/posttest research design to assess effectiveness of the instructional system. The authors also gathered feedback from students and instructors to provide a summative evaluation of the course as a whole. Based on test scores and qualitative feedback, the authors concluded that the course did provide a useful overview of IRM concepts and principles. Additionally, they were able to recommend several changes to the course presentation, content, and measurement instrument. DTIC

NASA/DOD AEROSPACE KNOWLEDGE DIFFUSION RESEARCH PROJECT. REPORT 35: THE USE OF COMPUTER NETWORKS IN AEROSPACE ENGINEERING
Ann P. Bishop and Thomas E. Pinelli (National Aeronautics and Space Administration. Langley Research Center, Hampton, VA.) Jun. 1995 403 p
(NASA Order L-45107; RTOP 505-90-00)
(NASA-CR-198170; NAS 1.26:198170) Avail: CASI HC A18/MF A04

This research used survey research to explore and describe the use of computer networks by aerospace engineers. The study population included 2000 randomly selected U.S. aerospace engineers and scientists who subscribed to Aerospace Engineering. A total of 950 usable questionnaires were received by the cutoff date of July 1994. Study results contribute to existing knowledge about both computer network use and the nature of engineering work and communication. We found that 74 percent of mail survey respondents personally used computer networks. Electronic mail, file transfer, and remote login were the most widely used applications. Networks were used less often than face-to-face interactions in performing work tasks, but about equally with reading and telephone conversations, and more often than mail or fax. Network use was associated with a range of technical, organizational, and personal factors: lack of compatibility across systems, cost, inadequate access and training, and unwillingness to embrace new technologies and modes of work appear to discourage network use. The greatest positive impacts from networking appear to be increases in the amount of accurate and timely information available, better exchange of ideas across organizational boundaries, and enhanced work flexibility, efficiency, and quality. Involvement with classified or proprietary data and type of organizational structure did not distinguish network users from nonusers. The findings can be used by people involved in the design and implementation of networks in engineering communities to inform the development of more effective networking systems, services, and policies. QUERY BY IMAGE EXAMPLE: THE CANDID APPROACH
P. M. Kelly, M. Cannon, and D. R. Hush 1995 12 p Presented at the SPIE 1995 Conference on Optics, Electro-optics, and Laser Application in Science, Engineering and Medicine, San Jose, CA, 5-10 Feb. 1995
(Contract W-7405-eng-36)
(DE95-006284; LA-UR-95-374; CONF-950226-12) Avail: CASI HC A03/MF A01

CANDID (Comparison Algorithm for Navigating Digital Image Databases) was developed to enable content-based retrieval of digital imagery from large databases using a query-by-example methodology. A user provides an example image to the system, and images in the database that are similar to that example are retrieved. The development of CANDID was inspired by the N-gram approach to document fingerprinting, where a 'global signature' is computed for every document in a database and these signatures are compared to one another to determine the similarity between any two documents. CANDID computes a global signature for every image in a database, where the signature is derived from various image features such as localized texture, shape, or color information. A distance between probability density functions of feature vectors is then used to compare signatures. In this paper, the authors present CANDID and highlight two results from their current research: subtracting a 'background' signature from every signature in a database in an attempt to improve system performance when using inner-product similarity measures, and visualizing the contribution of individual pixels in the matching process. These ideas are applicable to any histogram-based comparison technique. DOE

RESEARCH ON THE ESTABLISHMENT OF THE DATABASE SYSTEM FOR R AND D ON THE INNOVATIVE TECHNOLOGY FOR THE EARTH
Mar. 1994 101 p In JAPANESE
(DE95-759244; NEDO-GET-9310-4) Avail: CASI HC A06/MF A02

For the purpose of structuring a database system of technical information about the earth environmental issues, the 'database system for R and D of the earth environmental industrial technology' was operationally evaluated, and study was made to open it and structure a prototype of database. In the present state as pointed out in the operational evaluation, the utilization frequency is not heightened due to lack of UNIX experience, absence of system managers and shortage of utilizable articles listed, so that the renewal of database does not ideally progress. Therefore, study was then made to introduce tools utilizable by the initiators and open the information access terminal to the researchers at headquarters utilizing the internet. In order for the earth environment-related researchers to easily obtain the information, a database was prototypically structured to support the research exchange. Tasks were made clear to be taken for selecting the fields of research and compiling common thesauri in Japanese, Western and other languages. DOE

This volume begins with an introductory chapter on general properties of cataclysmic variables. Chapters 2 through 5 of Part 1 are devoted to observations and interpretation of dwarf novae and nova-like stars. Chapters 6 through 10, Part 2, discuss the general observational properties of classical and recurrent novae, the theoretical models, and the characteristics and models for some well observed classical novae and recurrent novae. Chapters 11 through 14 of Part 3 are devoted to an overview of the observations of symbiotic stars, to a description of the various models proposed for explaining the symbiotic phenomenon, and to a discussion of a few selected objects, respectively. Chapter 15 briefly examines the many unsolved problems posed by the observations of the different classes of cataclysmic variables and symbiotic stars. For individual titles, see N95-27069 through N95-27078.

DWARF NOVAE
Constanze laDous *In* NASA, Washington, Cataclysmic Variables and Related Objects Sep. 1993 p 15-94 (For primary document see N95-27068 09-89)
Avail: CASI HC A05/MF A10; SOD HC

Dwarf novae are defined on grounds of their semi-regular brightness variations of some two to five magnitudes on time scales of typically 10 to 100 days. Historically several different classification schemes have been used. Today, dwarf novae are divided into three sub-classes: the U Geminorum stars, the SU Ursae Majoris stars, and the Z Camelopardalis stars. Outbursts of dwarf novae occur at semi-periodic intervals of time, typically every 10 to 100 days; amplitudes range from typically 2 to 5 mag. Within certain limits values are characteristic for each object. Relations between the outburst amplitude, or the total energy released during outburst, and the recurrence time have been found, as well as relations between the orbital period and the outburst decay time, the absolute magnitude during outburst maximum, and the widths of long and short outbursts, respectively. Some dwarf novae are known to have suspended their normal outburst activity altogether for a while. They later resumed it without having undergone any observable changes. The optical colors of dwarf novae all are quite similar during outburst, considerably bluer than during the quiescent state. During the outburst cycle, characteristic loops in the two color diagram are performed. At a time resolution on the order of minutes, strictly periodic photometric changes due to orbital motion become visible in the light curves of dwarf novae. These are characteristic for each system. Remarkably little is known about orbital variations during the course of an outburst. On time-scales of minutes and seconds, further more or less periodic types of variability are seen in dwarf novae. Appreciable flux is emitted by dwarf novae at all wavelengths from the X-rays to the longest IR wavelengths, and in some cases even in the radio. Most dwarf novae exhibit strong emission line spectra in the optical and UV during quiescence, although some have only very weak emissions in the optical and/or weak absorptions at UV wavelengths. NOVA-LIKE VARIABLES
Constanze laDous *In* NASA, Wasington, Cataclysmic Variables and Related Objects Sep. 1993 p 95-143 (For primary document see

N95-27068 09-89)
Avail: CASI HC A03/MF A10; SOD HC

On grounds of different observable characteristics five classes of nova-like objects are distinguished: the UX Ursae Majoris stars, the antidwarf novae, the DQ Herculis stars, the AM Herculis stars, and the AM Canum Venaticorum stars. Some objects have not been classified specifically. Nova-like stars share most observable features with dwarf novae, except for the outburst behavior. The understanding is that dwarf novae, UX Ursae Majoris stars, and anti-dwarf novae are basically the same sort of objects. The difference between them is that in UX Ursae Majoris stars the mass transfer through the accretion disc always is high so the disc is stationary all the time; in anti-dwarf novae for some reason the mass transfer occasionally drops considerably for some time, and in dwarf novae it is low enough for the disc to undergo semiperiodic changes between high and low accretion events. DQ Herculis stars are believed to possess weakly magnetic white dwarfs which disrupt the inner disc at some distance from the central star; the rotation of the white dwarf can be seen as an additional photometric period. In AM Herculis stars, a strongly magnetic white dwarf entirely prevents the formation of an accretion disk and at the same time locks the rotation of the white dwarf to the binary orbit. Finally, AM Canum Venaticorum stars are believed to be cataclysmic variables that consist of two white dwarf components. Derived from text

N95-27071*# Osservatorio Astronomico, Trieste (Italy).

MODELS FOR VARIOUS ASPECTS OF DWARF NOVAE AND NOVA-LIKE STARS

Constanze laDous *In* NASA, Washington, Cataclysmic Variables and Related Objects Sep. 1993 p 145-231 (For primary document see N95-27068 09-89)
Avail: CASI HC A05/MF A10; SOD HC

The first attempts to explain the nature of dwarf novae were based on the assumption of single-star phenomena, in which emission lines were assumed to be caused by circumstellar gas shells. The outburst behavior was tentatively ascribed to the kind of (also not understood) mechanism leading to nova outbursts. The realization that some, and possibly all, dwarf novae and nova-like stars (and novae) are binaries eventually led to models which bore more and more similarities to the modern interpretation on the basis of the Roche model. Not all cataclysmic variables are known binaries. In fact, with respect to the entire number of known objects, the proven binaries are still the minority, but all the brightest variables are in fact known to binaries. Not a single system is known which exhibits the usual characteristics of a cataclysmic variable and at the same time can be declared with certainty to be a single star. Two systems are known, the dwarf nova EY Cyg and the recurrent nova V1017 Sgr, in which, in spite of intensive search, no radial velocity variations have been found; but they still exhibit composite spectra consisting of a bright continuum, an emission spectrum, and a cool absorption spectrum. If the Roche model is correct, it is to be expected that a small percentage of objects is viewed pole-on, so orbital motions do not make themselves felt as Doppler shifts of spectral lines. So even these two systems support the hypothesis that all cataclysmic variables (with the possible exception of symbiotic stars) are binaries. In cataclysmic variables, it seems that the brightness changes observed in dwarf novae and nova-like stars in the optical and the UV are due directly to changes in the accretion disks. The study and understanding of accretion disks in these systems can bear potentially valuable consequences for many other fields in astronomy. The observed spectra of dwarf novae and nova-like stars comprise a fairly large range: pure emission spectra, pure absorption spectra, a mixture of both, asymmetric line profiles, very different slopes of the continuous flux distribution -- and one single system may exhibit all of these features at different times. Agreement and disagreement between computed and observed spectra should show whether or not the Roche model is applicable and where it probably will have to be modified and improved. Except for their outburst behavior and its immediate consequences, novae, dwarf novae, and nova-like stars cannot be physically distinguished from each other.

CLASSICAL NOVAE AND RECURRENT NOVAE: GENERAL PROPERTIES

Margherita Hack, Pierluigi Selvelli, and Hilmar W. Duerbeck (Muenster Univ., Germany.) *In* NASA, Washington, Cataclysmic Variables and Related Objects Sep. 1993 p 261-369 (For primary document see N95-27068 09-89)
Avail: CASI HC A06/MF A10; SOD HC

We describe the observable characteristics of classical novae and recurrent novae obtained by different techniques (photometry, spectroscopy, and imaging) in all the available spectral ranges. We consider the three stages in the life of a nova: quiescence (pre- and post-outburst), outburst, final decline and nebular phase. We describe the photometric properties during the quiescent phase. We describe the photometric properties during outburst, the classification according the rate of decline (magnitudes per day), which permits us to define very fast, fast, intermediate, slow, and very slow novae and the correlation between luminosity and speed class. We report the scanty data on the spectra of the few known prenovae and those on the spectra of old novae and those of dwarf novae and nova-like, which, however, are almost undistinguishable. We describe the typical spectra appearing from the beginning of the outburst, just before maximum, up to the nebular phase and the correlation between spectral type at maximum, expansional velocity, and speed class of the nova. We report the existing infrared observations, which permit us to explain some of the characteristics of the outburst light curve, and give evidence of the formation of a dust shell in slow and intermediate novae (with the important exception of the very slow nova HR Del 1967) and its absence or quasi-absence in fast novae. The ultraviolet and X-ray observations are described. The X ray observations of novae, mainly from the two satellites EINSTEIN and EXOSAT, are reported. Observations of the final decline and of the envelopes appearing several months after outburst are also reported.

MODELS OF CLASSICAL AND RECURRENT NOVAE

Michael Friedjung and Hilmar W. Duerbeck (Muenster Univ., Germany.) *In* NASA, Washington, Cataclysmic Variables and Related Objects Sep. 1993 p 371-412 (For primary document see N95-27068 09-89)
Avail: CASI HC A03/MF A10; SOD HC

The behavior of novae may be divided roughly into two separate stages: quiescence and outburst. However, at closer inspection, both stages cannot be separated. It should be attempted to explain features in both stages with a similar model. Various simple models to explain the observed light and spectral observations during post optical maximum activity are conceivable. In instantaneous ejection models, all or nearly all material is ejected in a time that is short compared with the duration of post optical maximum activity. Instantaneous ejection type 1 models are those where the ejected material is in a fairly thin shell, the thickness of which remains small. In the instantaneous ejection type 2 model ('Hubble Flow'), a thick envelope is ejected instantaneously. This envelope remains thick as different parts have different velocities. Continued ejection models emphasize the importance of winds from the nova after optical maximum. Ejection is supposed to occur from one of the components of the central binary, and one can imagine a general swelling of one of the components, so that something resembling a normal, almost stationary, stellar photosphere is observed after optical maximum. The observed characteristics of recurrent novae in general are rather different from those of classical novae, thus, models for these stars need not be the same. Derived from text

TYPICAL EXAMPLES OF CLASSICAL NOVAE

Margherita Hack, Pierluigi Selvelli, Antonio Bianchini (Osservatorio Astrofisico, Asiago, Italy.), and Hilmar W. Duerbeck (Muenster Univ., Germany.) *In* NASA, Washington, Cataclysmic Variables and Related Objects Sep. 1993 p 413-510 (For primary document see N95-27068 09-89)
Avail: CASI HC A05/MF A10; SOD HC

Because of the very complicated individualistic behavior of each nova, we think it necessary to review the observations of a few well-observed individuals. We have selected a few objects of different speed classes, which have been extensively observed. They are: V1500 Cygni 1975, a very fast nova; V603 Aql 1918, fast nova; CP Pup 1942, fast nova; GK Per 1901, fast nova; V 1668 Cyg 1979, moderately fast nova; FH Ser 1970, slow nova; DQ Her 1934, slow nova; T Aur 1891, slow nova; RR Pic 1925, slow nova; and HR Del 1967, very slow nova.

RECURRENT NOVAE
Margherita Hack and Pierluigi Selvelli *In* NASA, Washington, Cataclysmic Variables and Related Objects Sep. 1993 p 511-559 (For primary document see N95-27068 09-89)
Avail: CASI HC A03/MF A10; SOD HC

Recurrent novae seem to be a rather inhomogeneous group: T CrB is a binary with a M III companion; U Sco probably has a late dwarf as companion. Three are fast novae; two are slow novae. Some of them appear to have normal chemical composition; others may present He and CNO excess. Some present a mass-loss that is lower by two orders of magnitude than classical novae. However, our sample is too small for saying whether there are several classes of recurrent novae, which may be related to the various classes of classical novae, or whether the low mass-loss is a general property of the class or just a peculiarity of one member of the larger class of classical novae and recurrent novae.

OVERVIEW OF THE OBSERVATIONS OF SYMBIOTIC STARS
Roberto Viotti *In* NASA, Washington, Cataclysmic Variables and Related Objects Sep. 1993 p 583-645 (For primary document see N95-27068 09-89)
Avail: CASI HC A04/MF A10; SOD HC

The term Symbiotic stars commonly denotes variable stars whose optical spectra simultaneously present a cool absorption spectrum (typically TiO absorption bands) and emission lines of high ionization energy. This term is now used for the category of variable stars with composite spectrum. The main spectral features of these objects are: (1) the presence of the red continuum typical of a cool star, (2) the rich emission line spectrum, and (3) the UV excess, frequently with the Balmer continuum in emission. In addition to the peculiar spectrum, the very irregular photometric and spectroscopic variability is the major feature of the symbiotic stars. Moreover, the light curve is basic to identify the different phases of activity in a symbiotic star. The physical mechanisms that cause the symbiotic phenomenon and its variety are the focus of this paper. An astronomical phenomenon characterized by a composite stellar spectrum with two apparently conflicting features, and large variability has been observed. Our research set out to find the origin of this behavior and, in particular, to identify and measure the physical mechanism(s) responsible for the observed phenomena. Derived from text

MODELS OF SYMBIOTIC STARS
Michael Friedjung *In* NASA, Washington, Cataclysmic Variables and Related Objects Sep. 1993 p 647-662 (For primary document see N95-27068 09-89)
Avail: CASI HC A05/MF A10; SOD HC

One of the most important features of symbiotic stars is the coexistence of a cool spectral component that is apparently very similar to the spectrum of a cool giant, with at least one hot continuum, and emission lines from very different stages of ionization. The cool component dominates the infrared spectrum of S-type symbiotics; it tends to be veiled in this wavelength range by what appears to be excess emission in D-type symbiotics, this excess usually being attributed to circumstellar dust. The hot continuum (or continua) dominates the ultraviolet. X-rays have sometimes also been observed. Another important feature of symbiotic stars that needs to be explained is the variability. Different forms occur, some variability being periodic. This type of variability can, in a few cases, strongly suggest the presence of eclipses of a binary system. One of the most characteristic forms of variability is that characterizing the active phases. This basic form of variation is traditionally associated in the optical with the veiling of the cool spectrum and the disappearance of high-ionization emission lines, the latter progressively appearing (in classical cases, reappearing) later. Such spectral changes recall those of novae, but spectroscopic signatures of the high-ejection velocities observed for novae are not usually detected in symbiotic stars. However, the light curves of the 'symbiotic nova' subclass recall those of novae. We may also mention in this connection that radio observations (or, in a few cases, optical observations) of nebulae indicate ejection from symbiotic stars, with deviations from spherical symmetry. We shall give a historical overview of the proposed models for symbiotic stars and make a critical analysis in the light of the observations of symbiotic stars. We describe the empirical approach to models and use the observational data to diagnose the physical conditions in the symbiotics stars. Finally, we compare the results of this empirical approach with existing models and discuss unresolved problems requiring new observational and theoretical work.

DISCUSSION ON SELECTED SYMBIOTIC STARS
Roberto Viotti and Margherita Hack (Osservatorio Astronomico, Trieste, Italy.) *In* NASA, Washington, Cataclysmic Variables and Related Objects Sep. 1993 p 663-724 (For primary document see N95-27068 09-89)
Avail: CASI HC A04/MF A10; SOD HC

Because of its large variety of aspects, the symbiotic phenomenon is not very suitable for a statistical treatment. It is also not clear whether symbiotic stars really represent a homogeneous group of astrophysical objects or a collection of objects of different natures but showing similar phenomena. However we are especially interested in the symbiotic phenomenon, i.e., in those physical processes occurring in the atmosphere of each individual object and in their time dependence. Such a research can be performed through the detailed analysis of individual objects. This study should be done for a time long enough to cover all the different phases of their activity, in all the spectral ranges. Since the typical time scale of the symbiotic phenomena is up to several years and decades, this represents a problem since, for instance, making astronomy outside the visual region is a quite new field of research. It was a fortunate case that a few symbiotic stars (Z And, AG Dra, CH Cyg, AX Per, and PU Vul) had undergone remarkable light variations (or 'outbursts') in recent years, which could have been followed in the space ultraviolet with IUE, and simultaneously in the optical and IR with ground-based telescopes. But, in general, the time coverage of most of the symbiotic objects is too short to have a complete picture of their behavior. In this regard, one should recall Mayall's remark about the light curve of Z And: 'Z Andromedae is another variable that shows it will require several hundred years of observations before a good analysis can be made of its variations'. This pessimistic remark should be considered as a note of caution for those involved in the interpretation of the observations. We shall discuss a number of individual symbiotic stars for which the amount of observational data is large enough to draw a rather complete picture of their general behavior and to make consistent models. We shall especially illustrate the necessary steps toward an empirical model and take the discussion of the individual objects as a useful occasion to describe different techniques of diagnosis.

A search for cosmological supernovae has discovered a number of a type Ia supernovae. In particular, one at z = 0.458 is the most distant supernovae yet observed. There is strong evidence from measurements of nearby type Ia supernovae that they can be considered as 'standard candles'. The authors plan to use these supernovae to measure the deceleration in the general expansion of the universe. The aim of their experiment is to try and observe and measure about 30 such distant supernovae in order to obtain a measurement of the deceleration parameter q(sub o) which is related to (Omega). Here (Omega) is the ratio of the density of the universe to the critical density, and they expect a measurement with an accuracy of about 30%. DOE

CO, HCO(+) AND HCN ABSORPTION IN THE GRAVITATIONAL LENS CANDIDATE B0218+357 AT $z=0.685$
T. Wiklind and F. Combes (Observatoire de Paris, France.) Dec. 1994 10 p
(PB95-185146) Avail: CASI HC A02/MF A01

Absorption lines of CO(1-2), CO(2-3), HCO+(1-2) and HCN(1-2) have been detected at a redshift of Z(a) = 0.68466 towards the background BL Lac object B0218+357. The CO and HCN lines are strongly saturated, while the HCO+ line is mildly saturated. Lower limits to the column densities are given. The filling factor for the background source is larger than 0.7-0.8. The absorption line profile is asymmetric with a width of approximately 30 km/s B0218+357 is a gravitational lens candidate with two compact continuum sources separated by 335 mas (1.8 kpc). The small linewidth of the molecular absorption puts constraints on the inclination and position angle of the lensing galaxy. We also report a search for quasi stellar objects (QSO's) molecular absorption lines in 12 other redshifted systems; none were detected. NTIS

X-ray studies of galaxies by the Smithsonian Astrophysical Observatory (SAO) and MIT are described. Activities at SAO include ROSAT PSPC x-ray data reduction and analysis pipeline; x-ray sources in nearby Sc galaxies; optical, x-ray, and radio study of ongoing galactic merger; a radio, far infrared, optical, and x-ray study of the Sc galaxy NGC247; and a multiparametric analysis of the Einstein sample of early-type galaxies. Activities at MIT included continued analysis of observations with ROSAT and ASCA, and continued development of new approaches to spectral analysis with ASCA and AXAF. Also, a new method for characterizing structure in galactic clusters was developed and applied to ROSAT images of a large sample of clusters. An appendix contains preprints generated by the research. SPACE MODELER: AN EXPANDED, DISTRIBUTED, VIRTUAL ENVIRONMENT FOR SPACE VISUALIZATION M.S. Thesis
John C. Vanderburgh Dec. 1994 93 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289409; AFIT/GCS/ENG/94D-23) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The Space Modeler is the first truly immersive virtual environment that models the solar system, models satellites in near-Earth orbit, and can operate in a Distributed Interactive Simulation (DIS) environment. It increases the capabilities of the 1993 Satellite Modeler by expanding the physical limits of the environment and by implementing a new three-dimensional user interface. Satellite orbits are modeled using NASA two line element sets. The positions of the Sun, Moon and planets are computed using an algorithm based on planetary orbital element sets using a linear polynomial fit. For higher precision, the planetary orbits can be computed using an algorithm based on VSOP87 planetary theory. The user interface is a three-dimensional array of panels, with buttons for controlling all aspects of the environment. The interface is easily accessible to an immersed user, and provides interactive movement controls for five. degrees of freedom, attachment to objects in the environment, setting the rate at which the simulation runs, and toggling the display of all visual features. The Space Modeler can model the solar system and render up to 50 satellites in near-Earth orbit using magnetic head tracking with a 20-30 Hz frame update rate. DTIC

OBSERVATIONS OF COMETS WITH THE IUE Final Report, 1 Dec. 1992 - 31 Jan. 1995
Paul D. Feldman 31 Jan. 1995 8 p
(Grant NAG5-2141)
(NASA-CR-197816; NAS 1.26:197816) Avail: CASI HC A02/MF A01

This is the final report for Observation of Comets with the IUE, which began in December 1992 and was completed in January 1995. This grant continued our IUE program which began in July 1979 and was terminated in September 1992. Attached in Appendix A is a complete list of publications related to IUE observations of comets from 1980 to the present. Publication numbers 51-53 appeared during the December 1992 - January 1995 period and copies of these are being forwarded to the NSSDC along with this report. Papers presented at recent scientific meetings are listed in Appendix B. During this period we have concentrated our effort into two distinct areas: new observations of comets of interest and continuing analysis of the data from previous observations. Derived from text

TRACKING AND IMPACT PREDICTION OF EARTH-CROSSING-OBJECTS (ECO'S) ON A COLLISION COURSE WITH EARTH M.S. Thesis
Gregory A. Bishop Dec. 1994 108 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A289321; AFIT/GSO/ENY/94D-01) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

This study investigated the effectiveness of earth-based angles only observations in determining the orbit of various hypothetical earth-crossing-objects (ECO's). 'True' trajectories were simulated specifically for earth-crossing-comets (ECC's) by numerically integrating in a restricted three body system. Starting at earth impact points, the state vectors were 'reverse-propagated' to a proposed detection time. Observations (obs), with state-of-the-art accuracy, were then simulated with error induced by a Gaussian random number generator; these were used in a least-squares differential corrector to estimate the positions of the ECO's. State vectors and covariance matrices were then propagated to the impact times and axis lengths of the one sigma impact footprint were calculated. Varied amounts of data were fed into the differential corrector and it was determined that earth-based obs alone may be ineffective in predicting an ECC's orbit. DTIC

MOLECULAR CLOUD CONTENT OF EARLY-TYPE GALAXIES. V. CO IN ELLIPTICAL GALAXIES
T. Wiklind, F. Combes, and C. Henkel 25 Oct. 1994 19 p See also PB93-151074 Prepared in cooperation with Observatoire de Paris, Meudon France, Max-Planck-Inst. fuer Radioastronomie, Bonn, Germany Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(PB95-185153) Avail: CASI HC A03/MF A01

A survey of CO emission in 29 far-IR selected elliptical galaxies resulted in 16 detections, of which 3 remain tentative. The molecular gas masses range from 2 x 10(exp 6) solar masses to 1 x 10(exp 9) solar masses, and appear to be unrelated to the underlying stellar population. This suggests an external origin of the gas. Most of the elliptical galaxies with a molecular gas component have a gas-to-dust mass ratio of about 700, where dust masses are derived from the Infrared Astronomy Satellite (IRAS) fluxes, but some appear to have a ratio as low as 50. A small apparent gas-to-dust mass ratio is also found for some late-type galaxies, and is correlated with a low dust temperature. NTIS

(DE95-006446; LA-UR-94-3033) Avail: CASI HC A09/MF A03

Views of the Solar System has been created as an educational tour of the solar system. It contains images and information about the Sun, planets, moons, asteroids and comets found within the solar system. The image processing for many of the images was done by the author. This tour uses hypertext to allow space travel by simply clicking on a desired planet. This causes information and images about the planet to appear on screen. While on a planet page, hyperlinks travel to pages about the moons and other relevant available resources. Unusual terms are linked to and defined in the Glossary page. Statistical information of the planets and satellites can be browsed through lists sorted by name, radius and distance. History of Space Exploration contains information about rocket history, early astronauts, space missions, spacecraft and detailed chronology tables of space exploration. The Table of Contents page has links to all of the various pages within Views of the Solar System. DOE

ON HIGHER DERIVATIVE GRAVITY IN TWO DIMENSIONS
S. N. Solodukhin 1994 26 p Submitted for publication
(DE95-608789; JINR-E-2-94-185) Avail: CASI HC A03/MF A01 (US Sales Only)

The 2 D gravity described by the action which is as arbitrary function of the scalar curvature f(R) is considered. The classical vacuum solutions are analyzed. The one-loop renormalizability is studied. For the function f R1nR the model coupled with scalar (conformal) matter is exactly integrated and is shown to describe a black hole of the 2 D dilaton gravity type. The influence of one-loop quantum corrections on a classical black hole configuration is studied by including the Liouville-Polyakov term. The resulting model turns out to be exactly solvable. The general solution is analyzed and shown to be free from the space-time singularities for a certain number of scalar fields. DOE

THE SECOND COMING OF COLD DARK MATTER?
W. H. Zurek, B. C. Bromley, and M. S. Warren 1994 11 p Presented at the 5th Astrophysics Conference: Dark Matter, College Park, MD, 10-12 Oct. 1994
(Contract W-7405-eng-36)
(DE95-005156; LA-UR-94-4268; CONF-9410287-2) Avail: CASI HC A03/MF A01

While the standard cold dark matter (CDM) model has received numerous marks against it on the basis of a variety of observational data, the prediction of high (Sigma)(Upsilon), the pairwise-velocity dispersion between galaxies, on small (megaparsec) scales was reported as perhaps one of its greatest failings. Here, we reexamine the case of CDM and (Sigma)(Upsilon), with high-resolution numerical simulations. The statistic was measured in simulations, in artificial galaxy catalogs, and in the CfA North Forty redshift survey. In our reanalysis of the CfA data, we found that (Sigma)(Upsilon) (approximately) 500 km/s, significantly higher than the original estimates of Davis & Peebles (1983). This new value, along with our estimate of the velocity bias, leads to a virial measure of the cosmological density parameter, (Omega) (approximately) 0.9, which is more than four times the traditionally cited CfA result. Analysis of the simulations indicates that while the method of Davis and Peebles works well, the (Sigma)(Upsilon) statistic itself is not generally robust: there is large scatter from catalog to catalog and evidence that the recovered (Sigma)(Upsilon) value depends strongly on a small fraction of galaxies in the central regions of rare, massive clusters. Thus, at present the CDM model cannot be deemed incompatible with observed small-scale peculiar velocities. DOE

LABORATORY HIGH-ENERGY ASTROPHYSICS ON LASERS
W. H. Goldstein, D. A. Liedahl, R. S. Walling, M. E. Foord, A. L. Osterheld, and B. G. Wilson Dec. 1994 7 p Presented at the ECLIM 23: Laser Interaction With Matter, Oxford, United Kingdom, 19-23 Sep. 1994
(Contract W-7405-eng-48)
(DE95-008062; UCRL-JC-119288; CONF-9409226-5) Avail: CASI HC A02/MF A01

The tremendous range of temperatures and densities spanned by astrophysical plasmas has significant overlap with conditions attainable using high-power laser facilities. These facilities provide an opportunity to create, control, and characterize plasmas in the laboratory that mirror conditions in some of the most important cosmological systems. Moreover, laboratory experiments can enhance astrophysical understanding by focusing on and isolating important physical processes, without necessarily reproducing the exact conditions of the integral system. Basic study of radiative properties, transport phenomena, thermodynamic response and hydrodynamic evolution in plasmas under properly scaled conditions leads both directly and indirectly to improved models of complex astrophysical systems. In this paper, we will discuss opportunities for current and planned highpower lasers to contribute to the study of high-energy astrophysics. DOE

A NEW METHOD OF DETERMINING THE EJECTED MASS OF NOVAE
W. M. Sparks 1994 6 p Presented at the Padova-Abano Conference on Cataclysmic Variables: Inter Class Relations, Abano, Italy, 19-25 Jun. 1994
(Contract W-7405-eng-36)
(DE95-007884; LA-UR-95-568; CONF-9406308-1) Avail: CASI HC A02/MF A01

A new method of determining the ejected mass of novae based on simple, reasonable assumptions is presented. This method assumes that the remnant mass on the white dwarf is the same as that from the previous nova outburst. The hydrogen, helium, and metal abundances of the accreted material from the secondary must also be known or assumed. The white dwarf's mass has a small effect because the amount of hydrogen consumed during the thermonuclear runaway only depends weakly upon this mass. If the composition of the ejecta and the time of the remnant shell burnout are determined from observations, then the ejected and remnant masses can be deduced. At present only a sharp decrease in the X-rays observed by ROSAT has been attributed to this remnant burnout and only for two novae: GQ Mus and V1974 Cyg. The ejected and remnant masses for these two novae are calculated. If other indicators of nova remnant burnout, such as a rapid decrease in high-ionization lines, can be identified, then this method could be applied to additional novae. DOE

THEORETICAL STUDIES OF INTERSTELLAR PROCESSES Final Report, 1 Dec. 1991 - 28 Feb. 1995
Steven L. Guberman 28 Feb. 1995 5 p
(Grant NAGw-2832)
(NASA-CR-198647; NAS 1.26:198647) Avail: CASI HC A01/MF A01

We have been studying the dissociative recombination (DR) of HeH(+) with an electron with the goal of calculating accurate cross sections and rate coefficients to allow for the accurate modelling of the abundance of HeH(+) in planetary nebulae and supernova envelopes. A unique feature of the HeH potential curves is that none of the neutral states cross the ion curve. This required a new approach to the calculation of DR cross sections and rate coefficients that had not yet appeared in the literature. Because of the lack of a potential curve crossing, the initial electron capture occurs by Born-Oppenheimer breakdown, i.e. by the interaction of the motion of the incoming electron with the nuclear motion. This same mechanism also drives DR in H3(+) and the methods developed and described below for HeH(+) DR will be used for the future calculation of H3(+) DR. Derived from text

SEARCH FOR MOLECULAR ABSORPTIONS WITH THE FOURIER TRANSFORM SPECTROMETER Final Report
Roger F. Knacke 21 May 1995 3 p Prepared for The State Univ. of

NY, Stony Brook, NY
(Grant NAG2-495)
(NASA-CR-198648; NAS 1.26:198648) Avail: CASI HC A01/MF A01

The objective of this research was a search for water molecules in the gas phase in molecular clouds. Water should be among the most abundant gases in the clouds and is of fundamental importance in gas chemistry, cloud cooling, shock wave chemistry, and gas-grain interactions of interstellar dust. Detection of water in Comet Halley in the 2.7 micron v(3) band in 1986 had shown that airborne H2O observations are feasible (ground-based observations of H2O are impossible because of the massive water content of the atmosphere). We planned to observe the v(3) band in interstellar clouds where a number of lines of this band should be in absorption. The search for H2O commenced in 1988 with a two flight program on the KAO. this resulted in a detection of interstellar H2O with S/N of 2-4 in the v(3) 1(01)-2(02) line at 3801.42/cm. A subsequent flight series of two flights in 1989 resulted in confirmation to the 3801.42/cm line detection and the detection of altogether four strong lines in the 000-001 v(3) vibration-rotation band of H2O. INTERNATIONAL ULTRAVIOLET EXPLORER ATLAS OF B-TYPE SPECTRA FROM 1200 TO 1900 A
Nolan R. Walborn, Joel William Parker, and Joy S. Nichols Apr. 1995 101 p
(RTOP 680-00-00)
(NASA-RP-1363; Rept-95B00054; NAS 1.61:1363) Avail: Issuing Activity (Goddard Space Flight Center, Greenbelt, MD)

An Atlas of B-type spectra observed at high resolution by the International Ultraviolet Explorer is presented. It is designed to complement the widely used O-type Atlas (NASA RP-1155). The purpose is to complete the OB natural group, i.e., to spectral type B3 on the main sequence and B8 at luminosity class Ia, in order to chart the gradual disappearance of the stellar-wind features in normal spectra as a function of spectral type and luminosity class. As in the O Atlas, the primary selection criterion is well-defined optical classifications to derive a consistent ultraviolet (UV) reference frame of normal objects. Some peculiar categories are also included, particularly types BN/BC and superluminous objects. Spectrograms of 86 stars are arranged in 20 spectral-type, luminosity-class, or peculiar-object sequences. The processing and presentation are similar to the O Atlas: the 1200-l900 A range has been rectified, rebinned to a uniform resolution of 0.25A, and plotted at 10 A/cm. The conclusions from the B Atlas are similar to those from the O Atlas, namely, that the UV stellar-wind features display strong systematic trends as a function of spectral type and luminosity class, and a high degree of correlation with the optical classifications as the winds decline toward the later types. A somewhat higher rate of exceptions to these correlations can be recognized among the B spectra (11 percent) than the O (2 percent), but they remain a small fraction of the total sample and do not prevent clear delineation of the normal behavior. Indeed, it is only as a result of the latter that the exceptions can be identified and described. Author

STABILITY OF STRANGE QUARK STARS WITH NUCLEAR CRUSTS AGAINST RADIAL OSCILLATIONS
Ch. Kettner, M. K. Weigel (Ludwig-Maximilians-Univ., Munich, Germany.), F. Weber (Ludwig-Maximilians-Univ., Munich, Germany.), and N. K. Glendenning Dec. 1994 10 p Presented at the Symposium on Strangeness and Quark Matter, Crete, Greece, 1-5 Sep. 1994
(Contract DE-AC03-76SF-00098)
(DE95-008484; LBL-36209; CONF-9409310-1) Avail: CASI HC A02/MF A01

This paper investigates the stability of the complete sequence of strange-matter stars with nuclear crusts against radial pulsations (acoustical modes). It is found that a broad class of white dwarf- like strange stars is stable against such pulsations. The same holds for the much denser strange stars, which are the strange counter-parts of neutron stars. All stars possessing still higher central densities (e.g., charm stars) turn out to be unstable. DOE

STATIONARY NEUTRINO RADIATION TRANSPORT BY MAXIMUM ENTROPY CLOSURE
S. A. Bludman (California Univ., Berkeley. Lawrence Berkeley Lab, CA.) and J. Cernohorsky (California Univ., Berkeley. Lawrence Berkeley Lab, CA.) Nov. 1994 18 p Presented at the Physics of Supernovae, Philadelphia, PA, 6-8 Apr. 1994
(Contract DE-AC03-76SF-00098)
(DE95-006579; LBL-36135; UPR-0631T; CONF-9404245-1) Avail: CASI HC A03/MF A01

The authors obtain the angular distributions that maximize the entropy functional for Maxwell-Boltzmann (classical), Bose-Einstein, and Fermi-Dirac radiation. In the low and high occupancy limits, the maximum entropy closure is bounded by previously known variable Eddington factors that depend only on the flux. For intermediate occupancy, the maximum entropy closure depends on both the occupation density and the flux. The Fermi-Dirac maximum entropy variable Eddington factor shows a scale invariance, which leads to a simple, exact analytic closure for fermions. This two-dimensional variable Eddington factor gives results that agree well with exact (Monte Carlo) neutrino transport calculations out of a collapse residue during early phases of hydrostatic neutron star formation. THEORETICAL AND EXPERIMENTAL MODELS OF THE DIFFUSE RADAR BACKSCATTER FROM MARS Final Report, 1 Jul. 1990 - 30 Jun. 1994
A. W. England 19 May 1995 84 p
(Grant NAGw-2199)
(NASA-CR-198650; NAS 1.26:198650) Avail: CASI HC A05/MF A01

The general objective for this work was to develop a theoretically and experimentally consistent explanation for the diffuse component of radar backscatter from Mars. The strength, variability, and wavelength independence of Mars' diffuse backscatter are unique among our Moon and the terrestrial planets. This diffuse backscatter is generally attributed to wavelength-scale surface roughness and to rock clasts within the Martian regolith. Through the combination of theory and experiment, the authors attempted to bound the range of surface characteristics that could produce the observed diffuse backscatter. Through these bounds they gained a limited capability for data inversion. Within this umbrella, specific objectives were: (1) To better define the statistical roughness parameters of Mars' surface so that they are consistent with observed radar backscatter data, and with the physical and chemical characteristics of Mars' surface as inferred from Mariner 9, the Viking probes, and Earth-based spectroscopy; (2) To better understand the partitioning between surface and volume scattering in the Mars regolith; (3) To develop computational models of Mars' radio emission that incorporate frequency dependent, surface and volume scattering. STUDIES OF PLANETARY SCALE WAVES AND INSTABILITIES IN SUPPORT OF THE GEOPHYSICAL FLUID FLOW CELL EXPERIMENT ON USML-2 Final Technical Report
J. E. Hart 30 May 1995 35 p Original contains color illustrations

(Grants NAG8-190; NAG8-1077)
(NASA-CR-198646; NAS 1.26:198646) Avail: CASI HC A03/MF A01; 2 functional color pages

High resolution numerical simulations of thermal convection in a rapidly rotating channel with gravity perpendicular to the rotation vector are described. The convecting columns are subject to a beta-effect resulting from cross-channel topographic vortex stretching. The symmetries of the problem allow many invariant wavenumber sets, and this property is associated with the existence of stable multiple-equilibria at modest supercriticality. The transition to chaotic behavior involves the production of intermittent unstable orbits off a two-torus in energy space. At very high Rayleigh number (of order 10(exp 6) to 10(exp 7)) the motion can be turbulent, depending on the size of beta. However, the turbulence is usually characterized by an almost-periodic formation of patches of small scale convection that cause regular pulsations in the accompanying strong zonal jets. The processes maintaining these flows may be related to those responsible for the zonal currents on Jupiter and for cyclic variability on the Sun. Author

TOPS: TOWARD OTHER PLANETARY SYSTEMS. A REPORT BY THE SOLAR SYSTEM EXPLORATION DIVISION
1995 138 p
(NASA-TM-110609; NAS 1.15:110609; PB95-184024) Avail: CASI HC A07/MF A02

This report describes a general plan and the pertinent technological requirements for TOPS (Toward Other Planetary Systems), a staged program to ascertain the prevalence and character of other planetary systems and to construct a definitive picture of the formation of stars and their planets. The first stages focus on discovering and studying a significant number of fully formed planetary systems, as well as expanding current studies of protoplanetary systems. As the TOPS Program evolves, emphasis will shift toward intensive study of the discovered systems and of individual planets. Early stages of the TOPS Program can be undertaken with ground-based observations and space missions comparable in scale to those now being performed. In the long term, however, TOPS will become an ambitious program that challenges our capabilities and provides impetus for major space initiatives and new technologies. NTIS

AXIONIC FUEL FOR SUN
V. S. Vanyashin Aug. 1994 5 p
(DE95-608788; IC-94/223) Avail: CASI HC A01/MF A01 (US Sales Only)

If a Bose condensate of relic hypothetical axions is sufficiently accumulated by the Sun during its evolution, it may be a noticeable source of solar energy, complementary to the thermonuclear one. For the rate of the condensate relaxation in the solar plasma medium an adequate kinetic Boltzmann equation has been derived. Fortunately, the effect depends on first rather than second power of the small coupling constant, that is typical for the quantum parametric resonance phenomena. DOE

PLASMA PROPERTIES AND MAGNETIC FIELD STRUCTURE OF THE SOLAR CORONA, BASED ON COORDINATED MAX 1991 OBSERVATIONS FROM SERTS, THE VLA, AND MAGNETOGRAPHS Annual Report, 12 Jul. 1994 - 11 Jul. 1995
Jeffrey W. Brosius 11 Jul. 1995 44 p
(Contract NASw-4933)
(NASA-CR-198592; NAS 1.26:198592) Avail: CASI HC A03/MF A01

The purposes of this investigation are to use existing, calibrated, coaligned sets of coordinated multiwaveband observations of the Sun to determine the coronal magnetic field strength and structure, and interpret the collective observations in terms of a self-consistent model of the coronal plasma and magnetic field. This information is vital to understanding processes such as coronal heating, solar wind acceleration, pre-flare energy storage, and active region evolution. Understanding these processes is the central theme of Max '91, the NASA-supported series of solar observing campaigns under which the observations acquired for this work were obtained. The observations came from NASA/GSFC's Solar EUV Rocket Telescope and Spectrograph (SERTS), the Very Large Array (VLA), and magnetographs. The technique of calculating the coronal magnetic field is to establish the contributions to the microwave emission from the two main emission mechanisms: thermal bremsstrahlung and thermal gyroemission. This is done by using the EUV emission to determine values of the coronal plasma quantities needed to calculate the thermal bremsstrahlung contribution to the microwave emission. Once the microwave emission mechanism(s) are determined, the coronal magnetic field can be calculated. A comparison of the coronal magnetic field derived from the coordinated multiwaveband observations with extrapolations from photospheric magnetograms will provide insight into the nature of the coronal magnetic field. SOLAR UV FLUX MEASUREMENTS FROM THE SBUV2 MONITOR ON THE NOAA9 SATELLITE. PART 1: Mg II h AND k LINE CORE-TO-WING RATIOS FOR 1986-1988 Technical Memo
R. F. Donnelly, L. C. Puga, J. Barrett, S. D. Bouwer, J. Pap, D. E. Stevens, and W. K. Tobiska Dec. 1994 220 p Prepared in cooperation with Colorado Univ.
(PB95-181962; NOAA-TM-ERL-SEL-85) Avail: CASI HC A10/MF A03

Analyses of the discrete-wavelength mode of observations of the solar full-disk MG 2 h and k line spectral irradiance measured by the Solar Backscatter UV Monitor (SBUV2) on the NOAA9 satellite are presented. Relative photometry techniques were used to derive a core-to-wing. This ratio has been modified, relative to that used by Heath and Schlesinger's (1986) classical MG 2 ratio derived for solar UV measurements made by their SBUV experiment aboard the Nimbus-7 satellite, to avoid inter-range instrumentation drifts encountered in the NOAA9 SBUV2 monitor. Prior research of the solar MG 2 h and k lines is reviewed. The raw measurements and observational parameters, such as the angle of the Sun as seen at the SBUV2 monitor are discussed. Temporal interpolations among the sets of discrete-mode measurements are used to account for most of the Sun-angle dependence and to reduce the sensitivity of the results to any errors in the Sun angles. Wavelength 'jitter' and long-term drift are studied, and intensity linearity and inter-range drift are analyzed. The NOAA9 results are compared with same-day Nimbus-7 data, the Kitt Peak Ca K1 angstrom index, the Canadian 10.7 cm solar radio flux, and observations of the solar H Lyman alpha line. NTIS

THREEFOLD MAXIMAL LEPTON MIXING AND THE SOLAR AND ATMOSPHERIC NEUTRINO DEFICITS

P. F. Harrison, D. H. Perkins, and W. G. Scott Dec. 1994 29 p

Prepared in cooperation with Queen Mary and Westfield Coll. and Oxford Univ.

(PB95-196259; RAL-94-125) Avail: Issuing Activity

Threefold maximal mixing would imply a cyclic permutation symmetry among the generations. The data from solar and atmospheric neutrino experiments are consistent with such mixing, and require a hierarchical spectrum of mass-squared differences for the neutrinos. A fit for the two independent mass-squared differences (excluding only the HOMESTAKE solar neutrino result) yields: Delta(m squared) = (0.72 + or - 0.18) x 10(exp -2)e(V squared) and Delta(m' squared) less than 0.9 x 10(exp -11)e(V squared) at 90% confidence. In the case that the neutrino mass spectrum is qualitatively similar to that of the charged leptons and quarks, these results can be re-expressed in terms of the neutrino masses as follows: m(3) approx = 85 + or - 10 meV, and m(1), m(2) less than 3(micro)eV at 90% confidence. Implications for future experiments are discussed. NTIS

(NASA-TP-3524; L-17450; NAS 1.60:3524) Avail: CASI HC A03/MF A01

High-speed commercial flight transportation is being studied for intercontinental operations in the 21st century, the projected operational characteristics for these aircraft are examined, the radiation environment as it is now known is presented, and the relevant health issues are discussed. Based on a critical examination of the data, a number of specific issues need to be addressed to ensure an adequate knowledge of the ionizing radiation health risks of these aircraft operations. Large uncertainties in our knowledge of the physical fields for high-energy neutrons and multiply-charged ion components need to be reduced. Improved methods for estimating risks in prenatal exposure need to be developed. A firm basis for solar flare monitoring and forecasting needs to be developed with means of exposure abatement. MULTIWAVELENGTH OBSERVATIONS OF UNIDENTIFIED HIGH ENERGY GAMMA-RAY SOURCES Annual Status Report, 15 Feb. 1994 - 14 Feb. 1995

Jules P. Halpern May 1995 17 p

(Grant NAG5-2051)

(NASA-CR-197840; NAS 1.26:197840; CAL-2314) Avail: CASI HC A03/MF A01

As was the case for COS B, the majority of high-energy (greater than 100 MeV) gamma-ray sources detected by the EGRET instrument on GRO are not immediately identifiable with catalogued objects at other wavelengths. These persistent gamma-ray sources are, next to the gamma-ray bursts, the least understood objects in the universe. This two year investigation is intended to support the analysis, correlation, and theoretical interpretation of data that we are obtaining at x-ray, optical, and radio wavelengths in order to render the gamma-ray data interpretable. This second year was devoted to studies of unidentified gamma-ray sources from the first EGRET catalog, similar to previous observations. Efforts have concentrated on the sources at low and intermediate Galactic latitudes, which are the most plausible pulsar candidates. Derived from text

Johnson Space Center, Houston, TX.), R. Silberberg (Universities Space Research Association, Washington, DC.), C. H. Tsao (Naval Research Lab., Washington, DC.), Lawrence W. Townsend, and Ram K. Tripathi (Christopher Newport Coll., Newport News, VA.) May 1995 148 p

(RTOP 199-45-16-11)

(NASA-TP-3495; L-17417; NAS 1.60:3495) Avail: CASI HC A07/MF A02

The high-charge-and energy (HZE) transport computer program HZETRN is developed to address the problems of free-space radiation transport and shielding. The HZETRN program is intended specifically for the design engineer who is interested in obtaining fast and accurate dosimetric information for the design and construction of space modules and devices. The program is based on a one-dimensional space-marching formulation of the Boltzmann transport equation with a straight-ahead approximation. The effect of the long-range Coulomb force and electron interaction is treated as a continuous slowing-down process. Atomic (electronic) stopping power coefficients with energies above a few A MeV are calculated by using Bethe's theory including Bragg's rule, Ziegler's shell corrections, and effective charge. Nuclear absorption cross sections are obtained from fits to quantum calculations and total cross sections are obtained with a Ramsauer formalism. Nuclear fragmentation cross sections are calculated with a semiempirical abrasion-ablation fragmentation model. The relation of the final computer code to the Boltzmann equation is discussed in the context of simplifying assumptions. A detailed description of the flow of the computer code, input requirements, sample output, and compatibility requirements for non-VAX platforms are provided. Author

NASA created the Numerical Aerodynamic Simulation (NAS) Program in 1987 to focus resources on solving critical problems in aeroscience and related disciplines by utilizing the power of the most advanced supercomputers available. The NAS Program provides scientists with the necessary computing power to solve today's most demanding computational fluid dynamics problems and serves as a pathfinder in integrating leading-edge supercomputing technologies, thus benefitting other supercomputer centers in government and industry. The 1993-94 operational year concluded with 448 high-speed processor projects and 95 parallel projects representing NASA, the Department of Defense, other government agencies, private industry, and universities. This document provides a glimpse at some of the significant scientific results for the year. Author

The Evaluation of Oxygen Interactions with Materials 3 (EOIM-3) flight experiment was developed to obtain benchmark atomic oxygen reactivity data and was conducted during Space Transportation System Mission 46 (STS-46), July 31 to August 7, 1992. In this paper, we present an overview of EOIM-3 and the results of the Lyndon B. Johnson Space Center (JSC) materials reactivity and mass spectrometer/carousel experiments. Mass spectrometer calibration methods are discussed briefly, as a prelude to a detailed discussion of the mass spectrometric results produced during STS-46. Mass spectrometric measurements of ambient O-atom flux and fluence are in good agreement with the values calculated using the MSIS-86 model of the thermosphere as well as estimates based on the extent of O-atom reaction with Kapton polyimide. Mass spectrometric measurements of gaseous products formed by O-atom reaction with C(13) labeled Kapton revealed CO, CO2, H2O, NO, and NO2. Finally, by operating the mass spectrometer so as to detect naturally occurring ionospheric species, we characterized the ambient ionosphere at various times during EOIM-3 and detected the gaseous reaction products formed when ambient ions interacted with the C(13) Kapton carousel sector. By direct comparison of the results of on-orbit O-atom exposures with those conducted in ground-based laboratory systems, which provide known O-atom fluences and translational energies, we have demonstrated the strong translational energy dependence of O-atom reactions with a variety of polymers. A 'line-of-centers' reactive scattering model was shown to provide a reasonably accurate description of the translational energy dependence of polymer reactions with O atoms at high atom kinetic energies while a Beckerle-Ceyer model provided an accurate description of O-atom reactivity over a three order-of-magnitude range in translational energy and a four order-of-magnitude range in reaction efficiency. Postflight studies of the polymer samples by x-ray photoelectron spectroscopy and infrared spectroscopy demonstrate that O-atom attack is confined to the near-surface region of the sample, i.e. within 50 to 100 A of the surface. The Evaluation of Oxygen Interactions with Materials 3 (EOIM-3) flight experiment was developed to obtain benchmark atomic oxygen/material reactivity data. The experiment was conducted during Space Shuttle mission 46 (STS-46), which flew July 31 to August 7, 1992. Quantitative interpretation of the materials reactivity measurements requires a complete and accurate definition of the space environment exposure, including the thermal history of the payload, the solar ultraviolet exposure, the atomic oxygen fluence, and any spacecraft outgassing contamination effects. The thermal history of the payload was measured using twelve thermocouple sensors placed behind selected samples and on the EOIM-3 payload structure. The solar ultraviolet exposure history of the EOIM-3 payload was determined by analysis of the as-flown orbit and vehicle attitude combined with daily average solar ultraviolet and vacuum ultraviolet (UV/VUV) fluxes. The atomic oxygen fluence was assessed in three different ways. First, the O-atom fluence was calculated using a program that incorporates the MSIS-86 atmospheric model, the as-flown Space Shuttle trajectory, and solar activity parameters. Second, the oxygen atom fluence was estimated directly from Kapton film erosion. Third, ambient oxygen atom measurements were made using the quadrupole mass spectrometer on the EOIM-3 payload. Our best estimate of the oxygen atom fluence as of this writing is 2.3 +/- 0.3 x 10(exp 20) atoms/sq cm. Finally, results of post-flight X-ray photoelectron spectroscopy (XPS) surface analyses of selected samples indicate low levels of contamination on the payload surface. Author

A passive tray was flown on the Effects of Oxygen Interaction with Materials experiment on STS-46 (EOIM-3) with 82 samples from The Aerospace Corporation. A variety of advanced materials related to potential uses on future spacecraft were included for evaluation representing optical coatings, lubricants, polymers, composites, carbon-carbon composite protective coatings, graphite protective coatings, thermal-control materials, and some samples of current materials. An overview of the available results from the investigations of these materials is presented. Author

The third Effects of Oxygen Atom Interaction with Materials (EOIM 3) experiment flew on STS-46 from July 31 to August 8, 1992. The EOIM-3 sample tray was exposed to the low-earth orbit space environment for 58.55 hours at an altitude of 124 nautical miles resulting in a calculated total atomic oxygen (AO) fluence of 1.99 x 10(exp 20) atoms/sq cm. Five samples previously flown on the Long Duration Exposure Facility (LDEF) Experiment M0003 were included on the Aerospace EOIM 3 experimental tray: (1) Chemglaze A276 white thermal control paint from the LDEF trailing edge (TE); (2) S13GLO white thermal control paint from the LDEF TE; (3) S13GLO from the LDEF leading edge (LE) with a visible contamination layer from the LDEF mission; (4) Z306 black thermal control paint from the LDEF TE with a contamination layer from the LDEF mission; and (5) anodized aluminum from the LDEF TE with a contamination layer from the LDEF mission. The purpose of this experiment was twofold: (l) investigate the response of trailing edge LDEF materials to atomic oxygen exposure, thereby simulating LDEF leading edge phenomena; (2) investigate the response of contaminated LDEF samples to atomic oxygen in attempts to understand LDEF contamination-atomic oxygen interactions. This paper describes the response of these materials to atomic oxygen exposure, and compares the results of the EOIM 3 experiment to the LDEF mission and to ground-based atomic oxygen exposure studies. With increasing flight duration and the possibility of a permanent facility in space, long-term monitoring of material degradation due to atomic oxygen is increasing in importance. Reliance on models to determine the fluence of atomic oxygen is not only necessarily complex but also imprecise due to the strong dependence of oxygen concentration on day/night, latitude and solar activity. Mass-spectroscopy, the traditional method for determining the gas phase species densities at low pressure, is not only expensive but is limited in the area that it can monitor. Our group has developed a simple and inexpensive dosimeter to measure the atomic oxygen fluence via the change in resistance as the sensor element is gradually oxidized. The sensors consisted of thin-film circuit elements deposited on a suitable substrate. Four-point resistance measurements were used to monitor the change in resistance. Results obtained using silver and carbon dosimeters flown on STS-46 (CONCAP 2-01) will be discussed. Author

In 1992, UAH (University of Alabama in Huntsville) conducted a unique experiment on STS-46 in which YBa2Cu3O7 (commonly known as '1-2-3' superconductor) high-T(c) superconducting thin film samples prepared at three different laboratories were exposed to 5 eV atomic oxygen in low Earth orbit on the ambient and 320 C hot plate during the first flight of the CONCAP-2 (Complex Autonomous Payload) experiment carrier. The resistance of the thin films was measured in flight during the atomic oxygen exposure and heating cycle. Superconducting properties were measured in the laboratory before and after the flight by the individual experimenters. Films with good superconducting properties, and which were exposed to the oxygen flux, survived the flight including those heated to 320 C (600 K) with properties essentially unchanged, while other samples which were heated but not exposed to oxygen were degraded. The properties of other flight controls held at ambient temperature appear unchanged and indistinguishable from those of ground controls, whether exposed to oxygen or not. Author

Avail: CASI HC A02/MF A04

Six different types of carbon and carbon-boron nitride composites were exposed to low Earth orbit aboard Space Shuttle flight STS-46. The samples received a nominal atomic oxygen fluence of 2.2 x 10(exp 20) atoms/sq cm in 42 hours of exposure. Pyrolytic graphite and highly oriented pyrolytic graphite showed significant degradation, and the measured erosion yield was within a factor of two of published values. The erosion yield of pyrolytic boron nitride was found to be 2.6 x 10(exp 26) cu cm/atom in plasma asher exposure, over 42 times lower than that of pyrolytic graphite. This low erosion yield makes graphite plus boron nitride mixtures quite resistant to low Earth orbit exposure. Evidence suggests that the graphitic component was preferentially etched, leaving the surface boron nitride rich. Degradation resistance increases with boron nitride composition. Carbon fiber/carbon composites degraded in low Earth orbit, and the carbon pitch binder was found to etch more easily than the graphite fibers which have much higher degradation resistance. Avail: CASI HC A03/MF A04

The third Evaluation of Oxygen Interaction with Materials experiment was flown on Space Shuttle Mission STS-46 (July 31 - August 8, 1992), representing a joint effort of several NASA centers, universities, and contractors. This array of active instrumentation and material exposure sub-assemblies was integrated as a Shuttle cargo bay pallet experiment for investigating the effects of orbital atomic oxygen on candidate space materials. Marshall Space Flight Center contributed several passive exposure trays of material specimens, uniform stress and static stress material exposure fixtures, the Atomic Oxygen Resistance Monitor (AORM), and specimens of thermal coatings for the EOIM-3 variable exposure mechanisms. As a result of 42 hours of spacecraft velocity vector-oriented exposure during the later phases of the STS-46 mission in LEO, EOIM-3 materials were exposed to an atomic oxygen fluence of 2.2 x 10(exp 20) atoms/sq cm. In this paper, an overview is presented of the technical approaches and results from analyses of the MSFC flight specimens, fixtures, and the AORM. More detailed results from earlier EOIM missions, the LDEF, and from laboratory testing are included in associated papers of this conference session. Author

EFFECTS OF ATOMIC OXYGEN ON POLYMERIC MATERIALS FLOWN ON EOIM-3 c27

Rachel R. Kamenetzky, Roger C. Linton, Miria M. Finckenor, and Jason A. Vaughn *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1011-1023 (For primary document see N95-27629 09-99)
Avail: CASI HC A03/MF A04

Diverse polymeric materials, including several variations of Kapton, were flown on STS-46 as part of the Evaluation of Oxygen Interaction with Materials Experiment (EOIM-3). These materials were flown in the cargo bay and exposed to the space environment July 31 - August 8, 1992, including 40 hours of direct atomic oxygen impingement. The atomic oxygen exposure was approximately 2.2 x 10(exp 20) atoms/sq cm. Polymeric materials flown on EOIM-3 include coated and uncoated Kapton, Tefzel ETFE, Lexan, FEP and TFE Teflon, bulk Halar and PEEK, S383 silicone and Viton elastomeric seal material. Analyses performed included thickness measurements using Dektak and eddy current methods, mass loss, resistance, permeability, hardness, and FTIR. The effects of stress and the space environment on Kapton were also evaluated. Previous EOIM missions on STS-5 and STS-8 and the Long Duration Exposure Facility also contained polymeric material samples. Data from these previous flights are shown for comparison, as well as ground simulation of space environment effects using both thermal energy flow tubes and 5 eV neutral atomic oxygen beam facilities. Reaction efficiencies for the various atomic oxygen exposure conditions are discussed. Author

THERMAL CONTROL MATERIALS ON EOIM-3 c27

Miria M. Finckenor, Roger C. Linton, Rachel R. Kamenetzky, and Jason A. Vaughn *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1025-1035 (For primary document see N95-27629 09-99)
Avail: CASI HC A03/MF A04

Thermal control paints, anodized aluminum, and beta cloth samples were flown on STS-46 as part of the Evaluation of Oxygen Interaction with Materials Experiment (EOIM-3). The thermal control paints flown on EOIM-3 include ceramic and polyurethane-based paints. Passively exposed samples are compared to actively heated samples and controlled exposure samples. Optical property measurements of absorptivity, emissivity, and spectrofluorescence are presented for each paint. Several variations of anodized aluminum, including chromic acid anodize, sulfuric acid anodize, and boric/sulfuric acid anodize were flown on the actively heated trays and the passive exposure trays. The post-flight optical properties are within tolerances for these materials. Also flown were two samples of yellow anodized aluminum. The yellow anodized aluminum samples darkened noticeably. Samples of aluminized and unaluminized beta cloth, a fiberglass woven mat impregnated with TFE Teflon, were flown with passive exposure to the space environment. Data from this part of the experiment is correlated to observations from LDEF and erosion of the Teflon thin film samples also flown on EOIM-3 and LDEF. Author

SOLID FILM LUBRICANTS AND THERMAL CONTROL COATINGS FLOWN ABOARD THE EOIM-3 MDA SUB-EXPERIMENT c27

Taylor J. Murphy, Kaia E. David, and Hank W. Babel *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1037-1052 (For primary document see N95-27629 09-99)
Avail: CASI HC A03/MF A04

Additional experimental data were desired to support the selection of candidate thermal control coatings and solid film lubricants for the McDonnell Douglas Aerospace (MDA) Space Station hardware. The third Evaluation of Oxygen Interactions With Materials Mission (EOIM-3) flight experiment presented an opportunity to study the effects of the low Earth orbit environment on thermal control coatings and solid film lubricants. MDA provided five solid film lubricants and two anodic thermal control coatings for EOIM-3. The lubricant sample set consisted of three solid film lubricants with organic binders one solid film lubricant with an inorganic binder, and one solid film lubricant with no binder. The anodize coating sample set consisted of undyed sulfuric acid anodize and cobalt sulfide dyed sulfuric acid anodize, each on two different substrate aluminum alloys. The organic and inorganic binders in the solid film lubricants experienced erosion, and the lubricating pigments experienced oxidation. MDA is continuing to assess the effect of exposure to the low Earth orbit environment on the life and friction properties of the lubricants. Results to date support the design practice of shielding solid film lubricants from the low Earth orbit environment. Post-flight optical property analysis of the anodized specimens indicated that there were limited contamination effects and some atomic oxygen and ultraviolet radiation effects. These effects appeared to be within the values predicted by simulated ground testing and analysis of these materials, and they were different for each coating and substrate. Author

EVALUATION OF SPACE ENVIRONMENTAL EFFECTS ON METALS AND OPTICAL THIN FILMS ON EOIM-3 c25
Jason A. Vaughn, Roger C. Linton, Miria M. Finckenor, and Rachel R. Kamenetzky *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1053-1065 (For primary document see N95-27629 09-99)
Avail: CASI HC A03/MF A04

Metals and optical thin films exposed to the space environment on the Third Flight of the Evaluation of Oxygen Interactions with Materials (EOIM-3) payload, onboard Space Shuttle mission STS-46 were evaluated. The materials effects described in this paper include the effects of space exposure on various pure metals, optical thin films, and optical thin film metals. The changes induced by exposure to the space environment in the material properties were evaluated using bidirectional reflectance distribution function (BRDF), specular reflectance (250 nm to 2500 nm), ESCA, VUV reflectance (120 nm to 200 nm), ellipsometry, FTIR and optical properties. Using these analysis techniques gold optically thin film metal mirrors with nickel undercoats were observed to darken due to nickel diffusion through the gold to the surface. Also, thin film nickel mirrors formed nickel oxide due to exposure to both the atmosphere and space. Author

ANALYSIS OF SELECTED SPECIMENS FROM THE STS-46 ENERGETIC OXYGEN INTERACTION WITH MATERIALS-3 EXPERIMENT c25
Johnny L. Golden, Roger J. Bourassa, Harry W. Dursch, and H. Gary Pippin *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1067-1094 (For primary document see N95-27629 09-99)
Avail: CASI HC A03/MF A04

The Energetic Oxygen Interaction with Materials 3 (EOIM-3) experiment was flown on the STS-46 mission, which was launched on 31 Jul. 1992 and returned 8 Aug. 1992. Boeing specimens were located on both the NASA Marshall Space Flight Center (MSFC) tray and the Ballistic Missile Defense Organization (BMDO) tray integrated by the Jet Propulsion Laboratory (JPL). The EOIM-3 pallet was mounted in the Space Shuttle payload bay near the aft bulkhead. During the mission, the atomic oxygen (AO) exposure levels of specimens in these passive sample trays was about 2.3 x 10(exp 20) atoms/sq cm. The specimens also received an estimated 22 equivalent sun hours of solar exposure. In addition, it appears that the EOIM-3 pallet was exposed to a silicone contamination source and many specimens had a thin layer of silicon based deposit on their surfaces after the flight. The specimens on the MSFC tray included seven solid film lubricants, a selection of butyl rubber (B612) and silicone (S383) o-rings, three indirect scatter surfaces, and Silver/Fluorinated Ethylene Propylene (Ag/FEP) and Chemglaze A276 specimens which had previously flown on trailing edge locations of the Long Duration Exposure Facility (LDEF). The specimens on the JPL tray included composites previously flown on LDEF and two indirect scattering surfaces. Derived from text

MOLECULAR BEAM SCATTERING FROM C-13 ENRICHED KAPTON AND CORRELATION WITH THE EOIM-3 CAROUSEL EXPERIMENT c72
Timothy K. Minton and Teresa A. Moore *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1095-1114 (For primary document see N95-27629 09-99)
Avail: CASI HC A03/MF A04

Mass spectra of products emerging from identical samples of a C-13-enriched polyimide polymer (chemically equivalent to Kapton) under atomic oxygen bombardment in space and in the laboratory were collected. Reaction products unambiguously detected in space were CO-13, NO, (12)CO2, and (13)CO2. These reaction products and two others, H2O and CO-12, were detected in the laboratory, along with inelastically scattered atomic and molecular oxygen. Qualitative agreement was seen in the mass spectra taken in space and in the laboratory; the agreement may be improved by reducing the fraction of O2 in the laboratory molecular beam. Both laboratory and space data indicated that CO and CO2 products come preferentially from reaction with the imide component of the polymer chain, raising the possibility that the either component may degrade in part by the 'evaporation' of higher molecular weight fragments. Laboratory time-of-flight distributions showed: (1) incomplete energy accommodation of impinging O and O2 species that do not react with the surface; and (2) both hyperthermal and thermal CO and CO2 products, suggesting two distinct reaction mechanisms with the surface. Author

BMDO MATERIALS TESTING IN THE EOIM-3 EXPERIMENT c25
Shirley Y. Chung, David E. Brinza, Timothy K. Minton, and Ranty H. Liang *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1115-1128 (For primary document see N95-27629 09-99)
Avail: CASI HC A03/MF A04

The NASA Evaluation of Oxygen Interactions with Materials-3 (EOIM-3) experiment served as a testbed for a variety of materials that are candidates for Ballistic Missile Defense Organization (BMDO) space assets. The materials evaluated on this flight experiment were provided by BMDO contractors and technology laboratories. A parallel ground-based exposure evaluation was conducted using the Fast Atom Sample Tester (FAST) atomic-oxygen simulation facility at Physical Sciences, Inc. The EOIM-3 flight materials were exposed to an atomic oxygen fluence of approximately 2.3 x 10(exp 20) atoms/sq cm. The ground-based exposure fluence of 2.0 - 2.5 x 10(exp 20) atoms/sq cm permits direct comparison with that of the flight-exposed specimens. The results from the flight test conducted aboard STS-46 and the correlative ground-based exposure are summarized here. A more detailed correlation study is presented in the JPL Publication 93-31 entitled 'Flight-and Ground-Test Correlation Study of BMDO SDS Materials: Phase 1 Report'. In general, the majority of the materials survived the AO environment with their performance tolerances maintained for the duration of the exposure. Optical materials, baffles, and coatings performed extremely well as did most of the thermal coatings and tribological materials. A few of the candidate radiator, threat shielding, and structural materials showed significant degradation. Many of the coatings designed to protect against AO erosion of sensitive materials performed this function well. Author

One of the active instruments incorporated into the Evaluation of Oxygen Interactions with Materials - 3 experiment was a quadrupole mass spectrometer. The primary objectives for this instrument, which was built by the Air Force Phillips Laboratory and was a veteran of the STS-4 flight in 1982, were to quantify the flux of atomic oxygen striking the test surfaces in the EOIM-3 payload and to detect surface reaction products from the materials in the carousel. Other speakers in this session have covered the results of these experiments. Prior to the 40-hour-long dedicated EOIM-3 mission segment at the end of the STS-46 flight, the authors used the mass spectrometer to make measurements of ion and neutral gas composition in the shuttle environment. About 25 hours of data were collected during a variety of mission events, including Eureca deployment at high altitude and many tethered satellite system operations. Author

Point defect formation associated with early stages of optical damage was observed unexpectedly in two, and possibly three, different optical materials subjected to short-duration space exposure. Three calcium fluoride, two lithium fluoride, and three magnesium fluoride samples were flown on Space Shuttle flight STS-46 as part of the Evaluation of Oxygen Interactions with Materials - Third Phase experiment. One each of the calcium and magnesium fluoride samples was held at a fixed temperature of 60 C during the space exposure, while the temperatures of the other samples were allowed to vary with the ambient temperature of the shuttle cargo bay. Pre-flight and post-flight optical absorption measurements were performed on all of the samples. With the possible exception of the magnesium fluoride samples, every sample clearly showed the formation of F-centers in that section of the sample that was exposed to the low earth orbit environment. Solar vacuum ultraviolet radiation is the most probable primary cause of the defect formation; however, the resulting surface metallization may be synergistically altered by the atomic oxygen environment. Avail: CASI HC A01/MF A04

The Systems Special Investigation Group (Systems SIG), formed by the LDEF Project Office to perform post-flight analysis of LDEF systems hardware, was chartered to investigate the effects of the extended LDEF mission on both satellite and experiment systems and to coordinate and integrate all systems related analyses performed during post-flight investigations. The Systems SIG published a summary report in April, 1992 titled 'Analysis of Systems Hardware Flown on LDEF - Results of the Systems Special Investigation Group' that described findings through the end of 1991. The Systems SIG, unfunded in FY 92 and FY93, has been funded in FY 94 to update this report with all new systems related findings. This paper provides a brief summary of the highlights of earlier Systems SIG accomplishments and describes tasks the Systems SIG has been funded to accomplish in FY 94. Derived from text

SYSTEM RESULTS FROM FRECOPA **c25**
Christian Durin, Lucinda Berthoud, and Jean-Claude Mandeville *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1153-1165 (For primary document see N95-27629 09-99)
Avail: CASI HC A03/MF A04

The work carried out over the past three years on FRECOPA and the LDEF has enabled a large quantity of information to be collected, part of which has already been exploited. As far as CNES is concerned, the major spin-offs of this mission mainly focus on the orbital environment and the behavior of materials in such an environment. With respect to the environment, the authors shall develop the lessons learned from expert appraisals on impacts by microparticles, which are the main feature observed in this area. As for the materials, the results show a variety of behavior when subjected to the space environment and even now constitute a wealth of information for the designing and validation of future mechanical systems. Apart from these direct spin-offs, there are repercussions on in-flight and ground testing, the calibration of test benches and improvements to simulation models. Author

SPACE ENVIRONMENTAL EFFECT ON SOLAR CELLS: LDEF AND OTHER FLIGHT TESTS **c44**
Peter Gruenbaum and Harry Dursch *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1167-1177 (For primary document see N95-27629 09-99)
(Contract NAS1-19247)
Avail: CASI HC A03/MF A04

This paper summarizes results of several experiments flown on the Long Duration Exposure Facility (LDEF) to examine the effects of the space environment on materials and technologies to be used in solar arrays. The various LDEF experiments are compared to each other as well as to other solar cell flight data published in the literature. Data on environmental effects such as atomic oxygen, ultraviolet light, micrometeoroids and debris, and charged particles are discussed in detail. The results from the LDEF experiments allow us to draw several conclusions. Atomic oxygen erodes unprotected silver interconnects, unprotected Kapton, and polymer cell covers, but certain dielectric coatings can protect both silver and Kapton. Cells that had wrap-around silver contacts sometimes showed erosion at the edges, but more recently developed wrap-through cells are not expected to have these problems. Micrometeoroid and debris damage is limited to the area close to the impact, and microsheet covers provide the cells with some protection. Damage from charged particles was as predicted, and the cell covers provided adequate protection. In general, silicon cells with microsheet covers showed very little degradation, and solar modules showed less than 3 percent degradation, except when mechanically damaged. The solar cell choices for the Space Station solar array are supported by the data from LDEF. Author

A FINAL LOOK AT LDEF ELECTRO-OPTIC SYSTEMS COMPONENTS **c74**
M. D. Blue *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1179-1188 (For primary document see N95-27629 09-99)
Avail: CASI HC A02/MF A04

Postrecovery characteristics of LDEF electro-optic components from the GTRI tray are compared with their prelaunch characteristics and with the characteristics of similar components from related experiments. Components considered here include lasers, light-emitting diodes, semiconducting radiation detectors and arrays, optical substrates, filters, and mirrors, and specialized coatings. Our understanding of the physical effects resulting from low earth orbit are described, and guidelines and recommendations for component and materials choices are presented. Author

EFFECTS OF THE LDEF ORBITAL ENVIRONMENT ON THE REFLECTANCE OF OPTICAL MIRROR MATERIALS **c74**
Howard Herzig and Charles Fleetwood, Jr. *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1189-1203 (For primary document see N95-27629 09-99)
Avail: CASI HC A03/MF A04

Specimens of eight different optical mirror materials were flown in low earth orbit as part of the Long Duration Exposure Facility (LDEF) manifest to determine their ability to withstand exposure to the residual atomic oxygen and other environmental effects at those altitudes. Optical thin films of aluminum, gold, iridium, osmium, platinum, magnesium fluoride-overcoated aluminum and reactively deposited, silicon monoxide-protected aluminum, all of which were vacuum deposited on polished fused silica substrates, were included as part of Experiment S0010, Exposure of Spacecraft Coatings. Two specimens of polished, chemical vapor deposited (CVD) silicon carbide were installed in sites available in Experiment A0114, Interaction of Atomic Oxygen with Solid Surfaces at Orbital Altitudes, which included trays in two of the spacecraft bays, one on the leading edge and the other on the trailing edge. One of the silicon carbide samples was located in each of these trays. This paper will compare specular reflectance data from the preflight and postflight measurements made on each of these samples and attempt to explain the changes in light of the specific environments to which the experiments were exposed. Avail: CASI HC A03/MF A04

Two mirror designs developed for space applications were flown along with a standard mid-infrared design on the leading and trailing edges of the Long Duration Exposure Facility (LDEF). Preliminary observations of induced changes in optical performance of ZnS-coated mirrors and impact-related microstructural and microchemical effects are described in the proceedings of the First LDEF Post-Retrieval Symposium. In this paper, effects of the induced environment and meteoroid/debris impacts on mirror performance are described in more detail. Also, an analysis of reflectance spectra using the results of Auger and secondary ion mass spectroscopy (SIMS) profiling measurements are used to identify an optical-degradation mechanism for the ZnS-coated mirrors. Structural damage associated with a high-velocity impact on a (Si/Al_2O_3)-coated mirror was imaged optically and with scanning electron and atomic force microscopy (SEM and AFM). Scanning Auger and SIMS analysis provided chemical mapping of selected impact sites. The impact data suggest design and fabrication modifications for obtaining improved mechanical performance using a design variation identified in preflight laboratory simulations. Auger surface profile and SIMS imaging data verified the conclusion that secondary impacts are the source of contamination associated with the dendrites grown on the leading-edge ZnS-coated test samples. It was also found that dendrites can be grown in the laboratory by irradiating contaminated sites on a trailing-edge ZnS-coated sample with a rastered electron beam. These results suggest a mechanism for dendrite growth. Author

At the time of our Second LDEF Post-Retrieval Symposium report, we had completed cleaning and measuring the post flight spectral performance of all of the samples except for the fused silica substrate with an antireflection (SiO_2/TiO_2) coating. As was documented in that report, after cleaning, all of the samples returned to their original pre-flight performance, with the exception of the fused silica anti-reflectance coated sample, which had significant degraded performance. All normal methods of removing the contaminant from the surface of this sample failed except for oxygen plasma etch. At the time of the previous report, we had only exposed the sample to three hours of plasma etch. We have since continued the plasma etch for a total of 32 hours, after which time, the transmission of the sample almost reached its pre-flight values. The peak areas of the transmission curves remained shifted approximately 150 nm. Of interest is the fact that the control samples, which hadn't flown, did not exhibit any spectral shifting. In summary, after the 6 yr exposure to the space environment, all of the coatings and substrates returned to their pre-flight performance after cleaning, with the exception of the antireflection coated fused silica sample. On this sample, the spectral transmission curves shifted approximately 150 nm. Author (revised)

LONG DURATION EXPOSURE FACILITY (LDEF) SPACE OPTICS HANDBOOK Abstract Only c74

William T. Kemp, Edward Taylor, Robert Champetier (Science Applications International Corp., Santa Monica, CA.), Alan Watts (POD Associates, Inc., Albuquerque, NM.), and Dale Atkinson (POD Associates, Inc., Albuquerque, NM.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1229 (For primary document see N95-27629 09-99)

Avail: CASI HC A01/MF A04

The overall objective of this effort is to construct a top-level space optics handbook that provides design guidelines based upon data collected from the Long Duration Exposure Facility (LDEF) experiment. The content of the handbook would cover optical coatings, surfaces, fiber optics, and fabricating process for lenses, windows and mirrors that were used on LDEF. The goal of this program (and handbook) is to ensure that the space community can derive the maximum benefit from the LDEF experiment relative to future optics designs for space applications. The summary of this handbook is 'What did we learn from the LDEF experiment?' Author

SPACE ENVIRONMENTAL EFFECTS OBSERVED ON THE HUBBLE SPACE TELESCOPE c27

Joel E. Edelman (Long Duration Exposure Facility Newsletter, Silver Spring, MD.) and James B. Mason *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1231-1236 (For primary document see N95-27629 09-99)

Avail: CASI HC A02/MF A04

The Hubble Space Telescope (HST) Repair Mission of December, 1993, was first and foremost a mission to improve the performance of the observatory. But for a specialized segment of the aerospace industry, the primary interest is in the return to Earth of numerous pieces of the HST hardware, pieces which have been replaced, repaired, improved, or superseded. The returned hardware is of interest because of the information it potentially carries about the effects of exposure to the space environment for three and a half years. Like the LDEF retrieval mission four years ago, the HST repair mission is of interest to many engineering disciplines, including all of the disciplines represented by the LDEF Special Investigation Groups (SIG's). There is particular interest in the evaluation of specific materials and systems in the returned components. Some coated surfaces have been processed with materials which are newer and still in use by, or under consideration for, other spacecraft in a variety of stages of development. Several of the systems are being returned because a specific failure or anomaly has been observed and thus there is, at the outset, a specific investigative trail that needs to be followed. These systems are much more complex than those flown on LDEF and, in two instances, comprised state-of-the-art science instruments. Further, the parts used in these systems generally were characterized more rigorously prior to flight than were those in the LDEF systems, and thus post flight testing may yield more significant results. HARDWARE CLEANLINESS METHODOLOGY AND CERTIFICATION c25

Gale A. Harvey, Thomas J. Lash, and J. Richard Rawls *In its* LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1237-1243 (For primary document see N95-27629 09-99)

Avail: CASI HC A02/MF A04

Inadequacy of mass loss cleanliness criteria for selection of materials for contamination sensitive uses, and processing of flight hardware for contamination sensitive instruments is discussed. Materials selection for flight hardware is usually based on mass loss (ASTM E-595). However, flight hardware cleanliness (MIL 1246A) is a surface cleanliness assessment. It is possible for materials (e.g. Sil-Pad 2000) to pass ASTM E-595 and fail MIL 1246A class A by orders of magnitude. Conversely, it is possible for small amounts of nonconforming material (Huma-Seal conformal coating) to not present significant cleanliness problems to an optical flight instrument. Effective cleaning (precleaning, precision cleaning, and ultra cleaning) and cleanliness verification are essential for contamination sensitive flight instruments. Polish cleaning of hardware, e.g. vacuum baking for vacuum applications, and storage of clean hardware, e.g. laser optics, is discussed. Silicone materials present special concerns for use in space because of the rapid conversion of the outgassed residues to glass by solar ultraviolet radiation and/or atomic oxygen. Non ozone depleting solvent cleaning and institutional support for cleaning and certification are also discussed. Author

FROM LDEF TO A NATIONAL SPACE ENVIRONMENT AND EFFECTS (SEE) PROGRAM: A NATURAL PROGRESSION Abstract Only c12

David E. Bowles, Robert L. Calloway, Joan G. Funk, William H. Kinard, and Arlene S. Levine *In its* LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1247-1248 (For primary document see N95-27629 09-99)

Avail: CASI HC A01/MF A04

As the LDEF program draws to a close, it leaves in place the fundamental building blocks for a Space Environment and Effects (SEE) program. Results from LDEF data analyses and investigations now form a substantial core of knowledge on the long term effects of the space environment on materials, system and structures. In addition, these investigations form the basic structure of a critically-needed SEE archive and database system. An agency-wide effort is required to capture all elements of a SEE program to provide a more comprehensive and focused approach to understanding the space environment, determining the best techniques for both flight and ground-based experimentation, updating the models which predict both the environments and those effects on subsystems and spacecraft, and, finally, ensuring that this multitudinous information is properly maintained, and inserted into spacecraft design programs. Many parts and pieces of a SEE program already exist at various locations to fulfill specific needs. The primary purpose of this program, under the direction of the Office of Advanced Concepts and Technology (OACT) in NASA Headquarters, is to take advantage of these parts; apply synergisms where possible; identify and when possible fill-in gaps; coordinate and advocate a comprehensive SEE program. The SEE program must coordinate and support the efforts of well-established technical communities wherein the bulk of the work will continue to be done. The SEE program will consist of a NASA-led SEE Steering Committee, consisting of government and industry users, with the responsibility for coordination between technology developers and NASA customers; and Technical Working Groups with primary responsibility for program technical content in response to user needs. The Technical Working Groups are as follows: Materials and Processes; Plasma and Fields; Ionizing Radiation; Meteoroids and Orbital Debris; Neutral External Contamination; Thermosphere, Thermal, and Solar Conditions; Electromagnetic Effects; Integrated Assessments and Databases. Specific technology development tasks will be solicited through a NASA Research Announcement to be released in May of 1994. The areas in which tasks are solicited include: (1) engineering environment definitions, (2) environments and effects design guidelines, (3) environments and effects assessment models and databases, and (4) flight/ground simulation/technology assessment data. A major objective of the Space Act of 1958 which led to the establishment of the National Aeronautics and Space Administration (NASA) was the dissemination of science and technology. Today, under NASA administrator Daniel Goldin and the White House, there is a reemphasis on the dissemination and transfer of NASA science and technology to U.S. industry: both aerospace and non aerospace. The goal of this transfer of science and technology is to aid U.S. industries, making them more competitive in the global economy. After 69 months in space, LDEF provided new and important information on the space environment and how this hostile environment impacts spacecraft materials and systems. The space environment investigated by the LDEF researchers included: ionizing radiation, ultraviolet radiation, meteoroid and debris, atomic oxygen, thermal cycling, vacuum, microgravity, induced contamination and various synergistic effects. The materials used as part of LDEF and its experiments include polymers, metals, glass, paints and coatings. Fiber optic, mechanical, electrical, and optical systems were also used on LDEF. As part of the effort to disseminate and transfer LDEF science and technology, an annotated bibliographic database is being developed. This bibliography will be available electronically, as well as in hard copy. All LDEF domestic and foreign publications in the open literature, including scientific journals, the NASA LDEF Symposia volumes, books, technical reports and unrestricted contractor reports will be included in this database. The hard copy, as well as the electronic database, will be categorized by section in the scientific and technical discipline. Derived from text

THE LONG DURATION EXPOSURE FACILITY (LDEF) PHOTOGRAPHIC SURVEY SPECIAL PUBLICATION c82

Robert L. ONeal (O'Neal, Robert L., Hampton, VA.), Arlene S. Levine, and Carol C. Kiser (Kiser, Carol C., Hampton, VA.) *In its* LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1267-1269 (For primary document see N95-27629 09-99)

Avail: CASI HC A01/MF A04

During the construction, integration, launch, retrieval and deintegration of the Long Duration Exposure Facility (LDEF), photographic surveys were made. Approximately 10,000 photographs were taken during the various phases of the LDEF project. These surveys are of technical and scientific importance because they revealed the pre and post flight conditions of the experiment trays as well as the spacecraft. Visual inspection of the photographs reveal valuable data such as space environment's effects and the earth atmosphere's effects post-retrieval. Careful files and records have been kept of these photographs. Each photograph has a Kennedy Space Center photo number or a Johnson Spaceflight Center photo number as well as a Langley Research Center photo number. The tray number, row number, and experiment number are also noted. Out of the 10,000 photographs taken, approximately 700 selected photographs were chosen for publication in a NASA Special Publication (SP) because they reveal the effects of space exposure to the viewer. These photographs will give researchers and spacecraft designers visual images of the effects of the space environment on specific materials, systems and spacecraft in general. One can visually see the degradation of thermal blankets, meteoroid craters, outgassing discoloration, atomic oxygen erosion, etc. Derived from text

LDEF'S CONTRIBUTION TO THE SELECTION OF THERMAL CONTROL COATINGS FOR THE SPACE STATION c27

Henry W. Babel *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1273-1283 (For primary document see N95-27629 09-99)

Avail: CASI HC A03/MF A04

The design of the Space Station presented new challenges in the selection and qualification of thermal control materials that would survive in low Earth orbit for a duration of up to 30 years. Prior to LDEF, flight data were obtained from Orbiting Solar Observatory (OSO) satellites, a number of Orbiter flights, and limited ground tests. The excellent data obtained from the OSO satellites were based on calorimetry and temperature measurements which were transmitted to Earth; these satellites were not recovered. For some of these flight experiments it was difficult to distinguish between changes due to contamination, atomic oxygen (AO), ultraviolet radiation (UV), particle radiation and the synergistic effects between them. The data from Shuttle flights were primarily focused on developing a better understanding of atomic oxygen (AO) effects. Although UV and AO were present, the relatively short duration of the Orbiter flights, about one week, was viewed as too short to show the effects from UV or possible synergistic interactions with AO and contamination. At the beginning of the program in 1989 there was no established design data base for AO resistant thermal control coatings for the Space Station. Then came the Long Duration Exposure Facility (LDEF). It provided the first long life data for materials exposed and recovered from space with a characterized environment. Post flight analysis proved data on the effects of contamination on optical properties in the ram (velocity) and wake directions and the erosion of Teflon and multilayer insulation (MLI) covers. The results from LDEF confirmed and, in some cases, modified the approach used for the Space Station, as well as helped to focus our development activities. These development activities resulted in a number of new technical solutions which are applicable to many spacecraft surfaces and missions. LDEF also showed the detrimental effects that could occur from silicone contamination, an issue that has not been completely resolved. An investigation was initiated in 1993 on the effects of silicone contamination and was continuing at the time this paper was prepared. Author

SPACE STATION PROGRAM STATUS AND RESEARCH CAPABILITIES **c18**

Alan C. Holt *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1285-1288 (For primary document see N95-27629 09-99)

Avail: CASI HC A01/MF A04

Space Station will be a permanent orbiting laboratory in space which will provide researchers with unprecedented opportunities for access to the space environment. Space Station is designed to provide essential resources of volume, crew, power, data handling and communications to accommodate experiments for long-duration studies in technology, materials and the life sciences. Materials and coatings for exposure research will be supported by Space Station, providing new knowledge for applications in Earthbased technology and future space missions. Space Station has been redesigned at the direction of the President. The redesign was performed to significantly reduce development, operations and utilization costs while achieving many of the original goals for long duration scientific research. An overview of the Space Station Program and capabilities for research following the redesign is presented below. Accommodations for pressurized and external payloads are described. SPACE STATION AS A LONG DURATION EXPOSURE FACILITY **c18**

Adrienne Folley and Jim Scheib *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1289-1300 (For primary document see N95-27629 09-99)

Avail: CASI HC A03/MF A04

There is need for a space platform for experiments investigating long duration exposure to space. This platform should be maintainable in the event of a malfunction, and experiments should be easily recoverable for analysis on Earth. The International Space Station provides such a platform. The current Space Station configuration has six external experiment attachment sites, providing utilities and data support distributed along the external truss. There are also other sites that could potentially support long duration exposure experiments. This paper describes the resources provided to payloads at these sites, and cites examples of integration of proposed long duration exposure experiments on these sites. The environments to which external attached payloads will be exposed are summarized. Author

A MATERIALS EXPOSURE FACILITY **c18**

Wayne S. Slemp and Don E. Avery *In its* LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1301-1304 (For primary document see N95-27629 09-99)

Avail: CASI HC A01/MF A04

The objective of the Materials Exposure Facility (MEF) is to provide a test bed in space for conducting long-term (greater than one year) materials experiments which require exposure to the low Earth orbit (LEO) space environment. The proposed MEF is planned to be an integral part of the agency's Space Environments and Effects Research Program. The facility will provide experiment trays similar to the Long Duration Exposure Facility (LDEF). Each tray location is planned to have a power and data interface and robotic installation and removal provisions. Space environmental monitoring for each side of the MEF will also be provided. Since routine access to MEF for specimen retrieval is extremely important to the materials research, Space Station Freedom has been chosen as the preferred MEF carrier. Derived from text

AN LDEF FOLLOW-ON SPACECRAFT CONCEPT Abstract Only **c18**

Vernon Keller, Larry Breazeale, Don Perkinson, and William H. Kinard (National Aeronautics and Space Administration. Langley Research Center, Hampton, VA.) *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1307 (For primary document see N95-27629 09-99)

Avail: CASI HC A01/MF A04

The successful flight, retrieval, and analyses of the Long Duration Exposure Facility (LDEF) experiments demonstrated the value of long duration space exposure for a broad spectrum of science and engineering investigations. The original LDEF was an excellent gravity gradient spacecraft, but because of its 9 m length and 9,700 kg mass it was difficult to manifest on the Shuttle, for either launch or retrieval, in conjunction with other payloads. This paper discusses an LDEF follow-on spacecraft concept whose short stowed length (approximately 3 m) greatly improves Shuttle manifesting opportunities while still providing very large surface area exposure for experiments. Deployable 'wings' on each end of the short, 'cylindrical' main body of this new spacecraft provide the means for gravity gradient stabilization while greatly increasing the spacecraft surface area. The center section of the spacecraft is oriented with the end faces of the twelve sided, 4.2 m diameter 'cylinder' perpendicular to the velocity vector thus providing large areas for experiments in both the ram and anti-ram directions as well as additional exposure area around the periphery of the cylinder. When deployed and properly oriented with the Shuttle's Remote Manipulator System (RMS), both wings of the spacecraft are oriented edge on to the direction of motion and lie in the plane which contains the local gravity vector. The relatively thin wings readily accommodate dual side exposure of glass plate stacks for cosmic ray detection. Flat surfaces mounted normal to and on the periphery of the wings provide additional areas in both the ram and anti-ram directions for cosmic dust, micrometeoroid, and orbital debris collection free of contamination from 'splatter' off secondary surfaces. The baseline concept provides enhancements not available on the original LDEF such as solar array generated electrical power and data telemetry. Status of the efforts to promote support for and ultimately space flight of this concept will be presented. Suggestions for improvements in the spacecraft design and proposed utilization are solicited. Author

LONG DURATION EXPOSURE FACILITY POST-FLIGHT DATA AS IT INFLUENCES THE TROPICAL RAINFALL MEASURING MISSION **c47**

Sharon A. Straka *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1309-1318 (For primary document see N95-27629 09-99)

Avail: CASI HC A02/MF A04

The Tropical Rainfall Measuring Mission (TRMM) is an earth observing satellite that will be in a low earth orbit (350 kilometers) during the next period of maximum solar activity. The TRMM observatory is expected to experience an atomic oxygen fluence of 8.9 x 10(exp 22) atoms per square centimeter. This fluence is ten times higher than the atomic oxygen impingement incident to the Long Duration Exposure Facility (LDEF). Other environmental concerns on TRMM include: spacecraft glow, silicon oxide contaminant build-up, severe spacecraft material degradation, and contamination deposition resulting from molecular interactions with the dense ambient atmosphere. Because of TRMM's predicted harsh environment, TRMM faces many unique material concerns and subsystem design issues. The LDEF data has influenced the design of TRMM and the TRMM material selection process. Author

ORBITING METEOROID AND DEBRIS COUNTING EXPERIMENT **c90**
William H. Kinard, Dwayne Armstrong, Sharon K. Crockett, James L. Jones, Jr., Philip C. Kassel, Jr., and J. J. Wortman (North Carolina State Univ., Raleigh, NC.) *In its* LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1331-1340 (For primary document see N95-27629 09-99)
Avail: CASI HC A02/MF A04

The Orbiting Meteoroid and Debris Counting Experiment (OMDC) flew for approximately 90 days in a highly elliptical earth orbit onboard the Clementine Interstage Adapter (ISA) Spacecraft. This experiment obtained data on the impact flux of natural micrometeoroids and it provided limited information on the population of small mass man-made debris as a function of altitude in near earth space. The flight of the OMDC experiment on the ISA spacecraft also demonstrated that the ultra-lightweight, low-power, particle impact detector system that was used is a viable system for flights on future spacecraft to monitor the population of small mass man-made debris particles and to map the cosmic dust environment encountered on interplanetary missions. An overview of the ISA spacecraft mission, the approach to the OMDC experiment, and the data obtained by the experiment are presented. Author

Avail: CASI HC A03/MF A04

Three projects are currently underway for the development of new coatings for the protection of materials in the space environment. These coatings are based on vacuum deposition technologies. The projects will go as far as the proof-of-concept stage when the commercial potential for the technology will be demonstrated on pilot-scale fabrication facilities in 1996. These projects are part of a subprogram to develop supporting technologies for automation and robotics technologies being developed under the Canadian Space Agency's STEAR Program, part of the Canadian Space Station Program. Avail: CASI HC A03/MF A04

Industry and university participants have joined together to form the IMPA:Ct consortium (In-situ Monitors of the Particulate Ambient: Circumterrestrial) which offers a broad range of flight qualified instruments for monitoring the small particle (0.1 micron to 10 cm) environment in space. Instruments are available in 12 months or less at costs ranging from 0.5 to 1.5 million dollars (US) for the total program. Detector technologies represented by these groups are: impact-induced capacitor-discharge (MOS, metal-oxide-silicon), cratering or penetration of electroactive thin film (polyvinylidene fluoride (PVDF)), impact-plasma detection, acoustic detection, CCD tracking of optical scatter of sunlight, and photodiode detection of optical scatter of laser light. The operational characteristics, general spacecraft interface and resource requirements (mass/power/telemetry), cost and delivery schedules, and points of contact for seven different instruments are presented. A NEW TECHNIQUE FOR GROUND SIMULATION OF HYPERVELOCITY DEBRIS **c14**
R. Roybal, J. Shively, C. Stein, C. Miglionico, and R. Robertson *In* NASA. Langley Research Center, LDEF: 69 Months in Space. Third Post-Retrieval Symposium, Part 3 Feb. 1995 p 1379-1388 (For primary document see N95-27629 09-99)
Avail: CASI HC A02/MF A04

A series of hypervelocity damage experiments were preformed on spacecraft materials. These experiments employed a technique which accelerates micro flyer plates simulating space debris traveling at 3 to 8 km/sec. The apparatus used to propel the micro flyer plates was compact and fit well into a space environmental chamber equipped with instrumentation capable of analyzing the vapor ejected from the sample. Mechanical damage to the sample was also characterized using optical and scanning electron microscpopy. Data for this work was obtained from hypervelocity impacts on a polysulfone resin and a graphite polysulfone composite. Polysulfone was selected because it was flown on the Long Duration Exposure Facility (LDEF) which spent several years in low earth orbit (LEO). Chemistry of the vapor produced by the impact was analyzed with a time of flight mass spectrometer, (TOFMS). This represents the first time that ejected vapors from hypervelocity collisions were trapped and analyzed with a mass spectrometer. With this approach we are able to study changes in the vapor chemistry as a function of time after impact, obtain a velocity measurement of the vapor, and estimate a temperature of the surface at time of impact using dynamic gas equations. Samples of the vapor plume may be captured and examined by transmission electron microscopy. Studies were also conducted to determine mechanical damage to a graphite polysulfone composite and a polysulfone resin. Impact craters were examined under optical and scanning electron microscopes. The collision craters in the matrix were typical of those shown in conventional shock experiments. However, the hypervelocity collisions with the graphite polysulfone composite were remarkably different than those with the resin. Author

SPACEFLIGHT REVOLUTION: NASA LANGLEY RESEARCH CENTER FROM SPUTNIK TO APOLLO
James R. Hansen 1995 563 p
(NASA-SP-4308; NAS 1.21:4308; LC-94-24592) Avail: CASI HC A24/MF A04; SOD HC

As part of the transition to the broad research scope of the National Aeronautics and Space Administration (NASA) starting in the late 1950's, the Langley Research Center underwent many changes in program content, organization and management, and areas of personnel expertise. This book describes and evaluates the evolution and activities of the Langley Research Center during the seventeen-year period from 1958 to 1975. The book was based on the analysis of hundreds of written records, both published and unpublished, as well as numerous personal interviews with many of the key individuals involved in the transition of Langley. Some of the projects and research areas covered include Project Echo, magnetoplasmadynamics research, Scout Rocket Program, lunar-orbit rendezvous research, manned space laboratory development, and Apollo and the Lunar Orbiter Project. RESEARCH AND TECHNOLOGY OBJECTIVES AND PLANS SUMMARY (RTOPS) Research and Technology Program, FY 1993

Mar. 1993 202 p

(NASA-TM-108574; NAS 1.15:108574) Avail: CASI HC A10/MF A03

This publication represents the NASA research and technology program for FY-93. It is a compilation of the Summary portions of each of the RTOP's (Research and Technology Objectives and Plans) used for management review and control of research currently in progress throughout NASA. The RTOP Summary is designed to facilitate communication and coordination among concerned technical personnel in government, in industry, and in universities. The first section containing citations and abstracts of the RTOP's is followed by four indexes: Subject, Technical Monitor, Responsible NASA Organization, and RTOP Number. Author

JTEC/WTEC ANNUAL REPORT AND PROGRAM SUMMARY: 1993/94

Geoffrey M. Holdridge, ed. Mar. 1994 204 p

(Grants NSF ECS-89-02528; NSF ECS-89-22947; NSF ENG-91-11333; NSF ENG-92-17849)

(NASA-CR-198563; NAS 1.26:198563; ISBN-1-883-71231-9; PB94-155702)

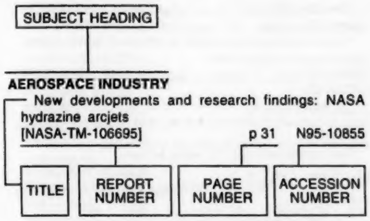
Avail: CASI HC A10/MF A03

The JTEC/WTEC (Japanese Technology Evaluation Center/World Technology Evaluation Center) Program at Loyola College is overviewed. A review of activities for 1993 and early 1994 is discussed along with plans for the following year. The bulk of the report consists of the summaries of completed projects in Information and Communication Technology; Materials; Manufacturing and Construction; Aeronautics, Space, and Ocean Technology; Energy; and Biotechnology. CASI

SUBJECT INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 33 NUMBER 9

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The page number helps you locate the citation in the abstract section. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus.*

A

ABERRATION
Frame selection performance limits for statistical image reconstruction of adaptive optics compensated images
[AD-A289240] p 2424 N95-26965
Plasma lens experiments at the final focus test beam
[DE95-008595] p 2434 N95-28161

ABLATION
Engineering calculations associated with the ablative thermal protective structures of returnable satellites
[AD-A289593] p 2162 N95-26715
Abrasion-ablation model for neutron production in heavy ion reactions
[NASA-TM-4656] p 2420 N95-27372

ABLATIVE MATERIALS
A high velocity electromagnetic mass launcher having an ablation resistant insulator
[AD-A288231] p 2154 N95-26524
Engineering calculations associated with the ablative thermal protective structures of returnable satellites
[AD-A289593] p 2162 N95-26715
Indirectly driven targets for ignition
[DE95-006451] p 2430 N95-27327
Task 4 supporting technology. Part 1: Detailed test plan for leading edge tile development. Leading edge material development and testing
[NASA-CR-198633] p 2160 N95-28258

ABNORMALITIES
Fuzzy-algebra uncertainty assessment
[DE95-005426] p 2391 N95-27432

ABRASION
Abrasion-ablation model for neutron production in heavy ion reactions
[NASA-TM-4656] p 2420 N95-27372

ABSORBENTS
Chlorodifluoromethane equilibrium on 13X molecular sieve
[AD-A289282] p 2405 N95-27034

ABSORBERS (MATERIALS)
Particle fallout/activity sensor
[NASA-CASE-KSC-11687-1] p 2293 N95-28362

ABSORPTION
Analysis of gas absorption to a thin liquid film in the presence of a zero-order chemical reaction
p 2280 N95-27348

ABSORPTION SPECTRA
CO, HCO(+) and HCN absorption in the gravitational lens candidate B0218+357 at z=0.685
[PB95-185146] p 2461 N95-26522
Overview of the observations of symbiotic stars
p 2460 N95-27076
Ionizing radiation measurements on LDEF: A0015 Free flyer biostack experiment
[NASA-CR-196603] p 2202 N95-27168
Analytical spectroscopy
[DE95-607896] p 2203 N95-27200
Programming for time resolved spectrum in pulse radiolysis experiments
[DE95-607929] p 2406 N95-27212
Particle-like absorption spectra in small transition metal clusters
[DE95-007082] p 2218 N95-27752
Observation on radiation transfer experiments using k-shell absorption spectra
[DE95-008068] p 2434 N95-28141
Multivariate classification of BPSG thin films using Mahalanobis distances
[DE95-008519] p 2267 N95-28148
Search for molecular absorptions with the Fourier Transform Spectrometer
[NASA-CR-198648] p 2462 N95-28222

ABSORPTION SPECTROSCOPY
Continuously-tunable, narrow-linewidth, Q-switched Cr:LiSAF laser for lidar applications
[DE95-006285] p 2296 N95-27672
High temperature kinetic study of the reactions H + O2 = OH + O and O + H2 = OH + H in H2/O2 system by shock tube-laser absorption spectroscopy
[NASA-CR-195473] p 2206 N95-27695
Structural oxidation state studies of the manganese cluster in the oxygen evolving complex of Photosystem II
[DE95-008488] p 2409 N95-27744
Bubble chamber spectroscopy for chemical analysis: A new concept
[DE95-006350] p 2209 N95-28088
Application of modern diagnostic methods to environmental improvement
[DE95-005797] p 2330 N95-28119

ABSORPTIVITY
Time-dependent model for vertical-cavity surface-emitting laser
[DE95-007880] p 2298 N95-28027

ABSTRACTS
Selected bibliography on heavy water, tritiated water and hydrogen isotopes (1981-1992)
[DE95-608331] p 2405 N95-27159

ABUNDANCE
Coronal abundances and their variation
[NASA-CR-197788] p 2464 N95-26671
Theoretical studies of interstellar processes
[NASA-CR-198647] p 2462 N95-28216

ACCELERATED LIFE TESTS
Progress towards computer simulation of NiH2 battery performance over life p 2272 N95-26786
Long life 80Ah standard IPV NiH2 battery cell
p 2272 N95-26787
Hubble Space Telescope nickel-hydrogen battery testing: An update p 2272 N95-26794

ACCELERATION (PHYSICS)
Analytical investigations of the acceleration sensitivity of acoustic bulk and surface wave resonators
[AD-A291715] p 2402 N95-28505

ACCELEROMETERS
Bearing defect signature analysis using advanced nonlinear signal analysis in a controlled environment
[NASA-TM-108491] p 2304 N95-28364
Material characterization system
[AD-D017385] p 2210 N95-28584

ACCEPTOR MATERIALS
Photoinduced dipoles and charge pairs in condensed phase
[DE95-007071] p 2207 N95-27921

ACCIDENT PREVENTION
Prevention and control of inlet unstart using an SR-71 simulation p 2119 N95-26948
Computational studies of projectile melt in impact with typical whipple shields
[DE95-005916] p 2311 N95-28337

ACCRETION DISKS
Nova-like variables p 2458 N95-27070
Models for various aspects of dwarf novae and nova-like stars p 2459 N95-27071
Magnetic viscosity by localized shear flow instability in magnetized accretion disks
[DE95-006879] p 2433 N95-28111

ACCUMULATORS
Replicator for characterization of cirrus and polar stratospheric cloud particles
[NASA-CR-197785] p 2341 N95-26669
To develop an aerosoling immunomagnetic device for rapid medical diagnosis from clinical samples
[AD-A288504] p 2354 N95-27059

ACCURACY
Micron Accuracy Deployment Experiment (MADE), phase A. Volume 1
[NASA-CR-197792] p 2144 N95-26426
Accurate orbit determination strategies for the tracking and data relay satellites p 2147 N95-27768
Operational improvements of long-term predicted ephemerides of the Tracking and Data Relay Satellites (TDRSs) p 2147 N95-27769
Earth horizon modeling and application to static Earth sensors on TRMM spacecraft p 2150 N95-27783
Perturbations on effective index of refraction from prism coupling
[AD-A291700] p 2427 N95-28524

ACEE PROGRAM
NASA-ACEE/Boeing 737 graphite-epoxy horizontal stabilizer service p 2138 N95-28489

ACETONITRILE
Applications of Second Harmonic and Sum Frequency Generation to graphite and silica type interfaces
[AD-A288228] p 2201 N95-26544

ACETYLENE
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-015] p 2246 N95-27213
Spectroscopic and dynamical studies of highly energized small polyatomic molecules
[DE95-006640] p 2414 N95-28199

ACIDITY
Measurement of high acidity using a renewable-reagent fiber optic sensor
[DE95-006327] p 2425 N95-27734
Porosity in hexylene-bridged polysilsesquioxanes: Effects of monomer concentration
[DE95-005421] p 2240 N95-28531
Comparison of bridged polysilsesquioxane xerogels prepared from methoxy- and ethoxy-silyl monomers
[DE95-005422] p 2240 N95-28532

ACOUSTIC ATTENUATION
Suppressor of oscillations in airframe cavities
[AD-D017265] p 2128 N95-26507
The use of acoustic methods to determine the parameters of porous materials
[IFTR-40/1994] p 2401 N95-26519

ACOUSTIC EMISSION
Bearing defect signature analysis using advanced nonlinear signal analysis in a controlled environment
[NASA-TM-108491] p 2304 N95-28364

ACOUSTIC EXCITATION
Self-excited oscillations in a duct with closed brances
[IFTR-18/1994] p 2400 N95-26358

ACOUSTIC IMPEDANCE
A finite element propagation model for extracting normal incidence impedance in nonprogressive acoustic wave fields
[NASA-TM-110160] p 2400 N95-26394

ACOUSTIC PROPERTIES
A finite element propagation model for extracting normal incidence impedance in nonprogressive acoustic wave fields
[NASA-TM-110160] p 2400 N95-26394
Analysis of historical oceanographic data on a personal computer. Program MDS
[AD-A288965] p 2363 N95-26447
The use of acoustic methods to determine the parameters of porous materials
[IFTR-40/1994] p 2401 N95-26519
Photoacoustic chambers for studying solids and gases: Theory and practical examples
[IFTR-39/1994] p 2143 N95-26837
The noise reduction potential of dual-stream coaxial rectangular improperly expanded jet flows
[NASA-CR-197820] p 2277 N95-26995
Anechoic wind tunnel study of turbulence effects on wind turbine broadband noise p 2325 N95-27992
Evaluation of a doubly-swept blade tip for rotorcraft noise reduction
[NASA-CR-189677] p 2402 N95-28264

ACOUSTIC SCATTERING
On the azimuthal Fourier components of the Green's function for the Helmholtz equation in three dimensions
[AD-A288775] p 2398 N95-26345

ACOUSTIC SOUNDING
Basic principles and recent observations of rotationally sampled wind p 2321 N95-27971

ACOUSTIC VELOCITY
Numerical analysis of wave scattering
[AD-A289478] p 2401 N95-26925

ACOUSTICS
Valve mechanism for an acoustic modulator
[AD-D017263] p 2300 N95-26504
The use of acoustic methods to determine the parameters of porous materials

ADDITIVES
The fBm Interpolator
[AD-A288996] p 2388 N95-26459
Materials Research Society Symposium Proceedings. Volume 339: Diamond, SiC and nitride wide bandgap semiconductors
[AD-A288690] p 2437 N95-26818
Photoluminescence spectroscopy of 4H- and 6H-SiC
[AD-A289326] p 2202 N95-26896
Modeling of trapping and abrupt doping effects in MESFET's using R-dynamic element
[PB95-184891] p 2262 N95-27050
Use of CTFE as an additive to enhance fire resistance of single hydraulic fluid
[AD-A289377] p 2233 N95-27325
The effect of aviation fuels containing low amounts of static dissipater additive on electrostatic charge generation
[AD-A280075] p 2243 N95-28152

ADHESION
Processing and properties of chromate-free conversion coatings on aluminum
[DE95-004768] p 2218 N95-27722
Effects of interlayers on the scratch adhesion performance of ultra-thin films of copper and gold on silicon substrates
[DE95-007367] p 2220 N95-28044
Functionalized block copolymers as adhesion promoters
[DE95-008158] p 2239 N95-28400

ADHESION TESTS
Effects of interlayers on the scratch adhesion performance of ultra-thin films of copper and gold on silicon substrates
[DE95-007367] p 2220 N95-28044

ADHESIVE BONDING
Adhesively bonded composite patch repair of cracked aluminum alloy structures p 2132 N95-27507
Field repair materials for naval aircraft
p 2133 N95-27514
The development of an engineering standard for composite repairs p 2135 N95-27528
Fracture testing and analysis of adhesively bonded joints for automotive applications
[DE95-007024] p 2184 N95-28207

ADHESIVES
Sceening, down selection, and implementation of environmentally compliant cleaning and insulation bonding for MNASA p 2165 N95-27124
Field repair materials for naval aircraft
p 2133 N95-27514
Repair of high temperature composite aircraft structure p 2134 N95-27520
Fracture testing and analysis of adhesively bonded joints for automotive applications
[DE95-007024] p 2184 N95-28207
Mechanical properties of Hysol EA-9394 structural adhesive
[DE95-008187] p 2240 N95-28405

ADIABATIC CONDITIONS
Adiabatic charging of nickel-hydrogen batteries
p 2272 N95-26795

ADJUSTING
Aircraft fuel system lightning protection design and qualification test procedures development
[AD-A288401] p 2125 N95-26497

ADSORBENTS
Chlorodifluoromethane equilibrium on 13X molecular sieve
[AD-A289282] p 2405 N95-27034

ADSORPTION
Stabilization and control of high energy intermediates through adsorption of restricted spaces
[AD-A288552] p 2201 N95-26606
Chlorodifluoromethane equilibrium on 13X molecular sieve
[AD-A289282] p 2405 N95-27034
Atomically resolved STM study of the adsorption and dissociation of methyl chloride on Si(001)
[AD-A289218] p 2438 N95-27061
Crystal structure, short-range oxygen defects, and water adsorption in La- and Nd-modified ZrO2
[DE95-007134] p 2439 N95-27452
FTIR studies of CH3OH on porous silicon
[AD-A289038] p 2207 N95-27904
Kinetics and dynamics of oxidation reactions involving adsorbed CO species on bulk supported Pt and copper oxides
[DE95-006420] p 2207 N95-27952
The role of hydrogen in the hydrogenation and hydrogenolysis of aniline on the nickel single crystal surfaces: Its implication on the mechanisms of HDN reactions
[DE95-006687] p 2222 N95-28134

ADVANCED VERY HIGH RESOLUTION RADIOMETER
Performance modeling of hyperspectral imaging sensors for atmospheric studies
[AD-A289017] p 2289 N95-26461
Linear and nonlinear trending and prediction for AVHRR time series data p 2385 N95-27391

ADVECTION
A numerical model to predict the fate of jettisoned aviation fuel
[AD-A289336] p 2242 N95-26842

AERIAL RECONNAISSANCE
Geophex airborne unmanned survey system
[DE95-007566] p 2131 N95-27440
Radon transform and its applications in gridding airborne geophysical survey data
[PB95-195533] p 2315 N95-28643

AEROACOUSTICS
Aircraft noise prediction program theoretical manual: Rotorcraft System Noise Prediction System (ROTONET), part 4
[NASA-TM-83199-PT-4] p 2400 N95-26392
The method of space-time conservation element and solution element-applications to one-dimensional and two-dimensional time-marching flow problems
[NASA-TM-106915] p 2389 N95-26663

Turbomachinery design and tonal acoustics computations [NASA-CR-197749] p 2139 N95-26777
Supersonic coaxial jet noise predictions [NASA-TM-106917] p 2401 N95-26801
An outflow boundary condition for aeroacoustic computations [NASA-TM-106930] p 2279 N95-27175
A numerical study of fundamental shock noise mechanisms [NASA-TM-110608] p 2401 N95-27908
Anechoic wind tunnel study of turbulence effects on wind turbine broadband noise p 2325 N95-27992
Evaluation of a doubly-swept blade tip for rotorcraft noise reduction [NASA-CR-189677] p 2402 N95-28264
Noise exposure reduction of advanced high-lift systems [NASA-CR-195077] p 2402 N95-28670
Response of multi-panel assembly to noise from a jet in forward motion [NASA-CR-198164] p 2289 N95-28673

AEROBRAKING
Rarefied gas effects on aerobraking/reentry vehicles with wakes [NASA-CR-196586] p 2164 N95-27093

AERODYNAMIC BALANCE
An easy way to analyze longitudinal and lateral-directional trim problems with AEO or OEI p 2119 N95-26949

AERODYNAMIC BRAKES
Comparative wind tunnel tests of NACA 23024 airfoils with several aileron and spoiler configurations p 2124 N95-27976

AERODYNAMIC CHARACTERISTICS
Simulation model of the integrated flight/propulsion control system, displays, and propulsion system for ASTOVL lift-fan aircraft [NASA-TM-108866] p 2139 N95-26412
Suppressor of oscillations in airframe cavities [AD-D017265] p 2128 N95-26507
Development and validation of a blade-element mathematical model for the AH-64A Apache helicopter [NASA-TM-108863] p 2118 N95-26710
AIAA Techfest 20 Proceedings [NIAR-94-1] p 2118 N95-26941
Modeling of aircraft unsteady aerodynamic characteristics. Part 2: Parameters estimated from wind tunnel data [NASA-TM-110161] p 2142 N95-27839
Comparative wind tunnel test at high Reynolds numbers of NACA 64 621 airfoils with two aileron configurations p 2124 N95-27977

AERODYNAMIC COEFFICIENTS
User documentation of the CTA program [AD-A289508] p 2121 N95-26854
Wind-tunnel test of the S814 thick root airfoil [DE95-000268] p 2122 N95-27541

AERODYNAMIC CONFIGURATIONS
Aeroelasticity of wing and wing-body configurations on parallel computers [NASA-CR-197756] p 2129 N95-26590
Design and testing of low sonic boom configurations and an oblique all-wing supersonic transport [NASA-CR-197744] p 2129 N95-26651
Supersonic civil airplane study and design: Performance and sonic boom [NASA-CR-197745] p 2130 N95-26813
An exploratory application of neural networks for airfoil design p 2118 N95-26943
The noise reduction potential of dual-stream coaxial rectangular improperly expanded jet flows [NASA-CR-197820] p 2277 N95-26995
The lift-fan aircraft: Lessons learned [NASA-CR-196694] p 2131 N95-27143
NAS Technical Summaries, March 1993 - February 1994 [NASA-RP-1355] p 2466 N95-27367

AERODYNAMIC DRAG
A new drag measurement system for wind tunnel testing of the racing bicycle and rider to determine a low drag configuration [AD-A289375] p 2122 N95-26875
Comparative wind tunnel test at high Reynolds numbers of NACA 64 621 airfoils with two aileron configurations p 2124 N95-27977
A hybrid vehicle evaluation code and its application to vehicle design. Revision 1 [DE95-008053] p 2303 N95-28029
A hybrid vehicle evaluation code and its application to vehicle design, revision 2 [DE95-008060] p 2303 N95-28139
Construction and wind tunnel test of a 1/12th scale helicopter model [AD-A288487] p 2123 N95-28331
Study of potential aerodynamic benefits from spanwise blowing at wingtip [NASA-TP-3515] p 2124 N95-28669

AERODYNAMIC HEATING
Engineering calculations associated with the ablative thermal protective structures of returnable satellites [AD-A289593] p 2162 N95-26715
Viscous shock-layer analysis on hypersonic flow over reentry capsule with nonequilibrium chemistry [ISAS-R-656] p 2274 N95-26739
Rarefied gas effects on aerobraking/reentry vehicles with wakes [NASA-CR-196586] p 2164 N95-27093

AERODYNAMIC LOADS
F/A-18 IFOSTP Fatigue test airbag load determination on the vertical and horizontal tails [DSTO-TR-0135] p 2128 N95-26389
Computational analysis of forebody tangential slot blowing on the high alpha research vehicle [NASA-CR-197754] p 2129 N95-26591
Preliminary analysis of dynamic stall effects on a 91-meter wind turbine rotor p 2124 N95-27975
Observed acoustic and aeroelastic spectral responses of a MOD-2 turbine blade to turbulence excitation p 2324 N95-27991
Aeroelasticity and structural optimization of composite helicopter rotor blades with swept tips [NASA-CR-4665] p 2136 N95-28262

AERODYNAMIC NOISE
Aircraft noise prediction program theoretical manual: Rotorcraft System Noise Prediction System (ROTONET), part 4 [NASA-TM-83199-PT-4] p 2400 N95-26392
A numerical study of fundamental shock noise mechanisms [NASA-TM-110608] p 2401 N95-27908
Anechoic wind tunnel study of turbulence effects on wind turbine broadband noise p 2325 N95-27992
Noise exposure reduction of advanced high-lift systems [NASA-CR-195077] p 2402 N95-28670
Response of multi-panel assembly to noise from a jet in forward motion [NASA-CR-198164] p 2289 N95-28673

AERODYNAMIC STABILITY
AIAA Techfest 20 Proceedings [NIAR-94-1] p 2118 N95-26941
A magnetic hysteresis model p 2153 N95-27801

AERODYNAMIC STALLING
Stall precursor study of high frequency data for three high speed, swept compressor rotors [AD-A289379] p 2139 N95-26878
Horizontal axis wind turbine post stall airfoil characteristics synthesization p 2124 N95-27974
Preliminary analysis of dynamic stall effects on a 91-meter wind turbine rotor p 2124 N95-27975

AERODYNAMICS
Suppressor of oscillations in airframe cavities [AD-D017265] p 2128 N95-26507
Wind-tunnel test of the S814 thick root airfoil [DE95-000268] p 2122 N95-27541
Aeronautical engineering: A continuing bibliography with indexes (supplement 318) [NASA-SP-7037(318)] p 2120 N95-27543
The Global Positioning System (GPS) and attitude determination: Applications and activities in the Flight Dynamics Division p 2152 N95-27795
Study of potential aerodynamic benefits from spanwise blowing at wingtip [NASA-TP-3515] p 2124 N95-28669

AEROELASTIC RESEARCH WINGS
Structural design optimization with survivability dependent constraints application: Primary wing box of a multi-role fighter p 2137 N95-28440

AEROELASTICITY
A non-iterative grid deformation algorithm for computational fluid dynamics for aeroelasticity [AD-A288298] p 2273 N95-26418
Aeroelasticity of wing and wing-body configurations on parallel computers [NASA-CR-197756] p 2129 N95-26590
Aeroelastic stability of wind turbine blade/aileron systems p 2124 N95-27981
Observed acoustic and aeroelastic spectral responses of a MOD-2 turbine blade to turbulence excitation p 2324 N95-27991
Aeroelasticity and structural optimization of composite helicopter rotor blades with swept tips [NASA-CR-4665] p 2136 N95-28262
Unique considerations in the design and experimental evaluation of tailored wings with elastically produced chordwise camber p 2192 N95-28436
Nonlinear dynamics and aeroelasticity of rotorcraft in forward flight [AD-A291714] p 2136 N95-28504

AEROGELS
The experience of CF Technologies, Inc. (CF Tech) in critical fluid processing p 2232 N95-27128
Ambient-pressure silica aerogel films [DE95-008161] p 2237 N95-28090

AERONAUTICAL ENGINEERING
Asian Aeronautics: Technology acquisition drives industry development. Report to Congressional requesters [GAO/NSIAD-94-140] p 2118 N95-26817
The noise reduction potential of dual-stream coaxial rectangular improperly expanded jet flows [NASA-CR-197820] p 2277 N95-26995
Aeronautical engineering: A continuing bibliography with indexes (supplement 318) [NASA-SP-7037(318)] p 2120 N95-27543
A review of Australian and New Zealand investigations on aeronautical fatigue during the period Apr. 1993 - Mar. 1995 [AR-009-202] p 2136 N95-27918
JTEC/WTEC annual report and program summary: 1993/94 [NASA-CR-198563] p 2475 N95-28038

AERONAUTICS
Research and Technology Objectives and Plans Summary (RTOPS) [NASA-TM-108574] p 2475 N95-28002

AEROSOLS
Transport phenomena and interfacial kinetics in multiphase combustion systems [AD-A288297] p 2199 N95-26417
Natural aerosol extinction module: XSCALE 1992 user's guide [AD-A289029] p 2340 N95-26463
Measurement of heterogeneous chemical processes relevant to aerosol surfaces and trace gases active in the marine environment [DE95-008337] p 2328 N95-27743
Formation of anisotropic Tl-1212, Tl-2212, Tl-1223 and Tl-2223 particles using aerosol flow reacted powders [DE95-007400] p 2444 N95-28079
Carbonaceous aerosols influencing atmospheric radiation: Black and organic carbon [DE95-006437] p 2330 N95-28118
Proceedings of the 1993 Scientific Conference on Obscuration and Aerosol Research [AD-A280084] p 2331 N95-28153
Towards the detection and attribution of an anthropogenic effect on climate [DE95-008589] p 2331 N95-28157
Toxicity assessment of liquid propellant XM46 p 2175 N95-28319
Laser beam aerosol interactions [AD-A291723] p 2300 N95-28509

AEROSPACE ENGINEERING
AGARD membership, 1995 [AGARD-MEMB-95] p 2450 N95-26353
Space Commerce 1994 Forum: The 10th National Space Symposium. Proceedings report [NASA-CR-198031] p 2144 N95-26583
The aerospace database: An introduction to AIAA'S computerized source for identifying scientific and technical information p 2119 N95-26950
The 29th Aerospace Mechanisms Symposium [NASA-CP-3293] p 2154 N95-27260
High performance stepper motors for space mechanisms p 2156 N95-27271
Thermal neutral format based on the step technology p 2283 N95-27363
Spaceflight revolution: NASA Langley Research Center from Sputnik to Apollo [NASA-SP-4308] p 2474 N95-27685
High-stakes aviation: US-Japan technology linkages in transport aircraft [LC-94-65759] p 2126 N95-27907
Research and Technology Objectives and Plans Summary (RTOPS) [NASA-TM-108574] p 2475 N95-28002
JPRS Report: Science and Technology. Central Eurasia [JPRS-UST-95-020] p 2145 N95-28257
The importance of propulsion engineers in protecting the global environment p 2170 N95-28295
Probabilistic design of advanced composite structure p 2193 N95-28443
Probabilistic evaluation of fuselage-type composite structures p 2137 N95-28444
Post impact compressive strength in composites p 2198 N95-28485
NASA/DOD Aerospace Knowledge Diffusion Research Project. Report 35: The use of computer networks in aerospace engineering [NASA-CR-198170] p 2456 N95-28600

AEROSPACE ENVIRONMENTS
Air Force Ni-H2 cell test program: State of Charge test p 2272 N95-26789

Deployment and retraction of a cable-driven solar array: Testing and simulation p 2158 N95-27283
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 3 [NASA-CP-3275-PT-3] p 2466 N95-27629
Evaluation of Oxygen Interactions with Materials 3: Mission and induced environments p 2210 N95-27631
Exposure of LDEF materials to atomic oxygen: Results of EOIM 3 p 2210 N95-27633
Inflight resistance measurement on high-T(sub c) superconducting thin films exposed to orbital atomic oxygen on CONCAP-2 (STS-46) p 2272 N95-27635
Orbital atomic oxygen effects on materials: An overview of MSFC experiments on the STS-46 EOIM-3 p 2419 N95-27637
Effects of atomic oxygen on polymeric materials flown on EOIM-3 p 2242 N95-27638
Point defect formation in optical materials expos ed to the space environment p 2428 N95-27646
System results from FRECOPA p 2211 N95-27648
Space environmental effect on solar cells: LDEF and other flight tests p 2326 N95-27649
Effects of the LDEF orbital environment on the reflectance of optical mirror materials p 2428 N95-27651
Effects of long term space environment exposure on optical substrates and coatings p 2428 N95-27653
Space environmental effects observed on the Hubble Space Telescope p 2242 N95-27655
From LDEF to a national Space Environment and Effects (SEE) program: A natural progression p 2145 N95-27657
The Long Duration Exposure Facility (LDEF) photographic survey special publication p 2457 N95-27660
Space Station program status and research capabilities p 2166 N95-27662
Space Station as a Long Duration Exposure Facility p 2166 N95-27663
A Materials Exposure Facility p 2166 N95-27664
An LDEF follow-on spacecraft concept p 2166 N95-27665
The orbital debris detector consortium: Suppliers of instruments for in-situ measurements of small-particles in the space environment p 2294 N95-27670
PRISM validation [AD-A288476] p 2337 N95-27703

AEROSPACE INDUSTRY
Asian Aeronautics: Technology acquisition drives industry development. Report to Congressional requesters [GAO/NSIAD-94-140] p 2118 N95-26817
Spaceport news index: January 1990 - December 1994 [NASA-TM-110653] p 2454 N95-27243
High-stakes aviation: US-Japan technology linkages in transport aircraft [LC-94-65759] p 2126 N95-27907
The importance of propulsion engineers in protecting the global environment p 2170 N95-28295

AEROSPACE MEDICINE
Aerospace medicine [AD-A289691] p 2353 N95-26763
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 402) [NASA-SP-7011(402)] p 2354 N95-27502
Acute and subacute toxicity of ammonium dinitramide (ADN) p 2175 N95-28318
Toxicity assessment of liquid propellant XM46 p 2175 N95-28319
A study of heart rate and heart rate variability during rapid decompression to 50,000 ft [AD-A291598] p 2355 N95-28561
Manikin integrated data acquisition system (MIDAS) initial modifications [AD-A291662] p 2361 N95-28667

AEROSPACE PLANES
Free Electron Laser Physical Process Code (FELPPC) [DE95-006276] p 2296 N95-27557

AEROSPACE SAFETY
Probabilistic risk assessment of the Space Shuttle. Phase 3: A study of the potential of losing the vehicle during nominal operation. Volume 2: Integrated loss of vehicle model [NASA-CR-197809] p 2159 N95-26399
Computational studies of projectile melt in impact with typical whipple shields [DE95-005916] p 2311 N95-28337

AEROSPACE SCIENCES
The aerospace database: An introduction to AIAA'S computerized source for identifying scientific and technical information p 2119 N95-26950
NAS Technical Summaries, March 1993 - February 1994 [NASA-RP-1355] p 2466 N95-27367
Research and Technology Objectives and Plans Summary (RTOPS) [NASA-TM-108574] p 2475 N95-28002
JPRS Report: Science and Technology. Central Eurasia [JPRS-UST-95-020] p 2145 N95-28257

AEROSPACE SYSTEMS
A methodology to assess the utility of future space systems [AD-A289414] p 2144 N95-27133
Design, testing and evaluation of latching end effector p 2155 N95-27261
ORION: A Supersynchronous Transfer Orbit mission p 2154 N95-27804

AEROSPACE TECHNOLOGY TRANSFER
Space Commerce 1994 Forum: The 10th National Space Symposium. Proceedings report [NASA-CR-198031] p 2144 N95-26583

AEROTHERMODYNAMICS
Viscous shock-layer analysis on hypersonic flow over reentry capsule with nonequilibrium chemistry [ISAS-R-656] p 2274 N95-26739

AEROZINE
Alternative cleaning solvents and lubricants at the Air Force PJKS facility p 2228 N95-27108
Chemical reactions identified in the Titan 2, Titan 4, and Delta 2 propellant systems and their application to source modeling p 2172 N95-28304

AFRICA
Southern Africa: A climatological study [AD-A289466] p 2342 N95-27148

AGGLOMERATION
A 3D agglomeration multigrid solver for the Reynolds-averaged Navier-Stokes equations on unstructured meshes [NASA-CR-195073] p 2390 N95-27029

AGGREGATES
Variation of solvent scattering-length density small-angle neutron scattering as a means of determining structure of composite materials [DE95-005394] p 2183 N95-27428
Small angle x ray scattering studies of reverse micelles in supercritical fluids [DE95-007803] p 2287 N95-28021

AGING (MATERIALS)
Creep recovery of PVC and polypropylene [PB95-185112] p 2224 N95-26448
The effect of proteins on the aging properties of radiation vulcanized Natural Rubber Latex [DE95-603357] p 2225 N95-26599
Can TMAE photocathode be used for high rate applications? [DE95-008594] p 2293 N95-28178

AGRICULTURE
Survey on bio-chemical complex harmonized with global environment [DE95-759252] p 2331 N95-28535
Models used to forecast agricultural corn crops in the micro-region of Ribeirao Preto-SP [INPE-5513-NTC/309] p 2315 N95-28554

AH-64 HELICOPTER
Development and validation of a blade-element mathematical model for the AH-64A Apache helicopter [NASA-TM-108863] p 2118 N95-26710

AILERONS
Full span flaperons for a biplane p 2119 N95-26954
Comparative wind tunnel test at high Reynolds numbers of NACA 64 621 airfoils with two aileron configurations p 2124 N95-27977
Aeroelastic stability of wind turbine blade/aileron systems p 2124 N95-27981

AIR BAG RESTRAINT DEVICES
F/A-18 IFOSTP Fatigue test airbag load determination on the vertical and horizontal tails [DSTO-TR-0135] p 2128 N95-26389

AIR CARGO
Incorporating biplane wing theory into a large, subsonic, all-cargo transport p 2120 N95-26956
Enplanement and all cargo activity [AD-A280074] p 2144 N95-28151

AIR CONDITIONING
Research on combustion processes relevant to burners in HVAC systems [PB95-179735] p 2208 N95-28006
Methods development for measuring and classifying flammability/combustibility of refrigerants. Task 1: Annotated bibliography [DE95-007232] p 2238 N95-28133
Planning, design and construction of the cavern arena: Heating, ventilation and air conditioning [PB95-196382] p 2361 N95-28659

AIR FILTERS
Evaluation of microporous carbon filters as catalysts for ozone decomposition [DE95-006498] p 2331 N95-28548

AIR FLOW
Flutter clearance flight tests of an OV-10A airplane modified for wake vortex flight experiments [NASA-TM-109168] p 2117 N95-26381
Valve mechanism for an acoustic modulator [AD-D017263] p 2300 N95-26504
A continuous emissions monitor for airborne metals p 2174 N95-28313

AIR LAND INTERACTIONS
Measurement and analysis of the surface energy budget for ARM field experiments [DE95-007646] p 2338 . N95-28114

AIR LAUNCHING
Cape Canaveral air station launch emergency response forces and toxic materials release contingency plans p 2172 N95-28308

AIR NAVIGATION
Design and synthesis of a real-time controller for an unmanned air vehicle [AD-A289134] p 2141 N95-26555

AIR POLLUTION
Soot particle density determination from a laser extinction multipass technique [AD-A288551] p 2423 N95-26532
Live from Antarctica, volume 4 [NASA-CR-197828] p 2335 N95-26596
Cleanliness verification process at Martin Marietta Astronautics p 2165 N95-27104
Reducing cold-start emissions by catalytic converter thermal management [DE95-000256] p 2327 N95-27540
Absorption of sparingly soluble gases by reactive media in self-aerated gas-liquid contactors: A scale-up procedure [DE95-006429] p 2206 N95-27707
Evaluation and qualification of environmentally conscious manufacturing processes for commercial and military applications [DE95-008520] p 2329 N95-27878
Application of modern diagnostic methods to environmental improvement [DE95-005797] p 2330 N95-28119
FY 1994 ambient air monitoring report for McMurdo Station, Antarctica [DE95-008565] p 2331 N95-28149
SIHTI 2: Energy and environmental technology. Yearbook 1993 of the research programme [DE95-755135] p 2331 N95-28202
The 1994 JANNAF Safety and Environmental Protection Subcommittee Meeting, volume 1 [CPIA-PUBL-614-VOL-1] p 2170 N95-28294
The importance of propulsion engineers in protecting the global environment p 2170 N95-28295
OB/OD treatment: The effective use of measured field data and air modeling to support an environmental assessment p 2170 N95-28296
Use of SURFACE CHEMKIN to model multiphase atmospheric chemistry: Application to nitrogen tetroxide spills p 2172 N95-28305
Prototype development and test results of a continuous ambient air monitoring system for hydrazine at the 110 ppb level p 2173 N95-28310
A continuous emissions monitor for airborne metals p 2174 N95-28313
Evaluation of microporous carbon filters as catalysts for ozone decomposition [DE95-006498] p 2331 N95-28548
A comparison of NH3 point monitoring and diode laser based path integrated measurements [DE95-006892] p 2332 N95-28602
The Global Historical Climatology Network: A preview of version 2 [DE95-007003] p 2332 N95-28605

AIR PURIFICATION
Chlorodifluoromethane equilibrium on 13X molecular sieve [AD-A289282] p 2405 N95-27034
Radiant exchange considerations in design and scaleup of photocatalytic reactors for purification of nitroglycerine-contaminated air p 2171 N95-28300

AIR QUALITY
Electromagnetic devices and processes in environment protection [AD-A288656] p 2141 N95-26487
Cleanliness verification process at Martin Marietta Astronautics p 2165 N95-27104
Wipe solvent substitutions for 1,1,1-trichloroethane (TCA) and methyl ethyl ketone (MEK) at Hill Air Force Base p 2228 N95-27107
Three objective indices for clear-air turbulence reconsidered [KNMI-TR-160] p 2342 N95-27366

AIR SAMPLING
Live from Antarctica, volume 4 [NASA-CR-197828] p 2335 N95-26596

Basic principles and recent observations of rotationally sampled wind p 2321 N95-27971
A model of rotationally-sampled wind turbulence for predicting fatigue loads in wind turbines p 2312 N95-27972
Comparison of measured and calculated dynamic loads for the Mod-2 2.5 mW wind turbine system p 2312 N95-27983
FY 1994 ambient air monitoring report for McMurdo Station, Antarctica [DE95-008565] p 2331 N95-28149
Prototype development and test results of a continuous ambient air monitoring system for hydrazine at the 110 ppb level p 2173 N95-28310
The sensitive detection of hydrazine using chemiluminescence p 2173 N95-28311

AIR SEA ICE INTERACTIONS
A parallel coupled oceanic-atmospheric general circulation model [DE95-005918] p 2335 N95-26622
Measurement of heterogeneous chemical processes relevant to aerosol surfaces and trace gases active in the marine environment [DE95-008337] p 2328 N95-27743

AIR TRAFFIC
Air traffic operational inventory CY 1994 [AD-A288281] p 2126 N95-26454
The 1994 updated National Airspace System performance assessment for year 2005 [AD-A288652] p 2125 N95-26485
Enplanement and all cargo activity [AD-A280074] p 2144 N95-28151

AIR TRAFFIC CONTROL
Weather And Radar Processor (WARP) Test and Evaluation Master Plan (TEMP) [AD-A288280] p 2340 N95-26453
Air traffic operational inventory CY 1994 [AD-A288281] p 2126 N95-26454
The 1994 updated National Airspace System performance assessment for year 2005 [AD-A288652] p 2125 N95-26485
The controller memory guide. Concepts from the field [AD-A289263] p 2127 N95-26978
Advanced interactive display formats for terminal area traffic control [NASA-CR-198576] p 2127 N95-28188
Development of a coding form for approach control/pilot voice communications [DOT/FAA/AM-95/15] p 2128 N95-28540
Proceedings of the AIAA/FAA joint symposium on general aviation systems [AD-A289830] p 2120 N95-28610

AIR TRAFFIC CONTROLLERS (PERSONNEL)
The controller memory guide. Concepts from the field [AD-A289263] p 2127 N95-26978
Practical color vision tests for air traffic control applicants: En route center and terminal facilities [DOT/FAA/AM-95/13] p 2357 N95-27323
Development of a coding form for approach control/pilot voice communications [DOT/FAA/AM-95/15] p 2128 N95-28540

AIR TRANSPORTATION
The high speed civil transport and NASA's High Speed Research (HSR) program p 2118 N95-26945
Enplanement and all cargo activity [AD-A280074] p 2144 N95-28151

AIR WATER INTERACTIONS
Hindcasting wind-driven anomalies using reduced-gravity global ocean models with 1/2 deg and 1/4 deg resolution [AD-A289060] p 2345 N95-26406
Infrared field measurements of sea surface temperature: Analysis of wake signatures and comparison of skin layer models [NASA-CR-197849] p 2346 N95-26533
Deep convection in the Mediterranean Sea [AD-A288497] p 2346 N95-26647
Meteorological and oceanographic data collected during the ASREX 91 field experiment [AD-A289492] p 2342 N95-26826
Nonlinear problems in fluid dynamics and inverse scattering: Langmuir circulations and spiral flows [AD-A289194] p 2278 N95-27019
Study of the response of a three-dimensional coupled ice-ocean model to daily varying atmospheric forcing [AD-A289050] p 2347 N95-27189

AIRBORNE EQUIPMENT
Radiometer measurements of snow in Sodankylae, 1991-1993 [PB95-184966] p 2313 N95-26645
Hardware cleanliness methodology and certification p 2211 N95-27656

AIRBORNE/SPACEBORNE COMPUTERS
Advanced flight computer. Special study [NASA-CR-198165] p 2371 N95-27246

AIRCRAFT ACCIDENT INVESTIGATION
Aircraft accident report: Controlled collision with Terrain Transportes Aereos Ejecutivos, S.A. (TAESA) Learjet 25D, XA-BBA Dulles International Airport Chantilly, Virginia, June 18, 1994 [NTSB/AAR-95/02] p 2125 N95-26498

AIRCRAFT ACCIDENTS
Aircraft accident report: Controlled collision with Terrain Transportes Aereos Ejecutivos, S.A. (TAESA) Learjet 25D, XA-BBA Dulles International Airport Chantilly, Virginia, June 18, 1994 [NTSB/AAR-95/02] p 2125 N95-26498
Prevention and control of inlet unstart using an SR-71 simulation p 2119 N95-26948

AIRCRAFT CARRIERS
Benefits and limitations of composites in carrier-based aircraft p 2189 N95-28422

AIRCRAFT COMMUNICATION
Development of a coding form for approach control/pilot voice communications [DOT/FAA/AM-95/15] p 2128 N95-28540

AIRCRAFT CONFIGURATIONS
Aeroelasticity of wing and wing-body configurations on parallel computers [NASA-CR-197756] p 2129 N95-26590
Comparison of fixed wing aircraft algorithms for JANUS [AD-A288503] p 2129 N95-26652
Supersonic civil airplane study and design: Performance and sonic boom [NASA-CR-197745] p 2130 N95-26813
A quantitative feedback theory FCS design for the subsonic envelope of the VISTA F-16 including configuration variation [AD-A289221] p 2141 N95-26958
Test operations procedure (TOP) 7-3-534 airworthiness testing of fixed wing aircraft: Asymmetric power testing [AD-A289458] p 2130 N95-26994

AIRCRAFT CONSTRUCTION MATERIALS
Static and fatigue testing of full-scale fuselage panels fabricated using a Therm-X(R) process p 2185 N95-28270
ACT/ICAPS: Thermoplastic composite activities p 2185 N95-28274
Development of composite carrythrough bulkhead p 2192 N95-28438
Effects of floor location on response of composite fuselage frames p 2192 N95-28439
Navy composite maintenance and repair experience p 2193 N95-28446
Ninth DOD/NASA/FAA Conference on Fibrous Composites in Structural Design, volume 2 [NASA-CR-198722] p 2193 N95-28462
Overview of the ACT program p 2193 N95-28463
Characterization and manufacture of braided composites for large commercial aircraft structures p 2196 N95-28478
Impact damage resistance of composite fuselage structure, part 1 p 2138 N95-28482
Fundamental concepts in the suppression of delamination buckling by stitching p 2198 N95-28486
Advanced wing design survivability testing and results p 2138 N95-28488

AIRCRAFT CONTROL
Simulation model of the integrated flight/propulsion control system, displays, and propulsion system for ASTOVL lift-fan aircraft [NASA-TM-108866] p 2139 N95-26412
Development of a nonlinear simulation for the McDonnell Douglas F-15 Eagle with a longitudinal TECS control-law [AD-A288610] p 2128 N95-26481
A comparison of the Neal-Smith and omega Tau function, zeta function and tau function flying qualities criteria [AD-A289503] p 2130 N95-26844
Pilot opinions on high level flight deck automation issues: Toward the development of a design philosophy [NASA-CR-4669] p 2357 N95-28253

AIRCRAFT DESIGN
Aircraft fuel system lightning protection design and qualification test procedures development [AD-A288401] p 2125 N95-26497
Balanced on air aircraft [AD-D017251] p 2129 N95-26537
Aeroelasticity of wing and wing-body configurations on parallel computers [NASA-CR-197756] p 2129 N95-26590
Supersonic civil airplane study and design: Performance and sonic boom [NASA-CR-197745] p 2130 N95-26813
AIAA Techfest 20 Proceedings [NIAR-94-1] p 2118 N95-26941
Preliminary design problems and solutions for a supersonic oblique all-wing transport aircraft p 2118 N95-26942
An exploratory application of neural networks for airfoil design p 2118 N95-26943
Creating an alternative parameter optimization method (APO) p 2118 N95-26946
Design of a high altitude long endurance aircraft with manufacturing considerations p 2119 N95-26947
Incorporating biplane wing theory into a large, subsonic, all-cargo transport p 2120 N95-26956
The lift-fan aircraft: Lessons learned [NASA-CR-196694] p 2131 N95-27143
Rapid repair of large area damage to contoured aircraft structures p 2133 N95-27516
Wind-tunnel test of the S814 thick root airfoil [DE95-000268] p 2122 N95-27541
JPRS report: Science and technology. Central Eurasia [JPRS-UST-94-022] p 2246 N95-27699
Propulsion system assessment for very high UAV under ERAST [NASA-CR-195469] p 2140 N95-27866
Evaluation of all-electric secondary power for transport aircraft [NASA-CR-189077] p 2266 N95-27999
Performance study for inlet installations [NASA-CR-189714] p 2140 N95-28227
Ninth DOD/NASA/FAA Conference on Fibrous Composites in Structural Design, volume 3 [NASA-CR-198718] p 2184 N95-28266
Ninth DOD/NASA/FAA Conference on Fibrous Composites in Structural Design, volume 1 [NASA-CR-198723] p 2189 N95-28420
Benefits and limitations of composites in carrier-based aircraft p 2189 N95-28422
Development of composite carrythrough bulkhead p 2192 N95-28438
Structural design optimization with survivability dependent constraints application: Primary wing box of a multi-role fighter p 2137 N95-28440
Probabilistic design of advanced composite structure p 2193 N95-28443
Probabilistic evaluation of fuselage-type composite structures p 2137 N95-28444
Ninth DOD/NASA/FAA Conference on Fibrous Composites in Structural Design, volume 2 [NASA-CR-198722] p 2193 N95-28462
Overview of the ACT program p 2193 N95-28463
Designers' unified cost model p 2194 N95-28464
COINS: A composites information database system p 2194 N95-28465
Structural testing of the technology integration box beam p 2194 N95-28467
Technology integration box beam failure study p 2194 N95-28468
Recent progress in NASA Langley textile reinforced composites program p 2196 N95-28475
Advanced textile applications for primary aircraft structures p 2138 N95-28476
Applications of a damage tolerance analysis methodology in aircraft design and production p 2197 N95-28483
Advanced wing design survivability testing and results p 2138 N95-28488

AIRCRAFT DETECTION
Aircraft IR/acoustic detection evaluation. Volume 2: Development of a ground-based acoustic sensor system for the detection of subsonic jet-powered aircraft [NASA-CR-189705-VOL-2] p 2402 N95-28073
Performance study for inlet installations [NASA-CR-189714] p 2140 N95-28227

AIRCRAFT ENGINES
Design of a high altitude long endurance aircraft with manufacturing considerations p 2119 N95-26947
Prevention and control of inlet unstart using an SR-71 simulation p 2119 N95-26948
Analysis of aircraft engine blade subject to ice impact p 2141 N95-28277
Application of fiber-reinforced bismaleimide materials to aircraft nacelle structures p 2137 N95-28278

AIRCRAFT EQUIPMENT
Aircraft nosewheel steering simulation p 2118 N95-26944

AIRCRAFT FUEL SYSTEMS
Aircraft fuel system lightning protection design and qualification test procedures development [AD-A288401] p 2125 N95-26497

AIRCRAFT FUELS
A numerical model to predict the fate of jettisoned aviation fuel [AD-A289336] p 2242 N95-26842
The effect of aviation fuels containing low amounts of static dissipater additive on electrostatic charge generation [AD-A280075] p 2243 N95-28152

AIRCRAFT GUIDANCE
Flight evaluation of GPS/DGPS sensor systems installed in NAL Do228 [NAL-TR-1230] p 2126 N95-26585

AIRCRAFT HAZARDS
Further investigations of icing effects on an advanced high-lift multi-element airfoil
[NASA-TM-106947] p 2125 N95-27762
A review of falconry as a bird control technique with recommendations for use at the Shuttle Landing Facility, John F. Kennedy Space Center, Florida, USA
[NASA-TM-110142] p 2126 N95-27859
AIRCRAFT INDUSTRY
Strategy in the commercial aircraft industry in the United States: A comparison of decisionmaking by McDonnell-Douglas and Boeing aircraft companies from 1977-1983
[AD-A288289] p 2117 N95-26409
Surviving the peace. Lessons learned from the aircraft industry in the 1920s and 1930s
[AD-A288284] p 2117 N95-26455
AIRCRAFT INSTRUMENTS
Flight evaluation of GPS/DGPS sensor systems installed in NAL Do228
[NAL-TR-1230] p 2126 N95-26585
AIRCRAFT LANDING
Flightpath synthesis and HUD scaling for V/STOL terminal area operations
[NASA-TM-110348] p 2127 N95-26587
An integrated GPS/INS/BARO and radar altimeter system for aircraft precision approach landings
[AD-A289280] p 2127 N95-26985
AIRCRAFT MAINTENANCE
Survey and implementation of commercial manual controllers for a generic telerobotics architecture
[AD-A289215] p 2381 N95-26990
AH-1F COBRA rewire program MANPRINT analysis
[AD-A289190] p 2130 N95-27018
Composite Repair of Military Aircraft Structures
[AGARD-CP-550] p 2131 N95-27504
Bonded composite repair of metallic aircraft components: Overview of Australian activities
p 2132 N95-27505
Status of bonded boron/epoxy doublers for military and commercial aircraft structures p 2132 N95-27506
Adhesively bonded composite patch repair of cracked aluminum alloy structures p 2132 N95-27507
Composite repair of metallic airframe: Twenty years of experience p 2132 N95-27508
Bonded composite repair of thin metallic materials: Variable load amplitude and temperature cycling effects
p 2132 N95-27509
Design and structural validation of CF116 upper wing skin boron doubler p 2132 N95-27510
A FEAM based methodology for analyzing composite patch repairs of metallic structures
p 2133 N95-27511
Structural modification and repair of C-130 wing structure using bonded composites p 2133 N95-27512
Evaluation of patch effectiveness in repairing aircraft components p 2133 N95-27513
Field repair materials for naval aircraft
p 2133 N95-27514
On aircraft repair verification of a fighter A/C integrally stiffened fuselage skin p 2133 N95-27515
Rapid repair of large area damage to contoured aircraft structures p 2133 N95-27516
Composite repair of a CF18: Vertical stabilizer leading edge p 2134 N95-27517
Composite repair issues on the CF-18 aircraft
p 2134 N95-27518
Repair technology for thermoplastic aircraft structures
p 2134 N95-27519
Repair of high temperature composite aircraft structure p 2134 N95-27520
Composite repair of composite structures
p 2134 N95-27521
External patch repair of CFRP/honeycomb sandwich
p 2134 N95-27522
Scarf joint technique with cocured and precured patches for composite repair p 2135 N95-27524
Composite or metallic bolted repairs on self-stiffened carbon wing panel of the commuter ATR72 design criteria, analysis, verification by test p 2135 N95-27525
Damage occurrence on composites during testing and fleet service: Repair of Airbus aircraft
p 2135 N95-27526
Repairs of CFC primary structures
p 2135 N95-27527
The development of an engineering standard for composite repairs p 2135 N95-27528
Human factors in aviation maintenance, phase 4
[DOT/FAA/AM-95/14] p 2360 N95-27696
Proceedings of the AIAA/FAA joint symposium on general aviation systems
[AD-A289830] p 2120 N95-28610
AIRCRAFT MODELS
Airfoil modification effects on subsonic and transonic pressure distributions and performance for the EA-6B airplane
[NASA-TP-3516] p 2120 N95-26382
Simulation model of the integrated flight/propulsion control system, displays, and propulsion system for ASTOVL lift-fan aircraft
[NASA-TM-108866] p 2139 N95-26412
Experimental investigation of static and dynamic ground effect on HOPE ALFLEX vehicle
[NAL-TR-1236] p 2128 N95-26525
Comparison of fixed wing aircraft algorithms for JANUS
[AD-A288503] p 2129 N95-26652
A verification procedure for MSC/NASTRAN Finite Element Models
[NASA-CR-4675] p 2131 N95-27371
Modeling of aircraft unsteady aerodynamic characteristics. Part 2: Parameters estimated from wind tunnel data
[NASA-TM-110161] p 2142 N95-27839
AIRCRAFT NOISE
Aircraft noise prediction program theoretical manual: Rotorcraft System Noise Prediction System (ROTONET), part 4
[NASA-TM-83199-PT-4] p 2400 N95-26392
Evaluation of a doubly-swept blade tip for rotorcraft noise reduction
[NASA-CR-189677] p 2402 N95-28264
Noise exposure reduction of advanced high-lift systems
[NASA-CR-195077] p 2402 N95-28670
AIRCRAFT PERFORMANCE
Supersonic civil airplane study and design: Performance and sonic boom
[NASA-CR-197745] p 2130 N95-26813
A comparison of the Neal-Smith and omega Tau function, zeta function and tau function flying qualities criteria
[AD-A289503] p 2130 N95-26844
Performance study for inlet installations
[NASA-CR-189714] p 2140 N95-28227
Benefits and limitations of composites in carrier-based aircraft p 2189 N95-28422
AIRCRAFT PILOTS
Development of injury preventing helmet servo-support system for high performance aircraft
[AD-A289547] p 2359 N95-26755
Pilot opinions on high level flight deck automation issues: Toward the development of a design philosophy
[NASA-CR-4669] p 2357 N95-28253
AIRCRAFT POWER SUPPLIES
Evaluation of all-electric secondary power for transport aircraft
[NASA-CR-189077] p 2266 N95-27999
AIRCRAFT PRODUCTION
Overview of the ACT program p 2193 N95-28463
AIRCRAFT PRODUCTION COSTS
Designers' unified cost model p 2194 N95-28464
COINS: A composites information database system
p 2194 N95-28465
Composite fuselage crown panel manufacturing technology p 2137 N95-28474
AIRCRAFT RELIABILITY
Test operations procedure (TOP) 7-3-534 airworthiness testing of fixed wing aircraft: Asymmetric power testing
[AD-A289458] p 2130 N95-26994
Composite or metallic bolted repairs on self-stiffened carbon wing panel of the commuter ATR72 design criteria, analysis, verification by test p 2135 N95-27525
AIRCRAFT SAFETY
WINCLR: A computer code for heat transfer and clearance calculation in a compressor
[NASA-CR-195436] p 2117 N95-26363
Aircraft accident report: Controlled collision with Terrain Transportes Aereos Ejecutivos, S.A. (TAESA) Learjet 25D, XA-BBA Dulles International Airport Chantilly, Virginia, June 18, 1994
[NTSB/AAR-95/02] p 2125 N95-26498
AIAA Techfest 20 Proceedings
[NIAR-94-1] p 2118 N95-26941
Prevention and control of inlet unstart using an SR-71 simulation p 2119 N95-26948
Precision landing system mathematical modeling study report for Andrews Air Force Base, runway 19L, Camp Springs, MD
[AD-A289015] p 2127 N95-27903
AIRCRAFT STABILITY
An easy way to analyze longitudinal and lateral-directional trim problems with AEO or OEI
p 2119 N95-26949
AIRCRAFT STRUCTURES
A verification procedure for MSC/NASTRAN Finite Element Models
[NASA-CR-4675] p 2131 N95-27371
Composite Repair of Military Aircraft Structures
[AGARD-CP-550] p 2131 N95-27504
Bonded composite repair of metallic aircraft components: Overview of Australian activities
p 2132 N95-27505
Status of bonded boron/epoxy doublers for military and commercial aircraft structures p 2132 N95-27506
Adhesively bonded composite patch repair of cracked aluminum alloy structures p 2132 N95-27507
Design and structural validation of CF116 upper wing skin boron doubler p 2132 N95-27510
A FEAM based methodology for analyzing composite patch repairs of metallic structures
p 2133 N95-27511
Structural modification and repair of C-130 wing structure using bonded composites p 2133 N95-27512
Evaluation of patch effectiveness in repairing aircraft components p 2133 N95-27513
Rapid repair of large area damage to contoured aircraft structures p 2133 N95-27516
Repair technology for thermoplastic aircraft structures
p 2134 N95-27519
Repair of high temperature composite aircraft structure p 2134 N95-27520
External patch repair of CFRP/honeycomb sandwich
p 2134 N95-27522
Scarf joint technique with cocured and precured patches for composite repair p 2135 N95-27524
Damage occurrence on composites during testing and fleet service: Repair of Airbus aircraft
p 2135 N95-27526
Repairs of CFC primary structures
p 2135 N95-27527
The development of an engineering standard for composite repairs p 2135 N95-27528
Ninth DOD/NASA/FAA Conference on Fibrous Composites in Structural Design, volume 3
[NASA-CR-198718] p 2184 N95-28266
Process and control systems for composites manufacturing p 2184 N95-28267
Advanced tow placement of composite fuselage structure p 2185 N95-28271
Through-the Thickness(R) braided composites for aircraft applications p 2185 N95-28273
Resin transfer molding of textile preforms for aircraft structural applications p 2185 N95-28276
Application of fiber-reinforced bismaleimide materials to aircraft nacelle structures p 2137 N95-28278
Analysis techniques for the prediction of springback in formed and bonded composite components
p 2188 N95-28289
The effect of material heterogeneity in curved composite beams for use in aircraft structures
p 2190 N95-28426
Vibrational behavior of adaptive aircraft wing structures modelled as composite thin-walled beams
p 2191 N95-28435
Development of composite carrythrough bulkhead
p 2192 N95-28438
Probabilistic design of advanced composite structure
p 2193 N95-28443
Probabilistic evaluation of fuselage-type composite structures p 2137 N95-28444
Navy composite maintenance and repair experience
p 2193 N95-28446
Ninth DOD/NASA/FAA Conference on Fibrous Composites in Structural Design, volume 2
[NASA-CR-198722] p 2193 N95-28462
Overview of the ACT program p 2193 N95-28463
COINS: A composites information database system
p 2194 N95-28465
Composite fuselage shell structures research at NASA Langley Research Center p 2194 N95-28466
Technology integration box beam failure study
p 2194 N95-28468
Development of stitched/RTM composite primary structures p 2195 N95-28469
Recent progress in NASA Langley textile reinforced composites program p 2196 N95-28475
Advanced textile applications for primary aircraft structures p 2138 N95-28476
Comparison of resin film infusion, resin transfer molding, and consolidation of textile preforms for primary aircraft structure p 2196 N95-28477
Characterization and manufacture of braided composites for large commercial aircraft structures
p 2196 N95-28478
Application of damage tolerance methodology in certification of the Piaggio P-180 Avanti
p 2138 N95-28480
Effect of low-speed impact damage and damage location on behavior of composite panels p 2197 N95-28481
AIRCRAFT SURVIVABILITY
Structural design optimization with survivability dependent constraints application: Primary wing box of a multi-role fighter p 2137 N95-28440

Advanced wing design survivability testing and results
p 2138 N95-28488

AIRCRAFT TIRES

Aircraft nosewheel steering simulation
p 2118 N95-26944

AIRDROPS

The performance of cargo airdrop systems using g-12E parachutes: Statistical determination of minimum altitude
[AD-A291666] p 2126 N95-28454

AIRFOIL OSCILLATIONS

Nonlinear dynamics and aeroelasticity of rotorcraft in forward flight
[AD-A291714] p 2136 N95-28504

AIRFOIL PROFILES

An exploratory application of neural networks for airfoil design p 2118 N95-26943

Comparative wind tunnel tests of NACA 23024 airfoils with several aileron and spoiler configurations
p 2124 N95-27976

Comparative wind tunnel test at high Reynolds numbers of NACA 64 621 airfoils with two aileron configurations
p 2124 N95-27977

Numerical study to assess sulfur hexafluoride as a medium for testing multielement airfoils
[NASA-TP-3496] p 2124 N95-28674

AIRFOILS

Airfoil modification effects on subsonic and transonic pressure distributions and performance for the EA-6B airplane
[NASA-TP-3516] p 2120 N95-26382

Computational fluid dynamics and transonic flow
[AD-A288962] p 2273 N95-26405

An exploratory application of neural networks for airfoil design p 2118 N95-26943

Creating an alternative parameter optimization method (APO) p 2118 N95-26946

The near-wake flow behavior of an oscillating airfoil with modified trailing edge p 2119 N95-26953

Wind-tunnel test of the S814 thick root airfoil
[DE95-000268] p 2122 N95-27541

Further investigations of icing effects on an advanced high-lift multi-element airfoil
[NASA-TM-106947] p 2125 N95-27762

Horizontal axis wind turbine post stall airfoil characteristics synthesization p 2124 N95-27974

AIRFRAMES

Suppressor of oscillations in airframe cavities
[AD-D017265] p 2128 N95-26507

Composite repair of metallic airframe: Twenty years of experience p 2132 N95-27508

Resin transfer molding of textile preforms for aircraft structural applications p 2185 N95-28276

Applications of a damage tolerance analysis methodology in aircraft design and production
p 2197 N95-28483

NASA-ACEE/Boeing 737 graphite-epoxy horizontal stabilizer service p 2138 N95-28489

Rotorcraft crashworthy airframe and fuel system technology development program
[AD-A289986] p 2126 N95-28630

AIRLINE OPERATIONS

An integrated GPS/INS/BARO and radar altimeter system for aircraft precision approach landings
[AD-A289280] p 2127 N95-26985

The effects of Crew Resource Management (CRM) training in airline maintenance: Results following three year's experience
[NASA-CR-196696] p 2358 N95-28676

AIRPORT TOWERS

Air traffic operational inventory CY 1994
[AD-A288281] p 2126 N95-26454

AIRPORTS

The 1994 updated National Airspace System performance assessment for year 2005
[AD-A288652] p 2125 N95-26485

AIRSPACE

The 1994 updated National Airspace System performance assessment for year 2005
[AD-A288652] p 2125 N95-26485

Unmanned aerial vehicles, 1994 master plan
[AD-A291628] p 2136 N95-28411

AIRSPEED

Advanced formation flight control
[AD-A289271] p 2142 N95-26981

ALCOHOLS

Probe molecule studies: Active species in alcohol synthesis
[DE95-003514] p 2203 N95-27420

NQR-NMR studies of higher alcohol synthesis Cu-Co catalysts
[DE95-007926] p 2205 N95-27680

ALGEBRA

On compact multipliers of topological algebras
[DE95-608751] p 2390 N95-27092

Spectral properties of multipliers on topological algebras
[DE95-608747] p 2390 N95-27299

Some commutativity theorems for a certain class of rings
[DE95-608750] p 2390 N95-27302

Introduction to Dubois-Violette's non-commutative differential geometry
[DE95-608801] p 2390 N95-27311

On commutativity of right s-unital rings with some polynomial constraints
[DE95-608752] p 2390 N95-27330

Quantum k-Poincare 1994
[DE95-608754] p 2448 N95-27332

Algebraic structure of the Green's ansatz and its q-deformed analogue
[DE95-608780] p 2395 N95-27340

Fuzzy-algebra uncertainty assessment
[DE95-005426] p 2391 N95-27432

The assembly tower and some categorical and algebraic aspects of frame theory
[AD-A289360] p 2391 N95-27489

Symmetries of the KAC-Peterson modular matrices of affine algebras
[PB95-190138] p 2392 N95-28010

Lie group weight multiplicities from conformal field theory
[PB95-190153] p 2392 N95-28012

Coordinates of the quantum plane as q-tensor operators in U(sub q) (su(2) * su(2))
[DE95-007100] p 2397 N95-28234

ALGORITHMS

A method for simulating correlated random variables from partially specified distributions
[AD-A288820] p 2393 N95-26347

Modified Gaussian elimination for adaptive beamforming using RNS arithmetic
[AD-A288809] p 2248 N95-26356

A fully implicit time accurate method for hypersonic combustion: Application to shock-induced combustion instability
[NASA-TM-106707] p 2273 N95-26380

Parallelizing locally-weighted regression
[AD-A288294] p 2394 N95-26414

A non-iterative grid deformation algorithm for computational fluid dynamics for aeroelasticity
[AD-A288298] p 2273 N95-26418

An introduction to software architecture
[AD-A288963] p 2363 N95-26446

Fast multidimensional density estimation based on Random-width bins
[AD-A288286] p 2394 N95-26457

An introduction to software architecture
[AD-A288356] p 2363 N95-26467

Robust hybrid state-space self-tuning control using dual-rate sampling
[AD-A288359] p 2380 N95-26468

ACT adaptive filters
[AD-A288385] p 2363 N95-26474

Modified eigenvalue problems with applications to structural dynamic re-analysis on parallel computers
[AD-A288257] p 2307 N95-26547

Grain size management in repetitive task graphs for multiprocessor computer scheduling
[AD-A288575] p 2377 N95-26551

A fast numerical method for isothermal resin transfer mold filling
[AD-A288944] p 2179 N95-26565

Flightpath synthesis and HUD scaling for V/STOL terminal area operations
[NASA-TM-110348] p 2127 N95-26587

Algorithms for parallel flow solvers on message passing architectures
[NASA-CR-197758] p 2274 N95-26588

Adaptive finite element method I: Solution algorithm and computational examples
[AD-A288979] p 2389 N95-26609

Activities of the Laboratory of Information Processing Science
[PB95-184982] p 2452 N95-26631

Comparison of fixed wing aircraft algorithms for JANUS
[AD-A288503] p 2129 N95-26652

Com(sup 3): A composite-compatible component coding system
[BBC-RD-1994/17] p 2249 N95-26670

Design tool for multiprocessor scheduling and evaluation of iterative dataflow algorithms
[NASA-TP-3491] p 2366 N95-26685

The D* algorithm for real-time planning of optimal traverses
[AD-A289361] p 2367 N95-26754

Computation of electromagnetic scattering parameters for lognormal distributions of magnetic spheres: Theory and algorithms
[AD-A289672] p 2250 N95-26759

Development of an upwind, finite-volume code with finite-rate chemistry
[NASA-CR-197747] p 2121 N95-26760

Performance and policy dimensions in internet routing
[NASA-CR-197772] p 2367 N95-26770

Addressing tension instability in SPH methods
[AD-A289531] p 2276 N95-26852

Do we fully understand the symmetric Lanczos algorithm yet?
[AD-A289614] p 2368 N95-26855

A demonstration of Client/Server technology using remote procedure calls for an application of file migration for moving records based on location
[AD-A289391] p 2453 N95-26864

Random relaxation of fixed point iteration
[PB95-185013] p 2389 N95-26910

Distributed computation of Pareto solutions in N-player games
[PB95-185039] p 2396 N95-26912

Image perception wavelet simulation and enhancement for the visually impaired
[AD-A289303] p 2353 N95-26917

Analysis of modal behavior at frequency cross-over
[AD-A289304] p 2162 N95-26918

A state-space model of a large, lightly damped space structure using the Eigensystem realization algorithm
[AD-A289251] p 2163 N95-26970

Nonlinear problems in fluid dynamics and inverse scattering: Propagation and capturing of singularities in problems of fluid dynamics and inverse scattering
[AD-A289146] p 2277 N95-26999

A modified backpropagation algorithm for training neural networks on data with error bars
[DE95-608729] p 2381 N95-27025

Unstructured mesh generation and adaptivity
[NASA-CR-195069] p 2278 N95-27027

Moment and hypergeometric filters for high precision computation of focus, stereo and optical flow
[AD-A289293] p 2425 N95-27038

Implementation and demonstration of a multiple model adaptive estimation failure detection system for the F-16
[AD-A289301] p 2131 N95-27042

Reducing network depth in the Cascade-Correlation learning architecture
[AD-A289352] p 2382 N95-27066

Efficient generation of counterexamples and witnesses in symbolic model checking
[AD-A288583] p 2370 N95-27095

Development of numerical methods for overset grids with applications for the integrated Space Shuttle vehicle
[NASA-CR-197759] p 2160 N95-27154

Vector algorithms for solving 3D nonlinear magnetostatic problems
[DE95-608737] p 2399 N95-27298

Single-drop reactive extraction/extractive reaction with forced convective diffusion and interphase mass transfer
p 2282 N95-27358

A spectral algorithm for the seriation problem
[DE95-004775] p 2372 N95-27436

Integrating the QMR method with first principles material science application code
[DE95-007380] p 2408 N95-27456

Parallel algorithms for semi-Lagrangian transport in global atmospheric circulation models
[DE95-007385] p 2327 N95-27457

Sequence comparison on a cluster of workstations using the PVM system
[DE95-006527] p 2378 N95-27709

Molecular dynamics simulations of Gay-Berne nematic liquid crystal: Elastic properties from direct correlation functions
[DE95-609149] p 2441 N95-27740

Kepler Equation solver p 2147 N95-27767

A PC-based magnetometer-only attitude and rate determination system for gyroless spacecraft
p 2147 N95-27770

An MME-based attitude estimator using vector observations p 2148 N95-27775

Development of a Robust star identification technique for use in attitude determination of the ACE spacecraft
p 2149 N95-27777

Experience from the in-flight calibration of the Extreme Ultraviolet Explorer (EUVE) and Upper Atmosphere Research Satellite (UARS) fixed head star trackers (FHSTs) p 2149 N95-27779

Use of nonlinear identification in robust attitude and attitude rate estimation for SAMPEX
p 2149 N95-27781

A simple method for verifying the deployment of the TOMS-EP solar arrays p 2150 N95-27782

Earth horizon modeling and application to static Earth sensors on TRMM spacecraft p 2150 N95-27783

A magnetic hysteresis model p 2153 N95-27801

Contingency designs for attitude determination of TRMM p 2154 N95-27803

Modeling of aircraft unsteady aerodynamic characteristics. Part 2: Parameters estimated from wind tunnel data
[NASA-TM-110161] p 2142 N95-27839
The applicability of turbulence models to aerodynamic and propulsion flowfields at McDonnell-Douglas Aerospace p 2285 N95-27886
Algorithm to describe the spread of a wall fire under a ceiling
[PB95-182259] p 2247 N95-28008
A numerical study of ultra-short-pulse reflectometry
[DE95-008070] p 2266 N95-28015
Multifractal character of the electronic states in disordered two-dimensional systems
[DE95-609153] p 2443 N95-28016
Robust integration schemes for generalized viscoplasticity with internal-state variables. Part 1: Theoretical developments and applications
[NASA-CR-195452-PT-1] p 2310 N95-28031
Robust integration schemes for generalized viscoplasticity with internal-state variables. Part 2: Algorithmic developments and implementation
[NASA-CR-195453-PT-2] p 2310 N95-28032
A new algorithm for generating highly accurate benchmark solutions to transport test problems
[DE95-007397] p 2373 N95-28047
Analysis of forward and inverse problems in chemical dynamics and spectroscopy
[DE95-009309] p 2209 N95-28164
Ultrashort Pulse retrieval using FROG trace irradiance moments and the adaptive neural networks backpropagation algorithm
[DE95-007153] p 2299 N95-28220
The concentration-estimation problem for multiple-wavelength differential absorption lidar
[DE95-008375] p 2256 N95-28231
Altimeter analysis of ocean currents
[AD-A290167] p 2315 N95-28392
Applications of boundary element methods on the Intel Paragon
[DE94-014135] p 2393 N95-28393
Denoising and robust non-linear wavelet analysis
[AD-A291668] p 2257 N95-28455
Piecemeal learning of an unknown environment
[AD-A291683] p 2387 N95-28461
Local design optimization for composite transport fuselage crown panels p 2137 N95-28473
Visualization methods for the exploration of high dimensional data
[AD-A291717] p 2393 N95-28507
Weighting the recursive spectral bisection algorithm for unstructured grids
[DE95-008080] p 2373 N95-28521
HZETRN: Description of a free-space ion and nucleon transport and shielding computer program
[NASA-TP-3495] p 2465 N95-28530
Cloud classification using whole-sky imager data
[DE95-006501] p 2344 N95-28556
Binary segmentation of SAR images by the ICM algorithm
[INPE-5464-PRE/1772] p 2258 N95-28559
A genuinely multidimensional upwind scheme and efficient multigrid solver for the compressible Euler equations
[NASA-CR-195000] p 2288 N95-28571
Low-angle tracking in the presence of ducting, coherent and incoherent multipath
[AD-A289838] p 2258 N95-28580
Exploiting parallelism in a Monte Carlo image-matching algorithm
[AD-A289872] p 2374 N95-28625
Query by image example: The CANDID approach
[DE95-006284] p 2456 N95-28631

ALIGNMENT
Nondestructive testing apparatus for determining the orientation of reinforcing bars within a concrete structure
[AD-D017267] p 2245 N95-26508
Isolated digit recognition without time alignment
[AD-A289344] p 2254 N95-27062
Experience from the in-flight calibration of the Extreme Ultraviolet Explorer (EUVE) and Upper Atmosphere Research Satellite (UARS) fixed head star trackers (FHSTs) p 2149 N95-27779

ALIPHATIC HYDROCARBONS
Wipe solvent substitutions for 1,1,1-trichloroethane (TCA) and methyl ethyl ketone (MEK) at Hill Air Force Base p 2228 N95-27107

ALKALI METAL COMPOUNDS
Rotor phases in compound semiconductors
[DE95-004139] p 2436 N95-26442

ALKALI METALS
Molecular approach to mesoporous metal sulfides
[DE95-005418] p 2202 N95-27137
Thermodynamics of aqueous electrolytes at high temperatures by the isopiestic technique
[DE95-006747] p 2449 N95-27546
Polybenzimidazoles via aromatic nucleophilic displacement
[NASA-CASE-LAR-14924-1-CU] p 2179 N95-28361

ALKALINE EARTH COMPOUNDS
Fabrication of long wavelength array by in-situ molecular beam epitaxy
[AD-A288599] p 2423 N95-26679

ALKANES
Surface crystallization and thin film melting in normal alkanes
[DE95-006694] p 2440 N95-27535

ALKENES
Porosity in hexylene-bridged polysilsesquioxanes: Effects of monomer concentration
[DE95-005421] p 2240 N95-28531

ALKYL COMPOUNDS
Comparison of bridged polysilsesquioxane xerogels prepared from methoxy- and ethoxy-silyl monomers
[DE95-005422] p 2240 N95-28532

ALL SKY PHOTOGRAPHY
Cloud classification using whole-sky imager data
[DE95-006501] p 2344 N95-28556

ALLOYING
Spin-density-wave magnetism in dilute copper-manganese alloys
[DE95-005121] p 2215 N95-27462
Laser ultrasonic generation at the surface of a liquid metal
[DE95-004999] p 2216 N95-27477
Systematic study of the ion beam mixing of oxide markers into alumina
[DE95-006262] p 2217 N95-27555

ALLOYS
Current programmes on physical metallurgy and related areas in BARC
[DE95-607939] p 2214 N95-27255
AMCC casting development. Volume 1: Executive Summary
[NASA-CR-196597] p 2247 N95-28419

ALPHA PARTICLES
Radon integral measurement system
[DE95-608074] p 2405 N95-27010
Detecting alpha particles through scintillation in porous materials
[AD-A289313] p 2406 N95-27399
Alpha characterization inside pipes using ion-transport technology
[DE95-007869] p 2411 N95-28024

ALTERNATING CURRENT
Alternate charging profiles for the onboard nickel cadmium batteries of the Explorer Platform/Extreme Ultraviolet Explorer p 2272 N95-26796
Automated integration of genomic physical mapping data via parallel simulated annealing
[DE95-008057] p 2351 N95-27725
OBIC analysis of stressed, thermally-isolated polysilicon resistors
[DE95-008511] p 2268 N95-28201
Surface scanning techniques to locate and study defects in painted zinc and zinc alloy coated steels
[DE95-006099] p 2240 N95-28547

ALTERNATIVES
Cleanliness verification process at Martin Marietta Astronautics p 2165 N95-27104
Life cycle costs of alternatives for F-16 printed circuit board diagnosis equipment
[AD-A288744] p 2138 N95-28586

ALTIMETERS
An in situ evaluation of TOPEX/Poseidon altimetric measurements versus meaurements made by moorings and inverted echo sounders for sea surface height
[NASA-CR-198621] p 2347 N95-27805
Altimeter analysis of ocean currents
[AD-A290167] p 2315 N95-28392

ALTIMETRY
An in situ evaluation of TOPEX/Poseidon altimetric measurements versus meaurements made by moorings and inverted echo sounders for sea surface height
[NASA-CR-198621] p 2347 N95-27805

ALUMINIDES
Lattice parameters and Debye-Waller factors of gamma-TiAl alloys
[AD-A288843] p 2213 N95-26681

ALUMINUM
The response of hydrotalcite coated aluminum to sealing with transition metal salt solutions
[DE95-004767] p 2234 N95-27460
Advanced neutron source materials surveillance program
[DE95-005700] p 2215 N95-27464
Atomistic calculations of hydrogen interactions with Ni3Al grain boundaries and Ni/Ni/Ni3Al interfaces
[DE95-006497] p 2408 N95-27534
Scaling issues in dynamic fragmentation
[DE95-008509] p 2309 N95-27745
Chromate-free corrosion resistant conversion coatings for aluminum alloys
[DE95-007742] p 2238 N95-28117
Hazards analysis of an integral class 1.1/1.3 rocket motor demilitarization and ingredient recovery system using ammonia p 2174 N95-28315
Computational studies of projectile melt in impact with typical whipple shields
[DE95-005916] p 2311 N95-28337
Photoemission study of solid state reaction and initial oxidation of the Ce/Al(100) system
[PB95-195368] p 2210 N95-28652

ALUMINUM ALLOYS
Identification of the plastic anisotropy of an aluminum alloy
[IFTR-26/1994] p 2212 N95-26512
Changes in the anisotropy parameters of an aluminum alloy caused by cyclical deformation
[IFTR-27/1994] p 2212 N95-26666
Lattice parameters and Debye-Waller factors of gamma-TiAl alloys
[AD-A288843] p 2213 N95-26681
Annealing-induced changes in the anisotropy of an aluminum alloy
[IFTR-24/1994] p 2213 N95-26838
Ductile - ductile beryllium aluminum metal matrix composite manufactured by extrusion
[AD-A289519] p 2181 N95-26848
A study of internal damage of metal matrix composites by neutron diffraction
[DE95-005157] p 2182 N95-27080
Tensile properties of Fe-16 at. % Al alloys
[DE95-007102] p 2215 N95-27450
Atomistic calculations of hydrogen interactions with Ni3Al grain boundaries and Ni/Ni/Ni3Al interfaces
[DE95-006497] p 2408 N95-27534
Thermal control materials on EOIM-3
p 2242 N95-27639
Solid film lubricants and thermal control coatings flown aboard the EOIM-3 MDA sub-experiment
p 2242 N95-27640
Processing and properties of chromate-free conversion coatings on aluminum
[DE95-004768] p 2218 N95-27722
A new technique for measuring the separation of closely spaced dislocations using residual contrast conditions
[DE95-007147] p 2219 N95-27968
Trace elements and the mechanical properties of intermetallic compounds
[DE95-007378] p 2220 N95-28046
Pulsed ion beam surface treatment for preparing rapidly solidified corrosion resistant steel and aluminum surfaces
[DE95-007741] p 2221 N95-28116
Chromate-free corrosion resistant conversion coatings for aluminum alloys
[DE95-007742] p 2238 N95-28117
Bases for extrapolating materials durability in fuel storage pools
[DE95-007748] p 2222 N95-28129
Electronic structure of ordered and disordered transition metal aluminides
[DE95-609034] p 2223 N95-28250
Surface scanning techniques to locate and study defects in painted zinc and zinc alloy coated steels
[DE95-006099] p 2240 N95-28547
Fatigue properties of an A356 (AlSi7Mg) aluminum alloy for automotive applications: Fatigue life prediction
[PB95-196424] p 2224 N95-28660

ALUMINUM BORON COMPOSITES
Composite flexible insulation for thermal protection of space vehicles p 2166 N95-28293

ALUMINUM GALLIUM ARSENIDES
Dimensionally self regulating materials
[AD-A291671] p 2257 N95-28456

ALUMINUM NITRIDES
Pseudomorphic semiconducting heterostructures from combinations of AlN, GaN and selected SiC polytypes: Theoretical advancement and its coordination with experimental studies of nucleation, growth, characterization and device development
[AD-A289550] p 2437 N95-26756
First-principles calculations for AlN, GaN, and InN: Bulk and alloy properties
[DE95-006822] p 2219 N95-27958

ALUMINUM OXIDES
A study of the use beta-alumina as a weak interface in alumina fiber composites
[AD-A288629] p 2179 N95-26484
Mechanical performance of fiber reinforced metal matrix composites and microstructural development of polycrystalline alumina fibers synthesized from liquid precursors
[AD-A289518] p 2181 N95-26847

Systematic study of the ion beam mixing of oxide markers into alumina
[DE95-006262] p 2217 N95-27555
ECR plasma-assisted deposition of Al2O3 and dispersion-strengthened AlO2
[DE95-007743] p 2235 N95-27687
High-temperature deformation of ZrO2-Al2O3/SiC whisker composites fabricated by two techniques
[DE95-008273] p 2183 N95-28069
Task 4 supporting technology. Part 1: Detailed test plan for leading edge tile development. Leading edge material development and testing
[NASA-CR-198633] p 2160 N95-28258
Stratospheric ozone reactive chemicals generated by space launches worldwide
[AD-A289852] p 2332 N95-28623

ALUMINUM SILICATES
Ceramic fiber-reinforced monoclinic celsian phase glass-ceramic matrix composite material
[NASA-CASE-LEW-15714-1] p 2183 N95-27717

ALUMINUM-LITHIUM ALLOYS
A first principles approach to phase stability and order-disorder transformation: Application to Li-Al alloys
[DE95-609152] p 2218 N95-27756

AMBIENCE
FY 1994 ambient air monitoring report for McMurdo Station, Antarctica
[DE95-008565] p 2331 N95-28149
Prototype development and test results of a continuous ambient air monitoring system for hydrazine at the 110 ppb level p 2173 N95-28310
Development and application of low-temperature AFM
[AD-A291704] p 2352 N95-28525

AMBIENT TEMPERATURE
Precision parts cleaning with supercritical carbon dioxide p 2229 N95-27114
Laser ultrasonic generation at the surface of a liquid metal
[DE95-004999] p 2216 N95-27477
Effect of internal hydrogen on the mixed-mode 1/3 fracture toughness of a ferrific/martensitic stainless steel
[DE95-005722] p 2216 N95-27479
Inflight resistance measurement on high-T(sub c) superconducting thin films exposed to orbital atomic oxygen on CONCAP-2 (STS-46) p 2272 N95-27635
Cryogenic washout of solid rocket propellants
p 2176 N95-28324

AMBIPOLAR DIFFUSION
Energization and transport of ions of ionospheric origin in the terrestrial magnetosphere
[NASA-CR-197813] p 2336 N95-26699

AMINO ACIDS
Hydrogen-ion titrations of amino acids and proteins in solutions containing concentrated electrolyte
[DE95-008356] p 2209 N95-28229

AMMONIA
Superior catalysts for selective catalytic reduction of nitric oxide
[DE95-007903] p 2205 N95-27691
Plasma source ion implantation of ammonia into electroplated chromium
[DE95-006275] p 2444 N95-28125
A comparison of NH3 point monitoring and diode laser based path integrated measurements
[DE95-006892] p 2332 N95-28602

AMMONIUM COMPOUNDS
Acute and subacute toxicity of ammonium dinitramide (ADN) p 2175 N95-28318

AMMONIUM PERCHLORATES
Hazards analysis of an integral class 1.1/1.3 rocket motor demilitarization and ingredient recovery system using ammonia p 2174 N95-28315
Acute and subacute toxicity of ammonium dinitramide (ADN) p 2175 N95-28318
The demilitarization of class 1.1 rocket motors using high pressure waterjets p 2176 N95-28322

AMMUNITION
Performance analysis of bullet trajectory estimation: Approach, simulation, and experiments
[DE95-007949] p 2399 N95-28109

AMORPHOUS MATERIALS
Surface energy driven crystallization of amorphous Ni69Cr14P17 alloy
[DE95-005543] p 2438 N95-27085
Temperature dependence of ion-beam-induced amorphization in (Beta)-SiC
[DE95-007164] p 2438 N95-27087
Variation of solvent scattering-length density small-angle neutron scattering as a means of determining structure of composite materials
[DE95-005394] p 2183 N95-27428
Characterization of collision cascade damage in Ca2La8(SiO4)6O2 by HRTEM
[DE95-005719] p 2440 N95-27491
Repair technology for thermoplastic aircraft structures
p 2134 N95-27519
Systematic study of the ion beam mixing of oxide markers into alumina
[DE95-006262] p 2217 N95-27555
Amorphization of complex ceramics by heavy-particle irradiations
[DE95-005725] p 2236 N95-27733
Density changes in amorphous Pd80Si20 during low temperature ion irradiation
[DE95-007132] p 2441 N95-27928
Pulsed laser deposition of zeolitic membranes
[DE95-006274] p 2298 N95-28124
The real structure of columnar pinning centers in heavy-ion-irradiated cuprate superconductors
[DE95-003948] p 2445 N95-28186

AMORPHOUS SILICON
Growth of hydrogenated amorphous silicon (a-Si:H) on patterned substrates for increased mechanical stability
[DE95-006589] p 2234 N95-27472
Amorphous silicon pixel radiation detectors and associated thin film transistor electronics readout
[DE95-006568] p 2265 N95-27678
Sensor for measuring the atomic fraction in highly dissociated hydrogen
[DE95-006531] p 2415 N95-28204
Atomic layer epitaxy of group 4 materials: Surface processes, thin films, devices and their characterization
[AD-A289092] p 2446 N95-28327

AMPHIBIOUS VEHICLES
Air cushioned landing craft (LCAC) based ship to shore movement simulation: A decision aid for the amphibious commander. A (SMMAT) application
[AD-A289635] p 2246 N95-26722

AMPLIFICATION
Low noise monolithic Si JFETS for operation in the 90-300K range and in high radiation environments
[DE95-007303] p 2269 N95-28244

AMPLITUDE MODULATION
High-speed coherent laser arrays
[AD-A289373] p 2295 N95-26906
Full complex modulation using two one-parameter spatial light modulators
[NASA-CASE-MSC-22255-1] p 2427 N95-28384

AMPLITUDES
Ball bearing vibrations amplitude modeling and test comparisons p 2158 N95-27286

ANALOG CIRCUITS
Modeling of trapping and abrupt doping effects in MESFET's using R-dynamic element
[PB95-184891] p 2262 N95-27050
Novel field effect transistors for low power electronics
[AD-A289929] p 2271 N95-28629

ANALOG SIMULATION
Modeling of trapping and abrupt doping effects in MESFET's using R-dynamic element
[PB95-184891] p 2262 N95-27050

ANALOG TO DIGITAL CONVERTERS
The systems of the proportional chambers registration electronics for present experiments in nuclear physics
[DE95-608559] p 2419 N95-27161
Method and apparatus for maintaining linearity and frequency accuracy of an FM chirp waveform
[AD-D017398] p 2258 N95-28615

ANALOGIES
Unification of LARCH and Z-based object models to support algebraically-based design refinement: The Z perspective
[AD-A289234] p 2369 N95-26962

ANALOGS
Algebraic structure of the Green's ansatz and its q-deformed analogue
[DE95-608780] p 2395 N95-27340
Leak detection utilizing analog binaural (VLSI) techniques
[NASA-CASE-NPO-18399-1-CU] p 2271 N95-28599

ANALYSIS (MATHEMATICS)
Efficient analytic computation of higher-order QCD amplitudes
[DE95-008593] p 2449 N95-28160

ANALYTIC FUNCTIONS
Generalized Schwarzians in several variables and Moebius invariant differential operators
[PB95-185211] p 2388 N95-26539
Holomorphic curves in Abelian varieties, part 1
[DE95-608748] p 2396 N95-27300

ANALYTICAL CHEMISTRY
Observations on the solvating power of supercritical fluids p 2228 N95-27106

ANDROMEDA CONSTELLATION
Discussion on selected symbiotic stars
p 2460 N95-27078

ANECHOIC CHAMBERS
Anechoic wind tunnel study of turbulence effects on wind turbine broadband noise p 2325 N95-27992
Data acquisition software for DREO's near-field antenna measurement facility
[AD-A289819] p 2258 N95-28573

ANGLE OF ATTACK
Numerical simulation of the flow about the F-18 HARV at high angle of attack
[NASA-CR-197755] p 2121 N95-26735

ANGLES (GEOMETRY)
A new angle on the Euler angles
p 2153 N95-27800

ANGULAR DISTRIBUTION
Radiation of a uniformly moving charge
[DE95-608757] p 2255 N95-27335
Laser ultrasonic generation at the surface of a liquid metal
[DE95-004999] p 2216 N95-27477

ANGULAR MOMENTUM
Wigner quantum oscillators. OSP (3/2) oscillators
[DE95-608756] p 2448 N95-27334
The Hurwitz-Eulerian reduction
[DE95-608760] p 2396 N95-27337
Magnetic viscosity by localized shear flow instability in magnetized accretion disks
[DE95-006879] p 2433 N95-28111
Coordinates of the quantum plane as q-tensor operators in U(sub q) (su(2) * su(2))
[DE95-007100] p 2397 N95-28234

ANGULAR VELOCITY
Electro-hydrostatic actuator controller design using quantitative feedback theory
[AD-A289220] p 2141 N95-26957
Preliminary analysis of dynamic stall effects on a 91-meter wind turbine rotor p 2124 N95-27975

ANILINE
The role of hydrogen in the hydrogenation and hydrogenolysis of aniline on the nickel single crystal surfaces: Its implication on the mechanisms of HDN reactions
[DE95-006687] p 2222 N95-28134

ANIMATION
Virtual Prototyping as an aid for control system analysis
[AD-A288819] p 2362 N95-28346

ANIONS
Molecular approach to mesoporous metal sulfides
[DE95-005418] p 2202 N95-27137
Atomistic study of energy and structure of surfaces in NiO
[DE95-005207] p 2215 N95-27446
Synthesis and properties of lanthanide-exchanged Preyssler's heteropolyanions
[DE95-007136] p 2238 N95-28235

ANISOTROPIC MEDIA
Conditions for the parameter dyadics of lossless bi-anisotropic media
[PB95-185104] p 2252 N95-26914
Dip-moveout processing by Fourier transform in anisotropic media
[DE95-007668] p 2339 N95-28190
Internal electric field of anisotropic and bi-anisotropic spheres
[PB95-195491] p 2257 N95-28449

ANISOTROPIC PLATES
Buckling behavior of long symmetrically laminated plates subjected to combined loads p 2190 N95-28430

ANISOTROPY
Determination of the cyclical properties of 18G2A steel on the basis of skeleton curves for a planar stress state
[IFTR-32/1994] p 2211 N95-26359
The development of the anisotropic properties of copper under plastic deformation induced by creep and monotonic loading
[IFTR-23/1994] p 2212 N95-26517
Changes in the anisotropy parameters of an aluminum alloy caused by cyclical deformation
[IFTR-27/1994] p 2212 N95-26666
Annealing-induced changes in the anisotropy of an aluminum alloy
[IFTR-24/1994] p 2213 N95-26838
Micromechanical modeling of damage and inelasticity of composite materials in macroscopic structural analysis
[DE95-003668] p 2182 N95-27421
Formation of anisotropic Tl-1212, Tl-2212, Tl-1223 and Tl-2223 particles using aerosol flow reacted powders
[DE95-007400] p 2444 N95-28079
Photon rockets and gravitational radiation
[PB95-190161] p 2397 N95-28174
Analysis of stresses in finite anisotropic panels with centrally located cutouts p 2187 N95-28286

ANNEALING
Annealing of radiation damaged gallium arsenide solar cells by laser illumination
[AD-A289683] p 2316 N95-26762

Annealing-induced changes in the anisotropy of an aluminum alloy
[IFTR-24/1994] p 2213 N95-26838
Effects of helium pre-implantation on the microstructure and mechanical properties of irradiated 316 stainless steel
[DE95-007162] p 2214 N95-27086
Neutron diffraction studies on recrystallization of solution derived lead zirconate titanates
[DE95-004771] p 2439 N95-27429
Characterization of defects in deuterium-implanted beryllium
[DE95-005688] p 2217 N95-27553
Modification of the optical properties of glass by sequential ion implantation
[DE95-007401] p 2237 N95-28080
Low resistivity ohmic contacts to moderately doped n-GaAs with low temperature processing
[DE95-008507] p 2445 N95-28144
Sensor for measuring the atomic fraction in highly dissociated hydrogen
[DE95-006531] p 2415 N95-28204
Chemical and electrical properties of cavities in silicon and germanium
[DE95-006812] p 2445 N95-28206

ANNIHILATION REACTIONS
A simple relativistic model of pp-bar yields K(+)K(-)
[DE95-608852] p 2406 N95-27318
Some aspects of the OZI-rule violation in the reaction anti-pp yields phi pi(0)
[DE95-608853] p 2415 N95-28245
B-Physics results from D0
[DE95-005126] p 2417 N95-28495

ANNUAL VARIATIONS
Hindcasting wind-driven anomalies using reduced-gravity global ocean models with 1/2 deg and 1/4 deg resolution
[AD-A289060] p 2345 N95-26406
Temporal and spatial decorrelation scales of the Yellow Sea thermal fields
[AD-A288617] p 2346 N95-26483
Spectral analyses, climatology, and interannual variability of Nimbus-7 TOMS version 6 total column ozone
[NASA-RP-1360] p 2341 N95-26689
Variability study of foF2 for an equatorial station
[DE95-608080] p 2337 N95-27157
Research project on CO2-induced climate change
[DE95-008339] p 2330 N95-28084

ANODES
Electrolyte effects in Li(Si)/FeS2 thermal batteries
[DE95-001614] p 2264 N95-27474

ANODIC COATINGS
Thermal control materials on EOIM-3
p 2242 N95-27639
Solid film lubricants and thermal control coatings flown aboard the EOIM-3 MDA sub-experiment
p 2242 N95-27640

ANOMALIES
Hindcasting wind-driven anomalies using reduced-gravity global ocean models with 1/2 deg and 1/4 deg resolution
[AD-A289060] p 2345 N95-26406
Parallelism detection and scheduling strategies for reliable and efficient execution on multicomputers
[AD-A288370] p 2376 N95-26471
Trace anomalies and cocycles of Weyl and diffeomorphism groups
[DE95-608793] p 2397 N95-27344
Geophex airborne unmanned survey system
[DE95-007566] p 2131 N95-27440
Kepler Equation solver p 2147 N95-27767

ANTARCTIC REGIONS
Live from Antarctica: Then and now
[NASA-CR-197829] p 2335 N95-26594
Live from Antarctica: The coldest, windiest place on Earth
[NASA-CR-197737] p 2335 N95-26595
Live from Antarctica, volume 4
[NASA-CR-197828] p 2335 N95-26596
FY 1994 ambient air monitoring report for McMurdo Station, Antarctica
[DE95-008565] p 2331 N95-28149

ANTENNA ARRAYS
Joint services electronics program
[AD-A289594] p 2260 N95-26716
Active antennas with periodic structures
[AD-A289437] p 2252 N95-26924
Adaptive beamforming in frequency-dispersive multipath environments
[AD-A289206] p 2254 N95-27009
Linearly tapered slot antenna impedance characteristics
[NASA-TM-106912] p 2266 N95-27853
Theoretical and experimental study of low-loss, High-efficiency monolithic antenna structures at 94 GHz
[AD-A291785] p 2257 N95-28513
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-019] p 2270 N95-28565

ANTENNA COMPONENTS
FORTE antenna element and release mechanism design p 2157 N95-27282
Theoretical and experimental study of low-loss, High-efficiency monolithic antenna structures at 94 GHz
[AD-A291785] p 2257 N95-28513

ANTENNA COUPLERS
One dimensional global and local solution for ICRF heating
[DE95-007984] p 2392 N95-28110
Shear Alfven wave excitation by direct antenna coupling and fast wave resonant mode conversion
[DE95-609109] p 2256 N95-28254

ANTENNA DESIGN
Improving the performance of spiral antennas by using passive scatterers
[AD-A289324] p 2251 N95-26893
Active antennas with periodic structures
[AD-A289437] p 2252 N95-26924
Low-cost tubular antenna deployer for WISP-2
p 2156 N95-27269
Design, development and testing of the x-ray timing explorer High Gain Antenna System
p 2157 N95-27279
Special features of the CLUSTER antenna and radial booms design, development and verification
p 2157 N95-27281
FORTE antenna element and release mechanism design p 2157 N95-27282
Linearly tapered slot antenna impedance characteristics
[NASA-TM-106912] p 2266 N95-27853
Faraday screen sputtering on TPX
[DE95-008347] p 2434 N95-28224
Data acquisition software for DREO's near-field antenna measurement facility
[AD-A289819] p 2258 N95-28573

ANTENNA RADIATION PATTERNS
Improving the performance of spiral antennas by using passive scatterers
[AD-A289324] p 2251 N95-26893
Active antennas with periodic structures
[AD-A289437] p 2252 N95-26924
FDTD-ANT user manual
[NASA-CR-195444] p 2372 N95-27729
Linearly tapered slot antenna impedance characteristics
[NASA-TM-106912] p 2266 N95-27853

ANTHROPOMETRY
The Alpha-Proton-X-ray Spectrometer deployment mechanism: An anthropomorphic approach to sensor placement on Martian rocks and soil
p 2155 N95-27265

ANTIBODIES
Cofactor-assisted antibody catalysis
[AD-A288929] p 2349 N95-26608

ANTIFERROMAGNETISM
Magnetic structures in RNi2B2C (R = Ho, Er) superconductors
[DE95-008370] p 2442 N95-27932
Muon spin relaxation in antiferromagnets: A study of RbMnF3 based on the coupled-mode theory of paramagnetic and critical spin fluctuations
[PB95-192878] p 2418 N95-28642

ANTIGENS
Anti-idiotype probes for toxin detection
[AD-A288955] p 2348 N95-26435
Diagnostic antigens of Leishmania
[AD-A288605] p 2350 N95-27097

ANTIMATTER
Polarizing matter and antimatter: A new method
[DE95-007109] p 2421 N95-27923

ANTIMONY
Analysis of the dimerized Sb/Si(001)-(2x1) surface by x-ray standing waves
[DE95-007097] p 2208 N95-27965

ANTIPROTONS
A study of events with large total transverse energy produced in proton-antiproton collisions at (radical)s = 1.8 TeV
[DE95-003382] p 2410 N95-27872
The CDF upgrade
[DE95-006683] p 2421 N95-28107
Some aspects of the OZI-rule violation in the reaction anti-pp yields phi pi(0)
[DE95-608853] p 2415 N95-28245
The 132 nsec bunch spacing in the Tevatron proton-antiproton collider
[DE95-005750] p 2422 N95-28346

ANTIREFLECTION COATINGS
Study of frequency doubling antireflection coating
[AD-A289634] p 2424 N95-26860
Effects of long term space environment exposure on optical substrates and coatings p 2428 N95-27653

APERTURES
Preliminary design study of the beam collapser and certain optomechanical aspects of the siderostat
[AD-A288423] p 2423 N95-26549

APOGEE BOOST MOTORS
Development test of a liquid Apogee engine for the ETS-6
[NAL-TR-1250] p 2167 N95-26799

APPLICATIONS PROGRAMS (COMPUTERS)
Manual for SHOCK3D, version 2.0. Computer program for non-linear shock response
[AD-A288631] p 2307 N95-26342
An evaluation of the Software Through Pictures/T Tool (StP/T) for the Software Support Activity (SSA)
[AD-A288822] p 2362 N95-26348
WINCLR: A computer code for heat transfer and clearance calculation in a compressor
[NASA-CR-195436] p 2117 N95-26363
Hindcasting wind-driven anomalies using reduced-gravity global ocean models with 1/2 deg and 1/4 deg resolution
[AD-A289060] p 2345 N95-26406
FREZCHEM: A chemical-thermodynamic model for aqueous solutions at subzero temperatures
[AD-A288456] p 2200 N95-26432
Analysis of historical oceanographic data on a personal computer. Program MDS
[AD-A288965] p 2363 N95-26447
Long term distributed file reference tracing: Implementation and experience
[AD-A288585] p 2452 N95-26535
Design tool for multiprocessor scheduling and evaluation of iterative dataflow algorithms
[NASA-TP-3491] p 2366 N95-26685
Software packager user's guide
[NASA-CR-197763] p 2366 N95-26693
The multidimensional Self-Adaptive Grid code, SAGE, version 2
[NASA-TM-110350] p 2367 N95-26726
NEXTSTEP: The next step in the right direction? Part 2: Software development with NEXTSTEP
[REPT-94-33-PT-2] p 2450 N95-26803
User documentation of the CTA program
[AD-A289508] p 2121 N95-26854
EASY-SIM: A visual simulation system software architecture with an Ada 9X application framework
[AD-A289325] p 2368 N95-26895
An exploratory application of neural networks for airfoil design p 2118 N95-26943
Measuring fault tolerance with the FTAPE fault injection tool
[NASA-CR-197773] p 2306 N95-27253
Computer program BL2D for solving two-dimensional and axisymmetric boundary layers
[NASA-CR-4668] p 2279 N95-27257
Thermal neutral format based on the step technology
p 2283 N95-27363
Automated database design from natural language input p 2383 N95-27378
Outline and handling manual of fusion experimental data monitor system DAISY, version 2
[DE95-703895] p 2431 N95-27414
Energetic particle destabilization of shear Alfven waves in stellarators and tokamaks
[DE95-006393] p 2431 N95-27419
Lattice QCD calculation using VPP500
[DE95-007076] p 2449 N95-27448
Scientific statistics and graphics on the Macintosh
[DE95-006445] p 2372 N95-27533
Numerical methods for determining interstitial oxygen in silicon
[DE95-007710] p 2205 N95-27683
PRISM validation
[AD-A288476] p 2337 N95-27703
Multimedia Environmental Pollutant Assessment System (MEPAS) application guidance. Guidelines for evaluating MEPAS input parameters for Version 3.1
[DE95-007525] p 2328 N95-27749
Development of a direct match technique for star identification on the SWAS mission
p 2148 N95-27771
Determining GPS average performance metrics
p 2128 N95-27791
Improvements and new features in the PDF module
p 2287 N95-27902
Scrape-off layer plasma modeling for the DIII-D tokamak
[DE95-008059] p 2433 N95-28054
UEDGE and DEGAS modeling of the DIII-D scrape-off layer plasma, revision 1
[DE95-008052] p 2433 N95-28065

Using the scalable nonlinear equations solvers package
[DE95-008323] p 2378 N95-28071
Preliminary flight software specification for the petite amateur Navy satellite (PANSAT)
[AD-A280068] p 2165 N95-28150
BEGET: The B-Factory Event Generator version 21
[DE95-008329] p 2414 N95-28171
Transport simulation of negative magnetic shear discharges
[DE95-003941] p 2416 N95-28329
Measurement-based MESFET model in APLAC
[PB95-195483] p 2269 N95-28448
HZETRN: Description of a free-space ion and nucleon transport and shielding computer program
[NASA-TP-3495] p 2465 N95-28530
ALLIANCE: An architecture for fault tolerant, cooperative control of heterogeneous mobile robots
[DE95-007374] p 2387 N95-28536
Development of a TECS control-law for the lateral directional axis of the McDonnell Douglas F-15 Eagle
[AD-A289771] p 2142 N95-28598
Radon transform and its applications in gridding airborne geophysical survey data
[PB95-195533] p 2315 N95-28643
Using COLETTE. (A simple guide)
[PB95-195806] p 2375 N95-28658

APPROACH CONTROL
Development of a coding form for approach control/pilot voice communications
[DOT/FAA/AM-95/15] p 2128 N95-28540

APPROXIMATION
Analysis and development of finite element methods for the study of nonlinear thermomechanical behavior of structural components
[NASA-CR-195354] p 2307 N95-26387
A mathematical framework for an improved search model
[AD-A288858] p 2358 N95-26552
The attenuation of microwave radiation by fog and rain
[AD-A288326] p 2249 N95-26562
Adaptive finite element method I: Solution algorithm and computational examples
[AD-A288979] p 2389 N95-26609
Truncated Gaussians as tolerance sets
[NASA-CR-197732] p 2395 N95-27417
Solving recursive domain equations with enriched categories
[AD-A289358] p 2371 N95-27418
An automated method of tuning an attitude estimator
p 2148 N95-27774
Optimal attitude maneuver execution for the Advanced Composition Explorer (ACE) mission
p 2149 N95-27778
Ulysses orbit determination at high declinations
p 2151 N95-27787
A magnetic hysteresis model p 2153 N95-27801
Generalized CNF satisfiability, local reductions and complexity of succinctly specified problems
[DE95-006343] p 2372 N95-27849
Deformation limits on two-parameter fracture mechanics in terms of higher order asymptotics
[AD-A289113] p 2310 N95-28098
Modeling the shock response of submerged structures
[AD-A289082] p 2288 N95-28351
Evaluation of defect-related diffusion in semiconductors by electrooptical sampling
[AD-A291630] p 2270 N95-28544

AQUEOUS SOLUTIONS
FREZCHEM: A chemical-thermodynamic model for aqueous solutions at subzero temperatures
[AD-A288456] p 2200 N95-26432
Applications of Second Harmonic and Sum Frequency Generation to graphite and silica type interfaces
[AD-A288228] p 2201 N95-26544
Survey of environmentally benign cleaning methodologies and materials p 2231 N95-27122
Sceening, down selection, and implementation of environmentally compliant cleaning and insulation bonding for MNASA p 2165 N95-27124
The response of hydrotalcite coated aluminum to sealing with transition metal salt solutions
[DE95-004767] p 2234 N95-27460
Thermodynamics of aqueous electrolytes at high temperatures by the isopiestic technique
[DE95-006747] p 2449 N95-27546
Absorption of sparingly soluble gases by reactive media in self-aerated gas-liquid contactors: A scale-up procedure
[DE95-006429] p 2206 N95-27707
Electrical conductivity measurements of aqueous electrolyte solutions at high temperatures and high pressures
[DE95-006748] p 2208 N95-27956
Aqueous electrolyte modeling in ASPEN PLUS(trademark)
[DE95-007008] p 2208 N95-27960

AQUIFERS
Numerical simulation of coupled flow and transport with TOUGH2: A verification study
[DE95-008351] p 2287 N95-28225

ARAMID FIBER COMPOSITES
Proof test methodology for composites
p 2193 N95-28445

ARC JET ENGINES
Electric propulsion for geostationary orbit insertion
[NASA-TM-106942] p 2168 N95-27727

ARC MELTING
Structural chemistry of some phases in the YC-Ni-B system
[DE95-007403] p 2447 N95-28537

ARC SPRAYING
Magnetically controlled deposition of metals using gas plasma
[DE95-007248] p 2430 N95-27237

ARCHES
Investigation into the behavior of geometrically nonlinear composite arches
[AD-A289258] p 2308 N95-26975

ARCHITECTURE
Advanced development for space robotics with emphasis on fault tolerance p 2155 N95-27263
Building-integrated photovoltaics: A case study
[DE95-004032] p 2325 N95-28396

ARCHITECTURE (COMPUTERS)
Using machine learning to derive efficient cost and performance estimates in VLSI CAD designs
[AD-A288254] p 2363 N95-26408
Massively parallel self-consistent-field calculations
[DE95-004128] p 2376 N95-26441
An introduction to software architecture
[AD-A288963] p 2363 N95-26446
Performance prediction: A case study using a multi-ring KSR-1 machine
[NASA-CR-195066] p 2361 N95-26697
Using an architectural approach to integrate heterogeneous, distributed software components
[NASA-CR-197766] p 2366 N95-26711
Control-flow analysis and type systems
[AD-A289338] p 2389 N95-26772
Progress towards computer simulation of NiH2 battery performance over life p 2272 N95-26786
An architecture for optimal all-to-all personalized communication
[AD-A288532] p 2377 N95-26840
Next generation controller specification for an open systems architecture standard - overview
[AD-A289507] p 2368 N95-26853
EASY-SIM: A visual simulation system software architecture with an Ada 9X application framework
[AD-A289325] p 2368 N95-26895
An exploratory application of neural networks for airfoil design p 2118 N95-26943
Design and implementation of a software communication architecture for the JANUS-3D Visualizer
[AD-A288509] p 2370 N95-27150
Advanced flight computer. Special study
[NASA-CR-198165] p 2371 N95-27246
An architecture and protocol for communications satellite constellations regarded as multi-agent systems
p 2166 N95-27377
A user-system interface agent p 2383 N95-27379
Design of a real-time wind turbine simulator using a custom parallel architecture p 2322 N95-27979
Teaching interdisciplinary computational science from an electronic book on the Internet
[DE95-006525] p 2373 N95-28498
Next generation controller specification for an open systems architecture standard
[AD-A289567] p 2375 N95-28647

ARGON
Cryogenic and simulated fuel jet breakup in argon, helium and nitrogen gas flows
[NASA-TM-106923] p 2291 N95-27030
Electron spectroscopy studies of argon K-shell excitation and vacancy cascades
[DE95-007096] p 2442 N95-27963
Low noise monolithic Si JFETS for operation in the 90-300K range and in high radiation environments
[DE95-007303] p 2269 N95-28244

ARID LANDS
Measurement and analysis of the surface energy budget for ARM field experiments
[DE95-007646] p 2338 N95-28114

ARITHMETIC
Modified Gaussian elimination for adaptive beamforming using RNS arithmetic
[AD-A288809] p 2248 N95-26356

ARMATURES
AFC generator development
[DE95-007094] p 2266 N95-27754

ARMED FORCES
Myers-Briggs type indicators and Kirton adaption-innovation inventory correlations
[AD-A288435] p 2357 N95-27181

ARMED FORCES (UNITED STATES)
Utilization of composite materials by the US Army: A look ahead p 2189 N95-28421

ARMOR
Improved hardness RHA weldability and material property testing
[AD-A289127] p 2221 N95-28102

ARRAYS
Fabrication of long wavelength array by in-situ molecular beam epitaxy
[AD-A288599] p 2423 N95-26679

ARSENIDES
Isolation and x-ray crystal structures of (Li(mu2-As(SiMe3)2) (mu3-As(SiMe3)2)(THF))2 and ((Me3Si)2AsLi(THF)2)2
[AD-A288870] p 2241 N95-28661

ARTIFICIAL INTELLIGENCE
Self-organizing artificial neural networks in dynamic systems modeling and control
[PB95-185120] p 2379 N95-26449
Encoding user-defined problems with SIPE-2
[AD-A288390] p 2380 N95-26475
Intelligent computer based reliability assessment of multichip modules
[AD-A288833] p 2259 N95-26550
Design and synthesis of a real-time controller for an unmanned air vehicle
[AD-A289134] p 2141 N95-26555
Digital systems validation. Chapter 20 Artificial Intelligenge with applications for aircraft. Handbbook, volume 2
[AD-A288492] p 2380 N95-26638
Multi-agent perception for Human/Robot interaction: A framework for intuitive trajectory modification
[AD-A289399] p 2359 N95-26884
Next generation real-time systems: Investigating the potential of partial-solution tasks
[AD-A289203] p 2381 N95-27007
Head related transfer function approximation using neural networks
[AD-A289422] p 2382 N95-27145
The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies
[NASA-CP-3296] p 2382 N95-27375
Applying AI tools to operational space environmental analysis p 2382 N95-27376
An architecture and protocol for communications satellite constellations regarded as multi-agent systems
p 2166 N95-27377
Building an adaptive agent to monitor and repair the electrical power system of an orbital satellite
p 2383 N95-27380
Limits to ground control in autonomous spacecraft
p 2383 N95-27381
Lessons learned from the introduction of autonomous monitoring to the EUVE science operations center
p 2385 N95-27393
Real-time value-driven diagnosis
p 2386 N95-27396
A linguistic geometry for 3D strategic planning
p 2386 N95-27397
Human factors in aviation maintenance, phase 4
[DOT/FAA/AM-95/14] p 2360 N95-27696
Operator modeling in commerical aviation: Cognitive models, intelligent displays, and pilot's assistants
[NASA-CR-198609] p 2138 N95-28203
Piecemeal learning of an unknown environment
[AD-A291683] p 2387 N95-28461
TRAINS: Dialogue transcription tools
[AD-A289869] p 2259 N95-28624

ARTIFICIAL SATELLITES
Engineering calculations associated with the ablative thermal protective structures of returnable satellites
[AD-A289593] p 2162 N95-26715
Optimization of a nutation damper attached to a spin-stabilized satellite
[AD-A289424] p 2162 N95-26887
A multi-attribute-utility-theory model that minimizes interview-data requirements: A consolidation of space launch decisions
[AD-A289421] p 2164 N95-27144
Non-explosive actuation for the ORBCOMM (TM) satellite p 2156 N95-27274
A sustainable genetic algorithm for satellite resource allocation p 2376 N95-27383
The combined release and radiation effects satellite time history data base system
[AD-A289835] p 2165 N95-28578

ASCENT PROPULSION SYSTEMS

Summary of EOS flight dynamics analysis p 2152 N95-27797

ASCENT TRAJECTORIES

Geostationary Operational Environmental Satellite (GOES)-8 mission flight experience p 2153 N95-27798

ASIA

An observational study on the onset of the summer monsoon over eastern Asia in 1979 [AD-A289637] p 2341 N95-26723

Synoptic features of the Yunan rainy season before the onset of the tropical monsoons [AD-A289641] p 2342 N95-26724

Asian Aeronautics: Technology acquisition drives industry development. Report to Congressional requesters [GAO/NSIAD-94-140] p 2118 N95-26817

JPRS report: Science and technology. Central Eurasia [JPRS-UST-95-016] p 2262 N95-27170

JPRS report: Science and technology. Central Eurasia [JPRS-UST-95-014] p 2145 N95-27171

JPRS report: Science and technology. Central Eurasia [JPRS-UST-95-019] p 2270 N95-28565

ASPECT RATIO

Analytical investigations of the acceleration sensitivity of acoustic bulk and surface wave resonators [AD-A291715] p 2402 N95-28505

ASPHALT

Layer coefficients for NHDOT pavement materials [AD-A288262] p 2246 N95-26548

ASPHERIC OPTICS

Design and fabrication of a diamond-turned hybrid diffractive/refractive singlet for visible applications at ORNL [DE95-007007] p 2427 N95-28552

ASSAYING

Microbial treatment for shipboard collection, hold ing, and transfer system tanks p 2179 N95-27119

ASSEMBLING

Automated integration of genomic physical mapping data via parallel simulated annealing [DE95-008057] p 2351 N95-27725

JTEC Panel report on microelectromechanical systems in Japan [NASA-CR-197831] p 2268 N95-28239

ASSEMBLY

Electronics manufacturing and assembly in Japan p 2263 N95-27231

ASSESSMENTS

Probabilistic risk assessment of the Space Shuttle. Phase 3: A study of the potential of losing the vehicle during nominal operation, volume 1 [NASA-CR-197808] p 2159 N95-26398

Probabilistic risk assessment of the Space Shuttle. Phase 3: A study of the potential of losing the vehicle during nominal operation. Volume 2: Integrated loss of vehicle model [NASA-CR-197809] p 2159 N95-26399

An introductory guide to uncertainty analysis in environmental and health risk assessment. Environmental Restoration Program [DE95-008097] p 2354 N95-28136

ASSIMILATION

Technical report series on global modeling and data assimilation. Volume 6: A multiyear assimilation with the GEOS-1 system: Overview and results [NASA-TM-104606-VOL-6] p 2334 N95-26423

ASSOCIATIVE PROCESSING (COMPUTERS)

Optical implementation of inner product neural associative memory [NASA-CASE-NPO-18491-2-CU] p 2427 N95-28363

ASTEROIDS

Tracking and impact prediction of Earth-Crossing-Objects (ECO's) on a collision course with Earth [AD-A289321] p 2461 N95-27303

ASTROMETRY

Preliminary design study of the beam collapser and certain optomechanical aspects of the siderostat [AD-A288423] p 2423 N95-26549

ASTRONAUTICS

Aeronautical engineering: A continuing bibliography with indexes (supplement 318) [NASA-SP-7037(318)] p 2120 N95-27543

ASTRONAUTS

Views of the solar system [DE95-006446] p 2461 N95-27326

ASTRONOMICAL MODELS

The second coming of cold dark matter? [DE95-005156] p 2462 N95-27445

ASTRONOMICAL POLARIMETRY

Classical novae and recurrent novae: General properties p 2459 N95-27072

ASTRONOMICAL SPECTROSCOPY

International Ultraviolet Explorer Atlas of B-type spectra from 1200 to 1900 A [NASA-RP-1363] p 2463 N95-28328

ASTROPHYSICS

Discussion on selected symbiotic stars p 2460 N95-27078

Airborne geophysics and precise positioning: Scientific issues and future directions [LC-94-68678] p 2314 N95-27156

Laboratory high-energy astrophysics on lasers [DE95-008062] p 2462 N95-28013

Normal modes and continuous spectra [DE95-006166] p 2287 N95-28055

Search for molecular absorptions with the Fourier Transform Spectrometer [NASA-CR-198648] p 2462 N95-28222

Neutrino oscillations in strong magnetic fields [DE95-608876] p 2416 N95-28249

Proceedings of the International Workshop on Acceleration and Radiation Generation in Space and Laboratory Plasmas [AD-A291673] p 2436 N95-28668

Space Science Division cumulative bibliography: 1989-1994 [NASA-TM-110355] p 2457 N95-28677

ASYMMETRY

Scalable multicast tree construction for wide area networks [AD-A288318] p 2379 N95-26421

Using the dimension reduction technique to prove that clique trees define facets for the asymmetric traveling salesman polytope [AD-A289397] p 2389 N95-26882

Study of parity and time reversal violation in neutron-nucleus interactions [DE95-005158] p 2405 N95-27081

Precise measurement of the left-right cross section asymmetry in Z boson production by e(+)e(-) collisions [DE95-008591] p 2414 N95-28158

ASYMPTOTIC METHODS

Modeling the shock response of submerged structures [AD-A289082] p 2288 N95-28351

ASYMPTOTIC SERIES

Deformation limits on two-parameter fracture mechanics in terms of higher order asymptotics [AD-A289113] p 2310 N95-28098

The high energy behavior of the forward scattering parameters -- (sigma)(sub tot), (rho), and B [DE95-007075] p 2415 N95-28210

ATMOSPHERIC ATTENUATION

Prediction of rain attenuation and total atmospheric attenuation for low-availability satellite communications in Europe [PB95-184925] p 2252 N95-26908

A study of surface temperatures, clouds and net radiation [NASA-CR-198589] p 2329 N95-27864

ATMOSPHERIC CHEMISTRY

Applications of Second Harmonic and Sum Frequency Generation to graphite and silica type interfaces [AD-A288228] p 2201 N95-26544

Engineering photochemical smog through convection towers [DE95-007727] p 2328 N95-27686

Dynamics and control of SEDSAT tethered multi-probe for thermospheric research flight data analysis of SEDS-2 satellite: Tethered systems dynamics and flight data analysis [NASA-CR-198653] p 2165 N95-27836

Issues relevant to the development of coupled chemistry/climate models [DE95-006441] p 2330 N95-27954

Emerging applications of probability (stochastic models in geosystems) [AD-A289117] p 2313 N95-28099

Use of SURFACE CHEMKIN to model multiphase atmospheric chemistry: Application to nitrogen tetroxide spills p 2172 N95-28305

Site scientific mission plan for the Southern Great Plains CART site, January-June 1995 [DE95-008393] p 2344 N95-28340

Remote sensing of the atmosphere by resonance Raman LIDAR [DE95-007312] p 2315 N95-28520

Measurements of daytime and upper tropospheric water vapor profiles by Raman lidar [DE95-007640] p 2344 N95-28538

A black carbon emission data base for atmospheric chemistry and climate studies [DE95-006436] p 2332 N95-28662

ATMOSPHERIC CIRCULATION

Meso-beta scale numerical simulation studies of terrain-induced jet streak mass/momentum perturbations [NASA-CR-197804] p 2335 N95-26592

Indexing meso-beta surface wind site representative [AD-A288501] p 2341 N95-26650

An observational study on the onset of the summer monsoon over eastern Asia in 1979 [AD-A289637] p 2341 N95-26723

Parallel algorithms for semi-Lagrangian transport in global atmospheric circulation models [DE95-007385] p 2327 N95-27457

Emerging applications of probability (stochastic models in geosystems) [AD-A289117] p 2313 N95-28099

OB/OD treatment: The effective use of measured field data and air modeling to support an environmental assessment p 2170 N95-28296

Three-dimensional forecast models for emergency response management p 2172 N95-28303

The northern wintertime divergence extrema at 200 hPa and surface cyclones as simulated in the integration of the ECMWF general circulation model [DE95-007946] p 2332 N95-28550

ATMOSPHERIC COMPOSITION

Live from Antarctica, volume 4 [NASA-CR-197828] p 2335 N95-26596

Integrated assessment and the relation between land-use change and climate change [DE95-006533] p 2327 N95-27469

Coupled chemistry/climate issues [DE95-006443] p 2327 N95-27532

Measurement of heterogeneous chemical processes relevant to aerosol surfaces and trace gases active in the marine environment [DE95-008337] p 2328 N95-27743

Carbonaceous aerosols influencing atmospheric radiation: Black and organic carbon [DE95-006437] p 2330 N95-28118

Mars Sample Return mission utilizing in-situ propellant production [NASA-CR-188371] p 2145 N95-28261

Stratospheric ozone reactive chemicals generated by space launches worldwide [AD-A289852] p 2332 N95-28623

A black carbon emission data base for atmospheric chemistry and climate studies [DE95-006436] p 2332 N95-28662

ATMOSPHERIC EFFECTS

The attenuation of microwave radiation by fog and rain [AD-A288326] p 2249 N95-26562

Study of development and utilization of a multipurpose atmospheric corrosion sensor [NASA-CR-198595] p 2292 N95-27368

Orbital atomic oxygen effects on materials: An overview of MSFC experiments on the STS-46 EOIM-3 p 2419 N95-27637

Basic principles and recent observations of rotationally sampled wind p 2321 N95-27971

Weightless Environment Training Facility (WETF) materials coating evaluation, volume 1 [NASA-CR-188366-VOL-1] p 2239 N95-28385

Atmospheric dispersion in adaptive optics [AD-A289639] p 2428 N95-28617

ATMOSPHERIC ELECTRICITY

A brief history of laser guided lightning discharge models and experiments [AD-A289448] p 2295 N95-27022

ATMOSPHERIC ENTRY

Composite flexible insulation for thermal protection of space vehicles p 2166 N95-28293

ATMOSPHERIC GENERAL CIRCULATION MODELS

Technical report series on global modeling and data assimilation. Volume 6: A multiyear assimilation with the GEOS-1 system: Overview and results [NASA-TM-104606-VOL-6] p 2334 N95-26423

A parallel coupled oceanic-atmospheric general circulation model [DE95-005918] p 2335 N95-26622

Parallel algorithms for semi-Lagrangian transport in global atmospheric circulation models [DE95-007385] p 2327 N95-27457

Issues relevant to the development of coupled chemistry/climate models [DE95-006441] p 2330 N95-27954

Research project on CO2-induced climate change [DE95-008339] p 2330 N95-28084

Anomalous cloud absorption? A critique of the paper entitled Absorption of Solar Radiation by Clouds: Observations Versus Models [DE95-007703] p 2331 N95-28121

The northern wintertime divergence extrema at 200 hPa and surface cyclones as simulated in the integration of the ECMWF general circulation model [DE95-007946] p 2332 N95-28550

Cloud classification using whole-sky imager data [DE95-006501] p 2344 N95-28556

ATMOSPHERIC LASERS

A novel sensitive detector of atmospheric nitrocompounds based on laser photofragmentation/ionization spectrometry p 2174 N95-28314

ATMOSPHERIC MODELS

A study of magnetic activity effects on the thermospheric winds in the low ionosphere [AD-A288677] p 2334 N95-26488

An improved model of high-latitude f-region scintillation (WBMOD version 13) [AD-A288558] p 2334 N95-26520

A mathematical analysis of the Janus combat simulation weather effects models and sensitivity analysis of sky-to-ground brightness ratio on target detection [AD-A289629] p 2336 N95-26858

Prediction of rain attenuation and total atmospheric attenuation for low-availability satellite communications in Europe [PB95-184925] p 2252 N95-26908

Assessment of the AN/FPS-118 Ionospheric model and proposed improvements [AD-A289439] p 2337 N95-27146

Evaluation of Oxygen Interactions with Materials 3: Mission and induced environments p 2210 N95-27631

PRISM validation [AD-A288476] p 2337 N95-27703

Differenced Range Versus Integrated Doppler (DRVID) ionospheric analysis of metric tracking in the Tracking and Data Relay Satellite System (TDRSS) p 2147 N95-27766

A summary documentation of the AMIP models [DE95-008343] p 2338 N95-27931

Remote measurement of ground temperature and emissivity [DE95-008055] p 2314 N95-28053

Three-dimensional forecast models for emergency response management p 2172 N95-28303

ATMOSPHERIC MOISTURE

Continuously-tunable, narrow-linewidth, Q-switched Cr:LiSAF laser for lidar applications [DE95-006285] p 2296 N95-27672

Millimeter-wave imaging radiometer data processing and development of water vapor retrieval algorithms [NASA-CR-198593] p 2343 N95-27997

Measurements of daytime and upper tropospheric water vapor profiles by Raman lidar [DE95-007640] p 2344 N95-28538

ATMOSPHERIC OPTICS

Atmospheric dispersion in adaptive optics [AD-A289639] p 2428 N95-28617

ATMOSPHERIC PHYSICS

Natural aerosol extinction module: XSCALE 1992 user's guide [AD-A289029] p 2340 N95-26463

Space physics educational outreach [NASA-CR-198649] p 2399 N95-27852

Emerging applications of probability (stochastic models in geosystems) [AD-A289117] p 2313 N95-28099

Site scientific mission plan for the Southern Great Plains CART site, January-June 1995 [DE95-008393] p 2344 N95-28340

ATMOSPHERIC REFRACTION

VOCAR: An experiment in Variability of Coastal Atmospheric Refractivity [AD-A289202] p 2253 N95-27006

ATMOSPHERIC SOUNDING

Indexing meso-beta surface wind site representative [AD-A288501] p 2341 N95-26650

ATMOSPHERIC TEMPERATURE

Synthetic 3-D atmospheric temperature structure: A model for known geophysical power spectra using a hybrid autoregression and Fourier technique [AD-A289058] p 2340 N95-26479

Infrared field measurements of sea surface temperature: Analysis of wake signatures and comparison of skin layer models [NASA-CR-197849] p 2346 N95-26533

Southern Africa: A climatological study [AD-A289466] p 2342 N95-27148

Dynamics and control of SEDSAT tethered multi-probe for thermospheric research flight data analysis of SEDS-2 satellite: Tethered systems dynamics and flight data analysis [NASA-CR-198653] p 2165 N95-27836

ATMOSPHERIC TURBULENCE

The small-scale structure of dispersing clouds in the atmosphere [AD-A288256] p 2341 N95-26546

Compensated deconvolution from wavefront sensing [AD-A289490] p 2336 N95-26824

Frame selection performance limits for statistical image reconstruction of adaptive optics compensated images [AD-A289240] p 2424 N95-26965

Laser beam propagation in non-Kolmogorov atmospheric turbulence [AD-A289256] p 2295 N95-26974

Studies of radar backscatter as a function of wave properties and the winds in the turbulent marine atmosphere [NASA-CR-198608] p 2315 N95-28209

ATOMIC BEAMS

Experimental aspects of effects of high-energy particles on Alfven modes [DE95-003383] p 2432 N95-27873

ATOMIC CLUSTERS

Atomic and electronic structure of clusters from Car-Parrinello method [DE94-634463] p 2403 N95-26437

Photoemission and optical properties of C60 fullerites [DE95-006588] p 2425 N95-27539

Particle-like absorption spectra in small transition metal clusters [DE95-007082] p 2218 N95-27752

Experimental determination of cluster geometrical structure [DE95-007089] p 2409 N95-27753

ATOMIC COLLISIONS

Collisions of highly charged ions with electrons, atoms and surfaces [DE95-007393] p 2413 N95-28078

ATOMIC ENERGY LEVELS

Quantum effects induced by a gap in the spectrum of atom-bath coupling constants: Freezing of atomic decay and monochromatic collective radiation [DE95-609037] p 2416 N95-28251

ATOMIC EXCITATIONS

Electron spectroscopy studies of argon K-shell excitation and vacancy cascades [DE95-007096] p 2442 N95-27963

ATOMIC FORCE MICROSCOPY

Electrocrystallization of an ordered organic monolayer: Selective epitaxial growth of beta(ET)213 ongraphite [AD-A288942] p 2178 N95-26569

Non-destructive inter-level dielectric via in-line process monitoring by atomic force microscopy [DE95-008516] p 2267 N95-28146

Functionalized block copolymers as adhesion promoters [DE95-008158] p 2239 N95-28400

Development and application of low-temperature AFM [AD-A291704] p 2352 N95-28525

Surface structure of MX-chains studied by atomic force microscopy [DE95-007881] p 2447 N95-28541

ATOMIC INTERACTIONS

Temperature dependence of ion-beam-induced amorphization in (Beta)-SiC [DE95-007164] p 2438 N95-27087

ATOMIC PHYSICS

Toward coherent excitation: Development of a single-source pump for the rubidium hyperfine ground state doublet [AD-A289413] p 2295 N95-27132

A new method of evaluating the explicit magnetic-state-dependent energy in semi-empirical calculations of iron [AD-A289098] p 2399 N95-27398

Atomic physics with highly charged ions [DE95-007325] p 2407 N95-27439

Basic and applied research in the field of electronics and communications [AD-A291727] p 2270 N95-28512

ATOMIC SPECTRA

Analytical spectroscopy [DE95-607896] p 2203 N95-27200

A continuous emissions monitor for airborne metals p 2174 N95-28313

Atomic layer epitaxy of group 4 materials: Surface processes, thin films, devices and their characterization [AD-A289092] p 2446 N95-28327

ATOMIC STRUCTURE

Atomic and electronic structure of clusters from Car-Parrinello method [DE94-634463] p 2403 N95-26437

Resonant photoemission studies of thickness dependence of the unoccupied Gd 5d bands [DE95-004127] p 2436 N95-26440

Massively parallel self-consistent-field calculations [DE95-004128] p 2376 N95-26441

Structure of ordinary ice Ih. Part 2: Defects in ice. Volume 1: Point defects [AD-A288279] p 2200 N95-26452

Investigations of the hyperfine interactions in copper-oxide perovskites using Eu-151 and Fe-57 Moessbauer spectroscopy [PB95-185138] p 2437 N95-26513

Analytic formulae for the Hartree-Fock order parameter at arbitrary p/q filling factors for the 2DEG in a magnetic field [DE95-607805] p 2448 N95-26603

Theoretical studies of reaction surfaces [AD-A288458] p 2404 N95-26632

Materials Research Society Symposium Proceedings. Volume 339: Diamond, SiC and nitride wide bandgap semiconductors [AD-A288690] p 2437 N95-26818

Boron-induced reconstructions of Si(100) investigated by scanning tunneling microscopy [AD-A289222] p 2438 N95-26959

Atomic structure and bonding of boron-induced reconstructions on Si(001) [AD-A289187] p 2405 N95-27017

Integrating the QMR method with first principles material science application code [DE95-007380] p 2408 N95-27456

PXAMS: Projectile X ray AMS: X ray yields and applications [DE95-006438] p 2204 N95-27496

Particle-like absorption spectra in small transition metal clusters [DE95-007082] p 2218 N95-27752

Electronic structure of disordered Cu-Ag alloys [DE95-609156] p 2219 N95-27758

Analysis of the dimerized Sb/Si(001)-(2x1) surface by x-ray standing waves [DE95-007097] p 2208 N95-27965

Electronic structure of ordered and disordered transition metal aluminides [DE95-609034] p 2223 N95-28250

The unusual properties of beryllium surfaces [DE95-006471] p 2223 N95-28593

ATOMIC WEIGHTS

PXAMS: Projectile X ray AMS: X ray yields and applications [DE95-006438] p 2204 N95-27496

ATOMS

Hydrogen-like atom in laser field: Invariant atomic parameters in the ground state [DE95-609036] p 2411 N95-27930

Observation on radiation transfer experiments using k-shell absorption spectra [DE95-008068] p 2434 N95-28141

Sensor for measuring the atomic fraction in highly dissociated hydrogen [DE95-006531] p 2415 N95-28204

Quantum effects induced by a gap in the spectrum of atom-bath coupling constants: Freezing of atomic decay and monochromatic collective radiation [DE95-609037] p 2416 N95-28251

High energy density systems in cryogenic media: The production and reactions of atoms and radicals [AD-A289818] p 2417 N95-28572

ATTACK AIRCRAFT

AH-1F COBRA rewire program MANPRINT analysis [AD-A289190] p 2130 N95-27018

ATTENUATION COEFFICIENTS

The attenuation of microwave radiation by fog and rain [AD-A288326] p 2249 N95-26562

ATTENUATORS

An optoelectronic attenuator for the high-speed control of microwave integrated circuits [AD-A289579] p 2260 N95-26690

ATTITUDE (INCLINATION)

Neural models of spatial orientation in novel environments [AD-A288420] p 2380 N95-26530

Frame selection performance limits for statistical image reconstruction of adaptive optics compensated images [AD-A289240] p 2424 N95-26965

Polarization sensitivity of monopulse radar boresight error induced by large, ogive radomes [AD-A289254] p 2252 N95-26972

A PC-based magnetometer-only attitude and rate determination system for gyroless spacecraft p 2147 N95-27770

Attitude determination using an adaptive multiple model filtering Scheme p 2148 N95-27772

An MME-based attitude estimator using vector observations p 2148 N95-27775

Development of a Robust star identification technique for use in attitude determination of the ACE spacecraft p 2149 N95-27777

Optimal attitude maneuver execution for the Advanced Composition Explorer (ACE) mission p 2149 N95-27778

Use of nonlinear identification in robust attitude and attitude rate estimation for SAMPEX p 2149 N95-27781

The Global Positioning System (GPS) and attitude determination: Applications and activities in the Flight Dynamics Division p 2152 N95-27795

Geostationary Operational Environmental Satellite (GOES)-8 mission flight experience
p 2153 N95-27798
Contingency designs for attitude determination of TRMM p 2154 N95-27803
ORION: A Supersynchronous Transfer Orbit mission
p 2154 N95-27804
On the physics of ion ring generation for the stabilization of FRX discharges
[DE95-007105] p 2410 N95-27922
Whirl plus tilt
[DE95-007948] p 2399 N95-28108

ATTITUDE CONTROL
Analysis of modal behavior at frequency cross-over
[AD-A289304] p 2162 N95-26918
High-precision buffer circuit for suppression of regenerative oscillation
[NASA-TM-4658] p 2291 N95-27259
Evaluation and modeling of autonomous attitude thrust control for the Geostation Operational Environmental Satellite (GOES)-8 orbit determination
p 2146 N95-27765
Optimal attitude maneuver execution for the Advanced Composition Explorer (ACE) mission
p 2149 N95-27778
Geostationary Operational Environmental Satellite (GOES)-8 mission flight experience
p 2153 N95-27798
Estimation of attitude sensor timetag biases
p 2153 N95-27799
Autonomous control system reconfiguration for spacecraft with non-redundant actuators
p 2153 N95-27802

ATTITUDE GYROS
Estimation of attitude sensor timetag biases
p 2153 N95-27799

ATTITUDE INDICATORS
High-precision buffer circuit for suppression of regenerative oscillation
[NASA-TM-4658] p 2291 N95-27259
Development of a Robust star identification technique for use in attitude determination of the ACE spacecraft
p 2149 N95-27777

ATTITUDE STABILITY
An automated method of tuning an attitude estimator
p 2148 N95-27774

AUDIO EQUIPMENT
Research and development report. Digital audio broadcasting: Comparison of coverage at Band 2 and Band 3
[BBC-RD-1994/16] p 2248 N95-26493
Research and development report. Eureka 147: Tests of the error performance of the DAB system
[BBC-RD-1994/18] p 2249 N95-26696

AUDIO SIGNALS
Research and development report. Digital audio broadcasting: Comparison of coverage at Band 2 and Band 3
[BBC-RD-1994/16] p 2248 N95-26493
The automatic extraction of selected speech spectral characteristics
[IFTR-2/1994] p 2250 N95-26835
An experimental version of the MZT (speech-from-text) system with external F(sub 0) control
[IFTR-14/1994] p 2250 N95-26836

AUGER SPECTROSCOPY
NO decomposition in non-reducing atmospheres
[DE95-007895] p 2205 N95-27690
Electron spectroscopy studies of argon K-shell excitation and vacancy cascades
[DE95-007096] p 2442 N95-27963

AUGMENTATION
Natural aerosol extinction module: XSCALE 1992 user's guide
[AD-A289029] p 2340 N95-26463
Performance enhancing ration components program: Supplemental carbohydrate test
[AD-A288560] p 2358 N95-26558

AURORAS
Measurements of HF auroral clutter using the Verona Ava Linear Array Radar (VALAR)
[AD-A289442] p 2337 N95-27147
Space physics educational outreach
[NASA-CR-198649] p 2399 N95-27852

AUSTENITE
Fatigue fracture analysis in medium carbon structural steel and austenitic stainless steel by X-ray fractography
[DE95-601504] p 2213 N95-26675
Radiation-induced segregation: A microchemical gauge to quantify fundamental defect parameters
[DE95-005720] p 2216 N95-27492

AUSTENITIC STAINLESS STEELS
Recycle of radiologically contaminated austenitic stainless steels
[DE95-006484] p 2215 N95-27328
Radiation-induced grain boundary segregation in austenitic stainless steels
[DE95-005721] p 2216 N95-27493
Toward a mechanistic understanding of radiation effects in materials
[DE95-006530] p 2221 N95-28120

AUSTRALIA
Comparison of fixed wing aircraft algorithms for JANUS
[AD-A288503] p 2129 N95-26652
A review of Australian and New Zealand investigations on aeronautical fatigue during the period Apr. 1993 - Mar. 1995
[AR-009-202] p 2136 N95-27918
Geothermal development in Australia
[DE95-007837] p 2325 N95-28058

AUTOCLAVES
ACT/ICAPS: Thermoplastic composite activities
p 2185 N95-28274

AUTOCORRELATION
Prediction of fatigue crack growth under constant amplitude and random loading using specimens with multiple cracks
[AD-A291614] p 2136 N95-28409

AUTOMATA THEORY
Probabilistic growth model
[PB95-185054] p 2395 N95-26913
An automated method of tuning an attitude estimator
p 2148 N95-27774

AUTOMATIC CONTROL
Automated Procurement System (APS) revised project management plan (DS-03)
[NASA-CR-198605] p 2450 N95-27169
NIST Automated Manufacturing Research Facility (AMRF): March 1987
[NONP-NASA-VT-95-49097] p 2246 N95-27203
NIST: Information management in the AMRF
[NONP-NASA-VT-95-49120] p 2454 N95-27208
Evaluation and modeling of autonomous attitude thrust control for the Geostation Operational Environmental Satellite (GOES)-8 orbit determination
p 2146 N95-27765
Autonomous control system reconfiguration for spacecraft with non-redundant actuators
p 2153 N95-27802
Operator modeling in commerical aviation: Cognitive models, intelligent displays, and pilot's assistants
[NASA-CR-198609] p 2138 N95-28203
Automated remedial assessment methodology software system
[DE95-007287] p 2373 N95-28243
Dimensionally self regulating materials
[AD-A291671] p 2257 N95-28456

AUTOMATIC FLIGHT CONTROL
Development of a TECS control-law for the lateral directional axis of the McDonnell Douglas F-15 Eagle
[AD-A289771] p 2142 N95-28598

AUTOMATIC PILOTS
Advanced formation flight control
[AD-A289271] p 2142 N95-26981

AUTOMATIC TEST EQUIPMENT
Life cycle costs of alternatives for F-16 printed circuit board diagnosis equipment
[AD-A288744] p 2138 N95-28586

AUTOMATION
Electronics manufacturing and assembly in Japan
p 2263 N95-27231
Limits to ground control in autonomous spacecraft
p 2383 N95-27381
Pilot opinions on high level flight deck automation issues: Toward the development of a design philosophy
[NASA-CR-4669] p 2357 N95-28253

AUTOMOBILES
Spray-formed tooling
[DE95-005031] p 2246 N95-27404
Reducing cold-start emissions by catalytic converter thermal management
[DE95-000256] p 2327 N95-27540
Fracture testing and analysis of adhesively bonded joints for automotive applications
[DE95-007024] p 2184 N95-28207
Fatigue properties of an A356 (AlSi7Mg) aluminum alloy for automotive applications: Fatigue life prediction
[PB95-196424] p 2224 N95-28660
Manikin integrated data acquisition system (MIDAS) initial modifications
[AD-A291662] p 2361 N95-28667

AUTOMORPHISMS
Symmetries of the KAC-Peterson modular matrices of affine algebras
[PB95-190138] p 2392 N95-28010

AUTONOMOUS NAVIGATION
Neural models of spatial orientation in novel environments
[AD-A288420] p 2380 N95-26530
A systems engineering approach to electro-mechanical reconfiguration for mobility autonomy
[AD-A289479] p 2301 N95-26926
Using virtual active vision tools to improve autonomous driving tasks
[AD-A289175] p 2356 N95-27013

AUTONOMY
Limits to ground control in autonomous spacecraft
p 2383 N95-27381
A fuzzy logic intelligent diagnostic system for spacecraft integrated vehicle health management
p 2385 N95-27392
Lessons learned from the introduction of autonomous monitoring to the EUVE science operations center
p 2385 N95-27393
A linguistic geometry for 3D strategic planning
p 2386 N95-27397
Preliminary flight software specification for the petite amateur Navy satellite (PANSAT)
[AD-A280068] p 2165 N95-28150

AUTOREGRESSIVE PROCESSES
Evolving cascade-correlation networks for time-series forecasting
[AD-A289197] p 2390 N95-27020
Linear and nonlinear trending and prediction for AVHRR time series data p 2385 N95-27391

AUXILIARY POWER SOURCES
Probabilistic risk assessment of the Space Shuttle. Phase 3: A study of the potential of losing the vehicle during nominal operation. Volume 4: System models and data analysis
[NASA-CR-197811] p 2160 N95-26401

AVAILABILITY
Report to the Chairman and Ranking Minority Member, Committee on Science, House of Representatives. Weather forecasting: Radar availability requirement not being met
[GAO/AIMD-95-132] p 2342 N95-27912

AVALANCHE DIODES
An acoustic charge transport imager for high definition television applications
[NASA-CR-197841] p 2249 N95-26708

AVIONICS
Micro-time stress measurement device development
[AD-A289511] p 2361 N95-26845
An analysis of the KC-135 three-person cockpit
[AD-A289540] p 2130 N95-26873

AWARDS
Quest for excellence 5
[NONP-NASA-VT-95-49099] p 2451 N95-27205
Malcolm Baldrige National Quality Award winners 1989
[NONP-NASA-VT-95-49119] p 2451 N95-27207

AXES OF ROTATION
Horizontal axis wind turbine post stall airfoil characteristics synthesization p 2124 N95-27974
A NASTRAN-based computer program for structural dynamic analysis of Horizontal Axis Wind Turbines
p 2312 N95-27980
Measurement and prediction of broadband noise from large horizontal axis wind turbine generators
p 2324 N95-27990
Local texture and grain boundary misorientations in high H(C) oxide superconductors
[DE95-007004] p 2447 N95-28606

AXIAL FLOW
The effects of transverse vibration on the performance of an axial groove wick heat pipe
[AD-A289349] p 2278 N95-27065
A general theory of two- and three-dimensional rotational flow in subsonic and transonic turbomachines
[NASA-CR-4496] p 2123 N95-28003

AXIAL LOADS
Reactor pressure vessel structural integrity research
[DE95-007034] p 2223 N95-28208

AXIAL STRESS
Stress transfer from axially loaded fiber to matrix in a microcomposite
[DE95-007366] p 2183 N95-28043
The role of biaxial stresses in discriminating between meaningful and illusory composite failure theories
p 2187 N95-28287

AXISYMMETRIC FLOW
An outflow boundary condition for aeroacoustic computations
[NASA-TM-106930] p 2279 N95-27175
Computer program BL2D for solving two-dimensional and axisymmetric boundary layers
[NASA-CR-4668] p 2279 N95-27257

AZIMUTH
Electromagnetic hysteretic response calculation for superconductors in demagnetizing geometries
[DE95-005028] p 2264 N95-27403

B

B STARS
International Ultraviolet Explorer Atlas of B-type spectra from 1200 to 1900 A
[NASA-RP-1363] p 2463 N95-28328

BACKGROUND RADIATION
Low energy neutral atom imaging: Remote observations of the magnetosphere
[DE95-006342] p 2337 N95-27848

BACKSCATTERING
Numerical analysis of wave scattering
[AD-A289478] p 2401 N95-26925
Assessment of the AN/FPS-118 Ionospheric model and proposed improvements
[AD-A289439] p 2337 N95-27146
Measurements of HF auroral clutter using the Verona Ava Linear Array Radar (VALAR)
[AD-A289442] p 2337 N95-27147
Material analysis using combined Elastic Recoil Detection and Rutherford/Enhanced Rutherford Backscattering Spectrometry
[DE95-005415] p 2205 N95-27681
Theoretical and experimental models of the diffuse radar backscatter from Mars
[NASA-CR-198650] p 2463 N95-27700
Solar UV flux measurements from the SBUV2 monitor on the NOAA9 satellite. Part 1: Mg II h and k line core-to-wing ratios for 1986-1988
[PB95-181962] p 2464 N95-28007
Studies of radar backscatter as a function of wave properties and the winds in the turbulent marine atmosphere
[NASA-CR-198608] p 2315 N95-28209
Local texture and grain boundary misorientations in high H(C) oxide superconductors
[DE95-007004] p 2447 N95-28606
Ultrasonic studies of liquid/solid seimoacoustic wave phenomena
[AD-A289644] p 2402 N95-28622

BACTERIA
Flow cytometry as a means of detecting, enumerating and characterizing bacteria for monitoring of the environment
[AD-A288997] p 2326 N95-26610
To develop an aerosoling immunomagnetic device for rapid medical diagnosis from clinical samples
[AD-A288504] p 2354 N95-27059
Microbial treatment for shipboard collection, hold ing, and transfer system tanks p 2179 N95-27119
Application of bacterial bioemusifiers to in situ maintenance of oil/water separators
p 2179 N95-27120
Investigation on energy conversion technology using biochemical reaction elements, 2
[DE95-759250] p 2321 N95-27940

BACTERIOLOGY
Environmentally Benign Cleaning and Degreasing Technology: JANNAF Safety and Protection Subcommittee and Propellant Development and Characterization Subcommittee Joint Workshop
[CPIA-PUBL-611] p 2227 N95-27101

BAINITIC STEEL
Characterization of Ultra-Low Carbon Baintic steels for use as weld wire consumables
[AD-A288292] p 2212 N95-26411

BALANCING
Balanced on air aircraft
[AD-D017251] p 2129 N95-26537
Parallel algorithms for semi-Lagrangian transport in global atmospheric circulation models
[DE95-007385] p 2327 N95-27457

BALL BEARINGS
Comparison of life theories for rolling-element bearings
[NASA-TM-106585] p 2301 N95-26774
Effect of hoop stress on ball bearing life prediction
[NASA-TM-106874] p 2301 N95-27178
Effects of bearing cleaning and lube environment on bearing performance p 2158 N95-27285
Ball bearing vibrations amplitude modeling and test comparisons p 2158 N95-27286
Developmental problems and their solution for the Space Shuttle main engine alternate liquid oxygen high-pressure turbopump: Anomaly or failure investigation the key
[NASA-TP-3553] p 2169 N95-28263

BALLISTIC MISSILES
Reusable launch vehicle development research
[NASA-CR-196614] p 2154 N95-27245

BALLISTIC TRAJECTORIES
Performance analysis of bullet trajectory estimation: Approach, simulation, and experiments
[DE95-007949] p 2399 N95-28109

BALLISTICS
Scale model experiments with ceramic laminate targets
[AD-A288322] p 2225 N95-26561
Recent high-speed ballistics experiments at ORNL
[DE95-006534] p 2422 N95-28205

BALTIC SEA
On the persistence of the oceanic background of apparent sea level changes in the Baltic Sea
[REPT-94:5] p 2348 N95-27996

BANACH SPACE
On permanent capillar-heavy waves in circular shaped channels
[DE95-608779] p 2280 N95-27339

BAND STRUCTURE OF SOLIDS
Numerical study of the singlet-triplet model for cuprate superconductors
[DE95-609438] p 2440 N95-27712
First-principles calculations for AIN, GaN, and InN: Bulk and alloy properties
[DE95-006822] p 2219 N95-27958

BANDWIDTH
Electrical performance characterisation of single-shot switches in high speed, high voltage and high current applications
[DSTO-RR-0010] p 2259 N95-26425
A foveated system to reduce transmission bandwidth of video images from remote camera systems
[AD-A288516] p 2254 N95-27060
Ring-plane traveling-wave tube slow-wave circuit design simulations at V-Band frequencies
[NASA-TM-106949] p 2371 N95-27370

BARIUM COMPOUNDS
Growth and evaluation of nonlinear optical crystals for laser applications: Lithium borate, barium borate and silver gallium selenide
[AD-A289147] p 2277 N95-27000
Ceramic fiber-reinforced monoclinic celsian phase glass-ceramic matrix composite material
[NASA-CASE-LEW-15714-1] p 2183 N95-27717
The oxidation state and magnetic behaviour of Tb in high-(Tc) related materials
[DE95-007129] p 2219 N95-27966

BARIUM OXIDES
Observations of CEF-split intermultiplet transitions in optically opaque EuBa2Cu3O7 using inelastic neutron scattering
[DE95-007135] p 2408 N95-27453
Review of activities in USA on HTS materials
[DE95-006404] p 2234 N95-27468

BARRIER LAYERS
The effects of temperature on Schottky diode barrier height and evidence of multiple barrier
[DE95-609147] p 2264 N95-27405

BARYONS
A simple relativistic model of pp-bar yields K(+)K(-)
[DE95-608852] p 2406 N95-27318
Implications of horizontal symmetries on baryon number violation in supersymmetric models
[DE95-610202] p 2407 N95-27406
Measurement of inclusive Lambda production in electron-positron interactions at the upsilon energies
[DE95-610302] p 2407 N95-27407
Excited Charm States
[DE95-005749] p 2409 N95-27747
Aspects of strange matter
[DE95-008316] p 2414 N95-28170

BASE FLOW
Effect of turbulence models on criticality conditions in swirling flows p 2282 N95-27356

BASE PRESSURE
Unsteady base pressure measurements in the near wake of a cylinder with imposed three-dimensional disturbances
[AD-A289498] p 2276 N95-26827

BATHYMETERS
Ultrasonic studies of liquid/solid seimoacoustic wave phenomena
[AD-A289644] p 2402 N95-28622

BATTERY CHARGERS
The 1994 27th Annual NASA Aerospace Battery Workshop
[NASA-CP-3292] p 2317 N95-26785
Calorimetric evaluation of commercial Ni-MH cells and charges p 2272 N95-26790
Alternate charging profiles for the onboard nickel cadmium batteries of the Explorer Platform/Extreme Ultraviolet Explorer p 2272 N95-26796

BAYARD-ALPERT IONIZATION GAGES
Neutral gas compression in the Alcator C-Mod divertor. Experimental observations
[DE95-007762] p 2432 N95-27688

BAYES THEOREM
Statistical theory and reliability
[AD-A288519] p 2394 N95-26733
Higher-order probabilistic perceptrons as Bayesian inference engines
[DE95-608730] p 2381 N95-27044
An analysis of Bayesian networks as classifiers
[AD-A289316] p 2382 N95-27293

BEADS
Contact micromechanics in granular media with clay
[DE95-006566] p 2340 N95-28583

BEAM CURRENTS
OBIC analysis of stressed, thermally-isolated polysilicon resistors
[DE95-008511] p 2268 N95-28201
Low power limits in ultrashort pulse measurement using Frequency-Resolved Optical Gating
[DE95-007150] p 2299 N95-28219
Transport simulation of negative magnetic shear discharges
[DE95-003941] p 2416 N95-28329

BEAM INJECTION
Coupling in the Tevatron
[DE95-005129] p 2421 N95-27531
Experimental aspects of effects of high-energy particles on Alfven modes
[DE95-003383] p 2432 N95-27873
On the physics of ion ring generation for the stabilization of FRX discharges
[DE95-007105] p 2410 N95-27922

BEAM INTERACTIONS
Orbit analysis
[DE95-007216] p 2419 N95-27091
Some notes on long-range beam-beam effects for the 2 TeV collider
[DE95-006771] p 2421 N95-28017
Nonlinear beam dynamics experimental program at SPEAR
[DE95-007823] p 2422 N95-28122
Beam-beam interaction working group summary
[DE95-007824] p 2422 N95-28123
Laser beam aerosol interactions
[AD-A291723] p 2300 N95-28509
Beam instability studies for the SSC
[DE95-008024] p 2423 N95-28551

BEAM SPLITTERS
Display system employing acousto-optic tunable filter
[NASA-CASE-NPO-18736-1-CU] p 2426 N95-27843
Phase retrieval and time-frequency methods in the measurement of ultrashort laser pulses
[DE95-006499] p 2300 N95-28549

BEAMFORMING
Modified Gaussian elimination for adaptive beamforming using RNS arithmetic
[AD-A288809] p 2248 N95-26356
Adaptive beamforming in frequency-dispersive multipath environments
[AD-A289206] p 2254 N95-27009

BEAMS
User's guide: Computer program for analysis of beam-column structures with nonlinear supports (CBEAMC)
[AD-A289031] p 2307 N95-26464

BEAMS (RADIATION)
CAS CERN Accelerator School 5th General Accelerator Physics Course
[DE95-608324] p 2419 N95-27158
Some notes on long-range beam-beam effects for the 2 TeV collider
[DE95-006771] p 2421 N95-28017
Optical design and performance of the inelastic scattering beamline at the National Synchrotron Light Source
[DE95-007679] p 2422 N95-28195
Ultrashort Pulse retrieval using FROG trace irradiance moments and the adaptive neural networks backpropagation algorithm
[DE95-007153] p 2299 N95-28220

BEAMS (SUPPORTS)
Preliminary design study of the beam collapser and certain optomechanical aspects of the siderostat
[AD-A288423] p 2423 N95-26549
Experimental studies to test simple flexural neutralizers fitted to beams
[ISVR-TR-239] p 2309 N95-27846
Vibrational behavior of adaptive aircraft wing structures modelled as composite thin-walled beams
p 2191 N95-28435

BEARINGS
Bearing defect signature analysis using advanced nonlinear signal analysis in a controlled environment
[NASA-TM-108491] p 2304 N95-28364

BEHAVIOR
Research activities on somatosensory (SI) cortical neurons
[AD-A288794] p 2348 N95-26360

BELIEF NETWORKS
A path-oriented knowledge representation system: Defusing the combinatorial system p 2386 N95-27395

BELL AIRCRAFT
Rotorcraft crashworthy airframe and fuel system technology development program
[AD-A289986] p 2126 N95-28630
BENARD CELLS
The Benard problem: A comparison of finite difference and spectral collocation eigen value solutions
p 2283 N95-27364
BEND TESTS
Interfacial mobility and its effect on flexural strength and fracture toughness in glass-fiber fabric reinforced epoxy laminates
[AD-A288344] p 2180 N95-26572
On aircraft repair verification of a fighter A/C integrally stiffened fuselage skin p 2133 N95-27515
BENDING
Interfacial mobility and its effect on flexural strength and fracture toughness in glass-fiber fabric reinforced epoxy laminates
[AD-A288344] p 2180 N95-26572
Study of damage evolutions in composite plates subjected to bending loads using micro-macro analysis
[AD-A288523] p 2308 N95-26839
Analysis of composite structures with delaminations under combined bending and compression
p 2190 N95-28429
BENDING MOMENTS
Technology integration box beam failure study
p 2194 N95-28468
BENZENE
Poly(N-arylenbenzimidazoles) via aromatic nucleophilic displacement
[NASA-CASE-LAR-14939-1] p 2179 N95-28360
BERYLLIUM
Characterization of defects in deuterium-implanted beryllium
[DE95-005688] p 2217 N95-27553
FY 1994 ambient air monitoring report for McMurdo Station, Antarctica
[DE95-008565] p 2331 N95-28149
The elevated temperature tensile properties of S-200E commercially pure beryllium
[DE95-009331] p 2223 N95-28534
The unusual properties of beryllium surfaces
[DE95-006471] p 2223 N95-28593
BERYLLIUM ALLOYS
Ductile - ductile beryllium aluminum metal matrix composite manufactured by extrusion
[AD-A289519] p 2181 N95-26848
BETA PARTICLES
Determination of the first hydrolysis constant of Europium (3) in 3 M of ionic strength
[DE95-607912] p 2405 N95-27211
Beta-dynamics in simple liquid metal
[DE95-609154] p 2220 N95-28039
BETATRONS
Observation of nonlinear resonances in the advanced light source
[DE95-006561] p 2425 N95-27675
Skew chromaticity
[DE95-007677] p 2422 N95-28115
Measurement of wakefield suppression in a detuned X-band accelerator structure
[DE95-008592] p 2422 N95-28159
BETHE-SALPETER EQUATION
Two-body bound states and the Bethe-Salpeter equation
[DE95-008302] p 2392 N95-27742
BIAS
Extended linear ion trap frequency standard apparatus
[NASA-CASE-NPO-19081-1-CU] p 2404 N95-26861
Estimation of attitude sensor timetag biases
p 2153 N95-27799
Extended linear ion trap frequency standard apparatus
[NASA-CASE-NPO-19081-1-CU] p 2416 N95-28348
Full complex modulation using two one-parameter spatial light modulators
[NASA-CASE-MSC-22255-1] p 2427 N95-28384
BIBLIOGRAPHIES
Bibliography of patents and licenses 1951-1990. 1991 edition
[AD-A289603] p 2452 N95-26721
Bibliography of NASA-related publications on wind turbine technology 1973-1995
[NASA-CR-195462] p 2316 N95-26734
Bibliography of NRL publications - 1990
[AD-A289483] p 2466 N95-26823
Selected bibliography on heavy water, tritiated water and hydrogen isotopes (1981-1992)
[DE95-608331] p 2405 N95-27159
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 402)
[NASA-SP-7011(402)] p 2354 N95-27502
Aeronautical engineering: A continuing bibliography with indexes (supplement 318)
[NASA-SP-7037(318)] p 2120 N95-27543
The Long Duration Exposure Facility (LDEF) annotated bibliography p 2457 N95-27659
Methods development for measuring and classifying flammability/combustibility of refrigerants. Task 1: Annotated bibliography
[DE95-007232] p 2238 N95-28133
Microgravity science and applications. Program tasks and bibliography for FY 1994
[NASA-TM-4677] p 2245 N95-28460
Space Science Division cumulative bibliography: 1989-1994
[NASA-TM-110355] p 2457 N95-28677
BICRYSTALS
Atomistic calculations of hydrogen interactions with Ni3Al grain boundaries and Ni/Ni/Ni3Al interfaces
[DE95-006497] p 2408 N95-27534
BIDIRECTIONAL REFLECTANCE
Cryogenic BRDF measurements at 10.6 micrometers and 0.63 micrometers on contaminated mirrors
[AD-A291611] p 2427 N95-28408
BIFURCATION (BIOLOGY)
Cognitive networks for ATR: The roles of bifurcation and chaos
[AD-A289010] p 2387 N95-28336
BINARY ALLOYS
Modeling the growth of electronic materials
[AD-A289137] p 2438 N95-26997
Study of the phase transformations and microstructures of uranium rich alloys of the binary uranium-gallium system
[DE95-609624] p 2217 N95-27713
A first principles approach to phase stability and order-disorder transformation: Application to Li-Al alloys
[DE95-609152] p 2218 N95-27756
Electronic structure of disordered Cu-Ag alloys
[DE95-609156] p 2219 N95-27758
The effects of processing variables on reaction synthesis of Fe-Al alloys
[DE95-007405] p 2221 N95-28082
BINARY CODES
Method of phased magnitude correlation using binary sequences
[AD-D017257] p 2248 N95-26465
BINARY DATA
Method of phased magnitude correlation using binary sequences
[AD-D017257] p 2248 N95-26465
First-principles study of intermetallic phase stability in the ternary Ti-Al-Nb alloy system
[DE95-005259] p 2213 N95-27082
Laser ionization of molecular clusters
[DE95-007011] p 2296 N95-27550
Binary segmentation of SAR images by the ICM algorithm
[INPE-5464-PRE/1772] p 2258 N95-28559
Vocoded KING data base
[AD-A289827] p 2258 N95-28576
BINARY STARS
Recurrent novae p 2460 N95-27075
Was Einstein 100% right?
[PB95-190179] p 2449 N95-28175
BINARY SYSTEMS (MATERIALS)
Bimaterial interlaces and their role in the mechanical performance of the in-situ composites
[AD-A288973] p 2182 N95-27188
BINAURAL HEARING
Leak detection utilizing analog binaural (VLSI) techniques
[NASA-CASE-NPO-18399-1-CU] p 2271 N95-28599
BINDERS (MATERIALS)
Thermal control materials on EOIM-3
p 2242 N95-27639
BINOCULAR VISION
Image perception wavelet simulation and enhancement for the visually impaired
[AD-A289303] p 2353 N95-26917
BIOASSAY
Modeling and statistical analysis of bioassay data: Medaka cell proliferation under DEN and TCE
[AD-A289998] p 2352 N95-28519
BIOCHEMISTRY
Biochemically vulnerable sites for antifungal intercession in the control of fungal growth
[AD-A288345] p 2348 N95-26573
Predicting protein structure using parallel genetic algorithms
[AD-A289305] p 2369 N95-26919
Investigation on energy conversion technology using biochemical reaction elements, 2
[DE95-759250] p 2321 N95-27940
Survey on bio-chemical complex harmonized with global environment
[DE95-759252] p 2331 N95-28535
BIOCONVERSION
Review and analysis of the 1980-1989 biomass thermochemical conversion program
[DE95-000287] p 2325 N95-28394
BIODEGRADABILITY
JTEC monograph on biodegradable polymers and plastics in Japan: Research, development, and applications
[NASA-CR-198562] p 2235 N95-27694
BIODEGRADATION
Environmentally Benign Cleaning and Degreasing Technology: JANNAF Safety and Protection Subcommittee and Propellant Development and Characterization Subcommittee Joint Workshop
[CPIA-PUBL-611] p 2227 N95-27101
The biodegradation of fuels in soils and sediments: Differences as a function of mineralogy
p 2230 N95-27116
Bioremediation of chlorinated organics: PCBs, TCE, HCFCs p 2179 N95-27117
Combined use of ground water circulation (UVB) technology and in situ bioreactors for enhanced bioremediation of subsurface contamination
p 2230 N95-27118
Microbial treatment for shipboard collection, hold ing, and transfer system tanks p 2179 N95-27119
Application of bacterial bioemusifiers to in situ maintenance of oil/water separators
p 2179 N95-27120
Biodegradation of nitrate esters p 2171 N95-28299
Survey on bio-chemical complex harmonized with global environment
[DE95-759252] p 2331 N95-28535
BIOELECTRIC POTENTIAL
The electrical behaviour of an excitable cell at different conditions
[DE95-607911] p 2351 N95-27254
BIOELECTRICITY
The electrical behaviour of an excitable cell at different conditions
[DE95-607911] p 2351 N95-27254
BIOLOGICAL EFFECTS
Radiation in everyday life
[DE95-604111] p 2349 N95-26597
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 402)
[NASA-SP-7011(402)] p 2354 N95-27502
Toxicity assessment of liquid propellant XM46
p 2175 N95-28319
BIOLOGICAL MODELS (MATHEMATICS)
Modeling and statistical analysis of bioassay data: Medaka cell proliferation under DEN and TCE
[AD-A289998] p 2352 N95-28519
BIOLOGY
Live from Antarctica: Then and now
[NASA-CR-197829] p 2335 N95-26594
BIOMASS
Hydrogen program
[DE94-011827] p 2242 N95-27415
Biomass Pyrolysis Oil Properties and Combustion Meeting
[DE95-004017] p 2204 N95-27438
Review and analysis of the 1980-1989 biomass thermochemical conversion program
[DE95-000287] p 2325 N95-28394
Survey on bio-chemical complex harmonized with global environment
[DE95-759252] p 2331 N95-28535
BIOMASS ENERGY PRODUCTION
Review and analysis of the 1980-1989 biomass thermochemical conversion program
[DE95-000287] p 2325 N95-28394
BIOMETRICS
Long-range eye tracking: A feasibility study
[DE95-008587] p 2357 N95-28176
BIONICS
A model of the neural basis of the rat's sense of direction
[AD-A289678] p 2350 N95-26761
BIOPOLYMER DENATURATION
DNA denaturation through a model of the partition points on a one-dimensional lattice
[DE95-607909] p 2439 N95-27201
A correlated Walks' theory for DNA denaturation
[DE95-607910] p 2444 N95-28112
BIOPOLYMERS
Materials design and processing by biomimicking. Section 1: Research progress
[AD-A288229] p 2226 N95-26623
Research activities of the Solid State Sciences Committee in the development of a Federal initiative on advanced materials and processing
[DE95-009328] p 2445 N95-28179

BIOREACTORS
Combined use of ground water circulation (UVB) technology and in situ bioreactors for enhanced bioremediation of subsurface contamination p 2230 N95-27118
BIOSPHERE
Nonlinear dynamics of global atmospheric and earth system processes [NASA-CR-197926] p 2326 N95-26429
BIOTECHNOLOGY
Microgravity Sciences Biotechnology Facility assessment [NASA-CR-196602] p 2351 N95-27329
Investigation on technology for increasing the biological CO2 sink and technology for CO2 fixation and reutilization [DE95-759251] p 2329 N95-27941
Physical interpretation and development of ultrasonic nondestructive evaluation techniques applied to the quantitative characterization of textile composite materials [NASA-CR-198591] p 2306 N95-28034
JTEC/WTEC annual report and program summary: 1993/94 [NASA-CR-198563] p 2475 N95-28038
Survey on bio-chemical complex harmonized with global environment [DE95-759252] p 2331 N95-28535
BIPLANES
Full span flaperons for a biplane p 2119 N95-26954
Incorporating biplane wing theory into a large, subsonic, all-cargo transport p 2120 N95-26956
BIPOLAR TRANSISTORS
Atomic layer epitaxy of group 4 materials: Surface processes, thin films, devices and their characterization [AD-A289092] p 2446 N95-28327
BIRD-AIRCRAFT COLLISIONS
Development of repair processes and sources for C/KC-135 aircraft windows/windshields [AD-A288348] p 2117 N95-26629
A review of falconry as a bird control technique with recommendations for use at the Shuttle Landing Facility, John F. Kennedy Space Center, Florida, USA [NASA-TM-110142] p 2126 N95-27859
BIRDS
A review of falconry as a bird control technique with recommendations for use at the Shuttle Landing Facility, John F. Kennedy Space Center, Florida, USA [NASA-TM-110142] p 2126 N95-27859
BISMALEIMIDE
Application of fiber-reinforced bismaleimide materials to aircraft nacelle structures p 2137 N95-28278
Post impact compressive strength in composites p 2198 N95-28485
BISTABLE CIRCUITS
Modulation effect of a Bragg acousto-optic bistable system [AD-A289622] p 2401 N95-26857
BIVARIATE ANALYSIS
Statistical theory and reliability [AD-A288519] p 2394 N95-26733
BL LACERTAE OBJECTS
CO, HCO(+) and HCN absorption in the gravitational lens candidate B0218+357 at z=0.685 [PB95-185146] p 2461 N95-26522
BLACK HOLES (ASTRONOMY)
On higher derivative gravity in two dimensions [DE95-608789] p 2462 N95-27343
BLADE SLAP NOISE
Flow structure generated by perpendicular blade vortex interaction and implications for helicopter noise predictions [NASA-CR-198590] p 2123 N95-28193
Evaluation of a doubly-swept blade tip for rotorcraft noise reduction [NASA-CR-189677] p 2402 N95-28264
BLADE TIPS
Evaluation of a doubly-swept blade tip for rotorcraft noise reduction [NASA-CR-189677] p 2402 N95-28264
BLADE-VORTEX INTERACTION
Comparative performance tests on the Mod-2, 2.5-mW wind turbine with and without vortex generators p 2124 N95-27978
Measurement and prediction of broadband noise from large horizontal axis wind turbine generators p 2324 N95-27990
Flow structure generated by perpendicular blade vortex interaction and implications for helicopter noise predictions [NASA-CR-198590] p 2123 N95-28193
Evaluation of a doubly-swept blade tip for rotorcraft noise reduction [NASA-CR-189677] p 2402 N95-28264
BLANKETS (FISSION REACTORS)
Toward a mechanistic understanding of radiation effects in materials [DE95-006530] p 2221 N95-28120
BLAST LOADS
Pressure vessel burst test study p 2175 N95-28317
BLOCK COPOLYMERS
Small angle neutron scattering study of the micelle structure of amphiphilic block copolymers [DE95-006625] p 2234 N95-27486
Functionalized block copolymers as adhesion promoters [DE95-008158] p 2239 N95-28400
BLOCKING
Precision landing system mathematical modeling study report for Andrews Air Force Base, runway 19L, Camp Springs, MD [AD-A289015] p 2127 N95-27903
Bilateral force feedback for hydraulically actuated systems [AD-A291632] p 2387 N95-28545
BLOCKS
Reference manual: Naive physics simulator [PB95-184917] p 2369 N95-26907
BLOOD
Mechanisms of hypertension after cross-linked hemoglobin blood-substitute transfusion [AD-A289558] p 2352 N95-26680
BLOWING
Computational analysis of forebody tangential slot blowing on the high alpha research vehicle [NASA-CR-197754] p 2129 N95-26591
Investigation of boundary layer and performance effects of transpiration cooling through a porous plate in a rocket nozzle [AD-A289393] p 2167 N95-26880
Performance characterization of a highly-offset diffuser with and without blowing vortex generator jets [AD-A289334] p 2122 N95-26901
BLUFF BODIES
Effects of three-dimensional imposed 3-D disturbances on bluff-body near wake flows [AD-A289553] p 2121 N95-26757
BODY CENTERED CUBIC LATTICES
First-principles study of intermetallic phase stability in the ternary Ti-Al-Nb alloy system [DE95-005259] p 2213 N95-27082
The role of edge dislocations in the deformation of BCC metals [DE95-609157] p 2219 N95-27759
BODY-WING CONFIGURATIONS
Aeroelasticity of wing and wing-body configurations on parallel computers [NASA-CR-197756] p 2129 N95-26590
Preliminary design problems and solutions for a supersonic oblique all-wing transport aircraft p 2118 N95-26942
BOEING AIRCRAFT
Strategy in the commercial aircraft industry in the United States: A comparison of decisionmaking by McDonnell-Douglas and Boeing aircraft companies from 1977-1983 [AD-A288289] p 2117 N95-26409
Report to Congressional Committees. Comanche Helicopter: Testing needs to be completed prior to production decisions [GAO/NSIAD-95-112] p 2135 N95-27910
BOEING 737 AIRCRAFT
NASA-ACEE/Boeing 737 graphite-epoxy horizontal stabilizer service p 2138 N95-28489
BOEING 747 AIRCRAFT
Numerical simulation of the SOFIA flow field [NASA-CR-197757] p 2274 N95-26589
BOEING 757 AIRCRAFT
The determination of the constitutive parameters of a medium with application to a reinforced concrete pad [NASA-CR-4674] p 2268 N95-28181
BOHR THEORY
The electric field of Bohr's atom [DE95-608758] p 2448 N95-27336
BOILERS
Measurements of the volatilities of electrolytes: Application to water/steam cycles [DE95-007103] p 2204 N95-27451
BOLTS
Evaluation of composite joints [AD-A289247] p 2181 N95-26967
BOLTZMANN TRANSPORT EQUATION
Axionic fuel for sun [DE95-608788] p 2464 N95-27342
Hall effect and resistivity in the normal state of high-T(sub c) cuprates in the electron-fracton model [DE95-610612] p 2439 N95-27413
HZETRN: Description of a free-space ion and nucleon transport and shielding computer program [NASA-TP-3495] p 2465 N95-28530
BOMBER AIRCRAFT
Performance study for inlet installations [NASA-CR-189714] p 2140 N95-28227
BONDED JOINTS
Split pipe testing device for the measurement of bond of reinforcement under controlled confinement [AD-D017258] p 2245 N95-26500
Bimaterial interlaces and their role in the mechanical performance of the in-situ composites [AD-A288973] p 2182 N95-27188
Design and structural validation of CF116 upper wing skin boron doubler p 2132 N95-27510
Composite repair issues on the CF-18 aircraft p 2134 N95-27518
The development of an engineering standard for composite repairs p 2135 N95-27528
Fracture testing and analysis of adhesively bonded joints for automotive applications [DE95-007024] p 2184 N95-28207
BONDING
Sceening, down selection, and implementation of environmentally compliant cleaning and insulation bonding for MNASA p 2165 N95-27124
Status of bonded boron/epoxy doublers for military and commercial aircraft structures p 2132 N95-27506
Evaluation of patch effectiveness in repairing aircraft components p 2133 N95-27513
Repair technology for thermoplastic aircraft structures p 2134 N95-27519
Analysis of the dimerized Sb/Si(001)-(2x1) surface by x-ray standing waves [DE95-007097] p 2208 N95-27965
Fracture testing and analysis of adhesively bonded joints for automotive applications [DE95-007024] p 2184 N95-28207
BOOLEAN ALGEBRA
The assembly tower and some categorical and algebraic aspects of frame theory [AD-A289360] p 2391 N95-27489
BOOMS (EQUIPMENT)
Special features of the CLUSTER antenna and radial booms design, development and verification p 2157 N95-27281
Development and testing of the rack insertion device p 2158 N95-27289
BORANES
Boron-induced reconstructions of Si(100) investigated by scanning tunneling microscopy [AD-A289222] p 2438 N95-26959
BORATES
Growth and evaluation of nonlinear optical crystals for laser applications: Lithium borate, barium borate and silver gallium selenide [AD-A289147] p 2277 N95-27000
BORESIGHT ERROR
Reduction of off-boresight fields for a TEM horn antenna [AD-A289708] p 2250 N95-26738
Polarization sensitivity of monopulse radar boresight error induced by large, ogive radomes [AD-A289254] p 2252 N95-26972
Retrofitting a fine-pointing system to satellite optics [DE95-004529] p 2427 N95-28516
BORESIGHTS
Reduction of off-boresight fields for a TEM horn antenna [AD-A289708] p 2250 N95-26738
SAMPEX special pointing mode p 2149 N95-27780
BORIDES
Structural chemistry of some phases in the YC-Ni-B system [DE95-007403] p 2447 N95-28537
BORN APPROXIMATION
Off-specular scattering in neutron reflectometry [DE95-007835] p 2412 N95-28057
BORON
Boron-induced reconstructions of Si(100) investigated by scanning tunneling microscopy [AD-A289222] p 2438 N95-26959
Boron-induced morphology changes in silicon CVD growth: A scanning tunneling microscopy study [AD-A289275] p 2290 N95-26982
Atomic structure and bonding of boron-induced reconstructions on Si(001) [AD-A289187] p 2405 N95-27017
Trace elements and the mechanical properties of intermetallic compounds [DE95-007378] p 2220 N95-28046
BORON COMPOUNDS
Boron-carbon-silicon polymers and the ceramic thereof [NASA-CASE-ARC-11891-1-SB] p 2238 N95-28212
BORON FIBERS
Composite repair of metallic airframe: Twenty years of experience p 2132 N95-27508

BORON REINFORCED MATERIALS

Adhesively bonded composite patch repair of cracked aluminum alloy structures p 2132 N95-27507

Bonded composite repair of thin metallic materials: Variable load amplitude and temperature cycling effects p 2132 N95-27509

BORON-EPOXY COMPOSITES

Bonded composite repair of metallic aircraft components: Overview of Australian activities p 2132 N95-27505

Status of bonded boron/epoxy doublers for military and commercial aircraft structures p 2132 N95-27506

Bonded composite repair of thin metallic materials: Variable load amplitude and temperature cycling effects p 2132 N95-27509

Design and structural validation of CF116 upper wing skin boron doubler p 2132 N95-27510

Structural modification and repair of C-130 wing structure using bonded composites p 2133 N95-27512

BOSONS

Model independent constraints on anomalous gauge boson self-couplings from e(+)e(-) colliders with longitudinally polarized beams [DE95-608844] p 2406 N95-27317

Magnetic quadrupole moment of W-boson in Kobayashi-Maskawa model [DE95-610355] p 2407 N95-27411

Search for exotic particles at CDF [DE95-008383] p 2411 N95-27933

Probing strongly-interacting electroweak dynamics through W(+)W(-)/ZZ ratios at future e(+)e(-) colliders [DE95-007202] p 2413 N95-28067

Precise measurement of the left-right cross section asymmetry in Z boson production by e(+)e(-) collisions [DE95-008591] p 2414 N95-28158

Constraints on the anomalous WW gamma couplings from b vector s gamma [DE95-608866] p 2415 N95-28246

BOTANY

Live from Antarctica: Then and now [NASA-CR-197829] p 2335 N95-26594

BOUNDARIES

A non-iterative grid deformation algorithm for computational fluid dynamics for aeroelasticity [AD-A288298] p 2273 N95-26418

The physics and chemistry of heavy Fermions [DE95-005277] p 2407 N95-27431

Advanced neutron source materials surveillance program [DE95-005700] p 2215 N95-27464

Comparison of the calculated and measured stability of a NbTi cable-in-conduit conductor [DE95-007964] p 2265 N95-27693

Scaling of localization length of a quasi 1D system with longitudinal boundary roughness [DE95-609148] p 2391 N95-27739

Molecular engineering of thin polymer films prepared from functionally-terminated oligomers [AD-A291681] p 2240 N95-28457

Piecemeal learning of an unknown environment [AD-A291683] p 2387 N95-28461

BOUNDARY CONDITIONS

Fluxes across the west coast resolved by Picket Fence observations during stormfest [AD-A288511] p 2341 N95-26653

User's and test case manual for FEMATS [NASA-CR-197803] p 2366 N95-26694

Material modeling in the CRALE code. Users' manual [AD-A288988] p 2178 N95-26712

An outflow boundary condition for aeroacoustic computations [NASA-TM-106930] p 2279 N95-27175

Features and applications of the Groove Analysis Program (GAP) p 2281 N95-27349

Validation of the SINDA/FLUINT code using several analytical solutions p 2281 N95-27350

Transient studies of G-induced capillary dryout and rewet p 2281 N95-27351

Single-drop reactive extraction/extractive reaction with forced convective diffusion and interphase mass transfer p 2282 N95-27358

Turbulance boundary conditions for shear flow analysis, using the DTNS flow solver p 2283 N95-27362

Single-drop reactive extraction/extractive reaction with forced convective diffusion and interphase mass transfer p 2283 N95-27365

A magnetic hysteresis model p 2153 N95-27801

A summary documentation of the AMIP models [DE95-008343] p 2338 N95-27931

BOUNDARY ELEMENT METHOD

Applications of boundary element methods on the Intel Paragon [DE94-014135] p 2393 N95-28393

BOUNDARY LAYER CONTROL

Performance characterization of a highly-offset diffuser with and without blowing vortex generator jets [AD-A289334] p 2122 N95-26901

Comparative performance tests on the Mod-2, 2.5-mW wind turbine with and without vortex generators p 2124 N95-27978

BOUNDARY LAYER EQUATIONS

Supersonic coaxial jet noise predictions [NASA-TM-106917] p 2401 N95-26801

BOUNDARY LAYER FLOW

Wavenumber selection for small-wavelength Goertler vortices in curved channel flows [NASA-CR-195063] p 2273 N95-26576

Direct numerical simulation of transitional and turbulent flow over a heated flat plate using finite-difference schemes [NASA-CR-197753] p 2275 N95-26776

Investigation of boundary layer and performance effects of transpiration cooling through a porous plate in a rocket nozzle [AD-A289393] p 2167 N95-26880

Computer program BL2D for solving two-dimensional and axisymmetric boundary layers [NASA-CR-4668] p 2279 N95-27257

Computation of three-dimensional mixed convective boundary layer flow p 2280 N95-27347

Response of multi-panel assembly to noise from a jet in forward motion [NASA-CR-198164] p 2289 N95-28673

BOUNDARY LAYER SEPARATION

Performance characterization of a highly-offset diffuser with and without blowing vortex generator jets [AD-A289334] p 2122 N95-26901

BOUNDARY LAYER STABILITY

Analysis of hypersonic boundary layer second mode instability over a 7 deg cone [AD-A289471] p 2276 N95-26819

On the modulational instability of large amplitude waves in supersonic boundary layers [NASA-CR-195072] p 2284 N95-27760

BOUNDARY LAYER TRANSITION

Direct numerical simulation of transitional and turbulent flow over a heated flat plate using finite-difference schemes [NASA-CR-197753] p 2275 N95-26776

Analysis of hypersonic boundary layer second mode instability over a 7 deg cone [AD-A289471] p 2276 N95-26819

BOUNDARY LAYERS

Transport phenomena and interfacial kinetics in multiphase combustion systems [AD-A288297] p 2199 N95-26417

Direct numerical simulation of transitional and turbulent flow over a heated flat plate using finite-difference schemes [NASA-CR-197753] p 2275 N95-26776

Compressible turbulence measurements in a supersonic flow with adverse pressure gradient [AD-A289477] p 2276 N95-26822

Investigation of boundary layer and performance effects of transpiration cooling through a porous plate in a rocket nozzle [AD-A289393] p 2167 N95-26880

BOUNDARY LUBRICATION

Deformation behavior of thin lubricant films at elevated pressure [AD-A288906] p 2241 N95-28592

BOUNDARY VALUE PROBLEMS

Analysis and development of finite element methods for the study of nonlinear thermomechanical behavior of structural components [NASA-CR-195354] p 2307 N95-26387

Balanced data focusing: Direction of arrival estimation with maximum likelihood performance [AD-A288252] p 2248 N95-26407

General purpose finite element solver [PB95-185062] p 2388 N95-26495

Adaptive finite element method I: Solution algorithm and computational examples [AD-A288979] p 2389 N95-26609

On permanent capillar-heavy waves in circular shaped channels [DE95-608779] p 2280 N95-27339

Extensional flow convecting a reactant undergoing a first order homogeneous reaction and diffusional mass transfer from a sphere at low to intermediate Peclet and Damkohler numbers p 2280 N95-27346

A Navier-Stokes boundary element solver p 2283 N95-27361

Parallel plasma fluid turbulence calculations [DE95-006741] p 2431 N95-27537

BOW WAVES

Bow shock data analysis [AD-A288432] p 2429 N95-26800

BOX BEAMS

C-130 Advanced Technology Center wing box conceptual design/cost study p 2192 N95-28437

Structural testing of the technology integration box beam p 2194 N95-28467

Technology integration box beam failure study p 2194 N95-28468

BRAGG ANGLE

Modulation effect of a Bragg acousto-optic bistable system [AD-A289622] p 2401 N95-26857

A numerical study of ultra-short-pulse reflectometry [DE95-008070] p 2266 N95-28015

BRAIDED COMPOSITES

Through-the Thickness(R) braided composites for aircraft applications p 2185 N95-28273

Mechanical properties of triaxially braided composites: Experimental and analytical results p 2189 N95-28423

Characterization and manufacture of braided composites for large commercial aircraft structures p 2196 N95-28478

BRAIN

Experimental definition for implantation of the AFIT cortical multielectrode array [AD-A289216] p 2354 N95-26991

Characterization and redesign of the AFIT multielectrode array [AD-A289295] p 2354 N95-27039

BRANCHING (PHYSICS)

Search for the top quark in dilepton decay modes at D(PHI) [DE95-007764] p 2409 N95-27689

Search for exotic particles at CDF [DE95-008383] p 2411 N95-27933

BRAZIL

Models used to forecast agricultural corn crops in the micro-region of Ribeirao Preto-SP [INPE-5513-NTC/309] p 2315 N95-28554

BRAZING

High energy electron beams for ceramic joining [DE95-006316] p 2420 N95-27480

BREADBOARD MODELS

Characterization of corrosion and development of a breadboard of a D sight aircraft inspection system, phase 1 [AD-A288347] p 2125 N95-26527

Hubble Space Telescope nickel-hydrogen battery testing: An update p 2272 N95-26794

BREEDER REACTORS

Toward a mechanistic understanding of radiation effects in materials [DE95-006530] p 2221 N95-28120

BREMSSTRAHLUNG

Comparative experimental study of PIXE and X-ray fluorescence analysis [DE95-607868] p 2327 N95-27198

The Bremsstrahlung of soft gamma-quanta created by elastic pp- and np-scatterings and the dibaryon resonance problem [DE95-608870] p 2415 N95-28248

BRIDGES (STRUCTURES)

The effects of finite element grid density on model correlation and damage detection of a bridge [DE94-018895] p 2309 N95-27305

BRIGHTNESS

Coronal abundances and their variation [NASA-CR-197788] p 2464 N95-26671

Dwarf novae p 2458 N95-27069

BRIGHTNESS TEMPERATURE

Radiometer measurements of snow in Sodankylae, 1991-1993 [PB95-184966] p 2313 N95-26645

Method and apparatus for polaradiometric pyrometer [NASA-CASE-NPO-19064-1-CU] p 2290 N95-26765

Modeling and retrieval of snow and sea ice characteristics in the frequency range 6 to 90 GHz [PB95-195467] p 2316 N95-28656

BRINES

Tomographic observations of deep convection and the thermal evolution of the Greenland Sea Gyre 1988-1989 [AD-A289104] p 2348 N95-28096

BRITISH COLUMBIA

Meteorological and oceanographic data collected during the ASREX 91 field experiment [AD-A289492] p 2342 N95-26826

BRITTLE MATERIALS

The development of mechanical strength in a ceramic material during firing [DE95-004925] p 2234 N95-27476

Prediction of material strength and fracture of glass using the SPHINX smooth particle hydrodynamics code [DE95-004869] p 2236 N95-27943

BRITTLENESS
Trace elements and the mechanical properties of intermetallic compounds
[DE95-007378] p 2220 N95-28046
BROADBAND
Measurement and prediction of broadband noise from large horizontal axis wind turbine generators
p 2324 N95-27990
Anechoic wind tunnel study of turbulence effects on wind turbine broadband noise p 2325 N95-27992
BROADBAND AMPLIFIERS
High power, broadband folded waveguide Gyrotron-Traveling-Wave-Amplifier
[AD-A288847] p 2259 N95-26433
BROADCASTING
Joint Services Electronics Program (JSEP)
[AD-A288299] p 2345 N95-26419
Research and development report. Digital audio broadcasting: Comparison of coverage at Band 2 and Band 3
[BBC-RD-1994/16] p 2248 N95-26493
Com(sup 3): A composite-compatible component coding system
[BBC-RD-1994/17] p 2249 N95-26670
Research and development report. Eureka 147: Tests of the error performance of the DAB system
[BBC-RD-1994/18] p 2249 N95-26696
Information superhighway: Issues affecting development
[AD-A289434] p 2252 N95-26923
Replacing the message service component in an integration framework
[AD-A289928] p 2375 N95-28628
BROKEN SYMMETRY
Supersymmetry and light quark masses in a realistic superstring model
[DE95-610201] p 2412 N95-28041
Probing strongly-interacting electroweak dynamics through W(+)W(-)/ZZ ratios at future e(+)e(-) colliders
[DE95-007202] p 2413 N95-28067
Rare decays/CP: The perspective of a kaon physicist
[DE95-005964] p 2416 N95-28338
BROMIDES
High resolution Fourier transform spectroscopy of the first overtone of the N-O stretch in nitrosyl bromide
[AD-A289318] p 2203 N95-27295
Thermodynamics of aqueous electrolytes at high temperatures by the isopiestic technique
[DE95-006747] p 2449 N95-27546
BROWNIAN MOVEMENTS
The fBm Interpolator
[AD-A288996] p 2388 N95-26459
BRUSHES
Water driven turbine/brush pipe cleaner
[NASA-CASE-KSC-11669-1] p 2304 N95-28359
BUBBLE CHAMBERS
Bubble chamber spectroscopy for chemical analysis: A new concept
[DE95-006350] p 2209 N95-28088
BUBBLES
The stability of the flow in a laminar separation bubble
[CUED/A-AERO/TR-22] p 2275 N95-26809
A model of bubble evolution during decompression based on a Monte Carlo simulation of inert gas diffusion
[AD-A289400] p 2353 N95-26885
Bubble fusion: Preliminary estimates
[DE95-006337] p 2420 N95-27494
Bubble chamber spectroscopy for chemical analysis: A new concept
[DE95-006350] p 2209 N95-28088
BUCKLING
Buckling behavior of long symmetrically laminated plates subjected to combined loads p 2190 N95-28430
Effect of low-speed impact damage and damage location on behavior of composite panels p 2197 N95-28481
Fundamental concepts in the suppression of delamination buckling by stitching p 2198 N95-28486
Damage tolerance of a geodesically stiffened advanced composite structural concept for aircraft structural applications p 2138 N95-28487
BULK MODULUS
First-principles calculations for AIN, GaN, and InN: Bulk and alloy properties
[DE95-006822] p 2219 N95-27958
The minimum pore size obtainable in a silica gel during drying
[DE95-008162] p 2239 N95-28401
BULKHEADS
Development of composite carrythrough bulkhead
p 2192 N95-28438
BUNCHING
Time-dependent multi-dimensional simulation studies of the electron output scheme for high power FELs
[DE95-006593] p 2297 N95-27737
Some notes on long-range beam-beam effects for the 2 TeV collider
[DE95-006771] p 2421 N95-28017
Measurement of wakefield suppression in a detuned X-band accelerator structure
[DE95-008592] p 2422 N95-28159
BUOYS
Radio telemetry buoy for long-range communication
[AD-D017269] p 2161 N95-28581
BURNERS
Research on combustion processes relevant to burners in HVAC systems
[PB95-179735] p 2208 N95-28006
BY-PRODUCTS
SIHTI 2: Energy and environmental technology. Yearbook 1993 of the research programme
[DE95-755135] p 2331 N95-28202

C

C BAND
Studies of radar backscatter as a function of wave properties and the winds in the turbulent marine atmosphere
[NASA-CR-198608] p 2315 N95-28209
C++ (PROGRAMMING LANGUAGE)
Multiple model adaptive estimation and head motion tracking in a virtual environment: An engineering approach
[AD-A289299] p 2359 N95-27046
C-130 AIRCRAFT
C-130 Advanced Technology Center wing box conceptual design/cost study p 2192 N95-28437
C-135 AIRCRAFT
Development of repair processes and sources for C/KC-135 aircraft windows/windshields
[AD-A288348] p 2117 N95-26629
An analysis of the KC-135 three-person cockpit
[AD-A289540] p 2130 N95-26873
Two-phase flow research using the learjet apparatus
[NASA-TM-106814] p 2284 N95-27854
CABLES
FENIX experimental results of large-scale CICC made of bronze-processed Nb3Sn strands
[DE95-007965] p 2222 N95-28167
CABLES (ROPES)
Deployment and retraction of a cable-driven solar array: Testing and simulation p 2158 N95-27283
CADMIUM
FY 1994 ambient air monitoring report for McMurdo Station, Antarctica
[DE95-008565] p 2331 N95-28149
CADMIUM ALLOYS
Precursor phenomenon of martensitic transformation in Au-49.5at%Cd alloy
[DE95-007698] p 2222 N95-28166
CADMIUM COMPOUNDS
Synchrotron X-ray scattering studies at mineral-water interfaces
[DE95-008303] p 2440 N95-27542
Health and environmental hazards of CdTe photovoltaic module production, use and decommissioning
[DE95-006688] p 2320 N95-27682
CADMIUM TELLURIDES
Health and environmental hazards of CdTe photovoltaic module production, use and decommissioning
[DE95-006688] p 2320 N95-27682
Recent progress in the Photovoltaic Manufacturing Technology Project (PVMaT)
[DE95-000279] p 2320 N95-27704
Strategies for recycling CdTe photovoltaic modules
[DE95-006776] p 2325 N95-28517
CALCITE
Synchrotron X-ray scattering studies at mineral-water interfaces
[DE95-008303] p 2440 N95-27542
CALCIUM
Large area smart piezoelectric and pyroelectric sensors
[AD-A288565] p 2290 N95-26541
Ash-based ceramic materials
[AD-D017272] p 2241 N95-28582
CALCIUM FLUORIDES
Point defect formation in optical materials expos ed to the space environment p 2428 N95-27646
CALCIUM OXIDES
Characterization of collision cascade damage in Ca2La8(SiO4)6O2 by HRTEM
[DE95-005719] p 2440 N95-27491
Ash-based ceramic materials
[AD-D017272] p 2241 N95-28582
CALCULUS
Modal event calculus in Lolli
[AD-A288544] p 2365 N95-26605
A parallel complexity model for functional languages
[AD-A288589] p 2365 N95-26656
CALDERAS
Seismic constraints on shallow crustal processes at the East Pacific rise
[AD-A289055] p 2338 N95-28094
CALIBRATING
Micron Accuracy Deployment Experiment (MADE), phase A. Volume 1
[NASA-CR-197792] p 2144 N95-26426
Aircraft fuel system lightning protection design and qualification test procedures development
[AD-A288401] p 2125 N95-26497
Uncertainties in the calibration of hydrophones at NPL by the three-transducer spherical-wave reciprocity method in the frequency range 10 kHz on 500 kHz
[PB95-185245] p 2401 N95-26615
Stability of reference masses 4: Growth of carbonaceous contamination on platinum-iridium mass standard surfaces, and its cleaning by UV/ozone treatment
[PB95-190096] p 2226 N95-26745
Telepresent spacecraft docking with object-based bilateral control (OBBC)
[AD-A289268] p 2163 N95-26980
Notes on the calibration of the JHU-APL solar vector magnetograph at NSO-Sec peak
[AD-A289277] p 2253 N95-26983
Solar terrestrial radiation data from the Sleepers River Research Watershed
[AD-A288444] p 2464 N95-27184
Linear and nonlinear trending and prediction for AVHRR time series data p 2385 N95-27391
The KTeV pure CsI calorimeter
[DE95-005747] p 2292 N95-27751
Observational magnetometer calibration with the Hubble Space Telescope's new magnetometers
p 2148 N95-27773
Experience from the in-flight calibration of the Extreme Ultraviolet Explorer (EUVE) and Upper Atmosphere Research Satellite (UARS) fixed head star trackers (FHSTs) p 2149 N95-27779
The installation of and first results from the superconducting gravimeter GWR20 at the Metsahovi Station, Finland
[REPT-95:1] p 2338 N95-27995
Remote sensing of hydrologic variables in boreal areas, phase 2
[NASA-CR-198717] p 2314 N95-27998
CALIFORNIA
Molten Carbonate Fuel Cell (MCFC) product development test
[DE95-007345] p 2316 N95-26543
CALIFORNIUM ISOTOPES
Bilateral intercomparison of the neutron emission rate of a (252)Cf spontaneous fission source between the National Physical Laboratory, Teddington, UK and the Physikalisch-Technische Bundesanstalt, Braunschweig, Germany
[PB95-190120] p 2404 N95-26748
CALORIMETERS
Large area smart piezoelectric and pyroelectric sensors
[AD-A288565] p 2290 N95-26541
Calorimetric evaluation of commercial Ni-MH cells and charges p 2272 N95-26790
Precision electromagnetic calorimetry with liquid krypton
[DE95-006685] p 2292 N95-27677
Performance of an accordion electromagnetic calorimeter with liquid krypton
[DE95-006693] p 2292 N95-27738
The KTeV pure CsI calorimeter
[DE95-005747] p 2292 N95-27751
CAMERAS
An illumination planner for Lambertian polyhedral objects
[AD-A289332] p 2424 N95-26900
ELVIS: Eigenvectors for land vehicle image system
[AD-A289297] p 2381 N95-27041
A foveated system to reduce transmission bandwidth of video images from remote camera systems
[AD-A288516] p 2254 N95-27060
SXI Prototype mirror mount
[NASA-CR-196613] p 2301 N95-27244
CANADA
Characterization of corrosion and development of a breadboard of a D sight aircraft inspection system, phase 1
[AD-A288347] p 2125 N95-26527
CANADIAN SPACE PROGRAM
The Strategic Technologies for Automation and Robotics (STEAR) program: Protection of materials in the space environment subprogram p 2242 N95-27669

CANARD CONFIGURATIONS
Design and testing of low sonic boom configurations and an oblique all-wing supersonic transport [NASA-CR-197744] p 2129 N95-26651

CANCER
A 3-D finite difference time domain investigation of microwave propagation through inhomogeneous biological materials [AD-A289431] p 2251 N95-26869

CANONICAL FORMS
The canonical q-transformations with two q-para-Bose oscillators [DE95-608781] p 2396 N95-27341

CANYONS
Comparison of the activities of fine-particle size catalysts [DE95-004773] p 2203 N95-27423

CAPACITANCE
Nickel metal hydride LEO cycle testing p 2272 N95-26791
Unique features of a new nickel-hydrogen 2-cell CPV p 2272 N95-26793
Efficient modeling of interconnects and capacitive discontinuities in high-speed digital circuits [NASA-CR-198728] p 2270 N95-28570
Characterization of a fused silica capacitance standard [DE95-006457] p 2270 N95-28597

CAPACITORS
A hybrid vehicle evaluation code and its application to vehicle design. Revision 1 [DE95-008053] p 2303 N95-28029
Forback DC-to-DC converter [NASA-CASE-GSC-13404-1] p 2269 N95-28341
Characterization of a fused silica capacitance standard [DE95-006457] p 2270 N95-28597

CAPE KENNEDY LAUNCH COMPLEX
Spaceport news index: January 1990 - December 1994 [NASA-TM-110653] p 2454 N95-27243
A review of falconry as a bird control technique with recommendations for use at the Shuttle Landing Facility, John F. Kennedy Space Center, Florida, USA [NASA-TM-110142] p 2126 N95-27859
Weather hazards to a Titan 4 on-pad destack-restack operation p 2172 N95-28307
Cape Canaveral air station launch emergency response forces and toxic materials release contingency plans p 2172 N95-28308

CAPILLARY FLOW
Measurement of viscosity by capillary rheometry: Dwell time effects [PB95-190203] p 2201 N95-26750
On permanent capillar-heavy waves in circular shaped channels [DE95-608779] p 2280 N95-27339
Transient studies of G-induced capillary dryout and rewet p 2281 N95-27351

CAPILLARY WAVES
New developments for sol-gel film and fiber processing [DE95-008175] p 2240 N95-28404

CARBIDES
JPRS report: Science and technology. Central Eurasia [JPRS-UST-95-015] p 2246 N95-27213
Engineered materials for appliation in severe metallurgical environments: Tantalum-carbon alloy development [DE95-006838] p 2216 N95-27488
Structural chemistry of some phases in the YC-Ni-B system [DE95-007403] p 2447 N95-28537

CARBOHYDRATES
Performance enhancing ration components program: Supplemental carbohydrate test [AD-A288560] p 2358 N95-26558

CARBON
Variation of solvent scattering-length density small-angle neutron scattering as a means of determining structure of composite materials [DE95-005394] p 2183 N95-27428
Engineered materials for appliation in severe metallurgical environments: Tantalum-carbon alloy development [DE95-006838] p 2216 N95-27488
Photoemission and optical properties of C60 fullerites [DE95-006588] p 2425 N95-27539
Atomic oxygen dosimetry measurements made on STS-46 by CONCAP 2 p 2418 N95-27634
Hydrogen induced C-C, C-N, and C-S bond activities on Pi and Ni surfaces [DE95-006251] p 2206 N95-27838
Formation of anisotropic Tl-1212, Tl-2212, Tl-1223 and Tl-2223 particles using aerosol flow reacted powders [DE95-007400] p 2444 N95-28079
Carbonaceous aerosols influencing atmospheric radiation: Black and organic carbon [DE95-006437] p 2330 N95-28118
On ionic charge distributions of heavy evaporation residues passing through a carbon foil [DE94-629016] p 2414 N95-28184
Evaluation of microporous carbon filters as catalysts for ozone decomposition [DE95-006498] p 2331 N95-28548
A black carbon emission data base for atmospheric chemistry and climate studies [DE95-006436] p 2332 N95-28662

CARBON COMPOUNDS
Statistical analysis of tensile mechanical property data of carbon/polyimide composites [NAL-TR-1238] p 2180 N95-26667
Investigation on energy conversion technology using biochemical reaction elements, 2 [DE95-759250] p 2321 N95-27940
Boron-carbon-silicon polymers and the ceramic thereof [NASA-CASE-ARC-11891-1-SB] p 2238 N95-28212

CARBON DIOXIDE
A summary of ODS replacement technologies at Litton Poly-Scientific p 2228 N95-27105
Observations on the solvating power of supercritical fluids p 2228 N95-27106
CO2 pellet blast cleaning and degreasing: The true environmentally benign technology p 2229 N95-27109
The use of supercritical carbon dioxide for contaminant removal from solid waste p 2229 N95-27110
Precision parts cleaning with supercritical CO2: Practical applications and solutions p 2229 N95-27111
Corrosive effects of supercritical carbon dioxide and cosolvents on metals p 2224 N95-27113
Precision parts cleaning with supercritical carbon dioxide p 2229 N95-27114
Survey of environmentally benign cleaning methodologies and materials p 2231 N95-27122
Fluid dynamic effects on precision cleaning with supercritical fluids p 2232 N95-27129
Integrated assessment and the relation between land-use change and climate change [DE95-006533] p 2327 N95-27469
Investigation on comprehensive fossil fuel cycle analysis and assessment approach as viewed from the global environment [DE95-759241] p 2329 N95-27935
Investigation on working out the global regeneration plan [DE95-759246] p 2329 N95-27938
Survey on researches related to ocean disposal of carbon dioxide [DE95-759247] p 2329 N95-27939
Investigation on energy conversion technology using biochemical reaction elements, 2 [DE95-759250] p 2321 N95-27940
Investigation on technology for increasing the biological CO2 sink and technology for CO2 fixation and reutilization [DE95-759251] p 2329 N95-27941
Measurement of particle transport coefficients on Alcator C-Mod [DE95-007763] p 2411 N95-28020
Mars Sample Return mission utilizing in-situ propellant production [NASA-CR-188371] p 2145 N95-28261
Cryogenic BRDF measurements at 10.6 micrometers and 0.63 micrometers on contaminated mirrors [AD-A291611] p 2427 N95-28408

CARBON DIOXIDE CONCENTRATION
Research project on CO2-induced climate change [DE95-008339] p 2330 N95-28084

CARBON DIOXIDE LASERS
Far-infrared laser interferometry measurements on the STP-3(M) reversed-field pinch [DE94-765440] p 2297 N95-27868
Applications of lasers and electro-optics [DE95-600841] p 2299 N95-28330
Thermally-induced unsymmetric optical distortion of output window of high-power CO2 laser [AD-A289604] p 2300 N95-28650

CARBON DIOXIDE REMOVAL
The use of supercritical carbon dioxide for contaminant removal from solid waste p 2229 N95-27110

CARBON FIBER REINFORCED PLASTICS
Adhesively bonded composite patch repair of cracked aluminum alloy structures p 2132 N95-27507
External patch repair of CFRP/honeycomb sandwich p 2134 N95-27522

CARBON FIBERS
Composite or metallic bolted repairs on self-stiffened carbon wing panel of the commuter ATR72 design criteria, analysis, verification by test p 2135 N95-27525
Failure analysis of thick composite cylinders under external pressure p 2187 N95-28284

CARBON MONOXIDE
CO, HCO(+) and HCN absorption in the gravitational lens candidate B0218+357 at z=0.685 [PB95-185146] p 2461 N95-26522
Photo and thermal excitation of surface chemistry on model catalyst surfaces [AD-A288541] p 2200 N95-26528
Molecular cloud content of early-type galaxies. V. CO in elliptical galaxies [PB95-185153] p 2461 N95-27320
Preconversion catalytic deoxygenation of phenolic functional groups [DE95-007556] p 2204 N95-27458
Coupled chemistry/climate issues [DE95-006443] p 2327 N95-27532
Kinetics and dynamics of oxidation reactions involving adsorbed CO species on bulk supported Pt and copper oxides [DE95-006420] p 2207 N95-27952
FY 1994 ambient air monitoring report for McMurdo Station, Antarctica [DE95-008565] p 2331 N95-28149

CARBON STEELS
Characterization of Ultra-Low Carbon Baintic steels for use as weld wire consumables [AD-A288292] p 2212 N95-26411
Fatigue fracture analysis in medium carbon structural steel and austenitic stainless steel by X-ray fractography [DE95-601504] p 2213 N95-26675
Stress corrosion cracking susceptibility of the earthquake resistant NOM B457 Mexican steel [DE95-607956] p 2214 N95-27256
Non-metallic oxide inclusion formation in C-Mnlow alloy steel welds [DE94-019160] p 2215 N95-27319
Effects of hydrogen on carbon steels at the Multi-Function Waste Tank Facility [DE95-007194] p 2219 N95-28005

CARBON 13
Molecular beam scattering from C-13 enriched Kapton and correlation with the EOIM-3 carousel experiment p 2419 N95-27643

CARBON-CARBON COMPOSITES
Composite heat pipe development status: Development of lightweight prototype carbon-carbon heat pipe with integral fins and metal foil liner [NASA-TM-106909] p 2283 N95-27369
LEO degradation of graphite and carbon-based composites aboard Space Shuttle Flight STS-46 p 2199 N95-27636

CARBONACEOUS MATERIALS
Carbonaceous aerosols influencing atmospheric radiation: Black and organic carbon [DE95-006437] p 2330 N95-28118

CARBONATES
Molten Carbonate Fuel Cell (MCFC) product development test [DE95-007345] p 2316 N95-26543
The US Molten Carbonate Fuel-Cell development and commercialization effort [DE95-008580] p 2320 N95-27746

CARCINOGENS
An introductory guide to uncertainty analysis in environmental and health risk assessment. Environmental Restoration Program [DE95-008097] p 2354 N95-28136

CARGO
The performance of cargo airdrop systems using g-12E parachutes: Statistical determination of minimum altitude [AD-A291666] p 2126 N95-28454

CARGO AIRCRAFT
Incorporating biplane wing theory into a large, subsonic, all-cargo transport p 2120 N95-26956

CARRIER DENSITY (SOLID STATE)
Time-dependent model for vertical-cavity surface-emitting laser [DE95-007880] p 2298 N95-28027

CARRIER FREQUENCIES
Nonlinear optical studies of surfaces [DE95-006574] p 2428 N95-28557

CARTESIAN COORDINATES
User documentation of the CTA program [AD-A289508] p 2121 N95-26854

CASE BONDED PROPELLANTS
A comprehensive energetic materials resource recovery and recycling program p 2176 N95-28323

CASES (CONTAINERS)
Composite intermediate case manufacturing scale-up for advanced engines p 2141 N95-28275

CASSINI MISSION

Briefing Report to the Ranking Minority Member, Subcommittee on Space and Aeronautics, Committee on Science, House of Representatives. Cassini Mission: Estimated launch costs for NASA's mission to Saturn [GAO/NSIAD-95-141BR] p 2145 N95-27856

CAST ALLOYS

Ductile - ductile beryllium aluminum metal matrix composite manufactured by extrusion [AD-A289519] p 2181 N95-26848

Fatigue properties of an A356 (AlSi7Mg) aluminum alloy for automotive applications: Fatigue life prediction [PB95-196424] p 2224 N95-28660

CASTING

Magnetic resonance imaging of solvent transport in polymer networks [DE95-007142] p 2234 N95-27455

AMCC casting development. Volume 1: Executive Summary [NASA-CR-196597] p 2247 N95-28419

CASTINGS

AMCC casting development. Volume 1: Executive Summary [NASA-CR-196597] p 2247 N95-28419

CATACLYSMIC VARIABLES

Cataclysmic variables and related objects [NASA-SP-507] p 2458 N95-27068

Models for various aspects of dwarf novae and nova-like stars p 2459 N95-27071

Classical novae and recurrent novae: General properties p 2459 N95-27072

Typical examples of classical novae p 2459 N95-27074

Recurrent novae p 2460 N95-27075

Overview of the observations of symbiotic stars p 2460 N95-27076

Models of symbiotic stars p 2460 N95-27077

CATALYSIS

Cofactor-assisted antibody catalysis [AD-A288929] p 2349 N95-26608

Synthesis and properties of lanthanide-exchanged Preyssler's heteropolyanions [DE95-007136] p 2238 N95-28235

The minimum pore size obtainable in a silica gel during drying [DE95-008162] p 2239 N95-28401

CATALYSTS

International Space Station Alpha trace contaminant control subassembly life test report [NASA-TM-108488] p 2358 N95-26364

Photo and thermal excitation of surface chemistry on model catalyst surfaces [AD-A288541] p 2200 N95-26528

Theoretical studies of reaction surfaces [AD-A288458] p 2404 N95-26632

Probe molecule studies: Active species in alcohol synthesis [DE95-003514] p 2203 N95-27420

Comparison of the activities of fine-particle size catalysts [DE95-004773] p 2203 N95-27423

Preconversion catalytic deoxygenation of phenolic functional groups [DE95-007556] p 2204 N95-27458

Reducing cold-start emissions by catalytic converter thermal management [DE95-000256] p 2327 N95-27540

Charge distribution analysis of catalysts under simulated reaction conditions [DE95-006943] p 2204 N95-27549

NQR-NMR studies of higher alcohol synthesis Cu-Co catalysts [DE95-007926] p 2205 N95-27680

Superior catalysts for selective catalytic reduction of nitric oxide [DE95-007903] p 2205 N95-27691

Transient studies of low temperature catalyst for methane conversion [DE95-007913] p 2205 N95-27692

Kinetics and dynamics of oxidation reactions involving adsorbed CO species on bulk supported Pt and copper oxides [DE95-006420] p 2207 N95-27952

Synthesis and properties of lanthanide-exchanged Preyssler's heteropolyanions [DE95-007136] p 2238 N95-28235

Comparison of bridged polysilsesquioxane xerogels prepared from methoxy- and ethoxy-silyl monomers [DE95-005422] p 2240 N95-28532

Evaluation of microporous carbon filters as catalysts for ozone decomposition [DE95-006498] p 2331 N95-28548

CATALYTIC ACTIVITY

Cofactor-assisted antibody catalysis [AD-A288929] p 2349 N95-26608

Comparison of the activities of fine-particle size catalysts [DE95-004773] p 2203 N95-27423

Synthesis and properties of lanthanide-exchanged Preyssler's heteropolyanions [DE95-007136] p 2238 N95-28235

Radiant exchange considerations in design and scaleup of photocatalytic reactors for purification of nitroglycerine-contaminated air p 2171 N95-28300

CATHODE RAY TUBES

Image quality metrics for color CRT displays [AD-A288934] p 2262 N95-27196

CATIONS

AEM investigation of tetrahedrally coordinated Ti(4+) in nickel-titanate spinel [DE95-006624] p 2215 N95-27473

The off-center effect on the diffusion coefficient of Cu(+) and Li(+) in the KCl lattice [DE95-609146] p 2446 N95-28255

CAVITATION FLOW

Scaling issues in dynamic fragmentation [DE95-008509] p 2309 N95-27745

CAVITIES

Suppressor of oscillations in airframe cavities [AD-D017265] p 2128 N95-26507

Numerical simulation of the SOFIA flow field [NASA-CR-197757] p 2274 N95-26589

Comparison of numerical results and multicavity purge and rim seal data with extensions to dynamics [NASA-TM-106685] p 2168 N95-27434

Cavity formation and impurity gettering in He-implanted Si [DE95-007744] p 2444 N95-28127

Chemical and electrical properties of cavities in silicon and germanium [DE95-006812] p 2445 N95-28206

Measurements of store forces and moments and cavity pressures for a generic store in and near a box cavity at subsonic and transonic speeds [NASA-TM-4611] p 2123 N95-28241

Investigation of HE driven cylindrical liner [DE95-007866] p 2311 N95-28539

CAVITONS

Proceedings of the International Workshop on Acceleration and Radiation Generation in Space and Laboratory Plasmas [AD-A291673] p 2436 N95-28668

CAVITY FLOW

Calculation of three-dimensional (3-D) internal flow by means of the velocity-vorticity formulation on a staggered grid [NASA-TM-110352] p 2122 N95-27258

A Navier-Stokes boundary element solver p 2283 N95-27361

Numerical analysis of intrs cavity and power-stream flow interaction in multiple gas-turbine disk-cavities [NASA-TM-106886] p 2140 N95-28344

Experimental study on transition characteristics of natural-convection flow [PB95-192423] p 2289 N95-28637

CAVITY RESONATORS

Design and characterization of resonant cavity light-emitting diodes [AD-A289307] p 2261 N95-26921

Thermally-induced unsymmetric optical distortion of output window of high-power CO2 laser [AD-A289604] p 2300 N95-28650

CCD STAR TRACKER

Development of a Robust star identification technique for use in attitude determination of the ACE spacecraft p 2149 N95-27777

CELESTIAL MECHANICS

Space modeler: An expanded, distributed, virtual environment for space visualization [AD-A289409] p 2461 N95-27131

Tracking and impact prediction of Earth-Crossing-Objects (ECO's) on a collision course with Earth [AD-A289321] p 2461 N95-27303

CELL DIVISION

Modeling and statistical analysis of bioassay data: Medaka cell proliferation under DEN and TCE [AD-A289998] p 2352 N95-28519

CELLS (BIOLOGY)

Comparative Transduction Mechanisms of Vestibular Otolith Hair Cells [NASA-CR-197980] p 2349 N95-26727

Regional differences in lectin binding patterns of vestibular hair cells p 2349 N95-26728

Hair cell regeneration in the bullfrog vestibular otolith organs following aminoglycoside toxicity p 2349 N95-26729

Peripheral innervation patterns of vestibular nerve afferents in the bullfrog utriculus p 2349 N95-26730

Comparative transduction mechanisms of hair cells in the bullfrog utriculus. 1: Responses to intracellular current p 2350 N95-26731

Comparative transduction mechanisms of hair cells in the bullfrog uticulus. 2: Sensitivity and response dynamics to hair bundle displacement p 2350 N95-26732

Hippocampal place fields, the internal compass, and the learning of landmark stability [AD-A289406] p 2350 N95-27100

The electrical behaviour of an excitable cell at different conditions [DE95-607911] p 2351 N95-27254

Mutagenesis in human cells with accelerated H and Fe ions [NASA-CR-198599] p 2351 N95-28177

Third international congress of plant molecular biology: Molecular biology of plant growth and development [DE95-006482] p 2352 N95-28496

CELLULOSE NITRATE

A comprehensive energetic materials resource recovery and recycling program p 2176 N95-28323

CEMENTS

Method and apparatus for measuring temperatures in fabrics and flexible thermal insulations [NASA-CASE-ARC-11984-1] p 2293 N95-28345

CENTAUR LAUNCH VEHICLE

Electromechanical rotary actuator p 2157 N95-27278

CENTER OF GRAVITY

A quantitative feedback theory FCS design for the subsonic envelope of the VISTA F-16 including configuration variation [AD-A289221] p 2141 N95-26958

CENTRAL NERVOUS SYSTEM

Research activities on somatosensory (SI) cortical neurons [AD-A288794] p 2348 N95-26360

CENTRAL PROCESSING UNITS

Testing of Uninterruptible Power Supplies with nonlinear loads [AD-A289353] p 2262 N95-27067

The transition of GTDS to the Unix workstation environment p 2151 N95-27789

Parallel block implicit integration technique for trajectory parallelism [AD-A288961] p 2379 N95-28335

CERAMIC FIBERS

Ceramic fiber-reinforced monoclinic celsian phase glass-ceramic matrix composite material [NASA-CASE-LEW-15714-1] p 2183 N95-27717

Ceramic composite combustor cans for expendable turbine engines [AD-A289551] p 2140 N95-28646

CERAMIC MATRIX COMPOSITES

Micromechanical prediction of tensile damage for ceramic matrix composites under high temperature [AD-A288238] p 2180 N95-26626

Characterization of fatigue behavior of 2-D woven fabric reinforced ceramic matrix composite at elevated temperature [AD-A289423] p 2181 N95-26886

Fatigue behavior of a cross-ply ceramic matrix composite at elevated temperature under tension-tension loading [AD-A289250] p 2182 N95-26969

Fatigue behavior of a cross-ply ceramic matrix composite subjected to tension-tension cycling with hold time [AD-A289418] p 2182 N95-27134

Structural ceramics incorporating whiskers, platelets, and particulate phases [DE95-007048] p 2235 N95-27499

Ceramic fiber-reinforced monoclinic celsian phase glass-ceramic matrix composite material [NASA-CASE-LEW-15714-1] p 2183 N95-27717

Thermal shock behavior of fiber-reinforced composites [DE95-006746] p 2183 N95-27955

Stress transfer from axially loaded fiber to matrix in a microcomposite [DE95-007366] p 2183 N95-28043

Effects of high-temperature environments on flaw generation and fracture behavior of SiC/SiC composites [DE95-008270] p 2183 N95-28068

High-temperature deformation of ZrO2-Al2O3/SiC whisker composites fabricated by two techniques [DE95-008273] p 2183 N95-28069

Ceramic composite combustor cans for expendable turbine engines [AD-A289551] p 2140 N95-28646

CERAMICS

Scale model experiments with ceramic laminate targets [AD-A288322] p 2225 N95-26561

Materials design and processing by biomimicking. Section 1: Research progress [AD-A288229] p 2226 N95-26623

Design and processing of materials by biomimicking. Section 2. Publications
[AD-A288230] p 2226 N95-26624
Bimaterial interlaces and their role in the mechanical performance of the in-situ composites
[AD-A288973] p 2182 N95-27188
Japan's electronic packaging technologies
p 2263 N95-27230
Current programmes on physical metallurgy and related areas in BARC
[DE95-607939] p 2214 N95-27255
The development of mechanical strength in a ceramic material during firing
[DE95-004925] p 2234 N95-27476
High energy electron beams for ceramic joining
[DE95-006316] p 2420 N95-27480
Thermal control materials on EOIM-3
p 2242 N95-27639
Amorphization of complex ceramics by heavy-particle irradiations
[DE95-005725] p 2236 N95-27733
Tungsten carbide fragmentation: Experimental characterization and numerical modelling
[DE95-008521] p 2236 N95-27879
Prediction of material strength and fracture of glass using the SPHINX smooth particle hydrodynamics code
[DE95-004869] p 2236 N95-27943
The development and testing of ceramic components in piston engines
[DE95-005759] p 2236 N95-27946
Sintering of textured YBa2Cu3O(7-x) under intensive Co-60 gamma irradiation
[DE95-007098] p 2442 N95-27950
Manufacturing tailored property ceramic composites
[DE95-006303] p 2237 N95-27993
Control of thin film processing behavior through precursor structural modifications
[DE95-006468] p 2444 N95-28103
Boron-carbon-silicon polymers and the ceramic thereof
[NASA-CASE-ARC-11891-1-SB] p 2238 N95-28212
Task 4 supporting technology. Part 1: Detailed test plan for leading edge tile development. Leading edge material development and testing
[NASA-CR-198633] p 2160 N95-28258
Method and apparatus for measuring temperatures in fabrics and flexible thermal insulations
[NASA-CASE-ARC-11984-1] p 2293 N95-28345
Development of low-expansion ceramics with strength retention to elevated temperatures
[DE95-005760] p 2239 N95-28397
An overview of activities and accomplishments of the Metals and Ceramics Division
[DE95-007020] p 2241 N95-28560
Ash-based ceramic materials
[AD-D017272] p 2241 N95-28582
Coatings of non-oxide ceramics for improved corrosion resistance in high temperature coal combustion
[DE95-006932] p 2241 N95-28604

CERENKOV COUNTERS
Measurement of the reaction C(nu(sub mu), mu(-)) X near threshold
[DE95-007888] p 2412 N95-28063
Can TMAE photocathode be used for high rate applications?
[DE95-008594] p 2293 N95-28178

CERENKOV RADIATION
Radiation of a uniformly moving charge
[DE95-608757] p 2255 N95-27335
Observation of asymmetrical two-cone Vavilov-Cherenkov radiation in biaxial crystal of triglycinesulphate emitted by 658 MeV protons passing along bi normal
[DE94-629017] p 2441 N95-27867

CERIUM OXIDES
Atomic layer epitaxy of group 4 materials: Surface processes, thin films, devices and their characterization
[AD-A289092] p 2446 N95-28327

CERTIFICATION
Bonded composite repair of metallic aircraft components: Overview of Australian activities
p 2132 N95-27505
Hardware cleanliness methodology and certification
p 2211 N95-27656
Application of damage tolerance methodology in certification of the Piaggio P-180 Avanti
p 2138 N95-28480

CESIUM
Cesium/oxide interactions for ultrathin films on (alpha)-Al2O3(001) and (alpha)-Al2O3(1(bar 1)O2)
[DE95-008159] p 2238 N95-28358
Photoemission study of solid state reaction and initial oxidation of the Ce/Al(100) system
[PB95-195368] p 2210 N95-28652

CESIUM IODIDES
The KTeV pure CsI calorimeter
[DE95-005747] p 2292 N95-27751

CHAINS
Design strategies for the preparation of polymeric organic superconductors
[AD-A289022] p 2436 N95-26462

CHANGE DETECTION
Search for molecular absorptions with the Fourier Transform Spectrometer
[NASA-CR-198648] p 2462 N95-28222
The sensitive detection of hydrazine using chemiluminescence p 2173 N95-28311
A new method for measuring hypergol scrubber emissions p 2174 N95-28312
In situ dynamic material property measurement system
[AD-D017387] p 2210 N95-28585

CHANNEL FLOW
A fixed time performance evaluation of parallel CFD applications
[DE94-014240] p 2273 N95-26445
Wavenumber selection for small-wavelength Goertler vortices in curved channel flows
[NASA-CR-195063] p 2273 N95-26576
Resonant coherent excitation of N6(+) and Mg11(+) in planer channeling: Anisotropies in ionization probabilities and X-ray emission
[DE95-006732] p 2417 N95-28595

CHAOS
The phenomena of subharmonic bifurcations, runaway, and transition to chaos in a non-linear oscillator: perturbation methods and a numerical experiment
[IFTR-16/1994] p 2398 N95-26518
Vibration control using chaotic motion stabilizers
[AD-A289576] p 2398 N95-26687
Nonlinear instability and chaos in plasma wave-wave interactions. I. Introduction
[DE95-005529] p 2429 N95-27084
Cognitive networks for ATR: The roles of bifurcation and chaos
[AD-A289010] p 2387 N95-28336
Chua's circuits: Phenomena and applications
[AD-A291638] p 2271 N95-28666

CHARACTERIZATION
Automatically selecting and using primary effects in planning: Theory and experiments
[AD-A289347] p 2450 N95-27064
Iron oxides characterization by Moessbauer spectroscopy
[DE95-607869] p 2202 N95-27199
Matrix kernels for MEG and EEG source localization and imaging
[DE95-005238] p 2354 N95-27426
Alpha characterization inside pipes using ion-transport technology
[DE95-007869] p 2411 N95-28024
High temperature Hexoloy(trademark) SX silicon carbide
[DE95-007290] p 2221 N95-28075
Improved hardness RHA weldability and material property testing
[AD-A289127] p 2221 N95-28102
Proceedings of the 1993 Scientific Conference on Obscuration and Aerosol Research
[AD-A280084] p 2331 N95-28153
Material characterization system
[AD-D017385] p 2210 N95-28584

CHARGE CARRIERS
On helicon wave induced radial plasma transport
[DE94-634477] p 2429 N95-26438
Low temperature deposition and characterization of N- and P-type silicon carbide thin films and associated Ohmic and Schottky contacts
[AD-A289107] p 2237 N95-28097
Comprehensive numerical model for CW vertical-cavity surface-emitting lasers
[DE95-007758] p 2299 N95-28132

CHARGE COUPLED DEVICES
The systems of the proportional chambers registration electronics for present experiments in nuclear physics
[DE95-608559] p 2419 N95-27161
Development of a Robust star identification technique for use in attitude determination of the ACE spacecraft
p 2149 N95-27777
Single molecule detection using charge-coupled device array technology
[DE95-006425] p 2411 N95-27953

CHARGE DISTRIBUTION
Simple equivalent dipole distributions for dielectric spheroidal scatterers
[PB95-184883] p 2254 N95-27049
Charge distribution analysis of catalysts under simulated reaction conditions
[DE95-006943] p 2204 N95-27549
Projectile image acceleration, neutralization and electron emission during grazing interactions of multicharged ions with Au(110)
[DE95-007394] p 2409 N95-27551
On ionic charge distributions of heavy evaporation residues passing through a carbon foil
[DE94-629016] p 2414 N95-28184

CHARGE TRANSFER
ACT adaptive filters
[AD-A288385] p 2363 N95-26474
An acoustic charge transport imager for high definition television applications
[NASA-CR-197841] p 2249 N95-26708
Photoinduced dipoles and charge pairs in condensed phase
[DE95-007071] p 2207 N95-27921

CHARGE TRANSFER DEVICES
An acoustic charge transport imager for high definition television applications
[NASA-CR-197841] p 2249 N95-26708

CHARGED PARTICLES
Detection of charged particles in superfluid helium
[DE95-007354] p 2403 N95-26560
Simulating the production of free defects in irradiated metals
[DE95-007165] p 2214 N95-27088
Acceleration theorems
[DE95-007300] p 2420 N95-27484
Amorphous silicon pixel radiation detectors and associated thin film transistor electronics readout
[DE95-006568] p 2265 N95-27678
Burst of energetic ions from reversed field pinch plasma
[DE94-765447] p 2432 N95-27870
Nonlinear beam dynamics experimental program at SPEAR
[DE95-007823] p 2422 N95-28122
Rare decays/CP: The perspective of a kaon physicist
[DE95-005964] p 2416 N95-28338
Resonant coherent excitation of N6(+) and Mg11(+) in planar channeling: Anisotropies in ionization probabilities and X-ray emission
[DE95-006732] p 2417 N95-28595
Supercooled liquid dynamics for the charged hard-sphere model
[DE95-609158] p 2241 N95-28609
Proceedings of the International Workshop on Acceleration and Radiation Generation in Space and Laboratory Plasmas
[AD-A291673] p 2436 N95-28668

CHARM (PARTICLE PHYSICS)
Excited Charm States
[DE95-005749] p 2409 N95-27747
The Tau-Charm Factory in the ERA of B-Factories and CESR
[DE95-007894] p 2412 N95-28028
Polarization as a probe to the production mechanisms of charmonium in (pi)N collisions
[DE95-008136] p 2414 N95-28142
Recent status in the search for the quark-gluon plasma
[DE95-007036] p 2417 N95-28447
B-Physics results from D0
[DE95-005126] p 2417 N95-28495

CHARTS
Digital mapping, charting, and geodesy analysis program: Initial technical review of Raster Product Format
[AD-A289039] p 2313 N95-26476
A video strip chart program
[DE95-006389] p 2372 N95-27495
Ultrasonic studies of liquid/solid seimoacoustic wave phenomena
[AD-A289644] p 2402 N95-28622

CHEBYSHEV APPROXIMATION
The Benard problem: A comparison of finite difference and spectral collocation eigen value solutions
p 2283 N95-27364

CHELATION
Non-covalent immobilization of proteins and enzymes on polymerized lipid assemblies
[AD-A288234] p 2225 N95-26526

CHEMICAL ANALYSIS
The 18th Annual Condensed Matter Physics Meeting
[DE95-605568] p 2398 N95-26598
Determining nanoscale physical properties of materials by microscopy and spectroscopy
[AD-A289532] p 2201 N95-26870
The evaluation of a fluorochemical drying process for an electrical contact p 2227 N95-27103
Cleanliness verification process at Martin Marietta Astronautics p 2165 N95-27104
A summary of ODS replacement technologies at Litton Poly-Scientific p 2228 N95-27105
Ethyl lactate as a solvent alternative for cleaning metal parts p 2229 N95-27112

Corrosive effects of supercritical carbon dioxide and cosolvents on metals p 2224 N95-27113
Evaluations of the effectiveness of environmentally benign cleaning methodologies p 2230 N95-27115
Superior catalysts for selective catalytic reduction of nitric oxide
[DE95-007903] p 2205 N95-27691
Investigation on comprehensive fossil fuel cycle analysis and assessment approach as viewed from the global environment
[DE95-759241] p 2329 N95-27935
The structure of lead-indium phosphate glass
[DE95-007130] p 2237 N95-27967
Recovery, evaluation, and decontamination of landfilled pentaborane cylinders, former liquid propellant rocket engine test facility, Washoe County, Nevada
p 2171 N95-28302

CHEMICAL BONDS
Stabilization and control of high energy intermediates through adsorption of restricted spaces
[AD-A288552] p 2201 N95-26606
Theoretical studies of reaction surfaces
[AD-A288458] p 2404 N95-26632
Modeling the growth of electronic materials
[AD-A289137] p 2438 N95-26997
Atomic structure and bonding of boron-induced reconstructions on Si(001)
[AD-A289187] p 2405 N95-27017
High resolution Fourier transform spectroscopy of the first overtone of the N-O stretch in nitrosyl bromide
[AD-A289318] p 2203 N95-27295
Hydrogen induced C-C, C-N, and C-S bond activities on Pi and Ni surfaces
[DE95-006251] p 2206 N95-27838
The structure of lead-indium phosphate glass
[DE95-007130] p 2237 N95-27967

CHEMICAL CLEANING
Effects of bearing cleaning and lube environment on bearing performance p 2158 N95-27285

CHEMICAL COMPOSITION
Characterization of Ultra-Low Carbon Baintic steels for use as weld wire consumables
[AD-A288292] p 2212 N95-26411
Replicator for characterization of cirrus and polar stratospheric cloud particles
[NASA-CR-197785] p 2341 N95-26669
Recurrent novae p 2460 N95-27075

CHEMICAL ENERGY
Investigation on energy conversion technology using biochemical reaction elements, 2
[DE95-759250] p 2321 N95-27940

CHEMICAL ENGINEERING
Chemical engineering: Measurements for a competitive age
[NONP-NASA-VT-95-49098] p 2203 N95-27204
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-015] p 2246 N95-27213
Intrusive multi-probe system
[DE95-006258] p 2292 N95-27465
The importance of propulsion engineers in protecting the global environment p 2170 N95-28295

CHEMICAL EQUILIBRIUM
Chlorodifluoromethane equilibrium on 13X molecular sieve
[AD-A289282] p 2405 N95-27034
Measurements of the volatilities of electrolytes: Application to water/steam cycles
[DE95-007103] p 2204 N95-27451
Transport coefficients for the NASA Lewis Chemical Equilibrium Program
[NASA-TM-4647] p 2209 N95-28182

CHEMICAL EXPLOSIONS
A compatibility study of containment materials in FEFO, bis-(2-fluoro-2,2-dinitroethyl) formal
[DE95-007548] p 2206 N95-27750
Investigation of HE driven cylindrical liner
[DE95-007866] p 2311 N95-28539

CHEMICAL PROPERTIES
Photoacoustic chambers for studying solids and gases: Theory and practical examples
[IFTR-39/1994] p 2143 N95-26837
Fundamental concepts of integrated and fiber optic sensors
[NASA-TM-106920] p 2426 N95-27906

CHEMICAL PROPULSION
The importance of propulsion engineers in protecting the global environment p 2170 N95-28295

CHEMICAL REACTIONS
Environmental effects on high energy density materials
[AD-A288296] p 2199 N95-26416
The use of electrochemistry and ellipsometry for identifying and evaluating corrosion on aircraft
[AD-A288536] p 2125 N95-27186
Analysis of gas absorption to a thin liquid film in the presence of a zero-order chemical reaction
p 2280 N95-27348
The influence of surface structure on the interaction of water with TiO2(100)
[DE95-004927] p 2203 N95-27401
Probe molecule studies: Active species in alcohol synthesis
[DE95-003514] p 2203 N95-27420
Charge distribution analysis of catalysts under simulated reaction conditions
[DE95-006943] p 2204 N95-27549
An overview of the Evaluation of Oxygen Interactions with Materials 3 experiment: Space Shuttle Mission 46, July-August 1992 p 2210 N95-27630
Evaluation of Oxygen Interactions with Materials 3: Mission and induced environments
p 2210 N95-27631
Investigation on LCA (Life Cycle Analysis/assessment)
[DE95-759260] p 2330 N95-27942
Beyond transition state theory: Rigorous quantum approaches for determining chemical reaction rates
[DE95-008483] p 2208 N95-28086
Analysis of forward and inverse problems in chemical dynamics and spectroscopy
[DE95-009309] p 2209 N95-28164
Chemical reactions identified in the Titan 2, Titan 4, and Delta 2 propellant systems and their application to source modeling p 2172 N95-28304
Poly(N-arylenbenzimidazoles) via aromatic nucleophilic displacement
[NASA-CASE-LAR-14939-1] p 2179 N95-28360
Polybenzimidazoles via aromatic nucleophilic displacement
[NASA-CASE-LAR-14924-1-CU] p 2179 N95-28361

CHEMICAL REACTORS
Absorption of sparingly soluble gases by reactive media in self-aerated gas-liquid contactors: A scale-up procedure
[DE95-006429] p 2206 N95-27707
Radiant exchange considerations in design and scaleup of photocatalytic reactors for purification of nitroglycerine-contaminated air p 2171 N95-28300

CHEMICAL TESTS
Measurement of high acidity using a renewable-reagent fiber optic sensor
[DE95-006327] p 2425 N95-27734

CHEMICAL VAPOR INFILTRATION
Ceramic composite combustor cans for expendable turbine engines
[AD-A289551] p 2140 N95-28646

CHEMICAL WARFARE
Chlorodifluoromethane equilibrium on 13X molecular sieve
[AD-A289282] p 2405 N95-27034

CHEMILUMINESCENCE
The sensitive detection of hydrazine using chemiluminescence p 2173 N95-28311
A comparison of NH3 point monitoring and diode laser based path integrated measurements
[DE95-006892] p 2332 N95-28602

CHEMISORPTION
Chemical physics of uniform cyclic etching
[AD-A288975] p 2404 N95-26574
Analysis of the dimerized Sb/Si(001)-(2x1) surface by x-ray standing waves
[DE95-007097] p 2208 N95-27965
Chemical and electrical properties of cavities in silicon and germanium
[DE95-006812] p 2445 N95-28206
Cesium/oxide interactions for ultrathin films on (alpha)-Al2O3(001) and (alpha)-Al2O3(1(bar 1)O2)
[DE95-008159] p 2236 N95-28358

CHEMORECEPTORS
Anti-idiotype probes for toxin detection
[AD-A288955] p 2348 N95-26435

CHINA
An observational study on the onset of the summer monsoon over eastern Asia in 1979
[AD-A289637] p 2341 N95-26723

CHINESE SPACECRAFT
Chinese space science and technology
[AD-A289618] p 2466 N95-26856

CHIPS
Orbital impacts and the Space Shuttle windshield
[NASA-TM-110594] p 2159 N95-26379
Monolithic electronics for nuclear and high-energy physics experiments
[DE95-005393] p 2420 N95-27427

CHIPS (ELECTRONICS)
Intelligent computer based reliability assessment of multichip modules
[AD-A288833] p 2259 N95-26550
An acoustic charge transport imager for high definition television applications
[NASA-CR-197841] p 2249 N95-26708
Construction of a connectionist network supercomputer
[AD-A288439] p 2377 N95-27182
Chua's circuits: Phenomena and applications
[AD-A291638] p 2271 N95-28666

CHIRALITY
Analysis of electromagnetic problems involving chiral, bi-isotropic, and uniaxial bianisotropic media
[PB95-185096] p 2248 N95-26450
Conditions for the parameter dyadics of lossless bi-anisotropic media
[PB95-185104] p 2252 N95-26914

CHIRP
Method and apparatus for maintaining linearity and frequency accuracy of an FM chirp waveform
[AD-D017398] p 2258 N95-28615

CHLORIDES
Atomically resolved STM study of the adsorption and dissociation of methyl chloride on Si(001)
[AD-A289218] p 2438 N95-27061
Thermodynamics of aqueous electrolytes at high temperatures by the isopiestic technique
[DE95-006747] p 2449 N95-27546

CHLORINATION
Bioremediation of chlorinated organics: PCBs, TCE, HCFCs p 2179 N95-27117

CHLORINE COMPOUNDS
Stratospheric ozone reactive chemicals generated by space launches worldwide
[AD-A289852] p 2332 N95-28623

CHLORINE FLUORIDES
Use of CTFE as an additive to enhance fire resistance of single hydraulic fluid
[AD-A289377] p 2233 N95-27325

CHLOROETHYLENE
Use of CTFE as an additive to enhance fire resistance of single hydraulic fluid
[AD-A289377] p 2233 N95-27325

CHLOROFLUOROCARBONS
Extended equation-of-state for dichlorodifluoromethane (CCl2F2)
[AD-A288885] p 2177 N95-26434
The evaluation of a fluorochemical drying process for an electrical contact p 2227 N95-27103
Methods development for measuring and classifying flammability/combustibility of refrigerants. Task 2: Test plan
[DE95-007066] p 2234 N95-27481
Vapor pressures of mixtures of CFC-114 with the potential replacement coolants C4F(10) andc-C4F 8
[DE95-003444] p 2208 N95-28042

CHLOROPHYLLS
Energy transfer in real and artificial photosynthetic systems
[DE95-005824] p 2351 N95-27948

CHOLESKY FACTORIZATION
Vector algorithms for solving 3D nonlinear magnetostatic problems
[DE95-608737] p 2399 N95-27298

CHOLESTEROL
Biochemically vulnerable sites for antifungal intercession in the control of fungal growth
[AD-A288345] p 2348 N95-26573

CHROMATOGRAPHY
An investigation of the applicability of the new Reillex(tm)-HPQ anion exchange resin system for technetium/rhenium and uranium in the Hanford waste tanks
[DE95-007643] p 2412 N95-28051

CHROMITES
Stability of chromite interconnections in dual environments
[DE95-007755] p 2267 N95-28131

CHROMIUM
NQR-NMR studies of higher alcohol synthesis Cu-Co catalysts
[DE95-007926] p 2205 N95-27680
Micromagnetics and microstructure of epitaxially grown Co and Co-Cr films for perpendicular magnetic recording
[DE95-004681] p 2441 N95-27720
Plasma source ion implantation of ammonia into electroplated chromium
[DE95-006275] p 2444 N95-28125

CHROMIUM ALLOYS
Surface energy driven crystallization of amorphous Ni69Cr14P17 alloy
[DE95-005543] p 2438 N95-27085

CHROMOPHORES
Applications of Second Harmonic and Sum Frequency Generation to graphite and silica type interfaces
[AD-A288228] p 2201 N95-26544

CHROMOSOMES
Automated integration of genomic physical mapping data via parallel simulated annealing
[DE95-008057] p 2351 N95-27725

CHRONIC CONDITIONS
Acute and subacute toxicity of ammonium dinitramide (ADN) p 2175 N95-28318
CIRCADIAN RHYTHMS
Research activities on somatosensory (SI) cortical neurons [AD-A288794] p 2348 N95-26360
Basic mechanisms and implications of non-photic entrainment of circadian rhythmicity [AD-A288433] p 2353 N95-26779
Crew adaptation evaluation of the Norwegian Crew Concept (NOROREW) [AD-A288478] p 2360 N95-27058
CIRCUIT BOARDS
Construction of a connectionist network supercomputer [AD-A288439] p 2377 N95-27182
CAE for thermal management of aerospace electronic boards using the BETAsoft program p 2272 N95-27354
Life cycle costs of alternatives for F-16 printed circuit board diagnosis equipment [AD-A288744] p 2138 N95-28586
CIRCUIT BREAKERS
Partial discharge testing of high voltage wiring harness for airborne displays [AD-A289150] p 2138 N95-27003
CIRCUIT PROTECTION
Characteristics of the standard current trip circuit [PB95-192886] p 2271 N95-28663
CIRCUIT RELIABILITY
Self-checking state machine realization in CMOS [AD-A289149] p 2261 N95-27002
I(sub DDQ) testing and defect classes: A tutorial [DE95-005467] p 2306 N95-27723
CIRCUITS
Calorimetric evaluation of commercial Ni-MH cells and charges p 2272 N95-26790
Characterization and redesign of the AFIT multielectrode array [AD-A289295] p 2354 N95-27039
Efficient generation of counterexamples and witnesses in symbolic model checking [AD-A288583] p 2370 N95-27095
High-precision buffer circuit for suppression of regenerative oscillation [NASA-TM-4658] p 2291 N95-27259
Monolithic electronics for nuclear and high-energy physics experiments [DE95-005393] p 2420 N95-27427
Atomic oxygen dosimetry measurements made on STS-46 by CONCAP 2 p 2418 N95-27634
Manufacturing tailored property ceramic composites [DE95-006303] p 2237 N95-27993
Low-power, parallel photonic interconnections for Multi-Chip Module applications [DE95-008518] p 2267 N95-28147
Novel field effect transistors for low power electronics [AD-A289929] p 2271 N95-28629
Chua's circuits: Phenomena and applications [AD-A291638] p 2271 N95-28666
CIRCULAR CYLINDERS
Unsteady base pressure measurements in the near wake of a cylinder with imposed three-dimensional disturbances [AD-A289498] p 2276 N95-26827
CIRCULAR ORBITS
Contingency maneuver strategies for the Total Ozone Mapping Spectrometer-Earth Probe (TOMS-EP) p 2152 N95-27796
CIRCULATION
Diagnostic system Cryo-D for the determination of parameters of vapor-liquid currents of the coolant [DE95-608775] p 2280 N95-27338
CIRRUS CLOUDS
Replicator for characterization of cirrus and polar stratospheric cloud particles [NASA-CR-197785] p 2341 N95-26669
Subvisual cirrus: What it is and where you find it [AD-A289329] p 2342 N95-26899
CIVIL AVIATION
CFD research, parallel computation and aerodynamic optimization [NASA-CR-197748] p 2120 N95-26649
The high speed civil transport and NASA's High Speed Research (HSR) program p 2118 N95-26945
An integrated GPS/INS/BARO and radar altimeter system for aircraft precision approach landings [AD-A289280] p 2127 N95-26985
A review of Australian and New Zealand investigations on aeronautical fatigue during the period Apr. 1993 - Mar. 1995 [AR-009-202] p 2136 N95-27918
Rotorcraft crashworthy airframe and fuel system technology development program [AD-A289986] p 2126 N95-28630
CLADDING
Bases for extrapolating materials durability in fuel storage pools [DE95-007748] p 2222 N95-28129
CLAMPS
Changing paradigms: Manufacturing vs. fabricating a high volume Hold Down and Release Mechanism p 2155 N95-27267
The Clementine mechanisms p 2156 N95-27268
Non-explosive actuation for the ORBCOMM (TM) satellite p 2156 N95-27274
CLASSICAL MECHANICS
Magnetization of ferromagnetic clusters [DE95-006878] p 2399 N95-27548
CLASSIFICATIONS
Dwarf novae p 2458 N95-27069
Classical novae and recurrent novae: General properties p 2459 N95-27072
A comparison of error categorization schemes for use in software system safety programs [AD-A288741] p 2371 N95-27251
Multivariate classification of BPSG thin films using Mahalanobis distances [DE95-008519] p 2267 N95-28148
Cloud classification using whole-sky imager data [DE95-006501] p 2344 N95-28556
CLASSIFIERS
Isolated digit recognition without time alignment [AD-A289344] p 2254 N95-27062
CLAYS
The biodegradation of fuels in soils and sediments: Differences as a function of mineralogy p 2230 N95-27116
The development of mechanical strength in a ceramic material during firing [DE95-004925] p 2234 N95-27476
The PCMDI Visualization and Computation System (VCS): A workbench for climate data display and analysis [DE95-008586] p 2328 N95-27558
Superior catalysts for selective catalytic reduction of nitric oxide [DE95-007903] p 2205 N95-27691
CLEANERS
Environmentally Benign Cleaning and Degreasing Technology: JANNAF Safety and Protection Subcommittee and Propellant Development and Characterization Subcommittee Joint Workshop [CPIA-PUBL-611] p 2227 N95-27101
Wipe solvent substitutions for 1,1,1-trichloroethane (TCA) and methyl ethyl ketone (MEK) at Hill Air Force Base p 2228 N95-27107
Alternative cleaning solvents and lubricants at the Air Force PJKS facility p 2228 N95-27108
Microbial treatment for shipboard collection, hold ing, and transfer system tanks p 2179 N95-27119
Survey of environmentally benign cleaning methodologies and materials p 2231 N95-27122
Sceening, down selection, and implementation of environmentally compliant cleaning and insulation bonding for MNASA p 2165 N95-27124
Water driven turbine/brush pipe cleaner [NASA-CASE-KSC-11669-1] p 2304 N95-28359
CLEANING
Stability of reference masses 4: Growth of carbonaceous contamination on platinum-iridium mass standard surfaces, and its cleaning by UV/ozone treatment [PB95-190096] p 2226 N95-26745
The evaluation of a fluorochemical drying process for an electrical contact p 2227 N95-27103
Cleanliness verification process at Martin Marietta Astronautics p 2165 N95-27104
A summary of ODS replacement technologies at Litton Poly-Scientific p 2228 N95-27105
Observations on the solvating power of supercritical fluids p 2228 N95-27106
Wipe solvent substitutions for 1,1,1-trichloroethane (TCA) and methyl ethyl ketone (MEK) at Hill Air Force Base p 2228 N95-27107
Alternative cleaning solvents and lubricants at the Air Force PJKS facility p 2228 N95-27108
CO2 pellet blast cleaning and degreasing: The true environmentally benign technology p 2229 N95-27109
Precision parts cleaning with supercritical CO2: Practical applications and solutions p 2229 N95-27111
Ethyl lactate as a solvent alternative for cleaning metal parts p 2229 N95-27112
Corrosive effects of supercritical carbon dioxide and cosolvents on metals p 2224 N95-27113
Precision parts cleaning with supercritical carbon dioxide p 2229 N95-27114
Evaluations of the effectiveness of environmentally benign cleaning methodologies p 2230 N95-27115
Microbial treatment for shipboard collection, hold ing, and transfer system tanks p 2179 N95-27119
Application of bacterial bioemusifiers to in situ maintenance of oil/water separators p 2179 N95-27120
Aqueous degreasing, precision cleaning, and cleanliness verification p 2231 N95-27121
Survey of environmentally benign cleaning methodologies and materials p 2231 N95-27122
Cleaning of parts for new manufacturing and parts rebuilding p 2231 N95-27123
Sceening, down selection, and implementation of environmentally compliant cleaning and insulation bonding for MNASA p 2165 N95-27124
Design considerations in supercritical fluid technology p 2232 N95-27126
Retrofitting conventional vapor degreasers to use a solvent wash/fluorochemical rinse process p 2232 N95-27127
The experience of CF Technologies, Inc. (CF Tech) in critical fluid processing p 2232 N95-27128
Fluid dynamic effects on precision cleaning with supercritical fluids p 2232 N95-27129
The application of waterjets for cleaning p 2233 N95-27130
Hardware cleanliness methodology and certification p 2211 N95-27656
Sensor for measuring the atomic fraction in highly dissociated hydrogen [DE95-006531] p 2415 N95-28204
The demilitarization of class 1.1 rocket motors using high pressure waterjets p 2176 N95-28322
Cryogenic washout of solid rocket propellants p 2176 N95-28324
Water driven turbine/brush pipe cleaner [NASA-CASE-KSC-11669-1] p 2304 N95-28359
CLEANLINESS
Cleanliness verification process at Martin Marietta Astronautics p 2165 N95-27104
Aqueous degreasing, precision cleaning, and cleanliness verification p 2231 N95-27121
Hardware cleanliness methodology and certification p 2211 N95-27656
CLEAR AIR TURBULENCE
Three objective indices for clear-air turbulence reconsidered [KNMI-TR-160] p 2342 N95-27366
CLEARANCES
WINCLR: A computer code for heat transfer and clearance calculation in a compressor [NASA-CR-195436] p 2117 N95-26363
CLEAVAGE
An experimental and numerical investigation of specimen size requirements for cleavage fracture toughness [AD-A289120] p 2311 N95-28100
CLIMATE
Subvisual cirrus: What it is and where you find it [AD-A289329] p 2342 N95-26899
The PCMDI Visualization and Computation System (VCS): A workbench for climate data display and analysis [DE95-008586] p 2328 N95-27558
Calculations of downward IR surface fluxes in the 500-3,000 cm(exp -1) wavenumber range for the 1994 ICRCCM model intercomparison study [DE95-006430] p 2328 N95-27708
A study of surface temperatures, clouds and net radiation [NASA-CR-198589] p 2329 N95-27864
Towards the detection and attribution of an anthropogenic effect on climate [DE95-008589] p 2331 N95-28157
Measurements of daytime and upper tropospheric water vapor profiles by Raman lidar [DE95-007640] p 2344 N95-28538
The Global Historical Climatology Network: A preview of version 2 [DE95-007003] p 2332 N95-28605
CLIMATE CHANGE
Technical report series on global modeling and data assimilation. Volume 6: A multiyear assimilation with the GEOS-1 system: Overview and results [NASA-TM-104606-VOL-6] p 2334 N95-26423
A parallel coupled oceanic-atmospheric general circulation model [DE95-005918] p 2335 N95-26622
Integrated assessment and the relation between land-use change and climate change [DE95-006533] p 2327 N95-27469
Coupled chemistry/climate issues [DE95-006443] p 2327 N95-27532
Issues relevant to the development of coupled chemistry/climate models [DE95-006441] p 2330 N95-27954
Research project on CO2-induced climate change [DE95-008339] p 2330 N95-28084

The Global Historical Climatology Network: A preview of version 2
[DE95-007003] p 2332 N95-28605

CLIMATE MODELS
A parallel coupled oceanic-atmospheric general circulation model
[DE95-005918] p 2335 N95-26622
The PCMDI Visualization and Computation System (VCS): A workbench for climate data display and analysis
[DE95-008586] p 2328 N95-27558
Calculations of downward IR surface fluxes in the 500-3,000 cm(exp -1) wavenumber range for the 1994 ICRCCM model intercomparison study
[DE95-006430] p 2328 N95-27708
Issues relevant to the development of coupled chemistry/climate models
[DE95-006441] p 2330 N95-27954
Advances in scientific visualization
[DE95-008065] p 2343 N95-28014
Models used to forecast agricultural corn crops in the micro-region of Ribeirao Preto-SP
[INPE-5513-NTC/309] p 2315 N95-28554

CLIMATOLOGY
Technical report series on global modeling and data assimilation. Volume 6: A multiyear assimilation with the GEOS-1 system: Overview and results
[NASA-TM-104606-VOL-6] p 2334 N95-26423
Spectral analyses, climatology, and interannual variability of Nimbus-7 TOMS version 6 total column ozone
[NASA-RP-1360] p 2341 N95-26689
Southern Africa: A climatological study
[AD-A289466] p 2342 N95-27148
Integrated assessment and the relation between land-use change and climate change
[DE95-006533] p 2327 N95-27469
Coupled chemistry/climate issues
[DE95-006443] p 2327 N95-27532
PRISM validation
[AD-A288476] p 2337 N95-27703
A study of surface temperatures, clouds and net radiation
[NASA-CR-198589] p 2329 N95-27864
The distribution of cloud cover over the former USSR as derived from the RIHMI 223-Station 3-hourly meteorological database
[DE95-007046] p 2343 N95-27920
A summary documentation of the AMIP models
[DE95-008343] p 2338 N95-27931
Issues relevant to the development of coupled chemistry/climate models
[DE95-006441] p 2330 N95-27954
The program for calculating sunshine duration from global radiation
[KNMI-TR-158] p 2343 N95-28237
The northern wintertime divergence extrema at 200 hPa and surface cyclones as simulated in the integration of the ECMWF general circulation model
[DE95-007946] p 2332 N95-28550
The Global Historical Climatology Network: A preview of version 2
[DE95-007003] p 2332 N95-28605
A black carbon emission data base for atmospheric chemistry and climate studies
[DE95-006436] p 2332 N95-28662

CLOUD COVER
Longterm infrared cloud clutter research
[AD-A288632] p 2340 N95-26343
Diagnosing cloudiness from global numerical weather prediction model forecasts
[AD-A289456] p 2356 N95-26992
The distribution of cloud cover over the former USSR as derived from the RIHMI 223-Station 3-hourly meteorological database
[DE95-007046] p 2343 N95-27920
Advances in scientific visualization
[DE95-008065] p 2343 N95-28014
Cloud classification using whole-sky imager data
[DE95-006501] p 2344 N95-28556

CLOUD DISPERSAL
The small-scale structure of dispersing clouds in the atmosphere
[AD-A288256] p 2341 N95-26546

CLOUD GLACIATION
Replicator for characterization of cirrus and polar stratospheric cloud particles
[NASA-CR-197785] p 2341 N95-26669

CLOUD PHYSICS
Longterm infrared cloud clutter research
[AD-A288632] p 2340 N95-26343
The small-scale structure of dispersing clouds in the atmosphere
[AD-A288256] p 2341 N95-26546

CLOUDS
Site scientific mission plan for the Southern Great Plains CART site, January-June 1995
[DE95-008393] p 2344 N95-28340

CLOUDS (METEOROLOGY)
The small-scale structure of dispersing clouds in the atmosphere
[AD-A288256] p 2341 N95-26546
Prediction of rain attenuation and total atmospheric attenuation for low-availability satellite communications in Europe
[PB95-184925] p 2252 N95-26908
A study of surface temperatures, clouds and net radiation
[NASA-CR-198589] p 2329 N95-27864
The distribution of cloud cover over the former USSR as derived from the RIHMI 223-Station 3-hourly meteorological database
[DE95-007046] p 2343 N95-27920
Anomalous cloud absorption? A critique of the paper entitled Absorption of Solar Radiation by Clouds: Observations Versus Models
[DE95-007703] p 2331 N95-28121
Cloud classification using whole-sky imager data
[DE95-006501] p 2344 N95-28556

CLUSTERS
Optical features of nanosize iron and molybdenum sulfide clusters
[DE95-005417] p 2202 N95-27136

CLUTTER
Longterm infrared cloud clutter research
[AD-A288632] p 2340 N95-26343
Auto-processing of OTH radar amplitude/range/Doppler data
[AD-A289152] p 2253 N95-27005
Measurements of HF auroral clutter using the Verona Ava Linear Array Radar (VALAR)
[AD-A289442] p 2337 N95-27147
Nonlinear signal processing schemes for robust target detection in radar
[AD-A288449] p 2255 N95-27185

CMOS
Silicon based microactuators for telerobotic tactile stimulation
[AD-A289340] p 2260 N95-26767
Solid-state image sensor with focal-plane digital photon-counting pixel array
[NASA-CASE-NPO-18518-1-CU] p 2424 N95-26894
Self-checking state machine realization in CMOS
[AD-A289149] p 2261 N95-27002
I(sub DDQ) testing and defect classes: A tutorial
[DE95-005467] p 2306 N95-27723

COAL
Comparison of the activities of fine-particle size catalysts
[DE95-004773] p 2203 N95-27423
Ash-based ceramic materials
[AD-D017272] p 2241 N95-28582
Coatings of non-oxide ceramics for improved corrosion resistance in high temperature coal combustion
[DE95-006932] p 2241 N95-28604

COAL LIQUEFACTION
Comparison of the activities of fine-particle size catalysts
[DE95-004773] p 2203 N95-27423

COASTAL WATER
Performance modeling of hyperspectral imaging sensors for atmospheric studies
[AD-A289017] p 2289 N95-26461
VOCAR: An experiment in Variability of Coastal Atmospheric Refractivity
[AD-A289202] p 2253 N95-27006

COASTS
Fluxes across the west coast resolved by Picket Fence observations during stormfest
[AD-A288511] p 2341 N95-26653
Meteorological and oceanographic data collected during the ASREX 91 field experiment
[AD-A289492] p 2342 N95-26826

COATING
Characterization of optical polymers for multi-layered electro-optic devices
[AD-A289255] p 2227 N95-26973
The response of hydrotalcite coated aluminum to sealing with transition metal salt solutions
[DE95-004767] p 2234 N95-27460
Processing and properties of chromate-free conversion coatings on aluminum
[DE95-004768] p 2218 N95-27722
Control of thin film processing behavior through precursor structural modifications
[DE95-006468] p 2444 N95-28103
Chromate-free corrosion resistant conversion coatings for aluminum alloys
[DE95-007742] p 2238 N95-28117
Weightless Environment Training Facility (WETF) materials coating evaluation, volume 2
[NASA-CR-188366-VOL-2] p 2239 N95-28386

COATINGS
The response of hydrotalcite coated aluminum to sealing with transition metal salt solutions
[DE95-004767] p 2234 N95-27460
Faraday screen sputtering on TPX
[DE95-008347] p 2434 N95-28224
Task 4 supporting technology. Part 1: Detailed test plan for leading edge tile development. Leading edge material development and testing
[NASA-CR-198633] p 2160 N95-28258
Contact micromechanics in granular media with clay
[DE95-006566] p 2340 N95-28583
Mechanism of deposit formation on fuel-wetted hot metal surfaces
[AD-A289847] p 2210 N95-28621

COAXIAL FLOW
Supersonic coaxial jet noise predictions
[NASA-TM-106917] p 2401 N95-26801

COAXIAL NOZZLES
The noise reduction potential of dual-stream coaxial rectangular improperly expanded jet flows
[NASA-CR-197820] p 2277 N95-26995

COBALT
Probe molecule studies: Active species in alcohol synthesis
[DE95-003514] p 2203 N95-27420
Solid film lubricants and thermal control coatings flown aboard the EOIM-3 MDA sub-experiment
p 2242 N95-27640

COBALT ALLOYS
Micromagnetics and microstructure of epitaxially grown Co and Co-Cr films for perpendicular magnetic recording
[DE95-004681] p 2441 N95-27720
Electronic structure of ordered and disordered transition metal aluminides
[DE95-609034] p 2223 N95-28250

COBALT COMPOUNDS
Experimental determination of cluster geometrical structure
[DE95-007089] p 2409 N95-27753

COCKPIT SIMULATORS
The photo-realistic AFIT virtual cockpit
[AD-A289376] p 2130 N95-26876

COCKPITS
Integrated mission precision attack cockpit technology (IMPACT). Phase 1: Identifying technologies for air-to-ground fighter integration
[AD-A289562] p 2129 N95-26684
An analysis of the KC-135 three-person cockpit
[AD-A289540] p 2130 N95-26873
The photo-realistic AFIT virtual cockpit
[AD-A289376] p 2130 N95-26876
Operator modeling in commerical aviation: Cognitive models, intelligent displays, and pilot's assistants
[NASA-CR-198609] p 2138 N95-28203

CODERS
ELVIS: Eigenvectors for land vehicle image system
[AD-A289297] p 2381 N95-27041
Ultra-high, resolution, modular optical angle encoder for space-based opto-mechanical applications
p 2156 N95-27270
Pulse Code Modulation (PCM) encoder handbook for Aydin Vector MMP-900 series system
[NASA-RP-1365] p 2255 N95-27435
Vocoded KING data base
[AD-A289827] p 2258 N95-28576

CODING
Encoding user-defined problems with SIPE-2
[AD-A288390] p 2380 N95-26475
Com(sup 3): A composite-compatible component coding system
[BBC-RD-1994/17] p 2249 N95-26670
Computing NORAD mean orbital elements from a state vector
[AD-A289281] p 2146 N95-27033
Real-time data compression using a fixed Huffman encoding scheme
[DE95-006159] p 2455 N95-27949
Modeling helicopter blade dynamics using a modified Myklestad-Prohl transfer matrix method
[AD-A289891] p 2136 N95-28626

COEFFICIENTS
Performance evaluation of a new parallel preconditioner
[AD-A288563] p 2376 N95-26529
Layer coefficients for NHDOT pavement materials
[AD-A288262] p 2246 N95-26548
Characterization of optical polymers for multi-layered electro-optic devices
[AD-A289255] p 2227 N95-26973
Time-dependent model for vertical-cavity surface-emitting laser
[DE95-007880] p 2298 N95-28027

Transport coefficients for the NASA Lewis Chemical Equilibrium Program
[NASA-TM-4647] p 2209 N95-28182
Atmospheric dispersion in adaptive optics
[AD-A289639] p 2428 N95-28617

COGNITION
Handbook of perception and human performance, volume 2. Cognitive processes and performance
[AD-A289587] p 2355 N95-26692
Myers-Briggs type indicators and Kirton adaption-innovation inventory correlations
[AD-A288435] p 2357 N95-27181
Operator modeling in commerical aviation: Cognitive models, intelligent displays, and pilot's assistants
[NASA-CR-198609] p 2138 N95-28203
Cognitive networks for ATR: The roles of bifurcation and chaos
[AD-A289010] p 2387 N95-28336

COHERENT LIGHT
Nonlinear dynamics of a coherent polariton-biexciton system
[DE95-609150] p 2417 N95-28607

COLD PLASMAS
Electromagnetic devices and processes in environment protection
[AD-A288656] p 2141 N95-26487
Ordered one-component plasmas: Phase transitions, normal modes, large systems, and experiments in a storage ring
[DE95-007077] p 2434 N95-28233
Proceedings of the International Workshop on Acceleration and Radiation Generation in Space and Laboratory Plasmas
[AD-A291673] p 2436 N95-28668

COLD ROLLING
Composite prepreg application device
[NASA-CASE-LAR-15259-1] p 2182 N95-27192

COLD STRENGTH
Layer coefficients for NHDOT pavement materials
[AD-A288262] p 2246 N95-26548

COLD WEATHER
Lightweight cold weather underwear investigation
[AD-A288506] p 2358 N95-26736

COLD WORKING
Effects of helium pre-implantation on the microstructure and mechanical properties of irradiated 316 stainless steel
[DE95-007162] p 2214 N95-27086

COLLAPSE
The collapse of composite cylindrical panels with various thickness using finite element analysis
[AD-A289370] p 2308 N95-26905
The minimum pore size obtainable in a silica gel during drying
[DE95-008162] p 2239 N95-28401

COLLINEARITY
Magnetic structures in RNi2B2C (R = Ho, Er) superconductors
[DE95-008370] p 2442 N95-27932
Efficient analytic computation of higher-order QCD amplitudes
[DE95-008593] p 2449 N95-28160

COLLISION PARAMETERS
Collisional dynamics and spectroscopic studies of highly excited rovibrational levels of I2(X)(0(+)(sub g)) via stimulated emission pumping
[AD-A289447] p 2295 N95-27172
Recent status in the search for the quark-gluon plasma
[DE95-007036] p 2417 N95-28447
B-Physics results from D0
[DE95-005126] p 2417 N95-28495

COLLISION RATES
Anomalous collision rate in the time counter scheme of the direct simulation Monte Carlo method for rarefied gas flow analysis
[ISAS-R-653] p 2275 N95-26742
Some notes on long-range beam-beam effects for the 2 TeV collider
[DE95-006771] p 2421 N95-28017

COLLISIONS
A study of parton distribution functions with the use of photon + jet event kinematics in p(bar p) collisions at (radical)s = TeV
[DE95-005127] p 2408 N95-27444
Collisions of highly charged ions with electrons, atoms and surfaces
[DE95-007393] p 2413 N95-28078
Polarization as a probe to the production mechanisms of charmonium in (pi)N collisions
[DE95-008136] p 2414 N95-28142
Precise measurement of the left-right cross section asymmetry in Z boson production by e(+)e(-) collisions
[DE95-008591] p 2414 N95-28158.
Time-resolved FTIR emission studies of laser photofragmentation and radical reactions
[DE95-008125] p 2300 N95-28398
Monte-Carlo simulation methods for finite flat plate winding flows
[AD-A289842] p 2289 N95-28619

COLLOCATION
The Benard problem: A comparison of finite difference and spectral collocation eigen value solutions
p 2283 N95-27364

COLOR
Image quality metrics for color CRT displays
[AD-A288934] p 2262 N95-27196
Search for exotic particles at CDF
[DE95-008383] p 2411 N95-27933
Measurement of particle transport coefficients on Alcator C-Mod
[DE95-007763] p 2411 N95-28020

COLOR VISION
Factors in human-computer interface design (a pilot study)
[AD-A288908] p 2360 N95-27195
Practical color vision tests for air traffic control applicants: En route center and terminal facilities
[DOT/FAA/AM-95/13] p 2357 N95-27323

COMBAT
A mathematical analysis of the Janus combat simulation weather effects models and sensitivity analysis of sky-to-ground brightness ratio on target detection
[AD-A289629] p 2336 N95-26858

COMBINATORIAL ANALYSIS
Yang-Baxter type equations and posets of maximal chains
[PB95-185195] p 2388 N95-26516
Scalability in production system programs
[AD-A289345] p 2453 N95-27063
A path-oriented knowledge representation system: Defusing the combinatorial system p 2386 N95-27395
A spectral algorithm for the seriation problem
[DE95-004775] p 2372 N95-27436
Symmetries of the KAC-Peterson modular matrices of affine algebras
[PB95-190138] p 2392 N95-28010

COMBINED STRESS
The role of biaxial stresses in discriminating between meaningful and illusory composite failure theories
p 2187 N95-28287

COMBUSTIBLE FLOW
Numerical simulation of combustion flow around a flame holder with hydrogen injection
[NAL-TR-1233] p 2200 N95-26523
A laboratory scale supersonic combustive flow system
[DE95-006347] p 2206 N95-27851

COMBUSTION
Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A288297] p 2199 N95-26417
Numerical simulation of combustion flow around a flame holder with hydrogen injection
[NAL-TR-1233] p 2200 N95-26523
Ram accelerator performance calculations using a modified version of the NASA CET89 equilibrium chemistry code
[AD-A289554] p 2201 N95-26678
Design and development of experimental facilities for short duration, low-gravity combustion and fire experiments
[NASA-CR-195458] p 2244 N95-26709
Biomass Pyrolysis Oil Properties and Combustion Meeting
[DE95-004017] p 2204 N95-27438
Methods development for measuring and classifying flammability/combustibility of refrigerants. Task 2: Test plan
[DE95-007066] p 2234 N95-27481
Evaluating the environmental viability of open burning/open detonation operations
p 2170 N95-28297
Upgrade of the computer modeling programs POLU10 and POLU13A for open burning and open detonation of energetic materials p 2172 N95-28306

COMBUSTION CHAMBERS
Experiment on a rectangular cross section scramjet combustor. 2: Effects of fuel injector geometry
[NAL-TR-1220] p 2139 N95-26600
NASA Lewis Research Center's combustor test facilities and capabilities
[NASA-TM-106903] p 2143 N95-27176
Three-dimensional computer modeling of hydrogen injection and combustion
[DE95-006261] p 2203 N95-27437
Three-dimensional visualization of reactive flows in complex geometries
[DE95-006332] p 2284 N95-27845
Turbulence models for gas turbine combustors
p 2285 N95-27888
Combustion system CFD modeling at GE Aircraft Engines p 2285 N95-27889
Experimental investigation of inlet-combustor isolators for a dual-mode scramjet at a Mach number of 4
[NASA-TP-3502] p 2140 N95-28343
AMCC casting development. Volume 1: Executive Summary
[NASA-CR-196597] p 2247 N95-28419
Ceramic composite combustor cans for expendable turbine engines
[AD-A289551] p 2140 N95-28646

COMBUSTION CHEMISTRY
Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A288297] p 2199 N95-26417
Design and development of experimental facilities for short duration, low-gravity combustion and fire experiments
[NASA-CR-195458] p 2244 N95-26709
Chemical engineering: Measurements for a competitive age
[NONP-NASA-VT-95-49098] p 2203 N95-27204
High temperature kinetic study of the reactions H + O2 = OH + O and O + H2 = OH + H in H2/O2 system by shock tube-laser absorption spectroscopy
[NASA-CR-195473] p 2206 N95-27695
Recent progress in the joint velocity-scalar PDF method p 2285 N95-27890
Experience with turbulence interaction and turbulence-chemistry models at Fluent Inc.
p 2286 N95-27893

COMBUSTION EFFICIENCY
High pressure Earth storable rocket technology program: Basic program
[NASA-CR-195449] p 2166 N95-26390
Experiment on a rectangular cross section scramjet combustor. 2: Effects of fuel injector geometry
[NAL-TR-1220] p 2139 N95-26600

COMBUSTION PHYSICS
Chemical engineering: Measurements for a competitive age
[NONP-NASA-VT-95-49098] p 2203 N95-27204
Turbulence program for propulsion systems
p 2285 N95-27883
Research on combustion processes relevant to burners in HVAC systems
[PB95-179735] p 2208 N95-28006
Application of modern diagnostic methods to environmental improvement
[DE95-005797] p 2330 N95-28119
Coatings of non-oxide ceramics for improved corrosion resistance in high temperature coal combustion
[DE95-006932] p 2241 N95-28604

COMBUSTION STABILITY
A fully implicit time accurate method for hypersonic combustion: Application to shock-induced combustion instability
[NASA-TM-106707] p 2273 N95-26380

COMBUSTION TEMPERATURE
NASA Lewis Research Center's combustor test facilities and capabilities
[NASA-TM-106903] p 2143 N95-27176

COMETARY COLLISIONS
Tracking and impact prediction of Earth-Crossing-Objects (ECO's) on a collision course with Earth
[AD-A289321] p 2461 N95-27303

COMETS
Observations of comets with the IUE
[NASA-CR-197816] p 2461 N95-27166
Tracking and impact prediction of Earth-Crossing-Objects (ECO's) on a collision course with Earth
[AD-A289321] p 2461 N95-27303

COMMAND AND CONTROL
The controller memory guide. Concepts from the field
[AD-A289263] p 2127 N95-26978
Semantic heterogeneity in database and data dictionary integration for command and control systems
[AD-A289180] p 2453 N95-27014
Design and implementation of a software communication architecture for the JANUS-3D Visualizer
[AD-A288509] p 2370 N95-27150

COMMERCE
Implementing an integrated standards-based management system to ensure compliance at Los Alamos National Laboratory
[DE95-007873] p 2451 N95-28025

COMMERCIAL AIRCRAFT
Strategy in the commercial aircraft industry in the United States: A comparison of decisionmaking by McDonnell-Douglas and Boeing aircraft companies from 1977-1983
[AD-A288289] p 2117 N95-26409

Radiation safety aspects of commercial high-speed flight transportation
[NASA-TP-3524] p 2465 N95-26427

An integrated GPS/INS/BARO and radar altimeter system for aircraft precision approach landings
[AD-A289280] p 2127 N95-26985

Pilot opinions on high level flight deck automation issues: Toward the development of a design philosophy
[NASA-CR-4669] p 2357 N95-28253

Study of potential aerodynamic benefits from spanwise blowing at wingtip
[NASA-TP-3515] p 2124 N95-28669

COMMERCIAL SPACECRAFT

Solar array deployment mechanism
p 2155 N95-27266

Global trade in satellites and launch services
[GPO-84-811] p 2165 N95-28342

COMMUNICATION

The effects of Crew Resource Management (CRM) training in airline maintenance: Results following three year's experience
[NASA-CR-196696] p 2358 N95-28676

COMMUNICATION EQUIPMENT

Testing of Uninterruptible Power Supplies with nonlinear loads
[AD-A289353] p 2262 N95-27067

The evolution and impact of PCS technology
[AD-A288606] p 2255 N95-27249

COMMUNICATION NETWORKS

Assessment of long-distance HF radio and satellite communication assets for RNLAF out-of-area operations
[AD-A288633] p 2247 N95-26344

Scalable multicast tree construction for wide area networks
[AD-A288318] p 2379 N95-26421

Design and implementation of a software communication architecture for the JANUS-3D Visualizer
[AD-A288509] p 2370 N95-27150

Radio telemetry buoy for long-range communication
[AD-D017269] p 2161 N95-28581

COMMUNICATION SATELLITES

An architecture and protocol for communications satellite constellations regarded as multi-agent systems
p 2166 N95-27377

ORION: A Supersynchronous Transfer Orbit mission
p 2154 N95-27804

Preliminary flight software specification for the petite amateur Navy satellite (PANSAT)
[AD-A280068] p 2165 N95-28150

Global trade in satellites and launch services
[GPO-84-811] p 2165 N95-28342

COMMUTATION

Dynamically timed electric motor
[NASA-CASE-MFS-28958-1] p 2261 N95-26890

On compact multipliers of topological algebras
[DE95-608751] p 2390 N95-27092

q-structure algebra of U(sub q)(g-circumflex) from its adjoint action
[DE95-608749] p 2390 N95-27301

Some commutativity theorems for a certain class of rings
[DE95-608750] p 2390 N95-27302

Realization of vector fields for quantum groups as pseudodifferential operators on quantum spaces
[DE95-008485] p 2449 N95-27877

Coordinates of the quantum plane as q-tensor operators in U(sub q) (su(2) * su(2))
[DE95-007100] p 2397 N95-28234

COMMUTATORS

A case study in automated theorem proving: A difficult problem about commutators
[DE95-008392] p 2392 N95-28173

COMPACTING

Compactification of moduli spaces of monopoles
[PB95-185179] p 2388 N95-26515

The effects of processing variables on reaction synthesis of Fe-Al alloys
[DE95-007405] p 2221 N95-28082

Residual stress, strain, and faults in nanocrystalline palladium and copper
[DE95-008294] p 2223 N95-28543

COMPARISON

An in situ evaluation of TOPEX/Poseidon altimetric measurements versus meaurements made by moorings and inverted echo sounders for sea surface height
[NASA-CR-198621] p 2347 N95-27805

COMPATIBILITY

Wipe solvent substitutions for 1,1,1-trichloroethane (TCA) and methyl ethyl ketone (MEK) at Hill Air Force Base p 2228 N95-27107

Alternative cleaning solvents and lubricants at the Air Force PJKS facility p 2228 N95-27108

COMPETITION

Information superhighway: Issues affecting development
[AD-A289434] p 2252 N95-26923

Global trade in satellites and launch services
[GPO-84-811] p 2165 N95-28342

COMPILERS

Control-flow analysis and type systems
[AD-A289338] p 2389 N95-26772

High performance hardware and software for pattern recognition and image processing
[AD-A289153] p 2370 N95-27031

COMPLEX COMPOUNDS

Structural oxidation state studies of the manganese cluster in the oxygen evolving complex of Photosystem II
[DE95-008488] p 2409 N95-27744

COMPLEX NUMBERS

Spectral properties of multipliers on topological algebras
[DE95-608747] p 2390 N95-27299

COMPLEX SYSTEMS

Nonlinear dynamics of global atmospheric and earth system processes
[NASA-CR-197926] p 2326 N95-26429

The phenomena of subharmonic bifurcations, runaway, and transition to chaos in a non-linear oscillator: perturbation methods and a numerical experiment
[IFTR-16/1994] p 2398 N95-26518

Digital systems validation. Chapter 20 Artificial Intelligenge with applications for aircraft. Handbbook, volume 2
[AD-A288492] p 2380 N95-26638

The controller memory guide. Concepts from the field
[AD-A289263] p 2127 N95-26978

Model-based monitoring and diagnosis of a satellite-based instrument p 2166 N95-27390

COMPLEXITY

Generalized CNF satisfiability, local reductions and complexity of succinctly specified problems
[DE95-006343] p 2372 N95-27849

COMPOSITE MATERIALS

Split pipe testing device for the measurement of bond of reinforcement under controlled confinement
[AD-D017258] p 2245 N95-26500

Molecular object liquid crystals: An approach to new materials
[AD-A288905] p 2437 N95-26553

The 18th Annual Condensed Matter Physics Meeting
[DE95-605568] p 2398 N95-26598

Design and processing of materials by biomimicking. Section 2. Publications
[AD-A288230] p 2226 N95-26624

Materials with self organized surfaces: 2D polymer assemblies
[AD-A288928] p 2226 N95-26627

Microengineered conducting composites from nanochannel templates
[AD-A289573] p 2180 N95-26686

Analysis of plate-twist test for in-plane shear modulus of composite materials (revised)
[PB95-190195] p 2308 N95-26749

Materials Research Society Symposium Proceedings. Volume 339: Diamond, SiC and nitride wide bandgap semiconductors
[AD-A288690] p 2437 N95-26818

Evaluation of composite joints
[AD-A289247] p 2181 N95-26967

Chlorodifluoromethane equilibrium on 13X molecular sieve
[AD-A289282] p 2405 N95-27034

Modeling considerations in the prediction of residual strength in composite laminates
[AD-A289128] p 2182 N95-27142

Bimaterial interlaces and their role in the mechanical performance of the in-situ composites
[AD-A288973] p 2182 N95-27188

A cryogenic scan mechanism for use in Fourier transform spectrometers p 2158 N95-27287

A FEAM based methodology for analyzing composite patch repairs of metallic structures
p 2133 N95-27511

Rapid repair of large area damage to contoured aircraft structures p 2133 N95-27516

Repair of high temperature composite aircraft structure p 2134 N95-27520

Composite repair of composite structures
p 2134 N95-27521

Damage occurrence on composites during testing and fleet service: Repair of Airbus aircraft
p 2135 N95-27526

The development of an engineering standard for composite repairs p 2135 N95-27528

Manufacturing tailored property ceramic composites
[DE95-006303] p 2237 N95-27993

The determination of the constitutive parameters of a medium with application to a reinforced concrete pad
[NASA-CR-4674] p 2268 N95-28181

Process and control systems for composites manufacturing p 2184 N95-28267

Advanced tow placement of composite fuselage structure p 2185 N95-28271

ACT/ICAPS: Thermoplastic composite activities
p 2185 N95-28274

Resin transfer molding of textile preforms for aircraft structural applications p 2185 N95-28276

Analysis techniques for the prediction of springback in formed and bonded composite components
p 2188 N95-28289

Atomic layer epitaxy of group 4 materials: Surface processes, thin films, devices and their characterization
[AD-A289092] p 2446 N95-28327

Utilization of composite materials by the US Army: A look ahead p 2189 N95-28421

Benefits and limitations of composites in carrier-based aircraft p 2189 N95-28422

Development of composite carrythrough bulkhead
p 2192 N95-28438

Reliability analysis of composite structures
p 2192 N95-28441

Navy composite maintenance and repair experience
p 2193 N95-28446

Overview of the ACT program p 2193 N95-28463

Technology integration box beam failure study
p 2194 N95-28468

Tension fracture of laminates for transport fuselage. Part 1: Material screening p 2137 N95-28471

Recent progress in NASA Langley textile reinforced composites program p 2196 N95-28475

Impact damage resistance of composite fuselage structure, part 1 p 2138 N95-28482

Applications of a damage tolerance analysis methodology in aircraft design and production
p 2197 N95-28483

The 18th Asilomar Conference on Polymeric Materials
[AD-A291721] p 2240 N95-28508

COMPOSITE STRUCTURES

A fast numerical method for isothermal resin transfer mold filling
[AD-A288944] p 2179 N95-26565

Composite sandwich structure and method for making same
[NASA-CASE-LAR-14898-1] p 2180 N95-26764

Study of damage evolutions in composite plates subjected to bending loads using micro-macro analysis
[AD-A288523] p 2308 N95-26839

The collapse of composite cylindrical panels with various thickness using finite element analysis
[AD-A289370] p 2308 N95-26905

Composite Repair of Military Aircraft Structures
[AGARD-CP-550] p 2131 N95-27504

Bonded composite repair of metallic aircraft components: Overview of Australian activities
p 2132 N95-27505

Composite repair of metallic airframe: Twenty years of experience p 2132 N95-27508

A FEAM based methodology for analyzing composite patch repairs of metallic structures
p 2133 N95-27511

Structural modification and repair of C-130 wing structure using bonded composites p 2133 N95-27512

Field repair materials for naval aircraft
p 2133 N95-27514

Rapid repair of large area damage to contoured aircraft structures p 2133 N95-27516

Composite repair of a CF18: Vertical stabilizer leading edge p 2134 N95-27517

Composite repair issues on the CF-18 aircraft
p 2134 N95-27518

Repair technology for thermoplastic aircraft structures
p 2134 N95-27519

Repair of high temperature composite aircraft structure p 2134 N95-27520

Composite repair of composite structures
p 2134 N95-27521

Scarf joint technique with cocured and precured patches for composite repair p 2135 N95-27524

Damage occurrence on composites during testing and fleet service: Repair of Airbus aircraft
p 2135 N95-27526

Repairs of CFC primary structures
p 2135 N95-27527

The development of an engineering standard for composite repairs p 2135 N95-27528

Load transfer in the stiffener-to-skin joints of a pressurized fuselage
[NASA-CR-198610] p 2310 N95-27865

Aeroelasticity and structural optimization of composite helicopter rotor blades with swept tips
[NASA-CR-4665] p 2136 N95-28262

Design of fabric preforms for double diaphragm forming p 2184 N95-28269

Static and fatigue testing of full-scale fuselage panels fabricated using a Therm-X(R) process
p 2185 N95-28270

Advanced tow placement of composite fuselage structure p 2185 N95-28271
Service tough composite structures using the Z-direction reinforcement process p 2185 N95-28272
ACT/ICAPS: Thermoplastic composite activities p 2185 N95-28274
Composite intermediate case manufacturing scale-up for advanced engines p 2141 N95-28275
Resin transfer molding of textile preforms for aircraft structural applications p 2185 N95-28276
Analysis of aircraft engine blade subject to ice impact p 2141 N95-28277
Application of fiber-reinforced bismaleimide materials to aircraft nacelle structures p 2137 N95-28278
Assembly induced delaminations in composite structures p 2186 N95-28279
Composite flight-control actuator development p 2142 N95-28281
Failure analysis of thick composite cylinders under external pressure p 2187 N95-28284
Analysis techniques for the prediction of springback in formed and bonded composite components p 2188 N95-28289
Design prediction for long term stress rupture service of composite pressure vessels p 2188 N95-28291
Ninth DOD/NASA/FAA Conference on Fibrous Composites in Structural Design, volume 1 [NASA-CR-198723] p 2189 N95-28420
Mechanical properties of triaxially braided composites: Experimental and analytical results p 2189 N95-28423
The effect of material heterogeneity in curved composite beams for use in aircraft structures p 2190 N95-28426
Analysis of composite structures with delaminations under combined bending and compression p 2190 N95-28429
Application of advanced material systems to composite frame elements p 2191 N95-28432
Unique considerations in the design and experimental evaluation of tailored wings with elastically produced chordwise camber p 2192 N95-28436
Effects of floor location on response of composite fuselage frames p 2192 N95-28439
Structural design optimization with survivability dependent constraints application: Primary wing box of a multi-role fighter p 2137 N95-28440
Reliability analysis of composite structures p 2192 N95-28441
Probabilistic design of advanced composite structure p 2193 N95-28443
Navy composite maintenance and repair experience p 2193 N95-28446
Ninth DOD/NASA/FAA Conference on Fibrous Composites in Structural Design, volume 2 [NASA-CR-198722] p 2193 N95-28462
Overview of the ACT program p 2193 N95-28463
COINS: A composites information database system p 2194 N95-28465
Composite fuselage shell structures research at NASA Langley Research Center p 2194 N95-28466
Structural testing of the technology integration box beam p 2194 N95-28467
Technology integration box beam failure study p 2194 N95-28468
Development of stitched/RTM composite primary structures p 2195 N95-28469
Test and analysis results for composite transport fuselage and wing structures p 2137 N95-28470
Local design optimization for composite transport fuselage crown panels p 2137 N95-28473
Composite fuselage crown panel manufacturing technology p 2137 N95-28474
Recent progress in NASA Langley textile reinforced composites program p 2196 N95-28475
Advanced textile applications for primary aircraft structures p 2138 N95-28476
Characterization and manufacture of braided composites for large commercial aircraft structures p 2196 N95-28478
The use of impact force as a scale parameter for the impact response of composite laminates p 2197 N95-28479
Application of damage tolerance methodology in certification of the Piaggio P-180 Avanti p 2138 N95-28480
Compressive strength of damaged and repaired composite plates p 2198 N95-28484
Post impact compressive strength in composites p 2198 N95-28485
Damage tolerance of a geodesically stiffened advanced composite structural concept for aircraft structural applications p 2138 N95-28487
Advanced wing design survivability testing and results p 2138 N95-28488
NASA-ACEE/Boeing 737 graphite-epoxy horizontal stabilizer service p 2138 N95-28489
SMART materials: Surfaces, transforms and interfaces. The commensurate engineering dimension [AD-A289598] p 2312 N95-28649

COMPOSITION (PROPERTY)
Satellite surface material composition from synthetic spectra [AD-A289236] p 2163 N95-26963
Advances in welding science: A perspective [DE95-006745] p 2302 N95-27545
Low temperature carrier transport properties in isotopically controlled germanium [DE95-008489] p 2444 N95-28092

COMPRESSIBILITY
Turbulence modeling [NASA-CR-197751] p 2274 N95-26665
Overview of through-thickness test methods for polymer matrix composites [PB95-190112] p 2227 N95-26747
High pressure optical studies of semiconductors and heterostructures [DE95-007119] p 2410 N95-27927

COMPRESSIBILITY EFFECTS
Compressible turbulence measurements in a supersonic boundary layer including favorable pressure gradient effects [AD-A289475] p 2276 N95-26821
Compressible turbulence measurements in a supersonic flow with adverse pressure gradient [AD-A289477] p 2276 N95-26822

COMPRESSIBLE BOUNDARY LAYER
Compressible turbulence measurements in a supersonic boundary layer including favorable pressure gradient effects [AD-A289475] p 2276 N95-26821
Nonlinear stability of non-stationary cross-flow vortices in compressible boundary layers [NASA-CR-189184] p 2279 N95-27242
On the modulational instability of large amplitude waves in supersonic boundary layers [NASA-CR-195072] p 2284 N95-27760

COMPRESSIBLE FLOW
Development of numerical methods for overset grids with applications for the integrated Space Shuttle vehicle [NASA-CR-197759] p 2160 N95-27154
Second-order closures for compressible turbulence p 2286 N95-27898
TranAir: A full-potential, solution-adaptive, rectangular grid code for predicting subsonic, transonic, and supersonic flows about arbitrary configurations. User's manual [NASA-CR-4349] p 2123 N95-28230

COMPRESSING
Real-time data compression using a fixed Huffman encoding scheme [DE95-006159] p 2455 N95-27949

COMPRESSION LOADS
Composite repair issues on the CF-18 aircraft p 2134 N95-27518
The high strain rate deformation of tungsten single crystals [AD-A288874] p 2223 N95-28189
Compression failure of angle-ply laminates p 2190 N95-28428
Analysis of composite structures with delaminations under combined bending and compression p 2190 N95-28429
Buckling behavior of long symmetrically laminated plates subjected to combined loads p 2190 N95-28430
Cryogenic temperature control and tension/compression attachment stage for an electron microscope [AD-D017390] p 2294 N95-28612

COMPRESSION TESTS
External patch repair of CFRP/honeycomb sandwich p 2134 N95-27522
High-temperature deformation of ZrO2-Al2O3/SiC whisker composites fabricated by two techniques [DE95-008273] p 2183 N95-28069
Task 4 supporting technology. Part 2: Detailed test plan for thermal seals. Thermal seals evaluation, improvement and test. CAN8-1, Reusable Launch Vehicle (RLV), advanced technology demonstrator: X-33. Leading edge and seals thermal protection system technology demonstration [NASA-CR-198628] p 2304 N95-28259
Test and analysis results for composite transport fuselage and wing structures p 2137 N95-28470

COMPRESSIVE STRENGTH
Identification of the plastic anisotropy of an aluminum alloy [IFTR-26/1994] p 2212 N95-26512
Service tough composite structures using the Z-direction reinforcement process p 2185 N95-28272
Failure analysis of thick composite cylinders under external pressure p 2187 N95-28284
Mechanisms of compressive failure in woven composites and stitched laminates p 2189 N95-28424
Investigation of static and cyclic bearing failure mechanisms for GR/EP laminates p 2190 N95-28427
Compression failure of angle-ply laminates p 2190 N95-28428
Compressive residual strength of graphite/epoxy laminates after impact p 2191 N95-28431
Compressive strength of damaged and repaired composite plates p 2198 N95-28484
Post impact compressive strength in composites p 2198 N95-28485

COMPRESSOR ROTORS
Stall precursor study of high frequency data for three high speed, swept compressor rotors [AD-A289379] p 2139 N95-26878
A general theory of two- and three-dimensional rotational flow in subsonic and transonic turbomachines [NASA-CR-4496] p 2123 N95-28003

COMPRESSORS
Cryogenic temperature control and tension/compression attachment stage for an electron microscope [AD-D017390] p 2294 N95-28612

COMPTON EFFECT
Comparative experimental study of PIXE and X-ray fluorescence analysis [DE95-607868] p 2327 N95-27198

COMPUTATION
Parallelizing locally-weighted regression [AD-A288294] p 2394 N95-26414
User's guide: Computer program for analysis of beam-column structures with nonlinear supports (CBEAMC) [AD-A289031] p 2307 N95-26464
An introduction to software architecture [AD-A288356] p 2363 N95-26467
Grain size management in repetitive task graphs for multiprocessor computer scheduling [AD-A288575] p 2377 N95-26551
CFD research, parallel computation and aerodynamic optimization [NASA-CR-197748] p 2120 N95-26649
Construction of arbitrary order schemes for many dimensional wave equation [PB95-184818] p 2276 N95-26928
Moment and hypergeometric filters for high precision computation of focus, stereo and optical flow [AD-A289293] p 2425 N95-27038
Scalability in production system programs [AD-A289345] p 2453 N95-27063
An outflow boundary condition for aeroacoustic computations [NASA-TM-106930] p 2279 N95-27175
A study of workstation computational performance for real-time flight simulation [NASA-TM-109184] p 2362 N95-27241
The PCMDI Visualization and Computation System (VCS): A workbench for climate data display and analysis [DE95-008586] p 2328 N95-27558

COMPUTATIONAL CHEMISTRY
Theoretical studies of reaction surfaces [AD-A288458] p 2404 N95-26632
Atomistic calculations of hydrogen interactions with Ni3Al grain boundaries and Ni/Ni/Ni3Al interfaces [DE95-006497] p 2408 N95-27534
Molecular modeling: An approach for the study of piezoelectric polymers [AD-A289821] p 2241 N95-28574

COMPUTATIONAL ELECTROMAGNETICS
The origin of spurious solutions in computational electromagnetics [NASA-TM-106921] p 2391 N95-27726
FDTD-ANT user manual [NASA-CR-195444] p 2372 N95-27729

COMPUTATIONAL FLUID DYNAMICS
A fully implicit time accurate method for hypersonic combustion: Application to shock-induced combustion instability [NASA-TM-106707] p 2273 N95-26380
Analysis and development of finite element methods for the study of nonlinear thermomechanical behavior of structural components [NASA-CR-195354] p 2307 N95-26387
Computational fluid dynamics and transonic flow [AD-A288962] p 2273 N95-26405
A non-iterative grid deformation algorithm for computational fluid dynamics for aeroelasticity [AD-A288298] p 2273 N95-26418
A fixed time performance evaluation of parallel CFD applications [DE94-014240] p 2273 N95-26445

Parallel computing on various platforms: A case study
[AD-A289008] p 2376 N95-26460
Numerical simulation of combustion flow around a flame holder with hydrogen injection
[NAL-TR-1233] p 2200 N95-26523
Algorithms for parallel flow solvers on message passing architectures
[NASA-CR-197758] p 2274 N95-26588
Supersonic transport grid generation, validation, and optimization
[NASA-CR-197752] p 2365 N95-26648
CFD research, parallel computation and aerodynamic optimization
[NASA-CR-197748] p 2120 N95-26649
The method of space-time conservation element and solution element-applications to one-dimensional and two-dimensional time-marching flow problems
[NASA-TM-106915] p 2389 N95-26663
Contribution to the optimal shape design of two-dimensional internal flows with embedded shocks
[NASA-CR-195062] p 2389 N95-26672
Ram accelerator performance calculations using a modified version of the NASA CET89 equilibrium chemistry code
[AD-A289554] p 2201 N95-26678
SUPG finite numerical element solutions for non-compressible Navier-Stokes equation sets
[AD-A289600] p 2274 N95-26718
The multidimensional Self-Adaptive Grid code, SAGE, version 2
[NASA-TM-110350] p 2367 N95-26726
Numerical simulation of the flow about the F-18 HARV at high angle of attack
[NASA-CR-197755] p 2121 N95-26735
Development of an upwind, finite-volume code with finite-rate chemistry
[NASA-CR-197747] p 2121 N95-26760
Progress in incompressible Navier-Stokes computations for propulsion flows and its dual-use applications
[NASA-CR-197746] p 2275 N95-26766
Computational support of the laminar flow supersonic wind tunnel, CNSFV code development, Maglev, and grid generation
[NASA-CR-197750] p 2143 N95-26775
Supersonic civil airplane study and design: Performance and sonic boom
[NASA-CR-197745] p 2130 N95-26813
A numerical method for unsteady transonic flow about wings with control surfaces
[AD-A289631] p 2121 N95-26859
Rarefied gas effects on aerobraking/reentry vehicles with wakes
[NASA-CR-196586] p 2164 N95-27093
Development of numerical methods for overset grids with applications for the integrated Space Shuttle vehicle
[NASA-CR-197759] p 2160 N95-27154
Flow control
[AD-A289262] p 2279 N95-27197
Application of CFD to the analysis and design of high-speed inlets
[NASA-CR-198574] p 2279 N95-27240
Nonlinear stability of non-stationary cross-flow vortices in compressible boundary layers
[NASA-CR-189184] p 2279 N95-27242
Computer program BL2D for solving two-dimensional and axisymmetric boundary layers
[NASA-CR-4668] p 2279 N95-27257
The Sixth Annual Thermal and Fluids Analysis Workshop
[NASA-CP-10161] p 2280 N95-27345
Numerical solution of fluid flow and heat tranfer problems with surface radiation p 2282 N95-27357
NAS Technical Summaries, March 1993 - February 1994
[NASA-RP-1355] p 2466 N95-27367
Multigrid techniques for unstructured meshes
[NASA-CR-195070] p 2391 N95-27433
Three-dimensional computer modeling of hydrogen injection and combustion
[DE95-006261] p 2203 N95-27437
A new finite element formulation for incompressible flow
[DE95-007141] p 2284 N95-27454
Optimization of wave rotors for use as gas turbine engine topping cycles
[NASA-TM-106951] p 2140 N95-27860
Industry-Wide Workshop on Computational Turbulence Modeling
[NASA-CP-10165] p 2285 N95-27882
A summary of computational experience at GE Aircraft Engines for complex turbulent flows in gas turbines
p 2285 N95-27885
The applicability of turbulence models to aerodynamic and propulsion flowfields at McDonnell-Douglas Aerospace p 2285 N95-27886
Experience with k-epsilon turbulence models for heat transfer computations in rotating p 2285 N95-27887
Combustion system CFD modeling at GE Aircraft Engines p 2285 N95-27889
Overview of turbulence model development and applications at Rocketdyne p 2286 N95-27891
Experience with turbulence interaction and turbulence-chemistry models at Fluent Inc.
p 2286 N95-27893
Experiences with two-equation turbulence models
p 2286 N95-27894
Progress in simulating industrial flows using two-equation models: Can more be achieved with further research?
p 2286 N95-27895
Turbulence modeling needs of commercial CFD codes: Complex flows in the aerospace and automotive industries p 2286 N95-27896
Turbulence requirements of a commerical CFD code
p 2286 N95-27897
A numerical method for solving the three-dimensional parabolized Navier-Stokes equations
[NASA-CR-198159] p 2287 N95-27917
Large HAWT wake measurement and analysis
p 2289 N95-27973
A NASTRAN-based computer program for structural dynamic analysis of Horizontal Axis Wind Turbines
p 2312 N95-27980
TranAir: A full-potential, solution-adaptive, rectangular grid code for predicting subsonic, transonic, and supersonic flows about arbitrary configurations. Theory document
[NASA-CR-4348] p 2123 N95-28265
Numerical analysis of intra-cavity and power-stream flow interaction in multiple gas-turbine disk-cavities
[NASA-TM-106886] p 2140 N95-28344
Modeling the shock response of submerged structures
[AD-A289082] p 2288 N95-28351
Numerical study to assess sulfur hexafluoride as a medium for testing multielement airfoils
[NASA-TP-3496] p 2124 N95-28674

COMPUTATIONAL GEOMETRY
Unstructured mesh generation and adaptivity
[NASA-CR-195069] p 2278 N95-27027
Uncertainties in obtaining high reliability from stress-strength models p 2193 N95-28442

COMPUTATIONAL GRIDS
Algorithms for parallel flow solvers on message passing architectures
[NASA-CR-197758] p 2274 N95-26588
Computational analysis of forebody tangential slot blowing on the high alpha research vehicle
[NASA-CR-197754] p 2129 N95-26591
Adaptive finite element method I: Solution algorithm and computational examples
[AD-A288979] p 2389 N95-26609
The multidimensional Self-Adaptive Grid code, SAGE, version 2
[NASA-TM-110350] p 2367 N95-26726
A 3D agglomeration multigrid solver for the Reynolds-averaged Navier-Stokes equations on unstructured meshes
[NASA-CR-195073] p 2390 N95-27029
Development of numerical methods for overset grids with applications for the integrated Space Shuttle vehicle
[NASA-CR-197759] p 2160 N95-27154
Global flowfield about the V-22 Tiltrotor Aircraft
[NASA-CR-198603] p 2122 N95-27248
Calculation of three-dimensional (3-D) internal flow by means of the velocity-vorticity formulation on a staggered grid
[NASA-TM-110352] p 2122 N95-27258
The effects of finite element grid density on model correlation and damage detection of a bridge
[DE94-018895] p 2309 N95-27305
Analysis of developing laminar flows in circular pipes using a higher-order finite-difference technique
p 2281 N95-27352
Error analysis of the quartic nodal expansion method for slab geometry
[DE95-007373] p 2412 N95-28045
TranAir: A full-potential, solution-adaptive, rectangular grid code for predicting subsonic, transonic, and supersonic flows about arbitrary configurations. User's manual
[NASA-CR-4349] p 2123 N95-28230
TranAir: A full-potential, solution-adaptive, rectangular grid code for predicting subsonic, transonic, and supersonic flows about arbitrary configurations. Theory document
[NASA-CR-4348] p 2123 N95-28265
Radon transform and its applications in gridding airborne geophysical survey data
[PB95-195533] p 2315 N95-28643

COMPUTER AIDED DESIGN
Virtual Prototyping as an aid for control system analysis
[AD-A288819] p 2362 N95-26346
Using machine learning to derive efficient cost and performance estimates in VLSI CAD designs
[AD-A288254] p 2363 N95-26408
User's guide: Computer program for analysis of beam-column structures with nonlinear supports (CBEAMC)
[AD-A289031] p 2307 N95-26464
Intelligent computer based reliability assessment of multichip modules
[AD-A288833] p 2259 N95-26550
The development of a feature-based concurrent engineering system
[AD-A288424] p 2364 N95-26557
Aeroelasticity of wing and wing-body configurations on parallel computers
[NASA-CR-197756] p 2129 N95-26590
Turbulence modeling
[NASA-CR-197751] p 2274 N95-26665
User's and test case manual for FEMATS
[NASA-CR-197803] p 2366 N95-26694
Turbomachinery design and tonal acoustics computations
[NASA-CR-197749] p 2139 N95-26777
Supersonic civil airplane study and design: Performance and sonic boom
[NASA-CR-197745] p 2130 N95-26813
Naval Aviation System TEAM mapping, charting, and geodesy handbook
[AD-A288590] p 2314 N95-26841
Creating an alternative parameter optimization method (APO) p 2118 N95-26946
NIST: Information management in the AMRF
[NONP-NASA-VT-95-49120] p 2454 N95-27208
STEP: A futurevision, today
[NONP-NASA-VT-95-49121] p 2451 N95-27209
Application of CFD to the analysis and design of high-speed inlets
[NASA-CR-198574] p 2279 N95-27240
Advanced flight computer. Special study
[NASA-CR-198165] p 2371 N95-27246
CAE for thermal management of aerospace electronic boards using the BETAsoft program
p 2272 N95-27354
Thermal neutral format based on the step technology
p 2283 N95-27363
PC Software graphics tool for conceptual design of space/planetary electrical power systems
[NASA-TM-106908] p 2372 N95-27905
A NASTRAN-based computer program for structural dynamic analysis of Horizontal Axis Wind Turbines
p 2312 N95-27980
Designers' unified cost model p 2194 N95-28464
COINS: A composites information database system
p 2194 N95-28465
Structural optimisation of cage induction motors using finite element analysis
[PB95-195434] p 2271 N95-28655

COMPUTER AIDED MANUFACTURING
The development of a feature-based concurrent engineering system
[AD-A288424] p 2364 N95-26557
Next generation controller specification for an open systems architecture standard - overview
[AD-A289507] p 2368 N95-26853
Advanced educational methods in the Department of Defense: Application of case theory and computer-assisted instruction to business process reengineering
[AD-A288881] p 2374 N95-28590
Next generation controller specification for an open systems architecture standard
[AD-A289567] p 2375 N95-28647

COMPUTER AIDED MAPPING
Digital mapping, charting, and geodesy analysis program: Initial technical review of Raster Product Format
[AD-A289039] p 2313 N95-26476
Digital mapping, charting, and geodesy analysis program technical review of Vector Quantization (VQ) Decompression for the National Imagery Transmission Format Standard (NITFS)
[AD-A288998] p 2314 N95-26682

COMPUTER AIDED TOMOGRAPHY
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-016] p 2262 N95-27170

COMPUTER ASSISTED INSTRUCTION
The value of simulation for training
[AD-A289174] p 2143 N95-26556
NEXTSTEP: The next step in the right direction? Part 2: Software development with NEXTSTEP
[REPT-94-33-PT-2] p 2450 N95-26803
Human factors in aviation maintenance, phase 4
[DOT/FAA/AM-95/14] p 2360 N95-27696

Development and implementation of an electronic library tour for the NASA Langley Technical Library
[NASA-TM-110619] p 2455 N95-27701
Advanced educational methods in the Department of Defense: Application of case theory and computer-assisted instruction to business process reengineering
[AD-A288881] p 2374 N95-28590

COMPUTER COMPONENTS
A decentralized software bus based on IP multicasting
[NASA-CR-197768] p 2366 N95-26695

COMPUTER DESIGN
Construction of a connectionist network supercomputer
[AD-A288439] p 2377 N95-27182
Advanced flight computer. Special study
[NASA-CR-198165] p 2371 N95-27246

COMPUTER GRAPHICS
An evaluation of the Software Through Pictures/T Tool (StP/T) for the Software Support Activity (SSA)
[AD-A288822] p 2362 N95-26348
EASY-SIM: A visual simulation system software architecture with an Ada 9X application framework
[AD-A289325] p 2368 N95-26895
Image quality metrics for color CRT displays
[AD-A288934] p 2262 N95-27196
Performance of a stand-alone wind-electric ice maker for remote villages
[DE95-004006] p 2320 N95-27475
A video strip chart program
[DE95-006389] p 2372 N95-27495
Scientific statistics and graphics on the Macintosh
[DE95-006445] p 2372 N95-27533
PC Software graphics tool for conceptual design of space/planetary electrical power systems
[NASA-TM-106908] p 2372 N95-27905

COMPUTER INFORMATION SECURITY
Flexible and safe resolution of file conflicts
[AD-A289342] p 2452 N95-26752
Research and development management information system, system user manual
[AD-A289151] p 2453 N95-27004
The Sunrise project: An R&D project for a national information infrastructure prototype
[DE95-006340] p 2455 N95-27847
Browsing the World Wide Web from behind a firewall
[DE95-006805] p 2455 N95-27957

COMPUTER NETWORKS
A software bus for thread objects
[NASA-CR-197764] p 2365 N95-26575
An architecture for optimal all-to-all personalized communication
[AD-A288532] p 2377 N95-26840
A demonstration of Client/Server technology using remote procedure calls for an application of file migration for moving records based on location
[AD-A289391] p 2453 N95-26864
A demonstration of Client-Server technology using remote procedure calls with an application of file migration for moving records based on time
[AD-A289392] p 2453 N95-26879
Weighting scheme for the space surveillance network automated tasker
[AD-A289285] p 2146 N95-27035
Reducing network depth in the Cascade-Correlation learning architecture
[AD-A289352] p 2382 N95-27066
A demonstration of client-server technology using remote procedure calls with an application in file migration using heuristics
[AD-A289467] p 2255 N95-27149
Design and implementation of a software communication architecture for the JANUS-3D Visualizer
[AD-A288509] p 2370 N95-27150
Construction of a connectionist network supercomputer
[AD-A288439] p 2377 N95-27182
Gigabit LAN issues: HIPPI, Fibre Channel, or ATM?
[DE95-003673] p 2378 N95-27422
Transparent access to distributed, heterogeneous environmental information systems
[DE95-007268] p 2454 N95-27483
A case for dynamic sets in operating systems
[AD-A289354] p 2454 N95-27529
The Sunrise project: An R&D project for a national information infrastructure prototype
[DE95-006340] p 2455 N95-27847
Sandia's network for Supercomputing '94: Linking the Los Alamos, Lawrence Livermore, and Sandia National Laboratories using switched multimegabit data service
[DE95-007717] p 2378 N95-28074
Optical implementation of inner product neural associative memory
[NASA-CASE-NPO-18491-2-CU] p 2427 N95-28363
International networks
[PB95-196366] p 2379 N95-28502
NASA/DOD Aerospace Knowledge Diffusion Research Project. Report 35: The use of computer networks in aerospace engineering
[NASA-CR-198170] p 2456 N95-28600
Two implementation relations and the correctness of communicating replicated processes
[PB95-195640] p 2375 N95-28645

COMPUTER PROGRAM INTEGRITY
Using an architectural approach to integrate heterogeneous, distributed software components
[NASA-CR-197766] p 2366 N95-26711

COMPUTER PROGRAMMING
An introduction to software architecture
[AD-A288963] p 2363 N95-26446
Application-aware adaptation for mobile computing
[AD-A288366] p 2363 N95-26469
Nonlinear scalespace via hierarchical statistical modeling
[AD-A289057] p 2394 N95-26478
A system dynamics based study of software reuse and its determinants
[AD-A288578] p 2364 N95-26554
Software packager user's guide
[NASA-CR-197763] p 2366 N95-26693
A process improvement model for software verification and validation
[NASA-CR-197761] p 2367 N95-26814
A demonstration of Client/Server technology using remote procedure calls for an application of file migration for moving records based on location
[AD-A289391] p 2453 N95-26864
User-centric development. Version 01.00.04
[AD-A289363] p 2368 N95-26903
Multiple model adaptive estimation and head motion tracking in a virtual environment: An engineering approach
[AD-A289299] p 2359 N95-27046
A demonstration of client-server technology using remote procedure calls with an application in file migration using heuristics
[AD-A289467] p 2255 N95-27149
Factors in human-computer interface design (a pilot study)
[AD-A288908] p 2360 N95-27195
STEP: A futurevision, today
[NONP-NASA-VT-95-49121] p 2451 N95-27209
Overview of megaprogramming course: Lectures and eexercises. Version 02.00.03
[AD-A286723] p 2370 N95-27235
Automated database design from natural language input p 2383 N95-27378
Contingency designs for attitude determination of TRMM p 2154 N95-27803
Control system design for the MOD-5A 7.3 mW wind turbine generator p 2306 N95-27985
An automated cost uncertainty program
[AD-A288747] p 2374 N95-28588
Advanced educational methods in the Department of Defense: Application of case theory and computer-assisted instruction to business process reengineering
[AD-A288881] p 2374 N95-28590
A correlational study of the SEI's capability maturity model and software development performance in DOD contracts
[AD-A288890] p 2374 N95-28591
Software process improvement in the NASA software engineering laboratory
[AD-A289912] p 2374 N95-28627

COMPUTER PROGRAMS
A non-iterative grid deformation algorithm for computational fluid dynamics for aeroelasticity
[AD-A288298] p 2273 N95-26418
Natural aerosol extinction module: XSCALE 1992 user's guide
[AD-A289029] p 2340 N95-26463
User's guide: Computer program for analysis of beam-column structures with nonlinear supports (CBEAMC)
[AD-A289031] p 2307 N95-26464
Software risk management through independent verification and validation
[NASA-CR-197767] p 2364 N95-26486
General purpose finite element solver
[PB95-185062] p 2388 N95-26495
An improved model of high-latitude f-region scintillation (WBMOD version 13)
[AD-A288558] p 2334 N95-26520
A system dynamics based study of software reuse and its determinants
[AD-A288578] p 2364 N95-26554
Design and synthesis of a real-time controller for an unmanned air vehicle
[AD-A289134] p 2141 N95-26555
Comparison of fixed wing aircraft algorithms for JANUS
[AD-A288503] p 2129 N95-26652
Turbulence modeling
[NASA-CR-197751] p 2274 N95-26665
Using SCR methods to analyze requirements documentation
[NASA-CR-197760] p 2365 N95-26668
User's and test case manual for FEMATS
[NASA-CR-197803] p 2366 N95-26694
Using an architectural approach to integrate heterogeneous, distributed software components
[NASA-CR-197766] p 2366 N95-26711
Development of an upwind, finite-volume code with finite-rate chemistry
[NASA-CR-197747] p 2121 N95-26760
Progress in incompressible Navier-Stokes computations for propulsion flows and its dual-use applications
[NASA-CR-197746] p 2275 N95-26766
Performance and policy dimensions in internet routing
[NASA-CR-197772] p 2367 N95-26770
Control-flow analysis and type systems
[AD-A289338] p 2389 N95-26772
Study of damage evolutions in composite plates subjected to bending loads using micro-macro analysis
[AD-A288523] p 2308 N95-26839
An architecture for optimal all-to-all personalized communication
[AD-A288532] p 2377 N95-26840
A 3-D finite difference time domain investigation of microwave propagation through inhomogeneous biological materials
[AD-A289431] p 2251 N95-26869
User-centric development. Version 01.00.04
[AD-A289363] p 2368 N95-26903
Calculation of suspended sediment transport by combined wave-current flows
[AD-A289368] p 2346 N95-26904
Predicting protein structure using parallel genetic algorithms
[AD-A289305] p 2369 N95-26919
Diagnosing cloudiness from global numerical weather prediction model forecasts
[AD-A289456] p 2356 N95-26992
Weighting scheme for the space surveillance network automated tasker
[AD-A289285] p 2146 N95-27035
A general object model transformation system
[AD-A289289] p 2370 N95-27037
Novel field effect transistors for low power electronics
[AD-A288650] p 2262 N95-27096
Design and implementation of a software communication architecture for the JANUS-3D Visualizer
[AD-A288509] p 2370 N95-27150
Development of numerical methods for overset grids with applications for the integrated Space Shuttle vehicle
[NASA-CR-197759] p 2160 N95-27154
The calculation of the mass moment of inertia of a fluid in a rotating rectangular tank
[NASA-CR-197777] p 2278 N95-27165
STEP: A futurevision, today
[NONP-NASA-VT-95-49121] p 2451 N95-27209
Computer Systems Division software system metrics approach
[AD-A288837] p 2370 N95-27210
Programming for time resolved spectrum in pulse radiolysis experiments
[DE95-607929] p 2406 N95-27212
Application of CFD to the analysis and design of high-speed inlets
[NASA-CR-198574] p 2279 N95-27240
Global flowfield about the V-22 Tiltrotor Aircraft
[NASA-CR-198603] p 2122 N95-27248
Spinning a web: Publishing the SEI software configuration management research on the world wide web
[AD-A288708] p 2377 N95-27250
Views of the solar system
[DE95-006446] p 2461 N95-27326
CAE for thermal management of aerospace electronic boards using the BETAsoft program
p 2272 N95-27354
RTE: A computer code for Rocket Thermal Evaluation
p 2177 N95-27355
Ring-plane traveling-wave tube slow-wave circuit design simulations at V-Band frequencies
[NASA-TM-106949] p 2371 N95-27370
Three-dimensional computer modeling of hydrogen injection and combustion
[DE95-006261] p 2203 N95-27437
An ugly duckling becomes a swan (hor ellipsis): How an organization becomes customer focused through listening
[DE95-004974] p 2454 N95-27461
A video strip chart program
[DE95-006389] p 2372 N95-27495
Flight Mechanics/Estimation Theory Symposium 1995
[NASA-CP-3299] p 2146 N95-27763
Kepler Equation solver p 2147 N95-27767

A PC-based magnetometer-only attitude and rate determination system for gyroless spacecraft p 2147 N95-27770
An MME-based attitude estimator using vector observations p 2148 N95-27775
Ulysses orbit determination at high declinations p 2151 N95-27787
Application of non-coherent Doppler data types for deep space navigation p 2151 N95-27788
PC Software graphics tool for conceptual design of space/planetary electrical power systems [NASA-TM-106908] p 2372 N95-27905
A model of rotationally-sampled wind turbulence for predicting fatigue loads in wind turbines p 2312 N95-27972
A NASTRAN-based computer program for structural dynamic analysis of Horizontal Axis Wind Turbines p 2312 N95-27980
Aeroelastic stability of wind turbine blade/aileron systems p 2124 N95-27981
Calculation of design load for the MOD-5A 7.3 mW wind turbine system p 2312 N95-27982
Control system design for the MOD-5A 7.3 mW wind turbine generator p 2306 N95-27985
Error analysis of the quartic nodal expansion method for slab geometry [DE95-007373] p 2412 N95-28045
Simulator report for SCI systems with HIC-router [PB95-196580] p 2379 N95-28093
Project Records Information System (PRIS) user's manual, revision 3 [DE95-008330] p 2456 N95-28172
Operator modeling in commerical aviation: Cognitive models, intelligent displays, and pilot's assistants [NASA-CR-198609] p 2138 N95-28203
TranAir: A full-potential, solution-adaptive, rectangular grid code for predicting subsonic, transonic, and supersonic flows about arbitrary configurations. User's manual [NASA-CR-4349] p 2123 N95-28230
TranAir: A full-potential, solution-adaptive, rectangular grid code for predicting subsonic, transonic, and supersonic flows about arbitrary configurations. Theory document [NASA-CR-4348] p 2123 N95-28265
Three-dimensional forecast models for emergency response management p 2172 N95-28303
Use of SURFACE CHEMKIN to model multiphase atmospheric chemistry: Application to nitrogen tetroxide spills p 2172 N95-28305
Upgrade of the computer modeling programs POLU10 and POLU13A for open burning and open detonation of energetic materials p 2172 N95-28306
Probabilistic evaluation of fuselage-type composite structures p 2137 N95-28444
An automated cost uncertainty program [AD-A288747] p 2374 N95-28588
Advanced educational methods in the Department of Defense: Application of case theory and computer-assisted instruction to business process reengineering [AD-A288881] p 2374 N95-28590
A correlational study of the SEI's capability maturity model and software development performance in DOD contracts [AD-A288890] p 2374 N95-28591
Computational and experimental studies of hydrodynamic instabilities and turbulent mixing [DE95-006837] p 2288 N95-28603
The Global Historical Climatology Network: A preview of version 2 [DE95-007003] p 2332 N95-28605
TRAINS: Dialogue transcription tools [AD-A289869] p 2259 N95-28624
Software process improvement in the NASA software engineering laboratory [AD-A289912] p 2374 N95-28627
Replacing the message service component in an integration framework [AD-A289928] p 2375 N95-28628
Manikin integrated data acquisition system (MIDAS) initial modifications [AD-A291662] p 2361 N95-28667
Guide for transmitting Standard Generalized Markup Language (SGML) encoded bibliographic records [DOE/OSTI-11685] p 2457 N95-28675

COMPUTER STORAGE DEVICES
Characterization and control of wafer charging effects during high-current ion implantation [DE95-006587] p 2440 N95-27471
Downloading environmental data in the new MOODS format [AD-A288835] p 2456 N95-28589

COMPUTER SYSTEMS DESIGN
Operating system support for coexistence of real-time and conventional scheduling [AD-A288584] p 2364 N95-26534
Control-flow analysis and type systems [AD-A289338] p 2389 N95-26772
Next generation controller specification for an open systems architecture standard - overview [AD-A289507] p 2368 N95-26853
Design considerations for FrankTalk: A distributed group support system [AD-A289386] p 2359 N95-26863
Self-checking state machine realization in CMOS [AD-A289149] p 2261 N95-27002
Advanced flight computer. Special study [NASA-CR-198165] p 2371 N95-27246
An ugly duckling becomes a swan (hor ellipsis): How an organization becomes customer focused through listening [DE95-004974] p 2454 N95-27461
Transparent access to distributed, heterogeneous environmental information systems [DE95-007268] p 2454 N95-27483
A case for dynamic sets in operating systems [AD-A289354] p 2454 N95-27529
Human factors in aviation maintenance, phase 4 [DOT/FAA/AM-95/14] p 2360 N95-27696
Design of a real-time wind turbine simulator using a custom parallel architecture p 2322 N95-27979
Next generation controller specification for an open systems architecture standard [AD-A289567] p 2375 N95-28647

COMPUTER SYSTEMS PERFORMANCE
Digital systems validation. Chapter 20 Artificial Intelligenge with applications for aircraft. Handbbook, volume 2 [AD-A288492] p 2380 N95-26638
Performance prediction: A case study using a multi-ring KSR-1 machine [NASA-CR-195066] p 2361 N95-26697
Measuring fault tolerance with the FTAPE fault injection tool [NASA-CR-197773] p 2306 N95-27253
Accelerating conservative parallel simulation of VHDL circuits [AD-A289317] p 2264 N95-27294
A case for dynamic sets in operating systems [AD-A289354] p 2454 N95-27529
Human factors in aviation maintenance, phase 4 [DOT/FAA/AM-95/14] p 2360 N95-27696
Development of a direct match technique for star identification on the SWAS mission p 2148 N95-27771
Observational magnetometer calibration with the Hubble Space Telescope's new magnetometers p 2148 N95-27773
Flight dynamics software in a distributed network environment p 2151 N95-27790
Control system design for the MOD-5A 7.3 mW wind turbine generator p 2306 N95-27985
Optimization strategies for molecular dynamics programs on Cray computers and scalar work stations [AD-A289574] p 2418 N95-28648

COMPUTER SYSTEMS PROGRAMS
Design considerations for FrankTalk: A distributed group support system [AD-A289386] p 2359 N95-26863
Research and development management information system, system user manual [AD-A289151] p 2453 N95-27004
Measuring fault tolerance with the FTAPE fault injection tool [NASA-CR-197773] p 2306 N95-27253
Sequence comparison on a cluster of workstations using the PVM system [DE95-006527] p 2378 N95-27709
Development of a direct match technique for star identification on the SWAS mission p 2148 N95-27771

COMPUTER TECHNIQUES
Long term distributed file reference tracing: Implementation and experience [AD-A288585] p 2452 N95-26535
The development of a feature-based concurrent engineering system [AD-A288424] p 2364 N95-26557
Activities of the Laboratory of Information Processing Science [PB95-184982] p 2452 N95-26631
Transitional flow in thin tubes for space station freedom radiator p 2282 N95-27360

COMPUTER VISION
Learning Hand/Eye coordination by an active observer. part 1: Organizing centers [AD-A289502] p 2356 N95-26843
EASY-SIM: A visual simulation system software architecture with an Ada 9X application framework [AD-A289325] p 2368 N95-26895
An illumination planner for Lambertian polyhedral objects [AD-A289332] p 2424 N95-26900
Using virtual active vision tools to improve autonomous driving tasks [AD-A289175] p 2356 N95-27013
The detection and tracking of motion by means of time-space pattern modelling using random fields [IFTR-37/1994] p 2374 N95-28566

COMPUTERIZED SIMULATION
Manual for SHOCK3D, version 2.0. Computer program for non-linear shock response [AD-A288631] p 2307 N95-26342
Virtual Prototyping as an aid for control system analysis [AD-A288819] p 2362 N95-26346
A method for simulating correlated random variables from partially specified distributions [AD-A288820] p 2393 N95-26347
Hindcasting wind-driven anomalies using reduced-gravity global ocean models with 1/2 deg and 1/4 deg resolution [AD-A289060] p 2345 N95-26406
The 1994 updated National Airspace System performance assessment for year 2005 [AD-A288652] p 2125 N95-26485
Microwave circuit simulation using higher-order dynamic elements [PB95-185088] p 2259 N95-26496
Analysis of fatigue fractographic data of a rod end housing using a Monte Carlo simulation [NAL-TR-1225] p 2307 N95-26521
Numerical simulation of combustion flow around a flame holder with hydrogen injection [NAL-TR-1233] p 2200 N95-26523
The small-scale structure of dispersing clouds in the atmosphere [AD-A288256] p 2341 N95-26546
Intelligent computer based reliability assessment of multichip modules [AD-A288833] p 2259 N95-26550
A system dynamics based study of software reuse and its determinants [AD-A288578] p 2364 N95-26554
The value of simulation for training [AD-A289174] p 2143 N95-26556
Indexing meso-beta surface wind site representative [AD-A288501] p 2341 N95-26650
Comparison of fixed wing aircraft algorithms for JANUS [AD-A288503] p 2129 N95-26652
Turbulence modeling [NASA-CR-197751] p 2274 N95-26665
Signals processing using acousto-optical technology [AD-A289597] p 2250 N95-26717
Numerical simulation of the flow about the F-18 HARV at high angle of attack [NASA-CR-197755] p 2121 N95-26735
Anomalous collision rate in the time counter scheme of the direct simulation Monte Carlo method for rarefied gas flow analysis [ISAS-R-653] p 2275 N95-26742
Soil moisture prediction during freeze and thaw using a coupled heat and moisture flow model [AD-A289343] p 2336 N95-26753
Progress towards computer simulation of NiH2 battery performance over life p 2272 N95-26786
A numerical model to predict the fate of jettisoned aviation fuel [AD-A289336] p 2242 N95-26842
A mathematical analysis of the Janus combat simulation weather effects models and sensitivity analysis of sky-to-ground brightness ratio on target detection [AD-A289629] p 2336 N95-26858
The photo-realistic AFIT virtual cockpit [AD-A289376] p 2130 N95-26876
Analysis of instability growth and collisionless relaxation in thermionic converters using 1-D PIC simulations [AD-A289310] p 2319 N95-26891
EASY-SIM: A visual simulation system software architecture with an Ada 9X application framework [AD-A289325] p 2368 N95-26895
Analysis and simulation of narrowband GPS jamming using digital excision temporal filtering [AD-A289328] p 2127 N95-26898
Reference manual: Naive physics simulator [PB95-184917] p 2369 N95-26907
Predicting protein structure using parallel genetic algorithms [AD-A289305] p 2369 N95-26919
Aircraft nosewheel steering simulation p 2118 N95-26944
Minimizing the impact of synchronization overhead in parallel discrete event simulations [AD-A289278] p 2377 N95-26984

Distributed interactive simulation virtual cassette recorder (DIS VCR); A datalogger with variable speed replay
[AD-A289212] p 2290 N95-26989

Implementation and demonstration of a multiple model adaptive estimation failure detection system for the F-16
[AD-A289301] p 2131 N95-27042

Simulating the production of free defects in irradiated metals
[DE95-007165] p 2214 N95-27088

Space modeler: An expanded, distributed, virtual environment for space visualization
[AD-A289409] p 2461 N95-27131

A finite element based technique for simulation helix TWT interaction circuit thermal behavior
[AD-A289552] p 2262 N95-27152

Probabilistic simulation of long term behavior in polymer matrix composites
[NASA-TM-106893] p 2309 N95-27174

Simulating a multi-target acoustic array on the Intel Paragon
[AD-A288443] p 2377 N95-27183

Mathematical simulation of three-dimensional magnetic field of spectrometric magnet SP-40
[DE95-608736] p 2398 N95-27239

Ball bearing vibrations amplitude modeling and test comparisons p 2158 N95-27286

Accelerating conservative parallel simulation of VHDL circuits
[AD-A289317] p 2264 N95-27294

CAE for thermal management of aerospace electronic boards using the BETAsoft program
p 2272 N95-27354

Transitional flow in thin tubes for space station freedom radiator p 2282 N95-27360

NAS Technical Summaries, March 1993 - February 1994
[NASA-RP-1355] p 2466 N95-27367

Ring-plane traveling-wave tube slow-wave circuit design simulations at V-Band frequencies
[NASA-TM-106949] p 2371 N95-27370

Three-dimensional computer modeling of hydrogen injection and combustion
[DE95-006261] p 2203 N95-27437

The second coming of cold dark matter?
[DE95-005156] p 2462 N95-27445

Lattice QCD calculation using VPP500
[DE95-007076] p 2449 N95-27448

Comparison of the calculated and measured stability of a NbTi cable-in-conduit conductor
[DE95-007964] p 2265 N95-27693

Time-dependent multi-dimensional simulation studies of the electron output scheme for high power FELs
[DE95-006593] p 2297 N95-27737

Molecular dynamics simulations of Gay-Berne nematic liquid crystal: Elastic properties from direct correlation functions
[DE95-609149] p 2441 N95-27740

Simulations of metal dissolution and corrosion
[DE95-007486] p 2218 N95-27748

Development of a direct match technique for star identification on the SWAS mission
p 2148 N95-27771

Precision landing system mathematical modeling study report for Andrews Air Force Base, runway 19L, Camp Springs, MD
[AD-A289015] p 2127 N95-27903

Studies of planetary scale waves and instabilities in support of the geophysical fluid flow cell experiment on USML-2
[NASA-CR-198646] p 2463 N95-27916

Polarizing matter and antimatter: A new method
[DE95-007109] p 2421 N95-27923

Aqueous electrolyte modeling in ASPEN PLUS(trademark)
[DE95-007008] p 2208 N95-27960

A NASTRAN-based computer program for structural dynamic analysis of Horizontal Axis Wind Turbines
p 2312 N95-27980

Aeroelastic stability of wind turbine blade/aileron systems p 2124 N95-27981

Phenomenology from 100 large lattices
[DE95-006349] p 2442 N95-27994

Algorithm to describe the spread of a wall fire under a ceiling
[PB95-182259] p 2247 N95-28008

A hybrid vehicle evaluation code and its application to vehicle design. Revision 1
[DE95-008053] p 2303 N95-28029

Beta-dynamics in simple liquid metal
[DE95-609154] p 2220 N95-28039

Scrape-off layer plasma modeling for the DIII-D tokamak
[DE95-008050] p 2433 N95-28054

Performance analysis of bullet trajectory estimation: Approach, simulation, and experiments
[DE95-007949] p 2399 N95-28109

An introductory guide to uncertainty analysis in environmental and health risk assessment. Environmental Restoration Program
[DE95-008097] p 2354 N95-28136

A hybrid vehicle evaluation code and its application to vehicle design, revision 2
[DE95-008060] p 2303 N95-28139

Developments in the electron gun simulation program, EGUN
[DE95-008137] p 2267 N95-28143

DNS, LES and stochastic modeling of turbulent reacting flows
[AD-A280099] p 2287 N95-28155

BEGET: The B-Factory Event Generator version 21
[DE95-008329] p 2414 N95-28171

Neural network error compensation of machine tools
[AD-A289300] p 2387 N95-28217

Numerical simulation of coupled flow and transport with TOUGH2: A verification study
[DE95-008351] p 2287 N95-28225

Automated remedial assessment methodology software system
[DE95-007287] p 2373 N95-28243

Analysis of aircraft engine blade subject to ice impact
p 2141 N95-28277

Upgrade of the computer modeling programs POLU10 and POLU13A for open burning and open detonation of energetic materials p 2172 N95-28306

Transport simulation of negative magnetic shear discharges
[DE95-003941] p 2416 N95-28329

Computational studies of projectile melt in impact with typical whipple shields
[DE95-005916] p 2311 N95-28337

Modeling the shock response of submerged structures
[AD-A289082] p 2288 N95-28351

Unmanned aerial vehicles, 1994 master plan
[AD-A291628] p 2136 N95-28411

Investigation of HE driven cylindrical liner
[DE95-007866] p 2311 N95-28539

The northern wintertime divergence extrema at 200 hPa and surface cyclones as simulated in the integration of the ECMWF general circulation model
[DE95-007946] p 2332 N95-28550

Numerical simulation of crack growth in pressurized fuselages
[PB95-192415] p 2137 N95-28636

Optimization strategies for molecular dynamics programs on Cray computers and scalar work stations
[AD-A289574] p 2418 N95-28648

Chua's circuits: Phenomena and applications
[AD-A291638] p 2271 N95-28666

COMPUTERS

Parallelizing locally-weighted regression
[AD-A288294] p 2394 N95-26414

A demonstration of client-server technology using remote procedure calls with an application in file migration using heuristics
[AD-A289467] p 2255 N95-27149

Factors in human-computer interface design (a pilot study)
[AD-A288908] p 2360 N95-27195

Lattice QCD calculation using VPP500
[DE95-007076] p 2449 N95-27448

Developments in the electron gun simulation program, EGUN
[DE95-008137] p 2267 N95-28143

CONCENTRATION (COMPOSITION)

Ethyl lactate as a solvent alternative for cleaning metal parts p 2229 N95-27112

Spacecraft materials studies on the Aerospace Corporation tray on EOIM-3 p 2210 N95-27632

Towards the detection and attribution of an anthropogenic effect on climate
[DE95-008589] p 2331 N95-28157

The sensitive detection of hydrazine using chemiluminescence p 2173 N95-28311

A new method for measuring hypergol scrubber emissions p 2174 N95-28312

The minimum pore size obtainable in a silica gel during drying
[DE95-008162] p 2239 N95-28401

High temperature oxidation of nickel concentrates
[PB95-195586] p 2224 N95-28644

CONCENTRATORS

Solar concentrator technology development for space based applications, volume 1
[NASA-CR-197723] p 2319 N95-27193

Solar concentrator technology development for space based applications, volume 2
[NASA-CR-197724] p 2319 N95-27194

Direct drive options for electric propulsion systems
[NASA-TM-106576] p 2168 N95-27861

Analysis of solar receiver flux distributions for US/Russian solar dynamic system demonstration on the MIR Space Station
[NASA-TM-106933] p 2169 N95-28036

CONCRETE STRUCTURES

Nondestructive testing apparatus for determining the orientation of reinforcing bars within a concrete structure
[AD-D017267] p 2245 N95-26508

CONCRETES

Split pipe testing device for the measurement of bond of reinforcement under controlled confinement
[AD-D017258] p 2245 N95-26500

Ultrasonic test system
[AD-D017261] p 2400 N95-26502

Nondestructive testing apparatus for determining the orientation of reinforcing bars within a concrete structure
[AD-D017267] p 2245 N95-26508

Layer coefficients for NHDOT pavement materials
[AD-A288262] p 2246 N95-26548

The determination of the constitutive parameters of a medium with application to a reinforced concrete pad
[NASA-CR-4674] p 2268 N95-28181

CONCURRENT ENGINEERING

Concurrent engineering research center
[NASA-CR-197726] p 2362 N95-26386

The development of a feature-based concurrent engineering system
[AD-A288424] p 2364 N95-26557

NIST: Information management in the AMRF
[NONP-NASA-VT-95-49120] p 2454 N95-27208

STEP: A futurevision, today
[NONP-NASA-VT-95-49121] p 2451 N95-27209

Thermal neutral format based on the step technology
p 2283 N95-27363

CONCURRENT PROCESSING

Two implementation relations and the correctness of communicating replicated processes
[PB95-195640] p 2375 N95-28645

CONDENSATES

Axionic fuel for sun
[DE95-608788] p 2464 N95-27342

CONDENSED MATTER PHYSICS

The 18th Annual Condensed Matter Physics Meeting
[DE95-605568] p 2398 N95-26[illegible]98

Optical design and performance of the inelastic scattering beamline at the National Synchrotron Light Source
[DE95-007679] p 2422 N95-28195

International journal of quantum chemistry
[AD-A291633] p 2352 N95-28546

CONDENSERS (LIQUEFIERS)

Experimental investigation of the effects of relative physical orientation between evaporator and condenser for a loop heat pipe
[AD-A289248] p 2277 N95-26968

CONDENSING

The surface of liquid He-4 at nonzero temperatures
[DE95-607841] p 2207 N95-27880

Cryogenic BRDF measurements at 10.6 micrometers and 0.63 micrometers on contaminated mirrors
[AD-A291611] p 2427 N95-28408

CONDUCTING POLYMERS

Current status of environmental, health, and safety issues of lithium polymer electric vehicle batteries
[DE95-004005] p 2265 N95-27719

CONDUCTIVE HEAT TRANSFER

Validation of the SINDA/FLUINT code using several analytical solutions p 2281 N95-27350

CAE for thermal management of aerospace electronic boards using the BETAsoft program
p 2272 N95-27354

CONDUCTIVITY

High pressure conductivity study of template synthesized polypyrrole: Observation of a crossover from three to one dimensional variable range hopping
[AD-A288367] p 2224 N95-26470

The effect of aviation fuels containing low amounts of static dissipater additive on electrostatic charge generation
[AD-A280075] p 2243 N95-28152

CONDUCTORS

Matrix kernels for MEG and EEG source localization and imaging
[DE95-005238] p 2354 N95-27426

Induced axial oscillations in superconducting dipole windings
[DE95-005690] p 2265 N95-27554

Comparison of the calculated and measured stability of a NbTi cable-in-conduit conductor
[DE95-007964] p 2265 N95-27693

FENIX experimental results of large-scale CICC made of bronze-processed Nb3Sn strands
[DE95-007965] p 2222 N95-28167

Numerical and theoretical studies of rough surface scattering
[AD-A291748] p 2257 N95-28528

CONFERENCES

The 1994 IEEE-IMS Workshop on Information Theory and Statistics
[AD-A288808] p 2380 N95-26492

Space Commerce 1994 Forum: The 10th National Space Symposium. Proceedings report
[NASA-CR-198031] p 2144 N95-26583

The 18th Annual Condensed Matter Physics Meeting
[DE95-605568] p 2398 N95-26598

Proceedings: Workshop on Research Needs in Wind Engineering
[PB95-189528] p 2308 N95-26743

The 1994 27th Annual NASA Aerospace Battery Workshop
[NASA-CP-3292] p 2317 N95-26785

Materials Research Society Symposium Proceedings. Volume 339: Diamond, SiC and nitride wide bandgap semiconductors
[AD-A288690] p 2437 N95-26818

Second International Conference on Software for Multiprocessors and Supercomputers Theory, Practice, Experience
[AD-A289474] p 2368 N95-26820

Determining nanoscale physical properties of materials by microscopy and spectroscopy
[AD-A289532] p 2201 N95-26870

AIAA Techfest 20 Proceedings
[NIAR-94-1] p 2118 N95-26941

Environmentally Benign Cleaning and Degreasing Technology: JANNAF Safety and Protection Subcommittee and Propellant Development and Characterization Subcommittee Joint Workshop
[CPIA-PUBL-611] p 2227 N95-27101

CAS CERN Accelerator School 5th General Accelerator Physics Course
[DE95-608324] p 2419 N95-27158

The 29th Aerospace Mechanisms Symposium
[NASA-CP-3293] p 2154 N95-27260

The Sixth Annual Thermal and Fluids Analysis Workshop
[NASA-CP-10161] p 2280 N95-27345

The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies
[NASA-CP-3296] p 2382 N95-27375

Advanced Earth-to-orbit propulsion technology information, dissemination and research
[NASA-CR-196582] p 2168 N95-27424

Biomass Pyrolysis Oil Properties and Combustion Meeting
[DE95-004017] p 2204 N95-27438

Composite Repair of Military Aircraft Structures
[AGARD-CP-550] p 2131 N95-27504

LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 3
[NASA-CP-3275-PT-3] p 2466 N95-27629

Flight Mechanics/Estimation Theory Symposium 1995
[NASA-CP-3299] p 2146 N95-27763

Industry-Wide Workshop on Computational Turbulence Modeling
[NASA-CP-10165] p 2285 N95-27882

The Tau-Charm Factory in the ERA of B-Factories and CESR
[DE95-007894] p 2412 N95-28028

The 1993 European school of high-energy physis
[DE95-610196] p 2421 N95-28040

Proceedings of the 1993 Scientific Conference on Obscuration and Aerosol Research
[AD-A280084] p 2331 N95-28153

Ninth DOD/NASA/FAA Conference on Fibrous Composites in Structural Design, volume 3
[NASA-CR-198718] p 2184 N95-28266

The 1994 JANNAF Safety and Environmental Protection Subcommittee Meeting, volume 1
[CPIA-PUBL-614-VOL-1] p 2170 N95-28294

Ninth DOD/NASA/FAA Conference on Fibrous Composites in Structural Design, volume 1
[NASA-CR-198723] p 2189 N95-28420

Ninth DOD/NASA/FAA Conference on Fibrous Composites in Structural Design, volume 2
[NASA-CR-198722] p 2193 N95-28462

Third international congress of plant molecular biology: Molecular biology of plant growth and development
[DE95-006482] p 2352 N95-28496

The 18th Asilomar Conference on Polymeric Materials
[AD-A291721] p 2240 N95-28508

International journal of quantum chemistry
[AD-A291633] p 2352 N95-28546

Proceedings of the AIAA/FAA joint symposium on general aviation systems
[AD-A289830] p 2120 N95-28610

Chua's circuits: Phenomena and applications
[AD-A291638] p 2271 N95-28666

Proceedings of the International Workshop on Acceleration and Radiation Generation in Space and Laboratory Plasmas
[AD-A291673] p 2436 N95-28668

CONFIGURATION MANAGEMENT

Spinning a web: Publishing the SEI software configuration management research on the world wide web
[AD-A288708] p 2377 N95-27250

Report to Congressional Committees. Comanche Helicopter: Testing needs to be completed prior to production decisions
[GAO/NSIAD-95-112] p 2135 N95-27910

CONFINEMENT

On the physics of ion ring generation for the stabilization of FRX discharges
[DE95-007105] p 2410 N95-27922

Fluctuations and transport in fusion plasmas
[DE95-007111] p 2433 N95-27924

High pressure optical studies of semiconductors and heterostructures
[DE95-007119] p 2410 N95-27927

Ordered one-component plasmas: Phase transitions, normal modes, large systems, and experiments in a storage ring
[DE95-007077] p 2434 N95-28233

Heterostructures and infrared emitters with compressed InAsSb layers
[DE95-008157] p 2446 N95-28399

Theoretical aspects of energy confinement in spheromaks
[DE95-008079] p 2435 N95-28542

CONFORMAL MAPPING

The structure of the Hurwitz transformation
[DE95-608759] p 2397 N95-28518

CONGRESSIONAL REPORTS

Report to Congressional Committees. Comanche Helicopter: Testing needs to be completed prior to production decisions
[GAO/NSIAD-95-112] p 2135 N95-27910

Report to the Chairman and Ranking Minority Member, Committee on Science, House of Representatives. Weather forecasting: Radar availability requirement not being met
[GAO/AIMD-95-132] p 2342 N95-27912

Global trade in satellites and launch services
[GPO-84-811] p 2165 N95-28342

CONICAL BODIES

Optimization of a nutation damper attached to a spin-stabilized satellite
[AD-A289424] p 2162 N95-26887

CONIFERS

Unification of LARCH and Z-based object models to support algebraically-based design refinement: The Z perspective
[AD-A289234] p 2369 N95-26962

CONJUGATE GRADIENT METHOD

Vector algorithms for solving 3D nonlinear magnetostatic problems
[DE95-608737] p 2399 N95-27298

CONJUGATION

Near-resonant properties of nonlinear organic materials for optical devices
[AD-A288339] p 2178 N95-26570

CONSECUTIVE EVENTS

Modal event calculus in Lolli
[AD-A288544] p 2365 N95-26605

CONSERVATION

The role of microprocesses in macroscale magnetotail dynamics
[DE95-006288] p 2432 N95-27673

CONSERVATION LAWS

The method of space-time conservation element and solution element-applications to one-dimensional and two-dimensional time-marching flow problems
[NASA-TM-106915] p 2389 N95-26663

Transient studies of G-induced capillary dryout and rewet p 2281 N95-27351

The 1993 European school of high-energy physis
[DE95-610196] p 2421 N95-28040

CONSISTENCY

Building the electronic industry's roadmaps
p 2263 N95-27228

Trace anomalies and cocycles of Weyl and diffeomorphism groups
[DE95-608793] p 2397 N95-27344

CONSTELLATIONS

Changing paradigms: Manufacturing vs. fabricating a high volume Hold Down and Release Mechanism
p 2155 N95-27267

CONSTITUTIVE EQUATIONS

Accuracy issues in modeling superplastic metal forming
[DE95-008934] p 2222 N95-28163

CONSTRUCTION

Process control of microstructure in manufacturing
[AD-A288291] p 2245 N95-26410

Scalable multicast tree construction for wide area networks
[AD-A288318] p 2379 N95-26421

Development of an optical trap as an ultra-sensitive analytical tool
[DE95-007843] p 2426 N95-28022

Design, construction, test and evaluation of a frequency scanning radiometer for measuring oil slick thicknesses
[AD-A290040] p 2293 N95-28389

Bilateral force feedback for hydraulically actuated systems
[AD-A291632] p 2387 N95-28545

A genuinely multidimensional upwind scheme and efficient multigrid solver for the compressible Euler equations
[NASA-CR-195000] p 2288 N95-28571

CONSTRUCTION MATERIALS

Pre-integrated truss space station and method of assembly
[NASA-CASE-MSC-22015-1] p 2165 N95-27842

CONSUMABLES (SPACECRAFT)

Characterization of Ultra-Low Carbon Baintic steels for use as weld wire consumables
[AD-A288292] p 2212 N95-26411

CONSUMERS

Successful product realization strategies
p 2264 N95-27233

Lithium ion rechargeable systems studies
[DE95-006810] p 2268 N95-28200

CONTACT RESISTANCE

Processing and properties of chromate-free conversion coatings on aluminum
[DE95-004768] p 2218 N95-27722

CONTACTORS

Discharge ignition behavior of the Space Station plasma contactor
[NASA-TM-106925] p 2168 N95-27862

CONTAINMENT

A compatibility study of containment materials in FEFO, bis-(2-fluoro-2,2-dinitroethyl) formal
[DE95-007548] p 2206 N95-27750

CONTAMINANTS

The evaluation of a fluorochemical drying process for an electrical contact p 2227 N95-27103

The use of supercritical carbon dioxide for contaminant removal from solid waste p 2229 N95-27110

Ethyl lactate as a solvent alternative for cleaning metal parts p 2229 N95-27112

Cleaning of parts for new manufacturing and parts rebuilding p 2231 N95-27123

Fluid dynamic effects on precision cleaning with supercritical fluids p 2232 N95-27129

Laser ultrasonic generation at the surface of a liquid metal
[DE95-004999] p 2216 N95-27477

Effects of long term space environment exposure on optical substrates and coatings p 2428 N95-27653

Fracture testing and analysis of adhesively bonded joints for automotive applications
[DE95-007024] p 2184 N95-28207

Automated remedial assessment methodology software system
[DE95-007287] p 2373 N95-28243

Atomic layer epitaxy of group 4 materials: Surface processes, thin films, devices and their characterization
[AD-A289092] p 2446 N95-28327

Cryogenic BRDF measurements at 10.6 micrometers and 0.63 micrometers on contaminated mirrors
[AD-A291611] p 2427 N95-28408

CONTAMINATION

Stability of reference masses 4: Growth of carbonaceous contamination on platinum-iridium mass standard surfaces, and its cleaning by UV/ozone treatment
[PB95-190096] p 2226 N95-26745

Combined use of ground water circulation (UVB) technology and in situ bioreactors for enhanced bioremediation of subsurface contamination
p 2230 N95-27118

Community relations plan: Galena Airport and Camp ion Air Force Station, Alaska
[AD-A286722] p 2327 N95-27234

Recycle of radiologically contaminated austenitic stainless steels
[DE95-006464] p 2215 N95-27328

Spacecraft materials studies on the Aerospace Corporation tray on EOIM-3 p 2210 N95-27632

Space environmental effects observed on the Hubble Space Telescope p 2242 N95-27655

Hardware cleanliness methodology and certification
p 2211 N95-27656

From LDEF to a national Space Environment and Effects (SEE) program: A natural progression
p 2145 N95-27657

LDEF's contribution to the selection of thermal control coatings for the Space Station p 2242 N95-27661
Alpha characterization inside pipes using ion-transport technology
[DE95-007869] p 2411 N95-28024
Cryogenic BRDF measurements at 10.6 micrometers and 0.63 micrometers on contaminated mirrors
[AD-A291611] p 2427 N95-28408

CONTINENTAL SHELVES
On the persistence of the oceanic background of apparent sea level changes in the Baltic Sea
[REPT-94:5] p 2348 N95-27996

CONTINGENCY
Contingency maneuver strategies for the Total Ozone Mapping Spectrometer-Earth Probe (TOMS-EP)
p 2152 N95-27796
Contingency designs for attitude determination of TRMM p 2154 N95-27803
Cape Canaveral air station launch emergency response forces and toxic materials release contingency plans
p 2172 N95-28308

CONTINUITY
Crew adaptation evaluation of the Norwegian Crew Concept (NOROREW)
[AD-A288478] p 2360 N95-27058

CONTINUITY EQUATION
A new finite element formulation for incompressible flow
[DE95-007141] p 2284 N95-27454

CONTINUOUS RADIATION
ACT adaptive filters
[AD-A288385] p 2363 N95-26474
Evaluation of the FMICW waveform in HF surface radar applications
[AD-A288245] p 2249 N95-26545

CONTINUOUS SPECTRA
FTIR measurements of thermal infrared sky radiance and transmission
[DE95-003642] p 2334 N95-26436
Synthetic 3-D atmospheric temperature structure: A model for known geophysical power spectra using a hybrid autoregression and Fourier technique
[AD-A289058] p 2340 N95-26479
A continuous emissions monitor for airborne metals
p 2174 N95-28313

CONTINUOUS WAVE LASERS
Comprehensive numerical model for CW vertical-cavity surface-emitting lasers
[DE95-007758] p 2299 N95-28132

CONTINUOUS WAVE RADAR
Evaluation of the FMICW waveform in HF surface radar applications
[AD-A288245] p 2249 N95-26545

CONTINUUM FLOW
NO decomposition in non-reducing atmospheres
[DE95-007695] p 2205 N95-27690

CONTINUUM MECHANICS
Continuum mechanical modeling of solids undergoing a phase transformation
[AD-A288274] p 2200 N95-26451
Stability and thermal influences in nonlinear continuum mechanics and material science
[AD-A288333] p 2448 N95-26563
Material modeling in the CRALE code. Users' manual
[AD-A288988] p 2178 N95-26712

CONTINUUM MODELING
Continuum mechanical modeling of solids undergoing a phase transformation
[AD-A288274] p 2200 N95-26451

CONTOURS
Advances in scientific visualization
[DE95-008065] p 2343 N95-28014

CONTRACT MANAGEMENT
Automated Procurement System (APS) revised project management plan (DS-03)
[NASA-CR-196605] p 2450 N95-27169
A correlational study of the SEI's capability maturity model and software development performance in DOD contracts
[AD-A288890] p 2374 N95-28591

CONTRAST
Image quality metrics for color CRT displays
[AD-A288934] p 2262 N95-27198

CONTROL BOARDS
Gloved operator performance study. The effects of hand wear and elastic resistance of a control during tracking performance
[AD-A289405] p 2360 N95-27099

CONTROL EQUIPMENT
Simulation model of the integrated flight/propulsion control system, displays, and propulsion system for ASTOVL lift-fan aircraft
[NASA-TM-108866] p 2139 N95-26412
Plate manipulators
[AD-A289601] p 2121 N95-26719
Calorimetric evaluation of commercial Ni-MH cells and charges p 2272 N95-26790
NIST: Information management in the AMRF
[NONP-NASA-VT-95-49120] p 2454 N95-27208
Bilateral force feedback for hydraulically actuated systems
[AD-A291632] p 2387 N95-28545

CONTROL SIMULATION
Development of a nonlinear simulation for the McDonnell Douglas F-15 Eagle with a longitudinal TECS control-law
[AD-A288610] p 2128 N95-26481
Hubble Space Telescope nickel-hydrogen battery testing: An update p 2272 N95-26794

CONTROL STABILITY
Stable adaptive neurocontrollers for spacecraft and space robots p 2384 N95-27385
Use of blade pitch control to provide power train damping for the Mod-2, 2.5-mW wind turbine
p 2306 N95-27986

CONTROL STICKS
Gloved operator performance study. The effects of hand wear and elastic resistance of a control during tracking performance
[AD-A289405] p 2360 N95-27099

CONTROL SURFACES
Plate manipulators
[AD-A289601] p 2121 N95-26719
A numerical method for unsteady transonic flow about wings with control surfaces
[AD-A289631] p 2121 N95-26859
Implementation and demonstration of a multiple model adaptive estimation failure detection system for the F-16
[AD-A289301] p 2131 N95-27042

CONTROL SYSTEMS DESIGN
Virtual Prototyping as an aid for control system analysis
[AD-A288819] p 2362 N95-26346
Demonstration study of hierarchical control of fluid-dynamic phenomena
[AD-A289341] p 2275 N95-26751
Control of a large space structure using multiple model adaptive estimation and control techniques
[AD-A289309] p 2162 N95-26916
A gain scheduling optimization method using genetic algorithms
[AD-A289306] p 2381 N95-26920
Prevention and control of inlet unstart using an SR-71 simulation p 2119 N95-26948
Generic satellite monitoring expert system
[AD-A289209] p 2163 N95-26987
NIST: Information management in the AMRF
[NONP-NASA-VT-95-49120] p 2454 N95-27208
Fuzzy logic techniques for rendezvous and docking of two geostationary satellites p 2384 N95-27386
A linguistic geometry for 3D strategic planning
p 2386 N95-27397
Time-optimal control of the magnetically levitated photolithography platen
[DE95-005493] p 2266 N95-27724
Collected papers on wind turbine technology
[NASA-CR-195432] p 2321 N95-27970
Analysis methods for wind turbine control and electrical system dynamics p 2273 N95-27984
Control system design for the MOD-5A 7.3 mW wind turbine generator p 2306 N95-27985
Use of blade pitch control to provide power train damping for the Mod-2, 2.5-mW wind turbine
p 2306 N95-27986
Variable speed generator technology options for wind turbine generators p 2273 N95-27988
Variable speed generator application on the MOD-5A 7.3 mW wind turbine generator p 2273 N95-27989
Application of modern diagnostic methods to environmental improvement
[DE95-005797] p 2330 N95-28119
The solar array-induced disturbance of the Hubble Space Telescope pointing system
[NASA-TP-3556] p 2311 N95-28214
Pilot opinions on high level flight deck automation issues: Toward the development of a design philosophy
[NASA-CR-4669] p 2357 N95-28253
Functionalized block copolymers as adhesion promoters
[DE95-008158] p 2239 N95-28400
Development of a TECS control-law for the lateral directional axis of the McDonnell Douglas F-15 Eagle
[AD-A289771] p 2142 N95-28598

CONTROL THEORY
A class of stabilizing controllers for flexible multibody systems
[NASA-TP-3494] p 2161 N95-26428
Development of a nonlinear simulation for the McDonnell Douglas F-15 Eagle with a longitudinal TECS control-law
[AD-A288610] p 2128 N95-26481
A comparison of the Neal-Smith and omega Tau function, zeta function and tau function flying qualities criteria
[AD-A289503] p 2130 N95-26844
Advanced formation flight control
[AD-A289271] p 2142 N95-26981
Optimal control of two queues in series
[DE95-608731] p 2382 N95-27045
Flow control
[AD-A289262] p 2279 N95-27197
High-precision buffer circuit for suppression of regenerative oscillation
[NASA-TM-4658] p 2291 N95-27259
Improved numerical solution of mixed H2/H(infinity) optimization with applications
[AD-A289315] p 2386 N95-27400
Dynamics and control of SEDSAT tethered multi-probe for thermospheric research flight data analysis of SEDS-2 satellite: Tethered systems dynamics and flight data analysis
[NASA-CR-198653] p 2165 N95-27836
Development of a TECS control-law for the lateral directional axis of the McDonnell Douglas F-15 Eagle
[AD-A289771] p 2142 N95-28598

CONTROLLABILITY
An investigation of the effects of pitch-roll (de)coupling on helicopter handling qualities
[NASA-TM-110349] p 2141 N95-26773
A comparison of the Neal-Smith and omega Tau function, zeta function and tau function flying qualities criteria
[AD-A289503] p 2130 N95-26844
Test operations procedure (TOP) 7-3-534 airworthiness testing of fixed wing aircraft: Asymmetric power testing
[AD-A289458] p 2130 N95-26994

CONTROLLERS
A class of stabilizing controllers for flexible multibody systems
[NASA-TP-3494] p 2161 N95-26428
Robust hybrid state-space self-tuning control using dual-rate sampling
[AD-A288359] p 2380 N95-26468
Design and synthesis of a real-time controller for an unmanned air vehicle
[AD-A289134] p 2141 N95-26555
Next generation controller specification for an open systems architecture standard - overview
[AD-A289507] p 2368 N95-26853
Electro-hydrostatic actuator controller design using quantitative feedback theory
[AD-A289220] p 2141 N95-26957
Telepresent spacecraft docking with object-based bilateral control (OBBC)
[AD-A289268] p 2163 N95-26980
Survey and implementation of commercial manual controllers for a generic telerobotics architecture
[AD-A289215] p 2381 N95-26990
Flight control design using mixed H2/micron optimization
[AD-A289288] p 2142 N95-27036
Development of a miniature actuator/controller system
p 2156 N95-27272
Fuzzy logic techniques for rendezvous and docking of two geostationary satellites p 2384 N95-27386
Improved numerical solution of mixed H2/H(infinity) optimization with applications
[AD-A289315] p 2386 N95-27400
A hybrid vehicle evaluation code and its application to vehicle design. Revision 1
[DE95-008053] p 2303 N95-28029
Functionalized block copolymers as adhesion promoters
[DE95-008158] p 2239 N95-28400
Replacing the message service component in an integration framework
[AD-A289928] p 2375 N95-28628
Next generation controller specification for an open systems architecture standard
[AD-A289567] p 2375 N95-28647

CONVECTION
Single-drop reactive extraction/extractive reaction with forced convective diffusion and interphase mass transfer
p 2282 N95-27358
Single-drop reactive extraction/extractive reaction with forced convective diffusion and interphase mass transfer
p 2283 N95-27365
Engineering photochemical smog through convection towers
[DE95-007727] p 2328 N95-27686
Algorithm to describe the spread of a wall fire under a ceiling
[PB95-182259] p 2247 N95-28008

CONVECTION CLOUDS
A study of lightning in winter thunderstorms and the analysis of thunderstorm overflight data
[NASA-CR-198577] p 2343 N95-28191

CONVECTION-DIFFUSION EQUATION

Extensional flow convecting a reactant undergoing a first order homogeneous reaction and diffusional mass transfer from a sphere at low to intermediate Peclet and Damkohler numbers p 2280 N95-27346

Single-drop reactive extraction/extractive reaction with forced convective diffusion and interphase mass transfer p 2283 N95-27365

CONVECTIVE FLOW

Two-layer or free surface shear flows and viscoelastic shear flows and the relationship between stability and eigenvalues --- viscoelastic, shear, and convective flows [AD-A289510] p 2278 N95-27047

Computation of three-dimensional mixed convective boundary layer flow p 2280 N95-27347

Single-drop reactive extraction/extractive reaction with forced convective diffusion and interphase mass transfer p 2283 N95-27365

Experimental study on transition characteristics of natural-convection flow [PB95-192423] p 2289 N95-28637

CONVECTIVE HEAT TRANSFER

Deep convection in the Mediterranean Sea [AD-A288497] p 2346 N95-26647

Adiabatic charging of nickel-hydrogen batteries p 2272 N95-26795

CAE for thermal management of aerospace electronic boards using the BETAsoft program p 2272 N95-27354

Tomographic observations of deep convection and the thermal evolution of the Greenland Sea Gyre 1988-1989 [AD-A289104] p 2348 N95-28096

Composite flexible insulation for thermal protection of space vehicles p 2166 N95-28293

CONVERGENCE

ACT adaptive filters [AD-A288385] p 2363 N95-26474

The comparison of P(sub 1) and simplified P(sub 2) synthetic acceleration for iterative methods in transport solutions [DE94-018306] p 2390 N95-27304

Optical implementation of inner product neural associative memory [NASA-CASE-NPO-18491-2-CU] p 2427 N95-28363

Korteweg-de Vries equation: Convergent Birkhoff normal form [PB95-196275] p 2393 N95-28611

COOLANTS

Mathematical modelling of the thermodynamic properties of coolants and working media of heat pumps [IFTR-6/1994] p 2447 N95-26510

Experimental investigation of the effects of relative physical orientation between evaporator and condenser for a loop heat pipe [AD-A289248] p 2277 N95-26968

Diagnostic system Cryo-D for the determination of parameters of vapor-liquid currents of the coolant [DE95-608775] p 2280 N95-27338

Vapor pressures of mixtures of CFC-114 with the potential replacement coolants C4F(10) andc-C4F 8 [DE95-003444] p 2208 N95-28042

Cooling apparatus and couplings therefor [NASA-CASE-ARC-11921-1] p 2304 N95-28256

COOLING

Ultra high purity, dimensionally stable INVAR 36 [NASA-CASE-NPO-19358-1-CU] p 2213 N95-26862

CAE for thermal management of aerospace electronic boards using the BETAsoft program p 2272 N95-27354

Heat pipe cooled reactors for multi-kilowatt space power supplies [DE95-005211] p 2420 N95-27425

Towards the detection and attribution of an anthropogenic effect on climate [DE95-008589] p 2331 N95-28157

Cooling apparatus and couplings therefor [NASA-CASE-ARC-11921-1] p 2304 N95-28256

COOLING SYSTEMS

Silicon subsystem mechanical engineering closeout report for the Solenoidal Detector Collaboration [DE95-006336] p 2421 N95-27735

Vapor pressures of mixtures of CFC-114 with the potential replacement coolants C4F(10) andc-C4F 8 [DE95-003444] p 2208 N95-28042

Cooling apparatus and couplings therefor [NASA-CASE-ARC-11921-1] p 2304 N95-28256

COORDINATE TRANSFORMATIONS

User documentation of the CTA program [AD-A289508] p 2121 N95-26854

The structure of the Hurwitz transformation [DE95-608759] p 2397 N95-28518

COORDINATES

Wigner quantum oscillators. OSP (3/2) oscillators [DE95-608756] p 2448 N95-27334

A simple method for verifying the deployment of the TOMS-EP solar arrays p 2150 N95-27782

Coordinates of the quantum plane as q-tensor operators in U(sub q) (su(2) * su(2)) [DE95-007100] p 2397 N95-28234

Three-dimensional photogrammetry for laboratory applications [AD-A291624] p 2294 N95-28410

COORDINATION

AEM investigation of tetrahedrally coordinated Ti(4+) in nickel-titanate spinel [DE95-006624] p 2215 N95-27473

COPOLYMERS

Design strategies for the preparation of polymeric organic superconductors [AD-A289022] p 2436 N95-26462

Fractionation studies of polyethylene using DSC-technique [PB95-185252] p 2200 N95-26540

Small angle neutron scattering study of the micelle structure of amphiphilic block copolymers [DE95-006625] p 2234 N95-27486

JTEC monograph on biodegradable polymers and plastics in Japan: Research, development, and applications [NASA-CR-198562] p 2235 N95-27694

Feasibility studies for separation processes using environmentally sensitive hydrogels [DE95-008355] p 2238 N95-28226

Functionalized block copolymers as adhesion promoters [DE95-008158] p 2239 N95-28400

Molecular modeling: An approach for the study of piezoelectric polymers [AD-A289821] p 2241 N95-28574

COPPER

The development of the anisotropic properties of copper under plastic deformation induced by creep and monotonic loading [IFTR-23/1994] p 2212 N95-26517

Characteristics of thermal lens in a copper-vapor laser [AD-A289545] p 2294 N95-26874

Simulating the production of free defects in irradiated metals [DE95-007165] p 2214 N95-27088

Probe molecule studies: Active species in alcohol synthesis [DE95-003514] p 2203 N95-27420

A new technique for measuring the separation of closely spaced dislocations using residual contrast conditions [DE95-007147] p 2219 N95-27968

Effects of interlayers on the scratch adhesion performance of ultra-thin films of copper and gold on silicon substrates [DE95-007367] p 2220 N95-28044

Copper CVD using liquid coinjection of (hfac)Cu(TMVS) and TMVS [DE95-008155] p 2237 N95-28089

The off-center effect on the diffusion coefficient of Cu(+) and Li(+) in the KCl lattice [DE95-609146] p 2446 N95-28255

Residual stress, strain, and faults in nanocrystalline palladium and copper [DE95-008294] p 2223 N95-28543

COPPER ALLOYS

Spin-density-wave magnetism in dilute copper-manganese alloys [DE95-005121] p 2215 N95-27462

A new Cu-8 Cr-4 Nb alloy for high temperature applications [NASA-TM-106910] p 2218 N95-27728

Electronic structure of disordered Cu-Ag alloys [DE95-609156] p 2219 N95-27758

COPPER COMPOUNDS

Experimental determination of cluster geometrical structure [DE95-007089] p 2409 N95-27753

The oxidation state and magnetic behaviour of Tb in high-(Tc) related materials [DE95-007129] p 2219 N95-27966

Indentability of conventional and negative Poisson's ratio foams p 2195 N95-28472

COPPER OXIDES

Investigations of the hyperfine interactions in copper-oxide perovskites using Eu-151 and Fe-57 Moessbauer spectroscopy [PB95-185138] p 2437 N95-26513

Hall effect and resistivity in the normal state of high-T(sub c) cuprates in the electron-fracton model [DE95-610612] p 2439 N95-27413

Observations of CEF-split intermultiplet transitions in optically opaque EuBa2Cu3O7 using inelastic neutron scattering [DE95-007135] p 2408 N95-27453

Numerical study of the singlet-triplet model for cuprate superconductors [DE95-609438] p 2440 N95-27712

Kinetics and dynamics of oxidation reactions involving adsorbed CO species on bulk supported Pt and copper oxides [DE95-006420] p 2207 N95-27952

Aspects of macroscopic phase separation and interstitial oxygen ordering in oxygen doped La2CuO(4+delta) [DE95-007864] p 2443 N95-28060

The real structure of columnar pinning centers in heavy-ion-irradiated cuprate superconductors [DE95-003948] p 2445 N95-28186

CORNER FLOW

A numerical method for solving the three-dimensional parabolized Navier-Stokes equations [NASA-CR-198159] p 2287 N95-27917

CORRECTION

Computing NORAD mean orbital elements from a state vector [AD-A289281] p 2146 N95-27033

The gluon propagator in non-Abelian Weizsaecker-Williams fields [DE95-006877] p 2449 N95-27547

Polarization as a probe to the production mechanisms of charmonium in (pi)N collisions [DE95-008136] p 2414 N95-28142

Efficient analytic computation of higher-order QCD amplitudes [DE95-008593] p 2449 N95-28160

CORRELATION

Method of phased magnitude correlation using binary sequences [AD-D017257] p 2248 N95-26465

Temporal and spatial decorrelation scales of the Yellow Sea thermal fields [AD-A288617] p 2346 N95-26483

A spectral algorithm for the seriation problem [DE95-004775] p 2372 N95-27436

A study of non-stationary processes and their applications [AD-A291725] p 2395 N95-28510

Atmospheric dispersion in adaptive optics [AD-A289639] p 2428 N95-28617

CORROSION

Alternative cleaning solvents and lubricants at the Air Force PJKS facility p 2228 N95-27108

Corrosive effects of supercritical carbon dioxide and cosolvents on metals p 2224 N95-27113

The use of electrochemistry and ellipsometry for identifying and evaluating corrosion on aircraft [AD-A288536] p 2125 N95-27186

Iron oxides characterization by Moessbauer spectroscopy [DE95-607869] p 2202 N95-27199

Current programmes on physical metallurgy and related areas in BARC [DE95-607939] p 2214 N95-27255

Study of development and utilization of a multipurpose atmospheric corrosion sensor [NASA-CR-198595] p 2292 N95-27368

Measurements of the volatilities of electrolytes: Application to water/steam cycles [DE95-007103] p 2204 N95-27451

Engineered materials for appliation in severe metallurgical environments: Tantalum-carbon alloy development [DE95-006838] p 2216 N95-27488

Effects of hydrogen on carbon steels at the Multi-Function Waste Tank Facility [DE95-007194] p 2219 N95-28005

An overview of activities and accomplishments of the Metals and Ceramics Division [DE95-007020] p 2241 N95-28560

CORROSION PREVENTION

Characterization of corrosion and development of a breadboard of a D sight aircraft inspection system, phase 1 [AD-A288347] p 2125 N95-26527

Stress corrosion cracking susceptibility of the earthquake resistant NOM B457 Mexican steel [DE95-607956] p 2214 N95-27256

Processing and properties of chromate-free conversion coatings on aluminum [DE95-004768] p 2218 N95-27722

Chromate-free corrosion resistant conversion coatings for aluminum alloys [DE95-007742] p 2238 N95-28117

CORROSION RESISTANCE

Engineered materials for appliation in severe metallurgical environments: Tantalum-carbon alloy development [DE95-006838] p 2216 N95-27488

Processing and properties of chromate-free conversion coatings on aluminum [DE95-004768] p 2218 N95-27722

Pulsed ion beam surface treatment for preparing rapidly solidified corrosion resistant steel and aluminum surfaces
[DE95-007741] p 2221 N95-28116
Chromate-free corrosion resistant conversion coatings for aluminum alloys
[DE95-007742] p 2238 N95-28117
Bases for extrapolating materials durability in fuel storage pools
[DE95-007748] p 2222 N95-28129
Coatings of non-oxide ceramics for improved corrosion resistance in high temperature coal combustion
[DE95-006932] p 2241 N95-28604

CORROSION TESTS
Study of development and utilization of a multipurpose atmospheric corrosion sensor
[NASA-CR-198595] p 2292 N95-27368

COSMIC DUST
Molecular cloud content of early-type galaxies. V. CO in elliptical galaxies
[PB95-185153] p 2461 N95-27320

COSMIC RAYS
Cosmic ray test results of the D0 prototype scintillating fiber tracker
[DE95-007215] p 2415 N95-28221

COSMOLOGY
Laboratory high-energy astrophysics on lasers
[DE95-008062] p 2462 N95-28013
The 1993 European school of high-energy physis
[DE95-610196] p 2421 N95-28040
Was Einstein 100% right?
[PB95-190179] p 2449 N95-28175
Discovery of the most distant supernovae and the quest for (Omega)
[DE95-006569] p 2460 N95-28197

COST ANALYSIS
Development of repair processes and sources for C/KC-135 aircraft windows/windshields
[AD-A288348] p 2117 N95-26629
An analysis of the KC-135 three-person cockpit
[AD-A289540] p 2130 N95-26873
Accelerating conservative parallel simulation of VHDL circuits
[AD-A289317] p 2264 N95-27294
Physics assessment of stellarators as fusion power plants
[DE95-007045] p 2431 N95-27498
Briefing Report to the Ranking Minority Member, Subcommittee on Space and Aeronautics, Committee on Science, House of Representatives. Cassini Mission: Estimated launch costs for NASA's mission to Saturn
[GAO/NSIAD-95-141BR] p 2145 N95-27856
C-130 Advanced Technology Center wing box conceptual design/cost study p 2192 N95-28437
Designers' unified cost model p 2194 N95-28464
An automated cost uncertainty program
[AD-A288747] p 2374 N95-28588

COST EFFECTIVENESS
Successful product realization strategies
p 2264 N95-27233
Monolithic electronics for nuclear and high-energy physics experiments
[DE95-005393] p 2420 N95-27427
Report to Congressional Committees. Comanche Helicopter: Testing needs to be completed prior to production decisions
[GAO/NSIAD-95-112] p 2135 N95-27910
Implementing an integrated standards-based management system to ensure compliance at Los Alamos National Laboratory
[DE95-007873] p 2451 N95-28025

COST ESTIMATES
Briefing Report to the Ranking Minority Member, Subcommittee on Space and Aeronautics, Committee on Science, House of Representatives. Cassini Mission: Estimated launch costs for NASA's mission to Saturn
[GAO/NSIAD-35-141BR] p 2145 N95-27856
Report to Congressional Committees. Comanche Helicopter: Testing needs to be completed prior to production decisions
[GAO/NSIAD-95-112] p 2135 N95-27910
Report to the Chairman and Ranking Minority Member, Committee on Science, House of Representatives. Weather forecasting: Radar availability requirement not being met
[GAO/AIMD-95-132] p 2342 N95-27912

COST REDUCTION
A system dynamics based study of software reuse and its determinants
[AD-A288578] p 2364 N95-26554
Using SCR methods to analyze requirements documentation
[NASA-CR-197760] p 2365 N95-26668
Development and analysis of SCR requirements tables for system scenarios
[NASA-CR-197769] p 2367 N95-26802
Briefing Report to the Ranking Minority Member, Subcommittee on Space and Aeronautics, Committee on Science, House of Representatives. Cassini Mission: Estimated launch costs for NASA's mission to Saturn
[GAO/NSIAD-95-141BR] p 2145 N95-27856
Low-power, parallel photonic interconnections for Multi-Chip Module applications
[DE95-008518] p 2267 N95-28147
C-130 Advanced Technology Center wing box conceptual design/cost study p 2192 N95-28437
Composite fuselage crown panel manufacturing technology p 2137 N95-28474

COSTS
Using machine learning to derive efficient cost and performance estimates in VLSI CAD designs
[AD-A288254] p 2363 N95-26408
Weightless Environment Training Facility (WETF) materials coating evaluation, volume 3
[NASA-CR-188366-VOL-3] p 2239 N95-28387
The U.S. Department of Energy Wind Turbine Development Program
[DE95-000292] p 2325 N95-28395
Building-integrated photovoltaics: A case study
[DE95-004032] p 2325 N95-28396
Strategies for recycling CdTe photovoltaic modules
[DE95-006776] p 2325 N95-28517

COUNTER ROTATION
Some notes on long-range beam-beam effects for the 2 TeV collider
[DE95-006771] p 2421 N95-28017

COUNTERS
Solid-state image sensor with focal-plane digital photon-counting pixel array
[NASA-CASE-NPO-18518-1-CU] p 2424 N95-26894
Orbiting meteoroid and debris counting experiment
p 2463 N95-27668
Precision electromagnetic calorimetry with liquid krypton
[DE95-006685] p 2292 N95-27677

COUPLED MODES
Supercooled liquid dynamics for the charged hard-sphere model
[DE95-609158] p 2241 N95-28609

COUPLING
An investigation of the effects of pitch-roll (de)coupling on helicopter handling qualities
[NASA-TM-110349] p 2141 N95-26773
Couplings of heavy hadrons with soft pions from QCD sum rules
[DE95-610349] p 2407 N95-27410
Skew chromaticity
[DE95-007677] p 2422 N95-28115
Constraints on the anomalous WW gamma couplings from b vector s gamma
[DE95-608866] p 2415 N95-28246

COUPLINGS
Dynamic coupling of underactuated manipulators
[AD-A289404] p 2301 N95-27098
Cooling apparatus and couplings therefor
[NASA-CASE-ARC-11921-1] p 2304 N95-28256

COVALENT BONDS
Non-covalent immobilization of proteins and enzymes on polymerized lipid assemblies
[AD-A288234] p 2225 N95-26526

COVARIANCE
Analysis of filter tuning techniques for sequential orbit determination p 2146 N95-27764
Accurate orbit determination strategies for the tracking and data relay satellites p 2147 N95-27768
Experience from the in-flight calibration of the Extreme Ultraviolet Explorer (EUVE) and Upper Atmosphere Research Satellite (UARS) fixed head star trackers (FHSTs) p 2149 N95-27779
Application of non-coherent Doppler data types for deep space navigation p 2151 N95-27788
A demonstration of unified TDRS/GPS tracking and orbit determination p 2151 N95-27792

CRACK BRIDGING
Structural ceramics incorporating whiskers, platelets, and particulate phases
[DE95-007048] p 2235 N95-27499

CRACK INITIATION
Fatigue properties of an A356 (AlSi7Mg) aluminum alloy for automotive applications: Fatigue life prediction
[PB95-196424] p 2224 N95-28660

CRACK OPENING DISPLACEMENT
An experimental and numerical investigation of specimen size requirements for cleavage fracture toughness
[AD-A289120] p 2311 N95-28100

CRACK PROPAGATION
Analysis of fatigue fractographic data of a rod end housing using a Monte Carlo simulation
[NAL-TR-1225] p 2307 N95-26521
Fatigue fracture analysis in medium carbon structural steel and austenitic stainless steel by X-ray fractography
[DE95-601504] p 2213 N95-26675
Stress corrosion cracking susceptibility of the earthquake resistant NOM B457 Mexican steel
[DE95-607956] p 2214 N95-27256
Adhesively bonded composite patch repair of cracked aluminum alloy structures p 2132 N95-27507
An experimental and numerical investigation of specimen size requirements for cleavage fracture toughness
[AD-A289120] p 2311 N95-28100
Prediction of fatigue crack growth under constant amplitude and random loading using specimens with multiple cracks
[AD-A291614] p 2136 N95-28409
Characteristics of laminates with delamination control strips p 2191 N95-28434
Numerical simulation of crack growth in pressurized fuselages
[PB95-192415] p 2137 N95-28636

CRACK TIPS
Fatigue fracture analysis in medium carbon structural steel and austenitic stainless steel by X-ray fractography
[DE95-601504] p 2213 N95-26675
Environmentally assisted cracking of high strength beta titanium alloys
[AD-A289156] p 2213 N95-27032
Deformation limits on two-parameter fracture mechanics in terms of higher order asymptotics
[AD-A289113] p 2310 N95-28098
An experimental and numerical investigation of specimen size requirements for cleavage fracture toughness
[AD-A289120] p 2311 N95-28100

CRACKING (FRACTURING)
Micromechanical prediction of tensile damage for ceramic matrix composites under high temperature
[AD-A288238] p 2180 N95-26626
Characterization of fatigue behavior of 2-D woven fabric reinforced ceramic matrix composite at elevated temperature
[AD-A289423] p 2181 N95-26886
Evaluation of patch effectiveness in repairing aircraft components p 2133 N95-27513
Deformation limits on two-parameter fracture mechanics in terms of higher order asymptotics
[AD-A289113] p 2310 N95-28098
An experimental and numerical investigation of specimen size requirements for cleavage fracture toughness
[AD-A289120] p 2311 N95-28100
Numerical simulation of crack growth in pressurized fuselages
[PB95-192415] p 2137 N95-28636

CRACKS
Bonded composite repair of metallic aircraft components: Overview of Australian activities
p 2132 N95-27505
Design and structural validation of CF116 upper wing skin boron doubler p 2132 N95-27510
Evaluation of patch effectiveness in repairing aircraft components p 2133 N95-27513
Prediction of fatigue crack growth under constant amplitude and random loading using specimens with multiple cracks
[AD-A291614] p 2136 N95-28409

CRASHES
Rotorcraft crashworthy airframe and fuel system technology development program
[AD-A289986] p 2126 N95-28630

CRASHWORTHINESS
Rotorcraft crashworthy airframe and fuel system technology development program
[AD-A289986] p 2126 N95-28630

CRATERS
A new technique for ground simulation of hypervelocity debris p 2154 N95-27671

CRAY COMPUTERS
Fluctuations and transport in fusion plasmas
[DE95-007111] p 2433 N95-27924
Optimization strategies for molecular dynamics programs on Cray computers and scalar work stations
[AD-A289574] p 2418 N95-28648

CREEP PROPERTIES
Creep recovery of PVC and polypropylene
[PB95-185112] p 2224 N95-26448
The development of the anisotropic properties of copper under plastic deformation induced by creep and monotonic loading
[IFTR-23/1994] p 2212 N95-26517
Probabilistic material strength degradation model for Inconel 718 components subjected to high temperature, high-cycle and low-cycle mechanical fatigue, creep and thermal fatigue effects
[NASA-CR-197832] p 2214 N95-27167

Scarf repairs to graphite/epoxy components
p 2135 N95-27523

CREEP STRENGTH

A new Cu-8 Cr-4 Nb alloy for high temperature applications
[NASA-TM-106910] p 2218 N95-27728

CREWS

Crew adaptation evaluation of the Norwegian Crew Concept (NOROREW)
[AD-A288478] p 2360 N95-27058

CRITERIA

A method to determine the structure of an unknown mixture using the Akaike Information Criterion and the bootstrap
[AD-A288295] p 2394 N95-26415

Automatically selecting and using primary effects in planning: Theory and experiments
[AD-A289347] p 2450 N95-27064

CRITICAL EXPERIMENTS

The experience of CF Technologies, Inc. (CF Tech) in critical fluid processing p 2232 N95-27128

CRITICAL FREQUENCIES

Variability study of foF2 for an equatorial station
[DE95-608080] p 2337 N95-27157

CRITICAL LOADING

Comparison of life theories for rolling-element bearings
[NASA-TM-106585] p 2301 N95-26774

Testing of Uninterruptible Power Supplies with nonlinear loads
[AD-A289353] p 2262 N95-27067

Fundamental concepts in the suppression of delamination buckling by stitching p 2198 N95-28486

CRITICAL POINT

Critical behaviour of spin models: A transfer-matrix approach
[PB95-192456] p 2418 N95-28638

CRITICAL PRESSURE

Precision parts cleaning with supercritical carbon dioxide p 2229 N95-27114

Design considerations in supercritical fluid technology
p 2232 N95-27126

CRITICAL TEMPERATURE

Precision parts cleaning with supercritical carbon dioxide p 2229 N95-27114

Design considerations in supercritical fluid technology
p 2232 N95-27126

Comparison of the calculated and measured stability of a NbTi cable-in-conduit conductor
[DE95-007964] p 2265 N95-27693

Beta-dynamics in simple liquid metal
[DE95-609154] p 2220 N95-28039

CROP GROWTH

Third international congress of plant molecular biology: Molecular biology of plant growth and development
[DE95-006482] p 2352 N95-28496

Models used to forecast agricultural corn crops in the micro-region of Ribeirao Preto-SP
[INPE-5513-NTC/309] p 2315 N95-28554

CROP IDENTIFICATION

Method for determining surface coverage by materials exhibiting different fluorescent properties
[NASA-CASE-GSC-13539-1] p 2315 N95-28211

CROSS CORRELATION

Fuzzy inference enhanced information recovery from digital PIV using cross-correlation combined with particle tracking
[NASA-TM-106896] p 2291 N95-27173

CROSS COUPLING

Coupling in the Tevatron
[DE95-005129] p 2421 N95-27531

CROSS FLOW

Nonlinear stability of non-stationary cross-flow vortices in compressible boundary layers
[NASA-CR-189184] p 2279 N95-27242

Computation of three-dimensional mixed convective boundary layer flow p 2280 N95-27347

CROSS SECTIONS

Measurement of R in e(+)e(-)-annihilation at center-of-mass energies between 7.2 and 10.34 GeV
[DE95-610303] p 2407 N95-27408

A study of events with large total transverse energy produced in proton-antiproton collisions at (radical)s = 1.8 TeV
[DE95-003382] p 2410 N95-27872

CROSSINGS

Crab crossing in a gamma-gamma collider
[DE95-006580] p 2420 N95-27470

CROSSLINKING

Radiation vulcanization of natural rubber latex
[DE95-600026] p 2226 N95-26637

Mechanisms of hypertension after cross-linked hemoglobin blood-substitute transfusion
[AD-A289558] p 2352 N95-26680

CRRES (SATELLITE)

The combined release and radiation effects satellite time history data base system
[AD-A289835] p 2165 N95-28578

CRUDE OIL

The biodegradation of fuels in soils and sediments: Differences as a function of mineralogy
p 2230 N95-27116

Investigation on energy conversion technology using biochemical reaction elements, 2
[DE95-759250] p 2321 N95-27940

CRUSHING

Crushing singularities in spacetimes with spherical, plane and hyperbolic symmetry
[PB95-190146] p 2397 N95-28011

CRUSTS

Stability of strange quark stars with nuclear crusts against radial oscillations
[DE95-008484] p 2463 N95-28357

CRYOGENIC FLUIDS

Precision electromagnetic calorimetry with liquid krypton
[DE95-006685] p 2292 N95-27677

Tank pressure control in low gravity by jet mixing
[NASA-CR-191012] p 2243 N95-28001

CRYOGENIC TEMPERATURE

Diagnostic system Cryo-D for the determination of parameters of vapor-liquid currents of the coolant
[DE95-608775] p 2280 N95-27338

Cryogenic washout of solid rocket propellants
p 2176 N95-28324

Development and application of low-temperature AFM
[AD-A291704] p 2352 N95-28525

Cryogenic temperature control and tension/compression attachment stage for an electron microscope
[AD-D017390] p 2294 N95-28612

CRYOGENICS

Cryogenic and simulated fuel jet breakup in argon, helium and nitrogen gas flows
[NASA-TM-106923] p 2291 N95-27030

Multi-channel electronically scanned cryogenic pressure sensor
[NASA-CASE-LAR-15062-1] p 2291 N95-27138

A cryogenic scan mechanism for use in Fourier transform spectrometers p 2158 N95-27287

Tank pressure control in low gravity by jet mixing
[NASA-CR-191012] p 2243 N95-28001

Cryogenic washout of solid rocket propellants
p 2176 N95-28324

Cryogenic BRDF measurements at 10.6 micrometers and 0.63 micrometers on contaminated mirrors
[AD-A291611] p 2427 N95-28408

High energy density systems in cryogenic media: The production and reactions of atoms and radicals
[AD-A289818] p 2417 N95-28572

Cryogenic temperature control and tension/compression attachment stage for an electron microscope
[AD-D017390] p 2294 N95-28612

CRYOPUMPING

Pumping characteristics of a cryopump with Ar sorbent in He and in D2/He mixture
[DE95-007049] p 2302 N95-27875

Divertor research on the DIII-D tokamak
[DE95-003942] p 2434 N95-28185

CRYSTAL DEFECTS

Electronic characterization of defects in narrow gap semiconductors: Comparison of electronic energy levels and formation energies in mercury cadmium telluride, mercury zinc telluride, and mercury zinc selenide
[NASA-CR-197835] p 2437 N95-26780

Effects of helium pre-implantation on the microstructure and mechanical properties of irradiated 316 stainless steel
[DE95-007162] p 2214 N95-27086

Simulating the production of free defects in irradiated metals
[DE95-007165] p 2214 N95-27088

A new method of evaluating the explicit magnetic-state-dependent energy in semi-empirical calculations of iron
[AD-A289098] p 2399 N95-27398

Crystal structure, short-range oxygen defects, and water adsorption in La- and Nd-modified ZrO2
[DE95-007134] p 2439 N95-27452

The real structure of columnar pinning centers in heavy-ion-irradiated cuprate superconductors
[DE95-003948] p 2445 N95-28186

CRYSTAL GROWTH

Probabilistic growth model
[PB95-185054] p 2395 N95-26913

Growth and evaluation of nonlinear optical crystals for laser applications: Lithium borate, barium borate and silver gallium selenide
[AD-A289147] p 2277 N95-27000

Low temperature materials growth and processing development for flat panel display technology applications
[AD-A288970] p 2233 N95-27187

Growth, characterization and device development in monocrystalline diamond films
[AD-A289356] p 2439 N95-27416

Effects of low earth orbit on the optical performance of multi-layer enhanced high reflectance mirrors
p 2428 N95-27652

Growth and characterization of crystals for room temperature I.R. detectors and second harmonic generation devices
[NASA-CR-198598] p 2443 N95-28033

Pulsed laser deposition of zeolitic membranes
[DE95-006274] p 2298 N95-28124

Self-assembly of low-dimensional molecular nanoclusters on Au(111) surfaces
[AD-A288936] p 2178 N95-28334

CRYSTAL LATTICES

Structure of ordinary ice Ih. Part 2: Defects in ice. Volume 1: Point defects
[AD-A288279] p 2200 N95-26452

Atomically resolved STM study of the adsorption and dissociation of methyl chloride on Si(001)
[AD-A289218] p 2438 N95-27061

A correlated Walks' theory for DNA denaturation
[DE95-607910] p 2444 N95-28112

The high strain rate deformation of tungsten single crystals
[AD-A288874] p 2223 N95-28189

The off-center effect on the diffusion coefficient of Cu(+) and Li(+) in the KCl lattice
[DE95-609146] p 2446 N95-28255

Local texture and grain boundary misorientations in high H(C) oxide superconductors
[DE95-007004] p 2447 N95-28606

Isolation and x-ray crystal structures of (Li(mu2-As(SiMe3)2) (mu3-As(SiMe3)2)(THF))2 and ((Me3Si)2AsLi(THF)2)2
[AD-A288870] p 2241 N95-28661

CRYSTAL OPTICS

Nonlinear dynamics of a coherent polariton-biexciton system
[DE95-609150] p 2417 N95-28607

CRYSTAL OSCILLATORS

Femtosecond OPO's at 3 microns and beyond: Design and performance issues related to the crystal properties of KTP and similar materials
[DE95-007286] p 2446 N95-28242

CRYSTAL STRUCTURE

The influence of surface structure on the interaction of water with TiO2(100)
[DE95-004927] p 2203 N95-27401

Crystal structure, short-range oxygen defects, and water adsorption in La- and Nd-modified ZrO2
[DE95-007134] p 2439 N95-27452

Crystal and magnetic structure of stoichiometric YFe2O4
[DE95-006627] p 2440 N95-27487

Surface crystallization and thin film melting in normal alkanes
[DE95-006694] p 2440 N95-27535

Amorphization of complex ceramics by heavy-particle irradiations
[DE95-005725] p 2236 N95-27733

The structure of lead-indium phosphate glass
[DE95-007130] p 2237 N95-27967

Precursor phenomenon of martensitic transformation in Au-49.5at%Cd alloy
[DE95-007698] p 2222 N95-28166

Structural chemistry of some phases in the YC-Ni-B system
[DE95-007403] p 2447 N95-28537

Surface structure of MX-chains studied by atomic force microscopy
[DE95-007881] p 2447 N95-28541

The unusual properties of beryllium surfaces
[DE95-006471] p 2223 N95-28593

Isolation and x-ray crystal structures of (Li(mu2-As(SiMe3)2) (mu3-As(SiMe3)2)(THF))2 and ((Me3Si)2AsLi(THF)2)2
[AD-A288870] p 2241 N95-28661

CRYSTAL SURFACES

Surface chemistry of silicon
[AD-A288893] p 2224 N95-26351

The role of hydrogen in the hydrogenation and hydrogenolysis of aniline on the nickel single crystal surfaces: Its implication on the mechanisms of HDN reactions
[DE95-006687] p 2222 N95-28134

CRYSTALLINITY

Chemistry involving the separation, isolation, and immobilization of 3-5 compound semiconductor nanocrystals and quantum dots
[AD-A288381] p 2436 N95-26473

Fractionation studies of polyethylene using DSC-technique
[PB95-185252] p 2200 N95-26540
Observations of CEF-split intermultiplet transitions in optically opaque EuBa2Cu3O7 using inelastic neutron scattering
[DE95-007135] p 2408 N95-27453
The 18th Asilomar Conference on Polymeric Materials
[AD-A291721] p 2240 N95-28508
Surfactants and desensitizing wax substitutes for TNT-Based systems
[AD-A289652] p 2243 N95-28634

CRYSTALLITES
Pulsed laser deposition of zeolitic membranes
[DE95-006274] p 2298 N95-28124

CRYSTALLIZATION
Electrocrystallization of an ordered organic monolayer: Selective epitaxial growth of beta(ET)213 ongraphite
[AD-A288942] p 2178 N95-26569
Device and method for screening crystallization conditions in solution crystal growth
[NASA-CASE-MFS-28985-1] p 2245 N95-26888
Surface energy driven crystallization of amorphous Ni69Cr14P17 alloy
[DE95-005543] p 2438 N95-27085
Surface crystallization and thin film melting in normal alkanes
[DE95-006694] p 2440 N95-27535
Control of thin film processing behavior through precursor structural modifications
[DE95-006468] p 2444 N95-28103
Vacancy related defects in thin film Pb(Zr,Ti)O3 materials
[DE95-007696] p 2445 N95-28165
The 18th Asilomar Conference on Polymeric Materials
[AD-A291721] p 2240 N95-28508

CRYSTALLOGRAPHY
Stiffness and strength tailoring in uniform space-filling truss structures p 2188 N95-28290

CRYSTALS
Growth and evaluation of nonlinear optical crystals for laser applications: Lithium borate, barium borate and silver gallium selenide
[AD-A289147] p 2277 N95-27000
Temperature dependence of ion-beam-induced amorphization in (Beta)-SiC
[DE95-007164] p 2438 N95-27087
The influence of surface structure on the interaction of water with TiO2(100)
[DE95-004927] p 2203 N95-27401
Characterization of collision cascade damage in Ca2La8(SiO4)6O2 by HRTEM
[DE95-005719] p 2440 N95-27491
Scintillator materials for calorimetry
[DE95-006570] p 2421 N95-27679
Observation of asymmetrical two-cone Vavilov-Cherenkov radiation in biaxial crystal of triglycinesulphate emitted by 658 MeV protons passing along bi normal
[DE94-629017] p 2441 N95-27867
Characterization of solid state laser and nonlinear optical materials
[AD-A291684] p 2300 N95-28458
Subharmonic phonon transmission and Kapitza conductance between crystals with very different vibrational spectra
[DE95-609151] p 2447 N95-28608

CUBIC EQUATIONS
Kepler Equation solver p 2147 N95-27767

CUES
Role of somatosensory and vestibular cues in attenuating visually induced human postural sway
[NASA-CR-197845] p 2357 N95-27697

CULTURE TECHNIQUES
Comparative Transduction Mechanisms of Vestibular Otolith Hair Cells
[NASA-CR-197980] p 2349 N95-26727
Hair cell regeneration in the bullfrog vestibular otolith organs following aminoglycoside toxicity
p 2349 N95-26729

CURING
External patch repair of CFRP/honeycomb sandwich
p 2134 N95-27522
Mechanical properties of Hysol EA-9394 structural adhesive
[DE95-008187] p 2240 N95-28405

CURRENT ALGEBRA
N. N. Bogolyubov and particle physics
[DE95-608794] p 2448 N95-27447

CURRENT DENSITY
Nickel metal hydride LEO cycle testing
p 2272 N95-26791
OBIC analysis of stressed, thermally-isolated polysilicon resistors
[DE95-008511] p 2268 N95-28201
Surface scanning techniques to locate and study defects in painted zinc and zinc alloy coated steels
[DE95-006099] p 2240 N95-28547
Local texture and grain boundary misorientations in high H(C) oxide superconductors
[DE95-007004] p 2447 N95-28606

CURRENT DISTRIBUTION
FENIX experimental results of large-scale CICC made of bronze-processed Nb3Sn strands
[DE95-007965] p 2222 N95-28167
Visualization of finite element model solutions for defibrillation voltage and current distributions
[AD-A289836] p 2400 N95-28579

CURVATURE
Preliminary design study of the beam collapser and certain optomechanical aspects of the siderostat
[AD-A288423] p 2423 N95-26549
Extended BRST symmetry for the relativistic particle with curvature
[DE95-608799] p 2406 N95-27309
On higher derivative gravity in two dimensions
[DE95-608789] p 2462 N95-27343
Crushing singularities in spacetimes with spherical, plane and hyperbolic symmetry
[PB95-190146] p 2397 N95-28011

CURVED BEAMS
The effect of material heterogeneity in curved composite beams for use in aircraft structures
p 2190 N95-28426

CURVED PANELS
Rapid repair of large area damage to contoured aircraft structures p 2133 N95-27516
Static and fatigue testing of full-scale fuselage panels fabricated using a Therm-X(R) process
p 2185 N95-28270

CURVES (GEOMETRY)
Holomorphic curves in Abelian varieties, part 1
[DE95-608748] p 2396 N95-27300
Theoretical studies of interstellar processes
[NASA-CR-198647] p 2462 N95-28216

CUTTING
The application of waterjets for cleaning
p 2233 N95-27130
SIHTI 2: Energy and environmental technology. Yearbook 1993 of the research programme
[DE95-755135] p 2331 N95-28202

CYCLES
Determination of the cyclical properties of 18G2A steel on the basis of skeleton curves for a planar stress state
[IFTR-32/1994] p 2211 N95-26359
Life prediction methodology for composite laminates. Part 1: Constant amplitude and two-stress level fatigue
[AD-A288343] p 2180 N95-26571
Measurements of the volatilities of electrolytes: Application to water/steam cycles
[DE95-007103] p 2204 N95-27451

CYCLIC LOADS
Determination of the cyclical properties of 18G2A steel on the basis of skeleton curves for a planar stress state
[IFTR-32/1994] p 2211 N95-26359
Changes in the anisotropy parameters of an aluminum alloy caused by cyclical deformation
[IFTR-27/1994] p 2212 N95-26666
Air Force Ni-H2 cell test program: State of Charge test
p 2272 N95-26789
Nickel metal hydride LEO cycle testing
p 2272 N95-26791
The 50 Ah NiH2 CPV qualification tests
p 2272 N95-26792
Hubble Space Telescope nickel-hydrogen battery testing: An update p 2272 N95-26794
Characterization of fatigue behavior of 2-D woven fabric reinforced ceramic matrix composite at elevated temperature
[AD-A289423] p 2181 N95-26886
Fatigue behavior of a cross-ply ceramic matrix composite subjected to tension-tension cycling with hold time
[AD-A289418] p 2182 N95-27134
Probabilistic material strength degradation model for Inconel 718 components subjected to high temperature, high-cycle and low-cycle mechanical fatigue, creep and thermal fatigue effects
[NASA-CR-197832] p 2214 N95-27167
A model of rotationally-sampled wind turbulence for predicting fatigue loads in wind turbines
p 2312 N95-27972
Preliminary analysis of dynamic stall effects on a 91-meter wind turbine rotor p 2124 N95-27975
Calculation of design load for the MOD-5A 7.3 mW wind turbine system p 2312 N95-27982
Comparison of measured and calculated dynamic loads for the Mod-2 2.5 mW wind turbine system
p 2312 N95-27983
Investigation of static and cyclic bearing failure mechanisms for GR/EP laminates p 2190 N95-28427

CYCLOHEXANE
Variation of solvent scattering-length density small-angle neutron scattering as a means of determining structure of composite materials
[DE95-005394] p 2183 N95-27428

CYCLONES
Systematic and integrated approach to Tropical Cyclone track forecasting. Part 1: Approach overview and description of meteorological basis
[AD-A291775] p 2344 N95-28459
The northern wintertime divergence extrema at 200 hPa and surface cyclones as simulated in the integration of the ECMWF general circulation model
[DE95-007946] p 2332 N95-28550

CYCLOTRON FREQUENCY
Fast wave current drive in D3-D
[DE95-007582] p 2431 N95-27441
One dimensional global and local solution for ICRF heating
[DE95-007984] p 2392 N95-28110
Engineering design of the ITER RF systems
[DE95-008064] p 2434 N95-28140

CYCLOTRON RADIATION
Fast wave current drive in D3-D
[DE95-007582] p 2431 N95-27441
ECR plasma-assisted deposition of Al2O3 and dispersion-strengthened AlO2
[DE95-007743] p 2235 N95-27687
Collisions of highly charged ions with electrons, atoms and surfaces
[DE95-007393] p 2413 N95-28078
Engineering design of the ITER RF systems
[DE95-008064] p 2434 N95-28140

CYCLOTRON RESONANCE
A BATSE investigation of radiation belt electrons precipitated by VLF waves
[NASA-CR-197780] p 2336 N95-26922
ECR plasma-assisted deposition of Al2O3 and dispersion-strengthened AlO2
[DE95-007743] p 2235 N95-27687
Process for non-contact removal of organic coatings from the surface of paintings
[NASA-CASE-LEW-15896-1] p 2235 N95-27702
Collisions of highly charged ions with electrons, atoms and surfaces
[DE95-007393] p 2413 N95-28078

CYCLOTRON RESONANCE DEVICES
High power, broadband folded waveguide Gyrotron-Traveling-Wave-Amplifier
[AD-A288847] p 2259 N95-26433

CYCLOTRONS
Polarizing matter and antimatter: A new method
[DE95-007109] p 2421 N95-27923

CYGNUS CONSTELLATION
Discussion on selected symbiotic stars
p 2460 N95-27078

CYLINDERS
Stress analysis and failure of an internally pressurized composite-jacketed steel cylinder p 2186 N95-28280

CYLINDRICAL BODIES
Template synthesis of electronically conductive polymer nanostructures
[AD-A288373] p 2225 N95-26472
Valve mechanism for an acoustic modulator
[AD-D017263] p 2300 N95-26504
Effects of three-dimensional imposed 3-D disturbances on bluff-body near wake flows
[AD-A289553] p 2121 N95-26757
A magnetic hysteresis model p 2153 N95-27801
Investigation of HE driven cylindrical liner
[DE95-007866] p 2311 N95-28539

CYLINDRICAL SHELLS
The collapse of composite cylindrical panels with various thickness using finite element analysis
[AD-A289370] p 2308 N95-26905
Load transfer in the stiffener-to-skin joints of a pressurized fuselage
[NASA-CR-198610] p 2310 N95-27865

CYTOCHROMES
Feasibility studies for separation processes using environmentally sensitive hydrogels
[DE95-008355] p 2238 N95-28226

CYTOMETRY
Flow cytometry as a means of detecting, enumerating and characterizing bacteria for monitoring of the environment
[AD-A288997] p 2326 N95-26610

CZOCHRALSKI METHOD
Numerical methods for determining interstitial oxygen in silicon
[DE95-007710] p 2205 N95-27683

D

DAMAGE

Synthesis and characterization of polymeric materials [AD-A288613] p 2225 N95-26482

A study of internal damage of metal matrix composites by neutron diffraction [DE95-005157] p 2182 N95-27080

Modeling considerations in the prediction of residual strength in composite laminates [AD-A289128] p 2182 N95-27142

Micromechanical modeling of damage and inelasticity of composite materials in macroscopic structural analysis [DE95-003666] p 2182 N95-27421

Radiation-induced segregation: A microchemical gauge to quantify fundamental defect parameters [DE95-005720] p 2216 N95-27492

Radiation-induced grain boundary segregation in austenitic stainless steels [DE95-005721] p 2216 N95-27493

Scarf repairs to graphite/epoxy components p 2135 N95-27523

Damage occurrence on composites during testing and fleet service: Repair of Airbus aircraft p 2135 N95-27526

An investigation of the chemical and physical properties of pristine, electrochromically damaged, and photochromically damaged KTiOPO4 (KTP) using surface analytical and optical spectroscopic techniques [DE95-007865] p 2443 N95-28023

Comparison of resin film infusion, resin transfer molding, and consolidation of textile preforms for primary aircraft structure p 2196 N95-28477

Application of damage tolerance methodology in certification of the Piaggio P-180 Avanti p 2138 N95-28480

DAMAGE ASSESSMENT

Probabilistic risk assessment of the Space Shuttle. Phase 3: A study of the potential of losing the vehicle during nominal operation. Volume 3: Basic events and minimal cutsets [NASA-CR-197810] p 2160 N95-26400

Study of damage evolutions in composite plates subjected to bending loads using micro-macro analysis [AD-A288523] p 2308 N95-26839

Debris/Ice/TPS assessment and integrated photographic analysis of Shuttle mission STS-67 [NASA-TM-110651] p 2160 N95-27238

The effects of finite element grid density on model correlation and damage detection of a bridge [DE94-018895] p 2309 N95-27305

Multimedia Environmental Pollutant Assessment System (MEPAS) application guidance. Guidelines for evaluating MEPAS input parameters for Version 3.1 [DE95-007525] p 2328 N95-27749

Assay of weathering effects on protective polymer coatings using positron annihilation spectroscopy [DE95-007040] p 2236 N95-27962

Gamma ray-induced embrittlement of pressure vessel alloys [DE95-007133] p 2220 N95-28072

OB/OD treatment: The effective use of measured field data and air modeling to support an environmental assessment p 2170 N95-28296

Toxicity assessment of liquid propellant XM46 p 2175 N95-28319

Weightless Environment Training Facility (WETF) materials coating evaluation, volume 3 [NASA-CR-188366-VOL-3] p 2239 N95-28387

Navy composite maintenance and repair experience p 2193 N95-28446

Compressive strength of damaged and repaired composite plates p 2198 N95-28484

SMART materials: Surfaces, transforms and interfaces. The commensurate engineering dimension [AD-A289598] p 2312 N95-28649

DAMPING

A state-space model of a large, lightly damped space structure using the Eigensystem realization algorithm [AD-A289251] p 2163 N95-26970

Use of blade pitch control to provide power train damping for the Mod-2, 2.5-mW wind turbine p 2306 N95-27986

DARK MATTER

The second coming of cold dark matter? [DE95-005156] p 2462 N95-27445

Supersymmetry and light quark masses in a realistic superstring model [DE95-610201] p 2412 N95-28041

DARKNESS

Basic mechanisms and implications of non-photic entrainment of circadian rhythmicity [AD-A288433] p 2353 N95-26779

DATA ACQUISITION

Longterm infrared cloud clutter research [AD-A288632] p 2340 N95-26343

Technical report series on global modeling and data assimilation. Volume 6: A multiyear assimilation with the GEOS-1 system: Overview and results [NASA-TM-104606-VOL-6] p 2334 N95-26423

Analysis of historical oceanographic data on a personal computer. Program MDS [AD-A288965] p 2363 N95-26447

Weather And Radar Processor (WARP) Test and Evaluation Master Plan (TEMP) [AD-A288280] p 2340 N95-26453

Long term distributed file reference tracing: Implementation and experience [AD-A288585] p 2452 N95-26535

Auto-processing of OTH radar amplitude/range/Doppler data [AD-A289152] p 2253 N95-27005

Radon integral measurement system [DE95-608074] p 2405 N95-27010

Measurements of HF auroral clutter using the Verona Ava Linear Array Radar (VALAR) [AD-A289442] p 2337 N95-27147

The systems of the proportional chambers registration electronics for present experiments in nuclear physics [DE95-608559] p 2419 N95-27161

Programming for time resolved spectrum in pulse radiolysis experiments [DE95-607929] p 2406 N95-27212

Spinning a web: Publishing the SEI software configuration management research on the world wide web [AD-A288708] p 2377 N95-27250

A video strip chart program [DE95-006389] p 2372 N95-27495

Development of a direct match technique for star identification on the SWAS mission p 2148 N95-27771

Real-time data compression using a fixed Huffman encoding scheme [DE95-006159] p 2455 N95-27949

The installation of and first results from the superconducting gravimeter GWR20 at the Metsahovi Station, Finland [REPT-95:1] p 2338 N95-27995

Remote measurement of ground temperature and emissivity [DE95-008055] p 2314 N95-28053

Particle fallout/activity sensor [NASA-CASE-KSC-11687-1] p 2293 N95-28362

Data acquisition software for DREO's near-field antenna measurement facility [AD-A289819] p 2258 N95-28573

Manikin integrated data acquisition system (MIDAS) initial modifications [AD-A291662] p 2361 N95-28667

DATA BASE MANAGEMENT SYSTEMS

Analysis, design and implementation of a database system for the systems management curriculum office [AD-A289656] p 2452 N95-26758

The re-engineering of the Air Force Institute of Technology Student Information System [AD-A289426] p 2453 N95-26866

A demonstration of Client-Server technology using remote procedure calls with an application of file migration for moving records based on time [AD-A289392] p 2453 N95-26879

Research and development management information system, system user manual [AD-A289151] p 2453 N95-27004

The transition of GTDS to the Unix workstation environment p 2151 N95-27789

The Sunrise project: An R&D project for a national information infrastructure prototype [DE95-006340] p 2455 N95-27847

Research on the establishment of the database system for R and D on the innovative technology for the Earth [DE95-759244] p 2458 N95-27937

Methods development for measuring and classifying flammability/combustibility of refrigerants. Task 1: Annotated bibliography [DE95-007232] p 2238 N95-28133

Managing electronic records: A guideline [DE95-007038] p 2456 N95-28555

The Global Historical Climatology Network: A preview of version 2 [DE95-007003] p 2332 N95-28605

Query by image example: The CANDID approach [DE95-006284] p 2456 N95-28631

A black carbon emission data base for atmospheric chemistry and climate studies [DE95-006436] p 2332 N95-28662

DATA BASES

Long Duration Exposure Facility Mini-Data Base User's Guide: Macintosh version [NASA-CR-4656] p 2177 N95-26391

A method to determine the structure of an unknown mixture using the Akaike Information Criterion and the bootstrap [AD-A288295] p 2394 N95-26415

Technical report series on global modeling and data assimilation. Volume 6: A multiyear assimilation with the GEOS-1 system: Overview and results [NASA-TM-104606-VOL-6] p 2334 N95-26423

The re-engineering of the Air Force Institute of Technology Student Information System [AD-A289426] p 2453 N95-26866

AIAA Techfest 20 Proceedings [NIAR-94-1] p 2118 N95-26941

The aerospace database: An introduction to AIAA'S computerized source for identifying scientific and technical information p 2119 N95-26950

Semantic heterogeneity in database and data dictionary integration for command and control systems [AD-A289180] p 2453 N95-27014

Isolated digit recognition without time alignment [AD-A289344] p 2254 N95-27062

Solar terrestrial radiation data from the Sleepers River Research Watershed [AD-A288444] p 2464 N95-27184

Automated database design from natural language input p 2383 N95-27378

Modeling precipitation from concentrated solutions with the EQ3/6 chemical speciation codes [DE95-006264] p 2204 N95-27556

From LDEF to a national Space Environment and Effects (SEE) program: A natural progression p 2145 N95-27657

Long Duration Exposure Facility (LDEF) Archive System p 2457 N95-27658

The Long Duration Exposure Facility (LDEF) annotated bibliography p 2457 N95-27659

The distribution of cloud cover over the former USSR as derived from the RIHMI 223-Station 3-hourly meteorological database [DE95-007046] p 2343 N95-27920

Research on the establishment of the database system for R and D on the innovative technology for the Earth [DE95-759244] p 2458 N95-27937

Horizontal axis wind turbine post stall airfoil characteristics synthesization p 2124 N95-27974

The Tau-Charm Factory in the ERA of B-Factories and CESR [DE95-007894] p 2412 N95-28028

High temperature Hexoloy(trademark) SX silicon carbide [DE95-007290] p 2221 N95-28075

Application of a Geographic Information System for radiologic emergency response [DE95-007624] p 2455 N95-28113

Methods development for measuring and classifying flammability/combustibility of refrigerants. Task 1: Annotated bibliography [DE95-007232] p 2238 N95-28133

Enplanement and all cargo activity [AD-A280074] p 2144 N95-28151

The program for calculating sunshine duration from global radiation [KNMI-TR-158] p 2343 N95-28237

Overview of the ACT program p 2193 N95-28463

COINS: A composites information database system p 2194 N95-28465

Managing electronic records: A guideline [DE95-007038] p 2456 N95-28555

Vocoded KING data base [AD-A289827] p 2258 N95-28576

The combined release and radiation effects satellite time history data base system [AD-A289835] p 2165 N95-28578

Downloading environmental data in the new MOODS format [AD-A288835] p 2456 N95-28589

Proceedings of the AIAA/FAA joint symposium on general aviation systems [AD-A289830] p 2120 N95-28610

TRAINS: Dialogue transcription tools [AD-A289869] p 2259 N95-28624

Query by image example: The CANDID approach [DE95-006284] p 2456 N95-28631

A black carbon emission data base for atmospheric chemistry and climate studies [DE95-006436] p 2332 N95-28662

DATA COMPRESSION

Digital mapping, charting, and geodesy analysis program technical review of Vector Quantization (VQ) Decompression for the National Imagery Transmission Format Standard (NITFS) [AD-A288998] p 2314 N95-26682

Auto-processing of OTH radar amplitude/range/Doppler data
[AD-A289152] p 2253 N95-27005
Real-time data compression using a fixed Huffman encoding scheme
[DE95-006159] p 2455 N95-27949

DATA CONVERSION ROUTINES
User documentation of the CTA program
[AD-A289508] p 2121 N95-26854
A simple method for verifying the deployment of the TOMS-EP solar arrays p 2150 N95-27782

DATA CORRELATION
The effects of finite element grid density on model correlation and damage detection of a bridge
[DE94-018895] p 2309 N95-27305

DATA FLOW ANALYSIS
Automatic test data generation tool for large-scale software systems
[AD-A289081] p 2365 N95-26611
Design tool for multiprocessor scheduling and evaluation of iterative dataflow algorithms
[NASA-TP-3491] p 2366 N95-26685
Control-flow analysis and type systems
[AD-A289338] p 2389 N95-26772

DATA INTEGRATION
Finding the forest in the trees. The challenge of combining diverse environmental data
[NASA-CR-197798] p 2326 N95-26362
Semantic heterogeneity in database and data dictionary integration for command and control systems
[AD-A289180] p 2453 N95-27014
Replacing the message service component in an integration framework
[AD-A289928] p 2375 N95-28628

DATA LINKS
Low-power, parallel photonic interconnections for Multi-Chip Module applications
[DE95-008518] p 2267 N95-28147
Radio telemetry buoy for long-range communication
[AD-D017269] p 2161 N95-28581

DATA MANAGEMENT
Finding the forest in the trees. The challenge of combining diverse environmental data
[NASA-CR-197798] p 2326 N95-26362
Digital mapping, charting, and geodesy analysis program: Initial technical review of Raster Product Format
[AD-A289039] p 2313 N95-26476
Activities of the Laboratory of Information Processing Science
[PB95-184982] p 2452 N95-26631
Flexible and safe resolution of file conflicts
[AD-A289342] p 2452 N95-26752
Analysis, design and implementation of a database system for the systems management curriculum office
[AD-A289656] p 2452 N95-26758
Scalability in production system programs
[AD-A289345] p 2453 N95-27063
A multi-attribute-utility-theory model that minimizes interview-data requirements: A consolidation of space launch decisions
[AD-A289421] p 2164 N95-27144
Solar terrestrial radiation data from the Sleepers River Research Watershed
[AD-A288444] p 2464 N95-27184
Integrated planning and scheduling for Earth science data processing p 2384 N95-27382
Flight dynamics software in a distributed network environment p 2151 N95-27790
Application of a Geographic Information System for radiologic emergency response
[DE95-007624] p 2455 N95-28113
Visualization methods for the exploration of high dimensional data
[AD-A291717] p 2393 N95-28507
Downloading environmental data in the new MOODS format
[AD-A288835] p 2456 N95-28589

DATA PROCESSING
SeaWiFS technical report series. Volume 26: Results of the SeaWiFS Data Analysis Round-Robin, July 1994 (DARR-1994)
[NASA-TM-104566-VOL-26] p 2345 N95-26430
Integration of video and radiation analysis data
[DE95-004165] p 2379 N95-26443
Analysis of historical oceanographic data on a personal computer. Program MDS
[AD-A288965] p 2363 N95-26447
Weather And Radar Processor (WARP) Test and Evaluation Master Plan (TEMP)
[AD-A288280] p 2340 N95-26453
Digital mapping, charting, and geodesy analysis program: Initial technical review of Raster Product Format
[AD-A289039] p 2313 N95-26476
Modal event calculus in Lolli
[AD-A288544] p 2365 N95-26605
Activities of the Laboratory of Information Processing Science
[PB95-184982] p 2452 N95-26631
Using SCR methods to analyze requirements documentation
[NASA-CR-197760] p 2365 N95-26668
Space tether-radar data processing
[AD-A289654] p 2250 N95-26725
Flexible and safe resolution of file conflicts
[AD-A289342] p 2452 N95-26752
Analysis, design and implementation of a database system for the systems management curriculum office
[AD-A289656] p 2452 N95-26758
Performance and policy dimensions in internet routing
[NASA-CR-197772] p 2367 N95-26770
Bow shock data analysis
[AD-A288432] p 2429 N95-26800
Conversion of sunflower multiband radiometer polarization measurements to polarization parameters
[NASA-CR-197774] p 2314 N95-26815
Stall precursor study of high frequency data for three high speed, swept compressor rotors
[AD-A289379] p 2139 N95-26878
Auto-processing of OTH radar amplitude/range/Doppler data
[AD-A289152] p 2253 N95-27005
A modified backpropagation algorithm for training neural networks on data with error bars
[DE95-608729] p 2381 N95-27025
Statistical data analysis
[DE95-007214] p 2454 N95-27090
STEP: A futurevision, today
[NONP-NASA-VT-95-49121] p 2451 N95-27209
Computer Systems Division software system metrics approach
[AD-A288837] p 2370 N95-27210
A user-system interface agent p 2383 N95-27379
Integrated planning and scheduling for Earth science data processing p 2384 N95-27382
A fuzzy logic intelligent diagnostic system for spacecraft integrated vehicle health management
p 2385 N95-27392
Scientific statistics and graphics on the Macintosh
[DE95-006445] p 2372 N95-27533
A simple method for verifying the deployment of the TOMS-EP solar arrays p 2150 N95-27782
Millimeter-wave imaging radiometer data processing and development of water vapor retrieval algorithms
[NASA-CR-198593] p 2343 N95-27997
Dip-moveout processing by Fourier transform in anisotropic media
[DE95-007668] p 2339 N95-28190
Transformation to zero offset in transversely isotropic media
[DE95-007669] p 2339 N95-28192
Bilateral force feedback for hydraulically actuated systems
[AD-A291632] p 2387 N95-28545
Guide for transmitting Standard Generalized Markup Language (SGML) encoded bibliographic records
[DOE/OSTI-11685] p 2457 N95-28675

DATA RECORDERS
Micro-time stress measurement device development
[AD-A289511] p 2361 N95-26845

DATA REDUCTION
SeaWiFS technical report series. Volume 26: Results of the SeaWiFS Data Analysis Round-Robin, July 1994 (DARR-1994)
[NASA-TM-104566-VOL-26] p 2345 N95-26430
Using SCR methods to analyze requirements documentation
[NASA-CR-197760] p 2365 N95-26668
Statistical data analysis
[DE95-007214] p 2454 N95-27090
A fuzzy logic intelligent diagnostic system for spacecraft integrated vehicle health management
p 2385 N95-27392
A simple method for verifying the deployment of the TOMS-EP solar arrays p 2150 N95-27782
Using COLETTE. (A simple guide)
[PB95-195806] p 2375 N95-28658

DATA RETRIEVAL
A demonstration of Client-Server technology using remote procedure calls with an application of file migration for moving records based on time
[AD-A289392] p 2453 N95-26879

DATA STORAGE
Distributed interactive simulation virtual cassette recorder (DIS VCR); A datalogger with variable speed replay
[AD-A289212] p 2290 N95-26989

DATA STRUCTURES
Parallel computing on various platforms: A case study
[AD-A289008] p 2376 N95-26460
An introduction to software architecture
[AD-A288356] p 2363 N95-26467
Vector Smart Map Level 1: A new DMA product
[AD-A288920] p 2452 N95-26607
Reflection of neutrons from an optical grating
[DE95-007145] p 2411 N95-28004

DATA SYSTEMS
Distributed interactive simulation virtual cassette recorder (DIS VCR); A datalogger with variable speed replay
[AD-A289212] p 2290 N95-26989
Outline and handling manual of fusion experimental data monitor system DAISY, version 2
[DE95-703895] p 2431 N95-27414

DATA TRANSFER (COMPUTERS)
A decentralized software bus based on IP multicasting
[NASA-CR-197768] p 2366 N95-26695
A demonstration of Client/Server technology using remote procedure calls for an application of file migration for moving records based on location
[AD-A289391] p 2453 N95-26864
A demonstration of Client-Server technology using remote procedure calls with an application of file migration for moving records based on time
[AD-A289392] p 2453 N95-26879
STEP: A futurevision, today
[NONP-NASA-VT-95-49121] p 2451 N95-27209
Preliminary flight software specification for the petite amateur Navy satellite (PANSAT)
[AD-A280068] p 2165 N95-28150

DATA TRANSMISSION
Joint Services Electronics Program (JSEP)
[AD-A288299] p 2345 N95-26419
A decentralized software bus based on IP multicasting
[NASA-CR-197768] p 2366 N95-26695
Information superhighway: Issues affecting development
[AD-A289434] p 2252 N95-26923
The systems of the proportional chambers registration electronics for present experiments in nuclear physics
[DE95-608559] p 2419 N95-27161
Sandia's network for Supercomputing '94: Linking the Los Alamos, Lawrence Livermore, and Sandia National Laboratories using switched multimegabit data service
[DE95-007717] p 2378 N95-28074
Guide for transmitting Standard Generalized Markup Language (SGML) encoded bibliographic records
[DOE/OSTI-11685] p 2457 N95-28675

DAYTIME
Parallel plasma fluid turbulence calculations
[DE95-006741] p 2431 N95-27537
Measurements of daytime and upper tropospheric water vapor profiles by Raman lidar
[DE95-007640] p 2344 N95-28538

DEBONDING (MATERIALS)
Micromechanical prediction of tensile damage for ceramic matrix composites under high temperature
[AD-A288238] p 2180 N95-26626
Micromechanical modeling of damage and inelasticity of composite materials in macroscopic structural analysis
[DE95-003666] p 2182 N95-27421
Evaluation of patch effectiveness in repairing aircraft components p 2133 N95-27513
Composite repair issues on the CF-18 aircraft
p 2134 N95-27518

DECELERATION
Discovery of the most distant supernovae and the quest for (Omega)
[DE95-006569] p 2460 N95-28197

DECISION MAKING
Using machine learning to derive efficient cost and performance estimates in VLSI CAD designs
[AD-A288254] p 2363 N95-26408
Strategy in the commercial aircraft industry in the United States: A comparison of decisionmaking by McDonnell-Douglas and Boeing aircraft companies from 1977-1983
[AD-A288289] p 2117 N95-26409
Distributed computation of Pareto solutions for two decision makers
[PB95-185047] p 2396 N95-26613
Analysis of group performance in visual signal detection
[AD-A289561] p 2355 N95-26683
A multi-attribute-utility-theory model that minimizes interview-data requirements: A consolidation of space launch decisions
[AD-A289421] p 2164 N95-27144
Myers-Briggs type indicators and Kirton adaption-innovation inventory correlations
[AD-A288435] p 2357 N95-27181

Community relations plan: Galena Airport and Camp ion Air Force Station, Alaska
[AD-A286722] p 2327 N95-27234
An analysis of Bayesian networks as classifiers
[AD-A289316] p 2382 N95-27293
Fuzzy-algebra uncertainty assessment
[DE95-005426] p 2391 N95-27432
An introductory guide to uncertainty analysis in environmental and health risk assessment. Environmental Restoration Program
[DE95-008097] p 2354 N95-28136
Automated remedial assessment methodology software system
[DE95-007287] p 2373 N95-28243
Distributed methods and processes in games of incomplete information
[PB95-184842] p 2396 N95-28352
Distributed methods and processes in games of incomplete information
[PB95-184859] p 2396 N95-28353
Severe weather guide mediterranean
[AD-A289829] p 2344 N95-28577

DECISION THEORY
Classification of ultra high range resolution radar using decision boundary analysis
[AD-A289378] p 2251 N95-26877
Real-time value-driven diagnosis
p 2386 N95-27396
Automated remedial assessment methodology software system
[DE95-007287] p 2373 N95-28243

DECLINATION
Ulysses orbit determination at high declinations
p 2151 N95-27787

DECODERS
Vocoded KING data base
[AD-A289827] p 2258 N95-28576

DECODING
The automatic extraction of selected speech spectral characteristics
[IFTR-2/1994] p 2250 N95-26835

DECOMMISSIONING
Health and environmental hazards of CdTe photovoltaic module production, use and decommissioning
[DE95-006688] p 2320 N95-27682

DECOMPOSITION
Parallelizing locally-weighted regression
[AD-A288294] p 2394 N95-26414
NO decomposition in non-reducing atmospheres
[DE95-007895] p 2205 N95-27690
Effects of hydrogen on carbon steels at the Multi-Function Waste Tank Facility
[DE95-007194] p 2219 N95-28005
Evaluation of microporous carbon filters as catalysts for ozone decomposition
[DE95-006498] p 2331 N95-28548

DECONTAMINATION
A practical approach to soil remediation
p 2232 N95-27125
Automated remedial assessment methodology software system
[DE95-007287] p 2373 N95-28243
Biodegradation of nitrate esters p 2171 N95-28299
Radiant exchange considerations in design and scaleup of photocatalytic reactors for purification of nitroglycerine-contaminated air p 2171 N95-28300
Recovery, evaluation, and decontamination of landfilled pentaborane cylinders, former liquid propellant rocket engine test facility, Washoe County, Nevada
p 2171 N95-28302

DECOUPLING
An investigation of the effects of pitch-roll (de)coupling on helicopter handling qualities
[NASA-TM-110349] p 2141 N95-26773

DEEP SPACE
Application of non-coherent Doppler data types for deep space navigation p 2151 N95-27788

DEEP SPACE NETWORK
Application of non-coherent Doppler data types for deep space navigation p 2151 N95-27788

DEEP WATER
Tomographic observations of deep convection and the thermal evolution of the Greenland Sea Gyre 1988-1989
[AD-A289104] p 2348 N95-28096

DEFECTS
A book and series of monographs on ice physics
[AD-A288319] p 2200 N95-26422
Combined investigation of Eddy current and ultrasonic techniques for composite materials NDE
[NASA-TM-110599] p 2306 N95-26778
Materials Research Society Symposium Proceedings. Volume 339: Diamond, SiC and nitride wide bandgap semiconductors
[AD-A288690] p 2437 N95-26818
Radiation-induced segregation: A microchemical gauge to quantify fundamental defect parameters
[DE95-005720] p 2216 N95-27492
Characterization of defects in deuterium-implanted beryllium
[DE95-005688] p 2217 N95-27553
I(sub DDQ) testing and defect classes: A tutorial
[DE95-005467] p 2306 N95-27723
Defect characterization of electronic conducting pseudo-perovskite systems
[DE95-007487] p 2220 N95-28049
Effects of high-temperature environments on flaw generation and fracture behavior of SiC/SiC composites
[DE95-008270] p 2183 N95-28068
Reactor pressure vessel structural integrity research
[DE95-007034] p 2223 N95-28208
Evaluation of defect-related diffusion in semiconductors by electrooptical sampling
[AD-A291630] p 2270 N95-28544

DEFENSE INDUSTRY
Surviving the peace. Lessons learned from the aircraft industry in the 1920s and 1930s
[AD-A288284] p 2117 N95-26455

DEFENSE PROGRAM
An integrated GPS/INS/BARO and radar altimeter system for aircraft precision approach landings
[AD-A289280] p 2127 N95-26985
OB/OD treatment: The effective use of measured field data and air modeling to support an environmental assessment p 2170 N95-28296
Hazards analysis of an integral class 1.1/1.3 rocket motor demilitarization and ingredient recovery system using ammonia p 2174 N95-28315
Recovery and reuse of rocket motor propellant ingredients p 2177 N95-28326
Unmanned aerial vehicles, 1994 master plan
[AD-A291628] p 2136 N95-28411
Inspection methods for underwater cables
[AD-A289610] p 2312 N95-28616

DEFLECTION
A non-iterative grid deformation algorithm for computational fluid dynamics for aeroelasticity
[AD-A288298] p 2273 N95-26418
Evaluation of composite joints
[AD-A289247] p 2181 N95-26967
Magnetization of ferromagnetic clusters
[DE95-006878] p 2399 N95-27548
Resonant coherent excitation of N6(+) and Mg11(+) in planar channeling: Anisotropies in ionization probabilities and X-ray emission
[DE95-006732] p 2417 N95-28595
Method of space-time sequence transform used to measure acousto-optic deflection and modulation
[AD-A289612] p 2402 N95-28671

DEFORESTATION
Investigation on technology for increasing the biological CO2 sink and technology for CO2 fixation and reutilization
[DE95-759251] p 2329 N95-27941

DEFORMATION
Process control of microstructure in manufacturing
[AD-A288291] p 2245 N95-26410
A non-iterative grid deformation algorithm for computational fluid dynamics for aeroelasticity
[AD-A288298] p 2273 N95-26418
Stability and thermal influences in nonlinear continuum mechanics and material science
[AD-A288333] p 2448 N95-26563
Frame selection performance limits for statistical image reconstruction of adaptive optics compensated images
[AD-A289240] p 2424 N95-26965
Investigation into the behavior of geometrically nonlinear composite arches
[AD-A289258] p 2308 N95-26975
The role of edge dislocations in the deformation of BCC metals
[DE95-609157] p 2219 N95-27759
The high strain rate deformation of tungsten single crystals
[AD-A288874] p 2223 N95-28189
Designing for time-dependent material response in spacecraft structures p 2166 N95-28292
Deformation behavior of thin lubricant films at elevated pressure
[AD-A288906] p 2241 N95-28592

DEGRADATION
Progress towards computer simulation of NiH2 battery performance over life p 2272 N95-26786
Fatigue behavior of a cross-ply ceramic matrix composite at elevated temperature under tension-tension loading
[AD-A289250] p 2182 N95-26969
Probabilistic material strength degradation model for Inconel 718 components subjected to high temperature, high-cycle and low-cycle mechanical fatigue, creep and thermal fatigue effects
[NASA-CR-197832] p 2214 N95-27167
Systematic study of the ion beam mixing of oxide markers into alumina
[DE95-006262] p 2217 N95-27555
Atomic oxygen dosimetry measurements made on STS-46 by CONCAP 2 p 2418 N95-27634
LEO degradation of graphite and carbon-based composites aboard Space Shuttle Flight STS-46
p 2199 N95-27636
Evaluation of laser-protective eyewear dyes in UVEX lenses
[AD-A290076] p 2361 N95-28390

DEGREES OF FREEDOM
Dynamic coupling of underactuated manipulators
[AD-A289404] p 2301 N95-27098
Aeroelastic stability of wind turbine blade/aileron systems p 2124 N95-27981
Bilateral force feedback for hydraulically actuated systems
[AD-A291632] p 2387 N95-28545

DEICING
Replicator for characterization of cirrus and polar stratospheric cloud particles
[NASA-CR-197785] p 2341 N95-26669

DEIONIZATION
Aqueous degreasing, precision cleaning, and cleanliness verification p 2231 N95-27121

DELAMINATING
Growth of hydrogenated amorphous silicon (a-Si:H) on patterned substrates for increased mechanical stability
[DE95-006589] p 2234 N95-27472
Composite repair issues on the CF-18 aircraft
p 2134 N95-27518
Repair technology for thermoplastic aircraft structures
p 2134 N95-27519
Service tough composite structures using the Z-direction reinforcement process p 2185 N95-28272
Through-the Thickness(R) braided composites for aircraft applications p 2185 N95-28273
Assembly induced delaminations in composite structures p 2186 N95-28279
Analysis of composite structures with delaminations under combined bending and compression
p 2190 N95-28429
Characteristics of laminates with delamination control strips p 2191 N95-28434
Fundamental concepts in the suppression of delamination buckling by stitching p 2198 N95-28486

DELAY
Crushing the delay: Tools for fractional delay filter design
[PB95-195509] p 2257 N95-28450

DELAY LINES
Generation of a single-lobe, far-field intensity pattern from a laser diode array using an optical delay line
[AD-A289226] p 2295 N95-26961

DELTA LAUNCH VEHICLE
Chemical reactions identified in the Titan 2, Titan 4, and Delta 2 propellant systems and their application to source modeling p 2172 N95-28304

DEMAGNETIZATION
Electromagnetic hysteretic response calculation for superconductors in demagnetizing geometries
[DE95-005028] p 2264 N95-27403

DEMAND (ECONOMICS)
Alternative fuels and vehicles choice model
[DE95-005695] p 2243 N95-27944

DEMOGRAPHY
Enhancing the effects of diversity awareness training: A review of the research literature
[DOT/FAA/AM-95/10] p 2355 N95-28361

DENITROGENATION
Biodegradation of nitrate esters p 2171 N95-28299

DENSIFICATION
Control of thin film processing behavior through precursor structural modifications
[DE95-006468] p 2444 N95-28103
Task 4 supporting technology. Densification requirements definition and test objectives. Propellant densification requirements definition
[NASA-CR-198629] p 2450 N95-28260
Ceramic composite combustor cans for expendable turbine engines
[AD-A289551] p 2140 N95-28646

DENSITY MEASUREMENT
A new technique for measuring the separation of closely spaced dislocations using residual contrast conditions
[DE95-007147] p 2219 N95-27968

DEOXYGENATION
Preconversion catalytic deoxygenation of phenolic functional groups
[DE95-007556] p 2204 N95-27458

DEOXYRIBONUCLEIC ACID
DNA denaturation through a model of the partition points on a one-dimensional lattice
[DE95-807909] p 2439 N95-27201

Sequence comparison on a cluster of workstations using the PVM system
[DE95-006527] p 2378 N95-27709
A correlated Walks' theory for DNA denaturation
[DE95-607910] p 2444 N95-28112

DEPLOYMENT
The Alpha-Proton-X-ray Spectrometer deployment mechanism: An anthropomorphic approach to sensor placement on Martian rocks and soil
p 2155 N95-27265
Solar array deployment mechanism
p 2155 N95-27266
Deployment and retraction of a cable-driven solar array: Testing and simulation p 2158 N95-27283
Development of the solar array deployment and drive system for the XTE spacecraft p 2158 N95-27284
A simple method for verifying the deployment of the TOMS-EP solar arrays p 2150 N95-27782
Report to the Chairman and Ranking Minority Member, Committee on Science, House of Representatives. Weather forecasting: Radar availability requirement not being met
[GAO/AIMD-95-132] p 2342 N95-27912

DEPOLARIZATION
Muon spin relaxation in ferromagnets: Theoretical results for paramagnetic EuO and EuS
[PB95-192860] p 2418 N95-28641
Muon spin relaxation in antiferromagnets: A study of RbMnF3 based on the coupled-mode theory of paramagnetic and critical spin fluctuations
[PB95-192878] p 2418 N95-28642

DEPOSITION
Advanced solid lubricant films by Ion-Beam Assisted Deposition
[AD-A288866] p 2225 N95-26499
Effect of processing parameters on surface finish for fused deposition machinable wax patterns
[NASA-TP-3550] p 2244 N95-26769
Magnetically controlled deposition of metals using gas plasma
[DE95-007248] p 2430 N95-27237
Growth of hydrogenated amorphous silicon (a-Si:H) on patterned substrates for increased mechanical stability
[DE95-006589] p 2234 N95-27472
ECR plasma-assisted deposition of Al2O3 and dispersion-strengthened AlO2
[DE95-007743] p 2235 N95-27687
Copper CVD using liquid coinjection of (hfac)Cu(TMVS) and TMVS
[DE95-008155] p 2237 N95-28089
Sensor for measuring the atomic fraction in highly dissociated hydrogen
[DE95-006531] p 2415 N95-28204
A model of the diurnal variation in magnesium ion density and radiance in the thermosphere
[AD-A289824] p 2339 N95-28575

DEPOSITS
Mechanism of deposit formation on fuel-wetted hot metal surfaces
[AD-A289847] p 2210 N95-28621

DEPTH
ACT adaptive filters
[AD-A288385] p 2363 N95-26474
Reducing network depth in the Cascade-Correlation learning architecture
[AD-A289352] p 2382 N95-27066
Depth migration in transversely isotropic media with explicit operators
[DE95-007670] p 2337 N95-27442
Non-destructive inter-level dielectric via in-line process monitoring by atomic force microscopy
[DE95-008516] p 2267 N95-28146

DERIVATION
Notes on the calibration of the JHU-APL solar vector magnetograph at NSO-Sec peak
[AD-A289277] p 2253 N95-26983
On higher derivative gravity in two dimensions
[DE95-608789] p 2462 N95-27343
Developments in the electron gun simulation program, EGUN
[DE95-008137] p 2267 N95-28143

DESCENT
Engineering photochemical smog through convection towers
[DE95-007727] p 2328 N95-27686

DESENSITIZING
Surfactants and desensitizing wax substitutes for TNT-Based systems
[AD-A289652] p 2243 N95-28634

DESIGN
Monolithic electronics for nuclear and high-energy physics experiments
[DE95-005393] p 2420 N95-27427

DESIGN ANALYSIS
An introduction to software architecture
[AD-A288963] p 2363 N95-26446
An introduction to software architecture
[AD-A288356] p 2363 N95-26467
Supersonic transport grid generation, validation, and optimization
[NASA-CR-197752] p 2365 N95-26648
CFD research, parallel computation and aerodynamic optimization
[NASA-CR-197748] p 2120 N95-26649
Design and testing of low sonic boom configurations and an oblique all-wing supersonic transport
[NASA-CR-197744] p 2129 N95-26651
The re-engineering of the Air Force Institute of Technology Student Information System
[AD-A289426] p 2453 N95-26866
Design and characterization of resonant cavity light-emitting diodes
[AD-A289307] p 2261 N95-26921
Active antennas with periodic structures
[AD-A289437] p 2252 N95-26924
A systems engineering approach to electro-mechanical reconfiguration for mobility autonomy
[AD-A289479] p 2301 N95-26926
Preliminary design problems and solutions for a supersonic oblique all-wing transport aircraft
p 2118 N95-26942
An exploratory application of neural networks for airfoil design p 2118 N95-26943
Distributed interactive simulation virtual cassette recorder (DIS VCR); A datalogger with variable speed replay
[AD-A289212] p 2290 N95-26989
A foveated system to reduce transmission bandwidth of video images from remote camera systems
[AD-A288516] p 2254 N95-27060
Design considerations in supercritical fluid technology
p 2232 N95-27126
A review of nickel hydrogen battery technology
[NASA-TM-106918] p 2167 N95-27177
Successful product realization strategies
p 2264 N95-27233
Design, testing and evaluation of latching end effector
p 2155 N95-27261
Some mechanical design aspects of the European Robotic Arm p 2155 N95-27262
Solar array deployment mechanism
p 2155 N95-27266
Changing paradigms: Manufacturing vs. fabricating a high volume Hold Down and Release Mechanism
p 2155 N95-27267
Ultra-high, resolution, modular optical angle encoder for space-based opto-mechanical applications
p 2156 N95-27270
High performance stepper motors for space mechanisms p 2156 N95-27271
Electromechanical rotary actuator
p 2157 N95-27278
Special features of the CLUSTER antenna and radial booms design, development and verification
p 2157 N95-27281
FORTE antenna element and release mechanism design p 2157 N95-27282
Development of the solar array deployment and drive system for the XTE spacecraft p 2158 N95-27284
High-performance reactionless scan mechanism
p 2158 N95-27288
Linear Proof Mass Actuator p 2158 N95-27290
Micromechanisms for optimism seismometer
p 2159 N95-27292
Composite heat pipe development status: Development of lightweight prototype carbon-carbon heat pipe with integral fins and metal foil liner
[NASA-TM-106909] p 2283 N95-27369
A verification procedure for MSC/NASTRAN Finite Element Models
[NASA-CR-4675] p 2131 N95-27371
Wind-tunnel test of the S814 thick root airfoil
[DE95-000268] p 2122 N95-27541
Performance of an accordion electromagnetic calorimeter with liquid krypton
[DE95-006693] p 2292 N95-27738
The KTeV pure CsI calorimeter
[DE95-005747] p 2292 N95-27751
Vibration analysis of a split path gearbox
[NASA-TM-106875] p 2302 N95-27855
Use of blade pitch control to provide power train damping for the Mod-2, 2.5-mW wind turbine
p 2306 N95-27986
A conceptual framework for evaluating variable speed generator options for wind energy applications
p 2273 N95-27987
Variable speed generator technology options for wind turbine generators p 2273 N95-27988
Variable speed generator application on the MOD-5A 7.3 mW wind turbine generator p 2273 N95-27989
A phase-stepped point diffraction interferometer using liquid crystals
[NASA-TM-106922] p 2293 N95-28037
FENIX experimental results of large-scale CICC made of bronze-processed Nb3Sn strands
[DE95-007965] p 2222 N95-28167
Advanced interactive display formats for terminal area traffic control
[NASA-CR-198576] p 2127 N95-28188
Optical design and performance of the inelastic scattering beamline at the National Synchrotron Light Source
[DE95-007679] p 2422 N95-28195
CORSSTOL: Cylinder Optimization of Rings, Skin, and Stringers with Tolerance sensitivity
[NASA-TP-3551] p 2392 N95-28215
Performance study for inlet installations
[NASA-CR-189714] p 2140 N95-28227
Femtosecond OPO's at 3 microns and beyond: Design and performance issues related to the crystal properties of KTP and similar materials
[DE95-007286] p 2446 N95-28242
Radiant exchange considerations in design and scaleup of photocatalytic reactors for purification of nitroglycerine-contaminated air p 2171 N95-28300
Design, analysis, and testing of a metal matrix composite web/flange intersection p 2191 N95-28433
Unique considerations in the design and experimental evaluation of tailored wings with elastically produced chordwise camber p 2192 N95-28436
C-130 Advanced Technology Center wing box conceptual design/cost study p 2192 N95-28437
Probabilistic design of advanced composite structure
p 2193 N95-28443
Nonlinear dynamics and aeroelasticity of rotorcraft in forward flight
[AD-A291714] p 2136 N95-28504

DESORPTION
The role of hydrogen in the hydrogenation and hydrogenolysis of aniline on the nickel single crystal surfaces: Its implication on the mechanisms of HDN reactions
[DE95-006687] p 2222 N95-28134

DESTABILIZATION
Energetic particle destabilization of shear Alfven waves in stellarators and tokamaks
[DE95-006393] p 2431 N95-27419

DESTRUCTION
Photo and thermal excitation of surface chemistry on model catalyst surfaces
[AD-A288541] p 2200 N95-26528

DETACHMENT
Measurement of particle transport coefficients on Alcator C-Mod
[DE95-007763] p 2411 N95-28020

DETECTION
Anti-idiotype probes for toxin detection
[AD-A288955] p 2348 N95-26435
Detection of charged particles in superfluid helium
[DE95-007354] p 2403 N95-26560
Compiler-assisted debugging and multiple instruction retry
[NASA-CR-197729] p 2365 N95-26628
Subvisual cirrus: What it is and where you find it
[AD-A289329] p 2342 N95-26899
Lessons learned from the introduction of autonomous monitoring to the EUVE science operations center
p 2385 N95-27393
Detecting alpha particles through scintillation in porous materials
[AD-A289313] p 2406 N95-27399
Single molecule detection using charge-coupled device array technology
[DE95-006425] p 2411 N95-27953
Alpha characterization inside pipes using ion-transport technology
[DE95-007869] p 2411 N95-28024
Particle fallout/activity sensor
[NASA-CASE-KSC-11687-1] p 2293 N95-28362
The detection and tracking of motion by means of time-space pattern modelling using random fields
[IFTR-37/1994] p 2374 N95-28566
Leak detection utilizing analog binaural (VLSI) techniques
[NASA-CASE-NPO-18399-1-CU] p 2271 N95-28599

DETECTORS
The Top...is it There? A Survey of the CDF and D0 Experiments
[DE95-005746] p 2411 N95-27945

DETERMINANTS
A system dynamics based study of software reuse and its determinants
[AD-A288578] p 2364 N95-26554

DETONATION

Evaluating the environmental viability of open burning/open detonation operations p 2170 N95-28297

Upgrade of the computer modeling programs POLU10 and POLU13A for open burning and open detonation of energetic materials p 2172 N95-28306

Recovery and reuse of rocket motor propellant ingredients p 2177 N95-28326

DETONATION WAVES

Pressure vessel burst test study p 2175 N95-28317

Investigation of HE driven cylindrical liner [DE95-007866] p 2311 N95-28539

DEUTERIUM

Fast wave current drive in D3-D [DE95-007582] p 2431 N95-27441

Characterization of defects in deuterium-implanted beryllium [DE95-005688] p 2217 N95-27553

Pumping characteristics of a cryopump with Ar sorbent in He and in D2/He mixture [DE95-007049] p 2302 N95-27875

DEUTERIUM COMPOUNDS

Small angle neutron scattering study of the micelle structure of amphiphilic block copolymers [DE95-006625] p 2234 N95-27486

DEUTERIUM FLUORIDES

A density functional/molecular dynamics study of the structure of liquid nitromethane [AD-A289224] p 2404 N95-26960

DEUTERONS

Search for deeply bound pionic atoms with high-purity germanium tagging spectrometer [DE95-609072] p 2416 N95-28252

DEVELOPING NATIONS

Environmental pollution-effects on national development [DE95-600439] p 2326 N95-26639

DIAGNOSIS

To develop an aerosoling immunomagnetic device for rapid medical diagnosis from clinical samples [AD-A288504] p 2354 N95-27059

Model-based monitoring and diagnosis of a satellite-based instrument p 2166 N95-27390

Real-time value-driven diagnosis p 2386 N95-27396

The PCMDI Visualization and Computation System (VCS): A workbench for climate data display and analysis [DE95-008586] p 2328 N95-27558

Fault tolerant features and experiments of ANTS distributed real-time system [AD-A290133] p 2256 N95-28391

Phase retrieval and time-frequency methods in the measurement of ultrashort laser pulses [DE95-006499] p 2300 N95-28549

DIALYSIS

Apparatus for diffusion controlled dialysis under microgravity conditions [NASA-CASE-MFS-28986-1] p 2245 N95-27500

DIAMOND FILMS

High-density plasma source for large-area chemical vapor deposition of diamond films [AD-A289053] p 2430 N95-27190

Growth, characterization and device development in monocrystalline diamond films [AD-A289356] p 2439 N95-27416

The in situ observation of epitaxial diamond thin film nucleation and growth using emission electron microscopy [AD-A289841] p 2447 N95-28618

DIAMONDS

Materials Research Society Symposium Proceedings. Volume 339: Diamond, SiC and nitride wide bandgap semiconductors [AD-A288690] p 2437 N95-26818

Growth, characterization and device development in monocrystalline diamond films [AD-A289356] p 2439 N95-27416

Sensor for measuring the atomic fraction in highly dissociated hydrogen [DE95-006531] p 2415 N95-28204

Atomic layer epitaxy of group 4 materials: Surface processes, thin films, devices and their characterization [AD-A289092] p 2446 N95-28327

Design and fabrication of a diamond-turned hybrid diffractive/refractive singlet for visible applications at ORNL [DE95-007007] p 2427 N95-28552

The in situ observation of epitaxial diamond thin film nucleation and growth using emission electron microscopy [AD-A289841] p 2447 N95-28618

DIATOMIC MOLECULES

Chemical physics of uniform cyclic etching [AD-A288975] p 2404 N95-26574

DIBORANE

Boron-induced reconstructions of Si(100) investigated by scanning tunneling microscopy [AD-A289222] p 2438 N95-26959

DIELECTRIC POLARIZATION

Simple equivalent dipole distributions for dielectric spheroidal scatterers [PB95-184883] p 2254 N95-27049

DIELECTRIC PROPERTIES

Temperature dependence of the static dielectric response in a Q1D electron gas [DE95-609269] p 2400 N95-28350

DIELECTRICS

A book and series of monographs on ice physics [AD-A288319] p 2200 N95-26422

Microengineered conducting composites from nanochannel templates [AD-A289573] p 2180 N95-26686

Materials, structures, and devices for high-speed electronics [NASA-CR-197815] p 2260 N95-26816

Improving the performance of spiral antennas by using passive scatterers [AD-A289324] p 2251 N95-26893

Simple equivalent dipole distributions for dielectric spheroidal scatterers [PB95-184883] p 2254 N95-27049

Observation of asymmetrical two-cone Vavilov-Cherenkov radiation in biaxial crystal of triglycinesulphate emitted by 658 MeV protons passing along bi normal [DE94-629017] p 2441 N95-27867

Time-dependent model for vertical-cavity surface-emitting laser [DE95-007880] p 2298 N95-28027

Non-destructive inter-level dielectric via in-line process monitoring by atomic force microscopy [DE95-008516] p 2267 N95-28146

Quantum effects induced by a gap in the spectrum of atom-bath coupling constants: Freezing of atomic decay and monochromatic collective radiation [DE95-609037] p 2416 N95-28251

Temperature dependence of the static dielectric response in a Q1D electron gas [DE95-609269] p 2400 N95-28350

Method of images applied to electromagnetic problems involving spherical, spheroidal and planar geometries [PB95-195517] p 2257 N95-28451

Theoretical and experimental study of low-loss, High-efficiency monolithic antenna structures at 94 GHz [AD-A291785] p 2257 N95-28513

Efficient modeling of interconnects and capacitive discontinuities in high-speed digital circuits [NASA-CR-198728] p 2270 N95-28570

Characterization of a fused silica capacitance standard [DE95-006457] p 2270 N95-28597

DIESEL FUELS

The biodegradation of fuels in soils and sediments: Differences as a function of mineralogy p 2230 N95-27116

DIFFERENCE EQUATIONS

Robust integration schemes for generalized viscoplasticity with internal-state variables. Part 1: Theoretical developments and applications [NASA-CR-195452-PT-1] p 2310 N95-28031

Robust integration schemes for generalized viscoplasticity with internal-state variables. Part 2: Algorithmic developments and implementation [NASA-CR-195453-PT-2] p 2310 N95-28032

DIFFERENTIAL ABSORPTION LIDAR

The concentration-estimation problem for multiple-wavelength differential absorption lidar [DE95-008375] p 2256 N95-28231

DIFFERENTIAL EQUATIONS

Generalized Schwarzians in several variables and Moebius invariant differential operators [PB95-185211] p 2388 N95-26539

Adaptive finite element method I: Solution algorithm and computational examples [AD-A288979] p 2389 N95-26609

Quantum k-Poincare 1994 [DE95-608754] p 2448 N95-27332

A genuinely multidimensional upwind scheme and efficient multigrid solver for the compressible Euler equations [NASA-CR-195000] p 2288 N95-28571

DIFFERENTIAL GEOMETRY

Gromov-Lawson-Rosenberg conjecture for groups with periodic cohomology [PB95-185203] p 2389 N95-26915

Introduction to Dubois-Violette's non-commutative differential geometry [DE95-608801] p 2390 N95-27311

DIFFRACTION

A phase-stepped point diffraction interferometer using liquid crystals [NASA-TM-106922] p 2293 N95-28037

Design and fabrication of a diamond-turned hybrid diffractive/refractive singlet for visible applications at ORNL [DE95-007007] p 2427 N95-28552

Method of space-time sequence transform used to measure acousto-optic deflection and modulation [AD-A289612] p 2402 N95-28671

DIFFRACTION PATTERNS

Radiation sensitive area detection device and method [NASA-CASE-MFS-28563-3] p 2423 N95-26385

DIFFUSE RADIATION

A case study of view-factor rectification procedures for diffuse-gray radiation enclosure computations p 2281 N95-27353

Reflection of neutrons from an optical grating [DE95-007145] p 2411 N95-28004

DIFFUSION

Stochastic adaptive estimation and control [AD-A289088] p 2380 N95-26480

On-axis polarization coupling in y-cut titanium in-diffused lithium niobate slab waveguides [AD-A289260] p 2253 N95-26977

Boron-induced morphology changes in silicon CVD growth: A scanning tunneling microscopy study [AD-A289275] p 2290 N95-26982

New radiation stable and long-lived plastic scintillators [DE95-608622] p 2233 N95-27163

Single-drop reactive extraction/extractive reaction with forced convective diffusion and interphase mass transfer p 2282 N95-27358

Single-drop reactive extraction/extractive reaction with forced convective diffusion and interphase mass transfer p 2283 N95-27365

Magnetic resonance imaging of solvent transport in polymer networks [DE95-007142] p 2234 N95-27455

Apparatus for diffusion controlled dialysis under microgravity conditions [NASA-CASE-MFS-28986-1] p 2245 N95-27500

The diffusion properties of ion implanted species in selected target materials [DE95-007006] p 2442 N95-27959

Error analysis of the quartic nodal expansion method for slab geometry [DE95-007373] p 2412 N95-28045

Sensor for measuring the atomic fraction in highly dissociated hydrogen [DE95-006531] p 2415 N95-28204

A point-centered diffusion differencing for unstructured meshes in 3-D [DE95-008382] p 2392 N95-28232

The off-center effect on the diffusion coefficient of Cu(+) and Li(+) in the KCl lattice [DE95-609146] p 2446 N95-28255

Evaluation of defect-related diffusion in semiconductors by electrooptical sampling [AD-A291630] p 2270 N95-28544

High energy density systems in cryogenic media: The production and reactions of atoms and radicals [AD-A289818] p 2417 N95-28572

Monte-Carlo simulation methods for finite flat plate winding flows [AD-A289842] p 2289 N95-28619

DIFFUSION COEFFICIENT

The diffusion properties of ion implanted species in selected target materials [DE95-007006] p 2442 N95-27959

The off-center effect on the diffusion coefficient of Cu(+) and Li(+) in the KCl lattice [DE95-609146] p 2446 N95-28255

DIFFUSION THEORY

The comparison of P(sub 1) and simplified P(sub 2) synthetic acceleration for iterative methods in transport solutions [DE94-018306] p 2390 N95-27304

DIFFUSIVITY

Survey on researches related to ocean disposal of carbon dioxide [DE95-759247] p 2329 N95-27939

DIGITAL COMMAND SYSTEMS

Advanced flight computer. Special study [NASA-CR-198165] p 2371 N95-27246

DIGITAL COMPUTERS

Digital optical computing [AD-A289395] p 2368 N95-26881

DIGITAL DATA

Digital mapping, charting, and geodesy analysis program technical review of Vector Quantization (VQ) Decompression for the National Imagery Transmission Format Standard (NITFS) [AD-A288998] p 2314 N95-26682

DIGITAL ELECTRONICS
Digital optical computing
[AD-A289395] p 2368 N95-26881
Novel field effect transistors for low power electronics
[AD-A288650] p 2262 N95-27096
Advanced flight computer. Special study
[NASA-CR-198165] p 2371 N95-27246
Efficient modeling of interconnects and capacitive discontinuities in high-speed digital circuits
[NASA-CR-198728] p 2270 N95-28570
Novel field effect transistors for low power electronics
[AD-A289929] p 2271 N95-28629
DIGITAL FILTERS
Analysis and simulation of narrowband GPS jamming using digital excision temporal filtering
[AD-A289328] p 2127 N95-26898
Structures for time-reversed inversion in filter banks
[AD-A289238] p 2261 N95-26964
Crushing the delay: Tools for fractional delay filter design
[PB95-195509] p 2257 N95-28450
DIGITAL SIMULATION
Design of a real-time wind turbine simulator using a custom parallel architecture p 2322 N95-27979
Parallel block implicit integration technique for trajectory parallelism
[AD-A288961] p 2379 N95-28335
DIGITAL SYSTEMS
Robust hybrid state-space self-tuning control using dual-rate sampling
[AD-A288359] p 2380 N95-26468
Research and development report. Digital audio broadcasting: Comparison of coverage at Band 2 and Band 3
[BBC-RD-1994/16] p 2248 N95-26493
Multipurpose bus interface utilizing a digital signal processor
[AD-D017264] p 2248 N95-26505
Target detection for vision systems
[AD-D017271] p 2249 N95-26509
Digital systems validation. Chapter 20 Artificial Intelligenge with applications for aircraft. Handbbook, volume 2
[AD-A288492] p 2380 N95-26638
Design tool for multiprocessor scheduling and evaluation of iterative dataflow algorithms
[NASA-TP-3491] p 2366 N95-26685
Research and development report. Eureka 147: Tests of the error performance of the DAB system
[BBC-RD-1994/18] p 2249 N95-26696
High-speed coherent laser arrays
[AD-A289373] p 2295 N95-26906
The KTeV pure CsI calorimeter
[DE95-005747] p 2292 N95-27751
Radio telemetry buoy for long-range communication
[AD-D017269] p 2161 N95-28581
Query by image example: The CANDID approach
[DE95-006284] p 2456 N95-28631
DIGITAL TECHNIQUES
Robust hybrid state-space self-tuning control using dual-rate sampling
[AD-A288359] p 2380 N95-26468
Long-range eye tracking: A feasibility study
[DE95-008587] p 2357 N95-28176
High performance ground penetrating radar survey of TA-49/Area 2
[DE95-006856] p 2258 N95-28601
DIGITAL TELEVISION
Integration of video and radiation analysis data
[DE95-004165] p 2379 N95-26443
DIGITAL TO ANALOG CONVERTERS
Method and apparatus for maintaining linearity and frequency accuracy of an FM chirp waveform
[AD-D017398] p 2258 N95-28615
DIGITS
Isolated digit recognition without time alignment
[AD-A289344] p 2254 N95-27062
DIMENSIONAL ANALYSIS
Parallel algorithms for semi-Lagrangian transport in global atmospheric circulation models
[DE95-007385] p 2327 N95-27457
DIMENSIONAL STABILITY
Ultra high purity, dimensionally stable INVAR 36
[NASA-CASE-NPO-19358-1-CU] p 2213 N95-26862
DIMERS
Analysis of the dimerized Sb/Si(001)-(2x1) surface by x-ray standing waves
[DE95-007097] p 2208 N95-27965
On the synthesis of mixed-metal and mixed-pnicogen13-15 ring-systems
[AD-A288869] p 2223 N95-28332
Isolation and x-ray crystal structures of (Li(mu2-As(SiMe3)2) (mu3-As(SiMe3)2)(THF))2 and ((Me3Si)2AsLi(THF)2)2
[AD-A288870] p 2241 N95-28661
DIMETHYLHYDRAZINES
Evaluation of a conductive polymer-based sensor for detection of hydrazines at the part-per-billion level
p 2173 N95-28309
DINITRATES
Biodegradation of nitrate esters p 2171 N95-28299
DIODES
Solid-state image sensor with focal-plane digital photon-counting pixel array
[NASA-CASE-NPO-18518-1-CU] p 2424 N95-26894
On the physics of ion ring generation for the stabilization of FRX discharges
[DE95-007105] p 2410 N95-27922
A comparison of NH3 point monitoring and diode laser based path integrated measurements
[DE95-006892] p 2332 N95-28602
DIOXIDES
Small angle x ray scattering studies of reverse micelles in supercritical fluids
[DE95-007803] p 2287 N95-28021
DIPOLE ANTENNAS
Low-cost tubular antenna deployer for WISP-2
p 2156 N95-27269
DIRECT CURRENT
Extended linear ion trap frequency standard apparatus
[NASA-CASE-NPO-19081-1-CU] p 2404 N95-26861
Dynamically timed electric motor
[NASA-CASE-MFS-28958-1] p 2261 N95-26890
MHD simulations of DC helicity injection for current drive in tokamaks
[DE95-007018] p 2429 N95-26940
Surface scanning techniques to locate and study defects in painted zinc and zinc alloy coated steels
[DE95-006099] p 2240 N95-28547
DIRECTIONAL ANTENNAS
Fast wave current drive in D3-D
[DE95-007582] p 2431 N95-27441
DIRECTIONAL COUPLERS
Design, fabrication, modeling, and optical characterization of organic polymer nonlinear directional couplers
[AD-A289327] p 2227 N95-26897
DIRECTIONAL STABILITY
An easy way to analyze longitudinal and lateral-directional trim problems with AEO or OEI
p 2119 N95-26949
DIRECTIVITY
Observation of asymmetrical two-cone Vavilov-Cherenkov radiation in biaxial crystal of triglycinesulphate emitted by 658 MeV protons passing along bi normal
[DE94-629017] p 2441 N95-27867
DIRECTORIES
AGARD membership, 1995
[AGARD-MEMB-95] p 2450 N95-26353
DISASTERS
Cape Canaveral air station launch emergency response forces and toxic materials release contingency plans
p 2172 N95-28308
DISCONNECT DEVICES
Partial discharge testing of high voltage wiring harness for airborne displays
[AD-A289150] p 2138 N95-27003
Development of a high force thermal latch
p 2157 N95-27275
DISCOVERY (ORBITER)
Debris/Ice/TPS assessment and integrated photographic analysis of Shuttle mission STS-67
[NASA-TM-110651] p 2160 N95-27238
DISCRIMINATION
Grayscale/resolution trade-off for text: Model predictions and psychophysical results for letter confusion and letter discrimination
[NASA-CR-197784] p 2369 N95-26930
DISLOCATIONS (MATERIALS)
A new technique for measuring the separation of closely spaced dislocations using residual contrast conditions
[DE95-007147] p 2219 N95-27968
DISORIENTATION
Rotor phases in compound semiconductors
[DE95-004139] p 2436 N95-26442
DISPERSING
Materials design and processing by biomimicking. Section 1: Research progress
[AD-A288229] p 2226 N95-26623
Design and processing of materials by biomimicking. Section 2. Publications
[AD-A288230] p 2226 N95-26624
A numerical model to predict the fate of jettisoned aviation fuel
[AD-A289336] p 2242 N95-26842
DISPLACEMENT
User's guide: Computer program for analysis of beam-column structures with nonlinear supports (CBEAMC)
[AD-A289031] p 2307 N95-26464
Temperature dependence of ion-beam-induced amorphization in (Beta)-SiC
[DE95-007164] p 2438 N95-27087
Visualization and direct comparison of large displacements using difference holographic interferometry
[DE95-608782] p 2292 N95-27711
An improved plate theory of order (1,2) for thick composite laminates p 2187 N95-28283
Poly(N-arylenbenzimidazoles) via aromatic nucleophilic displacement
[NASA-CASE-LAR-14939-1] p 2179 N95-28360
Polybenzimidazoles via aromatic nucleophilic displacement
[NASA-CASE-LAR-14924-1-CU] p 2179 N95-28361
DISPLACEMENT MEASUREMENT
TV-holography at high temperatures: In situ observations of the oxidation of advanced materials
[PB95-195343] p 2294 N95-28651
DISPLAY DEVICES
Grayscale/resolution trade-off for text: Model predictions and psychophysical results for letter confusion and letter discrimination
[NASA-CR-197784] p 2369 N95-26930
Visual system operational evaluation
[AD-A289173] p 2356 N95-27012
Multiple model adaptive estimation and head motion tracking in a virtual environment: An engineering approach
[AD-A289299] p 2359 N95-27046
Image quality metrics for color CRT displays
[AD-A288934] p 2262 N95-27196
Programming for time resolved spectrum in pulse radiolysis experiments
[DE95-607929] p 2406 N95-27212
Display system employing acousto-optic tunable filter
[NASA-CASE-NPO-18736-1-CU] p 2426 N95-27843
Advanced interactive display formats for terminal area traffic control
[NASA-CR-198576] p 2127 N95-28188
Operator modeling in commerical aviation: Cognitive models, intelligent displays, and pilot's assistants
[NASA-CR-198609] p 2138 N95-28203
DISSECTION
Variation of solvent scattering-length density small-angle neutron scattering as a means of determining structure of composite materials
[DE95-005394] p 2183 N95-27428
DISSIPATION
The effect of aviation fuels containing low amounts of static dissipater additive on electrostatic charge generation
[AD-A280075] p 2243 N95-28152
DISSOCIATION
Atomically resolved STM study of the adsorption and dissociation of methyl chloride on Si(001)
[AD-A289218] p 2438 N95-27061
Chemical and electrical properties of cavities in silicon and germanium
[DE95-006812] p 2445 N95-28206
DISSOLVING
Precision parts cleaning with supercritical CO2: Practical applications and solutions p 2229 N95-27111
Modeling precipitation from concentrated solutions with the EQ3/6 chemical speciation codes
[DE95-006264] p 2204 N95-27556
Simulations of metal dissolution and corrosion
[DE95-007486] p 2218 N95-27748
DISTANCE
Multivariate classification of BPSG thin films using Mahalanobis distances
[DE95-008519] p 2267 N95-28148
DISTANCE MEASURING EQUIPMENT
Precision landing system mathematical modeling study report for Andrews Air Force Base, runway 19L, Camp Springs, MD
[AD-A289015] p 2127 N95-27903
DISTRIBUTED PARAMETER SYSTEMS
Design considerations for FrankTalk: A distributed group support system
[AD-A289386] p 2359 N95-26863
Multi-agent perception for Human/Robot interaction: A framework for intuitive trajectory modification
[AD-A289399] p 2359 N95-26884
DISTRIBUTED PROCESSING
Using machine learning to derive efficient cost and performance estimates in VLSI CAD designs
[AD-A288254] p 2363 N95-26408
Long term distributed file reference tracing: Implementation and experience
[AD-A288585] p 2452 N95-26535
A demonstration of Client/Server technology using remote procedure calls for an application of file migration for moving records based on location
[AD-A289391] p 2453 N95-26864

A demonstration of Client-Server technology using remote procedure calls with an application of file migration for moving records based on time
[AD-A289392] p 2453 N95-26879
Distributed computation of Pareto solutions in N-player games
[PB95-185039] p 2396 N95-26912
A demonstration of client-server technology using remote procedure calls with an application in file migration using heuristics
[AD-A289467] p 2255 N95-27149
XTP as a transport protocol for distributed parallel processing
[DE95-004992] p 2378 N95-27402
A case for dynamic sets in operating systems
[AD-A289354] p 2454 N95-27529
Sequence comparison on a cluster of workstations using the PVM system
[DE95-006527] p 2378 N95-27709
Flight dynamics software in a distributed network environment p 2151 N95-27790
The Sunrise project: An R&D project for a national information infrastructure prototype
[DE95-006340] p 2455 N95-27847
Distributed methods and processes in games of incomplete information
[PB95-184842] p 2396 N95-28352
Distributed methods and processes in games of incomplete information
[PB95-184859] p 2396 N95-28353
Fault tolerant features and experiments of ANTS distributed real-time system
[AD-A290133] p 2256 N95-28391
Two implementation relations and the correctness of communicating replicated processes
[PB95-195640] p 2375 N95-28645

DISTRIBUTION FUNCTIONS
Anomalous collision rate in the time counter scheme of the direct simulation Monte Carlo method for rarefied gas flow analysis
[ISAS-R-653] p 2275 N95-26742
A study of parton distribution functions with the use of photon + jet event kinematics in p(bar p) collisions at (radical)s = TeV
[DE95-005127] p 2408 N95-27444
The structure of lead-indium phosphate glass
[DE95-007130] p 2237 N95-27967
Cryogenic BRDF measurements at 10.6 micrometers and 0.63 micrometers on contaminated mirrors
[AD-A291611] p 2427 N95-28408

DISTRIBUTION MOMENTS
Fitting: Subroutine to fit four-moment probability distributions to data
[DE95-007722] p 2395 N95-27684

DITHERS
Dithering transitions in resistive pressure-gradient-driven turbulence
[DE95-006737] p 2431 N95-27536

DIURNAL VARIATIONS
A model of the diurnal variation in magnesium ion density and radiance in the thermosphere
[AD-A289824] p 2339 N95-28575

DIVERGENCE
The northern wintertime divergence extrema at 200 hPa and surface cyclones as simulated in the integration of the ECMWF general circulation model
[DE95-007946] p 2332 N95-28550

DIVERTERS
Neutral gas compression in the Alcator C-Mod divertor. Experimental observations
[DE95-007762] p 2432 N95-27688
Pumping characteristics of a cryopump with Ar sorbent in He and in D2/He mixture
[DE95-007049] p 2302 N95-27875
Measurement of particle transport coefficients on Alcator C-Mod
[DE95-007763] p 2411 N95-28020

DIVERTORS (FUSION REACTORS)
UEDGE and DEGAS modeling of the DIII-D scrape-off layer plasma, revision 1
[DE95-008052] p 2433 N95-28065
Divertor research on the DIII-D tokamak
[DE95-003942] p 2434 N95-28185

DMSP SATELLITES
Development of welded solar arrays for DMSP and GPS satellites
[AD-A289512] p 2318 N95-26846

DOCUMENTATION
Using SCR methods to analyze requirements documentation
[NASA-CR-197760] p 2365 N95-26668
Index to NASA news releases and speeches 1994
[NASA-TM-110650] p 2452 N95-26673

DOCUMENTS
A book and series of monographs on ice physics
[AD-A288319] p 2200 N95-26422
Managing electronic records: A guideline
[DE95-007038] p 2456 N95-28555

DOMESTIC ENERGY
Hydrogen program
[DE94-011827] p 2242 N95-27415

DONOR MATERIALS
Photoinduced dipoles and charge pairs in condensed phase
[DE95-007071] p 2207 N95-27921

DOORS
The Solar X-ray Imager Vacuum Door Assembly
p 2157 N95-27280

DOPED CRYSTALS
Microwave circuit simulation using higher-order dynamic elements
[PB95-185088] p 2259 N95-26496
Silicate gel dye laser
[AD-D017262] p 2294 N95-26503
Photoluminescence spectroscopy of 4H- and 6H-SiC
[AD-A289326] p 2202 N95-26896
Atomic structure and bonding of boron-induced reconstructions on Si(001)
[AD-A289187] p 2405 N95-27017
Numerical methods for determining interstitial oxygen in silicon
[DE95-007710] p 2205 N95-27683
Growth and characterization of crystals for room temperature I.R. detectors and second harmonic generation devices
[NASA-CR-198598] p 2443 N95-28033
Aspects of macroscopic phase separation and interstitial oxygen ordering in oxygen doped La2CuO(4+delta)
[DE95-007864] p 2443 N95-28060
Low resistivity ohmic contacts to moderately doped n-GaAs with low temperature processing
[DE95-008507] p 2445 N95-28144
Vacancy related defects in thin film Pb(Zr,Ti)O3 materials
[DE95-007696] p 2445 N95-28165
Femtosecond OPO's at 3 microns and beyond: Design and performance issues related to the crystal properties of KTP and similar materials
[DE95-007286] p 2446 N95-28242

DOPPLER EFFECT
Evaluation of a new laboratory acoustic Doppler velocimeter
[AD-A289592] p 2290 N95-26714
Measurement of N2(+) mobility He via Fourier transform emission spectroscopy
[AD-A289266] p 2404 N95-26979
Telemetry down-link Doppler as an attitude sensor for spin stabilized spacecraft p 2150 N95-27785
Multi-spacecraft coherent Doppler and ranging for interplanetary-navigation p 2150 N95-27786

DOPPLER RADAR
Evaluation of the FMICW waveform in HF surface radar applications
[AD-A288245] p 2249 N95-26545
Measurements of HF auroral clutter using the Verona Ava Linear Array Radar (VALAR)
[AD-A289442] p 2337 N95-27147
Differenced Range Versus Integrated Doppler (DRVID) ionospheric analysis of metric tracking in the Tracking and Data Relay Satellite System (TDRSS)
p 2147 N95-27766
Telemetry down-link Doppler as an attitude sensor for spin stabilized spacecraft p 2150 N95-27785
Application of non-coherent Doppler data types for deep space navigation p 2151 N95-27788
Report to the Chairman and Ranking Minority Member, Committee on Science, House of Representatives. Weather forecasting: Radar availability requirement not being met
[GAO/AIMD-95-132] p 2342 N95-27912
Basic principles and recent observations of rotationally sampled wind p 2321 N95-27971

DOSAGE
Modification of the optical properties of glass by sequential ion implantation
[DE95-007401] p 2237 N95-28080
Acute and subacute toxicity of ammonium dinitramide (ADN) p 2175 N95-28318
Toxicity assessment of liquid propellant XM46
p 2175 N95-28319
The ELF controversy
[DE95-008283] p 2256 N95-28407

DOSIMETERS
Atomic oxygen dosimetry measurements made on STS-46 by CONCAP 2 p 2418 N95-27634
Evaluation of a conductive polymer-based sensor for detection of hydrazines at the part-per-billion level
p 2173 N95-28309

DOUGLAS AIRCRAFT
Evaluation of all-electric secondary power for transport aircraft
[NASA-CR-189077] p 2266 N95-27999

DOWNLINKING
Telemetry down-link Doppler as an attitude sensor for spin stabilized spacecraft p 2150 N95-27785
Multi-spacecraft coherent Doppler and ranging for interplanetary-navigation p 2150 N95-27786

DRAG
Computing NORAD mean orbital elements from a state vector
[AD-A289281] p 2146 N95-27033

DRAG MEASUREMENT
A new drag measurement system for wind tunnel testing of the racing bicycle and rider to determine a low drag configuration
[AD-A289375] p 2122 N95-26875

DRAG REDUCTION
Plate manipulators
[AD-A289601] p 2121 N95-26719

DREDGED MATERIALS
Calculation of suspended sediment transport by combined wave-current flows
[AD-A289368] p 2346 N95-26904

DROP SIZE
Structure of high-speed sprays
[AD-A291696] p 2288 N95-28523

DROP TOWERS
Design and development of experimental facilities for short duration, low-gravity combustion and fire experiments
[NASA-CR-195458] p 2244 N95-26709

DROPS (LIQUIDS)
The attenuation of microwave radiation by fog and rain
[AD-A288326] p 2249 N95-26562
Single-drop reactive extraction/extractive reaction with forced convective diffusion and interphase mass transfer
p 2283 N95-27365
Engineering photochemical smog through convection towers
[DE95-007727] p 2328 N95-27686

DRYING
The evaluation of a fluorochemical drying process for an electrical contact p 2227 N95-27103
Cleaning of parts for new manufacturing and parts rebuilding p 2231 N95-27123
Retrofitting conventional vapor degreasers to use a solvent wash/fluorochemical rinse process
p 2232 N95-27127
The experience of CF Technologies, Inc. (CF Tech) in critical fluid processing p 2232 N95-27128
Ambient-pressure silica aerogel films
[DE95-008161] p 2237 N95-28090
The minimum pore size obtainable in a silica gel during drying
[DE95-008162] p 2239 N95-28401

DUCTS
Self-excited oscillations in a duct with closed brances
[IFTR-18/1994] p 2400 N95-26358
A finite element propagation model for extracting normal incidence impedance in nonprogressive acoustic wave fields
[NASA-TM-110160] p 2400 N95-26394
The effect of infrared sea surface temperature measurements on evaporation duct height estimation
[AD-A289045] p 2346 N95-26477
Low-angle tracking in the presence of ducting, coherent and incoherent multipath
[AD-A289838] p 2258 N95-28580

DURABILITY
Bases for extrapolating materials durability in fuel storage pools
[DE95-007748] p 2222 N95-28129
Development of stitched/RTM composite primary structures p 2195 N95-28469

DUST
Effects of dust from storage heaters on ignition in scramjets
[NAL-TR-1234] p 2139 N95-26706
Particle fallout/activity sensor
[NASA-CASE-KSC-11687-1] p 2293 N95-28362

DWARF NOVAE
Cataclysmic variables and related objects
[NASA-SP-507] p 2458 N95-27068
Dwarf novae p 2458 N95-27069
Nova-like variables p 2458 N95-27070
Models for various aspects of dwarf novae and nova-like stars p 2459 N95-27071
Magnetic viscosity by localized shear flow instability in magnetized accretion disks
[DE95-006879] p 2433 N95-28111

DWARF STARS
Stability of strange quark stars with nuclear crusts against radial oscillations
[DE95-008484] p 2463 N95-28357

DWELL
N. N. Bogolyubov and particle physics
[DE95-608794] p 2448 N95-27447

DYADICS
Conditions for the parameter dyadics of lossless bi-anisotropic media
[PB95-185104] p 2252 N95-26914

DYE LASERS
Silicate gel dye laser
[AD-D017262] p 2294 N95-26503
New radiation stable and long-lived plastic scintillators
[DE95-608622] p 2233 N95-27163

DYES
Flow cytometry as a means of detecting, enumerating and characterizing bacteria for monitoring of the environment
[AD-A288997] p 2326 N95-26610
Evaluation of laser-protective eyewear dyes in UVEX lenses
[AD-A290076] p 2361 N95-28390

DYNAMIC CHARACTERISTICS
Dynamics and control of SEDSAT tethered multi-probe for thermospheric research flight data analysis of SEDS-2 satellite: Tethered systems dynamics and flight data analysis
[NASA-CR-198653] p 2165 N95-27836
A conceptual framework for evaluating variable speed generator options for wind energy applications
p 2273 N95-27987
Fellowship in physics
[AD-A291691] p 2446 N95-28522
In situ dynamic material property measurement system
[AD-D017387] p 2210 N95-28585

DYNAMIC CONTROL
Self-organizing artificial neural networks in dynamic systems modeling and control
[PB95-185120] p 2379 N95-26449
Analysis of modal behavior at frequency cross-over
[AD-A289304] p 2162 N95-26918
Dynamics and control of SEDSAT tethered multi-probe for thermospheric research flight data analysis of SEDS-2 satellite: Tethered systems dynamics and flight data analysis
[NASA-CR-198653] p 2165 N95-27836
A review of falconry as a bird control technique with recommendations for use at the Shuttle Landing Facility, John F. Kennedy Space Center, Florida, USA
[NASA-TM-110142] p 2126 N95-27859
Analysis methods for wind turbine control and electrical system dynamics p 2273 N95-27984
A conceptual framework for evaluating variable speed generator options for wind energy applications
p 2273 N95-27987

DYNAMIC LOADS
Using hob offset to balance dynamic strength in spur gears
[NASA-TM-106934] p 2302 N95-27698
System identification of damped truss-like space structures
[NASA-TM-106638] p 2303 N95-27911
A NASTRAN-based computer program for structural dynamic analysis of Horizontal Axis Wind Turbines
p 2312 N95-27980

DYNAMIC MODELS
Extension to the dynamic modeling of the large angle magnetic suspension test fixture
[NASA-CR-197801] p 2143 N95-26768
Optimal attitude maneuver execution for the Advanced Composition Explorer (ACE) mission
p 2149 N95-27778

DYNAMIC MODULUS OF ELASTICITY
In situ dynamic material property measurement system
[AD-D017387] p 2210 N95-28585

DYNAMIC PRESSURE
Wind tunnel experiments on wake flow field behind a reentry capsule from a viewpoint of parachute deployment at supersonic speeds
[ISAS-R-655] p 2121 N95-26740
Comparative wind tunnel tests of NACA 23024 airfoils with several aileron and spoiler configurations
p 2124 N95-27976
Pressure vessel burst test study p 2175 N95-28317

DYNAMIC RESPONSE
Effect of surface coating on one-dimensional system subjected to unit step pressure wave
[AD-A288237] p 2308 N95-26625
Dynamic coupling of underactuated manipulators
[AD-A289404] p 2301 N95-27098
Observed acoustic and aeroelastic spectral responses of a MOD-2 turbine blade to turbulence excitation
p 2324 N95-27991
Aeroelasticity and structural optimization of composite helicopter rotor blades with swept tips
[NASA-CR-4665] p 2136 N95-28262
Cape Canaveral air station launch emergency response forces and toxic materials release contingency plans
p 2172 N95-28308
Impact damage resistance of composite fuselage structure, part 1 p 2138 N95-28482
Non-linear viscoelastic behaviour
[PB95-192811] p 2199 N95-28639

DYNAMIC STABILITY
Beam instability studies for the SSC
[DE95-008024] p 2423 N95-28551

DYNAMIC STRUCTURAL ANALYSIS
Modified eigenvalue problems with applications to structural dynamic re-analysis on parallel computers
[AD-A288257] p 2307 N95-26547
The effects of finite element grid density on model correlation and damage detection of a bridge
[DE94-018895] p 2309 N95-27305
Vibration analysis of a split path gearbox
[NASA-TM-106875] p 2302 N95-27855
Collected papers on wind turbine technology
[NASA-CR-195432] p 2321 N95-27970
A NASTRAN-based computer program for structural dynamic analysis of Horizontal Axis Wind Turbines
p 2312 N95-27980
Structural design optimization with survivability dependent constraints application: Primary wing box of a multi-role fighter p 2137 N95-28440
Reliability analysis of composite structures
p 2192 N95-28441
Technology integration box beam failure study
p 2194 N95-28468

DYNAMIC TESTS
Experimental investigation of static and dynamic ground effect on HOPE ALFLEX vehicle
[NAL-TR-1236] p 2128 N95-26525

DYNAMICAL SYSTEMS
Self-organizing artificial neural networks in dynamic systems modeling and control
[PB95-185120] p 2379 N95-26449
The phenomena of subharmonic bifurcations, runaway, and transition to chaos in a non-linear oscillator: perturbation methods and a numerical experiment
[IFTR-16/1994] p 2398 N95-26518
Reference manual: Naive physics simulator
[PB95-184917] p 2369 N95-26907
An invariant measure for a nonlinear Schroedinger equation
[DE95-610166] p 2391 N95-27714
Nonlinear beam dynamics experimental program at SPEAR
[DE95-007823] p 2422 N95-28122

DYSON THEORY
A diagram technique for strongly interacting fermion systems. One-and two-band Hubbard models
[DE95-609437] p 2410 N95-27881

E

EARTH ATMOSPHERE
Nonlinear dynamics of global atmospheric and earth system processes
[NASA-CR-197926] p 2326 N95-26429
The Long Duration Exposure Facility (LDEF) photographic survey special publication
p 2457 N95-27660
Contingency maneuver strategies for the Total Ozone Mapping Spectrometer-Earth Probe (TOMS-EP)
p 2152 N95-27796
Mission to Planet Earth. Strategic enterprise plan, 1995-2000
[NASA-TM-110620] p 2145 N95-27919
Remote sensing of the atmosphere by resonance Raman LIDAR
[DE95-007312] p 2315 N95-28520

EARTH CRUST
Very low frequency seismo-acoustic noise below the sea floor (0.2-10 Hz)
[AD-A289164] p 2347 N95-27011
Seismic constraints on shallow crustal processes at the East Pacific rise
[AD-A289055] p 2338 N95-28094

EARTH ENVIRONMENT
Mission to Planet Earth. Strategic enterprise plan, 1995-2000
[NASA-TM-110620] p 2145 N95-27919

EARTH HYDROSPHERE
Nonlinear dynamics of global atmospheric and earth system processes
[NASA-CR-197926] p 2326 N95-26429

EARTH IONOSPHERE
An improved model of high-latitude f-region scintillation (WBMOD version 13)
[AD-A288558] p 2334 N95-26520
Space tether-radar data processing
[AD-A289654] p 2250 N95-26725
Assessment of the AN/FPS-118 Ionospheric model and proposed improvements
[AD-A289439] p 2337 N95-27146
PRISM validation
[AD-A288476] p 2337 N95-27703

EARTH MAGNETOSPHERE
SAMPEX special pointing mode p 2149 N95-27780
Low energy neutral atom imaging: Remote observations of the magnetosphere
[DE95-006342] p 2337 N95-27848
Relativistic electrons in the outer-zone: An 11 year cycle, their relation to the solar wind
[DE95-007882] p 2338 N95-28061

EARTH OBSERVATIONS (FROM SPACE)
Earth horizon modeling and application to static Earth sensors on TRMM spacecraft p 2150 N95-27783

EARTH OBSERVING SYSTEM (EOS)
Technical report series on global modeling and data assimilation. Volume 6: A multiyear assimilation with the GEOS-1 system: Overview and results
[NASA-TM-104606-VOL-6] p 2334 N95-26423
Development and analysis of SCR requirements tables for system scenarios
[NASA-CR-197769] p 2367 N95-26802
Summary of EOS flight dynamics analysis
p 2152 N95-27797

EARTH ORBITAL ENVIRONMENTS
Space Debris Research Phase One Program: Abstracts from published papers (1990-1993)
[AD-A289504] p 2162 N95-26850
Thermal control materials on EOIM-3
p 2242 N95-27639
Solid film lubricants and thermal control coatings flown aboard the EOIM-3 MDA sub-experiment
p 2242 N95-27640
Evaluation of space environmental effects on metals and optical thin films on EOIM-3 p 2210 N95-27641
Analysis of selected specimens from the STS-46 Energetic Oxygen Interaction with Materials-3 experiment p 2210 N95-27642
Molecular beam scattering from C-13 enriched Kapton and correlation with the EOIM-3 carousel experiment
p 2419 N95-27643
LDEF systems special investigation group overview
p 2470 N95-27647
A Materials Exposure Facility p 2166 N95-27664
Long Duration Exposure Facility post-flight data as it influences the Tropical Rainfall Measuring Mission
p 2345 N95-27666
Element material experiment by EFFU
p 2145 N95-27667
The Strategic Technologies for Automation and Robotics (STEAR) program: Protection of materials in the space environment subprogram p 2242 N95-27669

EARTH ORBITS
Orbital impacts and the Space Shuttle windshield
[NASA-TM-110594] p 2159 N95-26379

EARTH RADIATION BUDGET
A study of surface temperatures, clouds and net radiation
[NASA-CR-198589] p 2329 N95-27864
Cloud classification using whole-sky imager data
[DE95-006501] p 2344 N95-28556

EARTH RESOURCES
Materials design and processing by biomimicking. Section 1: Research progress
[AD-A288229] p 2226 N95-26623
Design and processing of materials by biomimicking. Section 2. Publications
[AD-A288230] p 2226 N95-26624
Mission to Planet Earth. Strategic enterprise plan, 1995-2000
[NASA-TM-110620] p 2145 N95-27919

EARTH SCIENCES
Airborne geophysics and precise positioning: Scientific issues and future directions
[LC-94-68678] p 2314 N95-27156

EARTH SURFACE
Naval Aviation System TEAM mapping, charting, and geodesy handbook
[AD-A288590] p 2314 N95-26841

EARTHQUAKE RESISTANT STRUCTURES
Stress corrosion cracking susceptibility of the earthquake resistant NOM B457 Mexican steel
[DE95-607956] p 2214 N95-27256

EARTHQUAKES
Live from Antarctica, volume 4
[NASA-CR-197828] p 2335 N95-26596
Investigation of rifting processes in the Rio Grande Rift using data from an unusually large earthquake swarm
[DE95-007623] p 2339 N95-28126

ECLIPTIC
Ulysses orbit determination at high declinations
p 2151 N95-27787

ECOLOGY
Finding the forest in the trees. The challenge of combining diverse environmental data
[NASA-CR-197798] p 2326 N95-26362

ECONOMIC ANALYSIS
Physics assessment of stellarators as fusion power plants
[DE95-007045] p 2431 N95-27498
ECONOMICS
Monolithic electronics for nuclear and high-energy physics experiments
[DE95-005393] p 2420 N95-27427
Commercial reformulation: An economic and environmentally neutral means of managing explosives and solid propellants p 2175 N95-28320
ECOSYSTEMS
Survey on researches related to ocean disposal of carbon dioxide
[DE95-759247] p 2329 N95-27939
EDDINGTON APPROXIMATION
Stationary neutrino radiation transport by maximum entropy closure
[DE95-006579] p 2463 N95-28558
EDDY CURRENTS
Extension to the dynamic modeling of the large angle magnetic suspension test fixture
[NASA-CR-197801] p 2143 N95-26768
Combined investigation of Eddy current and ultrasonic techniques for composite materials NDE
[NASA-TM-110599] p 2306 N95-26778
EDDY VISCOSITY
Computational analysis of forebody tangential slot blowing on the high alpha research vehicle
[NASA-CR-197754] p 2129 N95-26591
Calculation of suspended sediment transport by combined wave-current flows
[AD-A289368] p 2346 N95-26904
Progress in simulating industrial flows using two-equation models: Can more be achieved with further research?
p 2286 N95-27895
EDGE DETECTION
User's and test case manual for FEMATS
[NASA-CR-197803] p 2366 N95-26694
Edge detection by nonlinear dynamics
[DE95-008076] p 2373 N95-28168
EDGE DISLOCATIONS
The role of edge dislocations in the deformation of BCC metals
[DE95-609157] p 2219 N95-27759
EDGES
Nonlinear scalespace via hierarchical statistical modeling
[AD-A289057] p 2394 N95-26478
EDITING
Beginning to edit physics
[DE95-008374] p 2455 N95-28085
EDUCATION
Enhancing the effects of diversity awareness training: A review of the research literature
[DOT/FAA/AM-95/10] p 2355 N95-26361
Compiler-assisted debugging and multiple instruction retry
[NASA-CR-197729] p 2365 N95-26628
NEXTSTEP: The next step in the right direction? Part 2: Software development with NEXTSTEP
[REPT-94-33-PT-2] p 2450 N95-26803
Can there be reliability without reliability?
[AD-A289480] p 2306 N95-26927
Overview of megaprogramming course: Lectures and eexercises. Version 02.00.03
[AD-A286723] p 2370 N95-27235
Views of the solar system
[DE95-006446] p 2461 N95-27326
Space physics educational outreach
[NASA-CR-198649] p 2399 N95-27852
Laboratory of production engineering
[PB95-184834] p 2451 N95-28135
Teaching interdisciplinary computational science from an electronic book on the Internet
[DE95-006525] p 2373 N95-28498
Evaluation of an Air Force Information Resources Management (IRM) overview course
[AD-A288746] p 2456 N95-28587
Advanced educational methods in the Department of Defense: Application of case theory and computer-assisted instruction to business process reengineering
[AD-A288881] p 2374 N95-28590
Building an electronic book on the Internet. CSEP:An interdisciplinary syllabus for teaching computational science at the graduate level
[DE95-006526] p 2375 N95-28632
The effects of Crew Resource Management (CRM) training in airline maintenance: Results following three year's experience
[NASA-CR-196696] p 2358 N95-28676
EFFICIENCY
Automatically selecting and using primary effects in planning: Theory and experiments
[AD-A289347] p 2450 N95-27064
Heterostructures and infrared emitters with compressed InAsSb layers
[DE95-008157] p 2446 N95-28399
EFFLUENTS
Hydrothermal oxidation of solid rocket propellant and other department of defense hazardous wastes
p 2177 N95-28325
EIGENVALUES
Modified eigenvalue problems with applications to structural dynamic re-analysis on parallel computers
[AD-A288257] p 2307 N95-26547
Do we fully understand the symmetric Lanczos algorithm yet?
[AD-A289614] p 2368 N95-26855
Optimization of a nutation damper attached to a spin-stabilized satellite
[AD-A289424] p 2162 N95-26887
Adaptive beamforming in frequency-dispersive multipath environments
[AD-A289206] p 2254 N95-27009
Spectral properties of multipliers on topological algebras
[DE95-608747] p 2390 N95-27299
Aeroelastic stability of wind turbine blade/aileron systems p 2124 N95-27981
EIGENVECTORS
Optimization of a nutation damper attached to a spin-stabilized satellite
[AD-A289424] p 2162 N95-26887
ELVIS: Eigenvectors for land vehicle image system
[AD-A289297] p 2381 N95-27041
Extensional flow convecting a reactant undergoing a first order homogeneous reaction and diffusional mass transfer from a sphere at low to intermediate Peclet and Damkohler numbers p 2280 N95-27346
Multifractal character of the electronic states in disordered two-dimensional systems
[DE95-609153] p 2443 N95-28016
EJECTA
A new method of determining the ejected mass of novae
[DE95-007884] p 2462 N95-28062
ELASTIC BENDING
Deformation limits on two-parameter fracture mechanics in terms of higher order asymptotics
[AD-A289113] p 2310 N95-28098
ELASTIC BODIES
Manual for SHOCK3D, version 2.0. Computer program for non-linear shock response
[AD-A288631] p 2307 N95-26342
ELASTIC DEFORMATION
Characterization of the membrane theory of a clamped shell. The hyperbolic case
[PB95-185021] p 2308 N95-26911
Load transfer in the stiffener-to-skin joints of a pressurized fuselage
[NASA-CR-198610] p 2310 N95-27865
High-temperature deformation of ZrO2-Al2O3/SiC whisker composites fabricated by two techniques
[DE95-008273] p 2183 N95-28069
Unique considerations in the design and experimental evaluation of tailored wings with elastically produced chordwise camber p 2192 N95-28436
ELASTIC MEDIA
Emerging applications of probability (stochastic models in geosystems)
[AD-A289117] p 2313 N95-28099
ELASTIC PROPERTIES
Elastic properties of metallic superlattices
[AD-A288699] p 2212 N95-26490
C15 intermetallic compounds HfV2+Nb
[DE95-005264] p 2215 N95-27463
Atomistic calculations of hydrogen interactions with Ni3Al grain boundaries and Ni/Ni/Ni3Al interfaces
[DE95-006497] p 2408 N95-27534
ECR plasma-assisted deposition of Al2O3 and dispersion-strengthened AlO2
[DE95-007743] p 2235 N95-27687
Molecular dynamics simulations of Gay-Berne nematic liquid crystal: Elastic properties from direct correlation functions
[DE95-609149] p 2441 N95-27740
Phase stability and elasticity of C15 transition-metal intermetallic compounds
[DE95-007876] p 2219 N95-28026
An improved plate theory of order (1,2) for thick composite laminates p 2187 N95-28283
ELASTIC SCATTERING
Comparative experimental study of PIXE and X-ray fluorescence analysis
[DE95-607868] p 2327 N95-27198
The Bremsstrahlung of soft gamma-quanta created by elastic pp- and np-scatterings and the dibaryon resonance problem
[DE95-608870] p 2415 N95-28248
Laser beam aerosol interactions
[AD-A291723] p 2300 N95-28509
ELASTIC WAVES
Effect of surface coating on one-dimensional system subjected to unit step pressure wave
[AD-A288237] p 2308 N95-26625
ELASTOHYDRODYNAMICS
Deformation behavior of thin lubricant films at elevated pressure
[AD-A288906] p 2241 N95-28592
ELASTOMERS
Siloxane-based ferroelectric liquid crystal elastomers and Self-Assembled Mono- and multilayers
[AD-A288285] p 2224 N95-26456
Variation of solvent scattering-length density small-angle neutron scattering as a means of determining structure of composite materials
[DE95-005394] p 2183 N95-27428
Effects of atomic oxygen on polymeric materials flown on EOIM-3 p 2242 N95-27638
Development of a low-cost, modified resin transfer molding process using elastomeric tooling and automated preform fabrication p 2184 N95-28268
ELASTOSTATICS
Analysis of stresses in finite anisotropic panels with centrally located cutouts p 2187 N95-28286
ELECTRIC BATTERIES
Thermodynamics of electrolyte solutions for use in high energy lithium batteries
[AD-A288897] p 2199 N95-26352
Electrolyte effects in Li(Si)/FeS2 thermal batteries
[DE95-001614] p 2264 N95-27474
Current status of environmental, health, and safety issues of lithium polymer electric vehicle batteries
[DE95-004005] p 2265 N95-27719
Development of an ultra-safe rechargeable lithium-ion battery
[AD-A288959] p 2269 N95-28349
Thermal analysis of PANSAT batteries and Electrical Power Subsystem
[AD-A290013] p 2269 N95-28388
ELECTRIC CELLS
The 1994 27th Annual NASA Aerospace Battery Workshop
[NASA-CP-3292] p 2317 N95-26785
ELECTRIC CHARGE
Nickel metal hydride LEO cycle testing
p 2272 N95-26791
Adiabatic charging of nickel-hydrogen batteries
p 2272 N95-26795
Radiation of a uniformly moving charge
[DE95-608757] p 2255 N95-27335
Characterization of wafer charging mechanisms and oxide survival prediction methodology
[DE95-006583] p 2440 N95-27538
ELECTRIC CONDUCTORS
Microengineered conducting composites from nanochannel templates
[AD-A289573] p 2180 N95-26686
ELECTRIC CONNECTORS
Partial discharge testing of high voltage wiring harness for airborne displays
[AD-A289150] p 2138 N95-27003
ELECTRIC CONTACTS
The evaluation of a fluorochemical drying process for an electrical contact p 2227 N95-27103
Low temperature deposition and characterization of N- and P-type silicon carbide thin films and associated Ohmic and Schottky contacts
[AD-A289107] p 2237 N95-28097
ELECTRIC CURRENT
Room-temperature photocurrent spectroscopy of GaAs/GaAlAs multiple quantum wells
[AD-A289607] p 2201 N95-26707
The electric field of Bohr's atom
[DE95-608758] p 2448 N95-27336
Photoinduced dipoles and charge pairs in condensed phase
[DE95-007071] p 2207 N95-27921
Can TMAE photocathode be used for high rate applications?
[DE95-008594] p 2293 N95-28178
Energy-measuring resistor bank
[AD-D017392] p 2271 N95-28613
ELECTRIC DIPOLES
Scattering by a small object close to an interface. 3. Buried object
[PB95-184909] p 2256 N95-28354
Method of images applied to electromagnetic problems involving spherical, spheroidal and planar geometries
[PB95-195517] p 2257 N95-28451
ELECTRIC DISCHARGES
High-rate/high-temperature capability of a single-layer zicar-separator nickel-hydrogen cell
p 2272 N95-26788

Air Force Ni-H2 cell test program: State of Charge test
p 2272 N95-26789
The 50 Ah NiH2 CPV qualification tests
p 2272 N95-26792
Partial discharge testing of high voltage wiring harness for airborne displays
[AD-A289150] p 2138 N95-27003
Effect of internal hydrogen on the mixed-mode 1/3 fracture toughness of a ferrific/martensitic stainless steel
[DE95-005722] p 2216 N95-27479
The protection of electro-explosive devices (EEDs) and electronics from electrostatic discharge (ESD) hazards
[DSTO-TR-0100] p 2258 N95-28568

ELECTRIC ENERGY STORAGE
Investigation of high-temperature superconducting flywheel energy storage devices
[DE95-759242] p 2320 N95-27936

ELECTRIC EQUIPMENT
Analysis of magnetic field levels at KSC
[NASA-CR-197678] p 2326 N95-26808

ELECTRIC EQUIPMENT TESTS
The 1994 27th Annual NASA Aerospace Battery Workshop
[NASA-CP-3292] p 2317 N95-26785
Long life 80Ah standard IPV NiH2 battery cell
p 2272 N95-26787
Test operations procedure (TOP) 2-2-613, electromagnetic interference testing and electrical subsystem - non-communication
[AD-A289521] p 2251 N95-26851
Partial discharge testing of high voltage wiring harness for airborne displays
[AD-A289150] p 2138 N95-27003

ELECTRIC FIELDS
Room-temperature photocurrent spectroscopy of GaAs/GaAlAs multiple quantum wells
[AD-A289607] p 2201 N95-26707
Polarization sensitivity of monopulse radar boresight error induced by large, ogive radomes
[AD-A289254] p 2252 N95-26972
Measurement of N2(+) mobility He via Fourier transform emission spectroscopy
[AD-A289266] p 2404 N95-26979
Model of a single impurity in a wide bandgap semiconductor describing electric field screening
[AD-A289322] p 2264 N95-27296
The electric field of Bohr's atom
[DE95-608758] p 2448 N95-27336
Observations of CEF-split intermultiplet transitions in optically opaque EuBa2Cu3O7 using inelastic neutron scattering
[DE95-007135] p 2408 N95-27453
Dithering transitions in resistive pressure-gradient-driven turbulence
[DE95-006737] p 2431 N95-27536
Internal electric field of anisotropic and bi-anisotropic spheres
[PB95-195491] p 2257 N95-28449
Evaluation of defect-related diffusion in semiconductors by electrooptical sampling
[AD-A291630] p 2270 N95-28544

ELECTRIC GENERATORS
Test operations procedure (TOP) 2-2-613, electromagnetic interference testing and electrical subsystem - non-communication
[AD-A289521] p 2251 N95-26851
AFC generator development
[DE95-007094] p 2266 N95-27754
A hybrid vehicle evaluation code and its application to vehicle design. Revision 1
[DE95-008053] p 2303 N95-28029
The U.S. Department of Energy Wind Turbine Development Program
[DE95-000292] p 2325 N95-28395

ELECTRIC MOTOR VEHICLES
Current status of environmental, health, and safety issues of lithium polymer electric vehicle batteries
[DE95-004005] p 2265 N95-27719
DOE/KEURP Site Operator Program
[DE95-007116] p 2266 N95-27926
Electric vehicle activities
[DE95-006648] p 2267 N95-28105

ELECTRIC MOTORS
Dynamically timed electric motor
[NASA-CASE-MFS-28958-1] p 2261 N95-26890

ELECTRIC NETWORKS
Microengineered conducting composites from nanochannel templates
[AD-A289573] p 2180 N95-26686
Reference manual: Naive physics simulator
[PB95-184917] p 2369 N95-26907
Non-linear resistive grid kernel estimator useful in single feature, two-class pattern classification
[AD-D017394] p 2271 N95-28614

ELECTRIC POTENTIAL
Electrical performance characterisation of single-shot switches in high speed, high voltage and high current applications
[DSTO-RR-0010] p 2259 N95-26425
High-rate/high-temperature capability of a single-layer zicar-separator nickel-hydrogen cell
p 2272 N95-26788
Air Force Ni-H2 cell test program: State of Charge test
p 2272 N95-26789
Micro-time stress measurement device development
[AD-A289511] p 2361 N95-26845
MHD simulations of DC helicity injection for current drive in tokamaks
[DE95-007018] p 2429 N95-26940
The electric field of Bohr's atom
[DE95-608758] p 2448 N95-27336
Electromagnetic hysteretic response calculation for superconductors in demagnetizing geometries
[DE95-005028] p 2264 N95-27403
Matrix kernels for MEG and EEG source localization and imaging
[DE95-005238] p 2354 N95-27426
Performance of a stand-alone wind-electric ice maker for remote villages
[DE95-004006] p 2320 N95-27475
Visualization of finite element model solutions for defibrillation voltage and current distributions
[AD-A289836] p 2400 N95-28579
Non-linear resistive grid kernel estimator useful in single feature, two-class pattern classification
[AD-D017394] p 2271 N95-28614
Mechanism of deposit formation on fuel-wetted hot metal surfaces
[AD-A289847] p 2210 N95-28621

ELECTRIC POWER
Probabilistic risk assessment of the Space Shuttle. Phase 3: A study of the potential of losing the vehicle during nominal operation. Volume 4: System models and data analysis
[NASA-CR-197811] p 2160 N95-26401
Molten Carbonate Fuel Cell (MCFC) product development test
[DE95-007345] p 2316 N95-26543

ELECTRIC POWER SUPPLIES
Analysis methods for wind turbine control and electrical system dynamics p 2273 N95-27984
Evaluation of all-electric secondary power for transport aircraft
[NASA-CR-189077] p 2266 N95-27999

ELECTRIC POWER TRANSMISSION
Hydrogen program
[DE94-011827] p 2242 N95-27415

ELECTRIC PROPULSION
Direct drive options for electric propulsion systems
[NASA-TM-106576] p 2168 N95-27861
Micro electric propulsion feasibility
[NASA-CR-189139] p 2168 N95-28000

ELECTRIC ROCKET ENGINES
Micro electric propulsion feasibility
[NASA-CR-189139] p 2168 N95-28000

ELECTRIC SWITCHES
Electrical performance characterisation of single-shot switches in high speed, high voltage and high current applications
[DSTO-RR-0010] p 2259 N95-26425
Forback DC-to-DC converter
[NASA-CASE-GSC-13404-1] p 2269 N95-28341

ELECTRIC TERMINALS
Unique features of a new nickel-hydrogen 2-cell CPV
p 2272 N95-26793

ELECTRICAL ENGINEERING
Basic and applied research in the field of electronics and communications
[AD-A291727] p 2270 N95-28512

ELECTRICAL IMPEDANCE
Joint services electronics program
[AD-A289594] p 2260 N95-26716
Nickel metal hydride LEO cycle testing
p 2272 N95-26791
Characterization of wafer charging mechanisms and oxide survival prediction methodology
[DE95-006583] p 2440 N95-27538
Linearly tapered slot antenna impedance characteristics
[NASA-TM-106912] p 2266 N95-27853

ELECTRICAL MEASUREMENT
Micro-time stress measurement device development
[AD-A289511] p 2361 N95-26845
A study of lightning in winter thunderstorms and the analysis of thunderstorm overflight data
[NASA-CR-198577] p 2343 N95-28191
OBIC analysis of stressed, thermally-isolated polysilicon resistors
[DE95-008511] p 2268 N95-28201
Manufacture and testing of the superconducting wire and cable for the RHIC dipoles and quadrupoles
[DE95-006000] p 2270 N95-28515
Energy-measuring resistor bank
[AD-D017392] p 2271 N95-28613

ELECTRICAL PROPERTIES
A book and series of monographs on ice physics
[AD-A288319] p 2200 N95-26422
Electrical performance characterisation of single-shot switches in high speed, high voltage and high current applications
[DSTO-RR-0010] p 2259 N95-26425
Microengineered conducting composites from nanochannel templates
[AD-A289573] p 2180 N95-26686
Review of activities in USA on HTS materials
[DE95-006404] p 2234 N95-27468
I(sub DDQ) testing and defect classes: A tutorial
[DE95-005467] p 2306 N95-27723
Stability measurements on a 1-T high temperature superconducting magnet
[DE95-007411] p 2267 N95-28048
A study of lightning in winter thunderstorms and the analysis of thunderstorm overflight data
[NASA-CR-198577] p 2343 N95-28191
Chemical and electrical properties of cavities in silicon and germanium
[DE95-006812] p 2445 N95-28206

ELECTRICAL RESISTIVITY
Hall effect and resistivity in the normal state of high-T(sub c) cuprates in the electron-fracton model
[DE95-610612] p 2439 N95-27413
Atomic oxygen dosimetry measurements made on STS-46 by CONCAP 2 p 2418 N95-27634
Inflight resistance measurement on high-T(sub c) superconducting thin films exposed to orbital atomic oxygen on CONCAP-2 (STS-46) p 2272 N95-27635
Electrical conductivity measurements of aqueous electrolyte solutions at high temperatures and high pressures
[DE95-006748] p 2208 N95-27956
Defect characterization of electronic conducting pseudo-perovskite systems
[DE95-007487] p 2220 N95-28049
Low resistivity ohmic contacts to moderately doped n-GaAs with low temperature processing
[DE95-008507] p 2445 N95-28144

ELECTRICITY
Hydrogen program
[DE94-011827] p 2242 N95-27415
Heat pipe cooled reactors for multi-kilowatt space power supplies
[DE95-005211] p 2420 N95-27425

ELECTRO-OPTICS
Characterization of optical polymers for multi-layered electro-optic devices
[AD-A289255] p 2227 N95-26973
Toward coherent excitation: Development of a single-source pump for the rubidium hyperfine ground state doublet
[AD-A289413] p 2295 N95-27132
A final look at LDEF electro-optic systems components p 2428 N95-27650
Applications of lasers and electro-optics
[DE95-600841] p 2299 N95-28330
Passive spatial beam control, appendix
[AD-A288913] p 2300 N95-28333
Perturbations on effective index of refraction from prism coupling
[AD-A291700] p 2427 N95-28524
Evaluation of defect-related diffusion in semiconductors by electrooptical sampling
[AD-A291630] p 2270 N95-28544

ELECTROCHEMICAL CELLS
Progress towards computer simulation of NiH2 battery performance over life p 2272 N95-26786
High-rate/high-temperature capability of a single-layer zicar-separator nickel-hydrogen cell
p 2272 N95-26788
Air Force Ni-H2 cell test program: State of Charge test
p 2272 N95-26789
Calorimetric evaluation of commercial Ni-MH cells and charges p 2272 N95-26790
Nickel metal hydride LEO cycle testing
p 2272 N95-26791
Adiabatic charging of nickel-hydrogen batteries
p 2272 N95-26795
Alternate charging profiles for the onboard nickel cadmium batteries of the Explorer Platform/Extreme Ultraviolet Explorer p 2272 N95-26796

ELECTROCHEMICAL CORROSION
Environmentally Benign Cleaning and Degreasing Technology: JANNAF Safety and Protection Subcommittee and Propellant Development and Characterization Subcommittee Joint Workshop
[CPIA-PUBL-611] p 2227 N95-27101

Simulations of metal dissolution and corrosion
[DE95-007486] p 2218 N95-27748

ELECTROCHEMICAL OXIDATION
Absorption of sparingly soluble gases by reactive media in self-aerated gas-liquid contactors: A scale-up procedure
[DE95-006429] p 2206 N95-27707

ELECTROCHEMISTRY
Investigation of the interface between immiscible electrolytes applied to membrane electrochemistry
[AD-A288887] p 2199 N95-26350
Electrocrystallization of an ordered organic monolayer: Selective epitaxial growth of beta(ET)213 ongraphite
[AD-A288942] p 2178 N95-26569
The use of electrochemistry and ellipsometry for identifying and evaluating corrosion on aircraft
[AD-A288536] p 2125 N95-27186
Simulations of metal dissolution and corrosion
[DE95-007486] p 2218 N95-27748

ELECTRODES
Toward molecular selectivity with chemically modified electrodes: Can electroactivity and permeability through an overlaying metallopolymer film be controlled via rational manipulation of internal architecture?
[AD-A288719] p 2403 N95-26491
Experimental definition for implantation of the AFIT cortical multielectrode array
[AD-A289216] p 2354 N95-26991
An investigation of the chemical and physical properties of pristine, electrochromically damaged, and photochromically damaged KTiOPO4 (KTP) using surface analytical and optical spectroscopic techniques
[DE95-007865] p 2443 N95-28023

ELECTRODYNAMICS
Radiation of a uniformly moving charge
[DE95-608757] p 2255 N95-27335

ELECTROENCEPHALOGRAPHY
Experimental definition for implantation of the AFIT cortical multielectrode array
[AD-A289216] p 2354 N95-26991
Matrix kernels for MEG and EEG source localization and imaging
[DE95-005238] p 2354 N95-27426

ELECTROLUMINESCENCE
JTEC panel on display technologies in Japan
[NASA-CR-198564] p 2292 N95-27863

ELECTROLYTES
Investigation of the interface between immiscible electrolytes applied to membrane electrochemistry
[AD-A288887] p 2199 N95-26350
Thermodynamics of electrolyte solutions for use in high energy lithium batteries
[AD-A288897] p 2199 N95-26352
FREZCHEM: A chemical-thermodynamic model for aqueous solutions at subzero temperatures
[AD-A288456] p 2200 N95-26432
Materials design and processing by biomimicking. Section 1: Research progress
[AD-A288229] p 2226 N95-26623
Design and processing of materials by biomimicking. Section 2. Publications
[AD-A288230] p 2226 N95-26624
Measurements of the volatilities of electrolytes: Application to water/steam cycles
[DE95-007103] p 2204 N95-27451
Electrolyte effects in Li(Si)/FeS2 thermal batteries
[DE95-001614] p 2264 N95-27474
Thermodynamics of aqueous electrolytes at high temperatures by the isopiestic technique
[DE95-006747] p 2449 N95-27546
Simulations of metal dissolution and corrosion
[DE95-007486] p 2218 N95-27748
Electrical conductivity measurements of aqueous electrolyte solutions at high temperatures and high pressures
[DE95-006748] p 2208 N95-27956
Aqueous electrolyte modeling in ASPEN PLUS(trademark)
[DE95-007008] p 2208 N95-27960
Hydrogen-ion titrations of amino acids and proteins in solutions containing concentrated electrolyte
[DE95-008356] p 2209 N95-28229

ELECTROLYTIC CELLS
Long life 80Ah standard IPV NiH2 battery cell
p 2272 N95-26787

ELECTROMAGNETIC ABSORPTION
Soot particle density determination from a laser extinction multipass technique
[AD-A288551] p 2423 N95-26532
Particle-like absorption spectra in small transition metal clusters
[DE95-007082] p 2218 N95-27752
Nonlinear optical microscopy for imaging thin films and surfaces
[DE95-007872] p 2426 N95-28018
SeaWiFS technical report series. Volume 27: Case studies for SeaWiFS calibration and validation, part 3
[NASA-TM-104566-VOL-27] p 2348 N95-28030

ELECTROMAGNETIC ACCELERATION
A high velocity electromagnetic mass launcher having an ablation resistant insulator
[AD-A288231] p 2154 N95-26524

ELECTROMAGNETIC FIELDS
Analysis of electromagnetic problems involving chiral, bi-isotropic, and uniaxial bianisotropic media
[PB95-185096] p 2248 N95-26450
Radiation of a uniformly moving charge
[DE95-608757] p 2255 N95-27335
Acceleration theorems
[DE95-007300] p 2420 N95-27484
Proofs of contracted length non-covariance
[DE95-610175] p 2391 N95-27715
Landau quasi-energy spectrum destruction for an electron in both a static magnetic field and a resonant electromagnetic wave
[DE95-610176] p 2256 N95-27716
The ELF controversy
[DE95-008283] p 2256 N95-28407

ELECTROMAGNETIC INTERACTIONS
A high velocity electromagnetic mass launcher having an ablation resistant insulator
[AD-A288231] p 2154 N95-26524
A model of the extended electron and its nonlocal electromagnetic interaction: Gauge invariance of the nonlocal theory
[DE95-608803] p 2255 N95-27313

ELECTROMAGNETIC INTERFERENCE
Electromagnetic spectrum occupancy study of a potential transmitter site for the HF Active Auroral Research Program (HAARP)
[AD-A288909] p 2249 N95-26564
Test operations procedure (TOP) 2-2-613, electromagnetic interference testing and electrical subsystem - non-communication
[AD-A289521] p 2251 N95-26851

ELECTROMAGNETIC PROPERTIES
Reduction of off-boresight fields for a TEM horn antenna
[AD-A289708] p 2250 N95-26738

ELECTROMAGNETIC PUMPS
Heat pipe cooled reactors for multi-kilowatt space power supplies
[DE95-005211] p 2420 N95-27425

ELECTROMAGNETIC RADIATION
The attenuation of microwave radiation by fog and rain
[AD-A288326] p 2249 N95-26562
A BATSE investigation of radiation belt electrons precipitated by VLF waves
[NASA-CR-197780] p 2336 N95-26922
New trends and ideas in the fields of microwave technology
[AD-A291663] p 2257 N95-28453

ELECTROMAGNETIC SCATTERING
On the azimuthal Fourier components of the Green's function for the Helmholtz equation in three dimensions
[AD-A288775] p 2398 N95-26345
Joint services electronics program
[AD-A289594] p 2260 N95-26716
Computation of electromagnetic scattering parameters for lognormal distributions of magnetic spheres: Theory and algorithms
[AD-A289672] p 2250 N95-26759
Simple equivalent dipole distributions for dielectric spheroidal scatterers
[PB95-184883] p 2254 N95-27049
Internal electric field of anisotropic and bi-anisotropic spheres
[PB95-195491] p 2257 N95-28449
Method of images applied to electromagnetic problems involving spherical, spheroidal and planar geometries
[PB95-195517] p 2257 N95-28451
Numerical and theoretical studies of rough surface scattering
[AD-A291748] p 2257 N95-28528

ELECTROMAGNETIC SPECTRA
Electromagnetic spectrum occupancy study of a potential transmitter site for the HF Active Auroral Research Program (HAARP)
[AD-A288909] p 2249 N95-26564

ELECTROMAGNETIC WAVE TRANSMISSION
Electromagnetic spectrum occupancy study of a potential transmitter site for the HF Active Auroral Research Program (HAARP)
[AD-A288909] p 2249 N95-26564
Joint services electronics program
[AD-A289594] p 2260 N95-26716
New trends and ideas in the fields of microwave technology
[AD-A291663] p 2257 N95-28453

ELECTROMAGNETISM
Analysis of electromagnetic problems involving chiral, bi-isotropic, and uniaxial bianisotropic media
[PB95-185096] p 2248 N95-26450
Conditions for the parameter dyadics of lossless bi-anisotropic media
[PB95-185104] p 2252 N95-26914

ELECTROMAGNETS
Extension to the dynamic modeling of the large angle magnetic suspension test fixture
[NASA-CR-197801] p 2143 N95-26768
Magnetic field measurement for the spectrometric magnet of the ISTRA-M setup
[DE95-608560] p 2362 N95-27162

ELECTROMECHANICAL DEVICES
Feasibility of flywheel energy storage systems for applications in future space missions
[NASA-CR-195422] p 2316 N95-26393
Valve mechanism for an acoustic modulator
[AD-D017263] p 2300 N95-26504
A systems engineering approach to electro-mechanical reconfiguration for mobility autonomy
[AD-A289479] p 2301 N95-26926
Non-explosive actuation for the ORBCOMM (TM) satellite p 2156 N95-27274
A rotating arm using shape-memory alloy
p 2157 N95-27276
Electromechanical rotary actuator
p 2157 N95-27278
High-performance reactionless scan mechanism
p 2158 N95-27288
JTEC Panel report on microelectromechanical systems in Japan
[NASA-CR-197831] p 2268 N95-28239

ELECTRON BEAMS
The consideration of a bright relative beam dynamics in the magnetic focusing field
[DE95-608377] p 2398 N95-27160
Crab crossing in a gamma-gamma collider
[DE95-006580] p 2420 N95-27470
High energy electron beams for ceramic joining
[DE95-006316] p 2420 N95-27480
Femtosecond X-ray generation through 90 degrees T homson scattering: Status of the LBL experiment
[DE95-006560] p 2296 N95-27674
Precision electromagnetic calorimetry with liquid krypton
[DE95-006685] p 2292 N95-27677
ECR plasma-assisted deposition of Al2O3 and dispersion-strengthened AlO2
[DE95-007743] p 2235 N95-27687
Process for non-contact removal of organic coatings from the surface of paintings
[NASA-CASE-LEW-15896-1] p 2235 N95-27702
Application of conventional laser technology to gamma-gamma colliders
[DE95-006341] p 2297 N95-27736
Time-dependent multi-dimensional simulation studies of the electron output scheme for high power FELs
[DE95-006593] p 2297 N95-27737
Performance of an accordion electromagnetic calorimeter with liquid krypton
[DE95-006693] p 2292 N95-27738
Finite pulse effects in self-amplified-spontaneous emission
[DE95-006585] p 2298 N95-28104
Precise measurement of the left-right cross section asymmetry in Z boson production by e(+)e(-) collisions
[DE95-008591] p 2414 N95-28158
Beam instability studies for the SSC
[DE95-008024] p 2423 N95-28551

ELECTRON BOMBARDMENT
Molecular beam scattering from C-13 enriched Kapton and correlation with the EOIM-3 carousel experiment
p 2419 N95-27643

ELECTRON BUNCHING
Beam instability studies for the SSC
[DE95-008024] p 2423 N95-29551

ELECTRON CAPTURE
Lattice calculation for lepton capture from vacuum-pair production in relativistic heavy-ion collisions
[DE95-007392] p 2413 N95-28077

ELECTRON DENSITY (CONCENTRATION)
Measurement of particle transport coefficients on Alcator C-Mod
[DE95-007763] p 2411 N95-28020
Finite pulse effects in self-amplified-spontaneous emission
[DE95-006585] p 2298 N95-28104

ELECTRON DENSITY PROFILES
Far-infrared laser interferometry measurements on the STP-3(M) reversed-field pinch
[DE94-765440] p 2297 N95-27868
Finite pulse effects in self-amplified-spontaneous emission
[DE95-006585] p 2298 N95-28104

ELECTRON EMISSION

Projectile image acceleration, neutralization and electron emission during grazing interactions of multicharged ions with Au(110)
[DE95-007394] p 2409 N95-27551

ELECTRON ENERGY

Resonant photoemission studies of thickness dependence of the unoccupied Gd 5d bands
[DE95-004127] p 2436 N95-26440

Electronic characterization of defects in narrow gap semiconductors: Comparison of electronic energy levels and formation energies in mercury cadmium telluride, mercury zinc telluride, and mercury zinc selenide
[NASA-CR-197835] p 2437 N95-26780

Measurement of R in e(+)e(-)-annihilation at center-of-mass energies between 7.2 and 10.34 GeV
[DE95-610303] p 2407 N95-27408

Landau quasi-energy spectrum destruction for an electron in both a static magnetic field and a resonant electromagnetic wave
[DE95-610176] p 2256 N95-27716

Electron spectroscopy studies of argon K-shell excitation and vacancy cascades
[DE95-007096] p 2442 N95-27963

Phase stability and elasticity of C15 transition-metal intermetallic compounds
[DE95-007876] p 2219 N95-28026

Theory of exotic superconductivity and normal states of heavy electron and high temperature superconductivity materials
[DE95-006637] p 2268 N95-28198

ELECTRON GAS

Wake fields in semiconductor plasmas
[DE94-634523] p 2429 N95-26439

Monte Carlo study of electron-plasmon scattering effects on hot electron transport in GaAs
[DE95-607768] p 2403 N95-26542

Temperature dependence of the static dielectric response in a Q1D electron gas
[DE95-609269] p 2400 N95-28350

ELECTRON GUNS

Developments in the electron gun simulation program, EGUN
[DE95-008137] p 2267 N95-28143

ELECTRON IRRADIATION

Annealing of radiation damaged gallium arsenide solar cells by laser illumination
[AD-A289683] p 2316 N95-26762

ELECTRON MICROSCOPES

Cryogenic temperature control and tension/compression attachment stage for an electron microscope
[AD-D017390] p 2294 N95-28612

ELECTRON MICROSCOPY

Boron-induced reconstructions of Si(100) investigated by scanning tunneling microscopy
[AD-A289222] p 2438 N95-26959

Density changes in amorphous Pd80Si20 during low temperature ion irradiation
[DE95-007132] p 2441 N95-27928

Analytical electron microscopy of nanometer-sized particles
[AD-A289124] p 2413 N95-28101

The in situ observation of epitaxial diamond thin film nucleation and growth using emission electron microscopy
[AD-A289841] p 2447 N95-28618

ELECTRON MOBILITY

Comprehensive numerical model for CW vertical-cavity surface-emitting lasers
[DE95-007758] p 2299 N95-28132

ELECTRON PLASMA

Process for non-contact removal of organic coatings from the surface of paintings
[NASA-CASE-LEW-15896-1] p 2235 N95-27702

ELECTRON PRECIPITATION

A BATSE investigation of radiation belt electrons precipitated by VLF waves
[NASA-CR-197780] p 2336 N95-26922

ELECTRON RADIATION

Long-term variability of electron radiation dose in geosynchronous orbit
[AD-A289335] p 2162 N95-26902

ELECTRON SCATTERING

Monte Carlo study of electron-plasmon scattering effects on hot electron transport in GaAs
[DE95-607768] p 2403 N95-26542

A BATSE investigation of radiation belt electrons precipitated by VLF waves
[NASA-CR-197780] p 2336 N95-26922

Crab crossing in a gamma-gamma collider
[DE95-006580] p 2420 N95-27470

Molecular beam scattering from C-13 enriched Kapton and correlation with the EOIM-3 carousel experiment
p 2419 N95-27643

HZETRN: Description of a free-space ion and nucleon transport and shielding computer program
[NASA-TP-3495] p 2465 N95-28530

ELECTRON SPECTROSCOPY

Electron spectroscopy studies of argon K-shell excitation and vacancy cascades
[DE95-007096] p 2442 N95-27963

ELECTRON STATES

Analytic formulae for the Hartree-Fock order parameter at arbitrary p/q filling factors for the 2DEG in a magnetic field
[DE95-607805] p 2448 N95-26603

Multifractal character of the electronic states in disordered two-dimensional systems
[DE95-609153] p 2443 N95-28016

Chemical and electrical properties of cavities in silicon and germanium
[DE95-006812] p 2445 N95-28206

ELECTRON TRANSFER

Monte Carlo study of electron-plasmon scattering effects on hot electron transport in GaAs
[DE95-607768] p 2403 N95-26542

Photoemission and optical properties of C60 fullerites
[DE95-006588] p 2425 N95-27539

Photoinduced dipoles and charge pairs in condensed phase
[DE95-007071] p 2207 N95-27921

ELECTRON TRANSITIONS

Atomic physics with highly charged ions
[DE95-007325] p 2407 N95-27439

ELECTRON TUNNELING

Demonstration of photo-assisted tunneling process across the coulomb blockade energy gap in mesoscopic tunnel junctions --- photon-assisted tunneling
[AD-A289534] p 2438 N95-26872

ELECTRON-POSITRON PAIRS

Measurement of inclusive Lambda production in electron-positron interactions at the upsilon energies
[DE95-610302] p 2407 N95-27407

Measurement of R in e(+)e(-)-annihilation at center-of-mass energies between 7.2 and 10.34 GeV
[DE95-610303] p 2407 N95-27408

Measurement of alpha(s) in e(+)e(-) annihilation at E(cm) = 29 GeV
[DE95-006486] p 2417 N95-28594

ELECTRONIC CONTROL

Laser with optically driven Q-switch
[NASA-CASE-NPO-18470-1-CU] p 2297 N95-27731

ELECTRONIC EQUIPMENT

Test operations procedure (TOP) 2-2-613, electromagnetic interference testing and electrical subsystem - non-communication
[AD-A289521] p 2251 N95-26851

Multi-channel electronically scanned cryogenic pressure sensor
[NASA-CASE-LAR-15062-1] p 2291 N95-27138

JTEC Panel report on electronic manufacturing and packaging in Japan
[NASA-CR-197830] p 2263 N95-27226

Microelectronics in Japan p 2263 N95-27227

Building the electronic industry's roadmaps
p 2263 N95-27228

Japan's technology and manufacturing infrastructure
p 2263 N95-27229

Electronics manufacturing and assembly in Japan
p 2263 N95-27231

Quality assurance and reliability in the Japanese electronics industry p 2263 N95-27232

Successful product realization strategies
p 2264 N95-27233

CAE for thermal management of aerospace electronic boards using the BETAsoft program
p 2272 N95-27354

Monolithic electronics for nuclear and high-energy physics experiments
[DE95-005393] p 2420 N95-27427

Evaluation and qualification of environmentally conscious manufacturing processes for commercial and military applications
[DE95-008520] p 2329 N95-27878

Lithium ion rechargeable systems studies
[DE95-006810] p 2268 N95-28200

Basic and applied research in the field of electronics and communications
[AD-A291727] p 2270 N95-28512

The protection of electro-explosive devices (EEDs) and electronics from electrostatic discharge (ESD) hazards
[DSTO-TR-0100] p 2258 N95-28568

ELECTRONIC EQUIPMENT TESTS

Test operations procedure (TOP) 2-2-613, electromagnetic interference testing and electrical subsystem - non-communication
[AD-A289521] p 2251 N95-26851

Efficient generation of counterexamples and witnesses in symbolic model checking
[AD-A288583] p 2370 N95-27095

ELECTRONIC MODULES

Intelligent computer based reliability assessment of multichip modules
[AD-A288833] p 2259 N95-26550

Managing electronic records: A guideline
[DE95-007038] p 2456 N95-28555

ELECTRONIC PACKAGING

JTEC Panel report on electronic manufacturing and packaging in Japan
[NASA-CR-197830] p 2263 N95-27226

Microelectronics in Japan p 2263 N95-27227

Building the electronic industry's roadmaps
p 2263 N95-27228

Japan's technology and manufacturing infrastructure
p 2263 N95-27229

Japan's electronic packaging technologies
p 2263 N95-27230

Successful product realization strategies
p 2264 N95-27233

Manufacturing tailored property ceramic composites
[DE95-006303] p 2237 N95-27993

ELECTRONIC SPECTRA

Analytical spectroscopy
[DE95-607896] p 2203 N95-27200

Electron spectroscopy studies of argon K-shell excitation and vacancy cascades
[DE95-007096] p 2442 N95-27963

ELECTRONICS

Template synthesis of electronically conductive polymer nanostructures
[AD-A288373] p 2225 N95-26472

JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-016] p 2262 N95-27170

ELECTRONS

Long-term variability of electron radiation dose in geosynchronous orbit
[AD-A289335] p 2162 N95-26902

A BATSE investigation of radiation belt electrons precipitated by VLF waves
[NASA-CR-197780] p 2336 N95-26922

A model of the extended electron and its nonlocal electromagnetic interaction: Gauge invariance of the nonlocal theory
[DE95-608803] p 2255 N95-27313

Integrating the QMR method with first principles material science application code
[DE95-007380] p 2408 N95-27456

Photoemission and optical properties of C60 fullerites
[DE95-006588] p 2425 N95-27539

Search for the top quark in dilepton decay modes at D(PHI)
[DE95-007764] p 2409 N95-27689

Burst of energetic ions from reversed field pinch plasma
[DE94-765447] p 2432 N95-27870

Relativistic electrons in the outer-zone: An 11 year cycle, their relation to the solar wind
[DE95-007882] p 2338 N95-28061

Collisions of highly charged ions with electrons, atoms and surfaces
[DE95-007393] p 2413 N95-28078

Heterostructures and infrared emitters with compressed InAsSb layers
[DE95-008157] p 2446 N95-28399

ELECTROPLATING

The evaluation of a fluorochemical drying process for an electrical contact p 2227 N95-27103

Plasma source ion implantation of ammonia into electroplated chromium
[DE95-006275] p 2444 N95-28125

ELECTRORHEOLOGICAL FLUIDS

Vibration control using chaotic motion stabilizers
[AD-A289576] p 2398 N95-26687

ELECTROSTATIC CHARGE

Simple equivalent dipole distributions for dielectric spheroidal scatterers
[PB95-184883] p 2254 N95-27049

The effect of aviation fuels containing low amounts of static dissipater additive on electrostatic charge generation
[AD-A280075] p 2243 N95-28152

The protection of electro-explosive devices (EEDs) and electronics from electrostatic discharge (ESD) hazards
[DSTO-TR-0100] p 2258 N95-28568

ELECTROWEAK INTERACTIONS (FIELD THEORY)

Signatures of Higgs-Triplet representations at TeV-e(+)e(-) colliders
[DE95-007201] p 2419 N95-27089

Finite fermion density effects on the electroweak string
[DE95-608802] p 2448 N95-27312

Model independent constraints on anomalous gauge boson self-couplings from e(+)e(-) colliders with longitudinally polarized beams
[DE95-608844] p 2406 N95-27317

Probing strongly-interacting electroweak dynamics through W(+)W(-)/ZZ ratios at future e(+)e(-) colliders
[DE95-007202] p 2413 N95-28067
Constraints on the anomalous WW gamma couplings from b vector s gamma
[DE95-608866] p 2415 N95-28246

ELECTROWEAK MODEL
Weak matrix elements efforts on the lattice: Status and prospects
[DE95-007701] p 2416 N95-28355

ELEMENTARY EXCITATIONS
Photoemission and optical properties of C60 fullerites
[DE95-006588] p 2425 N95-27539
The surface of liquid He-4 at nonzero temperatures
[DE95-607841] p 2207 N95-27880

ELEMENTARY PARTICLE INTERACTIONS
Measurement of inclusive Lambda production in electron-positron interactions at the upsilon energies
[DE95-610302] p 2407 N95-27407
Application of conventional laser technology to gamma-gamma colliders
[DE95-006341] p 2297 N95-27736
Search for supersymmetry and leptoquark states at FNAL
[DE95-003381] p 2410 N95-27871
A study of events with large total transverse energy produced in proton-antiproton collisions at (radical)s = 1.8 TeV
[DE95-003382] p 2410 N95-27872
Beam-beam interaction working group summary
[DE95-007824] p 2422 N95-28123
Some aspects of the OZI-rule violation in the reaction anti-pp yields phi pi(0)
[DE95-608853] p 2415 N95-28245
Situation in study of electric polarizability and mean square charge radius of the neutron
[DE95-608869] p 2415 N95-28247
The Bremsstrahlung of soft gamma-quanta created by elastic pp- and np-scatterings and the dibaryon resonance problem
[DE95-608870] p 2415 N95-28248

ELEMENTARY PARTICLES
Extended BRST symmetry for the relativistic particle with curvature
[DE95-608799] p 2406 N95-27309
Field theory of point-like systems with higher-order derivatives
[DE95-608800] p 2448 N95-27310
N. N. Bogolyubov and particle physics
[DE95-608794] p 2448 N95-27447
The 1993 European school of high-energy physis
[DE95-610196] p 2421 N95-28040

ELLIPSES
An ugly duckling becomes a swan (hor ellipsis): How an organization becomes customer focused through listening
[DE95-004974] p 2454 N95-27461

ELLIPSOMETRY
Materials, structures, and devices for high-speed electronics
[NASA-CR-197815] p 2260 N95-26816
The use of electrochemistry and ellipsometry for identifying and evaluating corrosion on aircraft
[AD-A288536] p 2125 N95-27186
Ambient-pressure silica aerogel films
[DE95-008161] p 2237 N95-28090
New developments for sol-gel film and fiber processing
[DE95-008175] p 2240 N95-28404

ELLIPTIC DIFFERENTIAL EQUATIONS
Introduction to multigrid methods
[NASA-CR-195045] p 2388 N95-26395

ELLIPTICAL GALAXIES
Molecular cloud content of early-type galaxies. V. CO in elliptical galaxies
[PB95-185153] p 2461 N95-27320

ELLIPTICAL ORBITS
Kepler Equation solver p 2147 N95-27767

EMBEDDING
Contribution to the optimal shape design of two-dimensional internal flows with embedded shocks
[NASA-CR-195062] p 2389 N95-26672
Atomistic calculations of hydrogen interactions with Ni3Al grain boundaries and Ni/Ni/Ni3Al interfaces
[DE95-006497] p 2408 N95-27534
Pulsed laser deposition of zeolitic membranes
[DE95-006274] p 2298 N95-28124

EMBRITTLEMENT
Materials considerations for molten salt accelerator-based plutonium conversion systems
[DE95-006743] p 2217 N95-27544
Effects of hydrogen on carbon steels at the Multi-Function Waste Tank Facility
[DE95-007194] p 2219 N95-28005
Gamma ray-induced embrittlement of pressure vessel alloys
[DE95-007133] p 2220 N95-28072

EMERGENCIES
Application of a Geographic Information System for radiologic emergency response
[DE95-007624] p 2455 N95-28113

EMISSION
Photon rockets and gravitational radiation
[PB95-190161] p 2397 N95-28174
A black carbon emission data base for atmospheric chemistry and climate studies
[DE95-006436] p 2332 N95-28662

EMISSION SPECTRA
FTIR measurements of thermal infrared sky radiance and transmission
[DE95-003642] p 2334 N95-26436
Measurement of N2(+) mobility He via Fourier transform emission spectroscopy
[AD-A289266] p 2404 N95-26979
Overview of the observations of symbiotic stars
p 2460 N95-27076
Analytical spectroscopy
[DE95-607896] p 2203 N95-27200
Superior catalysts for selective catalytic reduction of nitric oxide
[DE95-007903] p 2205 N95-27691
Evaluation of a conductive polymer-based sensor for detection of hydrazines at the part-per-billion level
p 2173 N95-28309
A continuous emissions monitor for airborne metals
p 2174 N95-28313

EMISSIVITY
Remote measurement of ground temperature and emissivity
[DE95-008055] p 2314 N95-28053

EMITTANCE
Coupling in the Tevatron
[DE95-005129] p 2421 N95-27531
Observation of asymmetrical two-cone Vavilov-Cherenkov radiation in biaxial crystal of triglycinesulphate emitted by 658 MeV protons passing along bi normal
[DE94-629017] p 2441 N95-27867
Burst of energetic ions from reversed field pinch plasma
[DE94-765447] p 2432 N95-27870
Positron microscopy
[DE95-007042] p 2410 N95-27874
Gamma ray-induced embrittlement of pressure vessel alloys
[DE95-007133] p 2220 N95-28072

EMITTERS
Heterostructures and infrared emitters with compressed InAsSb layers
[DE95-008157] p 2446 N95-28399

EMULSIONS
Application of bacterial bioemusifiers to in situ maintenance of oil/water separators
p 2179 N95-27120

ENCAPSULATING
Parallelism detection and scheduling strategies for reliable and efficient execution on multicomputers
[AD-A288370] p 2376 N95-26471

END EFFECTORS
Multi-agent perception for Human/Robot interaction: A framework for intuitive trajectory modification
[AD-A289399] p 2359 N95-26884
Design, testing and evaluation of latching end effector
p 2155 N95-27261
Some mechanical design aspects of the European Robotic Arm p 2155 N95-27262
Development and testing of the rack insertion device
p 2158 N95-27289

END-TO-END DATA SYSTEMS
Performance modeling of hyperspectral imaging sensors for atmospheric studies
[AD-A289017] p 2289 N95-26461

ENERGETIC PARTICLES
Ionizing radiation measurements on LDEF: A0015 Free flyer biostack experiment
[NASA-CR-196603] p 2202 N95-27168
Energetic particle destabilization of shear Alfven waves in stellarators and tokamaks
[DE95-006393] p 2431 N95-27419

ENERGY
A new method of evaluating the explicit magnetic-state-dependent energy in semi-empirical calculations of iron
[AD-A289098] p 2399 N95-27398

ENERGY BUDGETS
Measurement and analysis of the surface energy budget for ARM field experiments
[DE95-007646] p 2338 N95-28114

ENERGY CONSERVATION
Rarefied gas effects on aerobraking/reentry vehicles with wakes
[NASA-CR-196586] p 2164 N95-27093
Investigation on working out the global regeneration plan
[DE95-759246] p 2329 N95-27938
Investigation on energy conversion technology using biochemical reaction elements, 2
[DE95-759250] p 2321 N95-27940
Electric vehicle activities
[DE95-006648] p 2267 N95-28105

ENERGY CONSUMPTION
Fabrication of long wavelength array by in-situ molecular beam epitaxy
[AD-A288599] p 2423 N95-26679
Novel field effect transistors for low power electronics
[AD-A288650] p 2262 N95-27096
Performance of a stand-alone wind-electric ice maker for remote villages
[DE95-004006] p 2320 N95-27475
Survey on bio-chemical complex harmonized with global environment
[DE95-759252] p 2331 N95-28535
Novel field effect transistors for low power electronics
[AD-A289929] p 2271 N95-28629

ENERGY CONVERSION
Investigation on energy conversion technology using biochemical reaction elements, 2
[DE95-759250] p 2321 N95-27940

ENERGY CONVERSION EFFICIENCY
Solar concentrator technology development for space based applications, volume 1
[NASA-CR-197723] p 2319 N95-27193
NQR-NMR studies of higher alcohol synthesis Cu-Co catalysts
[DE95-007926] p 2205 N95-27680

ENERGY DISSIPATION
Photoacoustic chambers for studying solids and gases: Theory and practical examples
[IFTR-39/1994] p 2143 N95-26837
Energy-measuring resistor bank
[AD-D017392] p 2271 N95-28613

ENERGY DISTRIBUTION
A study of events with large total transverse energy produced in proton-antiproton collisions at (radical)s = 1.8 TeV
[DE95-003382] p 2410 N95-27872

ENERGY GAPS (SOLID STATE)
Optical features of nanosize iron and molybdenum sulfide clusters
[DE95-005417] p 2202 N95-27136
Model of a single impurity in a wide bandgap semiconductor describing electric field screening
[AD-A289322] p 2264 N95-27296

ENERGY LEVELS
Electronic characterization of defects in narrow gap semiconductors: Comparison of electronic energy levels and formation energies in mercury cadmium telluride, mercury zinc telluride, and mercury zinc selenide
[NASA-CR-197835] p 2437 N95-26780
Numerical study of the singlet-triplet model for cuprate superconductors
[DE95-609438] p 2440 N95-27712
Electron spectroscopy studies of argon K-shell excitation and vacancy cascades
[DE95-007096] p 2442 N95-27963

ENERGY METHODS
First-principles study of intermetallic phase stability in the ternary Ti-Al-Nb alloy system
[DE95-005259] p 2213 N95-27082

ENERGY OF FORMATION
Electronic characterization of defects in narrow gap semiconductors: Comparison of electronic energy levels and formation energies in mercury cadmium telluride, mercury zinc telluride, and mercury zinc selenide
[NASA-CR-197835] p 2437 N95-26780

ENERGY POLICY
Alternative fuels and vehicles choice model
[DE95-005695] p 2243 N95-27944

ENERGY REQUIREMENTS
Geothermal direct-heat utilization assistance
[DE95-007247] p 2319 N95-27236

ENERGY SOURCES
The U.S. Department of Energy Wind Turbine Development Program
[DE95-000292] p 2325 N95-28395

ENERGY SPECTRA
Wigner quantum oscillators. OSP (3/2) oscillators
[DE95-608756] p 2448 N95-27334
Landau quasi-energy spectrum destruction for an electron in both a static magnetic field and a resonant electromagnetic wave
[DE95-610176] p 2256 N95-27716

Electron spectroscopy studies of argon K-shell excitation and vacancy cascades
[DE95-007096] p 2442 N95-27963
A phenomenological treatment of rotating turbulence
[NASA-CR-198168] p 2288 N95-28228

ENERGY STORAGE
Feasibility of flywheel energy storage systems for applications in future space missions
[NASA-CR-195422] p 2316 N95-26393
A review of nickel hydrogen battery technology
[NASA-TM-106918] p 2167 N95-27177
Investigation of high-temperature superconducting flywheel energy storage devices
[DE95-759242] p 2320 N95-27936

ENERGY TECHNOLOGY
Molten Carbonate Fuel Cell (MCFC) product development test
[DE95-007345] p 2316 N95-26543
Solar concentrator technology development for space based applications, volume 1
[NASA-CR-197723] p 2319 N95-27193
Parallel plasma fluid turbulence calculations
[DE95-006741] p 2431 N95-27537
Current status of environmental, health, and safety issues of lithium polymer electric vehicle batteries
[DE95-004005] p 2265 N95-27719
Investigation on technology for increasing the biological CO2 sink and technology for CO2 fixation and reutilization
[DE95-759251] p 2329 N95-27941
Analysis methods for wind turbine control and electrical system dynamics p 2273 N95-27984
Variable speed generator technology options for wind turbine generators p 2273 N95-27988
Transportation R and D included in thermal and mechanical sciences program
[DE95-008275] p 2303 N95-28070
SIHTI 2: Energy and environmental technology. Yearbook 1993 of the research programme
[DE95-755135] p 2331 N95-28202
Review and analysis of the 1980-1989 biomass thermochemical conversion program
[DE95-000287] p 2325 N95-28394

ENERGY TRANSFER
Energy transfer from excited nitrenes at high density
[AD-A288352] p 2403 N95-26466
Statistical model for molecular internal energy exchange in DSMC method for rarefied flow analysis
[ISAS-R-654] p 2274 N95-26741
Energy transfer in real and artificial photosynthetic systems
[DE95-005824] p 2351 N95-27948
Bubble chamber spectroscopy for chemical analysis: A new concept
[DE95-006350] p 2209 N95-28088
A phenomenological treatment of rotating turbulence
[NASA-CR-198168] p 2288 N95-28228
Time-resolved FTIR emission studies of laser photofragmentation and radical reactions
[DE95-008125] p 2300 N95-28398

ENGINE AIRFRAME INTEGRATION
Development of an upwind, finite-volume code with finite-rate chemistry
[NASA-CR-197747] p 2121 N95-26760
Performance study for inlet installations
[NASA-CR-189714] p 2140 N95-28227

ENGINE CONTROL
Prevention and control of inlet unstart using an SR-71 simulation p 2119 N95-26948

ENGINE DESIGN
Experiment on a rectangular cross section scramjet combustor. 2: Effects of fuel injector geometry
[NAL-TR-1220] p 2139 N95-26600
Prevention and control of inlet unstart using an SR-71 simulation p 2119 N95-26948
Preliminary results and research capabilities of a new jet facility at the University of Kansas
p 2119 N95-26951
Application of CFD to the analysis and design of high-speed inlets
[NASA-CR-198574] p 2279 N95-27240
Comparison of numerical results and multicavity purge and rim seal data with extensions to dynamics
[NASA-TM-106685] p 2168 N95-27434
Composite intermediate case manufacturing scale-up for advanced engines p 2141 N95-28275

ENGINE INLETS
Characteristics of the turbine inlet temperature sensing circuit for the T56 turbo-prop engine
[DSTO-TR-0095] p 2139 N95-26424
Performance characterization of a highly-offset diffuser with and without blowing vortex generator jets
[AD-A289334] p 2122 N95-26901
Prevention and control of inlet unstart using an SR-71 simulation p 2119 N95-26948
Application of CFD to the analysis and design of high-speed inlets
[NASA-CR-198574] p 2279 N95-27240
Performance study for inlet installations
[NASA-CR-189714] p 2140 N95-28227
Experimental investigation of inlet-combustor isolators for a dual-mode scramjet at a Mach number of 4
[NASA-TP-3502] p 2140 N95-28343

ENGINE MONITORING INSTRUMENTS
Characteristics of the turbine inlet temperature sensing circuit for the T56 turbo-prop engine
[DSTO-TR-0095] p 2139 N95-26424

ENGINE NOISE
Aircraft noise prediction program theoretical manual: Rotorcraft System Noise Prediction System (ROTONET), part 4
[NASA-TM-83199-PT-4] p 2400 N95-26392

ENGINE PARTS
Electromechanical rotary actuator
p 2157 N95-27278
Solid state sintering of silicon nitride ARL-CR-114
[DE95-007291] p 2443 N95-28076
Composite intermediate case manufacturing scale-up for advanced engines p 2141 N95-28275
Application of fiber-reinforced bismaleimide materials to aircraft nacelle structures p 2137 N95-28278

ENGINE TESTS
High pressure Earth storable rocket technology program: Basic program
[NASA-CR-195449] p 2166 N95-26390
Effects of dust from storage heaters on ignition in scramjets
[NAL-TR-1234] p 2139 N95-26706
Prevention and control of inlet unstart using an SR-71 simulation p 2119 N95-26948

ENGINEERS
NASA/DOD Aerospace Knowledge Diffusion Research Project. Report 35: The use of computer networks in aerospace engineering
[NASA-CR-198170] p 2456 N95-28600

ENTRAINMENT
Research on combustion processes relevant to burners in HVAC systems
[PB95-179735] p 2208 N95-28006

ENTROPY
The surface of liquid He-4 at nonzero temperatures
[DE95-607841] p 2207 N95-27880

ENUMERATION
Flow cytometry as a means of detecting, enumerating and characterizing bacteria for monitoring of the environment
[AD-A288997] p 2326 N95-26610

ENVIRONMENT EFFECTS
Finding the forest in the trees. The challenge of combining diverse environmental data
[NASA-CR-197798] p 2326 N95-26362
Environmental effects on high energy density materials
[AD-A288296] p 2199 N95-26416
Environmental pollution-effects on national development
[DE95-600439] p 2326 N95-26639
Space environmental effect on solar cells: LDEF and other flight tests p 2326 N95-27649
Effects of the LDEF orbital environment on the reflectance of optical mirror materials
p 2428 N95-27651
Current status of environmental, health, and safety issues of lithium polymer electric vehicle batteries
[DE95-004005] p 2265 N95-27719
Evaluation and qualification of environmentally conscious manufacturing processes for commercial and military applications
[DE95-008520] p 2329 N95-27878
Research project on CO2-induced climate change
[DE95-008339] p 2330 N95-28084
Carbonaceous aerosols influencing atmospheric radiation: Black and organic carbon
[DE95-006437] p 2330 N95-28118
Towards the detection and attribution of an anthropogenic effect on climate
[DE95-008589] p 2331 N95-28157
Survey on bio-chemical complex harmonized with global environment
[DE95-759252] p 2331 N95-28535

ENVIRONMENT MANAGEMENT
Multimedia Environmental Pollutant Assessment System (MEPAS) application guidance. Guidelines for evaluating MEPAS input parameters for Version 3.1
[DE95-007525] p 2328 N95-27749
Implementing an integrated standards-based management system to ensure compliance at Los Alamos National Laboratory
[DE95-007873] p 2451 N95-28025

ENVIRONMENT MODELS
Quantitative modeling and analysis in environmental studies
[AD-A288451] p 2326 N95-26431

ENVIRONMENT POLLUTION
Quantitative modeling and analysis in environmental studies
[AD-A288451] p 2326 N95-26431
Environmental pollution-effects on national development
[DE95-600439] p 2326 N95-26639
Subsurface radar investigations at the Pegasus Glacial-ice Runway and Williams Field, McMurdo Station, Antarctica
[AD-A289323] p 2144 N95-27297
Multimedia Environmental Pollutant Assessment System (MEPAS) application guidance. Guidelines for evaluating MEPAS input parameters for Version 3.1
[DE95-007525] p 2328 N95-27749
Three-dimensional forecast models for emergency response management p 2172 N95-28303

ENVIRONMENT PROTECTION
Concurrent engineering research center
[NASA-CR-197726] p 2362 N95-26386
Electromagnetic devices and processes in environment protection
[AD-A288656] p 2141 N95-26487
Environmentally Benign Cleaning and Degreasing Technology: JANNAF Safety and Protection Subcommittee and Propellant Development and Characterization Subcommittee Joint Workshop
[CPIA-PUBL-611] p 2227 N95-27101
Cleanliness verification process at Martin Marietta Astronautics p 2165 N95-27104
Wipe solvent substitutions for 1,1,1-trichloroethane (TCA) and methyl ethyl ketone (MEK) at Hill Air Force Base p 2228 N95-27107
CO2 pellet blast cleaning and degreasing: The true environmentally benign technology
p 2229 N95-27109
Evaluations of the effectiveness of environmentally benign cleaning methodologies p 2230 N95-27115
Sceening, down selection, and implementation of environmentally compliant cleaning and insulation bonding for MNASA p 2165 N95-27124
Marshall Space Flight Center solid waste characterization and recycling improvement study
[NASA-CR-196594] p 2360 N95-27164
Community relations plan: Galena Airport and Camp ion Air Force Station, Alaska
[AD-A286722] p 2327 N95-27234
Application of modern diagnostic methods to environmental improvement
[DE95-005797] p 2330 N95-28119
SIHTI 2: Energy and environmental technology. Yearbook 1993 of the research programme
[DE95-755135] p 2331 N95-28202
The 1994 JANNAF Safety and Environmental Protection Subcommittee Meeting, volume 1
[CPIA-PUBL-614-VOL-1] p 2170 N95-28294
The importance of propulsion engineers in protecting the global environment p 2170 N95-28295
Three-dimensional forecast models for emergency response management p 2172 N95-28303
Commercial reformulation: An economic and environmentally neutral means of managing explosives and solid propellants p 2175 N95-28320
A comprehensive energetic materials resource recovery and recycling program p 2176 N95-28323
Cryogenic washout of solid rocket propellants
p 2176 N95-28324
Strategies for recycling CdTe photovoltaic modules
[DE95-006776] p 2325 N95-28517
A comparison of NH3 point monitoring and diode laser based path integrated measurements
[DE95-006892] p 2332 N95-28602

ENVIRONMENT SIMULATION
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 3
[NASA-CP-3275-PT-3] p 2466 N95-27629
Exposure of LDEF materials to atomic oxygen: Results of EOIM 3 p 2210 N95-27633
Solid film lubricants and thermal control coatings flown aboard the EOIM-3 MDA sub-experiment
p 2242 N95-27640

ENVIRONMENT SIMULATORS
The value of simulation for training
[AD-A289174] p 2143 N95-26556

ENVIRONMENTAL CHEMISTRY
Cleanliness verification process at Martin Marietta Astronautics p 2165 N95-27104
Chemical engineering: Measurements for a competitive age
[NONP-NASA-VT-95-49098] p 2203 N95-27204

ENVIRONMENTAL CONTROL

International Space Station Alpha trace contaminant control subassembly life test report [NASA-TM-108488] p 2358 N95-26364

ENVIRONMENTAL MONITORING

Finding the forest in the trees. The challenge of combining diverse environmental data [NASA-CR-197798] p 2326 N95-26362

Using SCR methods to analyze requirements documentation [NASA-CR-197760] p 2365 N95-26668

Subsurface radar investigations at the Pegasus Glacial-ice Runway and Williams Field, McMurdo Station, Antarctica [AD-A289323] p 2144 N95-27297

Element material experiment by EFFU p 2145 N95-27667

Evaluation and qualification of environmentally conscious manufacturing processes for commercial and military applications [DE95-008520] p 2329 N95-27878

FY 1994 ambient air monitoring report for McMurdo Station, Antarctica [DE95-008565] p 2331 N95-28149

The 1994 JANNAF Safety and Environmental Protection Subcommittee Meeting, volume 1 [CPIA-PUBL-614-VOL-1] p 2170 N95-28294

OB/OD treatment: The effective use of measured field data and air modeling to support an environmental assessment p 2170 N95-28296

Use of mussels in biomonitoring of environmental impacts of propellants, projectiles, explosives, and pyrotechnics p 2170 N95-28298

Destruction of pyrotechnics manufacture wastewater treatment sludge by plasma arc pyrolysis p 2171 N95-28301

Three-dimensional forecast models for emergency response management p 2172 N95-28303

Prototype development and test results of a continuous ambient air monitoring system for hydrazine at the 110 ppb level p 2173 N95-28310

A comparison of NH3 point monitoring and diode laser based path integrated measurements [DE95-006892] p 2332 N95-28602

The Global Historical Climatology Network: A preview of version 2 [DE95-007003] p 2332 N95-28605

ENVIRONMENTAL QUALITY

Transparent access to distributed, heterogeneous environmental information systems [DE95-007268] p 2454 N95-27483

ENVIRONMENTAL SURVEYS

Multimedia Environmental Pollutant Assessment System (MEPAS) application guidance. Guidelines for evaluating MEPAS input parameters for Version 3.1 [DE95-007525] p 2328 N95-27749

ENVIRONMENTAL TESTS

Design and development of experimental facilities for short duration, low-gravity combustion and fire experiments [NASA-CR-195458] p 2244 N95-26709

The 1994 27th Annual NASA Aerospace Battery Workshop [NASA-CP-3292] p 2317 N95-26785

Air Force Ni-H2 cell test program: State of Charge test p 2272 N95-26789

Nickel metal hydride LEO cycle testing p 2272 N95-26791

Adiabatic charging of nickel-hydrogen batteries p 2272 N95-26795

Thermal control materials on EOIM-3 p 2242 N95-27639

Solid film lubricants and thermal control coatings flown aboard the EOIM-3 MDA sub-experiment p 2242 N95-27640

Evaluation of space environmental effects on metals and optical thin films on EOIM-3 p 2210 N95-27641

Analysis of selected specimens from the STS-46 Energetic Oxygen Interaction with Materials-3 experiment p 2210 N95-27642

Effects of low earth orbit on the optical performance of multi-layer enhanced high reflectance mirrors p 2428 N95-27652

Space Station as a Long Duration Exposure Facility p 2166 N95-27663

A Materials Exposure Facility p 2166 N95-27664

Use of mussels in biomonitoring of environmental impacts of propellants, projectiles, explosives, and pyrotechnics p 2170 N95-28298

ENZYME ACTIVITY

Microbial treatment for shipboard collection, hold ing, and transfer system tanks p 2179 N95-27119

ENZYMES

Non-covalent immobilization of proteins and enzymes on polymerized lipid assemblies [AD-A288234] p 2225 N95-26526

DNA denaturation through a model of the partition points on a one-dimensional lattice [DE95-607909] p 2439 N95-27201

A correlated Walks' theory for DNA denaturation [DE95-607910] p 2444 N95-28112

Biodegradation of nitrate esters p 2171 N95-28299

EOS DATA AND INFORMATION SYSTEM

Development and analysis of SCR requirements tables for system scenarios [NASA-CR-197769] p 2367 N95-26802

EPHEMERIDES

Operational improvements of long-term predicted ephemerides of the Tracking and Data Relay Satellites (TDRSs) p 2147 N95-27769

EPITAXY

Electrocrystallization of an ordered organic monolayer: Selective epitaxial growth of beta(ET)213 ongraphite [AD-A288942] p 2178 N95-26569

Preferentially etched epitaxial liftoff of InP material [NASA-CASE-LEW-15760-1] p 2235 N95-27503

Atomic layer epitaxy of group 4 materials: Surface processes, thin films, devices and their characterization [AD-A289092] p 2446 N95-28327

Basic and applied research in the field of electronics and communications [AD-A291727] p 2270 N95-28512

The in situ observation of epitaxial diamond thin film nucleation and growth using emission electron microscopy [AD-A289841] p 2447 N95-28618

EPOXY COMPOUNDS

Stress transfer from axially loaded fiber to matrix in a microcomposite [DE95-007366] p 2183 N95-28043

EPOXY MATRIX COMPOSITES

Characterization of fatigue behavior of 2-D woven fabric reinforced ceramic matrix composite at elevated temperature [AD-A289423] p 2181 N95-26886

Service tough composite structures using the Z-direction reinforcement process p 2185 N95-28272

Failure analysis of thick composite cylinders under external pressure p 2187 N95-28284

Mechanical properties of triaxially braided composites: Experimental and analytical results p 2189 N95-28423

EPOXY RESINS

Interfacial mobility and its effect on flexural strength and fracture toughness in glass-fiber fabric reinforced epoxy laminates [AD-A288344] p 2180 N95-26572

Scarf joint technique with cocured and precured patches for composite repair p 2135 N95-27524

EQUATIONS OF MOTION

Optimization of a nutation damper attached to a spin-stabilized satellite [AD-A289424] p 2162 N95-26887

The gluon propagator in non-Abelian Weizsaecker-Williams fields [DE95-006877] p 2449 N95-27547

EQUATIONS OF STATE

Extended equation-of-state for dichlorodifluoromethane (CCl2F2) [AD-A288885] p 2177 N95-26434

Material modeling in the CRALE code. Users' manual [AD-A288988] p 2178 N95-26712

SUPG finite numerical element solutions for non-compressible Navier-Stokes equation sets [AD-A289600] p 2274 N95-26718

EQUILIBRIUM FLOW

Normal modes and continuous spectra [DE95-006166] p 2287 N95-28055

EQUIPMENT

Cleaning of parts for new manufacturing and parts rebuilding p 2231 N95-27123

EQUIPMENT SPECIFICATIONS

Next generation controller specification for an open systems architecture standard - overview [AD-A289507] p 2368 N95-26853

Dynamically timed electric motor [NASA-CASE-MFS-28958-1] p 2261 N95-26890

A cryogenic scan mechanism for use in Fourier transform spectrometers p 2158 N95-27287

Next generation controller specification for an open systems architecture standard [AD-A289567] p 2375 N95-28647

EQUIVALENCE

Nonexistence of bilipschitz parameterizations and geometric problems about A(sub infinity) weights [PB95-185187] p 2396 N95-26538

EQUIVALENT CIRCUITS

Survey on step recovery diode and its applications [PB95-184974] p 2260 N95-26646

EROSION

Faraday screen sputtering on TPX [DE95-008347] p 2434 N95-28224

ERROR ANALYSIS

The attenuation of microwave radiation by fog and rain [AD-A288326] p 2249 N95-26562

Adaptive finite element method I: Solution algorithm and computational examples [AD-A288979] p 2389 N95-26609

Using SCR methods to analyze requirements documentation [NASA-CR-197760] p 2365 N95-26668

ROC analysis of IR segmentation techniques [AD-A289252] p 2424 N95-26971

Getting it right, making it better [NONP-NASA-VT-95-49118] p 2451 N95-27206

Analysis of filter tuning techniques for sequential orbit determination p 2146 N95-27764

An MME-based attitude estimator using vector observations p 2148 N95-27775

Error analysis of the quartic nodal expansion method for slab geometry [DE95-007373] p 2412 N95-28045

Bearing defect signature analysis using advanced nonlinear signal analysis in a controlled environment [NASA-TM-108491] p 2304 N95-28364

ERROR CORRECTING CODES

A comparison of error categorization schemes for use in software system safety programs [AD-A288741] p 2371 N95-27251

Neural network error compensation of machine tools [AD-A289300] p 2387 N95-28217

ERROR DETECTION CODES

ALLIANCE: An architecture for fault tolerant, cooperative control of heterogeneous mobile robots [DE95-007374] p 2387 N95-28536

ERRORS

The fBm Interpolator [AD-A288996] p 2388 N95-26459

Nonlinear scalespace via hierarchical statistical modeling [AD-A289057] p 2394 N95-26478

Compiler-assisted debugging and multiple instruction retry [NASA-CR-197729] p 2365 N95-26628

Preliminary heavy-light decay constants from the MILC Collaboration [DE95-005685] p 2409 N95-27552

Error analysis of the quartic nodal expansion method for slab geometry [DE95-007373] p 2412 N95-28045

A new algorithm for generating highly accurate benchmark solutions to transport test problems [DE95-007397] p 2373 N95-28047

Neural network error compensation of machine tools [AD-A289300] p 2387 N95-28217

ERS-1 (ESA SATELLITE)

Speckle spectrum of the ERS-1 wavemode product [PB95-196564] p 2315 N95-28180

ESA SATELLITES

Altimeter analysis of ocean currents [AD-A290167] p 2315 N95-28392

ESSENTIALLY NON-OSCILLATORY SCHEMES

A numerical method for solving the three-dimensional parabolized Navier-Stokes equations [NASA-CR-198159] p 2287 N95-27917

ESTERS

Evaluation of high ester content PAO based single hydraulic fluid in high humidity conditions [AD-A289374] p 2233 N95-27324

Use of CTFE as an additive to enhance fire resistance of single hydraulic fluid [AD-A289377] p 2233 N95-27325

ESTIMATES

Using machine learning to derive efficient cost and performance estimates in VLSI CAD designs [AD-A288254] p 2363 N95-26408

Satellite surface material composition from synthetic spectra [AD-A289236] p 2163 N95-26963

Design, construction, test and evaluation of a frequency scanning radiometer for measuring oil slick thicknesses [AD-A290040] p 2293 N95-28389

ESTIMATING

Filtered kernel density estimation [AD-A288293] p 2394 N95-26413

SeaWiFS technical report series. Volume 26: Results of the SeaWiFS Data Analysis Round-Robin, July 1994 (DARR-1994) [NASA-TM-104566-VOL-26] p 2345 N95-26430

The fBm Interpolator [AD-A288996] p 2388 N95-26459

Embedology and neural estimation for time series prediction [AD-A289312] p 2394 N95-26892

ROC analysis of IR segmentation techniques [AD-A289252] p 2424 N95-26971

Multiple model adaptive estimation and head motion tracking in a virtual environment: An engineering approach
[AD-A289299] p 2359 N95-27046
Characterization of defects in deuterium-implanted beryllium
[DE95-005688] p 2217 N95-27553
An automated method of tuning an attitude estimator
p 2148 N95-27774
Non-linear resistive grid kernel estimator useful in single feature, two-class pattern classification
[AD-D017394] p 2271 N95-28614
ETCHING
Chemical physics of uniform cyclic etching
[AD-A288975] p 2404 N95-26574
Preferentially etched epitaxial liftoff of InP material
[NASA-CASE-LEW-15760-1] p 2235 N95-27503
Non-destructive inter-level dielectric via in-line process monitoring by atomic force microscopy
[DE95-008516] p 2267 N95-28146
ETHERS
Small angle neutron scattering study of the micelle structure of amphiphilic block copolymers
[DE95-006625] p 2234 N95-27486
ETHYL ALCOHOL
Comparison of bridged polysilsesquioxane xerogels prepared from methoxy- and ethoxy-silyl monomers
[DE95-005422] p 2240 N95-28532
ETHYL COMPOUNDS
A summary of ODS replacement technologies at Litton Poly-Scientific p 2228 N95-27105
Ethyl lactate as a solvent alternative for cleaning metal parts p 2229 N95-27112
ETHYLENE
Use of CTFE as an additive to enhance fire resistance of single hydraulic fluid
[AD-A289377] p 2233 N95-27325
EUCLIDEAN GEOMETRY
Compactification of moduli spaces of monopoles
[PB95-185179] p 2388 N95-26515
Nonexistence of bilipschitz parameterizations and geometric problems about A(sub infinity) weights
[PB95-185187] p 2396 N95-26538
EULER EQUATIONS OF MOTION
Computational fluid dynamics and transonic flow
[AD-A288962] p 2273 N95-26405
A fixed time performance evaluation of parallel CFD applications
[DE94-014240] p 2273 N95-26445
The method of space-time conservation element and solution element-applications to one-dimensional and two-dimensional time-marching flow problems
[NASA-TM-106915] p 2389 N95-26663
Contribution to the optimal shape design of two-dimensional internal flows with embedded shocks
[NASA-CR-195062] p 2389 N95-26672
Flow control
[AD-A289262] p 2279 N95-27197
A new angle on the Euler angles
p 2153 N95-27800
Evaluation of a doubly-swept blade tip for rotorcraft noise reduction
[NASA-CR-189677] p 2402 N95-28264
EULER-LAGRANGE EQUATION
The surface of liquid He-4 at nonzero temperatures
[DE95-607841] p 2207 N95-27880
EURECA (ESA)
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 3
[NASA-CP-3275-PT-3] p 2466 N95-27629
EUROPE
Prediction of rain attenuation and total atmospheric attenuation for low-availability satellite communications in Europe
[PB95-184925] p 2252 N95-26908
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-016] p 2262 N95-27170
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-014] p 2145 N95-27171
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-019] p 2270 N95-28565
EUROPEAN SPACE AGENCY
Altimeter analysis of ocean currents
[AD-A290167] p 2315 N95-28392
EUROPIUM COMPOUNDS
Muon spin relaxation in ferromagnets: Theoretical results for paramagnetic EuO and EuS
[PB95-192860] p 2418 N95-28641
EUROPIUM ISOTOPES
Determination of the first hydrolysis constant of Europium (3) in 3 M of ionic strength
[DE95-607912] p 2405 N95-27211
EUTECTICS
Electrolyte effects in Li(Si)/FeS2 thermal batteries
[DE95-001614] p 2264 N95-27474
EVALUATION
Performance evaluation of a new parallel preconditioner
[AD-A288563] p 2376 N95-26529
Overview of through-thickness test methods for polymer matrix composites
[PB95-190112] p 2227 N95-26747
Evaluation of high ester content PAO based single hydraulic fluid in high humidity conditions
[AD-A289374] p 2233 N95-27324
Engineered materials for appliation in severe metallurgical environments: Tantalum-carbon alloy development
[DE95-006866] p 2216 N95-27488
Evaluation of an Air Force Information Resources Management (IRM) overview course
[AD-A288746] p 2456 N95-28587
EVAPORATION
FREZCHEM: A chemical-thermodynamic model for aqueous solutions at subzero temperatures
[AD-A288456] p 2200 N95-26432
The effect of infrared sea surface temperature measurements on evaporation duct height estimation
[AD-A289045] p 2346 N95-26477
A numerical model to predict the fate of jettisoned aviation fuel
[AD-A289336] p 2242 N95-26842
Transient studies of G-induced capillary dryout and rewet p 2281 N95-27351
Engineering photochemical smog through convection towers
[DE95-007727] p 2328 N95-27686
On ionic charge distributions of heavy evaporation residues passing through a carbon foil
[DE94-629016] p 2414 N95-28184
EVAPORATION RATE
Wipe solvent substitutions for 1,1,1-trichloroethane (TCA) and methyl ethyl ketone (MEK) at Hill Air Force Base p 2228 N95-27107
EVAPORATORS
Experimental investigation of the effects of relative physical orientation between evaporator and condenser for a loop heat pipe
[AD-A289248] p 2277 N95-26968
EVASIVE ACTIONS
Severe weather guide mediterranean
[AD-A289829] p 2344 N95-28577
EVOLUTION (DEVELOPMENT)
A model of bubble evolution during decompression based on a Monte Carlo simulation of inert gas diffusion
[AD-A289400] p 2353 N95-26885
The evolution and impact of PCS technology
[AD-A288606] p 2255 N95-27249
EXCIMER LASERS
Swords to plowshares: Shock wave applications to advanced lithography
[DE95-008154] p 2299 N95-28223
EXCITATION
Photo and thermal excitation of surface chemistry on model catalyst surfaces
[AD-A288541] p 2200 N95-26528
Toward coherent excitation: Development of a single-source pump for the rubidium hyperfine ground state doublet
[AD-A289413] p 2295 N95-27132
Excited Charm States
[DE95-005749] p 2409 N95-27747
Recent neutron scattering results on high-temperature superconductors
[DE95-007028] p 2413 N95-28066
Optical design and performance of the inelastic scattering beamline at the National Synchrotron Light Source
[DE95-007679] p 2422 N95-28195
Resonant coherent excitation of N6(+) and Mg11(+) in planar channeling: Anisotropies in ionization probabilities and X-ray emission
[DE95-006732] p 2417 N95-28595
EXCITONS
Nonlinear dynamics of a coherent polariton-biexciton system
[DE95-609150] p 2417 N95-28607
EXHAUST DIFFUSERS
Performance characterization of a highly-offset diffuser with and without blowing vortex generator jets
[AD-A289334] p 2122 N95-26901
EXHAUST EMISSION
Bow shock data analysis
[AD-A288432] p 2429 N95-26800
CO2 pellet blast cleaning and degreasing: The true environmentally benign technology
p 2229 N95-27109
Reducing cold-start emissions by catalytic converter thermal management
[DE95-000256] p 2327 N95-27540
Fracture testing and analysis of adhesively bonded joints for automotive applications
[DE95-007024] p 2184 N95-28207
Destruction of pyrotechnics manufacture wastewater treatment sludge by plasma arc pyrolysis
p 2171 N95-28301
A new method for measuring hypergol scrubber emissions p 2174 N95-28312
EXHAUST GASES
Plume measurements with the T5 xenon ion thruster
[AD-A288697] p 2167 N95-26489
Soot particle density determination from a laser extinction multipass technique
[AD-A288551] p 2423 N95-26532
CO2 pellet blast cleaning and degreasing: The true environmentally benign technology
p 2229 N95-27109
Reducing cold-start emissions by catalytic converter thermal management
[DE95-000256] p 2327 N95-27540
Pumping characteristics of a cryopump with Ar sorbent in He and in D2/He mixture
[DE95-007049] p 2302 N95-27875
EXHAUST NOZZLES
Preliminary results and research capabilities of a new jet facility at the University of Kansas
p 2119 N95-26951
EXOBIOLOGY
Space Science Division cumulative bibliography: 1989-1994
[NASA-TM-110355] p 2457 N95-28677

EXPERT SYSTEMS
Digital systems validation. Chapter 20 Artificial Intelligenge with applications for aircraft. Handbbook, volume 2
[AD-A288492] p 2380 N95-26638
Generic satellite monitoring expert system
[AD-A289209] p 2163 N95-26987
Generalized probabilistic reasoning and empirical studies on computational efficiency and scalability
[AD-A289185] p 2395 N95-27016
The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies
[NASA-CP-3296] p 2382 N95-27375
Applying AI tools to operational space environmental analysis p 2382 N95-27376
Building an adaptive agent to monitor and repair the electrical power system of an orbital satellite
p 2383 N95-27380
A rule-based shell to hierarchically organize HST observations p 2384 N95-27384
Lessons learned from the introduction of autonomous monitoring to the EUVE science operations center
p 2385 N95-27393
Development and implementation of an electronic library tour for the NASA Langley Technical Library
[NASA-TM-110619] p 2455 N95-27701
EXPLORATION
TOPS: Toward Other Planetary Systems. A report by the solar system exploration division
[NASA-TM-110609] p 2464 N95-28009
EXPLORER SATELLITES
Development of the solar array deployment and drive system for the XTE spacecraft p 2158 N95-27284
Development of a Robust star identification technique for use in attitude determination of the ACE spacecraft
p 2149 N95-27777
Optimal attitude maneuver execution for the Advanced Composition Explorer (ACE) mission
p 2149 N95-27778
SAMPEX special pointing mode p 2149 N95-27780

Use of nonlinear identification in robust attitude and attitude rate estimation for SAMPEX p 2149 N95-27781

EXPLOSIVE DEVICES

The protection of electro-explosive devices (EEDs) and electronics from electrostatic discharge (ESD) hazards [DSTO-TR-0100] p 2258 N95-28568

EXPLOSIVES

A compatibility study of containment materials in FEFO, bis-(2-fluoro-2,2-dinitroethyl) formal [DE95-007548] p 2206 N95-27750

Use of mussels in biomonitoring of environmental impacts of propellants, projectiles, explosives, and pyrotechnics p 2170 N95-28298

Commercial reformulation: An economic and environmentally neutral means of managing explosives and solid propellants p 2175 N95-28320

Alternate use of rocket propellants as ingredients in commercial watergel explosives p 2176 N95-28321

EXPONENTIAL FUNCTIONS

A mathematical framework for an improved search model [AD-A288858] p 2358 N95-26552

EXPOSURE

A practical approach to soil remediation p 2232 N95-27125

The response of hydrotalcite coated aluminum to sealing with transition metal salt solutions [DE95-004767] p 2234 N95-27460

Adhesively bonded composite patch repair of cracked aluminum alloy structures p 2132 N95-27507

Evaluation of Oxygen Interactions with Materials 3: Mission and induced environments p 2210 N95-27631

Exposure of LDEF materials to atomic oxygen: Results of EOIM 3 p 2210 N95-27633

Inflight resistance measurement on high-T(sub c) superconducting thin films exposed to orbital atomic oxygen on CONCAP-2 (STS-46) p 2272 N95-27635

LEO degradation of graphite and carbon-based composites aboard Space Shuttle Flight STS-46 p 2199 N95-27636

Orbital atomic oxygen effects on materials: An overview of MSFC experiments on the STS-46 EOIM-3 p 2419 N95-27637

Effects of atomic oxygen on polymeric materials flown on EOIM-3 p 2242 N95-27638

Analysis of selected specimens from the STS-46 Energetic Oxygen Interaction with Materials-3 experiment p 2210 N95-27642

BMDO materials testing in the EOIM-3 experiment p 2211 N95-27644

Effects of long term space environment exposure on optical substrates and coatings p 2428 N95-27653

Space environmental effects observed on the Hubble Space Telescope p 2242 N95-27655

From LDEF to a national Space Environment and Effects (SEE) program: A natural progression p 2145 N95-27657

A Materials Exposure Facility p 2166 N95-27664

Acute and subacute toxicity of ammonium dinitramide (ADN) p 2175 N95-28318

Toxicity assessment of liquid propellant XM46 p 2175 N95-28319

Weightless Environment Training Facility (WETF) materials coating evaluation, volume 1 [NASA-CR-188366-VOL-1] p 2239 N95-28385

Weightless Environment Training Facility (WETF) materials coating evaluation, volume 2 [NASA-CR-188366-VOL-2] p 2239 N95-28386

Weightless Environment Training Facility (WETF) materials coating evaluation, volume 3 [NASA-CR-188366-VOL-3] p 2239 N95-28387

EXTERNAL TANKS

Debris/Ice/TPS assessment and integrated photographic analysis of Shuttle mission STS-67 [NASA-TM-110651] p 2160 N95-27238

EXTINCTION

Natural aerosol extinction module: XSCALE 1992 user's guide [AD-A289029] p 2340 N95-26463

Computation of electromagnetic scattering parameters for lognormal distributions of magnetic spheres: Theory and algorithms [AD-A289672] p 2250 N95-26759

EXTRACTION

Processing of wide-angle synthetic aperture radar signals for detection of obscured ground targets [AD-A289243] p 2253 N95-26976

Moment and hypergeometric filters for high precision computation of focus, stereo and optical flow [AD-A289293] p 2425 N95-27038

Junkyard chemistry p 2227 N95-27102

Design considerations in supercritical fluid technology p 2232 N95-27126

The experience of CF Technologies, Inc. (CF Tech) in critical fluid processing p 2232 N95-27128

Investigation on working out the global regeneration plan [DE95-759246] p 2329 N95-27938

Novel field effect transistors for low power electronics [AD-A289929] p 2271 N95-28629

EXTRAPOLATION

Depth migration in transversely isotropic media with explicit operators [DE95-007670] p 2337 N95-27442

Spin-density-wave magnetism in dilute copper-manganese alloys [DE95-005121] p 2215 N95-27462

Bases for extrapolating materials durability in fuel storage pools [DE95-007748] p 2222 N95-28129

The high energy behavior of the forward scattering parameters -- (sigma)(sub tot), (rho), and B [DE95-007075] p 2415 N95-28210

EXTRATERRESTRIAL MATTER

The second coming of cold dark matter? [DE95-005156] p 2462 N95-27445

EXTREME ULTRAVIOLET EXPLORER SATELLITE

Experience from the in-flight calibration of the Extreme Ultraviolet Explorer (EUVE) and Upper Atmosphere Research Satellite (UARS) fixed head star trackers (FHSTs) p 2149 N95-27779

EXTREME ULTRAVIOLET RADIATION

Specification of the figure and finish of EUV mirrors in terms of performance requirements, revised Nov. 1994 [DE95-005689] p 2425 N95-27490

Plasma properties and magnetic field structure of the solar corona, based on coordinated Max 1991 observations from SERTS, the VLA, and magnetographs [NASA-CR-198592] p 2464 N95-27858

Swords to plowshares: Shock wave applications to advanced lithography [DE95-008154] p 2299 N95-28223

EXTREMELY HIGH FREQUENCIES

Prediction of rain attenuation and total atmospheric attenuation for low-availability satellite communications in Europe [PB95-184925] p 2252 N95-26908

Ring-plane traveling-wave tube slow-wave circuit design simulations at V-Band frequencies [NASA-TM-106949] p 2371 N95-27370

Search for molecular absorptions with the Fourier Transform Spectrometer [NASA-CR-198648] p 2462 N95-28222

Design, construction, test and evaluation of a frequency scanning radiometer for measuring oil slick thicknesses [AD-A290040] p 2293 N95-28389

EXTREMELY LOW FREQUENCIES

The ELF controversy [DE95-008283] p 2256 N95-28407

EXTRUDING

Ductile - ductile beryllium aluminum metal matrix composite manufactured by extrusion [AD-A289519] p 2181 N95-26848

The development of mechanical strength in a ceramic material during firing [DE95-004925] p 2234 N95-27476

EYE MOVEMENTS

Long-range eye tracking: A feasibility study [DE95-008587] p 2357 N95-28176

F

F REGION

A study of magnetic activity effects on the thermospheric winds in the low ionosphere [AD-A288677] p 2334 N95-26488

An improved model of high-latitude f-region scintillation (WBMOD version 13) [AD-A288558] p 2334 N95-26520

F 2 REGION

Variability study of foF2 for an equatorial station [DE95-608080] p 2337 N95-27157

F-14 AIRCRAFT

Navy composite maintenance and repair experience p 2193 N95-28446

F-15 AIRCRAFT

Development of a nonlinear simulation for the McDonnell Douglas F-15 Eagle with a longitudinal TECS control-law [AD-A288610] p 2128 N95-26481

Development of a TECS control-law for the lateral directional axis of the McDonnell Douglas F-15 Eagle [AD-A289771] p 2142 N95-28598

F-16 AIRCRAFT

A quantitative feedback theory FCS design for the subsonic envelope of the VISTA F-16 including configuration variation [AD-A289221] p 2141 N95-26958

Flight control design using mixed H2/micron optimization [AD-A289288] p 2142 N95-27036

Implementation and demonstration of a multiple model adaptive estimation failure detection system for the F-16 [AD-A289301] p 2131 N95-27042

Improved numerical solution of mixed H2/H(infinity) optimization with applications [AD-A289315] p 2386 N95-27400

Life cycle costs of alternatives for F-16 printed circuit board diagnosis equipment [AD-A288744] p 2138 N95-28586

F-18 AIRCRAFT

F/A-18 IFOSTP Fatigue test airbag load determination on the vertical and horizontal tails [DSTO-TR-0135] p 2128 N95-26389

Numerical simulation of the flow about the F-18 HARV at high angle of attack [NASA-CR-197755] p 2121 N95-26735

Composite repair of a CF18: Vertical stabilizer leading edge p 2134 N95-27517

Composite flight-control actuator development p 2142 N95-28281

FABRICATION

Fabrication of long wavelength array by in-situ molecular beam epitaxy [AD-A288599] p 2423 N95-26679

Composite sandwich structure and method for making same [NASA-CASE-LAR-14898-1] p 2180 N95-26764

Silicon based microactuators for telerobotic tactile stimulation [AD-A289340] p 2260 N95-26767

Design, fabrication, modeling, and optical characterization of organic polymer nonlinear directional couplers [AD-A289327] p 2227 N95-26897

Current programmes on physical metallurgy and related areas in BARC [DE95-607939] p 2214 N95-27255

Linear Proof Mass Actuator p 2158 N95-27290

The development and testing of ceramic components in piston engines [DE95-005759] p 2236 N95-27946

Manufacturing tailored property ceramic composites [DE95-006303] p 2237 N95-27993

Stability measurements on a 1-T high temperature superconducting magnet [DE95-007411] p 2267 N95-28048

TEM characterization of Al/Al2O3 composite fabricated by reactive metal infiltration [DE95-008506] p 2184 N95-28145

Flat panel planar optic display [DE95-007686] p 2426 N95-28196

Swords to plowshares: Shock wave applications to advanced lithography [DE95-008154] p 2299 N95-28223

Development of a low-cost, modified resin transfer molding process using elastomeric tooling and automated preform fabrication p 2184 N95-28268

Static and fatigue testing of full-scale fuselage panels fabricated using a Therm-X(R) process p 2185 N95-28270

Advanced tow placement of composite fuselage structure p 2185 N95-28271

Resin transfer molding of textile preforms for aircraft structural applications p 2185 N95-28276

Molecular engineering of thin polymer films prepared from functionally-terminated oligomers [AD-A291681] p 2240 N95-28457

Evaluation of defect-related diffusion in semiconductors by electrooptical sampling [AD-A291630] p 2270 N95-28544

Design and fabrication of a diamond-turned hybrid diffractive/refractive singlet for visible applications at ORNL [DE95-007007] p 2427 N95-28552

Novel field effect transistors for low power electronics [AD-A289929] p 2271 N95-28629

FABRICS

Interfacial mobility and its effect on flexural strength and fracture toughness in glass-fiber fabric reinforced epoxy laminates [AD-A288344] p 2180 N95-26572

Design of fabric preforms for double diaphragm forming p 2184 N95-28269

Method and apparatus for measuring temperatures in fabrics and flexible thermal insulations [NASA-CASE-ARC-11984-1] p 2293 N95-28345

FACSIMILE COMMUNICATION

NASA/DOD Aerospace Knowledge Diffusion Research Project. Report 35: The use of computer networks in aerospace engineering [NASA-CR-198170] p 2456 N95-28600

FACTORIAL DESIGN
Comparison of the activities of fine-particle size catalysts
[DE95-004773] p 2203 N95-27423
FACTORIZATION
Modified eigenvalue problems with applications to structural dynamic re-analysis on parallel computers
[AD-A288257] p 2307 N95-26547
FAILURE
Life prediction methodology for composite laminates. Part 1: Constant amplitude and two-stress level fatigue
[AD-A288343] p 2180 N95-26571
Compiler-assisted debugging and multiple instruction retry
[NASA-CR-197729] p 2365 N95-26628
FAILURE ANALYSIS
Probabilistic risk assessment of the Space Shuttle. Phase 3: A study of the potential of losing the vehicle during nominal operation. Volume 4: System models and data analysis
[NASA-CR-197811] p 2160 N95-26401
Synthesis and characterization of polymeric materials
[AD-A288613] p 2225 N95-26482
Specifying weak sets
[AD-A288587] p 2364 N95-26536
Micromechanical prediction of tensile damage for ceramic matrix composites under high temperature
[AD-A288238] p 2180 N95-26626
Research and development report. Eureka 147: Tests of the error performance of the DAB system
[BBC-RD-1994/18] p 2249 N95-26696
Study of damage evolutions in composite plates subjected to bending loads using micro-macro analysis
[AD-A288523] p 2308 N95-26839
Characterization of fatigue behavior of 2-D woven fabric reinforced ceramic matrix composite at elevated temperature
[AD-A289423] p 2181 N95-26886
Implementation and demonstration of a multiple model adaptive estimation failure detection system for the F-16
[AD-A289301] p 2131 N95-27042
Fatigue behavior of a cross-ply ceramic matrix composite subjected to tension-tension cycling with hold time
[AD-A289418] p 2182 N95-27134
An experimental investigation of sandwich flat panels under low velocity impact
[AD-A289420] p 2309 N95-27135
Comprehension and retrieval of failure cases in airborne observatories p 2145 N95-27394
I(sub DDQ) testing and defect classes: A tutorial
[DE95-005467] p 2306 N95-27723
Static stability of a three-dimensional space truss
[NASA-TM-106944] p 2164 N95-27730
Stress analysis and failure of an internally pressurized composite-jacketed steel cylinder p 2186 N95-28280
Failure analysis of thick composite cylinders under external pressure p 2187 N95-28284
The role of biaxial stresses in discriminating between meaningful and illusory composite failure theories
p 2187 N95-28287
Design prediction for long term stress rupture service of composite pressure vessels p 2188 N95-28291
Bearing defect signature analysis using advanced nonlinear signal analysis in a controlled environment
[NASA-TM-106491] p 2304 N95-28364
Mechanisms of compressive failure in woven composites and stitched laminates p 2189 N95-28424
Compression failure of angle-ply laminates
p 2190 N95-28428
Technology integration box beam failure study
p 2194 N95-28468
Tension fracture of laminates for transport fuselage. Part 1: Material screening p 2137 N95-28471
Application of damage tolerance methodology in certification of the Piaggio P-180 Avanti
p 2138 N95-28480
FAILURE MODES
Stochastic adaptive estimation and control
[AD-A289088] p 2380 N95-26480
Modeling considerations in the prediction of residual strength in composite laminates
[AD-A289128] p 2182 N95-27142
Static stability of a three-dimensional space truss
[NASA-TM-106944] p 2164 N95-27730
Contingency designs for attitude determination of TRMM p 2154 N95-27803
Static and fatigue testing of full-scale fuselage panels fabricated using a Therm-X(R) process
p 2185 N95-28270
Static and dynamic strain energy release rates in toughened thermosetting composite laminates
p 2188 N95-28288
Proof test methodology for composites
p 2193 N95-28445
Coatings of non-oxide ceramics for improved corrosion resistance in high temperature coal combustion
[DE95-006932] p 2241 N95-28604
Numerical simulation of crack growth in pressurized fuselages
[PB95-192415] p 2137 N95-28636
FALLOUT
Particle fallout/activity sensor
[NASA-CASE-KSC-11687-1] p 2293 N95-28362
FALSE ALARMS
Processing of wide-angle synthetic aperture radar signals for detection of obscured ground targets
[AD-A289243] p 2253 N95-26976
FAR FIELDS
Generation of a single-lobe, far-field intensity pattern from a laser diode array using an optical delay line
[AD-A289226] p 2295 N95-26961
Acceleration theorems
[DE95-007300] p 2420 N95-27484
Data acquisition software for DREO's near-field antenna measurement facility
[AD-A289819] p 2258 N95-28573
FAR INFRARED RADIATION
Far-infrared laser interferometry measurements on the STP-3(M) reversed-field pinch
[DE94-765440] p 2297 N95-27868
FAR ULTRAVIOLET RADIATION
Evaluation of Oxygen Interactions with Materials 3: Mission and induced environments
p 2210 N95-27631
FARM CROPS
Measurement and analysis of the surface energy budget for ARM field experiments
[DE95-007646] p 2338 N95-28114
Models used to forecast agricultural corn crops in the micro-region of Ribeirao Preto-SP
[INPE-5513-NTC/309] p 2315 N95-28554
FAST FOURIER TRANSFORMATIONS
Nonlinear problems in fluid dynamics and inverse scattering: Propagation and capturing of singularities in problems of fluid dynamics and inverse scattering
[AD-A289146] p 2277 N95-26999
FAST NEUTRONS
Comparison of the resistance of the MOS integrated circuits with various types of nuclear radiation
[DE95-608623] p 2261 N95-27023
Investigation of radiation resistance of transistors and integrated circuits using the heavy ions beam of energy higher than 1 MeV/amu and fast neutrons
[DE95-608624] p 2261 N95-27024
FAST NUCLEAR REACTORS
Energy transfer from excited nitrenes at high density
[AD-A288352] p 2403 N95-26466
Toward a mechanistic understanding of radiation effects in materials
[DE95-006530] p 2221 N95-28120
FASTENERS
Basic space payload fastener p 2156 N95-27273
Non-explosive actuation for the ORBCOMM (TM) satellite p 2156 N95-27274
Assembly induced delaminations in composite structures p 2186 N95-28279
FATIGUE (MATERIALS)
Fatigue fracture analysis in medium carbon structural steel and austenitic stainless steel by X-ray fractography
[DE95-601504] p 2213 N95-26675
Fatigue behavior of a cross-ply ceramic matrix composite at elevated temperature under tension-tension loading
[AD-A289250] p 2182 N95-26969
A review of Australian and New Zealand investigations on aeronautical fatigue during the period Apr. 1993 - Mar. 1995
[AR-009-202] p 2136 N95-27918
Comparison of measured and calculated dynamic loads for the Mod-2 2.5 mW wind turbine system
p 2312 N95-27963
Prediction of fatigue crack growth under constant amplitude and random loading using specimens with multiple cracks
[AD-A291614] p 2136 N95-28409
Investigation of static and cyclic bearing failure mechanisms for GR/EP laminates p 2190 N95-28427
Applications of a damage tolerance analysis methodology in aircraft design and production
p 2197 N95-28483
FATIGUE LIFE
Analysis of fatigue fractographic data of a rod end housing using a Monte Carlo simulation
[NAL-TR-1225] p 2307 N95-26521
Comparison of life theories for rolling-element bearings
[NASA-TM-106585] p 2301 N95-26774
Fatigue behavior of a cross-ply metal matrix composite at elevated temperature under strain controlled mode
[AD-A289425] p 2181 N95-26865
Viscoplastic characterization and fatigue modeling of titanium based metal matrix composites
[AD-A289430] p 2181 N95-26868
Probabilistic simulation of long term behavior in polymer matrix composites
[NASA-TM-106893] p 2309 N95-27174
Fatigue properties of an A356 (AlSi7Mg) aluminum alloy for automotive applications: Fatigue life prediction
[PB95-196424] p 2224 N95-28660
FATIGUE TESTS
Design and development of a test rig for the high frequency testing of rolling sleeve airsprings
[DSTO-TN-0001] p 2142 N95-26378
F/A-18 IFOSTP Fatigue test airbag load determination on the vertical and horizontal tails
[DSTO-TR-0135] p 2128 N95-26389
Development of welded solar arrays for DMSP and GPS satellites
[AD-A289512] p 2318 N95-26846
Fatigue behavior of a cross-ply metal matrix composite at elevated temperature under strain controlled mode
[AD-A289425] p 2181 N95-26865
Characterization of fatigue behavior of 2-D woven fabric reinforced ceramic matrix composite at elevated temperature
[AD-A289423] p 2181 N95-26886
Composite repair of metallic airframe: Twenty years of experience p 2132 N95-27508
External patch repair of CFRP/honeycomb sandwich
p 2134 N95-27522
Damage occurrence on composites during testing and fleet service: Repair of Airbus aircraft
p 2135 N95-27526
Static and fatigue testing of full-scale fuselage panels fabricated using a Therm-X(R) process
p 2185 N95-28270
Design, analysis, and testing of a metal matrix composite web/flange intersection p 2191 N95-28433
Proof test methodology for composites
p 2193 N95-28445
Applications of a damage tolerance analysis methodology in aircraft design and production
p 2197 N95-28483
FAULT DETECTION
Measuring fault tolerance with the FTAPE fault injection tool
[NASA-CR-197773] p 2306 N95-27253
Diagnosis of helicopter gearboxes using structure-based networks
[NASA-TM-106932] p 2302 N95-27373
I(sub DDQ) testing and defect classes: A tutorial
[DE95-005467] p 2306 N95-27723
SMART materials: Surfaces, transforms and interfaces. The commensurate engineering dimension
[AD-A289598] p 2312 N95-28649
FAULT TOLERANCE
Self-checking state machine realization in CMOS
[AD-A289149] p 2261 N95-27002
Measuring fault tolerance with the FTAPE fault injection tool
[NASA-CR-197773] p 2306 N95-27253
Advanced development for space robotics with emphasis on fault tolerance p 2155 N95-27263
Autonomous control system reconfiguration for spacecraft with non-redundant actuators
p 2153 N95-27802
Fault tolerant features and experiments of ANTS distributed real-time system
[AD-A290133] p 2256 N95-28391
ALLIANCE: An architecture for fault tolerant, cooperative control of heterogeneous mobile robots
[DE95-007374] p 2387 N95-28536
Two implementation relations and the correctness of communicating replicated processes
[PB95-195640] p 2375 N95-28645
FAULT TREES
Using the dimension reduction technique to prove that clique trees define facets for the asymmetric traveling salesman polytope
[AD-A289397] p 2389 N95-26882
FEASIBILITY
The development of a feature-based concurrent engineering system
[AD-A288424] p 2364 N95-26557
FEASIBILITY ANALYSIS
Multipoint multirate signal processing
[AD-A289211] p 2253 N95-26988
Report to the Chairman and Ranking Minority Member, Committee on Science, House of Representatives. Weather forecasting: Radar availability requirement not being met
[GAO/AIMD-95-132] p 2342 N95-27912
Long-range eye tracking: A feasibility study
[DE95-008587] p 2357 N95-28176

Evaluating the environmental viability of open burning/open detonation operations
p 2170 N95-28297
Alternate use of rocket propellants as ingredients in commercial watergel explosives p 2176 N95-28321

FEDERAL BUDGETS
Briefing Report to the Ranking Minority Member, Subcommittee on Space and Aeronautics, Committee on Science, House of Representatives. Cassini Mission: Estimated launch costs for NASA's mission to Saturn
[GAO/NSIAD-95-141BR] p 2145 N95-27856

FEEDBACK
Electro-hydrostatic actuator controller design using quantitative feedback theory
[AD-A289220] p 2141 N95-26957
A quantitative feedback theory FCS design for the subsonic envelope of the VISTA F-16 including configuration variation
[AD-A289221] p 2141 N95-26958
Telepresent spacecraft docking with object-based bilateral control (OBBC)
[AD-A289268] p 2163 N95-26980
Bilateral force feedback for hydraulically actuated systems
[AD-A291632] p 2387 N95-28545

FEEDBACK CONTROL
Extended linear ion trap frequency standard apparatus
[NASA-CASE-NPO-19081-1-CU] p 2404 N95-26861
A gain scheduling optimization method using genetic algorithms
[AD-A289306] p 2381 N95-26920
Telepresent spacecraft docking with object-based bilateral control (OBBC)
[AD-A289268] p 2163 N95-26980
Advanced formation flight control
[AD-A289271] p 2142 N95-26981
High-precision buffer circuit for suppression of regenerative oscillation
[NASA-TM-4658] p 2291 N95-27259
Time-optimal control of the magnetically levitated photolithography platen
[DE95-005493] p 2266 N95-27724
Extended linear ion trap frequency standard apparatus
[NASA-CASE-NPO-19081-1-CU] p 2416 N95-28348
Beam instability studies for the SSC
[DE95-008024] p 2423 N95-28551
Operating points and feedback control of plasma characteristics in tokamaks with full current drive
[DE95-007037] p 2435 N95-28553

FEMALES
Toxicity assessment of liquid propellant XM46
p 2175 N95-28319

FERMI SURFACES
Electronic structure of disordered Cu-Ag alloys
[DE95-609156] p 2219 N95-27758

FERMI-DIRAC STATISTICS
Stationary neutrino radiation transport by maximum entropy closure
[DE95-006579] p 2463 N95-28558

FERMIONS
Finite fermion density effects on the electroweak string
[DE95-608802] p 2448 N95-27312
The physics and chemistry of heavy Fermions
[DE95-005277] p 2407 N95-27431
A diagram technique for strongly interacting fermion systems. One-and two-band Hubbard models
[DE95-609437] p 2410 N95-27881
Phenomenology from 100 large lattices
[DE95-006349] p 2442 N95-27994
Theory of exotic superconductivity and normal states of heavy electron and high temperature superconductivity materials
[DE95-006637] p 2268 N95-28198
Stationary neutrino radiation transport by maximum entropy closure
[DE95-006579] p 2463 N95-28558

FERRITES
Effect of internal hydrogen on the mixed-mode 1/3 fracture toughness of a ferrific/martensitic stainless steel
[DE95-005722] p 2216 N95-27479

FERROELECTRICITY
Siloxane-based ferroelectric liquid crystal elastomers and Self-Assembled Mono- and multilayers
[AD-A288285] p 2224 N95-26456
Vacancy related defects in thin film Pb(Zr,Ti)O3 materials
[DE95-007696] p 2445 N95-28165

FERROMAGNETIC MATERIALS
Magnetization of ferromagnetic clusters
[DE95-006878] p 2399 N95-27548
Muon spin relaxation in ferromagnets: Theoretical results for paramagnetic EuO and EuS
[PB95-192860] p 2418 N95-28641

FERROMAGNETISM
A new method of evaluating the explicit magnetic-state-dependent energy in semi-empirical calculations of iron
[AD-A289098] p 2399 N95-27398

FERTILIZERS
Investigation on technology for increasing the biological CO2 sink and technology for CO2 fixation and reutilization
[DE95-759251] p 2329 N95-27941

FIBER COMPOSITES
A study of the use beta-alumina as a weak interface in alumina fiber composites
[AD-A288629] p 2179 N95-26484
Interfacial mobility and its effect on flexural strength and fracture toughness in glass-fiber fabric reinforced epoxy laminates
[AD-A288344] p 2180 N95-26572
Micromechanical prediction of tensile damage for ceramic matrix composites under high temperature
[AD-A288238] p 2180 N95-26626
Rheological measurement methods for fibre filled plastics
[PB95-190088] p 2226 N95-26744
Mechanical performance of fiber reinforced metal matrix composites and microstructural development of polycrystalline alumina fibers synthesized from liquid precursors
[AD-A289518] p 2181 N95-26847
On aircraft repair verification of a fighter A/C integrally stiffened fuselage skin p 2133 N95-27515
Composite repair of a CF18: Vertical stabilizer leading edge p 2134 N95-27517
Scarf joint technique with cocured and precured patches for composite repair p 2135 N95-27524
Composite or metallic bolted repairs on self-stiffened carbon wing panel of the commuter ATR72 design criteria, analysis, verification by test p 2135 N95-27525
Repairs of CFC primary structures
p 2135 N95-27527
Ceramic fiber-reinforced monoclinic celsian phase glass-ceramic matrix composite material
[NASA-CASE-LEW-15714-1] p 2183 N95-27717
Design of a unidirectional composite momentum wheel rim
[NASA-TM-106911] p 2164 N95-27761
Thermal shock behavior of fiber-reinforced composites
[DE95-006746] p 2183 N95-27955
Stress transfer from axially loaded fiber to matrix in a microcomposite
[DE95-007366] p 2183 N95-28043
Effects of high-temperature environments on flaw generation and fracture behavior of SiC/SiC composites
[DE95-008270] p 2183 N95-28068
Ninth DOD/NASA/FAA Conference on Fibrous Composites in Structural Design, volume 3
[NASA-CR-198718] p 2184 N95-28266
Service tough composite structures using the Z-direction reinforcement process p 2185 N95-28272
Analysis of aircraft engine blade subject to ice impact
p 2141 N95-28277
Application of fiber-reinforced bismaleimide materials to aircraft nacelle structures p 2137 N95-28278
Stress analysis and failure of an internally pressurized composite-jacketed steel cylinder p 2186 N95-28280
Failure analysis of thick composite cylinders under external pressure p 2187 N95-28284
The role of biaxial stresses in discriminating between meaningful and illusory composite failure theories
p 2187 N95-28287
Designing for time-dependent material response in spacecraft structures p 2166 N95-28292
Ninth DOD/NASA/FAA Conference on Fibrous Composites in Structural Design, volume 1
[NASA-CR-198723] p 2189 N95-28420
Effect of the fiber-matrix interphase on the transverse tensile strength of the unidirectional composite material
p 2190 N95-28425
Application of advanced material systems to composite frame elements p 2191 N95-28432
Design, analysis, and testing of a metal matrix composite web/flange intersection p 2191 N95-28433
Characteristics of laminates with delamination control strips p 2191 N95-28434
Ninth DOD/NASA/FAA Conference on Fibrous Composites in Structural Design, volume 2
[NASA-CR-198722] p 2193 N95-28462
Advanced wing design survivability testing and results
p 2138 N95-28488
Non-linear viscoelastic behaviour
[PB95-192811] p 2199 N95-28639
Ceramic composite combustor cans for expendable turbine engines
[AD-A289551] p 2140 N95-28646

FIBER OPTICS
Measurement of high acidity using a renewable-reagent fiber optic sensor
[DE95-006327] p 2425 N95-27734
Fundamental concepts of integrated and fiber optic sensors
[NASA-TM-106920] p 2426 N95-27906
Flat panel planar optic display
[DE95-007686] p 2426 N95-28196
SMART materials: Surfaces, transforms and interfaces. The commensurate engineering dimension
[AD-A289598] p 2312 N95-28649

FIBER ORIENTATION
Characteristics of laminates with delamination control strips p 2191 N95-28434

FIBER STRENGTH
Effects of high-temperature environments on flaw generation and fracture behavior of SiC/SiC composites
[DE95-008270] p 2183 N95-28068

FIBER VOLUME FRACTION
Design of a unidirectional composite momentum wheel rim
[NASA-TM-106911] p 2164 N95-27761

FIBER-MATRIX INTERFACES
A study of the use beta-alumina as a weak interface in alumina fiber composites
[AD-A288629] p 2179 N95-26484
Ceramic fiber-reinforced monoclinic celsian phase glass-ceramic matrix composite material
[NASA-CASE-LEW-15714-1] p 2183 N95-27717
Stress transfer from axially loaded fiber to matrix in a microcomposite
[DE95-007366] p 2183 N95-28043
Effect of the fiber-matrix interphase on the transverse tensile strength of the unidirectional composite material
p 2190 N95-28425

FIBERS
Gigabit LAN issues: HIPPI, Fibre Channel, or ATM?
[DE95-003673] p 2378 N95-27422

FIBRILLATION
Visualization of finite element model solutions for defibrillation voltage and current distributions
[AD-A289836] p 2400 N95-28579

FIELD EFFECT TRANSISTORS
Microwave circuit simulation using higher-order dynamic elements
[PB95-185088] p 2259 N95-26496
Active antennas with periodic structures
[AD-A289437] p 2252 N95-26924
Characterization of microwave MESFET circuits under laser illumination. Applications to phased array radar, microwave communications, and digital clock control
[AD-A289181] p 2261 N95-27015
Microwave characterization of sub-micron N- and P-channel MOSFET's fabricated with thin film silicon-on-sapphire
[AD-A289296] p 2438 N95-27040
Modeling of trapping and abrupt doping effects in MESFET's using R-dynamic element
[PB95-184891] p 2262 N95-27050
Novel field effect transistors for low power electronics
[AD-A288650] p 2262 N95-27096
Measurement-based MESFET model in APLAC
[PB95-195483] p 2269 N95-28448
Basic and applied research in the field of electronics and communications
[AD-A291727] p 2270 N95-28512
Quasi-optical millimeter wave power combining
[AD-A291767] p 2270 N95-28529
Novel field effect transistors for low power electronics
[AD-A289929] p 2271 N95-28629

FIELD INTENSITY METERS
A PC-based magnetometer-only attitude and rate determination system for gyroless spacecraft
p 2147 N95-27770

FIELD OF VIEW
SeaWiFS technical report series. Volume 27: Case studies for SeaWiFS calibration and validation, part 3
[NASA-TM-104566-VOL-27] p 2348 N95-28030

FIELD STRENGTH
Radiation of a uniformly moving charge
[DE95-608757] p 2255 N95-27335

FIELD THEORY (ALGEBRA)
Symmetries of the KAC-Peterson modular matrices of affine algebras
[PB95-190138] p 2392 N95-28010
Lie group weight multiplicities from conformal field theory
[PB95-190153] p 2392 N95-28012

FIELD THEORY (PHYSICS)
A density functional/molecular dynamics study of the structure of liquid nitromethane
[AD-A289224] p 2404 N95-26960
Field theory of point-like systems with higher-order derivatives
[DE95-608800] p 2448 N95-27310

Bogolyubov renormalization group
[DE95-608830] p 2448 N95-27315

FIGHTER AIRCRAFT

Integrated mission precision attack cockpit technology (IMPACT). Phase 1: Identifying technologies for air-to-ground fighter integration
[AD-A289562] p 2129 N95-26684

Performance study for inlet installations
[NASA-CR-189714] p 2140 N95-28227

Structural design optimization with survivability dependent constraints application: Primary wing box of a multi-role fighter p 2137 N95-28440

FILE MAINTENANCE (COMPUTERS)

Long term distributed file reference tracing: Implementation and experience
[AD-A288585] p 2452 N95-26535

Flexible and safe resolution of file conflicts
[AD-A289342] p 2452 N95-26752

A demonstration of Client/Server technology using remote procedure calls for an application of file migration for moving records based on location
[AD-A289391] p 2453 N95-26864

A demonstration of Client-Server technology using remote procedure calls with an application of file migration for moving records based on time
[AD-A289392] p 2453 N95-26879

A case for dynamic sets in operating systems
[AD-A289354] p 2454 N95-27529

The transition of GTDS to the Unix workstation environment p 2151 N95-27789

FILM COOLING

Investigation of boundary layer and performance effects of transpiration cooling through a porous plate in a rocket nozzle
[AD-A289393] p 2167 N95-26880

A summary of computational experience at GE Aircraft Engines for complex turbulent flows in gas turbines
p 2285 N95-27885

FILM THICKNESS

Copper CVD using liquid coinjection of (hfac)Cu(TMVS) and TMVS
[DE95-008155] p 2237 N95-28089

Influences of film structures on laser damage thresholds
[AD-A289647] p 2300 N95-28633

FILTRATION

Cleaning of parts for new manufacturing and parts rebuilding p 2231 N95-27123

FINE STRUCTURE

Observations of CEF-split intermultiplet transitions in optically opaque EuBa2Cu3O7 using inelastic neutron scattering
[DE95-007135] p 2408 N95-27453

Precision asteroseismology of DAV (ZZ CETI) white dwarf stars
[DE95-006265] p 2462 N95-28056

FINITE DIFFERENCE THEORY

Performance evaluation of a new parallel preconditioner
[AD-A288563] p 2376 N95-26529

Material modeling in the CRALE code. Users' manual
[AD-A288988] p 2178 N95-26712

Reduction of off-boresight fields for a TEM horn antenna
[AD-A289708] p 2250 N95-26738

Development of an upwind, finite-volume code with finite-rate chemistry
[NASA-CR-197747] p 2121 N95-26760

Direct numerical simulation of transitional and turbulent flow over a heated flat plate using finite-difference schemes
[NASA-CR-197753] p 2275 N95-26776

A numerical method for unsteady transonic flow about wings with control surfaces
[AD-A289631] p 2121 N95-26859

A 3-D finite difference time domain investigation of microwave propagation through inhomogeneous biological materials
[AD-A289431] p 2251 N95-26869

Analysis of modal behavior at frequency cross-over
[AD-A289304] p 2162 N95-26918

Validation of the SINDA/FLUINT code using several analytical solutions p 2281 N95-27350

Analysis of developing laminar flows in circular pipes using a higher-order finite-difference technique
p 2281 N95-27352

The Benard problem: A comparison of finite difference and spectral collocation eigen value solutions
p 2283 N95-27364

FDTD-ANT user manual
[NASA-CR-195444] p 2372 N95-27729

Scaling issues in dynamic fragmentation
[DE95-008509] p 2309 N95-27745

Time-dependent model for vertical-cavity surface-emitting laser
[DE95-007880] p 2298 N95-28027

FINITE ELEMENT METHOD

Analysis and development of finite element methods for the study of nonlinear thermomechanical behavior of structural components
[NASA-CR-195354] p 2307 N95-26387

A finite element propagation model for extracting normal incidence impedance in nonprogressive acoustic wave fields
[NASA-TM-110160] p 2400 N95-26394

Process control of microstructure in manufacturing
[AD-A288291] p 2245 N95-26410

General purpose finite element solver
[PB95-185062] p 2388 N95-26495

Performance evaluation of a new parallel preconditioner
[AD-A288563] p 2376 N95-26529

Intelligent computer based reliability assessment of multichip modules
[AD-A288833] p 2259 N95-26550

A fast numerical method for isothermal resin transfer mold filling
[AD-A288944] p 2179 N95-26565

Adaptive finite element method I: Solution algorithm and computational examples
[AD-A288979] p 2389 N95-26609

User's and test case manual for FEMATS
[NASA-CR-197803] p 2366 N95-26694

SUPG finite numerical element solutions for non-compressible Navier-Stokes equation sets
[AD-A289600] p 2274 N95-26718

The collapse of composite cylindrical panels with various thickness using finite element analysis
[AD-A289370] p 2308 N95-26905

Analysis of modal behavior at frequency cross-over
[AD-A289304] p 2162 N95-26918

Investigation into the behavior of geometrically nonlinear composite arches
[AD-A289258] p 2308 N95-26975

A finite element based technique for simulation helix TWT interaction circuit thermal behavior
[AD-A289552] p 2262 N95-27152

Effect of hoop stress on ball bearing life prediction
[NASA-TM-106874] p 2301 N95-27178

Magnetically controlled deposition of metals using gas plasma
[DE95-007248] p 2430 N95-27237

High performance stepper motors for space mechanisms p 2156 N95-27271

Vector algorithms for solving 3D nonlinear magnetostatic problems
[DE95-608737] p 2399 N95-27298

The effects of finite element grid density on model correlation and damage detection of a bridge
[DE94-018895] p 2309 N95-27305

A probabilistic model of a porous heat exchanger
p 2282 N95-27359

A verification procedure for MSC/NASTRAN Finite Element Models
[NASA-CR-4675] p 2131 N95-27371

Micromechanical modeling of damage and inelasticity of composite materials in macroscopic structural analysis
[DE95-003666] p 2182 N95-27421

A new finite element formulation for incompressible flow
[DE95-007141] p 2284 N95-27454

A FEAM based methodology for analyzing composite patch repairs of metallic structures
p 2133 N95-27511

Scarf repairs to graphite/epoxy components
p 2135 N95-27523

The origin of spurious solutions in computational electromagnetics
[NASA-TM-106921] p 2391 N95-27726

Scaling issues in dynamic fragmentation
[DE95-008509] p 2309 N95-27745

System identification of damped truss-like space structures
[NASA-TM-106638] p 2303 N95-27911

A NASTRAN-based computer program for structural dynamic analysis of Horizontal Axis Wind Turbines
p 2312 N95-27980

Robust integration schemes for generalized viscoplasticity with internal-state variables. Part 1: Theoretical developments and applications
[NASA-CR-195452-PT-1] p 2310 N95-28031

Robust integration schemes for generalized viscoplasticity with internal-state variables. Part 2: Algorithmic developments and implementation
[NASA-CR-195453-PT-2] p 2310 N95-28032

Deformation limits on two-parameter fracture mechanics in terms of higher order asymptotics
[AD-A289113] p 2310 N95-28098

Accuracy issues in modeling superplastic metal forming
[DE95-008934] p 2222 N95-28163

Reactor pressure vessel structural integrity research
[DE95-007034] p 2223 N95-28208

Aeroelasticity and structural optimization of composite helicopter rotor blades with swept tips
[NASA-CR-4665] p 2136 N95-28262

TranAir: A full-potential, solution-adaptive, rectangular grid code for predicting subsonic, transonic, and supersonic flows about arbitrary configurations. Theory document
[NASA-CR-4348] p 2123 N95-28265

Higher order finite element analysis of thick composite laminates p 2186 N95-28282

Failure analysis of thick composite cylinders under external pressure p 2187 N95-28284

Analysis techniques for the prediction of springback in formed and bonded composite components
p 2188 N95-28289

Design, analysis, and testing of a metal matrix composite web/flange intersection p 2191 N95-28433

Visualization of finite element model solutions for defibrillation voltage and current distributions
[AD-A289836] p 2400 N95-28579

Structural optimisation of cage induction motors using finite element analysis
[PB95-195434] p 2271 N95-28655

FINITE VOLUME METHOD

Numerical investigation to S-inlet flows (Numerical simulation study of S-inlet flows)
[AD-A289590] p 2120 N95-26713

Transitional flow in thin tubes for space station freedom radiator p 2282 N95-27360

FINLAND

Milestones in telecommunications in some selected countries
[PB95-184826] p 2252 N95-26929

WTEC panel report on research submersibles and undersea technologies
[NASA-CR-198565] p 2247 N95-27909

Laboratory of production engineering
[PB95-184834] p 2451 N95-28135

FINS

Application of damage tolerance methodology in certification of the Piaggio P-180 Avanti
p 2138 N95-28480

FIR FILTERS

Crushing the delay: Tools for fractional delay filter design
[PB95-195509] p 2257 N95-28450

FIRE EXTINGUISHERS

Engineering Technical Letter (ETL) 94-5: Fire protection engineering criteria and technical guidance. Emergency lighting and marking of exits
[AD-A288953] p 2246 N95-26566

FIRE PREVENTION

Engineering Technical Letter (ETL) 94-5: Fire protection engineering criteria and technical guidance. Emergency lighting and marking of exits
[AD-A288953] p 2246 N95-26566

FIRES

Design and development of experimental facilities for short duration, low-gravity combustion and fire experiments
[NASA-CR-195458] p 2244 N95-26709

Algorithm to describe the spread of a wall fire under a ceiling
[PB95-182259] p 2247 N95-28008

FISHES

Modeling and statistical analysis of bioassay data: Medaka cell proliferation under DEN and TCE
[AD-A289998] p 2352 N95-28519

FISSION

Bilateral intercomparison of the neutron emission rate of a (252)Cf spontaneous fission source between the National Physical Laboratory, Teddington, UK and the Physikalisch-Technische Bundesanstalt, Braunschweig, Germany
[PB95-190120] p 2404 N95-26748

FITTING

Fitting: Subroutine to fit four-moment probability distributions to data
[DE95-007722] p 2395 N95-27684

FIXED POINTS (MATHEMATICS)

Random relaxation of fixed point iteration
[PB95-185013] p 2389 N95-26910

FIXED WINGS

Comparison of fixed wing aircraft algorithms for JANUS
[AD-A288503] p 2129 N95-26652

Test operations procedure (TOP) 7-3-534 airworthiness testing of fixed wing aircraft: Asymmetric power testing
[AD-A289458] p 2130 N95-26994

FIXING

Compressive strength of damaged and repaired composite plates p 2198 N95-28484

FIXTURES
Extension to the dynamic modeling of the large angle magnetic suspension test fixture
[NASA-CR-197801] p 2143 N95-26768
FLAME HOLDERS
Numerical simulation of combustion flow around a flame holder with hydrogen injection
[NAL-TR-1233] p 2200 N95-26523
FLAME PROPAGATION
Funding for AFRAPT student trainees for academic year 1992-1993
[AD-A288461] p 2466 N95-26604
FLAMES
A composition joint PDF method for the modeling of spray flames p 2287 N95-27901
Research on combustion processes relevant to burners in HVAC systems
[PB95-179735] p 2208 N95-28006
FLAMMABILITY
Use of CTFE as an additive to enhance fire resistance of single hydraulic fluid
[AD-A289377] p 2233 N95-27325
Methods development for measuring and classifying flammability/combustibility of refrigerants. Task 2: Test plan
[DE95-007066] p 2234 N95-27461
Methods development for measuring and classifying flammability/combustibility of refrigerants. Task 1: Annotated bibliography
[DE95-007232] p 2238 N95-28133
FLANGES
Application of advanced material systems to composite frame elements p 2191 N95-28432
Design, analysis, and testing of a metal matrix composite web/flange intersection p 2191 N95-28433
FLAPERONS
Full span flaperons for a biplane
p 2119 N95-26954
FLAPPING
Visualization of the multiple supersonic jet oscillations by swept focused strobed schlieren technique
p 2119 N95-26952
Full span flaperons for a biplane
p 2119 N95-26954
FLAPS (CONTROL SURFACES)
Comparative wind tunnel tests of NACA 23024 airfoils with several aileron and spoiler configurations
p 2124 N95-27976
FLAT PANEL DISPLAYS
Low temperature materials growth and processing development for flat panel display technology applications
[AD-A288970] p 2233 N95-27187
Flat panel display development activities at Sandia National Laboratories
[DE95-005442] p 2265 N95-27706
JTEC panel on display technologies in Japan
[NASA-CR-198564] p 2292 N95-27863
Flat panel planar optic display
[DE95-007686] p 2426 N95-28196
FLAT PLATES
Plate manipulators
[AD-A289601] p 2121 N95-26719
Direct numerical simulation of transitional and turbulent flow over a heated flat plate using finite-difference schemes
[NASA-CR-197753] p 2275 N95-26776
Measurements of store forces and moments and cavity pressures for a generic store in and near a box cavity at subsonic and transonic speeds
[NASA-TM-4611] p 2123 N95-28241
Construction and wind tunnel test of a 1/12th scale helicopter model
[AD-A288487] p 2123 N95-28331
Monte-Carlo simulation methods for finite flat plate winding flows
[AD-A289842] p 2289 N95-28619
FLAT SURFACES
Atomistic study of energy and structure of surfaces in NiO
[DE95-005207] p 2215 N95-27446
FLAVOR (PARTICLE PHYSICS)
The Top...is it There? A Survey of the CDF and D0 Experiments
[DE95-005746] p 2411 N95-27945
FLEXIBLE BODIES
Method and apparatus for measuring temperatures in fabrics and flexible thermal insulations
[NASA-CASE-ARC-11984-1] p 2293 N95-28345
FLEXIBLE SPACECRAFT
A class of stabilizing controllers for flexible multibody systems
[NASA-TP-3494] p 2161 N95-26428
Analysis of modal behavior at frequency cross-over
[AD-A289304] p 2162 N95-26918
Static stability of a three-dimensional space truss
[NASA-TM-106944] p 2164 N95-27730
FLEXING
Interfacial mobility and its effect on flexural strength and fracture toughness in glass-fiber fabric reinforced epoxy laminates
[AD-A288344] p 2180 N95-26572
Experimental studies to test simple flexural neutralizers fitted to beams
[ISVR-TR-239] p 2309 N95-27846
Analytical and experimental evaluation of joining silicon carbide to silicon carbide and silicon nitride to silicon nitride for advanced heat engine applications, phase 2
[DE95-005761] p 2303 N95-27947
FLIGHT CHARACTERISTICS
Simulation model of the integrated flight/propulsion control system, displays, and propulsion system for ASTOVL lift-fan aircraft
[NASA-TM-108866] p 2139 N95-26412
A comparison of the Neal-Smith and omega Tau function, zeta function and tau function flying qualities criteria
[AD-A289503] p 2130 N95-26844
FLIGHT CLOTHING
Development of injury preventing helmet servo-support system for high performance aircraft
[AD-A289547] p 2359 N95-26755
FLIGHT CONDITIONS
Electro-hydrostatic actuator controller design using quantitative feedback theory
[AD-A289220] p 2141 N95-26957
Construction and wind tunnel test of a 1/12th scale helicopter model
[AD-A288487] p 2123 N95-28331
FLIGHT CONTROL
Development of a nonlinear simulation for the McDonnell Douglas F-15 Eagle with a longitudinal TECS control-law
[AD-A288610] p 2128 N95-26481
Design and synthesis of a real-time controller for an unmanned air vehicle
[AD-A289134] p 2141 N95-26555
An investigation of the effects of pitch-roll (de)coupling on helicopter handling qualities
[NASA-TM-110349] p 2141 N95-26773
A comparison of the Neal-Smith and omega Tau function, zeta function and tau function flying qualities criteria
[AD-A289503] p 2130 N95-26844
Electro-hydrostatic actuator controller design using quantitative feedback theory
[AD-A289220] p 2141 N95-26957
A quantitative feedback theory FCS design for the subsonic envelope of the VISTA F-16 including configuration variation
[AD-A289221] p 2141 N95-26958
Advanced formation flight control
[AD-A289271] p 2142 N95-26981
Flight control design using mixed H2/micron optimization
[AD-A289288] p 2142 N95-27036
Advanced flight computer. Special study
[NASA-CR-198165] p 2371 N95-27246
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-94-022] p 2246 N95-27699
Operator modeling in commerical aviation: Cognitive models, intelligent displays, and pilot's assistants
[NASA-CR-198609] p 2138 N95-28203
Composite flight-control actuator development
p 2142 N95-28281
FLIGHT CREWS
An analysis of the KC-135 three-person cockpit
[AD-A289540] p 2130 N95-26873
FLIGHT ENVELOPES
Flutter clearance flight tests of an OV-10A airplane modified for wake vortex flight experiments
[NASA-TM-109168] p 2117 N95-26381
Bow shock data analysis
[AD-A288432] p 2429 N95-26800
A quantitative feedback theory FCS design for the subsonic envelope of the VISTA F-16 including configuration variation
[AD-A289221] p 2141 N95-26958
FLIGHT HAZARDS
A review of falconry as a bird control technique with recommendations for use at the Shuttle Landing Facility, John F. Kennedy Space Center, Florida, USA
[NASA-TM-110142] p 2126 N95-27859
Weather hazards to a Titan 4 on-pad destack-restack operation p 2172 N95-28307
FLIGHT INSTRUMENTS
Hardware cleanliness methodology and certification
p 2211 N95-27656
FLIGHT MANAGEMENT SYSTEMS
Operator modeling in commerical aviation: Cognitive models, intelligent displays, and pilot's assistants
[NASA-CR-198609] p 2138 N95-28203
Pilot opinions on high level flight deck automation issues: Toward the development of a design philosophy
[NASA-CR-4669] p 2357 N95-28253
FLIGHT MECHANICS
Flight Mechanics/Estimation Theory Symposium 1995
[NASA-CP-3299] p 2146 N95-27763
Flight dynamics software in a distributed network environment p 2151 N95-27790
The Global Positioning System (GPS) and attitude determination: Applications and activities in the Flight Dynamics Division p 2152 N95-27795
Summary of EOS flight dynamics analysis
p 2152 N95-27797
FLIGHT OPERATIONS
Weather hazards to a Titan 4 on-pad destack-restack operation p 2172 N95-28307
FLIGHT PATHS
Flightpath synthesis and HUD scaling for V/STOL terminal area operations
[NASA-TM-110348] p 2127 N95-26587
FLIGHT SAFETY
Probabilistic risk assessment of the Space Shuttle. Phase 3: A study of the potential of losing the vehicle during nominal operation, volume 1
[NASA-CR-197808] p 2159 N95-26398
The 1994 updated National Airspace System performance assessment for year 2005
[AD-A288652] p 2125 N95-26485
The effect of aviation fuels containing low amounts of static dissipater additive on electrostatic charge generation
[AD-A280075] p 2243 N95-28152
Development and implementation of a system safety program for the space launch complex 3 east (SLC-3E) ground support system project to support Atlas 2 family of space launch vehicles p 2174 N95-28316
FLIGHT SIMULATION
Simulation model of the integrated flight/propulsion control system, displays, and propulsion system for ASTOVL lift-fan aircraft
[NASA-TM-108866] p 2139 N95-26412
Development of a nonlinear simulation for the McDonnell Douglas F-15 Eagle with a longitudinal TECS control-law
[AD-A288610] p 2128 N95-26481
Integrated mission precision attack cockpit technology (IMPACT). Phase 1: Identifying technologies for air-to-ground fighter integration
[AD-A289562] p 2129 N95-26684
The photo-realistic AFIT virtual cockpit
[AD-A289376] p 2130 N95-26876
Visual system operational evaluation
[AD-A289173] p 2356 N95-27012
Implementation and demonstration of a multiple model adaptive estimation failure detection system for the F-16
[AD-A289301] p 2131 N95-27042
The lift-fan aircraft: Lessons learned
[NASA-CR-196694] p 2131 N95-27143
A study of workstation computational performance for real-time flight simulation
[NASA-TM-109184] p 2362 N95-27241
FLIGHT SIMULATORS
The photo-realistic AFIT virtual cockpit
[AD-A289376] p 2130 N95-26876
The effects of UH-1 experience on UH-6O simulator performance: A preliminary study
[AD-A289457] p 2130 N95-26993
Visual system operational evaluation
[AD-A289173] p 2356 N95-27012
Flight control design using mixed H2/micron optimization
[AD-A289288] p 2142 N95-27036
FLIGHT TESTS
Flutter clearance flight tests of an OV-10A airplane modified for wake vortex flight experiments
[NASA-TM-109168] p 2117 N95-26381
Flight evaluation of GPS/DGPS sensor systems installed in NAL Do228
[NAL-TR-1230] p 2126 N95-26585
Hubble Space Telescope nickel-hydrogen battery testing: An update p 2272 N95-26794
The effects of UH-1 experience on UH-6O simulator performance: A preliminary study
[AD-A289457] p 2130 N95-26993
Test operations procedure (TOP) 7-3-534 airworthiness testing of fixed wing aircraft: Asymmetric power testing
[AD-A289458] p 2130 N95-26994
Status of bonded boron/epoxy doublers for military and commercial aircraft structures p 2132 N95-27506
Space environmental effect on solar cells: LDEF and other flight tests p 2326 N95-27649
Analysis of solar receiver flux distributions for US/Russian solar dynamic system demonstration on the MIR Space Station
[NASA-TM-106933] p 2169 N95-28036

Analysis of shadowing effects on MIR photovoltaic and solar dynamic power systems [NASA-TM-106940] p 2169 N95-28213

The solar array-induced disturbance of the Hubble Space Telescope pointing system [NASA-TP-3556] p 2311 N95-28214

Unmanned aerial vehicles, 1994 master plan [AD-A291628] p 2136 N95-28411

Proceedings of the AIAA/FAA joint symposium on general aviation systems [AD-A289830] p 2120 N95-28610

FLIGHT TRAINING

The value of simulation for training [AD-A289174] p 2143 N95-26556

FLOATING

Ultrasonic studies of liquid/solid seimoacoustic wave phenomena [AD-A289644] p 2402 N95-28622

FLOORS

Effects of floor location on response of composite fuselage frames p 2192 N95-28439

FLOQUET THEOREM

Aeroelasticity and structural optimization of composite helicopter rotor blades with swept tips [NASA-CR-4665] p 2136 N95-28262

FLOW CHARACTERISTICS

Viscous shock-layer analysis on hypersonic flow over reentry capsule with nonequilibrium chemistry [ISAS-R-656] p 2274 N95-26739

Wind tunnel experiments on wake flow field behind a reentry capsule from a viewpoint of parachute deployment at supersonic speeds [ISAS-R-655] p 2121 N95-26740

FLOW DISTRIBUTION

Numerical simulation of the SOFIA flow field [NASA-CR-197757] p 2274 N95-26589

CFD research, parallel computation and aerodynamic optimization [NASA-CR-197748] p 2120 N95-26649

Wind tunnel experiments on wake flow field behind a reentry capsule from a viewpoint of parachute deployment at supersonic speeds [ISAS-R-655] p 2121 N95-26740

Rarefied gas effects on aerobraking/reentry vehicles with wakes [NASA-CR-196586] p 2164 N95-27093

Fuzzy inference enhanced information recovery from digital PIV using cross-correlation combined with particle tracking [NASA-TM-106896] p 2291 N95-27173

Schlieren System and method for moving objects [NASA-CASE-LAR-15053-1] p 2291 N95-27191

Global flowfield about the V-22 Tiltrotor Aircraft [NASA-CR-198603] p 2122 N95-27248

Single-drop reactive extraction/extractive reaction with forced convective diffusion and interphase mass transfer p 2283 N95-27365

Measurements of store forces and moments and cavity pressures for a generic store in and near a box cavity at subsonic and transonic speeds [NASA-TM-4611] p 2123 N95-28241

TranAir: A full-potential, solution-adaptive, rectangular grid code for predicting subsonic, transonic, and supersonic flows about arbitrary configurations. Theory document [NASA-CR-4348] p 2123 N95-28265

Numerical analysis of intra-cavity and power-stream flow interaction in multiple gas-turbine disk-cavities [NASA-TM-106886] p 2140 N95-28344

FLOW EQUATIONS

A Navier-Stokes boundary element solver p 2283 N95-27361

Three-dimensional computer modeling of hydrogen injection and combustion [DE95-006261] p 2203 N95-27437

Robust integration schemes for generalized viscoplasticity with internal-state variables. Part 1: Theoretical developments and applications [NASA-CR-195452-PT-1] p 2310 N95-28031

Robust integration schemes for generalized viscoplasticity with internal-state variables. Part 2: Algorithmic developments and implementation [NASA-CR-195453-PT-2] p 2310 N95-28032

A genuinely multidimensional upwind scheme and efficient multigrid solver for the compressible Euler equations [NASA-CR-195000] p 2288 N95-28571

FLOW MEASUREMENT

Compressible turbulence measurements in a supersonic flow with adverse pressure gradient [AD-A289477] p 2276 N95-26822

FLOW RESISTANCE

Features and applications of the Groove Analysis Program (GAP) p 2281 N95-27349

FLOW STABILITY

The stability of the flow in a laminar separation bubble [CUED/A-AERO/TR-22] p 2275 N95-26809

On the nonlinear stability of the unsteady, viscous flow of an incompressible fluid in a curved pipe [NASA-CR-195065] p 2278 N95-27028

The Benard problem: A comparison of finite difference and spectral collocation eigen value solutions p 2283 N95-27364

Magnetic viscosity by localized shear flow instability in magnetized accretion disks [DE95-006879] p 2433 N95-28111

Computational and experimental studies of hydrodynamic instabilities and turbulent mixing [DE95-006837] p 2288 N95-28603

Experimental study on transition characteristics of natural-convection flow [PB95-192423] p 2289 N95-28637

FLOW VELOCITY

Evaluation of a new laboratory acoustic Doppler velocimeter [AD-A289592] p 2290 N95-26714

An investigation of the AFIT 2-inch shock tube as a flow source for supersonic testing [AD-A289246] p 2143 N95-26966

Observations of near-bottom flow in a wave-dominated nearshore environment [AD-A289331] p 2347 N95-27043

NASA Dryden flow visualization facility [NASA-TM-4631] p 2362 N95-27914

Energization and transport of ions of ionospheric origin in the terrestrial magnetosphere [NASA-CR-198618-REV] p 2338 N95-28035

Water driven turbine/brush pipe cleaner [NASA-CASE-KSC-11669-1] p 2304 N95-28359

Evaluation of microporous carbon filters as catalysts for ozone decomposition [DE95-006498] p 2331 N95-28548

FLOW VISUALIZATION

Plate manipulators [AD-A289601] p 2121 N95-26719

The stability of the flow in a laminar separation bubble [CUED/A-AERO/TR-22] p 2275 N95-26809

Visualization of the multiple supersonic jet oscillations by swept focused strobed schlieren technique p 2119 N95-26952

Flow visualization of a turbulent shear flow using an optical wavefront sensor [AD-A289208] p 2277 N95-26986

Schlieren System and method for moving objects [NASA-CASE-LAR-15053-1] p 2291 N95-27191

NASA Dryden flow visualization facility [NASA-TM-4631] p 2362 N95-27914

DNS, LES and stochastic modeling of turbulent reacting flows [AD-A280099] p 2287 N95-28155

Measurements of store forces and moments and cavity pressures for a generic store in and near a box cavity at subsonic and transonic speeds [NASA-TM-4611] p 2123 N95-28241

FLUENCE

Evaluation of Oxygen Interactions with Materials 3: Mission and induced environments p 2210 N95-27631

Spacecraft materials studies on the Aerospace Corporation tray on EOIM-3 p 2210 N95-27632

Exposure of LDEF materials to atomic oxygen: Results of EOIM 3 p 2210 N95-27633

Atomic oxygen dosimetry measurements made on STS-46 by CONCAP 2 p 2418 N95-27634

FLUID DYNAMICS

A non-iterative grid deformation algorithm for computational fluid dynamics for aeroelasticity [AD-A288298] p 2273 N95-26418

Demonstration study of hierarchical control of fluid-dynamic phenomena [AD-A289341] p 2275 N95-26751

Basic studies in turbulent shear flows [AD-A289145] p 2277 N95-26998

Nonlinear problems in fluid dynamics and inverse scattering: Nonlinear waves and inverse scattering [AD-A289148] p 2278 N95-27001

Nonlinear problems in fluid dynamics and inverse scattering: Langmuir circulations and spiral flows [AD-A289194] p 2278 N95-27019

Junkyard chemistry p 2227 N95-27102

Parallel plasma fluid turbulence calculations [DE95-006741] p 2431 N95-27537

FLUID FILMS

Transport phenomena and interfacial kinetics in multiphase combustion systems [AD-A288297] p 2199 N95-26417

Analysis of gas absorption to a thin liquid film in the presence of a zero-order chemical reaction p 2280 N95-27348

FLUID FILTERS

Application of bacterial bioemusifiers to in situ maintenance of oil/water separators p 2179 N95-27120

FLUID FLOW

Validation of the SINDA/FLUINT code using several analytical solutions p 2281 N95-27350

Transient studies of G-induced capillary dryout and rewet p 2281 N95-27351

Analysis of developing laminar flows in circular pipes using a higher-order finite-difference technique p 2281 N95-27352

Numerical solution of fluid flow and heat tranfer problems with surface radiation p 2282 N95-27357

The Benard problem: A comparison of finite difference and spectral collocation eigen value solutions p 2283 N95-27364

Studies of planetary scale waves and instabilities in support of the geophysical fluid flow cell experiment on USML-2 [NASA-CR-198646] p 2463 N95-27916

Computational and experimental studies of hydrodynamic instabilities and turbulent mixing [DE95-006837] p 2288 N95-28603

FLUID PRESSURE

Apparatus for testing high pressure injector elements [NASA-CASE-MFS-28773-1] p 2304 N95-28347

FLUIDICS

Flow control [AD-A289262] p 2279 N95-27197

FLUORESCENCE

Radiation sensitive area detection device and method [NASA-CASE-MFS-28563-3] p 2423 N95-26385

Flow cytometry as a means of detecting, enumerating and characterizing bacteria for monitoring of the environment [AD-A288997] p 2326 N95-26610

To develop an aerosoling immunomagnetic device for rapid medical diagnosis from clinical samples [AD-A288504] p 2354 N95-27059

Testing of Uninterruptible Power Supplies with nonlinear loads [AD-A289353] p 2262 N95-27067

Automated integration of genomic physical mapping data via parallel simulated annealing [DE95-008057] p 2351 N95-27725

Energy transfer in real and artificial photosynthetic systems [DE95-005824] p 2351 N95-27948

Single molecule detection using charge-coupled device array technology [DE95-006425] p 2411 N95-27953

Nonlinear optical microscopy for imaging thin films and surfaces [DE95-007872] p 2426 N95-28018

Development of an optical trap as an ultra-sensitive analytical tool [DE95-007843] p 2426 N95-28022

Spectroscopic and dynamical studies of highly energized small polyatomic molecules [DE95-006640] p 2414 N95-28199

Method for determining surface coverage by materials exhibiting different fluorescent properties [NASA-CASE-GSC-13539-1] p 2315 N95-28211

New developments for sol-gel film and fiber processing [DE95-008175] p 2240 N95-28404

FLUORIDES

Molecular modeling: An approach for the study of piezoelectric polymers [AD-A289821] p 2241 N95-28574

FLUORO COMPOUNDS

Retrofitting conventional vapor degreasers to use a solvent wash/fluorochemical rinse process p 2232 N95-27127

FLUOROCARBONS

The evaluation of a fluorochemical drying process for an electrical contact p 2227 N95-27103

FLUOROHYDROCARBONS

Extended equation-of-state for dichlorodifluoromethane (CCl2F2) [AD-A288885] p 2177 N95-26434

FLUTTER

Aeroelasticity of wing and wing-body configurations on parallel computers [NASA-CR-197756] p 2129 N95-26590

Nonlinear dynamics and aeroelasticity of rotorcraft in forward flight [AD-A291714] p 2136 N95-28504

FLUTTER ANALYSIS

Flutter clearance flight tests of an OV-10A airplane modified for wake vortex flight experiments [NASA-TM-109168] p 2117 N95-26381

FLUX DENSITY

The 50 Ah NiH2 CPV qualification tests p 2272 N95-26792

The role of microprocesses in macroscale magnetotail dynamics
[DE95-006288] p 2432 N95-27673
Aspects of strange matter
[DE95-008316] p 2414 N95-28170

FLUX DIFFERENCE SPLITTING
A numerical method for solving the three-dimensional parabolized Navier-Stokes equations
[NASA-CR-198159] p 2287 N95-27917

FLUX PINNING
The real structure of columnar pinning centers in heavy-ion-irradiated cuprate superconductors
[DE95-003948] p 2445 N95-28186

FLUX TRANSFER EVENTS
Energization and transport of ions of ionospheric origin in the terrestrial magnetosphere
[NASA-CR-197813] p 2336 N95-26699

FLY ASH
Ash-based ceramic materials
[AD-D017272] p 2241 N95-28582

FLY BY WIRE CONTROL
Evaluation of all-electric secondary power for transport aircraft
[NASA-CR-189077] p 2266 N95-27999

FLYWHEELS
Feasibility of flywheel energy storage systems for applications in future space missions
[NASA-CR-195422] p 2316 N95-26393
Investigation of high-temperature superconducting flywheel energy storage devices
[DE95-759242] p 2320 N95-27936
A hybrid vehicle evaluation code and its application to vehicle design. Revision 1
[DE95-008053] p 2303 N95-28029

FOAMING
Use of CTFE as an additive to enhance fire resistance of single hydraulic fluid
[AD-A289377] p 2233 N95-27325

FOCAL PLANE DEVICES
Performance analysis of bullet trajectory estimation: Approach, simulation, and experiments
[DE95-007949] p 2399 N95-28109

FOCUSING
The consideration of a bright relative beam dynamics in the magnetic focusing field
[DE95-608377] p 2398 N95-27160
Plasma lens experiments at the final focus test beam
[DE95-008595] p 2434 N95-28161

FOG
The attenuation of microwave radiation by fog and rain
[AD-A288326] p 2249 N95-26562

FOILS (MATERIALS)
Indirectly driven targets for ignition
[DE95-006451] p 2430 N95-27327
Development of an optical trap as an ultra-sensitive analytical tool
[DE95-007843] p 2426 N95-28022
On ionic charge distributions of heavy evaporation residues passing through a carbon foil
[DE94-629016] p 2414 N95-28184

FOREBODIES
Computational analysis of forebody tangential slot blowing on the high alpha research vehicle
[NASA-CR-197754] p 2129 N95-26591

FORECASTING
Evolving cascade-correlation networks for time-series forecasting
[AD-A289197] p 2390 N95-27020
Calculations of downward IR surface fluxes in the 500-3,000 cm(exp -1) wavenumber range for the 1994 ICRCCM model intercomparison study
[DE95-006430] p 2328 N95-27708
Models used to forecast agricultural corn crops in the micro-region of Ribeirao Preto-SP
[INPE-5513-NTC/309] p 2315 N95-28554
Severe weather guide mediterranean
[AD-A289829] p 2344 N95-28577

FORESTS
Survey on bio-chemical complex harmonized with global environment
[DE95-759252] p 2331 N95-28535

FORGING
Process control of microstructure in manufacturing
[AD-A288291] p 2245 N95-26410

FORM FACTORS
Phenomenology from 100 large lattices
[DE95-006349] p 2442 N95-27994

FORMALISM
Specifying weak sets
[AD-A288587] p 2364 N95-26536

FORMAT
Digital mapping, charting, and geodesy analysis program: Initial technical review of Raster Product Format
[AD-A289039] p 2313 N95-26476
Thermal neutral format based on the step technology
p 2283 N95-27363

FORMING TECHNIQUES
Forming metallurgy: Supervised drawing course, NTH
[PB95-196507] p 2219 N95-27934
Accuracy issues in modeling superplastic metal forming
[DE95-008934] p 2222 N95-28163
Design of fabric preforms for double diaphragm forming p 2184 N95-28269

FORTRAN
Computing NORAD mean orbital elements from a state vector
[AD-A289281] p 2146 N95-27033
Lattice QCD calculation using VPP500
[DE95-007076] p 2449 N95-27448
Fitting: Subroutine to fit four-moment probability distributions to data
[DE95-007722] p 2395 N95-27684

FORWARD SCATTERING
The high energy behavior of the forward scattering parameters -- (sigma)(sub tot), (rho), and B
[DE95-007075] p 2415 N95-28210

FOSSIL FUELS
Magnetic resonance imaging of solvent transport in polymer networks
[DE95-007142] p 2234 N95-27455
Investigation on comprehensive fossil fuel cycle analysis and assessment approach as viewed from the global environment
[DE95-759241] p 2329 N95-27935
A black carbon emission data base for atmospheric chemistry and climate studies
[DE95-006436] p 2332 N95-28662

FOURIER ANALYSIS
On the azimuthal Fourier components of the Green's function for the Helmholtz equation in three dimensions
[AD-A288775] p 2398 N95-26345
The comparison of P(sub 1) and simplified P(sub 2) synthetic acceleration for iterative methods in transport solutions
[DE94-018306] p 2390 N95-27304

FOURIER SERIES
Load transfer in the stiffener-to-skin joints of a pressurized fuselage
[NASA-CR-198610] p 2310 N95-27865

FOURIER TRANSFORMATION
FTIR measurements of thermal infrared sky radiance and transmission
[DE95-003642] p 2334 N95-26436
Synthetic 3-D atmospheric temperature structure: A model for known geophysical power spectra using a hybrid autoregression and Fourier technique
[AD-A289058] p 2340 N95-26479
Satellite surface material composition from synthetic spectra
[AD-A289236] p 2163 N95-26963
Measurement of N2(+) mobility He via Fourier transform emission spectroscopy
[AD-A289266] p 2404 N95-26979
A cryogenic scan mechanism for use in Fourier transform spectrometers p 2158 N95-27287
Crystal structure, short-range oxygen defects, and water adsorption in La- and Nd-modified ZrO2
[DE95-007134] p 2439 N95-27452
An introduction to wavelet transforms
[AD-A289083] p 2256 N95-28095
Dip-moveout processing by Fourier transform in anisotropic media
[DE95-007668] p 2339 N95-28190
Radon transform and its applications in gridding airborne geophysical survey data
[PB95-195533] p 2315 N95-28643

FRACTALS
The small-scale structure of dispersing clouds in the atmosphere
[AD-A288256] p 2341 N95-26546

FRACTIONATION
Fractionation studies of polyethylene using DSC-technique
[PB95-185252] p 2200 N95-26540
Design considerations in supercritical fluid technology
p 2232 N95-27126

FRACTOGRAPHY
Analysis of fatigue fractographic data of a rod end housing using a Monte Carlo simulation
[NAL-TR-1225] p 2307 N95-26521
Fatigue fracture analysis in medium carbon structural steel and austenitic stainless steel by X-ray fractography
[DE95-601504] p 2213 N95-26675

FRACTURE MECHANICS
Interfacial mobility and its effect on flexural strength and fracture toughness in glass-fiber fabric reinforced epoxy laminates
[AD-A288344] p 2180 N95-26572
Fatigue fracture analysis in medium carbon structural steel and austenitic stainless steel by X-ray fractography
[DE95-601504] p 2213 N95-26675
Characterization of fatigue behavior of 2-D woven fabric reinforced ceramic matrix composite at elevated temperature
[AD-A289423] p 2181 N95-26886
Fatigue behavior of a cross-ply ceramic matrix composite subjected to tension-tension cycling with hold time
[AD-A289418] p 2182 N95-27134
Effect of internal hydrogen on the mixed-mode 1/3 fracture toughness of a ferrific/martensitic stainless steel
[DE95-005722] p 2216 N95-27479
Deformation limits on two-parameter fracture mechanics in terms of higher order asymptotics
[AD-A289113] p 2310 N95-28098
Reactor pressure vessel structural integrity research
[DE95-007034] p 2223 N95-28208
An overview of activities and accomplishments of the Metals and Ceramics Division
[DE95-007020] p 2241 N95-28560

FRACTURE STRENGTH
Interfacial mobility and its effect on flexural strength and fracture toughness in glass-fiber fabric reinforced epoxy laminates
[AD-A288344] p 2180 N95-26572
Effect of internal hydrogen on the mixed-mode 1/3 fracture toughness of a ferrific/martensitic stainless steel
[DE95-005722] p 2216 N95-27479
Structural ceramics incorporating whiskers, platelets, and particulate phases
[DE95-007048] p 2235 N95-27499
Effects of high-temperature environments on flaw generation and fracture behavior of SiC/SiC composites
[DE95-008270] p 2183 N95-28068
An experimental and numerical investigation of specimen size requirements for cleavage fracture toughness
[AD-A289120] p 2311 N95-28100
Reactor pressure vessel structural integrity research
[DE95-007034] p 2223 N95-28208
Service tough composite structures using the Z-direction reinforcement process p 2185 N95-28272
Effect of the fiber-matrix interphase on the transverse tensile strength of the unidirectional composite material
p 2190 N95-28425

FRACTURING
Interfacial mobility and its effect on flexural strength and fracture toughness in glass-fiber fabric reinforced epoxy laminates
[AD-A288344] p 2180 N95-26572
Fatigue fracture analysis in medium carbon structural steel and austenitic stainless steel by X-ray fractography
[DE95-601504] p 2213 N95-26675
Scaling issues in dynamic fragmentation
[DE95-008509] p 2309 N95-27745
Prediction of material strength and fracture of glass using the SPHINX smooth particle hydrodynamics code
[DE95-004869] p 2236 N95-27943
Fracture testing and analysis of adhesively bonded joints for automotive applications
[DE95-007024] p 2184 N95-28207
Tension fracture of laminates for transport fuselage. Part 1: Material screening p 2137 N95-28471

FRAGMENTATION
Environmental effects on high energy density materials
[AD-A288296] p 2199 N95-26416
Scaling issues in dynamic fragmentation
[DE95-008509] p 2309 N95-27745
Tungsten carbide fragmentation: Experimental characterization and numerical modelling
[DE95-008521] p 2236 N95-27879
A novel sensitive detector of atmospheric nitrocompounds based on laser photofragmentation/ionization spectrometry
p 2174 N95-28314
Pressure vessel burst test study p 2175 N95-28317

FRAGMENTS
Automated integration of genomic physical mapping data via parallel simulated annealing
[DE95-008057] p 2351 N95-27725

FRAMES
Application of advanced material systems to composite frame elements p 2191 N95-28432
Effects of floor location on response of composite fuselage frames p 2192 N95-28439

FRANCE
WTEC panel report on research submersibles and undersea technologies
[NASA-CR-198565] p 2247 N95-27909

FREE CONVECTION
Studies of planetary scale waves and instabilities in support of the geophysical fluid flow cell experiment on USML-2
[NASA-CR-198646] p 2463 N95-27916
Experimental study on transition characteristics of natural-convection flow
[PB95-192423] p 2289 N95-28637
FREE ELECTRON LASERS
Free Electron Laser Physical Process Code (FELPPC)
[DE95-006276] p 2296 N95-27557
Time-dependent multi-dimensional simulation studies of the electron output scheme for high power FELs
[DE95-006593] p 2297 N95-27737
High power free-electron laser concepts and problems
[DE95-007841] p 2298 N95-28059
Finite pulse effects in self-amplified-spontaneous emission
[DE95-006585] p 2298 N95-28104
FREE ELECTRONS
Landau quasi-energy spectrum destruction for an electron in both a static magnetic field and a resonant electromagnetic wave
[DE95-610176] p 2256 N95-27716
FREE ENERGY
Modeling the growth of electronic materials
[AD-A289137] p 2438 N95-26997
The free energy of hot QED at three and a half loops
[DE95-007079] p 2449 N95-27449
A first principles approach to phase stability and order-disorder transformation: Application to Li-Al alloys
[DE95-609152] p 2218 N95-27756
Observation on radiation transfer experiments using k-shell absorption spectra
[DE95-008068] p 2434 N95-28141
FREE FLIGHT
Ionizing radiation measurements on LDEF: A0015 Free flyer biostack experiment
[NASA-CR-196603] p 2202 N95-27168
FREE JETS
Preliminary results and research capabilities of a new jet facility at the University of Kansas
p 2119 N95-26951
FREEZING
FREZCHEM: A chemical-thermodynamic model for aqueous solutions at subzero temperatures
[AD-A288456] p 2200 N95-26432
Quantum effects induced by a gap in the spectrum of atom-bath coupling constants: Freezing of atomic decay and monochromatic collective radiation
[DE95-609037] p 2416 N95-28251
FREQUENCIES
Applications of Second Harmonic and Sum Frequency Generation to graphite and silica type interfaces
[AD-A288228] p 2201 N95-26544
Fast wave current drive in D3-D
[DE95-007582] p 2431 N95-27441
Research on the establishment of the database system for R and D on the innovative technology for the Earth
[DE95-759244] p 2458 N95-27937
A numerical study of ultra-short-pulse reflectometry
[DE95-008070] p 2266 N95-28015
Infrared spectroscopy of nonclassical ions and their complexes
[DE95-008487] p 2413 N95-28091
Design, construction, test and evaluation of a frequency scanning radiometer for measuring oil slick thicknesses
[AD-A290040] p 2293 N95-28389
Prediction of fatigue crack growth under constant amplitude and random loading using specimens with multiple cracks
[AD-A291614] p 2136 N95-28409
Atmospheric dispersion in adaptive optics
[AD-A289639] p 2428 N95-28617
FREQUENCY HOPPING
Characterization of solid state laser and nonlinear optical materials
[AD-A291684] p 2300 N95-28458
FREQUENCY MODULATION
Evaluation of the FMICW waveform in HF surface radar applications
[AD-A288245] p 2249 N95-26545
Fundamental concepts of integrated and fiber optic sensors
[NASA-TM-106920] p 2426 N95-27906
Method and apparatus for maintaining linearity and frequency accuracy of an FM chirp waveform
[AD-D017398] p 2258 N95-28615
FREQUENCY MULTIPLIERS
Survey on step recovery diode and its applications
[PB95-184974] p 2260 N95-26646
Study of frequency doubling antireflection coating
[AD-A289634] p 2424 N95-26860
FREQUENCY RANGES
Uncertainties in the calibration of hydrophones at NPL by the three-transducer spherical-wave reciprocity method in the frequency range 10 kHz on 500 kHz
[PB95-185245] p 2401 N95-26615
A study of heart rate and heart rate variability during rapid decompression to 50,000 ft
[AD-A291598] p 2355 N95-28561
FREQUENCY RESPONSE
A state-space model of a large, lightly damped space structure using the Eigensystem realization algorithm
[AD-A289251] p 2163 N95-26970
Modeling of trapping and abrupt doping effects in MESFET's using R-dynamic element
[PB95-184891] p 2262 N95-27050
Effect of noise on Frequency-Resolved Optical Gating measurements of ultrashort pulses
[DE95-007149] p 2298 N95-27969
Low power limits in ultrashort pulse measurement using Frequency-Resolved Optical Gating
[DE95-007150] p 2299 N95-28219
FREQUENCY SCANNING
Design, construction, test and evaluation of a frequency scanning radiometer for measuring oil slick thicknesses
[AD-A290040] p 2293 N95-28389
FREQUENCY STANDARDS
Extended linear ion trap frequency standard apparatus
[NASA-CASE-NPO-19081-1-CU] p 2404 N95-26861
Extended linear ion trap frequency standard apparatus
[NASA-CASE-NPO-19081-1-CU] p 2416 N95-28348
FRICTION
Advanced solid lubricant films by Ion-Beam Assisted Deposition
[AD-A288866] p 2225 N95-26499
Accuracy issues in modeling superplastic metal forming
[DE95-008934] p 2222 N95-28163
FUEL CELL POWER PLANTS
The US Molten Carbonate Fuel-Cell development and commercialization effort
[DE95-008580] p 2320 N95-27746
FUEL CELLS
Molten Carbonate Fuel Cell (MCFC) product development test
[DE95-007345] p 2316 N95-26543
The US Molten Carbonate Fuel-Cell development and commercialization effort
[DE95-008580] p 2320 N95-27746
Stability of chromite interconnections in dual environments
[DE95-007755] p 2267 N95-28131
FUEL COMBUSTION
Coatings of non-oxide ceramics for improved corrosion resistance in high temperature coal combustion
[DE95-006932] p 2241 N95-28604
A black carbon emission data base for atmospheric chemistry and climate studies
[DE95-006436] p 2332 N95-28662
FUEL CORROSION
Characterization of corrosion and development of a breadboard of a D sight aircraft inspection system, phase 1
[AD-A288347] p 2125 N95-26527
Coatings of non-oxide ceramics for improved corrosion resistance in high temperature coal combustion
[DE95-006932] p 2241 N95-28604
FUEL INJECTION
Numerical simulation of combustion flow around a flame holder with hydrogen injection
[NAL-TR-1233] p 2200 N95-26523
Experiment on a rectangular cross section scramjet combustor. 2: Effects of fuel injector geometry
[NAL-TR-1220] p 2139 N95-26600
Propellant injection systems and processes
[NASA-TM-110632] p 2242 N95-26781
Apparatus for testing high pressure injector elements
[NASA-CASE-MFS-28773-1] p 2304 N95-28347
FUEL PRODUCTION
Alternative fuels and vehicles choice model
[DE95-005695] p 2243 N95-27944
FUEL SPRAYS
Cryogenic and simulated fuel jet breakup in argon, helium and nitrogen gas flows
[NASA-TM-106923] p 2291 N95-27030
FUEL SYSTEMS
Pellet injector research and development at ORNL
[DE95-006736] p 2435 N95-28596
Rotorcraft crashworthy airframe and fuel system technology development program
[AD-A289986] p 2126 N95-28630
FUEL TANKS
Bases for extrapolating materials durability in fuel storage pools
[DE95-007748] p 2222 N95-28129
FUELS
Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A288297] p 2199 N95-26417
Alternative fuels and vehicles choice model
[DE95-005695] p 2243 N95-27944
Proceedings of the AIAA/FAA joint symposium on general aviation systems
[AD-A289830] p 2120 N95-28610
FULL SCALE TESTS
Structural modification and repair of C-130 wing structure using bonded composites p 2133 N95-27512
Report to Congressional Committees. Comanche Helicopter: Testing needs to be completed prior to production decisions
[GAO/NSIAD-95-112] p 2135 N95-27910
Comparative wind tunnel tests of NACA 23024 airfoils with several aileron and spoiler configurations
p 2124 N95-27976
FULLERENES
Photoemission and optical properties of C60 fullerites
[DE95-006588] p 2425 N95-27539
FUNCTION SPACE
Local operators in Krylov subspaces
[PB95-195525] p 2393 N95-28499
FUNCTIONALS
Contribution to the optimal shape design of two-dimensional internal flows with embedded shocks
[NASA-CR-195062] p 2389 N95-26672
FUNCTIONS (MATHEMATICS)
Studies of radar backscatter as a function of wave properties and the winds in the turbulent marine atmosphere
[NASA-CR-198608] p 2315 N95-28209
FUNGI
Biochemically vulnerable sites for antifungal intercession in the control of fungal growth
[AD-A288345] p 2348 N95-26573
FUNGICIDES
Biochemically vulnerable sites for antifungal intercession in the control of fungal growth
[AD-A288345] p 2348 N95-26573
FURNACES
Junkyard chemistry p 2227 N95-27102
A practical approach to soil remediation
p 2232 N95-27125
The effects of processing variables on reaction synthesis of Fe-Al alloys
[DE95-007405] p 2221 N95-28082
FUSELAGES
Characterization of corrosion and development of a breadboard of a D sight aircraft inspection system, phase 1
[AD-A288347] p 2125 N95-26527
On aircraft repair verification of a fighter A/C integrally stiffened fuselage skin p 2133 N95-27515
Load transfer in the stiffener-to-skin joints of a pressurized fuselage
[NASA-CR-198610] p 2310 N95-27865
Static and fatigue testing of full-scale fuselage panels fabricated using a Therm-X(R) process
p 2185 N95-28270
Advanced tow placement of composite fuselage structure p 2185 N95-28271
ACT/ICAPS: Thermoplastic composite activities
p 2185 N95-28274
The effect of material heterogeneity in curved composite beams for use in aircraft structures
p 2190 N95-28426
Effects of floor location on response of composite fuselage frames p 2192 N95-28439
Probabilistic evaluation of fuselage-type composite structures p 2137 N95-28444
Composite fuselage shell structures research at NASA Langley Research Center p 2194 N95-28466
Test and analysis results for composite transport fuselage and wing structures p 2137 N95-28470
Tension fracture of laminates for transport fuselage. Part 1: Material screening p 2137 N95-28471
Local design optimization for composite transport fuselage crown panels p 2137 N95-28473
Composite fuselage crown panel manufacturing technology p 2137 N95-28474
Advanced textile applications for primary aircraft structures p 2138 N95-28476
Characterization and manufacture of braided composites for large commercial aircraft structures
p 2196 N95-28478
Impact damage resistance of composite fuselage structure, part 1 p 2138 N95-28482
Damage tolerance of a geodesically stiffened advanced composite structural concept for aircraft structural applications p 2138 N95-28487
Rotorcraft crashworthy airframe and fuel system technology development program
[AD-A289986] p 2126 N95-28630

Numerical simulation of crack growth in pressurized fuselages
[PB95-192415] p 2137 N95-28636

FUSION REACTORS
Experimental aspects of effects of high-energy particles on Alfven modes
[DE95-003383] p 2432 N95-27873
Pumping characteristics of a cryopump with Ar sorbent in He and in D2/He mixture
[DE95-007049] p 2302 N95-27875
Advanced tokamak operating modes in TPX and ITER
[DE95-008058] p 2434 N95-28138
Recent high-speed ballistics experiments at ORNL
[DE95-006534] p 2422 N95-28205
Operating points and feedback control of plasma characteristics in tokamaks with full current drive
[DE95-007037] p 2435 N95-28553
Tokamak ETE engineering preliminary project
[INPE-5529-PRE/1796] p 2435 N95-28562

FUZZY SYSTEMS
Digital systems validation. Chapter 20 Artificial Intelligenge with applications for aircraft. Handbbook, volume 2
[AD-A288492] p 2380 N95-26638
Fuzzy inference enhanced information recovery from digital PIV using cross-correlation combined with particle tracking
[NASA-TM-106896] p 2291 N95-27173
Fuzzy logic techniques for rendezvous and docking of two geostationary satellites p 2384 N95-27386
A fuzzy logic intelligent diagnostic system for spacecraft integrated vehicle health management
p 2385 N95-27392

G

GADOLINIUM
Resonant photoemission studies of thickness dependence of the unoccupied Gd 5d bands
[DE95-004127] p 2436 N95-26440

GALACTIC COSMIC RAYS
Abrasion-ablation model for neutron production in heavy ion reactions
[NASA-TM-4656] p 2420 N95-27372

GALACTIC EVOLUTION
A long-term space astrophysics research program: An x-ray perspective of the components and structure of galaxies
[NASA-CR-197787] p 2461 N95-26593

GALACTIC STRUCTURE
A long-term space astrophysics research program: An x-ray perspective of the components and structure of galaxies
[NASA-CR-197787] p 2461 N95-26593

GALAXIES
A long-term space astrophysics research program: An x-ray perspective of the components and structure of galaxies
[NASA-CR-197787] p 2461 N95-26593
The second coming of cold dark matter?
[DE95-005156] p 2462 N95-27445

GALERKIN METHOD
Spectral methods on arbitrary grids
[NASA-CR-198158] p 2279 N95-27247
A probabilistic model of a porous heat exchanger
p 2282 N95-27359
Numerical study to assess sulfur hexafluoride as a medium for testing multielement airfoils
[NASA-TP-3496] p 2124 N95-28674

GALLIUM
BIPM project: Intercomparison of water triple-point cells
[PB95-185237] p 2398 N95-26614

GALLIUM ALLOYS
Study of the phase transformations and microstructures of uranium rich alloys of the binary uranium-gallium system
[DE95-609624] p 2217 N95-27713

GALLIUM ARSENIDES
Chemistry involving the separation, isolation, and immobilization of 3-5 compound semiconductor nanocrystals and quantum dots
[AD-A288381] p 2436 N95-26473
Monte Carlo study of electron-plasmon scattering effects on hot electron transport in GaAs
[DE95-607768] p 2403 N95-26542
Room-temperature photocurrent spectroscopy of GaAs/GaAlAs multiple quantum wells
[AD-A289607] p 2201 N95-26707
Annealing of radiation damaged gallium arsenide solar cells by laser illumination
[AD-A289683] p 2316 N95-26762
Characterization of optical polymers for multi-layered electro-optic devices
[AD-A289255] p 2227 N95-26973
Low resistivity ohmic contacts to moderately doped n-GaAs with low temperature processing
[DE95-008507] p 2445 N95-28144
Sensor for measuring the atomic fraction in highly dissociated hydrogen
[DE95-006531] p 2415 N95-28204
Evaluation of defect-related diffusion in semiconductors by electrooptical sampling
[AD-A291630] p 2270 N95-28544

GALLIUM NITRIDES
Pseudomorphic semiconducting heterostructures from combinations of AlN, GaN and selected SiC polytypes: Theoretical advancement and its coordination with experimental studies of nucleation, growth, characterization and device development
[AD-A289550] p 2437 N95-26756
First-principles calculations for AlN, GaN, and InN: Bulk and alloy properties
[DE95-006822] p 2219 N95-27958

GALLIUM SELENIDES
Growth and evaluation of nonlinear optical crystals for laser applications: Lithium borate, barium borate and silver gallium selenide
[AD-A289147] p 2277 N95-27000

GAME THEORY
Distributed computation of Pareto solutions for two decision makers
[PB95-185047] p 2396 N95-26613
Distributed computation of Pareto solutions in N-player games
[PB95-185039] p 2396 N95-26912
Absolute logics
[ISBN-951-41-0775-6] p 2397 N95-28238
Distributed methods and processes in games of incomplete information
[PB95-184842] p 2396 N95-28352
Distributed methods and processes in games of incomplete information
[PB95-184859] p 2396 N95-28353

GAMMA RAY ASTRONOMY
Multiwavelength observations of unidentified high energy gamma-ray sources
[NASA-CR-197840] p 2465 N95-26630

GAMMA RAY OBSERVATORY
A BATSE investigation of radiation belt electrons precipitated by VLF waves
[NASA-CR-197780] p 2336 N95-26922

GAMMA RAY SPECTRA
Multiwavelength observations of unidentified high energy gamma-ray sources
[NASA-CR-197840] p 2465 N95-26630

GAMMA RAY TELESCOPES
Multiwavelength observations of unidentified high energy gamma-ray sources
[NASA-CR-197840] p 2465 N95-26630

GAMMA RAYS
The effect of proteins on the aging properties of radiation vulcanized Natural Rubber Latex
[DE95-603357] p 2225 N95-26599
Multiwavelength observations of unidentified high energy gamma-ray sources
[NASA-CR-197840] p 2465 N95-26630
Amorphous silicon pixel radiation detectors and associated thin film transistor electronics readout
[DE95-006568] p 2265 N95-27678
Sintering of textured YBa2Cu3O(7-x) under intensive Co-60 gamma irradiation
[DE95-007098] p 2442 N95-27950
Remote sensing of hydrologic variables in boreal areas, phase 2
[NASA-CR-198717] p 2314 N95-27998
Gamma ray-induced embrittlement of pressure vessel alloys
[DE95-007133] p 2220 N95-28072
The Bremsstrahlung of soft gamma-quanta created by elastic pp- and np-scatterings and the dibaryon resonance problem
[DE95-608870] p 2415 N95-28248

GAS ATOMIZATION
Cryogenic and simulated fuel jet breakup in argon, helium and nitrogen gas flows
[NASA-TM-106923] p 2291 N95-27030

GAS DETECTORS
Evaluation of a conductive polymer-based sensor for detection of hydrazines at the part-per-billion level
p 2173 N95-28309
The sensitive detection of hydrazine using chemiluminescence p 2173 N95-28311

GAS DYNAMICS
A genuinely multidimensional upwind scheme and efficient multigrid solver for the compressible Euler equations
[NASA-CR-195000] p 2288 N95-28571
Computational and experimental studies of hydrodynamic instabilities and turbulent mixing
[DE95-006837] p 2288 N95-28603

GAS EXCHANGE
A model of bubble evolution during decompression based on a Monte Carlo simulation of inert gas diffusion
[AD-A289400] p 2353 N95-26885

GAS EXPANSION
A model of bubble evolution during decompression based on a Monte Carlo simulation of inert gas diffusion
[AD-A289400] p 2353 N95-26885
The noise reduction potential of dual-stream coaxial rectangular improperly expanded jet flows
[NASA-CR-197820] p 2277 N95-26995

GAS FLOW
Cryogenic and simulated fuel jet breakup in argon, helium and nitrogen gas flows
[NASA-TM-106923] p 2291 N95-27030

GAS HEATING
Research on combustion processes relevant to burners in HVAC systems
[PB95-179735] p 2208 N95-28006

GAS INJECTION
Three-dimensional computer modeling of hydrogen injection and combustion
[DE95-006261] p 2203 N95-27437

GAS MIXTURES
High temperature kinetic study of the reactions H + O2 = OH + O and O + H2 = OH + H in H2/O2 system by shock tube-laser absorption spectroscopy
[NASA-CR-195473] p 2206 N95-27695

GAS PRESSURE
An investigation of the AFIT 2-inch shock tube as a flow source for supersonic testing
[AD-A289246] p 2143 N95-26966

GAS TUNGSTEN ARC WELDING
Characterization of Ultra-Low Carbon Baintic steels for use as weld wire consumables
[AD-A288292] p 2212 N95-26411

GAS TURBINE ENGINES
Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A288297] p 2199 N95-26417
Optimization of wave rotors for use as gas turbine engine topping cycles
[NASA-TM-106951] p 2140 N95-27860
A summary of computational experience at GE Aircraft Engines for complex turbulent flows in gas turbines
p 2285 N95-27865
Composite intermediate case manufacturing scale-up for advanced engines p 2141 N95-28275

GAS TURBINES
Turbulence models for gas turbine combustors
p 2285 N95-27888
Numerical analysis of intra-cavity and power-stream flow interaction in multiple gas-turbine disk-cavities
[NASA-TM-106886] p 2140 N95-28344

GAS VISCOSITY
Magnetic viscosity by localized shear flow instability in magnetized accretion disks
[DE95-006879] p 2433 N95-28111

GAS-METAL INTERACTIONS
Cesium/oxide interactions for ultrathin films on (alpha)-Al2O3(001) and (alpha)-Al2O3(1(bar 1)O2)
[DE95-008159] p 2238 N95-28358

GAS-SOLID INTERACTIONS
Modeling the shock response of submerged structures
[AD-A289082] p 2288 N95-28351

GASEOUS DIFFUSION
A model of bubble evolution during decompression based on a Monte Carlo simulation of inert gas diffusion
[AD-A289400] p 2353 N95-26885
Vapor pressures of mixtures of CFC-114 with the potential replacement coolants C4F(10) andc-C4F 8
[DE95-003444] p 2208 N95-28042

GASES
Development of an upwind, finite-volume code with finite-rate chemistry
[NASA-CR-197747] p 2121 N95-26760
Photoacoustic chambers for studying solids and gases: Theory and practical examples
[IFTR-39/1994] p 2143 N95-26837
Measurement of heterogeneous chemical processes relevant to aerosol surfaces and trace gases active in the marine environment
[DE95-008337] p 2328 N95-27743

GASIFICATION
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-021] p 2202 N95-27155
Review and analysis of the 1980-1989 biomass thermochemical conversion program
[DE95-000287] p 2325 N95-28394

GASOLINE
A hybrid vehicle evaluation code and its application to vehicle design. Revision 1
[DE95-008053] p 2303 N95-28029

GAUGE INVARIANCE
A model of the extended electron and its nonlocal electromagnetic interaction: Gauge invariance of the nonlocal theory
[DE95-608803] p 2255 N95-27313
Model independent constraints on anomalous gauge boson self-couplings from e(+)e(-) colliders with longitudinally polarized beams
[DE95-608844] p 2406 N95-27317

GAUGE THEORY
Addendum to the 1993 European school of high-energy physics
[DE95-610313] p 2419 N95-27321

GAUSS EQUATION
Truncated Gaussians as tolerance sets
[NASA-CR-197732] p 2395 N95-27417

GAUSSIAN ELIMINATION
Modified Gaussian elimination for adaptive beamforming using RNS arithmetic
[AD-A288809] p 2248 N95-26356

GEAR TEETH
Using hob offset to balance dynamic strength in spur gears
[NASA-TM-106934] p 2302 N95-27698

GEARS
Diagnosis of helicopter gearboxes using structure-based networks
[NASA-TM-106932] p 2302 N95-27373
Using hob offset to balance dynamic strength in spur gears
[NASA-TM-106934] p 2302 N95-27698
Vibration analysis of a split path gearbox
[NASA-TM-106875] p 2302 N95-27855

GELS
Silicate gel dye laser
[AD-D017262] p 2294 N95-26503
Variation of solvent scattering-length density small-angle neutron scattering as a means of determining structure of composite materials
[DE95-005394] p 2183 N95-27428
Feasibility studies for separation processes using environmentally sensitive hydrogels
[DE95-008355] p 2238 N95-28226
Alternate use of rocket propellants as ingredients in commercial watergel explosives p 2176 N95-28321
The minimum pore size obtainable in a silica gel during drying
[DE95-008162] p 2239 N95-28401
Porosity in hexylene-bridged polysilsesquioxanes: Effects of monomer concentration
[DE95-005421] p 2240 N95-28531
Comparison of bridged polysilsesquioxane xerogels prepared from methoxy- and ethoxy-silyl monomers
[DE95-005422] p 2240 N95-28532

GENE EXPRESSION
Toxicity assessment of liquid propellant XM46
p 2175 N95-28319

GENERAL AVIATION AIRCRAFT
Proceedings of the AIAA/FAA joint symposium on general aviation systems
[AD-A289830] p 2120 N95-28610

GENERAL OVERVIEWS
Building an electronic book on the Internet. CSEP:An interdisciplinary syllabus for teaching computational science at the graduate level
[DE95-006526] p 2375 N95-28632

GENES
Third international congress of plant molecular biology: Molecular biology of plant growth and development
[DE95-006482] p 2352 N95-28496

GENETIC ALGORITHMS
Predicting protein structure using parallel genetic algorithms
[AD-A289305] p 2369 N95-26919
A gain scheduling optimization method using genetic algorithms
[AD-A289306] p 2381 N95-26920
A sustainable genetic algorithm for satellite resource allocation p 2376 N95-27383
A hybrid genetic algorithm for resolving closely spaced objects p 2384 N95-27387

GENETICS
Comparative Transduction Mechanisms of Vestibular Otolith Hair Cells
[NASA-CR-197980] p 2349 N95-26727
Comparative transduction mechanisms of hair cells in the bullfrog utriculus. 1: Responses to intracellular current p 2350 N95-26731
Predicting protein structure using parallel genetic algorithms
[AD-A289305] p 2369 N95-26919
Investigation on technology for increasing the biological CO2 sink and technology for CO2 fixation and reutilization
[DE95-759251] p 2329 N95-27941
Toxicity assessment of liquid propellant XM46
p 2175 N95-28319

GEOCENTRIC COORDINATES
Ulysses orbit determination at high declinations
p 2151 N95-27787

GEOCHEMISTRY
Synchrotron X-ray scattering studies at mineral-water interfaces
[DE95-008303] p 2440 N95-27542
Testing the correlation between seismic stratigraphy, diagenesis and physical rock properties: Evaluation of fluid flow during early and late diagenesis
[DE95-008338] p 2338 N95-28083

GEODESIC LINES
Damage tolerance of a geodesically stiffened advanced composite structural concept for aircraft structural applications p 2138 N95-28487

GEODESY
Digital mapping, charting, and geodesy analysis program: Initial technical review of Raster Product Format
[AD-A289039] p 2313 N95-26476
Naval Aviation System TEAM mapping, charting, and geodesy handbook
[AD-A288590] p 2314 N95-26841
On the persistence of the oceanic background of apparent sea level changes in the Baltic Sea
[REPT-94:5] p 2348 N95-27996

GEODYNAMICS
On the persistence of the oceanic background of apparent sea level changes in the Baltic Sea
[REPT-94:5] p 2348 N95-27996

GEOGRAPHIC INFORMATION SYSTEMS
Application of a Geographic Information System for radiologic emergency response
[DE95-007624] p 2455 N95-28113

GEOGRAPHY
Live from Antarctica: The coldest, windiest place on Earth
[NASA-CR-197737] p 2335 N95-26595
Southern Africa: A climatological study
[AD-A289466] p 2342 N95-27148

GEOLOGICAL FAULTS
Investigation of rifting processes in the Rio Grande Rift using data from an unusually large earthquake swarm
[DE95-007623] p 2339 N95-28126
Dip-moveout processing by Fourier transform in anisotropic media
[DE95-007668] p 2339 N95-28190
Transformation to zero offset in transversely isotropic media
[DE95-007669] p 2339 N95-28192

GEOLOGICAL SURVEYS
High performance ground penetrating radar survey of TA-49/Area 2
[DE95-006656] p 2258 N95-28601

GEOLOGY
Live from Antarctica: The coldest, windiest place on Earth
[NASA-CR-197737] p 2335 N95-26595
Contact micromechanics in granular media with clay
[DE95-006566] p 2340 N95-28583

GEOMAGNETISM
Applying AI tools to operational space environmental analysis p 2382 N95-27376
SAMPEX special pointing mode p 2149 N95-27780

GEOMETRIC DILUTION OF PRECISION
Determining GPS average performance metrics
p 2128 N95-27791

GEOMETRICAL OPTICS
Full complex modulation using two one-parameter spatial light modulators
[NASA-CASE-MSC-22255-1] p 2427 N95-28384

GEOPHYSICS
Finding the forest in the trees. The challenge of combining diverse environmental data
[NASA-CR-197798] p 2326 N95-26362
A geo-acoustic and oceanographic description of several shallow water experimental sites on the Scotian Shelf
[AD-A288300] p 2345 N95-26420
Synthetic 3-D atmospheric temperature structure: A model for known geophysical power spectra using a hybrid autoregression and Fourier technique
[AD-A289058] p 2340 N95-26479
Airborne geophysics and precise positioning: Scientific issues and future directions
[LC-94-68678] p 2314 N95-27156
Geophex airborne unmanned survey system
[DE95-007566] p 2131 N95-27440
Studies of planetary scale waves and instabilities in support of the geophysical fluid flow cell experiment on USML-2
[NASA-CR-198646] p 2463 N95-27916
Solar-geophysical data number 604, December 1994. Part 1: (Prompt reports). Data for November, October 1994, and late data
[PB95-181848] p 2465 N95-28087
Emerging applications of probability (stochastic models in geosystems)
[AD-A289117] p 2313 N95-28099
Radon transform and its applications in gridding airborne geophysical survey data
[PB95-195533] p 2315 N95-28643

GEOSYNCHRONOUS ORBITS
Development test of a liquid Apogee engine for the ETS-6
[NAL-TR-1250] p 2167 N95-26799
Long-term variability of electron radiation dose in geosynchronous orbit
[AD-A289335] p 2162 N95-26902
Electric propulsion for geostationary orbit insertion
[NASA-TM-106942] p 2168 N95-27727
Accurate orbit determination strategies for the tracking and data relay satellites p 2147 N95-27768
Geostationary Operational Environmental Satellite (GOES)-8 mission flight experience
p 2153 N95-27798
ORION: A Supersynchronous Transfer Orbit mission
p 2154 N95-27804
The combined release and radiation effects satellite time history data base system
[AD-A289835] p 2165 N95-28578

GEOTHERMAL ENERGY CONVERSION
Geothermal direct-heat utilization assistance
[DE95-007247] p 2319 N95-27236

GEOTHERMAL ENERGY EXTRACTION
Geothermal direct-heat utilization assistance
[DE95-007247] p 2319 N95-27236

GEOTHERMAL ENERGY UTILIZATION
Geothermal direct-heat utilization assistance
[DE95-007247] p 2319 N95-27236
Geothermal development in Australia
[DE95-007837] p 2325 N95-28058

GEOTHERMAL RESOURCES
Geothermal direct-heat utilization assistance
[DE95-007247] p 2319 N95-27236

GEOTHERMAL TECHNOLOGY
Geothermal direct-heat utilization assistance
[DE95-007247] p 2319 N95-27236
Geothermal development in Australia
[DE95-007837] p 2325 N95-28058

GERMANIUM
Low temperature carrier transport properties in isotopically controlled germanium
[DE95-008489] p 2444 N95-28092
Chemical and electrical properties of cavities in silicon and germanium
[DE95-006812] p 2445 N95-28206
Search for deeply bound pionic atoms with high-purity germanium tagging spectrometer
[DE95-609072] p 2416 N95-28252

GETTERS
Cavity formation and impurity gettering in He-implanted Si
[DE95-007744] p 2444 N95-28127

GIBBS FREE ENERGY
Thermodynamics of electrolyte solutions for use in high energy lithium batteries
[AD-A288897] p 2199 N95-26352

GLASS
Orbital impacts and the Space Shuttle windshield
[NASA-TM-110594] p 2159 N95-26379
Silicate gel dye laser
[AD-D017262] p 2294 N95-26503
Scintillator materials for calorimetry
[DE95-006570] p 2421 N95-27679
Ceramic fiber-reinforced monoclinic celsian phase glass-ceramic matrix composite material
[NASA-CASE-LEW-15714-1] p 2183 N95-27717
Prediction of material strength and fracture of glass using the SPHINX smooth particle hydrodynamics code
[DE95-004869] p 2236 N95-27943
Modification of the optical properties of glass by sequential ion implantation
[DE95-007401] p 2237 N95-28080
Characterization of solid state laser and nonlinear optical materials
[AD-A291684] p 2300 N95-28458
Fellowship in physics
[AD-A291691] p 2446 N95-28522
Contact micromechanics in granular media with clay
[DE95-006566] p 2340 N95-28583
Supercooled liquid dynamics for the charged hard-sphere model
[DE95-609158] p 2241 N95-28609

GLASS FIBERS
Interfacial mobility and its effect on flexural strength and fracture toughness in glass-fiber fabric reinforced epoxy laminates
[AD-A288344] p 2180 N95-26572
Scarf joint technique with cocured and precured patches for composite repair p 2135 N95-27524
Thermal control materials on EOIM-3
p 2242 N95-27639
Design prediction for long term stress rupture service of composite pressure vessels p 2188 N95-28291
Utilization of composite materials by the US Army: A look ahead p 2189 N95-28421

GLASS LASERS
Trident as an ultrahigh irradiance laser
[DE95-006345] p 2297 N95-27850

GLIDERS
Sailplane glide performance and control using fixed and articulating winglets
[NASA-CR-198579] p 2131 N95-27180

GLIDING
Sailplane glide performance and control using fixed and articulating winglets
[NASA-CR-198579] p 2131 N95-27180

GLOBAL POSITIONING SYSTEM
Flight evaluation of GPS/DGPS sensor systems installed in NAL Do228
[NAL-TR-1230] p 2126 N95-26585
Analysis and simulation of narrowband GPS jamming using digital excision temporal filtering
[AD-A289328] p 2127 N95-26898
Flight Mechanics/Estimation Theory Symposium 1995
[NASA-CP-3299] p 2146 N95-27763
Determining GPS average performance metrics
p 2128 N95-27791
A demonstration of unified TDRS/GPS tracking and orbit determination p 2151 N95-27792
GPS as an orbit determination subsystems
p 2152 N95-27793
Operational considerations of using GPS for spacecraft navigation p 2152 N95-27794
The Global Positioning System (GPS) and attitude determination: Applications and activities in the Flight Dynamics Division p 2152 N95-27795

GLOBAL WARMING
Investigation on working out the global regeneration plan
[DE95-759246] p 2329 N95-27938
Research project on CO2-induced climate change
[DE95-008339] p 2330 N95-28084
The importance of propulsion engineers in protecting the global environment p 2170 N95-28295

GLOVES
Gloved operator performance study. The effects of hand wear and elastic resistance of a control during tracking performance
[AD-A289405] p 2360 N95-27099

GLUONS
Physics with relativistic heavy ions: QGP and other delicacies
[DE95-007014] p 2406 N95-27307
The gluon propagator in non-Abelian Weizsaecker-Williams fields
[DE95-006877] p 2449 N95-27547
Recent status in the search for the quark-gluon plasma
[DE95-007036] p 2417 N95-28447

GLYCINE
Growth and characterization of crystals for room temperature I.R. detectors and second harmonic generation devices
[NASA-CR-198598] p 2443 N95-28033

GLYCOLS
Biodegradation of nitrate esters p 2171 N95-28299

GODDARD TRAJECTORY DETERMINATION SYSTEM
Accurate orbit determination strategies for the tracking and data relay satellites p 2147 N95-27768
The transition of GTDS to the Unix workstation environment p 2151 N95-27789

GOES SATELLITES
Flight Mechanics/Estimation Theory Symposium 1995
[NASA-CP-3299] p 2146 N95-27763
Evaluation and modeling of autonomous attitude thrust control for the Geostation Operational Environmental Satellite (GOES)-8 orbit determination
p 2146 N95-27765
Geostationary Operational Environmental Satellite (GOES)-8 mission flight experience
p 2153 N95-27798
Solar-geophysical data number 604, December 1994. Part 1: (Prompt reports). Data for November, October 1994, and late data
[PB95-181848] p 2465 N95-28087

GOGGLES
An image quality analysis of ANVIS-6 night vision goggles
[AD-A289398] p 2359 N95-26883
Evaluation of laser-protective eyewear dyes in UVEX lenses
[AD-A290076] p 2361 N95-28390

GOLD
Indirectly driven targets for ignition
[DE95-006451] p 2430 N95-27327
Evaluation of space environmental effects on metals and optical thin films on EOIM-3 p 2210 N95-27641
Effects of interlayers on the scratch adhesion performance of ultra-thin films of copper and gold on silicon substrates
[DE95-007367] p 2220 N95-28044
Formation of anisotropic Tl-1212, Tl-2212, Tl-1223 and Tl-2223 particles using aerosol flow reacted powders
[DE95-007400] p 2444 N95-28079
Self-assembly of low-dimensional molecular nanoclusters on Au(111) surfaces
[AD-A288936] p 2178 N95-28334

GOLD ALLOYS
Precursor phenomenon of martensitic transformation in Au-49.5at%Cd alloy
[DE95-007698] p 2222 N95-28166

GOODNESS OF FIT
Statistical analysis of tensile mechanical property data of carbon/polyimide composites
[NAL-TR-1238] p 2180 N95-26667

GOVERNMENT PROCUREMENT
Surviving the peace. Lessons learned from the aircraft industry in the 1920s and 1930s
[AD-A288284] p 2117 N95-26455
Report to the Chairman and Ranking Minority Member, Committee on Science, House of Representatives. Weather forecasting: Radar availability requirement not being met
[GAO/AIMD-95-132] p 2342 N95-27912

GOVERNMENT/INDUSTRY RELATIONS
NIST Automated Manufacturing Research Facility (AMRF): March 1987
[NONP-NASA-VT-95-49097] p 2246 N95-27203
Quest for excellence 5
[NONP-NASA-VT-95-49099] p 2451 N95-27205
Malcolm Baldrige National Quality Award winners 1989
[NONP-NASA-VT-95-49119] p 2451 N95-27207
NIST: Information management in the AMRF
[NONP-NASA-VT-95-49120] p 2454 N95-27208
STEP: A futurevision, today
[NONP-NASA-VT-95-49121] p 2451 N95-27209
Collected papers on wind turbine technology
[NASA-CR-195432] p 2321 N95-27970

GRADIENTS
Polarizing matter and antimatter: A new method
[DE95-007109] p 2421 N95-27923

GRAFTING
The 18th Asilomar Conference on Polymeric Materials
[AD-A291721] p 2240 N95-28508

GRAIN BOUNDARIES
Radiation-induced grain boundary segregation in austenitic stainless steels
[DE95-005721] p 2216 N95-27493
Atomistic calculations of hydrogen interactions with Ni3Al grain boundaries and Ni/Ni/Ni3Al interfaces
[DE95-006497] p 2408 N95-27534
Trace elements and the mechanical properties of intermetallic compounds
[DE95-007378] p 2220 N95-28046
Local texture and grain boundary misorientations in high H(C) oxide superconductors
[DE95-007004] p 2447 N95-28606

GRAIN SIZE
Grain size management in repetitive task graphs for multiprocessor computer scheduling
[AD-A288575] p 2377 N95-26551
Solid-state sintering of tungsten heavy alloys
[DE95-007749] p 2222 N95-28130

GRAND UNIFIED THEORY
Bit-string physics: A novel theory of everything
[DE95-005941] p 2449 N95-28137

GRANULAR MATERIALS
Contact micromechanics in granular media with clay
[DE95-006566] p 2340 N95-28583

GRAPHICAL USER INTERFACE
NEXTSTEP: The next step in the right direction? Part 2: Software development with NEXTSTEP
[REPT-94-33-PT-2] p 2450 N95-26803
The transition of GTDS to the Unix workstation environment p 2151 N95-27789
The Sunrise project: An R&D project for a national information infrastructure prototype
[DE95-006340] p 2455 N95-27847

GRAPHITE
Applications of Second Harmonic and Sum Frequency Generation to graphite and silica type interfaces
[AD-A288228] p 2201 N95-26544
Evaluation of composite joints
[AD-A289247] p 2181 N95-26967

GRAPHITE-EPOXY COMPOSITES
Combined investigation of Eddy current and ultrasonic techniques for composite materials NDE
[NASA-TM-110599] p 2306 N95-26778
The collapse of composite cylindrical panels with various thickness using finite element analysis
[AD-A289370] p 2308 N95-26905
An experimental investigation of sandwich flat panels under low velocity impact
[AD-A289420] p 2309 N95-27135
Probabilistic simulation of long term behavior in polymer matrix composites
[NASA-TM-106893] p 2309 N95-27174
Structural modification and repair of C-130 wing structure using bonded composites p 2133 N95-27512
Scarf repairs to graphite/epoxy components
p 2135 N95-27523
Analysis of selected specimens from the STS-46 Energetic Oxygen Interaction with Materials-3 experiment p 2210 N95-27642
Load transfer in the stiffener-to-skin joints of a pressurized fuselage
[NASA-CR-198610] p 2310 N95-27865
Mechanical properties of triaxially braided composites: Experimental and analytical results
p 2189 N95-28423
Investigation of static and cyclic bearing failure mechanisms for GR/EP laminates p 2190 N95-28427
Compressive residual strength of graphite/epoxy laminates after impact p 2191 N95-28431
Effects of floor location on response of composite fuselage frames p 2192 N95-28439
Structural testing of the technology integration box beam p 2194 N95-28467
Effect of low-speed impact damage and damage location on behavior of composite panels p 2197 N95-28481
Compressive strength of damaged and repaired composite plates p 2198 N95-28484
Post impact compressive strength in composites
p 2198 N95-28485
Fundamental concepts in the suppression of delamination buckling by stitching p 2198 N95-28486
NASA-ACEE/Boeing 737 graphite-epoxy horizontal stabilizer service p 2138 N95-28489

GRAPHS (CHARTS)
Naval Aviation System TEAM mapping, charting, and geodesy handbook
[AD-A288590] p 2314 N95-26841
Using the dimension reduction technique to prove that clique trees define facets for the asymmetric traveling salesman polytope
[AD-A289397] p 2389 N95-26882

GRASSLANDS
Measurement and analysis of the surface energy budget for ARM field experiments
[DE95-007646] p 2338 N95-28114

GRAVIMETERS
The installation of and first results from the superconducting gravimeter GWR20 at the Metsahovi Station, Finland
[REPT-95:1] p 2338 N95-27995

GRAVIRECEPTORS
Comparative transduction mechanisms of hair cells in the bullfrog utriculus. 1: Responses to intracellular current p 2350 N95-26731

GRAVITATION
On higher derivative gravity in two dimensions
[DE95-608789] p 2462 N95-27343
General relativity and experiment
[PB95-192894] p 2450 N95-28664

GRAVITATIONAL EFFECTS
Device and method for screening crystallization conditions in solution crystal growth
[NASA-CASE-MFS-28985-1] p 2245 N95-26888
Transient studies of G-induced capillary dryout and rewet p 2281 N95-27351
Photon rockets and gravitational radiation
[PB95-190161] p 2397 N95-28174

GRAVITATIONAL LENSES
CO, HCO(+) and HCN absorption in the gravitational lens candidate B0218+357 at z=0.685
[PB95-185146] p 2461 N95-26522

GRAVITATIONAL WAVES
Photon rockets and gravitational radiation
[PB95-190161] p 2397 N95-28174

GRAVITY WAVES
Meso-beta scale numerical simulation studies of terrain-induced jet streak mass/momentum perturbations
[NASA-CR-197804] p 2335 N95-26592

GRAY SCALE
Grayscale/resolution trade-off for text: Model predictions and psychophysical results for letter confusion and letter discrimination [NASA-CR-197784] p 2369 N95-26930
GRAZING
Projectile image acceleration, neutralization and electron emission during grazing interactions of multicharged ions with Au(110) [DE95-007394] p 2409 N95-27551
GRAZING INCIDENCE
Reflection of neutrons from an optical grating [DE95-007145] p 2411 N95 28004
GREASES
Environmentally Benign Cleaning and Degreasing Technology: JANNAF Safety and Protection Subcommittee and Propellant Development and Characterization Subcommittee Joint Workshop [CPIA-PUBL-611] p 2227 N95-27101
CO2 pellet blast cleaning and degreasing: The true environmentally benign technology p 2229 N95-27109
Aqueous degreasing, precision cleaning, and cleanliness verification p 2231 N95-27121
GREAT PLAINS CORRIDOR (NORTH AMERICA)
Site scientific mission plan for the Southern Great Plains CART site, January-June 1995 [DE95-008393] p 2344 N95-28340
GREEN'S FUNCTIONS
On the azimuthal Fourier components of the Green's function for the Helmholtz equation in three dimensions [AD-A288775] p 2398 N95-26345
Scaling of localization length of a quasi 1D system with longitudinal boundary roughness [DE95-609148] p 2391 N95-27739
A diagram technique for strongly interacting fermion systems. One-and two-band Hubbard models [DE95-609437] p 2410 N95-27881
Scattering by a small object close to an interface. 3. Buried object [PB95-184909] p 2256 N95-28354
Efficient modeling of interconnects and capacitive discontinuities in high-speed digital circuits [NASA-CR-198728] p 2270 N95-28570
GREENHOUSE EFFECT
Measurement of heterogeneous chemical processes relevant to aerosol surfaces and trace gases active in the marine environment [DE95-008337] p 2328 N95-27743
Towards the detection and attribution of an anthropogenic effect on climate [DE95-008589] p 2331 N95-28157
GREENLAND
Tomographic observations of deep convection and the thermal evolution of the Greenland Sea Gyre 1988-1989 [AD-A289104] p 2348 N95-28096
GRID GENERATION (MATHEMATICS)
Adaptive finite element method I: Solution algorithm and computational examples [AD-A288979] p 2389 N95-26609
Supersonic transport grid generation, validation, and optimization [NASA-CR-197752] p 2365 N95-26648
User's and test case manual for FEMATS [NASA-CR-197803] p 2366 N95-26694
The multidimensional Self-Adaptive Grid code, SAGE, version 2 [NASA-TM-110350] p 2367 N95-26726
Numerical simulation of the flow about the F-18 HARV at high angle of attack [NASA-CR-197755] p 2121 N95-26735
Computational support of the laminar flow supersonic wind tunnel, CNSFV code development, Maglev, and grid generation [NASA-CR-197750] p 2143 N95-26775
Unstructured mesh generation and adaptivity [NASA-CR-195069] p 2278 N95-27027
A 3D agglomeration multigrid solver for the Reynolds-averaged Navier-Stokes equations on unstructured meshes [NASA-CR-195073] p 2390 N95-27029
Development of numerical methods for overset grids with applications for the integrated Space Shuttle vehicle [NASA-CR-197759] p 2160 N95-27154
Global flowfield about the V-22 Tiltrotor Aircraft [NASA-CR-198603] p 2122 N95-27248
Calculation of three-dimensional (3-D) internal flow by means of the velocity-vorticity formulation on a staggered grid [NASA-TM-110352] p 2122 N95-27258
Error analysis of the quartic nodal expansion method for slab geometry [DE95-007373] p 2412 N95-28045
A new algorithm for generating highly accurate benchmark solutions to transport test problems [DE95-007397] p 2373 N95-28047
TranAir: A full-potential, solution-adaptive, rectangular grid code for predicting subsonic, transonic, and supersonic flows about arbitrary configurations. Theory document [NASA-CR-4348] p 2123 N95-28265
Weighting the recursive spectral bisection algorithm for unstructured grids [DE95-008080] p 2373 N95-28521
Radon transform and its applications in gridding airborne geophysical survey data [PB95-195533] p 2315 N95-28643
GROOVES
The effects of transverse vibration on the performance of an axial groove wick heat pipe [AD-A289349] p 2278 N95-27065
Features and applications of the Groove Analysis Program (GAP) p 2281 N95-27349
Transient studies of G-induced capillary dryout and rewet p 2281 N95-27351
GROUND BASED CONTROL
Air traffic operational inventory CY 1994 [AD-A288281] p 2126 N95-26454
Limits to ground control in autonomous spacecraft p 2383 N95-27381
Optimal attitude maneuver execution for the Advanced Composition Explorer (ACE) mission p 2149 N95-27778
GROUND EFFECT (AERODYNAMICS)
Experimental investigation of static and dynamic ground effect on HOPE ALFLEX vehicle [NAL-TR-1236] p 2128 N95-26525
GROUND EFFECT MACHINES
Air cushioned landing craft (LCAC) based ship to shore movement simulation: A decision aid for the amphibious commander. A (SMMAT) application [AD-A289635] p 2246 N95-26722
GROUND STATE
Hydrogen-like atom in laser field: Invariant atomic parameters in the ground state [DE95-609036] p 2411 N95-27930
GROUND STATIONS
A demonstration of unified TDRS/GPS tracking and orbit determination p 2151 N95-27792
GROUND SUPPORT EQUIPMENT
Aqueous degreasing, precision cleaning, and cleanliness verification p 2231 N95-27121
The 29th Aerospace Mechanisms Symposium [NASA-CP-3293] p 2154 N95-27260
GROUND SUPPORT SYSTEMS
Development and implementation of a system safety program for the space launch complex 3 east (SLC-3E) ground support system project to support Atlas 2 family of space launch vehicles p 2174 N95-28316
GROUND TESTS
The 1994 27th Annual NASA Aerospace Battery Workshop [NASA-CP-3292] p 2317 N95-26785
A new technique for ground simulation of hypervelocity debris p 2154 N95-27671
GROUND WATER
Combined use of ground water circulation (UVB) technology and in situ bioreactors for enhanced bioremediation of subsurface contamination p 2230 N95-27118
Biodegradation of nitrate esters p 2171 N95-28299
GROUND WIND
Indexing meso-beta surface wind site representative [AD-A288501] p 2341 N95-26650
GROUP DYNAMICS
Analysis of group performance in visual signal detection [AD-A289561] p 2355 N95-26683
GROUP THEORY
Gromov-Lawson-Rosenberg conjecture for groups with periodic cohomology [PB95-185203] p 2389 N95-26915
Trace anomalies and cocycles of Weyl and diffeomorphism groups [DE95-608793] p 2397 N95-27344
Realization of vector fields for quantum groups as pseudodifferential operators on quantum spaces [DE95-008485] p 2449 N95-27877
A case study in automated theorem proving: A difficult problem about commutators [DE95-008392] p 2392 N95-28173
GROWTH
Modeling the growth of electronic materials [AD-A289137] p 2438 N95-26997
GUN LAUNCHERS
A high velocity electromagnetic mass launcher having an ablation resistant insulator [AD-A288231] p 2154 N95-26524
GUNS (ORDNANCE)
Stress analysis and failure of an internally pressurized composite-jacketed steel cylinder p 2186 N95-28280
GUST LOADS
Calculation of design load for the MOD-5A 7.3 mW wind turbine system p 2312 N95-27982
Comparison of measured and calculated dynamic loads for the Mod-2 2.5 mW wind turbine system p 2312 N95-27983
GUSTS
A model of rotationally-sampled wind turbulence for predicting fatigue loads in wind turbines p 2312 N95-27972
Calculation of design load for the MOD-5A 7.3 mW wind turbine system p 2312 N95-27982
GYRES
Tomographic observations of deep convection and the thermal evolution of the Greenland Sea Gyre 1988-1989 [AD-A289104] p 2348 N95-28096

H

H LINES
Solar UV flux measurements from the SBUV2 monitor on the NOAA9 satellite. Part 1: Mg II h and k line core-to-wing ratios for 1986-1988 [PB95-181962] p 2464 N95-28007
HADRONS
The photon structure function F2 in QCD with nonlocal vacuum quark condensates [DE95-608829] p 2406 N95-27314
Measurement of R in e(+)e(-)-annihilation at center-of-mass energies between 7.2 and 10.34 GeV [DE95-610303] p 2407 N95-27408
Couplings of heavy hadrons with soft pions from QCD sum rules [DE95-610349] p 2407 N95-27410
Polarizing matter and antimatter: A new method [DE95-007109] p 2421 N95-27923
Beam-beam interaction working group summary [DE95-007824] p 2422 N95-28123
Measurement of alpha(s) in e(+)e(-) annihilation at E(cm) = 29 GeV [DE95-006486] p 2417 N95-28594
HAIR
Comparative Transduction Mechanisms of Vestibular Otolith Hair Cells [NASA-CR-197980] p 2349 N95-26727
Regional differences in lectin binding patterns of vestibular hair cells p 2349 N95-26728
Hair cell regeneration in the bullfrog vestibular otolith organs following aminoglycoside toxicity p 2349 N95-26729
Peripheral innervation patterns of vestibular nerve afferents in the bullfrog utriculus p 2349 N95-26730
Comparative transduction mechanisms of hair cells in the bullfrog utriculus. 1: Responses to intracellular current p 2350 N95-26731
Comparative transduction mechanisms of hair cells in the bullfrog uticulus. 2: Sensitivity and response dynamics to hair bundle displacement p 2350 N95-26732
HALIDES
Poly(N-arylenbenzimidazoles) via aromatic nucleophilic displacement [NASA-CASE-LAR-14939-1] p 2179 N95-28360
HALL EFFECT
Hall effect and resistivity in the normal state of high-T(sub c) cuprates in the electron-fracton model [DE95-610612] p 2439 N95-27413
HALLEY'S COMET
Search for molecular absorptions with the Fourier Transform Spectrometer [NASA-CR-198648] p 2462 N95-28222
HALOGENS
Chemical physics of uniform cyclic etching [AD-A288975] p 2404 N95-26574
HAMILTONIAN FUNCTIONS
DNA denaturation through a model of the partition points on a one-dimensional lattice [DE95-607909] p 2439 N95-27201
Wigner quantum oscillators. OSP (3/2) oscillators [DE95-608756] p 2448 N95-27334
Numerical study of the singlet-triplet model for cuprate superconductors [DE95-609438] p 2440 N95-27712
Scaling of localization length of a quasi 1D system with longitudinal boundary roughness [DE95-609148] p 2391 N95-27739
Multifractal character of the electronic states in disordered two-dimensional systems [DE95-609153] p 2443 N95-28016
Aeroelasticity and structural optimization of composite helicopter rotor blades with swept tips [NASA-CR-4665] p 2136 N95-28262
Korteweg-de Vries equation: Convergent Birkhoff normal form [PB95-196275] p 2393 N95-28611

HANDBOOKS
Naval Aviation System TEAM mapping, charting, and geodesy handbook
[AD-A288590] p 2314 N95-26841
Long Duration Exposure Facility (LDEF) space optics handbook p 2428 N95-27654
Severe weather guide mediterranean
[AD-A289829] p 2344 N95-28577

HARDNESS
New radiation stable and long-lived plastic scintillators
[DE95-608622] p 2233 N95-27163

HARDWARE
Pulse Code Modulation (PCM) encoder handbook for Aydin Vector MMP-900 series system
[NASA-RP-1365] p 2255 N95-27435
Building an electronic book on the Internet. CSEP:An interdisciplinary syllabus for teaching computational science at the graduate level
[DE95-006526] p 2375 N95-28632

HARDWARE DESCRIPTION LANGUAGES
Accelerating conservative parallel simulation of VHDL circuits
[AD-A289317] p 2264 N95-27294

HARMONIC GENERATIONS
Applications of Second Harmonic and Sum Frequency Generation to graphite and silica type interfaces
[AD-A288228] p 2201 N95-26544
A new growth technology for highly non-linear, optical quality organic films: Organic vapor phase deposition
[AD-A289006] p 2178 N95-26567
Nonlinear optical microscopy for imaging thin films and surfaces
[DE95-007872] p 2426 N95-28018
Growth and characterization of crystals for room temperature I.R. detectors and second harmonic generation devices
[NASA-CR-198598] p 2443 N95-28033
Vibrational spectroscopy of water interfaces
[DE95-006592] p 2209 N95-28218
Nonlinear optical studies of surfaces
[DE95-006574] p 2428 N95-28557

HARMONIC OSCILLATORS
The canonical q-transformations with two q-para-Bose oscillators
[DE95-608781] p 2396 N95-27341

HARMONICS
Field quality improvements in superconducting magnets for RHIC
[DE95-006096] p 2269 N95-28339

HARNESSES
Partial discharge testing of high voltage wiring harness for airborne displays
[AD-A289150] p 2138 N95-27003

HARRIER AIRCRAFT
Navy composite maintenance and repair experience
p 2193 N95-28446

HARTREE APPROXIMATION
Analytic formulae for the Hartree-Fock order parameter at arbitrary p/q filling factors for the 2DEG in a magnetic field
[DE95-607805] p 2448 N95-26603

HASTELLOY (TRADEMARK)
Materials considerations for molten salt accelerator-based plutonium conversion systems
[DE95-006743] p 2217 N95-27544

HAZARDS
Space Debris Research Phase One Program: Abstracts from published papers (1990-1993)
[AD-A289504] p 2162 N95-26850
Measurements of the volatilities of electrolytes: Application to water/steam cycles
[DE95-007103] p 2204 N95-27451
The effect of aviation fuels containing low amounts of static dissipater additive on electrostatic charge generation
[AD-A280075] p 2243 N95-28152
Hazards analysis of an integral class 1.1/1.3 rocket motor demilitarization and ingredient recovery system using ammonia p 2174 N95-28315
The protection of electro-explosive devices (EEDs) and electronics from electrostatic discharge (ESD) hazards
[DSTO-TR-0100] p 2258 N95-28568

HEAD MOVEMENT
Multiple model adaptive estimation and head motion tracking in a virtual environment: An engineering approach
[AD-A289299] p 2359 N95-27046

HEAD-UP DISPLAYS
Simulation model of the integrated flight/propulsion control system, displays, and propulsion system for ASTOVL lift-fan aircraft
[NASA-TM-108866] p 2139 N95-26412

HEALTH
Implementing an integrated standards-based management system to ensure compliance at Los Alamos National Laboratory
[DE95-007873] p 2451 N95-28025
An introductory guide to uncertainty analysis in environmental and health risk assessment. Environmental Restoration Program
[DE95-008097] p 2354 N95-28136

HEART
Progress in incompressible Navier-Stokes computations for propulsion flows and its dual-use applications
[NASA-CR-197746] p 2275 N95-26766
A study of heart rate and heart rate variability during rapid decompression to 50,000 ft
[AD-A291598] p 2355 N95-28561

HEART RATE
A study of heart rate and heart rate variability during rapid decompression to 50,000 ft
[AD-A291598] p 2355 N95-28561

HEAT ENGINES
Analytical and experimental evaluation of joining silicon carbide to silicon carbide and silicon nitride to silicon nitride for advanced heat engine applications, phase 2
[DE95-005761] p 2303 N95-27947

HEAT EXCHANGERS
A probabilistic model of a porous heat exchanger
p 2282 N95-27359
Heat pipe cooled reactors for multi-kilowatt space power supplies
[DE95-005211] p 2420 N95-27425
Task 4 supporting technology. Densification requirements definition and test objectives. Propellant densification requirements definition
[NASA-CR-198629] p 2450 N95-28260
Coatings of non-oxide ceramics for improved corrosion resistance in high temperature coal combustion
[DE95-006932] p 2241 N95-28604
Cryogenic temperature control and tension/compression attachment stage for an electron microscope
[AD-D017390] p 2294 N95-28612
Mechanism of deposit formation on fuel-wetted hot metal surfaces
[AD-A289847] p 2210 N95-28621

HEAT FLUX
Fluxes across the west coast resolved by Picket Fence observations during stormfest
[AD-A288511] p 2341 N95-26653
Radiation production from stagnating compact toroids employing a nonequilibrium radiation diffusion model
[AD-A289602] p 2429 N95-26720
RTE: A computer code for Rocket Thermal Evaluation
p 2177 N95-27355
Neutral gas compression in the Alcator C-Mod divertor. Experimental observations
[DE95-007762] p 2432 N95-27688
Measurement and analysis of the surface energy budget for ARM field experiments
[DE95-007646] p 2338 N95-28114

HEAT MEASUREMENT
Fractionation studies of polyethylene using DSC-technique
[PB95-185252] p 2200 N95-26540
Scintillator materials for calorimetry
[DE95-008570] p 2421 N95-27679

HEAT PIPES
Experimental investigation of the effects of relative physical orientation between evaporator and condenser for a loop heat pipe
[AD-A289248] p 2277 N95-26968
The effects of transverse vibration on the performance of an axial groove wick heat pipe
[AD-A289349] p 2278 N95-27065
Features and applications of the Groove Analysis Program (GAP) p 2281 N95-27349
Composite heat pipe development status: Development of lightweight prototype carbon-carbon heat pipe with integral fins and metal foil liner
[NASA-TM-106909] p 2283 N95-27369
Heat pipe cooled reactors for multi-kilowatt space power supplies
[DE95-005211] p 2420 N95-27425

HEAT PUMPS
Mathematical modelling of the thermodynamic properties of coolants and working media of heat pumps
[IFTR-6/1994] p 2447 N95-26510

HEAT RESISTANT ALLOYS
Atomistic calculations of hydrogen interactions with Ni3Al grain boundaries and Ni/Ni/Ni3Al interfaces
[DE95-006497] p 2408 N95-27534
A new Cu-8 Cr-4 Nb alloy for high temperature applications
[NASA-TM-106910] p 2218 N95-27728

HEAT SHIELDING
Engineering calculations associated with the ablative thermal protective structures of returnable satellites
[AD-A289593] p 2162 N95-26715

HEAT TRANSFER
WINCLR: A computer code for heat transfer and clearance calculation in a compressor
[NASA-CR-195436] p 2117 N95-26363
Progress in incompressible Navier-Stokes computations for propulsion flows and its dual-use applications
[NASA-CR-197746] p 2275 N95-26766
Experimental investigation of the effects of relative physical orientation between evaporator and condenser for a loop heat pipe
[AD-A289248] p 2277 N95-26968
A finite element based technique for simulation helix TWT interaction circuit thermal behavior
[AD-A289552] p 2262 N95-27152
Effects of blowing ratio on heat transfer to the throat region of a porous-walled nozzle
[AD-A289459] p 2167 N95-27153
Computation of three-dimensional mixed convective boundary layer flow p 2280 N95-27347
Features and applications of the Groove Analysis Program (GAP) p 2281 N95-27349
RTE: A computer code for Rocket Thermal Evaluation
p 2177 N95-27355
Numerical solution of fluid flow and heat tranfer problems with surface radiation p 2282 N95-27357
A probabilistic model of a porous heat exchanger
p 2282 N95-27359
Transitional flow in thin tubes for space station freedom radiator p 2282 N95-27360
Heat pipe cooled reactors for multi-kilowatt space power supplies
[DE95-005211] p 2420 N95-27425
Advances in welding science: A perspective
[DE95-006745] p 2302 N95-27545
Experience with k-epsilon turbulence models for heat transfer computations in rotating p 2285 N95-27887
Cooling apparatus and couplings therefor
[NASA-CASE-ARC-11921-1] p 2304 N95-28256
Radiant exchange considerations in design and scaleup of photocatalytic reactors for purification of nitroglycerine-contaminated air p 2171 N95-28300
Thermal analysis of PANSAT batteries and Electrical Power Subsystem
[AD-A290013] p 2269 N95-28388

HEAT TRANSMISSION
Phase stability and elasticity of C15 transition-metal intermetallic compounds
[DE95-007876] p 2219 N95-28026
Thermal analysis of PANSAT batteries and Electrical Power Subsystem
[AD-A290013] p 2269 N95-28388

HEAT TREATMENT
The development of mechanical strength in a ceramic material during firing
[DE95-004925] p 2234 N95-27476

HEATING
Composite prepreg application device
[NASA-CASE-LAR-15259-1] p 2182 N95-27192
Development of an optical trap as an ultra-sensitive analytical tool
[DE95-007843] p 2426 N95-28022
Engineering design of the ITER RF systems
[DE95-008064] p 2434 N95-28140

HEAVY IONS
Investigation of radiation resistance of transistors and integrated circuits using the heavy ions beam of energy higher than 1 MeV/amu and fast neutrons
[DE95-608624] p 2261 N95-27024
Physics with relativistic heavy ions: QGP and other delicacies
[DE95-007014] p 2406 N95-27307
Abrasion-ablation model for neutron production in heavy ion reactions
[NASA-TM-4656] p 2420 N95-27372
Aspects of strangeness
[DE95-008314] p 2414 N95-28169
Aspects of strange matter
[DE95-008316] p 2414 N95-28170
Mutagenesis in human cells with accelerated H and Fe ions
[NASA-CR-198599] p 2351 N95-28177
On ionic charge distributions of heavy evaporation residues passing through a carbon foil
[DE94-629016] p 2414 N95-28184
The real structure of columnar pinning centers in heavy-ion-irradiated cuprate superconductors
[DE95-003948] p 2445 N95-28186

HEAVY WATER
Selected bibliography on heavy water, tritiated water and hydrogen isotopes (1981-1992)
[DE95-608331] p 2405 N95-27159

HELICOPTER CONTROL
An investigation of the effects of pitch-roll (de)coupling on helicopter handling qualities
[NASA-TM-110349] p 2141 N95-26773
HELICOPTER DESIGN
Construction and wind tunnel test of a 1/12th scale helicopter model
[AD-A288487] p 2123 N95-28331
Modeling helicopter blade dynamics using a modified Myklestad-Prohl transfer matrix method
[AD-A289891] p 2136 N95-28626
HELICOPTER PERFORMANCE
An investigation of the effects of pitch-roll (de)coupling on helicopter handling qualities
[NASA-TM-110349] p 2141 N95-26773
HELICOPTER WAKES
An experimental investigation of helicopter downwash and tailboom interaction at the Wichita State University 7x10 foot wind tunnel p 2120 N95-26955
HELICOPTERS
Aircraft noise prediction program theoretical manual: Rotorcraft System Noise Prediction System (ROTONET), part 4
[NASA-TM-83199-PT-4] p 2400 N95-26392
An investigation of the effects of pitch-roll (de)coupling on helicopter handling qualities
[NASA-TM-110349] p 2141 N95-26773
Flow structure generated by perpendicular blade vortex interaction and implications for helicopter noise predictions
[NASA-CR-198590] p 2123 N95-28193
Aeroelasticity and structural optimization of composite helicopter rotor blades with swept tips
[NASA-CR-4665] p 2136 N95-28262
Construction and wind tunnel test of a 1/12th scale helicopter model
[AD-A288487] p 2123 N95-28331
Modeling helicopter blade dynamics using a modified Myklestad-Prohl transfer matrix method
[AD-A289891] p 2136 N95-28626
Rotorcraft crashworthy airframe and fuel system technology development program
[AD-A289986] p 2126 N95-28630
HELIUM
Measurement of N2(+) mobility He via Fourier transform emission spectroscopy
[AD-A289266] p 2404 N95-26979
Cryogenic and simulated fuel jet breakup in argon, helium and nitrogen gas flows
[NASA-TM-106923] p 2291 N95-27030
Effects of helium pre-implantation on the microstructure and mechanical properties of irradiated 316 stainless steel
[DE95-007162] p 2214 N95-27086
Diagnostic system Cryo-D for the determination of parameters of vapor-liquid currents of the coolant
[DE95-608775] p 2280 N95-27338
Comparison of the calculated and measured stability of a NbTi cable-in-conduit conductor
[DE95-007964] p 2265 N95-27693
The surface of liquid He-4 at nonzero temperatures
[DE95-607841] p 2207 N95-27880
Divertor research on the DIII-D tokamak
[DE95-003942] p 2434 N95-28185
HELIUM HYDROGEN ATMOSPHERES
Theoretical studies of interstellar processes
[NASA-CR-198647] p 2462 N95-28216
HELIUM IONS
Cavity formation and impurity gettering in He-implanted Si
[DE95-007744] p 2444 N95-28127
Theoretical studies of interstellar processes
[NASA-CR-198647] p 2462 N95-28216
HELIUM ISOTOPES
Search for deeply bound pionic atoms with high-purity germanium tagging spectrometer
[DE95-609072] p 2416 N95-28252
HELIUM-NEON LASERS
Flat panel planar optic display
[DE95-007686] p 2426 N95-28196
HELMET MOUNTED DISPLAYS
Development of injury preventing helmet servo-support system for high performance aircraft
[AD-A289547] p 2359 N95-26755
Partial discharge testing of high voltage wiring harness for airborne displays
[AD-A289150] p 2138 N95-27003
HELMETS
Development of injury preventing helmet servo-support system for high performance aircraft
[AD-A289547] p 2359 N95-26755
HELMHOLTZ VORTICITY EQUATION
On the azimuthal Fourier components of the Green's function for the Helmholtz equation in three dimensions
[AD-A288775] p 2398 N95-26345
HEMOGLOBIN
Mechanisms of hypertension after cross-linked hemoglobin blood-substitute transfusion
[AD-A289558] p 2352 N95-26680
Acute and subacute toxicity of ammonium dinitramide (ADN) p 2175 N95-28318
HERMITIAN POLYNOMIAL
The gluon propagator in non-Abelian Weizsaecker-Williams fields
[DE95-006877] p 2449 N95-27547
HETEROGENEITY
Charge distribution analysis of catalysts under simulated reaction conditions
[DE95-006943] p 2204 N95-27549
Synthesis and properties of lanthanide-exchanged Preyssler's heteropolyanions
[DE95-007136] p 2238 N95-28235
The effect of material heterogeneity in curved composite beams for use in aircraft structures
p 2190 N95-28426
Ultrasonic studies of liquid/solid seimoacoustic wave phenomena
[AD-A289644] p 2402 N95-28622
HETEROJUNCTION DEVICES
Atomic layer epitaxy of group 4 materials: Surface processes, thin films, devices and their characterization
[AD-A289092] p 2446 N95-28327
HEURISTIC METHODS
Grain size management in repetitive task graphs for multiprocessor computer scheduling
[AD-A288575] p 2377 N95-26551
Accelerating conservative parallel simulation of VHDL circuits
[AD-A289317] p 2264 N95-27294
A linguistic geometry for 3D strategic planning
p 2386 N95-27397
A spectral algorithm for the seriation problem
[DE95-004775] p 2372 N95-27436
An automated cost uncertainty program
[AD-A288747] p 2374 N95-28588
HIERARCHIES
A rule-based shell to hierarchically organize HST observations p 2384 N95-27384
Generalized CNF satisfiability, local reductions and complexity of succinctly specified problems
[DE95-006343] p 2372 N95-27849
HIGGS BOSONS
Signatures of Higgs-Triplet representations at TeV-e(+)e(-) colliders
[DE95-007201] p 2419 N95-27089
HIGH ALTITUDE
Design of a high altitude long endurance aircraft with manufacturing considerations p 2119 N95-26947
Propulsion system assessment for very high UAV under ERAST
[NASA-CR-195469] p 2140 N95-27866
HIGH CURRENT
Electrical performance characterisation of single-shot switches in high speed, high voltage and high current applications
[DSTO-RR-0010] p 2259 N95-26425
Evaluation of current drive requirements and operating characteristics of a high bootstrap fraction advanced tokamak reactor
[DE95-007041] p 2430 N95-27308
Characterization and control of wafer charging effects during high-current ion implantation
[DE95-006587] p 2440 N95-27471
Comparison of the calculated and measured stability of a NbTi cable-in-conduit conductor
[DE95-007964] p 2265 N95-27693
HIGH DEFINITION TELEVISION
An acoustic charge transport imager for high definition television applications
[NASA-CR-197841] p 2249 N95-26708
HIGH ELECTRON MOBILITY TRANSISTORS
Quasi-optical millimeter wave power combining
[AD-A291767] p 2270 N95-28529
HIGH ENERGY ELECTRONS
High energy electron beams for ceramic joining
[DE95-006316] p 2420 N95-27480
Relativistic electrons in the outer-zone: An 11 year cycle, their relation to the solar wind
[DE95-007882] p 2338 N95-28061
HIGH ENERGY INTERACTIONS
Addendum to the 1993 European school of high-energy physics
[DE95-610313] p 2419 N95-27321
Scintillator materials for calorimetry
[DE95-006570] p 2421 N95-27679
The 1993 European school of high-energy physis
[DE95-610196] p 2421 N95-28040
The 132 nsec bunch spacing in the Tevatron proton-antiproton collider
[DE95-005750] p 2422 N95-28346
B-Physics results from D0
[DE95-005126] p 2417 N95-28495
Beam instability studies for the SSC
[DE95-008024] p 2423 N95-28551
HIGH FREQUENCIES
Design and development of a test rig for the high frequency testing of rolling sleeve airsprings
[DSTO-TN-0001] p 2142 N95-26378
Evaluation of the FMICW waveform in HF surface radar applications
[AD-A288245] p 2249 N95-26545
Com(sup 3): A composite-compatible component coding system
[BBC-RD-1994/17] p 2249 N95-26670
HIGH GAIN
OBIC analysis of stressed, thermally-isolated polysilicon resistors
[DE95-008511] p 2268 N95-28201
HIGH LEVEL LANGUAGES
Software technology for adaptable, reliable systems (STARS). AdaWise user's manual
[AD-A289655] p 2375 N95-28635
HIGH POLYMERS
JTEC monograph on biodegradable polymers and plastics in Japan: Research, development, and applications
[NASA-CR-198562] p 2235 N95-27694
HIGH POWER LASERS
Trident as an ultrahigh irradiance laser
[DE95-006345] p 2297 N95-27850
Laboratory high-energy astrophysics on lasers
[DE95-008062] p 2462 N95-28013
High power free-electron laser concepts and problems
[DE95-007841] p 2298 N95-28059
Thermally-induced unsymmetric optical distortion of output window of high-power CO2 laser
[AD-A289604] p 2300 N95-28650
HIGH PRESSURE
High pressure Earth storable rocket technology program: Basic program
[NASA-CR-195449] p 2166 N95-26390
Extended equation-of-state for dichlorodifluoromethane (CCl2F2)
[AD-A288885] p 2177 N95-26434
High pressure conductivity study of template synthesized polypyrrole: Observation of a crossover from three to one dimensional variable range hopping
[AD-A288367] p 2224 N95-26470
An investigation of the AFIT 2-inch shock tube as a flow source for supersonic testing
[AD-A289246] p 2143 N95-26966
Sceening, down selection, and implementation of environmentally compliant cleaning and insulation bonding for MNASA p 2165 N95-27124
The application of waterjets for cleaning
p 2233 N95-27130
NASA Lewis Research Center's combustor test facilities and capabilities
[NASA-TM-106903] p 2143 N95-27176
Neutral gas compression in the Alcator C-Mod divertor. Experimental observations
[DE95-007762] p 2432 N95-27688
High pressure optical studies of semiconductors and heterostructures
[DE95-007119] p 2410 N95-27927
Survey on researches related to ocean disposal of carbon dioxide
[DE95-759247] p 2329 N95-27939
Electrical conductivity measurements of aqueous electrolyte solutions at high temperatures and high pressures
[DE95-006748] p 2208 N95-27956
The demilitarization of class 1.1 rocket motors using high pressure waterjets p 2176 N95-28322
Apparatus for testing high pressure injector elements
[NASA-CASE-MFS-28773-1] p 2304 N95-28347
HIGH RESOLUTION
The ambiguity function of the stepped frequency radar
[AD-A289533] p 2251 N95-26871
Classification of ultra high range resolution radar using decision boundary analysis
[AD-A289378] p 2251 N95-26877
The second coming of cold dark matter?
[DE95-005156] p 2462 N95-27445
Crystal and magnetic structure of stoichiometric YFe2O4
[DE95-006627] p 2440 N95-27487
Parallel plasma fluid turbulence calculations
[DE95-006741] p 2431 N95-27537
Automated integration of genomic physical mapping data via parallel simulated annealing
[DE95-008057] p 2351 N95-27725
Studies of planetary scale waves and instabilities in support of the geophysical fluid flow cell experiment on USML-2
[NASA-CR-198646] p 2463 N95-27916

Analytical electron microscopy of nanometer-sized particles
[AD-A289124] p 2413 N95-28101
A genuinely multidimensional upwind scheme and efficient multigrid solver for the compressible Euler equations
[NASA-CR-195000] p 2288 N95-28571

HIGH REYNOLDS NUMBER
Analysis of hypersonic boundary layer second mode instability over a 7 deg cone
[AD-A289471] p 2276 N95-26819
Comparative wind tunnel test at high Reynolds numbers of NACA 64 621 airfoils with two aileron configurations
p 2124 N95-27977

HIGH SPEED
Electrical performance characterisation of single-shot switches in high speed, high voltage and high current applications
[DSTO-RR-0010] p 2259 N95-26425
Characterization of optical polymers for multi-layered electro-optic devices
[AD-A289255] p 2227 N95-26973
Application of CFD to the analysis and design of high-speed inlets
[NASA-CR-198574] p 2279 N95-27240
Overview of turbulence model development and applications at Rocketdyne p 2286 N95-27891
The effects of processing variables on reaction synthesis of Fe-Al alloys
[DE95-007405] p 2221 N95-28082
Recent high-speed ballistics experiments at ORNL
[DE95-006534] p 2422 N95-28205
Structure of high-speed sprays
[AD-A291696] p 2288 N95-28523

HIGH STRENGTH
The development of mechanical strength in a ceramic material during firing
[DE95-004925] p 2234 N95-27476
Repairs of CFC primary structures
p 2135 N95-27527
Modeling precipitation from concentrated solutions with the EQ3/6 chemical speciation codes
[DE95-006264] p 2204 N95-27556
A new Cu-8 Cr-4 Nb alloy for high temperature applications
[NASA-TM-106910] p 2218 N95-27728

HIGH STRENGTH ALLOYS
Lattice parameters and Debye-Waller factors of gamma-TiAl alloys
[AD-A288843] p 2213 N95-26681
Environmentally assisted cracking of high strength beta titanium alloys
[AD-A289156] p 2213 N95-27032

HIGH STRENGTH STEELS
Determination of the cyclical properties of 18G2A steel on the basis of skeleton curves for a planar stress state
[IFTR-32/1994] p 2211 N95-26359
Non-metallic oxide inclusion formation in C-Mnlow alloy steel welds
[DE94-019160] p 2215 N95-27319

HIGH TEMPERATURE
International Space Station Alpha trace contaminant control subassembly life test report
[NASA-TM-108488] p 2358 N95-26364
Extended equation-of-state for dichlorodifluoromethane (CCl2F2)
[AD-A288885] p 2177 N95-26434
High-rate/high-temperature capability of a single-layer zicar-separator nickel-hydrogen cell
p 2272 N95-26788
Fatigue behavior of a cross-ply metal matrix composite at elevated temperature under strain controlled mode
[AD-A289425] p 2181 N95-26865
Fatigue behavior of a cross-ply ceramic matrix composite at elevated temperature under tension-tension loading
[AD-A289250] p 2182 N95-26969
Alternative cleaning solvents and lubricants at the Air Force PJKS facility p 2228 N95-27108
Heat pipe cooled reactors for multi-kilowatt space power supplies
[DE95-005211] p 2420 N95-27425
Measurements of the volatilities of electrolytes: Application to water/steam cycles
[DE95-007103] p 2204 N95-27451
Crystal structure, short-range oxygen defects, and water adsorption in La- and Nd-modified ZrO2
[DE95-007134] p 2439 N95-27452
High energy electron beams for ceramic joining
[DE95-006316] p 2420 N95-27480
Materials considerations for molten salt accelerator-based plutonium conversion systems
[DE95-006743] p 2217 N95-27544
Thermodynamics of aqueous electrolytes at high temperatures by the isopiestic technique
[DE95-006747] p 2449 N95-27546
Inflight resistance measurement on high-T(sub c) superconducting thin films exposed to orbital atomic oxygen on CONCAP-2 (STS-46) p 2272 N95-27635
Analytical and experimental evaluation of joining silicon carbide to silicon carbide and silicon nitride to silicon nitride for advanced heat engine applications, phase 2
[DE95-005761] p 2303 N95-27947
Electrical conductivity measurements of aqueous electrolyte solutions at high temperatures and high pressures
[DE95-006748] p 2208 N95-27956
High-temperature deformation of ZrO2-Al2O3/SiC whisker composites fabricated by two techniques
[DE95-008273] p 2183 N95-28069
High temperature Hexoloy(trademark) SX silicon carbide
[DE95-007290] p 2221 N95-28075
Solid state sintering of silicon nitride ARL-CR-114
[DE95-007291] p 2443 N95-28076
Lattice calculation for lepton capture from vacuum-pair production in relativistic heavy-ion collisions
[DE95-007392] p 2413 N95-28077
Review and analysis of the 1980-1989 biomass thermochemical conversion program
[DE95-000287] p 2325 N95-28394
Development of low-expansion ceramics with strength retention to elevated temperatures
[DE95-005760] p 2239 N95-28397
TV-holography at high temperatures: In situ observations of the oxidation of advanced materials
[PB95-195343] p 2294 N95-28651

HIGH TEMPERATURE ENVIRONMENTS
Effects of high-temperature environments on flaw generation and fracture behavior of SiC/SiC composites
[DE95-008270] p 2183 N95-28068
Hydrothermal oxidation of solid rocket propellant and other department of defense hazardous wastes
p 2177 N95-28325

HIGH TEMPERATURE GASES
Algorithm to describe the spread of a wall fire under a ceiling
[PB95-182259] p 2247 N95-28008

HIGH TEMPERATURE PLASMAS
Application of modern diagnostic methods to environmental improvement
[DE95-005797] p 2330 N95-28119

HIGH TEMPERATURE RESEARCH
High temperature oxidation of nickel concentrates
[PB95-195566] p 2224 N95-28644

HIGH TEMPERATURE SUPERCONDUCTORS
Investigations of the hyperfine interactions in copper-oxide perovskites using Eu-151 and Fe-57 Moessbauer spectroscopy
[PB95-185138] p 2437 N95-26513
Hall effect and resistivity in the normal state of high-T(sub c) cuprates in the electron-fracton model
[DE95-610612] p 2439 N95-27413
Review of activities in USA on HTS materials
[DE95-006404] p 2234 N95-27468
Numerical study of the singlet-triplet model for cuprate superconductors
[DE95-609438] p 2440 N95-27712
A diagram technique for strongly interacting fermion systems. One-and two-band Hubbard models
[DE95-609437] p 2410 N95-27881
Investigation of high-temperature superconducting flywheel energy storage devices
[DE95-759242] p 2320 N95-27936
The oxidation state and magnetic behaviour of Tb in high-(Tc) related materials
[DE95-007129] p 2219 N95-27966
Stability measurements on a 1-T high temperature superconducting magnet
[DE95-007411] p 2267 N95-28048
Aspects of macroscopic phase separation and interstitial oxygen ordering in oxygen doped La2CuO(4+delta)
[DE95-007864] p 2443 N95-28060
Local texture and grain boundary misorientations in high H(C) oxide superconductors
[DE95-007004] p 2447 N95-28606

HIGH TEMPERATURE TESTS
Calorimetric evaluation of commercial Ni-MH cells and charges p 2272 N95-26790
High temperature kinetic study of the reactions H + O2 = OH + O and O + H2 = OH + H in H2/O2 system by shock tube-laser absorption spectroscopy
[NASA-CR-195473] p 2206 N95-27695
Task 4 supporting technology. Part 2: Detailed test plan for thermal seals. Thermal seals evaluation, improvement and test. CAN8-1, Reusable Launch Vehicle (RLV), advanced technology demonstrator: X-33. Leading edge and seals thermal protection system technology demonstration
[NASA-CR-198628] p 2304 N95-28259
Coatings of non-oxide ceramics for improved corrosion resistance in high temperature coal combustion
[DE95-006932] p 2241 N95-28604
High temperature oxidation of nickel concentrates
[PB95-195566] p 2224 N95-28644

HIGH VOLTAGES
Electrical performance characterisation of single-shot switches in high speed, high voltage and high current applications
[DSTO-RR-0010] p 2259 N95-26425
Partial discharge testing of high voltage wiring harness for airborne displays
[AD-A289150] p 2138 N95-27003
AFC generator development
[DE95-007094] p 2266 N95-27754

HILL METHOD
Dynamics and control of SEDSAT tethered multi-probe for thermospheric research flight data analysis of SEDS-2 satellite: Tethered systems dynamics and flight data analysis
[NASA-CR-198653] p 2165 N95-27836

HIPPOCAMPUS
Hippocampal place fields, the internal compass, and the learning of landmark stability
[AD-A289406] p 2350 N95-27100

HISTORIES
Live from Antarctica: Then and now
[NASA-CR-197829] p 2335 N95-26594
Live from Antarctica, volume 4
[NASA-CR-197828] p 2335 N95-26596
Standards for excellence
[NONP-NASA-VT-95-49096] p 2451 N95-27202
Application of CFD to the analysis and design of high-speed inlets
[NASA-CR-198574] p 2279 N95-27240
Spaceport news index: January 1990 - December 1994
[NASA-TM-110653] p 2454 N95-27243
Spaceflight revolution: NASA Langley Research Center from Sputnik to Apollo
[NASA-SP-4308] p 2474 N95-27685
The Global Historical Climatology Network: A preview of version 2
[DE95-007003] p 2332 N95-28605

HMX
Hazards analysis of an integral class 1.1/1.3 rocket motor demilitarization and ingredient recovery system using ammonia p 2174 N95-28315
A comprehensive energetic materials resource recovery and recycling program p 2176 N95-28323

HOHLRAUMS
Indirectly driven targets for ignition
[DE95-006451] p 2430 N95-27327

HOLES (ELECTRON DEFICIENCIES)
Photoemission and optical properties of C60 fullerites
[DE95-006588] p 2425 N95-27539

HOLES (MECHANICS)
Assembly induced delaminations in composite structures p 2186 N95-28279

HOLLOW CATHODES
Discharge ignition behavior of the Space Station plasma contactor
[NASA-TM-106925] p 2168 N95-27862

HOLOGRAPHIC INTERFEROMETRY
Visualization and direct comparison of large displacements using difference holographic interferometry
[DE95-608782] p 2292 N95-27711

HOLOGRAPHY
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-016] p 2262 N95-27170
Visualization and direct comparison of large displacements using difference holographic interferometry
[DE95-608782] p 2292 N95-27711
TV-holography at high temperatures: In situ observations of the oxidation of advanced materials
[PB95-195343] p 2294 N95-28651

HOMODYNE RECEPTION
Method and apparatus for maintaining linearity and frequency accuracy of an FM chirp waveform
[AD-D017398] p 2258 N95-28615

HOMOGENEITY
Improved hardness RHA weldability and material property testing
[AD-A289127] p 2221 N95-28102
Scattering by a small object close to an interface. 3. Buried object
[PB95-184909] p 2256 N95-28354

HOMOLOGY
Gromov-Lawson-Rosenberg conjecture for groups with periodic cohomology
[PB95-185203] p 2389 N95-26915

HOMOTOPY THEORY
Compactification of moduli spaces of monopoles
[PB95-185179] p 2388 N95-26515

HONEYCOMB CORES

An experimental investigation of sandwich flat panels under low velocity impact [AD-A289420] p 2309 N95-27135

HONEYCOMB STRUCTURES

An experimental investigation of sandwich flat panels under low velocity impact [AD-A289420] p 2309 N95-27135

Development of the solar array deployment and drive system for the XTE spacecraft p 2158 N95-27284

Field repair materials for naval aircraft p 2133 N95-27514

Composite repair of a CF18: Vertical stabilizer leading edge p 2134 N95-27517

Composite repair issues on the CF-18 aircraft p 2134 N95-27518

External patch repair of CFRP/honeycomb sandwich p 2134 N95-27522

Scarf repairs to graphite/epoxy components p 2135 N95-27523

HORIZON

Earth horizon modeling and application to static Earth sensors on TRMM spacecraft p 2150 N95-27783

HORIZONTAL ORIENTATION

Large HAWT wake measurement and analysis p 2289 N95-27973

Horizontal axis wind turbine post stall airfoil characteristics synthesization p 2124 N95-27974

A NASTRAN-based computer program for structural dynamic analysis of Horizontal Axis Wind Turbines p 2312 N95-27980

Measurement and prediction of broadband noise from large horizontal axis wind turbine generators p 2324 N95-27990

HORN ANTENNAS

Reduction of off-boresight fields for a TEM horn antenna [AD-A289708] p 2250 N95-26738

HOT ELECTRONS

Monte Carlo study of electron-plasmon scattering effects on hot electron transport in GaAs [DE95-607768] p 2403 N95-26542

HOT ISOSTATIC PRESSING

Analytical and experimental evaluation of joining silicon carbide to silicon carbide and silicon nitride to silicon nitride for advanced heat engine applications, phase 2 [DE95-005761] p 2303 N95-27947

HOT SURFACES

Mechanism of deposit formation on fuel-wetted hot metal surfaces [AD-A289847] p 2210 N95-28621

HOVERING

An experimental investigation of helicopter downwash and tailboom interaction at the Wichita State University 7x10 foot wind tunnel p 2120 N95-26955

HUBBLE SPACE TELESCOPE

Hubble Space Telescope nickel-hydrogen battery testing: An update p 2272 N95-26794

A rule-based shell to hierarchically organize HST observations p 2384 N95-27384

Space environmental effects observed on the Hubble Space Telescope p 2242 N95-27655

Observational magnetometer calibration with the Hubble Space Telescope's new magnetometers p 2148 N95-27773

The solar array-induced disturbance of the Hubble Space Telescope pointing system [NASA-TP-3556] p 2311 N95-28214

HUMAN BEHAVIOR

Enhancing the effects of diversity awareness training: A review of the research literature [DOT/FAA/AM-95/10] p 2355 N95-26361

HUMAN BODY

Non-invasive method and apparatus for monitoring intracranial pressure and pressure volume index in humans [NASA-CASE-LAR-13894-1] p 2353 N95-26889

HUMAN FACTORS ENGINEERING

A perspective on the Human-Rating process of US spacecraft: Both past and present [NASA-SP-6104] p 2162 N95-26586

US Coast Guard Human Systems Integration (HSI) process model [AD-A289172] p 2358 N95-26612

Digital systems validation. Chapter 20 Artificial Intelligenge with applications for aircraft. Handbbook, volume 2 [AD-A288492] p 2380 N95-26638

Integrated mission precision attack cockpit technology (IMPACT). Phase 1: Identifying technologies for air-to-ground fighter integration [AD-A289562] p 2129 N95-26684

Development of injury preventing helmet servo-support system for high performance aircraft [AD-A289547] p 2359 N95-26755

Multi-agent perception for Human/Robot interaction: A framework for intuitive trajectory modification [AD-A289399] p 2359 N95-26884

Change, Learning and Mental Work in Organizations: Working papers of the 3rd Otaniemi-Dresden Workshop [PB95-184941] p 2356 N95-26909

Crew adaptation evaluation of the Norwegian Crew Concept (NOROREW) [AD-A288478] p 2360 N95-27058

Factors in human-computer interface design (a pilot study) [AD-A288908] p 2360 N95-27195

Image quality metrics for color CRT displays [AD-A288934] p 2262 N95-27196

Human factors in aviation maintenance, phase 4 [DOT/FAA/AM-95/14] p 2360 N95-27696

HUMAN PERFORMANCE

A mathematical framework for an improved search model [AD-A288858] p 2358 N95-26552

A perspective on the Human-Rating process of US spacecraft: Both past and present [NASA-SP-6104] p 2162 N95-26586

Analysis of group performance in visual signal detection [AD-A289561] p 2355 N95-26683

Codes of processing and multiple resources: Model and methodology [AD-A289583] p 2355 N95-26691

Handbook of perception and human performance, volume 2. Cognitive processes and performance [AD-A289587] p 2355 N95-26692

HUMAN REACTIONS

ELVIS: Eigenvectors for land vehicle image system [AD-A289297] p 2381 N95-27041

HUMAN TOLERANCES

Radiation in everyday life [DE95-604111] p 2349 N95-26597

HUMAN-COMPUTER INTERFACE

Enhanced visual user interface support for domain-oriented application composition systems [AD-A289337] p 2359 N95-26737

A demonstration of Client-Server technology using remote procedure calls with an application of file migration for moving records based on time [AD-A289392] p 2453 N95-26879

Multi-agent perception for Human/Robot interaction: A framework for intuitive trajectory modification [AD-A289399] p 2359 N95-26884

Factors in human-computer interface design (a pilot study) [AD-A288908] p 2360 N95-27195

A user-system interface agent p 2383 N95-27379

Building an adaptive agent to monitor and repair the electrical power system of an orbital satellite p 2383 N95-27380

Development and implementation of an electronic library tour for the NASA Langley Technical Library [NASA-TM-110619] p 2455 N95-27701

HUMIDITY

Evaluation of high ester content PAO based single hydraulic fluid in high humidity conditions [AD-A289374] p 2233 N95-27324

Millimeter-wave imaging radiometer data processing and development of water vapor retrieval algorithms [NASA-CR-198593] p 2343 N95-27997

Evaluation of a conductive polymer-based sensor for detection of hydrazines at the part-per-billion level p 2173 N95-28309

HYBRID STRUCTURES

Design and fabrication of a diamond-turned hybrid diffractive/refractive singlet for visible applications at ORNL [DE95-007007] p 2427 N95-28552

HYDRATES

Survey on researches related to ocean disposal of carbon dioxide [DE95-759247] p 2329 N95-27939

HYDRAULIC EQUIPMENT

Composite flight-control actuator development p 2142 N95-28281

Water driven turbine/brush pipe cleaner [NASA-CASE-KSC-11669-1] p 2304 N95-28359

HYDRAULIC FLUIDS

Evaluation of high ester content PAO based single hydraulic fluid in high humidity conditions [AD-A289374] p 2233 N95-27324

Use of CTFE as an additive to enhance fire resistance of single hydraulic fluid [AD-A289377] p 2233 N95-27325

HYDRAULIC JETS

Environmentally Benign Cleaning and Degreasing Technology: JANNAF Safety and Protection Subcommittee and Propellant Development and Characterization Subcommittee Joint Workshop [CPIA-PUBL-611] p 2227 N95-27101

The application of waterjets for cleaning p 2233 N95-27130

The demilitarization of class 1.1 rocket motors using high pressure waterjets p 2176 N95-28322

HYDRAULIC TEST TUNNELS

Demonstration study of hierarchical control of fluid-dynamic phenomena [AD-A289341] p 2275 N95-26751

HYDRAZINE ENGINES

Electric propulsion for geostationary orbit insertion [NASA-TM-106942] p 2168 N95-27727

HYDRAZINES

Evaluation of a conductive polymer-based sensor for detection of hydrazines at the part-per-billion level p 2173 N95-28309

Prototype development and test results of a continuous ambient air monitoring system for hydrazine at the 110 ppb level p 2173 N95-28310

The sensitive detection of hydrazine using chemiluminescence p 2173 N95-28311

A new method for measuring hypergol scrubber emissions p 2174 N95-28312

HYDRIDES

The 1994 27th Annual NASA Aerospace Battery Workshop [NASA-CP-3292] p 2317 N95-26785

HYDROCARBONS

A summary of ODS replacement technologies at Litton Poly-Scientific p 2228 N95-27105

Coupled chemistry/climate issues [DE95-006443] p 2327 N95-27532

NQR-NMR studies of higher alcohol synthesis Cu-Co catalysts [DE95-007926] p 2205 N95-27680

HYDROCHLORIC ACID

Molecular approach to mesoporous metal sulfides [DE95-005418] p 2202 N95-27137

Measurements of the volatilities of electrolytes: Application to water/steam cycles [DE95-007103] p 2204 N95-27451

HYDROCLIMATOLOGY

Deep convection in the Mediterranean Sea [AD-A288497] p 2346 N95-26647

HYDROCYANIC ACID

CO, HCO(+) and HCN absorption in the gravitational lens candidate B0218+357 at z=0.685 [PB95-185146] p 2461 N95-26522

HYDRODYNAMICS

Addressing tension instability in SPH methods [AD-A289531] p 2276 N95-26852

Calculation of suspended sediment transport by combined wave-current flows [AD-A289368] p 2346 N95-26904

Validation of the SINDA/FLUINT code using several analytical solutions p 2281 N95-27350

Single-drop reactive extraction/extractive reaction with forced convective diffusion and interphase mass transfer p 2282 N95-27358

Three-dimensional computer modeling of hydrogen injection and combustion [DE95-006261] p 2203 N95-27437

WTEC panel report on research submersibles and undersea technologies [NASA-CR-198565] p 2247 N95-27909

Prediction of material strength and fracture of glass using the SPHINX smooth particle hydrodynamics code [DE95-004869] p 2236 N95-27943

Numerical simulation of coupled flow and transport with TOUGH2: A verification study [DE95-008351] p 2287 N95-28225

Computational and experimental studies of hydrodynamic instabilities and turbulent mixing [DE95-006837] p 2288 N95-28603

HYDROGEN

Environmental effects on high energy density materials [AD-A288296] p 2199 N95-26416

Hydrogen program [DE94-011827] p 2242 N95-27415

Three-dimensional computer modeling of hydrogen injection and combustion [DE95-006261] p 2203 N95-27437

Effect of internal hydrogen on the mixed-mode 1/3 fracture toughness of a ferrific/martensitic stainless steel [DE95-005722] p 2216 N95-27479

Atomistic calculations of hydrogen interactions with Ni3Al grain boundaries and Ni/Ni/Ni3Al interfaces [DE95-006497] p 2408 N95-27534

High temperature kinetic study of the reactions H + O2 = OH + O and O + H2 = OH + H in H2/O2 system by shock tube-laser absorption spectroscopy [NASA-CR-195473] p 2206 N95-27695

FTIR studies of CH3OH on porous silicon [AD-A289038] p 2207 N95-27904

Investigation on energy conversion technology using biochemical reaction elements, 2
[DE95-759250] p 2321 N95-27940

Effects of hydrogen on carbon steels at the Multi-Function Waste Tank Facility
[DE95-007194] p 2219 N95-28005

A hybrid vehicle evaluation code and its application to vehicle design. Revision 1
[DE95-008053] p 2303 N95-28029

LLNL input to FY94 hydrogen annual report
[DE95-007950] p 2243 N95-28064

Infrared spectroscopy of nonclassical ions and their complexes
[DE95-008487] p 2413 N95-28091

The role of hydrogen in the hydrogenation and hydrogenolysis of aniline on the nickel single crystal surfaces: Its implication on the mechanisms of HDN reactions
[DE95-006687] p 2222 N95-28134

Sensor for measuring the atomic fraction in highly dissociated hydrogen
[DE95-006531] p 2415 N95-28204

HYDROGEN BONDS

A density functional/molecular dynamics study of the structure of liquid nitromethane
[AD-A289224] p 2404 N95-26960

HYDROGEN EMBRITTLEMENT

Environmentally assisted cracking of high strength beta titanium alloys
[AD-A289156] p 2213 N95-27032

Stress corrosion cracking susceptibility of the earthquake resistant NOM B457 Mexican steel
[DE95-607956] p 2214 N95-27256

Atomistic calculations of hydrogen interactions with Ni3Al grain boundaries and Ni/Ni/Ni3Al interfaces
[DE95-006497] p 2408 N95-27534

HYDROGEN ENGINES

A hybrid vehicle evaluation code and its application to vehicle design. Revision 1
[DE95-008053] p 2303 N95-28029

A hybrid vehicle evaluation code and its application to vehicle design, revision 2
[DE95-008060] p 2303 N95-28139

HYDROGEN FUELS

LLNL input to FY94 hydrogen annual report
[DE95-007950] p 2243 N95-28064

HYDROGEN IONS

Infrared spectroscopy of nonclassical ions and their complexes
[DE95-008487] p 2413 N95-28091

Theoretical studies of interstellar processes
[NASA-CR-198647] p 2462 N95-28216

HYDROGEN ISOTOPES

Selected bibliography on heavy water, tritiated water and hydrogen isotopes (1981-1992)
[DE95-608331] p 2405 N95-27159

D/H and O-18/O-16 partitioning between water liquid and vapor in the system H2O-Na-K-Mg-Ca-Cl-SO4 from 0 to 350 C
[DE95-007013] p 2208 N95-27961

Recent high-speed ballistics experiments at ORNL
[DE95-006534] p 2422 N95-28205

HYDROGEN PRODUCTION

Investigation on energy conversion technology using biochemical reaction elements, 2
[DE95-759250] p 2321 N95-27940

HYDROGENATION

Growth of hydrogenated amorphous silicon (a-Si:H) on patterned substrates for increased mechanical stability
[DE95-006589] p 2234 N95-27472

Amorphous silicon pixel radiation detectors and associated thin film transistor electronics readout
[DE95-006568] p 2265 N95-27678

The role of hydrogen in the hydrogenation and hydrogenolysis of aniline on the nickel single crystal surfaces: Its implication on the mechanisms of HDN reactions
[DE95-006687] p 2222 N95-28134

HYDROGENOLYSIS

Hydrogen induced C-C, C-N, and C-S bond activities on Pt and Ni surfaces
[DE95-006251] p 2206 N95-27838

The role of hydrogen in the hydrogenation and hydrogenolysis of aniline on the nickel single crystal surfaces: Its implication on the mechanisms of HDN reactions
[DE95-006687] p 2222 N95-28134

HYDROLYSIS

Determination of the first hydrolysis constant of Europium (3) in 3 M of ionic strength
[DE95-607912] p 2405 N95-27211

Measurements of the volatilities of electrolytes: Application to water/steam cycles
[DE95-007103] p 2204 N95-27451

HYDROMETEOROLOGY

The distribution of cloud cover over the former USSR as derived from the RIHMI 223-Station 3-hourly meteorological database
[DE95-007046] p 2343 N95-27920

HYDROPHONES

Uncertainties in the calibration of hydrophones at NPL by the three-transducer spherical-wave reciprocity method in the frequency range 10 kHz on 500 kHz
[PB95-185245] p 2401 N95-26615

Simulating a multi-target acoustic array on the Intel Paragon
[AD-A288443] p 2377 N95-27183

Molecular modeling: An approach for the study of piezoelectric polymers
[AD-A289821] p 2241 N95-28574

Inspection methods for underwater cables
[AD-A289610] p 2312 N95-28616

HYDROSTATIC PRESSURE

High pressure optical studies of semiconductors and heterostructures
[DE95-007119] p 2410 N95-27927

HYDROSTATICS

Electro-hydrostatic actuator controller design using quantitative feedback theory
[AD-A289220] p 2141 N95-26957

Stationary neutrino radiation transport by maximum entropy closure
[DE95-006579] p 2463 N95-28558

HYDROTHERMAL SYSTEMS

Geothermal development in Australia
[DE95-007837] p 2325 N95-28058

Hydrothermal oxidation of solid rocket propellant and other department of defense hazardous wastes
p 2177 N95-28325

HYDROXIDES

Thermodynamics of aqueous electrolytes at high temperatures by the isopiestic technique
[DE95-006747] p 2449 N95-27546

Photochemistry in constrained spaces: Zeolites and layered double metal hydroxides
[DE95-006417] p 2207 N95-27951

HYDROXYL RADICALS

High temperature kinetic study of the reactions H + O2 = OH + O and O + H2 = OH + H in H2/O2 system by shock tube-laser absorption spectroscopy
[NASA-CR-195473] p 2206 N95-27695

HYPERBOLAS

Characterization of the membrane theory of a clamped shell. The hyperbolic case
[PB95-185021] p 2308 N95-26911

HYPERBOLIC DIFFERENTIAL EQUATIONS

Introduction to multigrid methods
[NASA-CR-195045] p 2388 N95-26395

HYPERCUBE MULTIPROCESSORS

A fixed time performance evaluation of parallel CFD applications
[DE94-014240] p 2273 N95-26445

HYPERFINE STRUCTURE

Investigations of the hyperfine interactions in copper-oxide perovskites using Eu-151 and Fe-57 Moessbauer spectroscopy
[PB95-185138] p 2437 N95-26513

Toward coherent excitation: Development of a single-source pump for the rubidium hyperfine ground state doublet
[AD-A289413] p 2295 N95-27132

HYPERGEOMETRIC FUNCTIONS

Moment and hypergeometric filters for high precision computation of focus, stereo and optical flow
[AD-A289293] p 2425 N95-27038

HYPERGOLIC ROCKET PROPELLANTS

A new method for measuring hypergol scrubber emissions p 2174 N95-28312

HYPERPLANES

Yang-Baxter type equations and posets of maximal chains
[PB95-185195] p 2388 N95-26516

HYPERSONIC BOUNDARY LAYER

Analysis of hypersonic boundary layer second mode instability over a 7 deg cone
[AD-A289471] p 2276 N95-26819

HYPERSONIC COMBUSTION

A fully implicit time accurate method for hypersonic combustion: Application to shock-induced combustion instability
[NASA-TM-106707] p 2273 N95-26380

HYPERSONIC FLOW

Turbulence modeling
[NASA-CR-197751] p 2274 N95-26665

Viscous shock-layer analysis on hypersonic flow over reentry capsule with nonequilibrium chemistry
[ISAS-R-656] p 2274 N95-26739

Analysis of hypersonic boundary layer second mode instability over a 7 deg cone
[AD-A289471] p 2276 N95-26819

HYPERSONIC REENTRY

Viscous shock-layer analysis on hypersonic flow over reentry capsule with nonequilibrium chemistry
[ISAS-R-656] p 2274 N95-26739

HYPERSONIC SHOCK

Turbulence modeling
[NASA-CR-197751] p 2274 N95-26665

HYPERSONIC SPEED

A fully implicit time accurate method for hypersonic combustion: Application to shock-induced combustion instability
[NASA-TM-106707] p 2273 N95-26380

Turbulence modeling
[NASA-CR-197751] p 2274 N95-26665

Application of CFD to the analysis and design of high-speed inlets
[NASA-CR-198574] p 2279 N95-27240

HYPERTENSION

Mechanisms of hypertension after cross-linked hemoglobin blood-substitute transfusion
[AD-A289558] p 2352 N95-26680

HYPERTHERMIA

A 3-D finite difference time domain investigation of microwave propagation through inhomogeneous biological materials
[AD-A289431] p 2251 N95-26869

HYPERVELOCITY

A high velocity electromagnetic mass launcher having an ablation resistant insulator
[AD-A288231] p 2154 N95-26524

HYPERVELOCITY GUNS

A high velocity electromagnetic mass launcher having an ablation resistant insulator
[AD-A288231] p 2154 N95-26524

Ram accelerator performance calculations using a modified version of the NASA CET89 equilibrium chemistry code
[AD-A289554] p 2201 N95-26678

HYPERVELOCITY IMPACT

Orbital impacts and the Space Shuttle windshield
[NASA-TM-110594] p 2159 N95-26379

A new technique for ground simulation of hypervelocity debris p 2154 N95-27671

HYPERVELOCITY PROJECTILES

A high velocity electromagnetic mass launcher having an ablation resistant insulator
[AD-A288231] p 2154 N95-26524

HYSTERESIS

Fatigue behavior of a cross-ply ceramic matrix composite at elevated temperature under tension-tension loading
[AD-A289250] p 2182 N95-26969

Electromagnetic hysteretic response calculation for superconductors in demagnetizing geometries
[DE95-005028] p 2264 N95-27403

A magnetic hysteresis model p 2153 N95-27801

I

ICE

A book and series of monographs on ice physics
[AD-A288319] p 2200 N95-26422

Structure of ordinary ice Ih. Part 2: Defects in ice. Volume 1: Point defects
[AD-A288279] p 2200 N95-26452

Subsurface radar investigations at the Pegasus Glacial-ice Runway and Williams Field, McMurdo Station, Antarctica
[AD-A289323] p 2144 N95-27297

Performance of a stand-alone wind-electric ice maker for remote villages
[DE95-004006] p 2320 N95-27475

Analysis of aircraft engine blade subject to ice impact
p 2141 N95-28277

Ultrasonic studies of liquid/solid seimoacoustic wave phenomena
[AD-A289644] p 2402 N95-28622

ICE CLOUDS

Replicator for characterization of cirrus and polar stratospheric cloud particles
[NASA-CR-197785] p 2341 N95-26669

Subvisual cirrus: What it is and where you find it
[AD-A289329] p 2342 N95-26899

ICE FORMATION

Structure of ordinary ice Ih. Part 2: Defects in ice. Volume 1: Point defects
[AD-A288279] p 2200 N95-26452

Replicator for characterization of cirrus and polar stratospheric cloud particles
[NASA-CR-197785] p 2341 N95-26669

Debris/Ice/TPS assessment and integrated photographic analysis of Shuttle mission STS-67
[NASA-TM-110651] p 2160 N95-27238

Further investigations of icing effects on an advanced high-lift multi-element airfoil
[NASA-TM-106947] p 2125 N95-27762

Tomographic observations of deep convection and the thermal evolution of the Greenland Sea Gyre 1988-1989
[AD-A289104] p 2348 N95-28096

IDEAL FLUIDS

Computational and experimental studies of hydrodynamic instabilities and turbulent mixing
[DE95-006837] p 2288 N95-28603

IDENTIFYING

A study of the use beta-alumina as a weak interface in alumina fiber composites
[AD-A288629] p 2179 N95-26484

The use of electrochemistry and ellipsometry for identifying and evaluating corrosion on aircraft
[AD-A288536] p 2125 N95-27186

PXAMS: Projectile X ray AMS: X ray yields and applications
[DE95-006438] p 2204 N95-27496

IGNITION

Effects of dust from storage heaters on ignition in scramjets
[NAL-TR-1234] p 2139 N95-26706

Indirectly driven targets for ignition
[DE95-006451] p 2430 N95-27327

Discharge ignition behavior of the Space Station plasma contactor
[NASA-TM-106925] p 2168 N95-27862

IGNITION LIMITS

Methods development for measuring and classifying flammability/combustibility of refrigerants. Task 2: Test plan
[DE95-007066] p 2234 N95-27481

IGNITION TEMPERATURE

Use of CTFE as an additive to enhance fire resistance of single hydraulic fluid
[AD-A289377] p 2233 N95-27325

High temperature oxidation of nickel concentrates
[PB95-195566] p 2224 N95-28644

ILLITE

The biodegradation of fuels in soils and sediments: Differences as a function of mineralogy
p 2230 N95-27116

ILLUMINATING

Testing of Uninterruptible Power Supplies with nonlinear loads
[AD-A289353] p 2262 N95-27067

Visualization and direct comparison of large displacements using difference holographic interferometry
[DE95-608782] p 2292 N95-27711

ILLUMINATION

An illumination planner for Lambertian polyhedral objects
[AD-A289332] p 2424 N95-26900

IMAGE ANALYSIS

Neural models of spatial orientation in novel environments
[AD-A288420] p 2380 N95-26530

Schlieren System and method for moving objects
[NASA-CASE-LAR-15053-1] p 2291 N95-27191

Characterization of collision cascade damage in Ca2La8(SiO4)6O2 by HRTEM
[DE95-005719] p 2440 N95-27491

Physical interpretation and development of ultrasonic nondestructive evaluation techniques applied to the quantitative characterization of textile composite materials
[NASA-CR-198591] p 2306 N95-28034

Scattering by a small object close to an interface. 3. Buried object
[PB95-184909] p 2256 N95-28354

The detection and tracking of motion by means of time-space pattern modelling using random fields
[IFTR-37/1994] p 2374 N95-28566

IMAGE CLASSIFICATION

An analysis of Bayesian networks as classifiers
[AD-A289316] p 2382 N95-27293

Neural networks in the classification of uses of the soil in satellite images
[INPE-5478-PRE/1777] p 2316 N95-28672

IMAGE CONTRAST

Performance modeling of hyperspectral imaging sensors for atmospheric studies
[AD-A289017] p 2289 N95-26461

IMAGE ENHANCEMENT

Image perception wavelet simulation and enhancement for the visually impaired
[AD-A289303] p 2353 N95-26917

IMAGE FILTERS

SAR noise reduction through the utilization of robust filters
[INPE-5504-PRE/1787] p 2258 N95-28569

IMAGE PROCESSING

Longterm infrared cloud clutter research
[AD-A288632] p 2340 N95-26343

Joint Services Electronics Program (JSEP)
[AD-A288299] p 2345 N95-26419

Digital mapping, charting, and geodesy analysis program: Initial technical review of Raster Product Format
[AD-A289039] p 2313 N95-26476

Nonlinear scalespace via hierarchical statistical modeling
[AD-A289057] p 2394 N95-26478

Neural models of spatial orientation in novel environments
[AD-A288420] p 2380 N95-26530

Digital mapping, charting, and geodesy analysis program technical review of Vector Quantization (VQ) Decompression for the National Imagery Transmission Format Standard (NITFS)
[AD-A288998] p 2314 N95-26682

User's and test case manual for FEMATS
[NASA-CR-197803] p 2366 N95-26694

Compensated deconvolution from wavefront sensing
[AD-A289490] p 2336 N95-26824

Perceptual based image fusion with applications to hyperspectral image data
[AD-A289429] p 2251 N95-26867

Frame selection performance limits for statistical image reconstruction of adaptive optics compensated images
[AD-A289240] p 2424 N95-26965

ROC analysis of IR segmentation techniques
[AD-A289252] p 2424 N95-26971

Using virtual active vision tools to improve autonomous driving tasks
[AD-A289175] p 2356 N95-27013

A foveated system to reduce transmission bandwidth of video images from remote camera systems
[AD-A288516] p 2254 N95-27060

A hybrid genetic algorithm for resolving closely spaced objects p 2384 N95-27387

Improved reduced-resolution satellite imagery
p 2376 N95-27388

Effect of noise on Frequency-Resolved Optical Gating measurements of ultrashort pulses
[DE95-007149] p 2298 N95-27969

An introduction to wavelet transforms
[AD-A289083] p 2256 N95-28095

Edge detection by nonlinear dynamics
[DE95-008076] p 2373 N95-28168

Speckle spectrum of the ERS-1 wavemode product
[PB95-196564] p 2315 N95-28180

Full complex modulation using two one-parameter spatial light modulators
[NASA-CASE-MSC-22255-1] p 2427 N95-28384

Binary segmentation of SAR images by the ICM algorithm
[INPE-5464-PRE/1772] p 2258 N95-28559

The detection and tracking of motion by means of time-space pattern modelling using random fields
[IFTR-37/1994] p 2374 N95-28566

Exploiting parallelism in a Monte Carlo image-matching algorithm
[AD-A289872] p 2374 N95-28625

IMAGE RECONSTRUCTION

Frame selection performance limits for statistical image reconstruction of adaptive optics compensated images
[AD-A289240] p 2424 N95-26965

JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-016] p 2262 N95-27170

Visualization and direct comparison of large displacements using difference holographic interferometry
[DE95-608782] p 2292 N95-27711

An introduction to wavelet transforms
[AD-A289083] p 2256 N95-28095

IMAGE RESOLUTION

An image quality analysis of ANVIS-6 night vision goggles
[AD-A289398] p 2359 N95-26883

Grayscale/resolution trade-off for text: Model predictions and psychophysical results for letter confusion and letter discrimination
[NASA-CR-197784] p 2369 N95-26930

Frame selection performance limits for statistical image reconstruction of adaptive optics compensated images
[AD-A289240] p 2424 N95-26965

Factors in human-computer interface design (a pilot study)
[AD-A288908] p 2360 N95-27195

Image quality metrics for color CRT displays
[AD-A288934] p 2262 N95-27196

Improved reduced-resolution satellite imagery
p 2376 N95-27388

Reconstruction of an infrared band of meteorological satellite imagery with abductive networks
[SAIC-94/1062] p 2345 N95-27389

Effect of noise on Frequency-Resolved Optical Gating measurements of ultrashort pulses
[DE95-007149] p 2298 N95-27969

Low power limits in ultrashort pulse measurement using Frequency-Resolved Optical Gating
[DE95-007150] p 2299 N95-28219

IMAGERY

Digital mapping, charting, and geodesy analysis program technical review of Vector Quantization (VQ) Decompression for the National Imagery Transmission Format Standard (NITFS)
[AD-A288998] p 2314 N95-26682

Three-dimensional photogrammetry for laboratory applications
[AD-A291624] p 2294 N95-28410

IMAGES

Grayscale/resolution trade-off for text: Model predictions and psychophysical results for letter confusion and letter discrimination
[NASA-CR-197784] p 2369 N95-26930

Views of the solar system
[DE95-006446] p 2461 N95-27326

Free Electron Laser Physical Process Code (FELPPC)
[DE95-006276] p 2296 N95-27557

TOPS: Toward Other Planetary Systems. A report by the solar system exploration division
[NASA-TM-110609] p 2464 N95-28009

Query by image example: The CANDID approach
[DE95-006284] p 2456 N95-28631

Method of space-time sequence transform used to measure acousto-optic deflection and modulation
[AD-A289612] p 2402 N95-28671

IMAGING RADAR

High performance ground penetrating radar survey of TA-49/Area 2
[DE95-006856] p 2258 N95-28601

IMAGING SPECTROMETERS

Perceptual based image fusion with applications to hyperspectral image data
[AD-A289429] p 2251 N95-26867

IMAGING TECHNIQUES

Radiation sensitive area detection device and method
[NASA-CASE-MFS-28563-3] p 2423 N95-26385

Analysis of electromagnetic problems involving chiral, bi-isotropic, and uniaxial bianisotropic media
[PB95-185096] p 2248 N95-26450

Performance modeling of hyperspectral imaging sensors for atmospheric studies
[AD-A289017] p 2289 N95-26461

Replicator for characterization of cirrus and polar stratospheric cloud particles
[NASA-CR-197785] p 2341 N95-26669

The development of infrared detectors and mechanisms for use in future infrared space missions
[NASA-CR-197819] p 2290 N95-26702

An acoustic charge transport imager for high definition television applications
[NASA-CR-197841] p 2249 N95-26708

Combined investigation of Eddy current and ultrasonic techniques for composite materials NDE
[NASA-TM-110599] p 2306 N95-26778

Compensated deconvolution from wavefront sensing
[AD-A289490] p 2336 N95-26824

Perceptual based image fusion with applications to hyperspectral image data
[AD-A289429] p 2251 N95-26867

Determining nanoscale physical properties of materials by microscopy and spectroscopy
[AD-A289532] p 2201 N95-26870

Solid-state image sensor with focal-plane digital photon-counting pixel array
[NASA-CASE-NPO-18518-1-CU] p 2424 N95-26894

Image perception wavelet simulation and enhancement for the visually impaired
[AD-A289303] p 2353 N95-26917

Grayscale/resolution trade-off for text: Model predictions and psychophysical results for letter confusion and letter discrimination
[NASA-CR-197784] p 2369 N95-26930

Notes on the calibration of the JHU-APL solar vector magnetograph at NSO-Sec peak
[AD-A289277] p 2253 N95-26983

Schlieren System and method for moving objects
[NASA-CASE-LAR-15053-1] p 2291 N95-27191

SXI Prototype mirror mount
[NASA-CR-196613] p 2301 N95-27244

Matrix kernels for MEG and EEG source localization and imaging
[DE95-005238] p 2354 N95-27426

Magnetic resonance imaging of solvent transport in polymer networks
[DE95-007142] p 2234 N95-27455

Specification of the figure and finish of EUV mirrors in terms of performance requirements, revised Nov. 1994
[DE95-005689] p 2425 N95-27490

Visualization and direct comparison of large displacements using difference holographic interferometry
[DE95-608782] p 2292 N95-27711

Low energy neutral atom imaging: Remote observations of the magnetosphere

[DE95-006342] p 2337 N95-27848

Positron microscopy

[DE95-007042] p 2410 N95-27874

Nonlinear optical microscopy for imaging thin films and surfaces

[DE95-007872] p 2426 N95-28018

Physical interpretation and development of ultrasonic nondestructive evaluation techniques applied to the quantitative characterization of textile composite materials

[NASA-CR-198591] p 2306 N95-28034

Remote measurement of ground temperature and emissivity

[DE95-008055] p 2314 N95-28053

Ambient-pressure silica aerogel films

[DE95-008161] p 2237 N95-28090

Analytical electron microscopy of nanometer-sized particles

[AD-A289124] p 2413 N95-28101

Surface-emitting semiconductor laser for intracavity spectroscopy and microscopy

[DE95-007745] p 2299 N95-28128

Transformation to zero offset in transversely isotropic media

[DE95-007669] p 2339 N95-28192

Fowler DMO and time migration for transversely isotropic media with explicit operators

[DE95-007671] p 2339 N95-28194

OBIC analysis of stressed, thermally-isolated polysilicon resistors

[DE95-008511] p 2268 N95-28201

New developments for sol-gel film and fiber processing

[DE95-008175] p 2240 N95-28404

Development and application of low-temperature AFM

[AD-A291704] p 2352 N95-28525

Query by image example: The CANDID approach

[DE95-006284] p 2456 N95-28631

TV-holography at high temperatures: In situ observations of the oxidation of advanced materials

[PB95-195343] p 2294 N95-28651

IMMOBILIZATION

Chemistry involving the separation, isolation, and immobilization of 3-5 compound semiconductor nanocrystals and quantum dots

[AD-A288381] p 2436 N95-26473

Non-covalent immobilization of proteins and enzymes on polymerized lipid assemblies

[AD-A288234] p 2225 N95-26526

IMMUNE SYSTEMS

Diagnostic antigens of Leishmania

[AD-A288805] p 2350 N95-27097

IMMUNOLOGY

Anti-idiotype probes for toxin detection

[AD-A288955] p 2348 N95-26435

Diagnostic antigens of Leishmania

[AD-A288805] p 2350 N95-27097

IMPACT

Scale model experiments with ceramic laminate targets

[AD-A288322] p 2225 N95-26561

IMPACT DAMAGE

Orbital impacts and the Space Shuttle windshield

[NASA-TM-110594] p 2159 N95-26379

Combined investigation of Eddy current and ultrasonic techniques for composite materials NDE

[NASA-TM-110599] p 2306 N95-26778

Effects of low earth orbit on the optical performance of multi-layer enhanced high reflectance mirrors

p 2428 N95-27652

Space environmental effects observed on the Hubble Space Telescope p 2242 N95-27655

A new technique for ground simulation of hypervelocity debris p 2154 N95-27671

Analysis of aircraft engine blade subject to ice impact

p 2141 N95-28277

Characteristics of laminates with delamination control strips p 2191 N95-28434

The use of impact force as a scale parameter for the impact response of composite laminates

p 2197 N95-28479

Effect of low-speed impact damage and damage location on behavior of composite panels p 2197 N95-28481

Impact damage resistance of composite fuselage structure, part 1 p 2138 N95-28482

Applications of a damage tolerance analysis methodology in aircraft design and production

p 2197 N95-28483

Compressive strength of damaged and repaired composite plates p 2198 N95-28484

Post impact compressive strength in composites

p 2198 N95-28485

Fundamental concepts in the suppression of delamination buckling by stitching p 2198 N95-28486

Damage tolerance of a geodesically stiffened advanced composite structural concept for aircraft structural applications p 2138 N95-28487

Advanced wing design survivability testing and results

p 2138 N95-28488

IMPACT LOADS

Layer coefficients for NHDOT pavement materials

[AD-A288262] p 2246 N95-26548

Effects of floor location on response of composite fuselage frames p 2192 N95-28439

IMPACT MELTS

Computational studies of projectile melt in impact with typical whipple shields

[DE95-005916] p 2311 N95-28337

IMPACT PREDICTION

Tracking and impact prediction of Earth-Crossing-Objects (ECO's) on a collision course with Earth

[AD-A289321] p 2461 N95-27303

IMPACT RESISTANCE

Static and dynamic strain energy release rates in toughened thermosetting composite laminates

p 2188 N95-28288

IMPACT STRENGTH

Orbital impacts and the Space Shuttle windshield

[NASA-TM-110594] p 2159 N95-26379

Layer coefficients for NHDOT pavement materials

[AD-A288262] p 2246 N95-26548

Compressive residual strength of graphite/epoxy laminates after impact p 2191 N95-28431

Effects of floor location on response of composite fuselage frames p 2192 N95-28439

The use of impact force as a scale parameter for the impact response of composite laminates

p 2197 N95-28479

Post impact compressive strength in composites

p 2198 N95-28485

IMPACT TESTS

Layer coefficients for NHDOT pavement materials

[AD-A288262] p 2246 N95-26548

Development of repair processes and sources for C/KC-135 aircraft windows/windshields

[AD-A288348] p 2117 N95-26629

An experimental investigation of sandwich flat panels under low velocity impact

[AD-A289420] p 2309 N95-27135

Scaling issues in dynamic fragmentation

[DE95-008509] p 2309 N95-27745

Analysis of aircraft engine blade subject to ice impact

p 2141 N95-28277

Computational studies of projectile melt in impact with typical whipple shields

[DE95-005916] p 2311 N95-28337

The use of impact force as a scale parameter for the impact response of composite laminates

p 2197 N95-28479

Effect of low-speed impact damage and damage location on behavior of composite panels p 2197 N95-28481

Impact damage resistance of composite fuselage structure, part 1 p 2138 N95-28482

Applications of a damage tolerance analysis methodology in aircraft design and production

p 2197 N95-28483

Damage tolerance of a geodesically stiffened advanced composite structural concept for aircraft structural applications p 2138 N95-28487

Rotorcraft crashworthy airframe and fuel system technology development program

[AD-A289986] p 2126 N95-28630

IMPACT TOLERANCES

Through-the Thickness(R) braided composites for aircraft applications p 2185 N95-28273

Compressive residual strength of graphite/epoxy laminates after impact p 2191 N95-28431

IMPEDANCE

Surface scanning techniques to locate and study defects in painted zinc and zinc alloy coated steels

[DE95-006099] p 2240 N95-28547

IMPINGEMENT

Load measurement system with load cell lock-out mechanism p 2159 N95-27291

IMPLANTATION

Characterization and redesign of the AFIT multielectrode array

[AD-A289295] p 2354 N95-27039

Characterization of defects in deuterium-implanted beryllium

[DE95-005688] p 2217 N95-27553

Modification of the optical properties of glass by sequential ion implantation

[DE95-007401] p 2237 N95-28080

IMPLOSIONS

Bubble fusion: Preliminary estimates

[DE95-006337] p 2420 N95-27494

Investigation of HE driven cylindrical liner

[DE95-007866] p 2311 N95-28539

IMPULSES

ACT adaptive filters

[AD-A288385] p 2363 N95-26474

IMPURITIES

A new growth technology for highly non-linear, optical quality organic films: Organic vapor phase deposition

[AD-A289006] p 2178 N95-26567

Materials Research Society Symposium Proceedings. Volume 339: Diamond, SiC and nitride wide bandgap semiconductors

[AD-A288690] p 2437 N95-26818

Ultra high purity, dimensionally stable INVAR 36

[NASA-CASE-NPO-19358-1-CU] p 2213 N95-26862

Photoluminescence spectroscopy of 4H- and 6H-SiC

[AD-A289326] p 2202 N95-26896

Model of a single impurity in a wide bandgap semiconductor describing electric field screening

[AD-A289322] p 2264 N95-27296

Cavity formation and impurity gettering in He-implanted Si

[DE95-007744] p 2444 N95-28127

Theory of exotic superconductivity and normal states of heavy electron and high temperature superconductivity materials

[DE95-006637] p 2268 N95-28198

Chemical and electrical properties of cavities in silicon and germanium

[DE95-006812] p 2445 N95-28206

The off-center effect on the diffusion coefficient of Cu(+) and Li(+) in the KCl lattice

[DE95-609146] p 2446 N95-28255

Fellowship in physics

[AD-A291691] p 2446 N95-28522

IN SITU MEASUREMENT

Electrocrystallization of an ordered organic monolayer: Selective epitaxial growth of beta(ET)213 ongraphite

[AD-A288942] p 2178 N95-26569

Replicator for characterization of cirrus and polar stratospheric cloud particles

[NASA-CR-197785] p 2341 N95-26660

Fabrication of long wavelength array by in-situ molecular beam epitaxy

[AD-A288599] p 2423 N95-26679

Surface scanning techniques to locate and study defects in painted zinc and zinc alloy coated steels

[DE95-006099] p 2240 N95-28547

In situ dynamic material property measurement system

[AD-D017387] p 2210 N95-28585

TV-holography at high temperatures: In situ observations of the oxidation of advanced materials

[PB95-195343] p 2294 N95-28651

IN-FLIGHT MONITORING

Inflight resistance measurement on high-T(sub c) superconducting thin films exposed to orbital atomic oxygen on CONCAP-2 (STS-46) p 2272 N95-27635

A PC-based magnetometer-only attitude and rate determination system for gyroless spacecraft

p 2147 N95-27770

Experience from the in-flight calibration of the Extreme Ultraviolet Explorer (EUVE) and Upper Atmosphere Research Satellite (UARS) fixed head star trackers (FHSTs) p 2149 N95-27779

INCLUSIONS

Non-metallic oxide inclusion formation in C-Mnlow alloy steel welds

[DE94-019160] p 2215 N95-27319

Engineered materials for appliation in severe metallurgical environments: Tantalum-carbon alloy development

[DE95-006838] p 2216 N95-27488

Advances in welding science: A perspective

[DE95-006745] p 2302 N95-27545

INCOMPRESSIBLE FLOW

CFD research, parallel computation and aerodynamic optimization

[NASA-CR-197748] p 2120 N95-26649

Progress in incompressible Navier-Stokes computations for propulsion flows and its dual-use applications

[NASA-CR-197746] p 2275 N95-26766

Flow control

[AD-A289262] p 2279 N95-27197

A new finite element formulation for incompressible flow

[DE95-007141] p 2284 N95-27454

Computational and experimental studies of hydrodynamic instabilities and turbulent mixing

[DE95-006837] p 2288 N95-28603

INCOMPRESSIBLE FLUIDS

A fast numerical method for isothermal resin transfer mold filling

[AD-A288944] p 2179 N95-26565

On the nonlinear stability of the unsteady, viscous flow of an incompressible fluid in a curved pipe

[NASA-CR-195065] p 2278 N95-27028

The calculation of the mass moment of inertia of a fluid in a rotating rectangular tank
[NASA-CR-197777] p 2278 N95-27165

INCONEL (TRADEMARK)

Probabilistic material strength degradation model for Inconel 718 components subjected to high temperature, high-cycle and low-cycle mechanical fatigue, creep and thermal fatigue effects
[NASA-CR-197832] p 2214 N95-27167

INDENTATION

Indentability of conventional and negative Poisson's ratio foams p 2195 N95-28472

In situ dynamic material property measurement system
[AD-D017387] p 2210 N95-28585

INDEXES (DOCUMENTATION)

Index to NASA news releases and speeches 1994
[NASA-TM-110650] p 2452 N95-26673

Spaceport news index: January 1990 - December 1994
[NASA-TM-110653] p 2454 N95-27243

Aerospace medicine and biology: A continuing bibliography with indexes (supplement 402)
[NASA-SP-7011(402)] p 2354 N95-27502

Aeronautical engineering: A continuing bibliography with indexes (supplement 318)
[NASA-SP-7037(318)] p 2120 N95-27543

INDIAN OCEAN

The northern wintertime divergence extrema at 200 hPa and surface cyclones as simulated in the integration of the ECMWF general circulation model
[DE95-007946] p 2332 N95-28550

INDIUM

The structure of lead-indium phosphate glass
[DE95-007130] p 2237 N95-27967

INDIUM COMPOUNDS

First-principles calculations for AlN, GaN, and InN: Bulk and alloy properties
[DE95-006822] p 2219 N95-27958

INDIUM GALLIUM ARSENIDES

Phase separation and ordering in InGaAsP and InGaAs materials
[DE95-007493] p 2443 N95-28050

INDIUM PHOSPHIDES

Preferentially etched epitaxial liftoff of InP material
[NASA-CASE-LEW-15760-1] p 2235 N95-27503

Phase separation and ordering in InGaAsP and InGaAs materials
[DE95-007493] p 2443 N95-28050

INDUCTANCE

Measurement of the D0 WAMUS magnet inductance
[DE95-005126] p 2399 N95-27530

Global dynamo in a reversed field pinch plasma
[DE94-765441] p 2432 N95-27869

Forback DC-to-DC converter
[NASA-CASE-GSC-13404-1] p 2269 N95-28341

INDUCTION MOTORS

Structural optimisation of cage induction motors using finite element analysis
[PB95-195434] p 2271 N95-28655

INDUCTORS

Forback DC-to-DC converter
[NASA-CASE-GSC-13404-1] p 2269 N95-28341

INDUSTRIAL MANAGEMENT

Asian Aeronautics: Technology acquisition drives industry development. Report to Congressional requesters
[GAO/NSIAD-94-140] p 2118 N95-26817

Change, Learning and Mental Work in Organizations: Working papers of the 3rd Otaniemi-Dresden Workshop
[PB95-184941] p 2356 N95-26909

INDUSTRIAL PLANTS

Molten Carbonate Fuel Cell (MCFC) product development test
[DE95-007345] p 2316 N95-26543

Electro-hydrostatic actuator controller design using quantitative feedback theory
[AD-A289220] p 2141 N95-26957

NIST Automated Manufacturing Research Facility (AMRF): March 1987
[NONP-NASA-VT-95-49097] p 2246 N95-27203

Building the electronic industry's roadmaps p 2263 N95-27228

Electronics manufacturing and assembly in Japan p 2263 N95-27231

The Tau-Charm Factory in the ERA of B-Factories and CESR
[DE95-007894] p 2412 N95-28028

INDUSTRIAL SAFETY

Concurrent engineering research center
[NASA-CR-197726] p 2362 N95-26386

INDUSTRIAL WASTES

Marshall Space Flight Center solid waste characterization and recycling improvement study
[NASA-CR-196594] p 2360 N95-27164

INDUSTRIES

Quest for excellence 5
[NONP-NASA-VT-95-49099] p 2451 N95-27205

JTEC Panel report on electronic manufacturing and packaging in Japan
[NASA-CR-197830] p 2263 N95-27226

Building the electronic industry's roadmaps p 2263 N95-27228

Japan's electronic packaging technologies p 2263 N95-27230

Electronics manufacturing and assembly in Japan p 2263 N95-27231

Quality assurance and reliability in the Japanese electronics industry p 2263 N95-27232

An ugly duckling becomes a swan (hor ellipsis): How an organization becomes customer focused through listening
[DE95-004974] p 2454 N95-27461

SIHTI 2: Energy and environmental technology. Yearbook 1993 of the research programme
[DE95-755135] p 2331 N95-28202

The U.S. Department of Energy Wind Turbine Development Program
[DE95-000292] p 2325 N95-28395

INELASTIC COLLISIONS

Atomic physics with highly charged ions
[DE95-007325] p 2407 N95-27439

INELASTIC SCATTERING

Comparative experimental study of PIXE and X-ray fluorescence analysis
[DE95-607868] p 2327 N95-27198

A note on the constituent quark resonances
[DE95-608831] p 2406 N95-27316

Addendum to the 1993 European school of high-energy physics
[DE95-610313] p 2419 N95-27321

Atomic physics with highly charged ions
[DE95-007325] p 2407 N95-27439

Observations of CEF-split intermultiplet transitions in optically opaque EuBa2Cu3O7 using inelastic neutron scattering
[DE95-007135] p 2408 N95-27453

Molecular beam scattering from C-13 enriched Kapton and correlation with the EOIM-3 carousel experiment p 2419 N95-27643

Optical design and performance of the inelastic scattering beamline at the National Synchrotron Light Source
[DE95-007679] p 2422 N95-28195

Resonant coherent excitation of N6(+) and Mg11(+) in planar channeling: Anisotropies in ionization probabilities and X-ray emission
[DE95-006732] p 2417 N95-28595

Future opportunities and present possibilities for coherent inelastic single crystal measurements on pulsed neutron sources
[PB95-195798] p 2418 N95-28657

INERTIAL CONFINEMENT FUSION

Development of density and temperature profile diagnostics for ICF targets
[DE95-007664] p 2433 N95-28052

INERTIAL NAVIGATION

A modified proportional navigation scheme for rendezvous and docking with tumbling targets: The Planar case p 2150 N95-27784

INFECTIOUS DISEASES

Diagnostic antigens of Leishmania
[AD-A288805] p 2350 N95-27097

INFERENCE

Generalized probabilistic reasoning and empirical studies on computational efficiency and scalability
[AD-A289185] p 2395 N95-27016

INFILTRATION

Polymer infiltration studies
[NASA-CR-198601] p 2236 N95-27857

TEM characterization of Al/Al2O3 composite fabricated by reactive metal infiltration
[DE95-008508] p 2184 N95-28145

INFORMATION

The distribution of cloud cover over the former USSR as derived from the RIHMI 223-Station 3-hourly meteorological database
[DE95-007046] p 2343 N95-27920

INFORMATION DISSEMINATION

The aerospace database: An introduction to AIAA'S computerized source for identifying scientific and technical information p 2119 N95-26950

Geothermal direct-heat utilization assistance
[DE95-007247] p 2319 N95-27236

Advanced Earth-to-orbit propulsion technology information, dissemination and research
[NASA-CR-196582] p 2168 N95-27424

Teaching interdisciplinary computational science from an electronic book on the Internet
[DE95-006525] p 2373 N95-28498

NASA/DOD Aerospace Knowledge Diffusion Research Project. Report 35: The use of computer networks in aerospace engineering
[NASA-CR-198170] p 2456 N95-28600

Building an electronic book on the Internet. CSEP:An interdisciplinary syllabus for teaching computational science at the graduate level
[DE95-006526] p 2375 N95-28632

INFORMATION MANAGEMENT

Concurrent engineering research center
[NASA-CR-197726] p 2362 N95-26386

NIST: Information management in the AMRF
[NONP-NASA-VT-95-49120] p 2454 N95-27208

An ugly duckling becomes a swan (hor ellipsis): How an organization becomes customer focused through listening
[DE95-004974] p 2454 N95-27461

Project Records Information System (PRIS) user's manual, revision 3
[DE95-008330] p 2456 N95-28172

Evaluation of an Air Force Information Resources Management (IRM) overview course
[AD-A288746] p 2456 N95-28587

INFORMATION PROCESSING (BIOLOGY)

Codes of processing and multiple resources: Model and methodology
[AD-A289583] p 2355 N95-26691

INFORMATION RETRIEVAL

Specifying weak sets
[AD-A288587] p 2364 N95-26536

A demonstration of Client/Server technology using remote procedure calls for an application of file migration for moving records based on location
[AD-A289391] p 2453 N95-26864

Transparent access to distributed, heterogeneous environmental information systems
[DE95-007268] p 2454 N95-27483

Development and implementation of an electronic library tour for the NASA Langley Technical Library
[NASA-TM-110619] p 2455 N95-27701

The Sunrise project: An R&D project for a national information infrastructure prototype
[DE95-006340] p 2455 N95-27847

Query by image example: The CANDID approach
[DE95-006284] p 2456 N95-28631

INFORMATION SYSTEMS

Long term distributed file reference tracing: Implementation and experience
[AD-A288585] p 2452 N95-26535

Specifying weak sets
[AD-A288587] p 2364 N95-26536

Activities of the Laboratory of Information Processing Science
[PB95-184982] p 2452 N95-26631

The aerospace database: An introduction to AIAA'S computerized source for identifying scientific and technical information p 2119 N95-26950

Selected bibliography on heavy water, tritiated water and hydrogen isotopes (1981-1992)
[DE95-608331] p 2405 N95-27159

A user-system interface agent p 2383 N95-27379

Outline and handling manual of fusion experimental data monitor system DAISY, version 2
[DE95-703895] p 2431 N95-27414

Transparent access to distributed, heterogeneous environmental information systems
[DE95-007268] p 2454 N95-27483

Long Duration Exposure Facility (LDEF) Archive System p 2457 N95-27658

Human factors in aviation maintenance, phase 4
[DOT/FAA/AM-95/14] p 2360 N95-27696

Development and implementation of an electronic library tour for the NASA Langley Technical Library
[NASA-TM-110619] p 2455 N95-27701

The distribution of cloud cover over the former USSR as derived from the RIHMI 223-Station 3-hourly meteorological database
[DE95-007046] p 2343 N95-27920

Research on the establishment of the database system for R and D on the innovative technology for the Earth
[DE95-759244] p 2458 N95-27937

Project Records Information System (PRIS) user's manual, revision 3
[DE95-008330] p 2456 N95-28172

International networks
[PB95-196366] p 2379 N95-28502

Query by image example: The CANDID approach
[DE95-006284] p 2456 N95-28631

INFORMATION THEORY

The 1994 IEEE-IMS Workshop on Information Theory and Statistics
[AD-A288808] p 2380 N95-26492

Distributed methods and processes in games of incomplete information
[PB95-184842] p 2396 N95-28352

Distributed methods and processes in games of incomplete information
[PB95-184859] p 2396 N95-28353

INFORMATION TRANSFER

A demonstration of Client/Server technology using remote procedure calls for an application of file migration for moving records based on location
[AD-A289391] p 2453 N95-28864

Integrated planning and scheduling for Earth science data processing p 2384 N95-27382

Teaching interdisciplinary computational science from an electronic book on the Internet
[DE95-006525] p 2373 N95-28498

Downloading environmental data in the new MOODS format
[AD-A288835] p 2456 N95-28589

INFRARED ASTRONOMY

The development of infrared detectors and mechanisms for use in future infrared space missions
[NASA-CR-197819] p 2290 N95-26702

Typical examples of classical novae
p 2459 N95-27074

Molecular cloud content of early-type galaxies. V. CO in elliptical galaxies
[PB95-185153] p 2461 N95-27320

INFRARED DETECTORS

Longterm infrared cloud clutter research
[AD-A288632] p 2340 N95-26343

A probabilistic target classification and description model for seismic sensors
[AD-A288548] p 2335 N95-26531

Fabrication of long wavelength array by in-situ molecular beam epitaxy
[AD-A288599] p 2423 N95-26679

The development of infrared detectors and mechanisms for use in future infrared space missions
[NASA-CR-197819] p 2290 N95-26702

Subvisual cirrus: What it is and where you find it
[AD-A289329] p 2342 N95-26899

Growth and characterization of crystals for room temperature I.R. detectors and second harmonic generation devices
[NASA-CR-198598] p 2443 N95-28033

Dimensionally self regulating materials
[AD-A291671] p 2257 N95-28456

INFRARED IMAGERY

Infrared field measurements of sea surface temperature: Analysis of wake signatures and comparison of skin layer models
[NASA-CR-197849] p 2346 N95-26533

Perceptual based image fusion with applications to hyperspectral image data
[AD-A289429] p 2251 N95-26867

ROC analysis of IR segmentation techniques
[AD-A289252] p 2424 N95-26971

Reconstruction of an infrared band of meteorological satellite imagery with abductive networks
[SAIC-94/1062] p 2345 N95-27389

INFRARED LASERS

Generation of a single-lobe, far-field intensity pattern from a laser diode array using an optical delay line
[AD-A289226] p 2295 N95-26961

Improved performance 1590 nm Er:YLF laser
[DE95-003691] p 2296 N95-27705

Fellowship in physics
[AD-A291691] p 2446 N95-28522

INFRARED RADIATION

Longterm infrared cloud clutter research
[AD-A288632] p 2340 N95-26343

The effect of infrared sea surface temperature measurements on evaporation duct height estimation
[AD-A289045] p 2346 N95-26477

Infrared field measurements of sea surface temperature: Analysis of wake signatures and comparison of skin layer models
[NASA-CR-197849] p 2346 N95-26533

The development of infrared detectors and mechanisms for use in future infrared space missions
[NASA-CR-197819] p 2290 N95-26702

Calculations of downward IR surface fluxes in the 500-3,000 cm(exp -1) wavenumber range for the 1994 ICRCCM model intercomparison study
[DE95-006430] p 2328 N95-27708

Remote measurement of ground temperature and emissivity
[DE95-008055] p 2314 N95-28053

Heterostructures and infrared emitters with compressed InAsSb layers
[DE95-008157] p 2446 N95-28399

INFRARED SPECTRA

FTIR measurements of thermal infrared sky radiance and transmission
[DE95-003642] p 2334 N95-26436

FTIR studies of CH3OH on porous silicon
[AD-A289038] p 2207 N95-27904

Multivariate classification of BPSG thin films using Mahalanobis distances
[DE95-008519] p 2267 N95-28148

Weightless Environment Training Facility (WETF) materials coating evaluation, volume 2
[NASA-CR-188366-VOL-2] p 2239 N95-28386

Time-resolved FTIR emission studies of laser photofragmentation and radical reactions
[DE95-008125] p 2300 N95-28398

INFRARED SPECTROMETERS

Perceptual based image fusion with applications to hyperspectral image data
[AD-A289429] p 2251 N95-26867

A cryogenic scan mechanism for use in Fourier transform spectrometers p 2158 N95-27287

High-performance reactionless scan mechanism
p 2158 N95-27288

INFRARED SPECTROSCOPY

FTIR measurements of thermal infrared sky radiance and transmission
[DE95-003642] p 2334 N95-26436

Analytical spectroscopy
[DE95-607896] p 2203 N95-27200

High resolution Fourier transform spectroscopy of the first overtone of the N-O stretch in nitrosyl bromide
[AD-A289318] p 2203 N95-27295

FTIR studies of CH3OH on porous silicon
[AD-A289038] p 2207 N95-27904

Infrared spectroscopy of nonclassical ions and their complexes
[DE95-008487] p 2413 N95-28091

INGESTION (ENGINES)

WINCLR: A computer code for heat transfer and clearance calculation in a compressor
[NASA-CR-195436] p 2117 N95-26363

Comparison of numerical results and multicavity purge and rim seal data with extensions to dynamics
[NASA-TM-106685] p 2168 N95-27434

INITIATION

Comparison of the calculated and measured stability of a NbTi cable-in-conduit conductor
[DE95-007964] p 2265 N95-27693

INITIATORS (EXPLOSIVES)

The protection of electro-explosive devices (EEDs) and electronics from electrostatic discharge (ESD) hazards
[DSTO-TR-0100] p 2258 N95-28568

INJECTION

Proposed high speed pellet injection system HIPEL for large helical device
[NIFS-255] p 2419 N95-26584

MHD simulations of DC helicity injection for current drive in tokamaks
[DE95-007018] p 2429 N95-26940

On the physics of ion ring generation for the stabilization of FRX discharges
[DE95-007105] p 2410 N95-27922

Fault tolerant features and experiments of ANTS distributed real-time system
[AD-A290133] p 2256 N95-28391

INJECTORS

Experiment on a rectangular cross section scramjet combustor. 2: Effects of fuel injector geometry
[NAL-TR-1220] p 2139 N95-26600

Propellant injection systems and processes
[NASA-TM-110632] p 2242 N95-26781

The CDF upgrade
[DE95-006683] p 2421 N95-28107

Recent high-speed ballistics experiments at ORNL
[DE95-006534] p 2422 N95-28205

Apparatus for testing high pressure injector elements
[NASA-CASE-MFS-28773-1] p 2304 N95-28347

Pellet injector research and development at ORNL
[DE95-006736] p 2435 N95-28596

INJURIES

Development of injury preventing helmet servo-support system for high performance aircraft
[AD-A289547] p 2359 N95-26755

INLET AIRFRAME CONFIGURATIONS

Performance study for inlet installations
[NASA-CR-189714] p 2140 N95-28227

INLET FLOW

Numerical investigation to S-inlet flows (Numerical simulation study of S-inlet flows)
[AD-A289590] p 2120 N95-26713

INLET TEMPERATURE

Characteristics of the turbine inlet temperature sensing circuit for the T56 turbo-prop engine
[DSTO-TR-0095] p 2139 N95-26424

INNER RADIATION BELT

A BATSE investigation of radiation belt electrons precipitated by VLF waves
[NASA-CR-197780] p 2336 N95-26922

INORGANIC COMPOUNDS

On the synthesis of mixed-metal and mixed-pnicogen13-15 ring-systems
[AD-A288869] p 2223 N95-28332

Stratospheric ozone reactive chemicals generated by space launches worldwide
[AD-A289852] p 2332 N95-28623

INPUT/OUTPUT ROUTINES

Reducing network depth in the Cascade-Correlation learning architecture
[AD-A289352] p 2382 N95-27066

A case for dynamic sets in operating systems
[AD-A289354] p 2454 N95-27529

INSECTS

Fault tolerant features and experiments of ANTS distributed real-time system
[AD-A290133] p 2256 N95-28391

INSERTION

CAS CERN Accelerator School 5th General Accelerator Physics Course
[DE95-608324] p 2419 N95-27158

INSOLATION

A study of surface temperatures, clouds and net radiation
[NASA-CR-198589] p 2329 N95-27864

INSPECTION

Integration of video and radiation analysis data
[DE95-004165] p 2379 N95-26443

Synthesis and characterization of polymeric materials
[AD-A288613] p 2225 N95-26482

Characterization of corrosion and development of a breadboard of a D sight aircraft inspection system, phase 1
[AD-A288347] p 2125 N95-26527

An illumination planner for Lambertian polyhedral objects
[AD-A289332] p 2424 N95-26900

Evaluations of the effectiveness of environmentally benign cleaning methodologies p 2230 N95-27115

Performance of the Satellite Test Assistant Robot in JPL's Space Simulation Facility p 2154 N95-27264

Inspection methods for underwater cables
[AD-A289610] p 2312 N95-28616

INSTALLING

Development and testing of the rack insertion device
p 2158 N95-27289

The installation of and first results from the superconducting gravimeter GWR20 at the Metsahovi Station, Finland
[REPT-95:1] p 2338 N95-27995

INSTANTONS

Topological density and instantons on a lattice
[DE95-006348] p 2445 N95-28240

INSTRUMENT ERRORS

Flight evaluation of GPS/DGPS sensor systems installed in NAL Do228
[NAL-TR-1230] p 2126 N95-26585

INSTRUMENT LANDING SYSTEMS

An integrated GPS/INS/BARO and radar altimeter system for aircraft precision approach landings
[AD-A289280] p 2127 N95-26985

INSULATION

Sceening, down selection, and implementation of environmentally compliant cleaning and insulation bonding for MNASA p 2165 N95-27124

Reducing cold-start emissions by catalytic converter thermal management
[DE95-000256] p 2327 N95-27540

INSULATORS

A high velocity electromagnetic mass launcher having an ablation resistant insulator
[AD-A288231] p 2154 N95-26524

INTEGERS

On commutativity of right s-unital rings with some polynomial constraints
[DE95-608752] p 2390 N95-27330

Wigner quantum oscillators. OSP (3/2) oscillators
[DE95-608756] p 2448 N95-27334

INTEGRAL EQUATIONS

Electromagnetic hysteretic response calculation for superconductors in demagnetizing geometries
[DE95-005028] p 2264 N95-27403

INTEGRATED CIRCUITS

An optoelectronic attenuator for the high-speed control of microwave integrated circuits
[AD-A289579] p 2260 N95-26690

Comparison of the resistance of the MOS integrated circuits with various types of nuclear radiation
[DE95-608623] p 2261 N95-27023

Investigation of radiation resistance of transistors and integrated circuits using the heavy ions beam of energy higher than 1 MeV/amu and fast neutrons
[DE95-608624] p 2261 N95-27024

Novel field effect transistors for low power electronics
[AD-A288650] p 2262 N95-27096

Pulse Code Modulation (PCM) encoder handbook for Aydin Vector MMP-900 series system
[NASA-RP-1365] p 2255 N95-27435

Characterization of wafer charging mechanisms and oxide survival prediction methodology
[DE95-006583] p 2440 N95-27538
Numerical methods for determining interstitial oxygen in silicon
[DE95-007710] p 2205 N95-27683
I(sub DDQ) testing and defect classes: A tutorial
[DE95-005467] p 2306 N95-27723
Research activities of the Solid State Sciences Committee in the development of a Federal initiative on advanced materials and processing
[DE95-009328] p 2445 N95-28179
JTEC Panel report on microelectromechanical systems in Japan
[NASA-CR-197831] p 2268 N95-28239
Novel field effect transistors for low power electronics
[AD-A289929] p 2271 N95-28629
Characteristics of the standard current trip circuit
[PB95-192886] p 2271 N95-28663

INTEGRATED LIBRARY SYSTEMS
The Global Historical Climatology Network: A preview of version 2
[DE95-007003] p 2332 N95-28605

INTEGRATED OPTICS
Digital optical computing
[AD-A289395] p 2368 N95-26881
Fundamental concepts of integrated and fiber optic sensors
[NASA-TM-106920] p 2426 N95-27906

INTEGRATORS
Robust integration schemes for generalized viscoplasticity with internal-state variables. Part 1: Theoretical developments and applications
[NASA-CR-195452-PT-1] p 2310 N95-28031
Robust integration schemes for generalized viscoplasticity with internal-state variables. Part 2: Algorithmic developments and implementation
[NASA-CR-195453-PT-2] p 2310 N95-28032

INTERFACE STABILITY
Static and dynamic strain energy release rates in toughened thermosetting composite laminates
p 2188 N95-28288

INTERFACES
Bimaterial interlaces and their role in the mechanical performance of the in-situ composites
[AD-A288973] p 2182 N95-27188

INTERFACIAL ENERGY
Bimaterial interlaces and their role in the mechanical performance of the in-situ composites
[AD-A288973] p 2182 N95-27188

INTERFACIAL TENSION
Investigation of the interface between immiscible electrolytes applied to membrane electrochemistry
[AD-A288887] p 2199 N95-26350

INTERFERENCE FIT
Design and structural validation of CF116 upper wing skin boron doubler p 2132 N95-27510

INTERFEROMETERS
Preliminary design study of the beam collapser and certain optomechanical aspects of the siderostat
[AD-A288423] p 2423 N95-26549
Satellite surface material composition from synthetic spectra
[AD-A289236] p 2163 N95-26963
Flow visualization of a turbulent shear flow using an optical wavefront sensor
[AD-A289208] p 2277 N95-26986
Ultrasonic study on ternary liquid systems by laser-sound interaction
[DE95-608783] p 2207 N95-27929
Measurement of particle transport coefficients on Alcator C-Mod
[DE95-007763] p 2411 N95-28020
A phase-stepped point diffraction interferometer using liquid crystals
[NASA-TM-106922] p 2293 N95-28037

INTERFEROMETRY
Uncertainties in the calibration of hydrophones at NPL by the three-transducer spherical-wave reciprocity method in the frequency range 10 kHz on 500 kHz
[PB95-185245] p 2401 N95-26615
Satellite surface material composition from synthetic spectra
[AD-A289236] p 2163 N95-26963

INTERGRANULAR CORROSION
Environmentally assisted cracking of high strength beta titanium alloys
[AD-A289156] p 2213 N95-27032

INTERIOR BALLISTICS
Ram accelerator performance calculations using a modified version of the NASA CET89 equilibrium chemistry code
[AD-A289554] p 2201 N95-26678

INTERLAYERS
Materials Research Society Symposium Proceedings. Volume 339: Diamond, SiC and nitride wide bandgap semiconductors
[AD-A288690] p 2437 N95-26818
Effects of interlayers on the scratch adhesion performance of ultra-thin films of copper and gold on silicon substrates
[DE95-007367] p 2220 N95-28044

INTERMETALLICS
First-principles study of intermetallic phase stability in the ternary Ti-Al-Nb alloy system
[DE95-005259] p 2213 N95-27082
The physics and chemistry of heavy Fermions
[DE95-005277] p 2407 N95-27431
The response of hydrotalcite coated aluminum to sealing with transition metal salt solutions
[DE95-004767] p 2234 N95-27460
C15 intermetallic compounds HfV2+Nb
[DE95-005264] p 2215 N95-27463
A new technique for measuring the separation of closely spaced dislocations using residual contrast conditions
[DE95-007147] p 2219 N95-27968
Phase stability and elasticity of C15 transition-metal intermetallic compounds
[DE95-007876] p 2219 N95-28026
Trace elements and the mechanical properties of intermetallic compounds
[DE95-007378] p 2220 N95-28046
Electronic structure of ordered and disordered transition metal aluminides
[DE95-609034] p 2223 N95-28250

INTERMOLECULAR FORCES
A density functional/molecular dynamics study of the structure of liquid nitromethane
[AD-A289224] p 2404 N95-26960

INTERNAL COMBUSTION ENGINES
Biomass Pyrolysis Oil Properties and Combustion Meeting
[DE95-004017] p 2204 N95-27438
A hybrid vehicle evaluation code and its application to vehicle design. Revision 1
[DE95-008053] p 2303 N95-28029
A hybrid vehicle evaluation code and its application to vehicle design, revision 2
[DE95-008060] p 2303 N95-28139

INTERNAL ENERGY
Statistical model for molecular internal energy exchange in DSMC method for rarefied flow analysis
[ISAS-R-654] p 2274 N95-26741
Burst of energetic ions from reversed field pinch plasma
[DE94-765447] p 2432 N95-27870

INTERNAL FLOW
A fixed time performance evaluation of parallel CFD applications
[DE94-014240] p 2273 N95-26445
Contribution to the optimal shape design of two-dimensional internal flows with embedded shocks
[NASA-CR-195062] p 2389 N95-26672
Calculation of three-dimensional (3-D) internal flow by means of the velocity-vorticity formulation on a staggered grid
[NASA-TM-110352] p 2122 N95-27258
Comparison of numerical results and multicavity purge and rim seal data with extensions to dynamics
[NASA-TM-106685] p 2168 N95-27434

INTERNAL FRICTION
Stress transfer from axially loaded fiber to matrix in a microcomposite
[DE95-007366] p 2183 N95-28043

INTERNAL PRESSURE
Stress analysis and failure of an internally pressurized composite-jacketed steel cylinder p 2186 N95-28280
Composite fuselage shell structures research at NASA Langley Research Center p 2194 N95-28466

INTERNATIONAL COOPERATION
AGARD membership, 1995
[AGARD-MEMB-95] p 2450 N95-26353
High-stakes aviation: US-Japan technology linkages in transport aircraft
[LC-94-65759] p 2126 N95-27907
JTEC/WTEC annual report and program summary: 1993/94
[NASA-CR-198563] p 2475 N95-28038
SIHTI 2: Energy and environmental technology. Yearbook 1993 of the research programme
[DE95-755135] p 2331 N95-28202
Global trade in satellites and launch services
[GPO-84-811] p 2165 N95-28342

INTERNATIONAL SPACE STATION
International Space Station Alpha trace contaminant control subassembly life test report
[NASA-TM-108488] p 2358 N95-26364
Feasibility of flywheel energy storage systems for applications in future space missions
[NASA-CR-195422] p 2316 N95-26393
Some mechanical design aspects of the European Robotic Arm p 2155 N95-27262
Microgravity Sciences Biotechnology Facility assessment
[NASA-CR-196602] p 2351 N95-27329

INTERNATIONAL TRADE
Global trade in satellites and launch services
[GPO-84-811] p 2165 N95-28342

INTERNETS
A decentralized software bus based on IP multicasting
[NASA-CR-197768] p 2366 N95-26695
Performance and policy dimensions in internet routing
[NASA-CR-197772] p 2367 N95-26770
Spinning a web: Publishing the SEI software configuration management research on the world wide web
[AD-A288708] p 2377 N95-27250
A high performance totally ordered multicast protocol
[NASA-CR-197765] p 2371 N95-27252
Sequence comparison on a cluster of workstations using the PVM system
[DE95-006527] p 2378 N95-27709
Browsing the World Wide Web from behind a firewall
[DE95-006805] p 2455 N95-27957
Teaching interdisciplinary computational science from an electronic book on the Internet
[DE95-006525] p 2373 N95-28498
Building an electronic book on the Internet. CSEP:An interdisciplinary syllabus for teaching computational science at the graduate level
[DE95-006526] p 2375 N95-28632
Practical considerations for network addressing using CIDR
[PB95-195335] p 2379 N95-28665

INTERPLANETARY MEDIUM
Differenced Range Versus Integrated Doppler (DRVID) ionospheric analysis of metric tracking in the Tracking and Data Relay Satellite System (TDRSS)
p 2147 N95-27766

INTERPLANETARY NAVIGATION
Multi-spacecraft coherent Doppler and ranging for interplanetary-navigation p 2150 N95-27786

INTERPLANETARY SPACECRAFT
Application of non-coherent Doppler data types for deep space navigation p 2151 N95-27788

INTERPLANETARY TRAJECTORIES
Application of non-coherent Doppler data types for deep space navigation p 2151 N95-27788

INTERPOLATION
The fBm Interpolator
[AD-A288996] p 2388 N95-26459
SUPG finite numerical element solutions for non-compressible Navier-Stokes equation sets
[AD-A289600] p 2274 N95-26718

INTERPROCESSOR COMMUNICATION
An architecture for optimal all-to-all personalized communication
[AD-A288532] p 2377 N95-26840
A demonstration of Client/Server technology using remote procedure calls for an application of file migration for moving records based on location
[AD-A289391] p 2453 N95-26864
Digital optical computing
[AD-A289395] p 2368 N95-26881
A demonstration of client-server technology using remote procedure calls with an application in file migration using heuristics
[AD-A289467] p 2255 N95-27149
Simulator report for SCI systems with HIC-router
[PB95-196580] p 2379 N95-28093
Two implementation relations and the correctness of communicating replicated processes
[PB95-195640] p 2375 N95-28645

INTERSTELLAR CHEMISTRY
Search for molecular absorptions with the Fourier Transform Spectrometer
[NASA-CR-198648] p 2462 N95-28222

INTERSTELLAR GAS
Molecular cloud content of early-type galaxies. V. CO in elliptical galaxies
[PB95-185153] p 2461 N95-27320
Theoretical studies of interstellar processes
[NASA-CR-198647] p 2462 N95-28216

INTERSTELLAR MATTER
CO, HCO(+) and HCN absorption in the gravitational lens candidate B0218+357 at z=0.685
[PB95-185146] p 2461 N95-26522
A long-term space astrophysics research program: An x-ray perspective of the components and structure of galaxies
[NASA-CR-197787] p 2461 N95-26593

INTERSTITIALS
Numerical methods for determining interstitial oxygen in silicon
[DE95-007710] p 2205 N95-27683
Aspects of macroscopic phase separation and interstitial oxygen ordering in oxygen doped La2CuO(4+delta)
[DE95-007864] p 2443 N95-28060
INTRACRANIAL PRESSURE
Non-invasive method and apparatus for monitoring intracranial pressure and pressure volume index in humans
[NASA-CASE-LAR-13894-1] p 2353 N95-26889
INTRUSION
Numerical simulation of coupled flow and transport with TOUGH2: A verification study
[DE95-008351] p 2287 N95-28225
INVARIANCE
Generalized Schwarzians in several variables and Moebius invariant differential operators
[PB95-185211] p 2388 N95-26539
Transverse tau polarization in inclusive bar-B yields tau bar-nu X decays
[DE95-610325] p 2407 N95-27409
INVENTORIES
Investigation on LCA (Life Cycle Analysis/assessment)
[DE95-759260] p 2330 N95-27942
INVERSE SCATTERING
Nonlinear problems in fluid dynamics and inverse scattering: Nonlinear waves and inverse scattering
[AD-A289148] p 2278 N95-27001
INVERSIONS
Structures for time-reversed inversion in filter banks
[AD-A289238] p 2261 N95-26964
Far-infrared laser interferometry measurements on the STP-3(M) reversed-field pinch
[DE94-765440] p 2297 N95-27868
INVESTMENT CASTING
Effect of processing parameters on surface finish for fused deposition machinable wax patterns
[NASA-TP-3550] p 2244 N95-26769
INVISCID FLOW
A fixed time performance evaluation of parallel CFD applications
[DE94-014240] p 2273 N95-26445
The calculation of the mass moment of inertia of a fluid in a rotating rectangular tank
[NASA-CR-197777] p 2278 N95-27165
A numerical method for solving the three-dimensional parabolized Navier-Stokes equations
[NASA-CR-198159] p 2287 N95-27917
IODINE
Energy transfer from excited nitrenes at high density
[AD-A288352] p 2403 N95-26466
Collisional dynamics and spectroscopic studies of highly excited rovibrational levels of I2(X)(0(+)(sub g)) via stimulated emission pumping
[AD-A289447] p 2295 N95-27172
IODINE LASERS
Collisional dynamics and spectroscopic studies of highly excited rovibrational levels of I2(X)(0(+)(sub g)) via stimulated emission pumping
[AD-A289447] p 2295 N95-27172
ION ACOUSTIC WAVES
Nonlinear instability and chaos in plasma wave-wave interactions. I. Introduction
[DE95-005529] p 2429 N95-27084
ION ATOM INTERACTIONS
Atomic and electronic structure of clusters from Car-Parrinello method
[DE94-634463] p 2403 N95-26437
Resonant coherent excitation of N6(+) and Mg11(+) in planar channeling: Anisotropies in ionization probabilities and X-ray emission
[DE95-006732] p 2417 N95-28595
ION BEAMS
Advanced solid lubricant films by Ion-Beam Assisted Deposition
[AD-A288866] p 2225 N95-26499
Temperature dependence of ion-beam-induced amorphization in (Beta)-SiC
[DE95-007164] p 2438 N95-27087
Characterization and control of wafer charging effects during high-current ion implantation
[DE95-006587] p 2440 N95-27471
Systematic study of the ion beam mixing of oxide markers into alumina
[DE95-006262] p 2217 N95-27555
On the physics of ion ring generation for the stabilization of FRX discharges
[DE95-007105] p 2410 N95-27922
The diffusion properties of ion implanted species in selected target materials
[DE95-007006] p 2442 N95-27959
Collisions of highly charged ions with electrons, atoms and surfaces
[DE95-007393] p 2413 N95-28078
Pulsed ion beam surface treatment for preparing rapidly solidified corrosion resistant steel and aluminum surfaces
[DE95-007741] p 2221 N95-28116
Mutagenesis in human cells with accelerated H and Fe ions
[NASA-CR-198599] p 2351 N95-28177
On ionic charge distributions of heavy evaporation residues passing through a carbon foil
[DE94-629016] p 2414 N95-28184
ION CHARGE
Projectile image acceleration, neutralization and electron emission during grazing interactions of multicharged ions with Au(110)
[DE95-007394] p 2409 N95-27551
ION CYCLOTRON RADIATION
Energetic particle destabilization of shear Alfven waves in stellarators and tokamaks
[DE95-006393] p 2431 N95-27419
Experimental aspects of effects of high-energy particles on Alfven modes
[DE95-003383] p 2432 N95-27873
One dimensional global and local solution for ICRF heating
[DE95-007984] p 2392 N95-28110
Engineering design of the ITER RF systems
[DE95-008064] p 2434 N95-28140
Faraday screen sputtering on TPX
[DE95-008347] p 2434 N95-28224
ION DENSITY (CONCENTRATION)
Energization and transport of ions of ionospheric origin in the terrestrial magnetosphere
[NASA-CR-197813] p 2336 N95-26699
A model of the diurnal variation in magnesium ion density and radiance in the thermosphere
[AD-A289824] p 2339 N95-28575
ION DISTRIBUTION
Modification of the optical properties of glass by sequential ion implantation
[DE95-007401] p 2237 N95-28080
ION EMISSION
Energization and transport of ions of ionospheric origin in the terrestrial magnetosphere
[NASA-CR-198618-REV] p 2338 N95-28035
ION ENGINES
Plume measurements with the T5 xenon ion thruster
[AD-A288697] p 2167 N95-26489
ION EXCHANGE RESINS
An investigation of the applicability of the new Reillex(tm)-HPQ anion exchange resin system for technetium/rhenium and uranium in the Hanford waste tanks
[DE95-007643] p 2412 N95-28051
ION EXCHANGING
Investigation of the interface between immiscible electrolytes applied to membrane electrochemistry
[AD-A288887] p 2199 N95-26350
Molecular approach to mesoporous metal sulfides
[DE95-005418] p 2202 N95-27137
NO decomposition in non-reducing atmospheres
[DE95-007895] p 2205 N95-27690
An investigation of the applicability of the new Reillex(tm)-HPQ anion exchange resin system for technetium/rhenium and uranium in the Hanford waste tanks
[DE95-007643] p 2412 N95-28051
ION IMPLANTATION
Effects of helium pre-implantation on the microstructure and mechanical properties of irradiated 316 stainless steel
[DE95-007162] p 2214 N95-27086
Characterization and control of wafer charging effects during high-current ion implantation
[DE95-006587] p 2440 N95-27471
Characterization of wafer charging mechanisms and oxide survival prediction methodology
[DE95-006583] p 2440 N95-27538
Characterization of defects in deuterium-implanted beryllium
[DE95-005688] p 2217 N95-27553
The diffusion properties of ion implanted species in selected target materials
[DE95-007006] p 2442 N95-27959
Modification of the optical properties of glass by sequential ion implantation
[DE95-007401] p 2237 N95-28080
Coherent V2O3 precipitates in alpha-Al2O3CO-implanted with vanadium and oxygen
[DE95-007404] p 2444 N95-28081
Plasma source ion implantation of ammonia into electroplated chromium
[DE95-006275] p 2444 N95-28125
Cavity formation and impurity gettering in He-implanted Si
[DE95-007744] p 2444 N95-28127
Chemical and electrical properties of cavities in silicon and germanium
[DE95-006812] p 2445 N95-28206
ION IRRADIATION
Amorphization of complex ceramics by heavy-particle irradiations
[DE95-005725] p 2236 N95-27733
Density changes in amorphous Pd80Si20 during low temperature ion irradiation
[DE95-007132] p 2441 N95-27928
Toward a mechanistic understanding of radiation effects in materials
[DE95-006530] p 2221 N95-28120
ION PROPULSION
Plume measurements with the T5 xenon ion thruster
[AD-A288697] p 2167 N95-26489
ION SCATTERING
An overview of the Evaluation of Oxygen Interactions with Materials 3 experiment: Space Shuttle Mission 46, July-August 1992 p 2210 N95-27630
ION SOURCES
Intermediate energy neutrons at WNR. Spin-isospin and energy dependence of the NN interaction and the nuclear response
[DE95-006291] p 2408 N95-27466
Collisions of highly charged ions with electrons, atoms and surfaces
[DE95-007393] p 2413 N95-28078
ION STORAGE
Extended linear ion trap frequency standard apparatus
[NASA-CASE-NPO-19081-1-CU] p 2404 N95-26861
Extended linear ion trap frequency standard apparatus
[NASA-CASE-NPO-19081-1-CU] p 2416 N95-28348
ION TEMPERATURE
Energization and transport of ions of ionospheric origin in the terrestrial magnetosphere
[NASA-CR-197813] p 2336 N95-26699
ION TRAPS (INSTRUMENTATION)
Extended linear ion trap frequency standard apparatus
[NASA-CASE-NPO-19081-1-CU] p 2416 N95-28348
IONIC COLLISIONS
Physics with relativistic heavy ions: QGP and other delicacies
[DE95-007014] p 2406 N95-27307
Characterization of collision cascade damage in Ca2La8(SiO4)6O2 by HRTEM
[DE95-005719] p 2440 N95-27491
Lattice calculation for lepton capture from vacuum-pair production in relativistic heavy-ion collisions
[DE95-007392] p 2413 N95-28077
Aspects of strangeness
[DE95-008314] p 2414 N95-28169
IONIZATION
Comparison of the resistance of the MOS integrated circuits with various types of nuclear radiation
[DE95-608623] p 2261 N95-27023
Models of symbiotic stars p 2460 N95-27077
Laser ionization of molecular clusters
[DE95-007011] p 2296 N95-27550
Observation on radiation transfer experiments using k-shell absorption spectra
[DE95-008068] p 2434 N95-28141
IONIZATION GAGES
Neutral gas compression in the Alcator C-Mod divertor. Experimental observations
[DE95-007762] p 2432 N95-27688
IONIZING RADIATION
Radiation safety aspects of commercial high-speed flight transportation
[NASA-TP-3524] p 2465 N95-26427
Ionizing radiation measurements on LDEF: A0015 Free flyer biostack experiment
[NASA-CR-196603] p 2202 N95-27168
Low noise monolithic Si JFETS for operation in the 90-300K range and in high radiation environments
[DE95-007303] p 2269 N95-28244
IONOSPHERIC COMPOSITION
Energization and transport of ions of ionospheric origin in the terrestrial magnetosphere
[NASA-CR-198618-REV] p 2338 N95-28035
IONOSPHERIC CONDUCTIVITY
PRISM validation
[AD-A288476] p 2337 N95-27703
IONOSPHERIC DISTURBANCES
Space tether-radar data processing
[AD-A289654] p 2250 N95-26725
IONS
Energization and transport of ions of ionospheric origin in the terrestrial magnetosphere
[NASA-CR-197813] p 2336 N95-26699
Atomic physics with highly charged ions
[DE95-007325] p 2407 N95-27439
PXAMS: Projectile X ray AMS: X ray yields and applications
[DE95-006438] p 2204 N95-27496

Projectile image acceleration, neutralization and electron emission during grazing interactions of multicharged ions with Au(110)
[DE95-007394] p 2409 N95-27551

Burst of energetic ions from reversed field pinch plasma
[DE94-765447] p 2432 N95-27870

Polarizing matter and antimatter: A new method
[DE95-007109] p 2421 N95-27923

An investigation of the chemical and physical properties of pristine, electrochromically damaged, and photochromically damaged KTiOPO4 (KTP) using surface analytical and optical spectroscopic techniques
[DE95-007865] p 2443 N95-28023

Lattice calculation for lepton capture from vacuum-pair production in relativistic heavy-ion collisions
[DE95-007392] p 2413 N95-28077

Infrared spectroscopy of nonclassical ions and their complexes
[DE95-008487] p 2413 N95-28091

Resonant coherent excitation of N6(+) and Mg11(+) in planar channeling: Anisotropies in ionization probabilities and X-ray emission
[DE95-006732] p 2417 N95-28595

IRIDIUM ALLOYS

Stability of reference masses 4: Growth of carbonaceous contamination on platinum-iridium mass standard surfaces, and its cleaning by UV/ozone treatment
[PB95-190096] p 2226 N95-26745

IRON

Optical features of nanosize iron and molybdenum sulfide clusters
[DE95-005417] p 2202 N95-27136

A new method of evaluating the explicit magnetic-state-dependent energy in semi-empirical calculations of iron
[AD-A289098] p 2399 N95-27398

Electrolyte effects in Li(Si)/FeS2 thermal batteries
[DE95-001614] p 2264 N95-27474

Magnetic and structural properties of Fe/Pd multilayers studied by magnetic x-ray dichroism and x-ray absorption spectroscopy
[DE95-007095] p 2206 N95-27755

Mutagenesis in human cells with accelerated H and Fe ions
[NASA-CR-198599] p 2351 N95-28177

IRON ALLOYS

Ultra high purity, dimensionally stable INVAR 36
[NASA-CASE-NPO-19358-1-CU] p 2213 N95-26862

Electronic structure of ordered and disordered transition metal aluminides
[DE95-609034] p 2223 N95-28250

IRON OXIDES

Iron oxides characterization by Moessbauer spectroscopy
[DE95-607869] p 2202 N95-27199

Charge distribution analysis of catalysts under simulated reaction conditions
[DE95-006943] p 2204 N95-27549

Superior catalysts for selective catalytic reduction of nitric oxide
[DE95-007903] p 2205 N95-27691

IRRADIANCE

SeaWiFS technical report series. Volume 26: Results of the SeaWiFS Data Analysis Round-Robin, July 1994 (DARR-1994)
[NASA-TM-104566-VOL-26] p 2345 N95-26430

The attenuation of microwave radiation by fog and rain
[AD-A288326] p 2249 N95-26562

Calculations of downward IR surface fluxes in the 500-3,000 cm(exp -1) wavenumber range for the 1994 ICRCCM model intercomparison study
[DE95-006430] p 2328 N95-27708

SeaWiFS technical report series. Volume 27: Case studies for SeaWiFS calibration and validation, part 3
[NASA-TM-104566-VOL-27] p 2348 N95-28030

Ultrashort Pulse retrieval using FROG trace irradiance moments and the adaptive neural networks backpropagation algorithm
[DE95-007153] p 2299 N95-28220

IRRADIATION

Radiation in everyday life
[DE95-604111] p 2349 N95-26597

Investigation of radiation resistance of transistors and integrated circuits using the heavy ions beam of energy higher than 1 MeV/amu and fast neutrons
[DE95-608624] p 2261 N95-27024

Effects of helium pre-implantation on the microstructure and mechanical properties of irradiated 316 stainless steel
[DE95-007162] p 2214 N95-27086

Temperature dependence of ion-beam-induced amorphization in (Beta)-SiC
[DE95-007184] p 2438 N95-27087

Density changes in amorphous Pd80Si20 during low temperature ion irradiation
[DE95-007132] p 2441 N95-27928

Sintering of textured YBa2Cu3O(7-x) under intensive Co-60 gamma irradiation
[DE95-007098] p 2442 N95-27950

The real structure of columnar pinning centers in heavy-ion-irradiated cuprate superconductors
[DE95-003948] p 2445 N95-28186

ISING MODEL

DNA denaturation through a model of the partition points on a one-dimensional lattice
[DE95-607909] p 2439 N95-27201

ISLANDS

Automated integration of genomic physical mapping data via parallel simulated annealing
[DE95-008057] p 2351 N95-27725

ISOLATION

Chemistry involving the separation, isolation, and immobilization of 3-5 compound semiconductor nanocrystals and quantum dots
[AD-A288381] p 2436 N95-26473

Computational and matrix isolation studies of (2- and 3-furyl)methylene
[AD-A280085] p 2178 N95-28154

High energy density systems in cryogenic media: The production and reactions of atoms and radicals
[AD-A289818] p 2417 N95-28572

ISOLATORS

Experimental investigation of inlet-combustor isolators for a dual-mode scramjet at a Mach number of 4
[NASA-TP-3502] p 2140 N95-28343

ISOMERS

Iron oxides characterization by Moessbauer spectroscopy
[DE95-607869] p 2202 N95-27199

ISOTHERMAL FLOW

A fast numerical method for isothermal resin transfer mold filling
[AD-A288944] p 2179 N95-26565

Testing the correlation between seismic stratigraphy, diagenesis and physical rock properties: Evaluation of fluid flow during early and late diagenesis
[DE95-008338] p 2338 N95-28083

ISOTOPE RATIOS

D/H and O-18/O-16 partitioning between water liquid and vapor in the system H2O-Na-K-Mg-Ca-Cl-SO4 from 0 to 350 C
[DE95-007013] p 2208 N95-27961

ISOTOPIC LABELING

Low temperature carrier transport properties in isotopically controlled germanium
[DE95-008489] p 2444 N95-28092

ISOTROPIC MEDIA

Analysis of electromagnetic problems involving chiral, bi-isotropic, and uniaxial bianisotropic media
[PB95-185096] p 2248 N95-26450

Analysis of plate-twist test for in-plane shear modulus of composite materials (revised)
[PB95-190195] p 2308 N95-26749

Depth migration in transversely isotropic media with explicit operators
[DE95-007670] p 2337 N95-27442

Transformation to zero offset in transversely isotropic media
[DE95-007669] p 2339 N95-28192

Fowler DMO and time migration for transversely isotropic media with explicit operators
[DE95-007671] p 2339 N95-28194

Scattering by a small object close to an interface. 3. Buried object
[PB95-184909] p 2256 N95-28354

ISOTROPIC TURBULENCE

A phenomenological treatment of rotating turbulence
[NASA-CR-198168] p 2288 N95-28228

ISOTROPY

Transformation to zero offset in transversely isotropic media
[DE95-007669] p 2339 N95-28192

Fowler DMO and time migration for transversely isotropic media with explicit operators
[DE95-007671] p 2339 N95-28194

ITERATION

Random relaxation of fixed point iteration
[PB95-185013] p 2389 N95-26910

Computing NORAD mean orbital elements from a state vector
[AD-A289281] p 2146 N95-27033

Optical implementation of inner product neural associative memory
[NASA-CASE-NPO-18491-2-CU] p 2427 N95-28363

Remarks on the growth of the resolvent operators for power bounded operators
[PB95-195418] p 2393 N95-28653

ITERATIVE SOLUTION

Introduction to multigrid methods
[NASA-CR-195045] p 2388 N95-26395

Distributed computation of Pareto solutions in N-player games
[PB95-185039] p 2396 N95-26912

An easy way to analyze longitudinal and lateral-directional trim problems with AEO or OEI
p 2119 N95-26949

Vector algorithms for solving 3D nonlinear magnetostatic problems
[DE95-608737] p 2399 N95-27298

The comparison of P(sub 1) and simplified P(sub 2) synthetic acceleration for iterative methods in transport solutions
[DE94-018306] p 2390 N95-27304

IUE

Observations of comets with the IUE
[NASA-CR-197816] p 2461 N95-27166

J

J INTEGRAL

Effect of internal hydrogen on the mixed-mode 1/3 fracture toughness of a ferrific/martensitic stainless steel
[DE95-005722] p 2216 N95-27479

JACKETS

The effect on stability and thermal hydraulic quenchback of perforating the jacket of a cable-in-conduit conductor
[DE95-005392] p 2262 N95-27083

AMCC casting development. Volume 1: Executive Summary
[NASA-CR-196597] p 2247 N95-28419

JAMMING

Analysis and simulation of narrowband GPS jamming using digital excision temporal filtering
[AD-A289328] p 2127 N95-26898

Nonlinear signal processing schemes for robust target detection in radar
[AD-A288449] p 2255 N95-27185

JAPAN

JTEC Panel report on electronic manufacturing and packaging in Japan
[NASA-CR-197830] p 2263 N95-27226

Microelectronics in Japan p 2263 N95-27227

Building the electronic industry's roadmaps
p 2263 N95-27228

Japan's technology and manufacturing infrastructure
p 2263 N95-27229

Japan's electronic packaging technologies
p 2263 N95-27230

Electronics manufacturing and assembly in Japan
p 2263 N95-27231

Quality assurance and reliability in the Japanese electronics industry p 2263 N95-27232

JTEC monograph on biodegradable polymers and plastics in Japan: Research, development, and applications
[NASA-CR-198562] p 2235 N95-27694

High-stakes aviation: US-Japan technology linkages in transport aircraft
[LC-94-65759] p 2126 N95-27907

JTEC/WTEC annual report and program summary: 1993/94
[NASA-CR-198563] p 2475 N95-28038

JTEC Panel report on microelectromechanical systems in Japan
[NASA-CR-197831] p 2268 N95-28239

JAPANESE SPACECRAFT

Element material experiment by EFFU
p 2145 N95-27667

JET AIRCRAFT

Aircraft IR/acoustic detection evaluation. Volume 2: Development of a ground-based acoustic sensor system for the detection of subsonic jet-powered aircraft
[NASA-CR-189705-VOL-2] p 2402 N95-28073

JET AIRCRAFT NOISE

Supersonic coaxial jet noise predictions
[NASA-TM-106917] p 2401 N95-26801

Preliminary results and research capabilities of a new jet facility at the University of Kansas
p 2119 N95-26951

Basic studies in turbulent shear flows
[AD-A289145] p 2277 N95-26998

A numerical study of fundamental shock noise mechanisms
[NASA-TM-110608] p 2401 N95-27908

Response of multi-panel assembly to noise from a jet in forward motion
[NASA-CR-198164] p 2289 N95-28673

JET CONTROL

The application of waterjets for cleaning
p 2233 N95-27130

JET ENGINE FUELS
Mechanism of deposit formation on fuel-wetted hot metal surfaces
[AD-A289847] p 2210 N95-28621

JET ENGINES
Performance characterization of a highly-offset diffuser with and without blowing vortex generator jets
[AD-A289334] p 2122 N95-26901
Preliminary results and research capabilities of a new jet facility at the University of Kansas
p 2119 N95-26951

JET FLOW
The noise reduction potential of dual-stream coaxial rectangular improperly expanded jet flows
[NASA-CR-197820] p 2277 N95-26995
The application of waterjets for cleaning
p 2233 N95-27130
An outflow boundary condition for aeroacoustic computations
[NASA-TM-106930] p 2279 N95-27175
Response of multi-panel assembly to noise from a jet in forward motion
[NASA-CR-198164] p 2289 N95-28673

JET MIXING FLOW
Tank pressure control in low gravity by jet mixing
[NASA-CR-191012] p 2243 N95-28001
DNS, LES and stochastic modeling of turbulent reacting flows
[AD-A280099] p 2287 N95-28155

JET NOZZLES
Visualization of the multiple supersonic jet oscillations by swept focused strobed schlieren technique
p 2119 N95-26952

JET STREAMS (METEOROLOGY)
Meso-beta scale numerical simulation studies of terrain-induced jet streak mass/momentum perturbations
[NASA-CR-197804] p 2335 N95-26592
An observational study on the onset of the summer monsoon over eastern Asia in 1979
[AD-A289637] p 2341 N95-26723

JETTISONING
A numerical model to predict the fate of jettisoned aviation fuel
[AD-A289336] p 2242 N95-26842

JFET
Low noise monolithic Si JFETS for operation in the 90-300K range and in high radiation environments
[DE95-007303] p 2269 N95-28244

JOINTS (ANATOMY)
Automatic locking knee brace joint
[NASA-CASE-MFS-28997-1] p 2360 N95-27501

JOINTS (JUNCTIONS)
Status of bonded boron/epoxy doublers for military and commercial aircraft structures p 2132 N95-27506
Load transfer in the stiffener-to-skin joints of a pressurized fuselage
[NASA-CR-198610] p 2310 N95-27865
Design, analysis, and testing of a metal matrix composite web/flange intersection p 2191 N95-28433

JUNCTION DIODES
Survey on step recovery diode and its applications
[PB95-184974] p 2260 N95-26646
Amorphous silicon pixel radiation detectors and associated thin film transistor electronics readout
[DE95-006568] p 2265 N95-27678

JUNCTION TRANSISTORS
Demonstration of photo-assisted tunneling process across the coulomb blockade energy gap in mesoscopic tunnel junctions — photon-assisted tunneling
[AD-A289534] p 2438 N95-26872

K

K LINES
Solar UV flux measurements from the SBUV2 monitor on the NOAA9 satellite. Part 1: Mg II h and k line core-to-wing ratios for 1986-1988
[PB95-181962] p 2464 N95-28007

K-EPSILON TURBULENCE MODEL
Experience with k-epsilon turbulence models for heat transfer computations in rotating p 2285 N95-27887
Experiences with two-equation turbulence models
p 2286 N95-27894

KALMAN FILTERS
Control of a large space structure using multiple model adaptive estimation and control techniques
[AD-A289309] p 2162 N95-26916
Multiple model adaptive estimation and head motion tracking in a virtual environment: An engineering approach
[AD-A289299] p 2359 N95-27046
Analysis of filter tuning techniques for sequential orbit determination p 2146 N95-27764
A PC-based magnetometer-only attitude and rate determination system for gyroless spacecraft
p 2147 N95-27770
Attitude determination using an adaptive multiple model filtering Scheme p 2148 N95-27772
An automated method of tuning an attitude estimator
p 2148 N95-27774
Post Kalman progress p 2148 N95-27776
Estimation of attitude sensor timetag biases
p 2153 N95-27799
Autonomous control system reconfiguration for spacecraft with non-redundant actuators
p 2153 N95-27802
Contingency designs for attitude determination of TRMM p 2154 N95-27803

KAONS
A simple relativistic model of pp-bar yields K(+)K(-)
[DE95-608852] p 2406 N95-27318
The KTeV pure CsI calorimeter
[DE95-005747] p 2292 N95-27751
Rare decays/CP: The perspective of a kaon physicist
[DE95-005964] p 2416 N95-28338

KAPITZA RESISTANCE
Subharmonic phonon transmission and Kapitza conductance between crystals with very different vibrational spectra
[DE95-609151] p 2447 N95-28608

KAPTON (TRADEMARK)
An overview of the Evaluation of Oxygen Interactions with Materials 3 experiment: Space Shuttle Mission 46, July-August 1992 p 2210 N95-27630
Evaluation of Oxygen Interactions with Materials 3: Mission and induced environments
p 2210 N95-27631
Effects of atomic oxygen on polymeric materials flown on EOIM-3 p 2242 N95-27638
Molecular beam scattering from C-13 enriched Kapton and correlation with the EOIM-3 carousel experiment
p 2419 N95-27643

KELVIN WAVES
Spectral analyses, climatology, and interannual variability of Nimbus-7 TOMS version 6 total column ozone
[NASA-RP-1360] p 2341 N95-26689

KELVIN-HELMHOLTZ INSTABILITY
Computational and experimental studies of hydrodynamic instabilities and turbulent mixing
[DE95-006837] p 2288 N95-28603

KEPLER LAWS
Kepler Equation solver p 2147 N95-27767

KERNEL FUNCTIONS
Filtered kernel density estimation
[AD-A288293] p 2394 N95-26413
Applications of boundary element methods on the Intel Paragon
[DE94-014135] p 2393 N95-28393
Non-linear resistive grid kernel estimator useful in single feature, two-class pattern classification
[AD-D017394] p 2271 N95-28614

KEVLAR (TRADEMARK)
Design prediction for long term stress rupture service of composite pressure vessels p 2188 N95-28291
Utilization of composite materials by the US Army: A look ahead p 2189 N95-28421

KINEMATIC EQUATIONS
A new angle on the Euler angles
p 2153 N95-27800

KINEMATICS
Learning Hand/Eye coordination by an active observer. part 1: Organizing centers
[AD-A289502] p 2356 N95-26843
Telepresent spacecraft docking with object-based bilateral control (OBBC)
[AD-A289268] p 2163 N95-26980
Studies of kinematic distributions and mass reconstruction of CDF top candidate events
[DE95-005108] p 2408 N95-27478
An MME-based attitude estimator using vector observations p 2148 N95-27775

KINETIC ENERGY
Deep convection in the Mediterranean Sea
[AD-A288497] p 2346 N95-26647
The role of microprocesses in macroscale magnetotail dynamics
[DE95-006288] p 2432 N95-27673

KINETIC EQUATIONS
Axionic fuel for sun
[DE95-608788] p 2464 N95-27342

KINETICS
DNA denaturation through a model of the partition points on a one-dimensional lattice
[DE95-607909] p 2439 N95-27201

KINOFORM
Design and fabrication of a diamond-turned hybrid diffractive/refractive singlet for visible applications at ORNL
[DE95-007007] p 2427 N95-28552

KLYSTRONS
Time-dependent multi-dimensional simulation studies of the electron output scheme for high power FELs
[DE95-006593] p 2297 N95-27737

KNEE (ANATOMY)
Automatic locking knee brace joint
[NASA-CASE-MFS-28997-1] p 2360 N95-27501

KNOWLEDGE BASED SYSTEMS
A knowledge highway for integrated modelling from manufacturing to design
[AD-A288872] p 2247 N95-28187

KNOWLEDGE BASES (ARTIFICIAL INTELLIGENCE)
Digital systems validation. Chapter 20 Artificial Intelligenge with applications for aircraft. Handbbook, volume 2
[AD-A288492] p 2380 N95-26638
Generalized probabilistic reasoning and empirical studies on computational efficiency and scalability
[AD-A289185] p 2395 N95-27016

KNOWLEDGE REPRESENTATION
Generalized probabilistic reasoning and empirical studies on computational efficiency and scalability
[AD-A289185] p 2395 N95-27016
Applying AI tools to operational space environmental analysis p 2382 N95-27376
Automated database design from natural language input p 2383 N95-27378
Comprehension and retrieval of failure cases in airborne observatories p 2145 N95-27394
A path-oriented knowledge representation system: Defusing the combinatorial system p 2386 N95-27395

KOLMOGOROV-SMIRNOV TEST
Statistical analysis of tensile mechanical property data of carbon/polyimide composites
[NAL-TR-1238] p 2180 N95-26667

KORTEWEG-DEVRIES EQUATION
Korteweg-de Vries equation: Convergent Birkhoff normal form
[PB95-196275] p 2393 N95-28611

KRYPTON
Precision electromagnetic calorimetry with liquid krypton
[DE95-006685] p 2292 N95-27677
Performance of an accordion electromagnetic calorimeter with liquid krypton
[DE95-006693] p 2292 N95-27738
Low noise monolithic Si JFETS for operation in the 90-300K range and in high radiation environments
[DE95-007303] p 2269 N95-28244

KRYPTON FLUORIDE LASERS
Spectral broadening of KrF laser radiation by self-seeded Raman amplification in long air paths
[DE95-003697] p 2297 N95-27718

KRYPTON ISOTOPES
Photon burst mass spectrometry--ultrasensitive detection of rare isotopes
[DE95-006403] p 2204 N95-27467

L

LABORATORIES
Implementing an integrated standards-based management system to ensure compliance at Los Alamos National Laboratory
[DE95-007873] p 2451 N95-28025
Sandia's network for Supercomputing '94: Linking the Los Alamos, Lawrence Livermore, and Sandia National Laboratories using switched multimegabit data service
[DE95-007717] p 2378 N95-28074
Laboratory of production engineering
[PB95-184834] p 2451 N95-28135

LABORATORY EQUIPMENT
A laboratory scale supersonic combustive flow system
[DE95-006347] p 2206 N95-27851

LABYRINTH
Hair cell regeneration in the bullfrog vestibular otolith organs following aminoglycoside toxicity
p 2349 N95-26729

LACTATES
A summary of ODS replacement technologies at Litton Poly-Scientific p 2228 N95-27105
Ethyl lactate as a solvent alternative for cleaning metal parts p 2229 N95-27112

LAGRANGIAN FUNCTION
Field theory of point-like systems with higher-order derivatives
[DE95-608800] p 2448 N95-27310
Parallel algorithms for semi-Lagrangian transport in global atmospheric circulation models
[DE95-007385] p 2327 N95-27457

Subharmonic phonon transmission and Kapitza conductance between crystals with very different vibrational spectra
[DE95-609151] p 2447 N95-28608

LAMINAR FLOW

Computational support of the laminar flow supersonic wind tunnel, CNSFV code development, Maglev, and grid generation
[NASA-CR-197750] p 2143 N95-26775

The stability of the flow in a laminar separation bubble
[CUED/A-AERO/TR-22] p 2275 N95-26809

Analysis of developing laminar flows in circular pipes using a higher-order finite-difference technique
p 2281 N95-27352

Research on combustion processes relevant to burners in HVAC systems
[PB95-179735] p 2208 N95-28006

LAMINATES

A high velocity electromagnetic mass launcher having an ablation resistant insulator
[AD-A288231] p 2154 N95-26524

Scale model experiments with ceramic laminate targets
[AD-A288322] p 2225 N95-26561

Life prediction methodology for composite laminates. Part 1: Constant amplitude and two-stress level fatigue
[AD-A288343] p 2180 N95-26571

Interfacial mobility and its effect on flexural strength and fracture toughness in glass-fiber fabric reinforced epoxy laminates
[AD-A288344] p 2180 N95-26572

Composite sandwich structure and method for making same
[NASA-CASE-LAR-14898-1] p 2180 N95-26764

Fatigue behavior of a cross-ply ceramic matrix composite subjected to tension-tension cycling with hold time
[AD-A289418] p 2182 N95-27134

An experimental investigation of sandwich flat panels under low velocity impact
[AD-A289420] p 2309 N95-27135

Modeling considerations in the prediction of residual strength in composite laminates
[AD-A289128] p 2182 N95-27142

Scarf repairs to graphite/epoxy components
p 2135 N95-27523

Scarf joint technique with cocured and precured patches for composite repair p 2135 N95-27524

Measurement of the D0 WAMUS magnet inductance
[DE95-005128] p 2399 N95-27530

Superior catalysts for selective catalytic reduction of nitric oxide
[DE95-007903] p 2205 N95-27691

Analysis of aircraft engine blade subject to ice impact
p 2141 N95-28277

Assembly induced delaminations in composite structures p 2186 N95-28279

Higher order finite element analysis of thick composite laminates p 2186 N95-28282

An improved plate theory of order (1,2) for thick composite laminates p 2187 N95-28283

On the thermally-induced residual stresses in thick fiber-thermoplastic matrix (PEEK) cross-ply laminated plates p 2187 N95-28285

Analysis of stresses in finite anisotropic panels with centrally located cutouts p 2187 N95-28286

The role of biaxial stresses in discriminating between meaningful and illusory composite failure theories
p 2187 N95-28287

Static and dynamic strain energy release rates in toughened thermosetting composite laminates
p 2188 N95-28288

Mechanisms of compressive failure in woven composites and stitched laminates p 2189 N95-28424

Investigation of static and cyclic bearing failure mechanisms for GR/EP laminates p 2190 N95-28427

Compression failure of angle-ply laminates
p 2190 N95-28428

Buckling behavior of long symmetrically laminated plates subjected to combined loads p 2190 N95-28430

Compressive residual strength of graphite/epoxy laminates after impact p 2191 N95-28431

Characteristics of laminates with delamination control strips p 2191 N95-28434

Probabilistic evaluation of fuselage-type composite structures p 2137 N95-28444

Development of stitched/RTM composite primary structures p 2195 N95-28469

Tension fracture of laminates for transport fuselage. Part 1: Material screening p 2137 N95-28471

The use of impact force as a scale parameter for the impact response of composite laminates
p 2197 N95-28479

Effect of low-speed impact damage and damage location on behavior of composite panels p 2197 N95-28481

Impact damage resistance of composite fuselage structure, part 1 p 2138 N95-28482

Applications of a damage tolerance analysis methodology in aircraft design and production
p 2197 N95-28483

Post impact compressive strength in composites
p 2198 N95-28485

Fundamental concepts in the suppression of delamination buckling by stitching p 2198 N95-28486

LAND USE

Integrated assessment and the relation between land-use change and climate change
[DE95-006533] p 2327 N95-27469

LANDING

Full span flaperons for a biplane
p 2119 N95-26954

LANDING AIDS

Precision landing system mathematical modeling study report for Andrews Air Force Base, runway 19L, Camp Springs, MD
[AD-A289015] p 2127 N95-27903

LANDING GEAR

Aircraft nosewheel steering simulation
p 2118 N95-26944

Rotorcraft crashworthy airframe and fuel system technology development program
[AD-A289986] p 2126 N95-28630

LANGEVIN FORMULA

Magnetization of ferromagnetic clusters
[DE95-006878] p 2399 N95-27548

LANGUAGES

An introduction to software architecture
[AD-A288356] p 2363 N95-26467

Unification of LARCH and Z-based object models to support algebraically-based design refinement: The Z perspective
[AD-A289234] p 2369 N95-26962

LANTHANUM ALLOYS

Aspects of macroscopic phase separation and interstitial oxygen ordering in oxygen doped La2CuO(4+delta)
[DE95-007864] p 2443 N95-28060

LANTHANUM OXIDES

Characterization of collision cascade damage in Ca2La8(SiO4)6O2 by HRTEM
[DE95-005719] p 2440 N95-27491

LAP JOINTS

Characterization of corrosion and development of a breadboard of a D sight aircraft inspection system, phase 1
[AD-A288347] p 2125 N95-26527

Evaluation of composite joints
[AD-A289247] p 2181 N95-26967

LAPLACE TRANSFORMATION

Hydrogen-like atom in laser field: Invariant atomic parameters in the ground state
[DE95-609036] p 2411 N95-27930

LARGE SPACE STRUCTURES

A class of stabilizing controllers for flexible multibody systems
[NASA-TP-3494] p 2161 N95-26428

Control of a large space structure using multiple model adaptive estimation and control techniques
[AD-A289309] p 2162 N95-26916

A state-space model of a large, lightly damped space structure using the Eigensystem realization algorithm
[AD-A289251] p 2163 N95-26970

Static stability of a three-dimensional space truss
[NASA-TM-106944] p 2164 N95-27730

System identification of damped truss-like space structures
[NASA-TM-106638] p 2303 N95-27911

LASER ABLATION

Analysis of surfaces, films and multilayers by resonant laser ablation
[DE95-006295] p 2297 N95-27841

Vacancy related defects in thin film Pb(Zr,Ti)O3 materials
[DE95-007696] p 2445 N95-28165

LASER APPLICATIONS

Soot particle density determination from a laser extinction multipass technique
[AD-A288551] p 2423 N95-26532

Design and development of experimental facilities for short duration, low-gravity combustion and fire experiments
[NASA-CR-195458] p 2244 N95-26709

Continuously-tunable, narrow-linewidth, Q-switched Cr:LiSAF laser for lidar applications
[DE95-006285] p 2296 N95-27672

Application of conventional laser technology to gamma-gamma colliders
[DE95-006341] p 2297 N95-27736

Applications of lasers and electro-optics
[DE95-600841] p 2299 N95-28330

Structural design optimization with survivability dependent constraints application: Primary wing box of a multi-role fighter p 2137 N95-28440

LASER ARRAYS

High-speed coherent laser arrays
[AD-A289373] p 2295 N95-26906

LASER BEAMS

Laser beam propagation in non-Kolmogorov atmospheric turbulence
[AD-A289256] p 2295 N95-26974

Surface damage effects generated by a fast-pulse laser beam
[AD-A289131] p 2295 N95-26996

JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-015] p 2246 N95-27213

Indirectly driven targets for ignition
[DE95-006451] p 2430 N95-27327

Crab crossing in a gamma-gamma collider
[DE95-006580] p 2420 N95-27470

Femtosecond X-ray generation through 90 degrees T homson scattering: Status of the LBL experiment
[DE95-006560] p 2296 N95-27674

Spectral broadening of KrF laser radiation by self-seeded Raman amplification in long air paths
[DE95-003697] p 2297 N95-27718

High power free-electron laser concepts and problems
[DE95-007841] p 2298 N95-28059

Flat panel planar optic display
[DE95-007686] p 2426 N95-28196

Ultrashort Pulse retrieval using FROG trace irradiance moments and the adaptive neural networks backpropagation algorithm
[DE95-007153] p 2299 N95-28220

Femtosecond OPO's at 3 microns and beyond: Design and performance issues related to the crystal properties of KTP and similar materials
[DE95-007286] p 2446 N95-28242

Laser beam aerosol interactions
[AD-A291723] p 2300 N95-28509

A comparison of NH3 point monitoring and diode laser based path integrated measurements
[DE95-006892] p 2332 N95-28602

LASER CAVITIES

Comprehensive numerical model for CW vertical-cavity surface-emitting lasers
[DE95-007758] p 2299 N95-28132

Thermally-induced unsymmetric optical distortion of output window of high-power CO2 laser
[AD-A289604] p 2300 N95-28650

LASER DAMAGE

Surface damage effects generated by a fast-pulse laser beam
[AD-A289131] p 2295 N95-26996

Influences of film structures on laser damage thresholds
[AD-A289647] p 2300 N95-28633

LASER GUIDANCE

A brief history of laser guided lightning discharge models and experiments
[AD-A289448] p 2295 N95-27022

LASER HEATING

Surface damage effects generated by a fast-pulse laser beam
[AD-A289131] p 2295 N95-26996

LASER INDUCED FLUORESCENCE

Laser beam aerosol interactions
[AD-A291723] p 2300 N95-28509

LASER INTERFEROMETRY

Far-infrared laser interferometry measurements on the STP-3(M) reversed-field pinch
[DE94-765440] p 2297 N95-27868

LASER MATERIALS

Growth and evaluation of nonlinear optical crystals for laser applications: Lithium borate, barium borate and silver gallium selenide
[AD-A289147] p 2277 N95-27000

New radiation stable and long-lived plastic scintillators
[DE95-608622] p 2233 N95-27163

Characterization of solid state laser and nonlinear optical materials
[AD-A291684] p 2300 N95-28458

LASER MICROSCOPY

Surface-emitting semiconductor laser for intracavity spectroscopy and microscopy
[DE95-007745] p 2299 N95-28128

LASER MODE LOCKING

Characterization of microwave MESFET circuits under laser illumination. Applications to phased array radar, microwave communications, and digital clock control
[AD-A289181] p 2261 N95-27015

LASER OUTPUTS

Laser ultrasonic generation at the surface of a liquid metal
[DE95-004999] p 2216 N95-27477

Direct ultrashort-pulse retrieval using frequency-resolved optical gating and a computational neural network
[DE95-007148] p 2425 N95-27482

Femtosecond X-ray generation through 90 degrees T homson scattering: Status of the LBL experiment
[DE95-006560] p 2296 N95-27674
Laser with optically driven Q-switch
[NASA-CASE-NPO-18470-1-CU] p 2297 N95-27731
Application of conventional laser technology to gamma-gamma colliders
[DE95-006341] p 2297 N95-27736
Trident as an ultrahigh irradiance laser
[DE95-006345] p 2297 N95-27850
Ultrasonic study on ternary liquid systems by laser-sound interaction
[DE95-608783] p 2207 N95-27929
Hydrogen-like atom in laser field: Invariant atomic parameters in the ground state
[DE95-609036] p 2411 N95-27930
High power free-electron laser concepts and problems
[DE95-007841] p 2298 N95-28059
Inspection methods for underwater cables
[AD-A289610] p 2312 N95-28616

LASER PUMPING
Silicate gel dye laser
[AD-D017262] p 2294 N95-26503
Collisional dynamics and spectroscopic studies of highly excited rovibrational levels of I2(X)(0(+)(sub g)) via stimulated emission pumping
[AD-A289447] p 2295 N95-27172
Improved performance 1590 nm Er:YLF laser
[DE95-003691] p 2296 N95-27705
Low power limits in ultrashort pulse measurement using Frequency-Resolved Optical Gating
[DE95-007150] p 2299 N95-28219

LASER SPECTROSCOPY
Analytical spectroscopy
[DE95-607896] p 2203 N95-27200
High temperature kinetic study of the reactions H + O2 = OH + O and O + H2 = OH + H in H2/O2 system by shock tube-laser absorption spectroscopy
[NASA-CR-195473] p 2206 N95-27695
Analysis of surfaces, films and multilayers by resonant laser ablation
[DE95-006295] p 2297 N95-27841
Single molecule detection using charge-coupled device array technology
[DE95-006425] p 2411 N95-27953
Bubble chamber spectroscopy for chemical analysis: A new concept
[DE95-006350] p 2209 N95-28088
Surface-emitting semiconductor laser for intracavity spectroscopy and microscopy
[DE95-007745] p 2299 N95-28128
A novel sensitive detector of atmospheric nitrocompounds based on laser photofragmentation/ionization spectrometry
p 2174 N95-28314

LASER TARGETS
Indirectly driven targets for ignition
[DE95-006451] p 2430 N95-27327
A magnetic hysteresis model p 2153 N95-27801
Development of density and temperature profile diagnostics for ICF targets
[DE95-007664] p 2433 N95-28052
Pulsed laser deposition of zeolitic membranes
[DE95-006274] p 2298 N95-28124
A novel sensitive detector of atmospheric nitrocompounds based on laser photofragmentation/ionization spectrometry
p 2174 N95-28314

LASER WINDOWS
Characteristics of thermal lens in a copper-vapor laser
[AD-A289545] p 2294 N95-26874

LASERS
Annealing of radiation damaged gallium arsenide solar cells by laser illumination
[AD-A289683] p 2316 N95-26762
Design and characterization of resonant cavity light-emitting diodes
[AD-A289307] p 2261 N95-26921
Laser ultrasonic generation at the surface of a liquid metal
[DE95-004999] p 2216 N95-27477
Laser ionization of molecular clusters
[DE95-007011] p 2296 N95-27550
Continuously-tunable, narrow-linewidth, Q-switched Cr:LiSAF laser for lidar applications
[DE95-006285] p 2296 N95-27672
Application of conventional laser technology to gamma-gamma colliders
[DE95-006341] p 2297 N95-27736
Portable laser laboratory
[DE95-008376] p 2298 N95-27876
Laboratory high-energy astrophysics on lasers
[DE95-008062] p 2462 N95-28013
Evaluation of laser-protective eyewear dyes in UVEX lenses
[AD-A290076] p 2361 N95-28390
Time-resolved FTIR emission studies of laser photofragmentation and radical reactions
[DE95-008125] p 2300 N95-28398

LASING
Toward coherent excitation: Development of a single-source pump for the rubidium hyperfine ground state doublet
[AD-A289413] p 2295 N95-27132
Surface-emitting semiconductor laser for intracavity spectroscopy and microscopy
[DE95-007745] p 2299 N95-28128

LATCH-UP
Characteristics of the standard current trip circuit
[PB95-192886] p 2271 N95-28663

LATCHES
Changing paradigms: Manufacturing vs. fabricating a high volume Hold Down and Release Mechanism
p 2155 N95-27267
Development of a high force thermal latch
p 2157 N95-27275

LATERAL STABILITY
An easy way to analyze longitudinal and lateral-directional trim problems with AEO or OEI
p 2119 N95-26949

LATEX
The effect of proteins on the aging properties of radiation vulcanized Natural Rubber Latex
[DE95-603357] p 2225 N95-26599
Radiation vulcanization of natural rubber latex
[DE95-600026] p 2226 N95-26637

LATTICE PARAMETERS
Lattice parameters and Debye-Waller factors of gamma-TiAl alloys
[AD-A288843] p 2213 N95-26681
First-principles calculations for AlN, GaN, and InN: Bulk and alloy properties
[DE95-006822] p 2219 N95-27958
Phenomenology from 100 large lattices
[DE95-006349] p 2442 N95-27994
Local texture and grain boundary misorientations in high H(C) oxide superconductors
[DE95-007004] p 2447 N95-28606

LATTICE VIBRATIONS
The unusual properties of beryllium surfaces
[DE95-006471] p 2223 N95-28593

LATTICES (MATHEMATICS)
Probabilistic growth model
[PB95-185054] p 2395 N95-26913
Phenomenology from 100 large lattices
[DE95-006349] p 2442 N95-27994
Topological density and instantons on a lattice
[DE95-006348] p 2445 N95-28240

LAUNCH VEHICLES
Stratospheric ozone reactive chemicals generated by space launches worldwide
[AD-A289852] p 2332 N95-28623

LAUNCHING BASES
Development and implementation of a system safety program for the space launch complex 3 east (SLC-3E) ground support system project to support Atlas 2 family of space launch vehicles p 2174 N95-28316

LAUNCHING PADS
Weather hazards to a Titan 4 on-pad destack-restack operation p 2172 N95-28307

LAY-UP
Field repair materials for naval aircraft
p 2133 N95-27514
Design of fabric preforms for double diaphragm forming p 2184 N95-28269
Advanced tow placement of composite fuselage structure p 2185 N95-28271

LEAD (METAL)
The structure of lead-indium phosphate glass
[DE95-007130] p 2237 N95-27967

LEAD ALLOYS
A microstructurally based model of solder joints under conditions of thermomechanical fatigue
[DE95-006226] p 2309 N95-27837
Vacancy related defects in thin film Pb(Zr,Ti)O3 materials
[DE95-007696] p 2445 N95-28165

LEAD COMPOUNDS
The oxidation state and magnetic behaviour of Tb in high-(Tc) related materials
[DE95-007129] p 2219 N95-27966

LEAD TITANATES
Large area smart piezoelectric and pyroelectric sensors
[AD-A288565] p 2290 N95-26541

LEAD ZIRCONATE TITANATES
Neutron diffraction studies on recrystallization of solution derived lead zirconate titanates
[DE95-004771] p 2439 N95-27429

LEADING EDGES
Airfoil modification effects on subsonic and transonic pressure distributions and performance for the EA-6B airplane
[NASA-TP-3516] p 2120 N95-26382
Composite repair of a CF18: Vertical stabilizer leading edge p 2134 N95-27517
Wind-tunnel test of the S814 thick root airfoil
[DE95-000268] p 2122 N95-27541
Task 4 supporting technology. Part 1: Detailed test plan for leading edge tile development. Leading edge material development and testing
[NASA-CR-198633] p 2160 N95-28258

LEAKAGE
Leak detection utilizing analog binaural (VLSI) techniques
[NASA-CASE-NPO-18399-1-CU] p 2271 N95-28599

LEAR JET AIRCRAFT
Aircraft accident report: Controlled collision with Terrain Transportes Aereos Ejecutivos, S.A. (TAESA) Learjet 25D, XA-BBA Dulles International Airport Chantilly, Virginia, June 18, 1994
[NTSB/AAR-95/02] p 2125 N95-26498
Two-phase flow research using the learjet apparatus
[NASA-TM-106814] p 2284 N95-27854

LEARNING
Change, Learning and Mental Work in Organizations: Working papers of the 3rd Otaniemi-Dresden Workshop
[PB95-184941] p 2356 N95-26909
Hippocampal place fields, the internal compass, and the learning of landmark stability
[AD-A289406] p 2350 N95-27100
Piecemeal learning of an unknown environment
[AD-A291683] p 2387 N95-28461

LEARNING THEORY
Piecemeal learning of an unknown environment
[AD-A291683] p 2387 N95-28461

LEAST SQUARES METHOD
The origin of spurious solutions in computational electromagnetics
[NASA-TM-106921] p 2391 N95-27726
Accurate orbit determination strategies for the tracking and data relay satellites p 2147 N95-27768
Use of nonlinear identification in robust attitude and attitude rate estimation for SAMPEX
p 2149 N95-27781
Ulysses orbit determination at high declinations
p 2151 N95-27787

LECTURES
Index to NASA news releases and speeches 1994
[NASA-TM-110650] p 2452 N95-26673
CAS CERN Accelerator School 5th General Accelerator Physics Course
[DE95-608324] p 2419 N95-27158
The 1993 European school of high-energy physis
[DE95-610196] p 2421 N95-28040
International journal of quantum chemistry
[AD-A291633] p 2352 N95-28546

LENGTH
Reflection of neutrons from an optical grating
[DE95-007145] p 2411 N95-28004

LENNARD-JONES POTENTIAL
A new shared-memory programming paradigm for molecular dynamics simulations on the Intel Paragon
[DE95-007289] p 2378 N95-28019
Beta-dynamics in simple liquid metal
[DE95-609154] p 2220 N95-28039

LENSES
Characteristics of thermal lens in a copper-vapor laser
[AD-A289545] p 2294 N95-26874
Plasma lens experiments at the final focus test beam
[DE95-008595] p 2434 N95-28161
Evaluation of laser-protective eyewear dyes in UVEX lenses
[AD-A290076] p 2361 N95-28390

LEPTONS
Implications of horizontal symmetries on baryon number violation in supersymmetric models
[DE95-610202] p 2407 N95-27406
Search for SUSY at CDF
[DE95-005109] p 2407 N95-27430
Search for supersymmetry and leptoquark states at FNAL
[DE95-003381] p 2410 N95-27871
Lattice calculation for lepton capture from vacuum-pair production in relativistic heavy-ion collisions
[DE95-007392] p 2413 N95-28077
Bit-string physics: A novel theory of everything
[DE95-005941] p 2449 N95-28137
Threefold maximal lepton mixing and the solar and atmospheric neutrino deficits
[PB95-196259] p 2465 N95-28500

LEUKOCYTES
Anti-idiotype probes for toxin detection
[AD-A288955] p 2348 N95-26435

LEVITATION
Time-optimal control of the magnetically levitated photolithography platen
[DE95-005493] p 2266 N95-27724
LEXAN (TRADEMARK)
Effects of atomic oxygen on polymeric materials flown on EOIM-3 p 2242 N95-27638
LIBRARIES
Development and implementation of an electronic library tour for the NASA Langley Technical Library
[NASA-TM-110619] p 2455 N95-27701
A new shared-memory programming paradigm for molecular dynamics simulations on the Intel Paragon
[DE95-007289] p 2378 N95-28019
LICENSING
Bibliography of patents and licenses 1951-1990. 1991 edition
[AD-A289603] p 2452 N95-26721
Global trade in satellites and launch services
[GPO-84-811] p 2165 N95-28342
LIE GROUPS
Hyperkaehler metrics associated to compact Lie groups
[PB95-185161] p 2388 N95-26514
q-structure algebra of U(sub q)(g-circumflex) from its adjoint action
[DE95-608749] p 2390 N95-27301
Introduction to Dubois-Violette's non-commutative differential geometry
[DE95-608801] p 2390 N95-27311
On the Hopf structure of U(p,q)(gl(1/1)) and the universal Tau-matrix of Fun(p,q)(GL(1/1))
[DE95-608755] p 2448 N95-27333
Algebraic structure of the Green's ansatz and its q-deformed analogue
[DE95-608780] p 2395 N95-27340
Realization of vector fields for quantum groups as pseudodifferential operators on quantum spaces
[DE95-008485] p 2449 N95-27877
Symmetries of the KAC-Peterson modular matrices of affine algebras
[PB95-190138] p 2392 N95-28010
Lie group weight multiplicities from conformal field theory
[PB95-190153] p 2392 N95-28012
Coordinates of the quantum plane as q-tensor operators in U(sub q) (su(2) * su(2))
[DE95-007100] p 2397 N95-28234
LIFE (DURABILITY)
Life prediction methodology for composite laminates. Part 1: Constant amplitude and two-stress level fatigue
[AD-A288343] p 2180 N95-26571
Statistical theory and reliability
[AD-A288519] p 2394 N95-26733
A review of nickel hydrogen battery technology
[NASA-TM-106918] p 2167 N95-27177
Effect of hoop stress on ball bearing life prediction
[NASA-TM-106874] p 2301 N95-27178
Investigation on LCA (Life Cycle Analysis/assessment)
[DE95-759260] p 2330 N95-27942
Electric vehicle activities
[DE95-006648] p 2267 N95-28105
Lithium ion rechargeable systems studies
[DE95-006810] p 2268 N95-28200
LIFE CYCLE COSTS
Life cycle costs of alternatives for F-16 printed circuit board diagnosis equipment
[AD-A288744] p 2138 N95-28586
LIFE SCIENCES
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-015] p 2246 N95-27213
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-94-022] p 2246 N95-27699
LIFE SUPPORT SYSTEMS
International Space Station Alpha trace contaminant control subassembly life test report
[NASA-TM-108488] p 2358 N95-26364
LIFT
Wind-tunnel test of the S814 thick root airfoil
[DE95-000268] p 2122 N95-27541
Study of potential aerodynamic benefits from spanwise blowing at wingtip
[NASA-TP-3515] p 2124 N95-28669
Noise exposure reduction of advanced high-lift systems
[NASA-CR-195077] p 2402 N95-28670
LIFT DRAG RATIO
Noise exposure reduction of advanced high-lift systems
[NASA-CR-195077] p 2402 N95-28670
LIFT FANS
The lift-fan aircraft: Lessons learned
[NASA-CR-196694] p 2131 N95-27143
LIGHT (VISIBLE RADIATION)
Solar UV flux measurements from the SBUV2 monitor on the NOAA9 satellite. Part 1: Mg II h and k line core-to-wing ratios for 1986-1988
[PB95-181962] p 2464 N95-28007
LIGHT BEAMS
Preliminary design study of the beam collapser and certain optomechanical aspects of the siderostat
[AD-A288423] p 2423 N95-26549
Ultrasonic study on ternary liquid systems by laser-sound interaction
[DE95-608783] p 2207 N95-27929
OBIC analysis of stressed, thermally-isolated polysilicon resistors
[DE95-008511] p 2268 N95-28201
Inspection methods for underwater cables
[AD-A289610] p 2312 N95-28616
LIGHT CURVE
Models of classical and recurrent novae
p 2459 N95-27073
Overview of the observations of symbiotic stars
p 2460 N95-27076
Discussion on selected symbiotic stars
p 2460 N95-27078
LIGHT EMITTING DIODES
An organic thin film laser diode: A novel light source
[AD-A289007] p 2294 N95-26568
Design and characterization of resonant cavity light-emitting diodes
[AD-A289307] p 2261 N95-26921
Laser with optically driven Q-switch
[NASA-CASE-NPO-18470-1-CU] p 2297 N95-27731
LIGHT GAS GUNS
Pellet injector research and development at ORNL
[DE95-006736] p 2435 N95-28596
LIGHT MODULATION
Modulation effect of a Bragg acousto-optic bistable system
[AD-A289622] p 2401 N95-26857
Optical implementation of inner product neural associative memory
[NASA-CASE-NPO-18491-2-CU] p 2427 N95-28363
Full complex modulation using two one-parameter spatial light modulators
[NASA-CASE-MSC-22255-1] p 2427 N95-28384
LIGHT SCATTERING
Visualization and direct comparison of large displacements using difference holographic interferometry
[DE95-608782] p 2292 N95-27711
Advances in scientific visualization
[DE95-008065] p 2343 N95-28014
Scattering by a small object close to an interface. 3. Buried object
[PB95-184909] p 2256 N95-28354
New developments for sol-gel film and fiber processing
[DE95-008175] p 2240 N95-28404
LIGHT SOURCES
An organic thin film laser diode: A novel light source
[AD-A289007] p 2294 N95-26568
An illumination planner for Lambertian polyhedral objects
[AD-A289332] p 2424 N95-26900
Observation of nonlinear resonances in the advanced light source
[DE95-006561] p 2425 N95-27675
Laser with optically driven Q-switch
[NASA-CASE-NPO-18470-1-CU] p 2297 N95-27731
Atmospheric dispersioh in adaptive optics
[AD-A289639] p 2428 N95-28617
LIGHTHILL METHOD
A numerical study of fundamental shock noise mechanisms
[NASA-TM-110608] p 2401 N95-27908
LIGHTING EQUIPMENT
Engineering Technical Letter (ETL) 94-5: Fire protection engineering criteria and technical guidance. Emergency lighting and marking of exits
[AD-A288953] p 2246 N95-26566
LIGHTNING
Aircraft fuel system lightning protection design and qualification test procedures development
[AD-A288401] p 2125 N95-26497
A brief history of laser guided lightning discharge models and experiments
[AD-A289448] p 2295 N95-27022
A study of lightning in winter thunderstorms and the analysis of thunderstorm overflight data
[NASA-CR-198577] p 2343 N95-28191
Weather hazards to a Titan 4 on-pad destack-restack operation p 2172 N95-28307
LIGHTNING SUPPRESSION
A brief history of laser guided lightning discharge models and experiments
[AD-A289448] p 2295 N95-27022
LIMESTONE
Ash-based ceramic materials
[AD-D017272] p 2241 N95-28582
LIMITER CIRCUITS
Characteristics of the standard current trip circuit
[PB95-192886] p 2271 N95-28663
LINE OF SIGHT
A modified proportional navigation scheme for rendezvous and docking with tumbling targets: The Planar case p 2150 N95-27784
LINE SHAPE
Investigation of the collision line broadening problem as applicable to the NASA Optical Plume Anomaly Detection (OPAD) system, phase 1
[NASA-CR-198605] p 2426 N95-27913
LINE SPECTRA
CO, HCO(+) and HCN absorption in the gravitational lens candidate B0218+357 at z=0.685
[PB95-185146] p 2461 N95-26522
Coronal abundances and their variation
[NASA-CR-197788] p 2464 N95-26671
Spectral broadening of KrF laser radiation by self-seeded Raman amplification in long air paths
[DE95-003697] p 2297 N95-27718
Investigation of the collision line broadening problem as applicable to the NASA Optical Plume Anomaly Detection (OPAD) system, phase 1
[NASA-CR-198605] p 2426 N95-27913
LINEAR ACCELERATORS
Atomic physics with highly charged ions
[DE95-007325] p 2407 N95-27439
LINEAR ARRAYS
Balanced data focusing: Direction of arrival estimation with maximum likelihood performance
[AD-A288252] p 2248 N95-26407
Satellite surface material composition from synthetic spectra
[AD-A289236] p 2163 N95-26963
Simulating a multi-target acoustic array on the Intel Paragon
[AD-A288443] p 2377 N95-27183
Physical interpretation and development of ultrasonic nondestructive evaluation techniques applied to the quantitative characterization of textile composite materials
[NASA-CR-198591] p 2306 N95-28034
LINEAR ENERGY TRANSFER (LET)
Ionizing radiation measurements on LDEF: A0015 Free flyer biostack experiment
[NASA-CR-196603] p 2202 N95-27168
LINEAR EQUATIONS
Electromagnetic hysteretic response calculation for superconductors in demagnetizing geometries
[DE95-005028] p 2264 N95-27403
LINEAR FILTERS
Filtered kernel density estimation
[AD-A288293] p 2394 N95-26413
LINEAR OPERATORS
Local operators in Krylov subspaces
[PB95-195525] p 2393 N95-28499
LINEAR POLARIZATION
Scattering by a small object close to an interface. 3. Buried object
[PB95-184909] p 2256 N95-28354
LINEAR PROGRAMMING
Modal event calculus in Lolli
[AD-A288544] p 2365 N95-26605
LINEAR QUADRATIC GAUSSIAN CONTROL
Control of a large space structure using multiple model adaptive estimation and control techniques
[AD-A289309] p 2162 N95-26916
Post Kalman progress p 2148 N95-27776
LINEAR SYSTEMS
Robust hybrid state-space self-tuning control using dual-rate sampling
[AD-A288359] p 2380 N95-26468
Performance evaluation of a new parallel preconditioner
[AD-A288563] p 2376 N95-26529
Random relaxation of fixed point iteration
[PB95-185013] p 2389 N95-26910
Control of a large space structure using multiple model adaptive estimation and control techniques
[AD-A289309] p 2162 N95-26916
Linear and nonlinear trending and prediction for AVHRR time series data p 2385 N95-27391
Post Kalman progress p 2148 N95-27776
Method and apparatus for maintaining linearity and frequency accuracy of an FM chirp waveform
[AD-D017398] p 2258 N95-28615
LINEAR TRANSFORMATIONS
Three-dimensional photogrammetry for laboratory applications
[AD-A291624] p 2294 N95-28410

LINGUISTICS
Factors in human-computer interface design (a pilot study)
[AD-A288908] p 2360 N95-27195
A linguistic geometry for 3D strategic planning
p 2386 N95-27397
LININGS
Composite heat pipe development status: Development of lightweight prototype carbon-carbon heat pipe with integral fins and metal foil liner
[NASA-TM-106909] p 2283 N95-27369
Investigation of HE driven cylindrical liner
[DE95-007866] p 2311 N95-28539
LIPIDS
Non-covalent immobilization of proteins and enzymes on polymerized lipid assemblies
[AD-A288234] p 2225 N95-26526
LIQUEFIED GASES
Low noise monolithic Si JFETS for operation in the 90-300K range and in high radiation environments
[DE95-007303] p 2269 N95-28244
LIQUEFIED NATURAL GAS
Investigation on comprehensive fossil fuel cycle analysis and assessment approach as viewed from the global environment
[DE95-759241] p 2329 N95-27935
LIQUID AMMONIA
Hazards analysis of an integral class 1.1/1.3 rocket motor demilitarization and ingredient recovery system using ammonia p 2174 N95-28315
LIQUID COOLING
Supercooled liquid dynamics for the charged hard-sphere model
[DE95-609158] p 2241 N95-28609
LIQUID CRYSTALS
Siloxane-based ferroelectric liquid crystal elastomers and Self-Assembled Mono- and multilayers
[AD-A288285] p 2224 N95-26456
Molecular object liquid crystals: An approach to new materials
[AD-A288905] p 2437 N95-26553
Surface crystallization and thin film melting in normal alkanes
[DE95-006694] p 2440 N95-27535
Molecular dynamics simulations of Gay-Berne nematic liquid crystal: Elastic properties from direct correlation functions
[DE95-609149] p 2441 N95-27740
JTEC panel on display technologies in Japan
[NASA-CR-198564] p 2292 N95-27863
Determination of phase transitions in a lyotropic liquid crystal by positron annihilation technique
[DE95-609162] p 2442 N95-27964
A phase-stepped point diffraction interferometer using liquid crystals
[NASA-TM-106922] p 2293 N95-28037
LIQUID FUELS
Alternative fuels and vehicles choice model
[DE95-005695] p 2243 N95-27944
Mechanism of deposit formation on fuel-wetted hot metal surfaces
[AD-A289847] p 2210 N95-28621
LIQUID HELIUM
Detection of charged particles in superfluid helium
[DE95-007354] p 2403 N95-26560
Pumping characteristics of a cryopump with Ar sorbent in He and in D2/He mixture
[DE95-007049] p 2302 N95-27875
LIQUID HYDROGEN
Task 4 supporting technology. Densification requirements definition and test objectives. Propellant densification requirements definition
[NASA-CR-198629] p 2450 N95-28260
LIQUID INJECTION
Propellant injection systems and processes
[NASA-TM-110632] p 2242 N95-26781
LIQUID METALS
Spray-formed tooling
[DE95-005031] p 2246 N95-27404
Laser ultrasonic generation at the surface of a liquid metal
[DE95-004999] p 2216 N95-27477
Crossover integral equation theory for the liquid structure study
[DE95-609155] p 2218 N95-27757
Beta-dynamics in simple liquid metal
[DE95-609154] p 2220 N95-28039
LIQUID NITROGEN
Cryogenic and simulated fuel jet breakup in argon, helium and nitrogen gas flows
[NASA-TM-106923] p 2291 N95-27030
The 77 K operation of a multi-resonant power converter
[NASA-TM-106941] p 2264 N95-27374
Cryogenic washout of solid rocket propellants
p 2176 N95-28324
LIQUID OXYGEN
Task 4 supporting technology. Densification requirements definition and test objectives. Propellant densification requirements definition
[NASA-CR-198629] p 2450 N95-28260
Developmental problems and their solution for the Space Shuttle main engine alternate liquid oxygen high-pressure turbopump: Anomaly or failure investigation the key
[NASA-TP-3553] p 2169 N95-28263
Chemical reactions identified in the Titan 2, Titan 4, and Delta 2 propellant systems and their application to source modeling p 2172 N95-28304
LIQUID PHASES
Molecular object liquid crystals: An approach to new materials
[AD-A288905] p 2437 N95-26553
LIQUID PROPELLANT ROCKET ENGINES
Progress in incompressible Navier-Stokes computations for propulsion flows and its dual-use applications
[NASA-CR-197746] p 2275 N95-26766
LIQUID ROCKET PROPELLANTS
Funding for AFRAPT student trainees for academic year 1992-1993
[AD-A288461] p 2466 N95-26604
Propellant injection systems and processes
[NASA-TM-110632] p 2242 N95-26781
Development test of a liquid Apogee engine for the ETS-6
[NAL-TR-1250] p 2167 N95-26799
Alternative cleaning solvents and lubricants at the Air Force PJKS facility p 2228 N95-27108
Task 4 supporting technology. Densification requirements definition and test objectives. Propellant densification requirements definition
[NASA-CR-198629] p 2450 N95-28260
Mars Sample Return mission utilizing in-situ propellant production
[NASA-CR-188371] p 2145 N95-28261
Toxicity assessment of liquid propellant XM46
p 2175 N95-28319
LIQUID WASTES
Recovery, evaluation, and decontamination of landfilled pentaborane cylinders, former liquid propellant rocket engine test facility, Washoe County, Nevada
p 2171 N95-28302
LIQUID-GAS MIXTURES
Two-phase flow research using the learjet apparatus
[NASA-TM-106814] p 2284 N95-27854
LIQUID-LIQUID INTERFACES
Investigation of the interface between immiscible electrolytes applied to membrane electrochemistry
[AD-A288887] p 2199 N95-26350
Vibrational spectroscopy of water interfaces
[DE95-006592] p 2209 N95-28218
LIQUID-SOLID INTERFACES
Synchrotron X-ray scattering studies at mineral-water interfaces
[DE95-008303] p 2440 N95-27542
Vibrational spectroscopy of water interfaces
[DE95-006592] p 2209 N95-28218
Cooling apparatus and couplings therefor
[NASA-CASE-ARC-11921-1] p 2304 N95-28256
LIQUID-VAPOR EQUILIBRIUM
Bubble fusion: Preliminary estimates
[DE95-006337] p 2420 N95-27494
LIQUID-VAPOR INTERFACES
Applications of Second Harmonic and Sum Frequency Generation to graphite and silica type interfaces
[AD-A288228] p 2201 N95-26544
Surface crystallization and thin film melting in normal alkanes
[DE95-006694] p 2440 N95-27535
LIQUIDS
Observations on the solvating power of supercritical fluids p 2228 N95-27106
The surface of liquid He-4 at nonzero temperatures
[DE95-607841] p 2207 N95-27880
LITHIUM
The 1994 27th Annual NASA Aerospace Battery Workshop
[NASA-CP-3292] p 2317 N95-26785
Current status of environmental, health, and safety issues of lithium polymer electric vehicle batteries
[DE95-004005] p 2265 N95-27719
Lithium ion rechargeable systems studies
[DE95-006810] p 2268 N95-28200
The off-center effect on the diffusion coefficient of Cu(+) and Li(+) in the KCl lattice
[DE95-609146] p 2446 N95-28255
Development of an ultra-safe rechargeable lithium-ion battery
[AD-A288959] p 2269 N95-28349
Isolation and x-ray crystal structures of (Li(mu2-As(SiMe3)2) (mu3-As(SiMe3)2)(THF))2 and ((Me3Si)2AsLi(THF)2)2
[AD-A288870] p 2241 N95-28661
LITHIUM ALLOYS
Electrolyte effects in Li(Si)/FeS2 thermal batteries
[DE95-001614] p 2264 N95-27474
LITHIUM BORATES
Growth and evaluation of nonlinear optical crystals for laser applications: Lithium borate, barium borate and silver gallium selenide
[AD-A289147] p 2277 N95-27000
LITHIUM COMPOUNDS
Thermodynamics of electrolyte solutions for use in high energy lithium batteries
[AD-A288897] p 2199 N95-26352
Processing and properties of chromate-free conversion coatings on aluminum
[DE95-004768] p 2218 N95-27722
LITHIUM FLUORIDES
Point defect formation in optical materials expos ed to the space environment p 2428 N95-27646
LITHIUM NIOBATES
On-axis polarization coupling in y-cut titanium in-diffused lithium niobate slab waveguides
[AD-A289260] p 2253 N95-26977
LITHOGRAPHY
Swords to plowshares: Shock wave applications to advanced lithography
[DE95-008154] p 2299 N95-28223
LIVER
Modeling and statistical analysis of bioassay data: Medaka cell proliferation under DEN and TCE
[AD-A289998] p 2352 N95-28519
LOAD DISTRIBUTION (FORCES)
Analysis of plate-twist test for in-plane shear modulus of composite materials (revised)
[PB95-190195] p 2308 N95-26749
LOAD TESTS
Stress corrosion cracking susceptibility of the earthquake resistant NOM B457 Mexican steel
[DE95-607956] p 2214 N95-27258
On aircraft repair verification of a fighter A/C integrally stiffened fuselage skin p 2133 N95-27515
Comparison of measured and calculated dynamic loads for the Mod-2 2.5 mW wind turbine system
p 2312 N95-27983
Buckling behavior of long symmetrically laminated plates subjected to combined loads p 2190 N95-28430
Design, analysis, and testing of a metal matrix composite web/flange intersection p 2191 N95-28433
Development of composite carrythrough bulkhead
p 2192 N95-28438
Structural testing of the technology integration box beam p 2194 N95-28467
Technology integration box beam failure study
p 2194 N95-28468
LOADS (FORCES)
Process control of microstructure in manufacturing
[AD-A288291] p 2245 N95-26410
Identification of the plastic anisotropy of an aluminum alloy
[IFTR-26/1994] p 2212 N95-26512
Evaluation of composite joints
[AD-A289247] p 2181 N95-26967
Testing of Uninterruptible Power Supplies with nonlinear loads
[AD-A289353] p 2262 N95-27067
Load measurement system with load cell lock-out mechanism p 2159 N95-27291
A comparison of measured wind park load histories with the WISPER and WISPERX load spectra
[DE95-000295] p 2319 N95-27459
Load transfer in the stiffener-to-skin joints of a pressurized fuselage
[NASA-CR-198610] p 2310 N95-27865
Investigation on technology for increasing the biological CO2 sink and technology for CO2 fixation and reutilization
[DE95-759251] p 2329 N95-27941
Investigation on LCA (Life Cycle Analysis/assessment)
[DE95-759260] p 2330 N95-27942
A hybrid vehicle evaluation code and its application to vehicle design. Revision 1
[DE95-008053] p 2303 N95-28029
A hybrid vehicle evaluation code and its application to vehicle design, revision 2
[DE95-008060] p 2303 N95-28139
Local design optimization for composite transport fuselage crown panels p 2137 N95-28473
Comparison of resin film infusion, resin transfer molding, and consolidation of textile preforms for primary aircraft structure p 2196 N95-28477
LOCAL AREA NETWORKS
A high performance totally ordered multicast protocol
[NASA-CR-197765] p 2371 N95-27252
Gigabit LAN issues: HIPPI, Fibre Channel, or ATM?
[DE95-003673] p 2378 N95-27422

LOG PERIODIC ANTENNAS
Improving the performance of spiral antennas by using passive scatterers
[AD-A289324] p 2251 N95-26893
FORTE antenna element and release mechanism design p 2157 N95-27282

LOGIC CIRCUITS
Novel field effect transistors for low power electronics
[AD-A289929] p 2271 N95-28629

LOGIC PROGRAMMING
Modal event calculus in Lolli
[AD-A288544] p 2365 N95-26605
Reference manual: Naive physics simulator
[PB95-184917] p 2369 N95-26907

LOGISTICS
The value of simulation for training
[AD-A289174] p 2143 N95-26556
US Coast Guard Human Systems Integration (HSI) process model
[AD-A289172] p 2358 N95-26612

LONG DURATION EXPOSURE FACILITY
Long Duration Exposure Facility Mini-Data Base User's Guide: Macintosh version
[NASA-CR-4656] p 2177 N95-26391
Ionizing radiation measurements on LDEF: A0015 Free flyer biostack experiment
[NASA-CR-196603] p 2202 N95-27168
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 3
[NASA-CP-3275-PT-3] p 2466 N95-27629
Exposure of LDEF materials to atomic oxygen: Results of EOIM 3 p 2210 N95-27633
LDEF systems special investigation group overview
p 2470 N95-27647
System results from FRECOPA p 2211 N95-27648
Space environmental effect on solar cells: LDEF and other flight tests p 2326 N95-27649
A final look at LDEF electro-optic systems components p 2428 N95-27650
Effects of the LDEF orbital environment on the reflectance of optical mirror materials
p 2428 N95-27651
Long Duration Exposure Facility (LDEF) space optics handbook p 2428 N95-27654
Long Duration Exposure Facility (LDEF) Archive System p 2457 N95-27658
The Long Duration Exposure Facility (LDEF) annotated bibliography p 2457 N95-27659
The Long Duration Exposure Facility (LDEF) photographic survey special publication
p 2457 N95-27660
LDEF's contribution to the selection of thermal control coatings for the Space Station p 2242 N95-27661
Space Station as a Long Duration Exposure Facility
p 2166 N95-27663
A Materials Exposure Facility p 2166 N95-27664
An LDEF follow-on spacecraft concept
p 2166 N95-27665

LONG TERM EFFECTS
From LDEF to a national Space Environment and Effects (SEE) program: A natural progression
p 2145 N95-27657

LONG WAVE RADIATION
A study of surface temperatures, clouds and net radiation
[NASA-CR-198589] p 2329 N95-27864

LONGITUDINAL CONTROL
A comparison of the Neal-Smith and omega Tau function, zeta function and tau function flying qualities criteria
[AD-A289503] p 2130 N95-26844
Use of blade pitch control to provide power train damping for the Mod-2, 2.5-mW wind turbine
p 2306 N95-27986

LONGITUDINAL STABILITY
An easy way to analyze longitudinal and lateral-directional trim problems with AEO or OEI
p 2119 N95-26949

LOOPS
The free energy of hot QED at three and a half loops
[DE95-007079] p 2449 N95-27449

LORENTZ TRANSFORMATIONS
Mean value theorem in topological vector spaces
[DE95-608753] p 2390 N95-27331

LOSSES
Investigation of high-temperature superconducting flywheel energy storage devices
[DE95-759242] p 2320 N95-27936

LOSSLESS MATERIALS
Conditions for the parameter dyadics of lossless bi-anisotropic media
[PB95-185104] p 2252 N95-26914

LOW ALTITUDE
Visual system operational evaluation
[AD-A289173] p 2356 N95-27012

LOW CONCENTRATIONS
Modeling precipitation from concentrated solutions with the EQ3/6 chemical speciation codes
[DE95-006264] p 2204 N95-27556

LOW COST
Adaptive finite element method I: Solution algorithm and computational examples
[AD-A288979] p 2389 N95-26609
Design of a high altitude long endurance aircraft with manufacturing considerations p 2119 N95-26947
Optical features of nanosize iron and molybdenum sulfide clusters
[DE95-005417] p 2202 N95-27136
Successful product realization strategies
p 2264 N95-27233
Spray-formed tooling
[DE95-005031] p 2246 N95-27404
Development of a low-cost, modified resin transfer molding process using elastomeric tooling and automated preform fabrication p 2184 N95-28268
Commercial reformulation: An economic and environmentally neutral means of managing explosives and solid propellants p 2175 N95-28320

LOW CURRENTS
Comparison of the calculated and measured stability of a NbTi cable-in-conduit conductor
[DE95-007964] p 2265 N95-27693

LOW EARTH ORBITS
An analysis of orbital propagators for Low Earth Orbit Rendezvous
[AD-A288883] p 2161 N95-26458
Space tether-radar data processing
[AD-A289654] p 2250 N95-26725
Nickel metal hydride LEO cycle testing
p 2272 N95-26791
Space Debris Research Phase One Program: Abstracts from published papers (1990-1993)
[AD-A289504] p 2162 N95-26850
Computing NORAD mean orbital elements from a state vector
[AD-A289281] p 2146 N95-27033
Solar concentrator technology development for space based applications, volume 1
[NASA-CR-197723] p 2319 N95-27193
LEO degradation of graphite and carbon-based composites aboard Space Shuttle Flight STS-46
p 2199 N95-27636
Orbital atomic oxygen effects on materials: An overview of MSFC experiments on the STS-46 EOIM-3
p 2419 N95-27637
Solid film lubricants and thermal control coatings flown aboard the EOIM-3 MDA sub-experiment
p 2242 N95-27640
Effects of the LDEF orbital environment on the reflectance of optical mirror materials
p 2428 N95-27651
Effects of low earth orbit on the optical performance of multi-layer enhanced high reflectance mirrors
p 2428 N95-27652
LDEF's contribution to the selection of thermal control coatings for the Space Station p 2242 N95-27661
Long Duration Exposure Facility post-flight data as it influences the Tropical Rainfall Measuring Mission
p 2345 N95-27666

LOW FREQUENCIES
Ultrasonic studies of liquid/solid seimoacoustic wave phenomena
[AD-A289644] p 2402 N95-28622

LOW NOISE
Low noise monolithic Si JFETS for operation in the 90-300K range and in high radiation environments
[DE95-007303] p 2269 N95-28244

LOW PASS FILTERS
The installation of and first results from the superconducting gravimeter GWR20 at the Metsahovi Station, Finland
[REPT-95:1] p 2338 N95-27995

LOW SPEED
Atomic physics with highly charged ions
[DE95-007325] p 2407 N95-27439
Overview of turbulence model development and applications at Rocketdyne p 2286 N95-27891
Effect of low-speed impact damage and damage location on behavior of composite panels p 2197 N95-28481
Post impact compressive strength in composites
p 2198 N95-28485
Damage tolerance of a geodesically stiffened advanced composite structural concept for aircraft structural applications p 2138 N95-28487
Ultrasonic studies of liquid/solid seimoacoustic wave phenomena
[AD-A289644] p 2402 N95-28622

LOW TEMPERATURE
High pressure conductivity study of template synthesized polypyrrole: Observation of a crossover from three to one dimensional variable range hopping
[AD-A288367] p 2224 N95-26470
Chemistry involving the separation, isolation, and immobilization of 3-5 compound semiconductor nanocrystals and quantum dots
[AD-A288381] p 2436 N95-26473
First-principles study of intermetallic phase stability in the ternary Ti-Al-Nb alloy system
[DE95-005259] p 2213 N95-27082
Fluid dynamic effects on precision cleaning with supercritical fluids p 2232 N95-27129
Low temperature materials growth and processing development for flat panel display technology applications
[AD-A288970] p 2233 N95-27187
The 77 K operation of a multi-resonant power converter
[NASA-TM-106941] p 2264 N95-27374
Transient studies of low temperature catalyst for methane conversion
[DE95-007913] p 2205 N95-27692
Comparison of the calculated and measured stability of a NbTi cable-in-conduit conductor
[DE95-007964] p 2265 N95-27693
Density changes in amorphous Pd80Si20 during low temperature ion irradiation
[DE95-007132] p 2441 N95-27928
Phase stability and elasticity of C15 transition-metal intermetallic compounds
[DE95-007876] p 2219 N95-28026
Low temperature carrier transport properties in isotopically controlled germanium
[DE95-008489] p 2444 N95-28092
Low temperature deposition and characterization of N- and P-type silicon carbide thin films and associated Ohmic and Schottky contacts
[AD-A289107] p 2237 N95-28097
Low resistivity ohmic contacts to moderately doped n-GaAs with low temperature processing
[DE95-008507] p 2445 N95-28144

LOW THRUST PROPULSION
Micro electric propulsion feasibility
[NASA-CR-189139] p 2168 N95-28000

LUBRICANT TESTS
Deformation behavior of thin lubricant films at elevated pressure
[AD-A288906] p 2241 N95-28592

LUBRICANTS
Environmentally Benign Cleaning and Degreasing Technology: JANNAF Safety and Protection Subcommittee and Propellant Development and Characterization Subcommittee Joint Workshop
[CPIA-PUBL-611] p 2227 N95-27101
Alternative cleaning solvents and lubricants at the Air Force PJKS facility p 2228 N95-27108
Effects of bearing cleaning and lube environment on bearing performance p 2158 N95-27285
Molecular engineering of thin polymer films prepared from functionally-terminated oligomers
[AD-A291681] p 2240 N95-28457
Deformation behavior of thin lubricant films at elevated pressure
[AD-A288906] p 2241 N95-28592

LUBRICATION
Advanced solid lubricant films by Ion-Beam Assisted Deposition
[AD-A288866] p 2225 N95-26499
Effects of bearing cleaning and lube environment on bearing performance p 2158 N95-27285

LUGS
Higher order finite element analysis of thick composite laminates p 2186 N95-28282

LUMINANCE
Com(sup 3): A composite-compatible component coding system
[BBC-RD-1994/17] p 2249 N95-26670

LUMINESCENCE
Scintillator materials for calorimetry
[DE95-006570] p 2421 N95-27679
Optimization of measurements with pressure sensitive paints
[NASA-TM-4695] p 2293 N95-27915

LUMINOSITY
CAS CERN Accelerator School 5th General Accelerator Physics Course
[DE95-608324] p 2419 N95-27158
The CDF upgrade
[DE95-006683] p 2421 N95-28107
The 132 nsec bunch spacing in the Tevatron proton-antiproton collider
[DE95-005750] p 2422 N95-28346

LUMINOUS INTENSITY

Fundamental concepts of integrated and fiber optic sensors
[NASA-TM-106920] p 2426 N95-27906

LUNAR EXPLORATION

The Clementine mechanisms p 2156 N95-27268

LYSOZYME

Hydrogen-ion titrations of amino acids and proteins in solutions containing concentrated electrolyte
[DE95-008356] p 2209 N95-28229

M

MACH NUMBER

On the modulational instability of large amplitude waves in supersonic boundary layers
[NASA-CR-195072] p 2284 N95-27760

Comparative wind tunnel test at high Reynolds numbers of NACA 64 621 airfoils with two aileron configurations
p 2124 N95-27977

Measurements of store forces and moments and cavity pressures for a generic store in and near a box cavity at subsonic and transonic speeds
[NASA-TM-4611] p 2123 N95-28241

Surfactants and desensitizing wax substitutes for TNT-Based systems
[AD-A289652] p 2243 N95-28634

MACHINE LEARNING

Using machine learning to derive efficient cost and performance estimates in VLSI CAD designs
[AD-A288254] p 2363 N95-26408

Evolving cascade-correlation networks for time-series forecasting
[AD-A289197] p 2390 N95-27020

A modified backpropagation algorithm for training neural networks on data with error bars
[DE95-608729] p 2381 N95-27025

Higher-order probabilistic perceptrons as Bayesian inference engines
[DE95-608730] p 2381 N95-27044

Building an adaptive agent to monitor and repair the electrical power system of an orbital satellite
p 2383 N95-27380

A fuzzy logic intelligent diagnostic system for spacecraft integrated vehicle health management
p 2385 N95-27392

MACHINE TOOLS

Neural network error compensation of machine tools
[AD-A289300] p 2387 N95-28217

MACHINING

Neural network error compensation of machine tools
[AD-A289300] p 2387 N95-28217

JTEC Panel report on microelectromechanical systems in Japan
[NASA-CR-197831] p 2268 N95-28239

MACINTOSH PERSONAL COMPUTERS

Scientific statistics and graphics on the Macintosh
[DE95-006445] p 2372 N95-27533

MACROMOLECULES

Materials with self organized surfaces: 2D polymer assemblies
[AD-A288928] p 2226 N95-26627

MACROPHAGES

Anti-idiotype probes for toxin detection
[AD-A288955] p 2348 N95-26435

MAGNESIUM

A model of the diurnal variation in magnesium ion density and radiance in the thermosphere
[AD-A289824] p 2339 N95-28575

MAGNESIUM FLUORIDES

Point defect formation in optical materials expos ed to the space environment p 2428 N95-27646

MAGNETIC BEARINGS

Whirl plus tilt
[DE95-007948] p 2399 N95-28108

MAGNETIC COILS

Extension to the dynamic modeling of the large angle magnetic suspension test fixture
[NASA-CR-197801] p 2143 N95-26768

MAGNETIC DIPOLES

Simple equivalent dipole distributions for dielectric spheroidal scatterers
[PB95-184883] p 2254 N95-27049

Field quality improvements in superconducting magnets for RHIC
[DE95-006096] p 2269 N95-28339

Manufacture and testing of the superconducting wire and cable for the RHIC dipoles and quadrupoles
[DE95-006000] p 2270 N95-28515

MAGNETIC EFFECTS

The oxidation state and magnetic behaviour of Tb in high-(Tc) related materials
[DE95-007129] p 2219 N95-27966

Transport simulation of negative magnetic shoar discharges
[DE95-003941] p 2416 N95-28329

Theoretical aspects of energy confinement in spheromaks
[DE95-008079] p 2435 N95-28542

MAGNETIC FIELD CONFIGURATIONS

Magnetically controlled deposition of metals using gas plasma
[DE95-007248] p 2430 N95-27237

Crystal and magnetic structure of stoichiometric YFe2O4
[DE95-006627] p 2440 N95-27487

SAMPEX special pointing mode p 2149 N95-27780

Plasma properties and magnetic field structure of the solar corona, based on coordinated Max 1991 observations from SERTS, the VLA, and magnetographs
[NASA-CR-198592] p 2464 N95-27858

Magnetic structures in RNi2B2C (R = Ho, Er) superconductors
[DE95-008370] p 2442 N95-27932

MAGNETIC FIELDS

A study of magnetic activity effects on the thermospheric winds in the low ionosphere
[AD-A288677] p 2334 N95-26488

Analytic formulae for the Hartree-Fock order parameter at arbitrary p/q filling factors for the 2DEG in a magnetic field
[DE95-607805] p 2448 N95-26603

Joint services electronics program
[AD-A289594] p 2260 N95-26716

Computation of electromagnetic scattering parameters for lognormal distributions of magnetic spheres: Theory and algorithms
[AD-A289672] p 2250 N95-26759

Analysis of magnetic field levels at KSC
[NASA-CR-197678] p 2326 N95-26808

Notes on the calibration of the JHU-APL solar vector magnetograph at NSO-Sec peak
[AD-A289277] p 2253 N95-26983

The consideration of a bright relative beam dynamics in the magnetic focusing field
[DE95-608377] p 2398 N95-27160

Magnetic field measurement for the spectrometric magnet of the ISTRA-M setup
[DE95-608560] p 2362 N95-27162

Mathematical simulation of three-dimensional magnetic field of spectrometric magnet SP-40
[DE95-608736] p 2398 N95-27239

Energetic particle destabilization of shear Alfven waves in stellarators and tokamaks
[DE95-006393] p 2431 N95-27419

Magnetization of ferromagnetic clusters
[DE95-006878] p 2399 N95-27548

Landau quasi-energy spectrum destruction for an electron in both a static magnetic field and a resonant electromagnetic wave
[DE95-610176] p 2256 N95-27716

A PC-based magnetometer-only attitude and rate determination system for gyroless spacecraft
p 2147 N95-27770

Measurement of particle transport coefficients on Alcator C-Mod
[DE95-007763] p 2411 N95-28020

Solar-geophysical data number 604, December 1994. Part 1: (Prompt reports). Data for November, October 1994, and late data
[PB95-181848] p 2465 N95-28087

One dimensional global and local solution for ICRF heating
[DE95-007984] p 2392 N95-28110

Neutrino oscillations in strong magnetic fields
[DE95-608876] p 2416 N95-28249

Field quality improvements in superconducting magnets for RHIC
[DE95-006096] p 2269 N95-28339

MAGNETIC FLUX

Magnetically controlled deposition of metals using gas plasma
[DE95-007248] p 2430 N95-27237

The role of microprocesses in macroscale magnetotail dynamics
[DE95-006288] p 2432 N95-27673

A magnetic hysteresis model p 2153 N95-27801

MAGNETIC INDUCTION

Measurement of the D0 WAMUS magnet inductance
[DE95-005128] p 2399 N95-27530

MAGNETIC LENSES

The consideration of a bright relative beam dynamics in the magnetic focusing field
[DE95-608377] p 2398 N95-27160

MAGNETIC LEVITATION VEHICLES

Computational support of the laminar flow supersonic wind tunnel, CNSFV code development, Maglev, and grid generation
[NASA-CR-197750] p 2143 N95-26775

MAGNETIC MEASUREMENT

Analysis of magnetic field levels at KSC
[NASA-CR-197678] p 2326 N95-26808

Measurement of the D0 WAMUS magnet inductance
[DE95-005128] p 2399 N95-27530

Manufacture and testing of the superconducting wire and cable for the RHIC dipoles and quadrupoles
[DE95-006000] p 2270 N95-28515

MAGNETIC MIRRORS

Attractive characteristics of mirrors
[DE95-008073] p 2435 N95-28356

MAGNETIC MOMENTS

Magnetic quadrupole moment of W-boson in Kobayashi-Maskawa model
[DE95-610355] p 2407 N95-27411

Magnetization of ferromagnetic clusters
[DE95-006878] p 2399 N95-27548

Magnetic and structural properties of Fe/Pd multilayers studied by magnetic x-ray dichroism and x-ray absorption spectroscopy
[DE95-007095] p 2206 N95-27755

Observational magnetometer calibration with the Hubble Space Telescope's new magnetometers
p 2148 N95-27773

MAGNETIC PERMEABILITY

The oxidation state and magnetic behaviour of Tb in high-(Tc) related materials
[DE95-007129] p 2219 N95-27966

MAGNETIC PROPERTIES

A new method of evaluating the explicit magnetic-state-dependent energy in semi-empirical calculations of iron
[AD-A289098] p 2399 N95-27398

Spin-density-wave magnetism in dilute copper-manganese alloys
[DE95-005121] p 2215 N95-27462

Measurement of the D0 WAMUS magnet inductance
[DE95-005128] p 2399 N95-27530

Micromagnetics and microstructure of epitaxially grown Co and Co-Cr films for perpendicular magnetic recording
[DE95-004681] p 2441 N95-27720

Recent neutron scattering results on high-temperature superconductors
[DE95-007028] p 2413 N95-28066

MAGNETIC RECORDING

Micromagnetics and microstructure of epitaxially grown Co and Co-Cr films for perpendicular magnetic recording
[DE95-004681] p 2441 N95-27720

MAGNETIC RELAXATION

Muon spin relaxation in ferromagnets: Theoretical results for paramagnetic EuO and EuS
[PB95-192860] p 2418 N95-28641

Muon spin relaxation in antiferromagnets: A study of RbMnF3 based on the coupled-mode theory of paramagnetic and critical spin fluctuations
[PB95-192878] p 2418 N95-28642

MAGNETIC RESONANCE

Magnetic resonance imaging of solvent transport in polymer networks
[DE95-007142] p 2234 N95-27455

MAGNETIC SHIELDING

Analysis of magnetic field levels at KSC
[NASA-CR-197678] p 2326 N95-26808

Extended linear ion trap frequency standard apparatus
[NASA-CASE-NPO-19081-1-CU] p 2404 N95-26861

Extended linear ion trap frequency standard apparatus
[NASA-CASE-NPO-19081-1-CU] p 2416 N95-28348

MAGNETIC SIGNATURES

Plasma properties and magnetic field structure of the solar corona, based on coordinated Max 1991 observations from SERTS, the VLA, and magnetographs
[NASA-CR-198592] p 2464 N95-27858

MAGNETIC SUSPENSION

Extension to the dynamic modeling of the large angle magnetic suspension test fixture
[NASA-CR-197801] p 2143 N95-26768

Time-optimal control of the magnetically levitated photolithography platen
[DE95-005493] p 2266 N95-27724

MAGNETIC VARIATIONS

A study of magnetic activity effects on the thermospheric winds in the low ionosphere
[AD-A288677] p 2334 N95-26488

Energization and transport of ions of ionospheric origin in the terrestrial magnetosphere
[NASA-CR-197813] p 2336 N95-26699

MAGNETIZATION

Magnetization of ferromagnetic clusters
[DE95-006878] p 2399 N95-27548

Micromagnetics and microstructure of epitaxially grown Co and Co-Cr films for perpendicular magnetic recording
[DE95-004681] p 2441 N95-27720

Magnetic and structural properties of Fe/Pd multilayers studied by magnetic x-ray dichroism and x-ray absorption spectroscopy
[DE95-007095] p 2206 N95-27755

MAGNETO-OPTICS
Development of an optical trap as an ultra-sensitive analytical tool
[DE95-007843] p 2426 N95-28022
MAGNETOHYDRODYNAMIC FLOW
Fluctuations and transport in fusion plasma
[DE95-004178] p 2429 N95-26444
Effect of toroidal plasma flow and flow shear on global MHD modes
[DE95-006676] p 2433 N95-28106
MAGNETOHYDRODYNAMIC STABILITY
Analysis of instability growth and collisionless relaxation in thermionic converters using 1-D PIC simulations
[AD-A289310] p 2319 N95-26891
Nonlinear instability and chaos in plasma wave-wave interactions. I. Introduction
[DE95-005529] p 2429 N95-27084
Fluctuations in high beta(sub p) plasmas in DIII-D
[DE95-008071] p 2432 N95-27710
MAGNETOHYDRODYNAMIC TURBULENCE
Magnetic viscosity by localized shear flow instability in magnetized accretion disks
[DE95-006879] p 2433 N95-28111
A phenomenological treatment of rotating turbulence
[NASA-CR-198168] p 2288 N95-28228
MAGNETOHYDRODYNAMIC WAVES
Energetic particle destabilization of shear Alfven waves in stellarators and tokamaks
[DE95-006393] p 2431 N95-27419
Fast wave current drive in D3-D
[DE95-007582] p 2431 N95-27441
Experimental aspects of effects of high-energy particles on Alfven modes
[DE95-003383] p 2432 N95-27873
Magnetic viscosity by localized shear flow instability in magnetized accretion disks
[DE95-006879] p 2433 N95-28111
Shear Alfven wave excitation by direct antenna coupling and fast wave resonant mode conversion
[DE95-609109] p 2256 N95-28254
Proceedings of the International Workshop on Acceleration and Radiation Generation in Space and Laboratory Plasmas
[AD-A291673] p 2436 N95-28668
MAGNETOHYDRODYNAMICS
MHD simulations of DC helicity injection for current drive in tokamaks
[DE95-007018] p 2429 N95-26940
Intrusive multi-probe system
[DE95-006258] p 2292 N95-27465
The role of microprocesses in macroscale magnetotail dynamics
[DE95-006288] p 2432 N95-27673
Global dynamo in a reversed field pinch plasma
[DE94-765441] p 2432 N95-27869
Effect of toroidal plasma flow and flow shear on global MHD modes
[DE95-006676] p 2433 N95-28106
Magnetic viscosity by localized shear flow instability in magnetized accretion disks
[DE95-006879] p 2433 N95-28111
A phenomenological treatment of rotating turbulence
[NASA-CR-198168] p 2288 N95-28228
Third-order-accurate numerical methods for efficient, large time-step solutions of mixed linear and nonlinear problems
[DE95-009184] p 2288 N95-28533
MAGNETOMETERS
Notes on the calibration of the JHU-APL solar vector magnetograph at NSO-Sec peak
[AD-A289277] p 2253 N95-26983
Flight Mechanics/Estimation Theory Symposium 1995
[NASA-CP-3299] p 2146 N95-27763
A PC-based magnetometer-only attitude and rate determination system for gyroless spacecraft
p 2147 N95-27770
Observational magnetometer calibration with the Hubble Space Telescope's new magnetometers
p 2148 N95-27773
An automated method of tuning an attitude estimator
p 2148 N95-27774
SAMPEX special pointing mode p 2149 N95-27780
Solar-geophysical data number 604, December 1994. Part 1: (Prompt reports). Data for November, October 1994, and late data
[PB95-181848] p 2465 N95-28087
MAGNETOSPHERE-IONOSPHERE COUPLING
Energization and transport of ions of ionospheric origin in the terrestrial magnetosphere
[NASA-CR-197813] p 2336 N95-26699
MAGNETOSTATICS
Vector algorithms for solving 3D nonlinear magnetostatic problems
[DE95-608737] p 2399 N95-27298
MAGNETS
Mathematical simulation of three-dimensional magnetic field of spectrometric magnet SP-40
[DE95-608736] p 2398 N95-27239
MAGNITUDE
Weighting scheme for the space surveillance network automated tasker
[AD-A289265] p 2146 N95-27035
MAINTAINABILITY
Design of a high altitude long endurance aircraft with manufacturing considerations p 2119 N95-26947
Report to Congressional Committees. Comanche Helicopter: Testing needs to be completed prior to production decisions
[GAO/NSIAD-95-112] p 2135 N95-27910
MAINTENANCE
Alternative cleaning solvents and lubricants at the Air Force PJKS facility p 2228 N95-27108
Application of bacterial bioemusifiers to in situ maintenance of oil/water separators
p 2179 N95-27120
Cleaning of parts for new manufacturing and parts rebuilding p 2231 N95-27123
Comprehension and retrieval of failure cases in airborne observatories p 2145 N95-27394
Life cycle costs of alternatives for F-16 printed circuit board diagnosis equipment
[AD-A288744] p 2138 N95-28586
The effects of Crew Resource Management (CRM) training in airline maintenance: Results following three year's experience
[NASA-CR-196696] p 2358 N95-28676
MAINTENANCE TRAINING
The value of simulation for training
[AD-A289174] p 2143 N95-26556
MALAYSIA
Environmental pollution-effects on national development
[DE95-600439] p 2326 N95-26639
MAN ENVIRONMENT INTERACTIONS
Quantitative modeling and analysis in environmental studies
[AD-A288451] p 2326 N95-26431
Towards the detection and attribution of an anthropogenic effect on climate
[DE95-008589] p 2331 N95-28157
MAN MACHINE SYSTEMS
A perspective on the Human-Rating process of US spacecraft: Both past and present
[NASA-SP-6104] p 2162 N95-26586
US Coast Guard Human Systems Integration (HSI) process model
[AD-A289172] p 2358 N95-26612
Integrated mission precision attack cockpit technology (IMPACT). Phase 1: Identifying technologies for air-to-ground fighter integration
[AD-A289562] p 2129 N95-26684
Telepresent spacecraft docking with object-based bilateral control (OBBC)
[AD-A289268] p 2163 N95-26980
Survey and implementation of commercial manual controllers for a generic telerobotics architecture
[AD-A289215] p 2381 N95-26990
MANAGEMENT INFORMATION SYSTEMS
Analysis, design and implementation of a database system for the systems management curriculum office
[AD-A289656] p 2452 N95-26758
Design considerations for FrankTalk: A distributed group support system
[AD-A289386] p 2359 N95-26863
A demonstration of Client/Server technology using remote procedure calls for an application of file migration for moving records based on location
[AD-A289391] p 2453 N95-26864
The re-engineering of the Air Force Institute of Technology Student Information System
[AD-A289426] p 2453 N95-26866
Research and development management information system, system user manual
[AD-A289151] p 2453 N95-27004
Managing electronic records: A guideline
[DE95-007038] p 2456 N95-28555
A correlational study of the SEI's capability maturity model and software development performance in DOD contracts
[AD-A288890] p 2374 N95-28591
The Global Historical Climatology Network: A preview of version 2
[DE95-007003] p 2332 N95-28605
MANAGEMENT METHODS
Distributed computation of Pareto solutions for two decision makers
[PB95-185047] p 2396 N95-26613
Change, Learning and Mental Work in Organizations: Working papers of the 3rd Otaniemi-Dresden Workshop
[PB95-184941] p 2356 N95-26909
Performance of a stand-alone wind-electric ice maker for remote villages
[DE95-004006] p 2320 N95-27475
The 1994 JANNAF Safety and Environmental Protection Subcommittee Meeting, volume 1
[CPIA-PUBL-614-VOL-1] p 2170 N95-28294
MANAGEMENT PLANNING
Air traffic operational inventory CY 1994
[AD-A288281] p 2126 N95-26454
Automated Procurement System (APS) revised project management plan (DS-03)
[NASA-CR-196605] p 2450 N95-27169
A linguistic geometry for 3D strategic planning
p 2386 N95-27397
Cape Canaveral air station launch emergency response forces and toxic materials release contingency plans
p 2172 N95-28308
Evaluation of an Air Force Information Resources Management (IRM) overview course
[AD-A288746] p 2456 N95-28587
MANAGEMENT SYSTEMS
Automated Procurement System (APS) revised project management plan (DS-03)
[NASA-CR-196605] p 2450 N95-27169
Implementing an integrated standards-based management system to ensure compliance at Los Alamos National Laboratory
[DE95-007873] p 2451 N95-28025
Automated remedial assessment methodology software system
[DE95-007287] p 2373 N95-28243
Cape Canaveral air station launch emergency response forces and toxic materials release contingency plans
p 2172 N95-28308
Replacing the message service component in an integration framework
[AD-A289928] p 2375 N95-28628
MANEUVERABILITY
Airfoil modification effects on subsonic and transonic pressure distributions and performance for the EA-6B airplane
[NASA-TP-3516] p 2120 N95-26382
MANEUVERS
Full span flaperons for a biplane
p 2119 N95-26954
MANGANESE
Structural oxidation state studies of the manganese cluster in the oxygen evolving complex of Photosystem II
[DE95-008488] p 2409 N95-27744
MANGANESE ALLOYS
Spin-density-wave magnetism in dilute copper-manganese alloys
[DE95-005121] p 2215 N95-27462
MANGANESE COMPOUNDS
Muon spin relaxation in antiferromagnets: A study of RbMnF3 based on the coupled-mode theory of paramagnetic and critical spin fluctuations
[PB95-192878] p 2418 N95-28642
MANIFOLDS (MATHEMATICS)
Compactification of moduli spaces of monopoles
[PB95-185179] p 2388 N95-26515
Generalized Schwarzians in several variables and Moebius invariant differential operators
[PB95-185211] p 2388 N95-26539
Gromov-Lawson-Rosenberg conjecture for groups with periodic cohomology
[PB95-185203] p 2389 N95-26915
Collapsing and solvmanifolds
[PB95-196267] p 2393 N95-28501
MANIPULATORS
Plate manipulators
[AD-A289601] p 2121 N95-26719
Learning Hand/Eye coordination by an active observer. part 1: Organizing centers
[AD-A289502] p 2356 N95-26843
Telepresent spacecraft docking with object-based bilateral control (OBBC)
[AD-A289268] p 2163 N95-26980
Survey and implementation of commercial manual controllers for a generic telerobotics architecture
[AD-A289215] p 2381 N95-26990
Dynamic coupling of underactuated manipulators
[AD-A289404] p 2301 N95-27098
MANNED SPACE FLIGHT
International Space Station Alpha trace contaminant control subassembly life test report
[NASA-TM-108488] p 2358 N95-26364
A perspective on the Human-Rating process of US spacecraft: Both past and present
[NASA-SP-6104] p 2162 N95-26586
Spaceflight revolution: NASA Langley Research Center from Sputnik to Apollo
[NASA-SP-4308] p 2474 N95-27685

MANNED SPACECRAFT
Long-term variability of electron radiation dose in geosynchronous orbit
[AD-A289335] p 2162 N95-26902
MANPOWER
Free Electron Laser Physical Process Code (FELPPC)
[DE95-006276] p 2296 N95-27557
MANUFACTURING
Process control of microstructure in manufacturing
[AD-A288291] p 2245 N95-26410
Stochastic adaptive estimation and control
[AD-A289088] p 2380 N95-26480
Design of a high altitude long endurance aircraft with manufacturing considerations p 2119 N95-26947
JTEC Panel report on electronic manufacturing and packaging in Japan
[NASA-CR-197830] p 2263 N95-27226
Microelectronics in Japan p 2263 N95-27227
Japan's technology and manufacturing infrastructure
p 2263 N95-27229
Electronics manufacturing and assembly in Japan
p 2263 N95-27231
Specification of the figure and finish of EUV mirrors in terms of performance requirements, revised Nov. 1994
[DE95-005689] p 2425 N95-27490
Recent progress in the Photovoltaic Manufacturing Technology Project (PVMaT)
[DE95-000279] p 2320 N95-27704
JTEC panel on display technologies in Japan
[NASA-CR-198564] p 2292 N95-27863
Evaluation and qualification of environmentally conscious manufacturing processes for commercial and military applications
[DE95-008520] p 2329 N95-27878
A knowledge highway for integrated modelling from manufacturing to design
[AD-A288872] p 2247 N95-28187
Process and control systems for composites manufacturing p 2184 N95-28267
ACT/ICAPS: Thermoplastic composite activities
p 2185 N95-28274
Composite intermediate case manufacturing scale-up for advanced engines p 2141 N95-28275
Composite fuselage crown panel manufacturing technology p 2137 N95-28474
Manufacture and testing of the superconducting wire and cable for the RHIC dipoles and quadrupoles
[DE95-006000] p 2270 N95-28515
MAPPING
Longterm infrared cloud clutter research
[AD-A288632] p 2340 N95-26343
Digital mapping, charting, and geodesy analysis program: Initial technical review of Raster Product Format
[AD-A289039] p 2313 N95-26476
Vector Smart Map Level 1: A new DMA product
[AD-A288920] p 2452 N95-26607
On compact multipliers of topological algebras
[DE95-608751] p 2390 N95-27092
Harmonic maps of the bounded symmetric domains
[DE95-608798] p 2397 N95-27485
MARINE BIOLOGY
Biological/physical modeling of upper ocean processes
[AD-A289468] p 2347 N95-27151
MARINE ENVIRONMENTS
Transport phenomena and interfacial kinetics in multiphase combustion systems
[AD-A288297] p 2199 N95-26417
Environmentally assisted cracking of high strength beta titanium alloys
[AD-A289156] p 2213 N95-27032
Biological/physical modeling of upper ocean processes
[AD-A289468] p 2347 N95-27151
Measurement of heterogeneous chemical processes relevant to aerosol surfaces and trace gases active in the marine environment
[DE95-008337] p 2328 N95-27743
Benefits and limitations of composites in carrier-based aircraft p 2189 N95-28422
Downloading environmental data in the new MOODS format
[AD-A288835] p 2456 N95-28589
MARINE METEOROLOGY
Live from Antarctica: The coldest, windiest place on Earth
[NASA-CR-197737] p 2335 N95-26595
Live from Antarctica, volume 4
[NASA-CR-197828] p 2335 N95-26596
Deep convection in the Mediterranean Sea
[AD-A288497] p 2346 N95-26647
Study of the response of a three-dimensional coupled ice-ocean model to daily varying atmospheric forcing
[AD-A289050] p 2347 N95-27189
Tomographic observations of deep convection and the thermal evolution of the Greenland Sea Gyre 1988-1989
[AD-A289104] p 2348 N95-28096
Studies of radar backscatter as a function of wave properties and the winds in the turbulent marine atmosphere
[NASA-CR-198608] p 2315 N95-28209
MARINE TECHNOLOGY
JTEC/WTEC annual report and program summary: 1993/94
[NASA-CR-198563] p 2475 N95-28038
Modeling the shock response of submerged structures
[AD-A289082] p 2288 N95-28351
MARKERS
Systematic study of the ion beam mixing of oxide markers into alumina
[DE95-006262] p 2217 N95-27555
MARKET RESEARCH
Electronics manufacturing and assembly in Japan
p 2263 N95-27231
JTEC monograph on biodegradable polymers and plastics in Japan: Research, development, and applications
[NASA-CR-198562] p 2235 N95-27694
MARKOV PROCESSES
A mathematical framework for an improved search model
[AD-A288858] p 2358 N95-26552
Stochastic control and topics in applied probability
[AD-A291712] p 2395 N95-28526
MARS (PLANET)
Micromechanisms for optimism seismometer
p 2159 N95-27292
MARS ATMOSPHERE
Mars Sample Return mission utilizing in-situ propellant production
[NASA-CR-188371] p 2145 N95-28261
MARS EXPLORATION
A rotating arm using shape-memory alloy
p 2157 N95-27276
MARS SAMPLE RETURN MISSIONS
Mars Sample Return mission utilizing in-situ propellant production
[NASA-CR-188371] p 2145 N95-28261
MARS SURFACE
The Alpha-Proton-X-ray Spectrometer deployment mechanism: An anthropomorphic approach to sensor placement on Martian rocks and soil
p 2155 N95-27265
Theoretical and experimental models of the diffuse radar backscatter from Mars
[NASA-CR-198650] p 2463 N95-27700
MARTENSITE
Precursor phenomenon of martensitic transformation in Au-49.5at%Cd alloy
[DE95-007698] p 2222 N95-28166
MARTENSITIC STAINLESS STEELS
Effect of internal hydrogen on the mixed-mode 1/3 fracture toughness of a ferrific/martensitic stainless steel
[DE95-005722] p 2216 N95-27479
MARTENSITIC TRANSFORMATION
Precursor phenomenon of martensitic transformation in Au-49.5at%Cd alloy
[DE95-007698] p 2222 N95-28166
MASS DISTRIBUTION
The calculation of the mass moment of inertia of a fluid in a rotating rectangular tank
[NASA-CR-197777] p 2278 N95-27165
MASS DRIVERS
A high velocity electromagnetic mass launcher having an ablation resistant insulator
[AD-A288231] p 2154 N95-26524
MASS RATIOS
Molecular cloud content of early-type galaxies. V. CO in elliptical galaxies
[PB95-185153] p 2461 N95-27320
MASS SPECTRA
Measurement of inclusive Lambda production in electron-positron interactions at the upsilon energies
[DE95-610302] p 2407 N95-27407
Molecular beam scattering from C-13 enriched Kapton and correlation with the EOIM-3 carousel experiment
p 2419 N95-27643
Excited Charm States
[DE95-005749] p 2409 N95-27747
MASS SPECTROMETERS
Plume measurements with the T5 xenon ion thruster
[AD-A288697] p 2167 N95-26489
Photon burst mass spectrometry--ultrasensitive detection of rare isotopes
[DE95-006403] p 2204 N95-27467
STS-46 plasma composition measurements using the EOIM-3 mass spectrometer p 2211 N95-27645
MASS SPECTROSCOPY
Photon burst mass spectrometry--ultrasensitive detection of rare isotopes
[DE95-006403] p 2204 N95-27467
PXAMS: Projectile X ray AMS: X ray yields and applications
[DE95-006438] p 2204 N95-27496
Laser ionization of molecular clusters
[DE95-007011] p 2296 N95-27550
Analysis of surfaces, films and multilayers by resonant laser ablation
[DE95-006295] p 2297 N95-27841
D/H and O-18/O-16 partitioning between water liquid and vapor in the system H2O-Na-K-Mg-Ca-Cl-SO4 from 0 to 350 C
[DE95-007013] p 2208 N95-27961
MASS TRANSFER
Nova-like variables p 2458 N95-27070
Models for various aspects of dwarf novae and nova-like stars p 2459 N95-27071
Extensional flow convecting a reactant undergoing a first order homogeneous reaction and diffusional mass transfer from a sphere at low to intermediate Peclet and Damkohler numbers p 2280 N95-27346
Computation of three-dimensional mixed convective boundary layer flow p 2280 N95-27347
Analysis of gas absorption to a thin liquid film in the presence of a zero-order chemical reaction
p 2280 N95-27348
Single-drop reactive extraction/extractive reaction with forced convective diffusion and interphase mass transfer
p 2282 N95-27358
Single-drop reactive extraction/extractive reaction with forced convective diffusion and interphase mass transfer
p 2283 N95-27365
Survey on researches related to ocean disposal of carbon dioxide
[DE95-759247] p 2329 N95-27939
MATCHING
Development of a direct match technique for star identification on the SWAS mission
p 2148 N95-27771
MATERIALS RECOVERY
Hazards analysis of an integral class 1.1/1.3 rocket motor demilitarization and ingredient recovery system using ammonia p 2174 N95-28315
Commercial reformulation: An economic and environmentally neutral means of managing explosives and solid propellants p 2175 N95-28320
Alternate use of rocket propellants as ingredients in commercial watergel explosives p 2176 N95-28321
A comprehensive energetic materials resource recovery and recycling program p 2176 N95-28323
Recovery and reuse of rocket motor propellant ingredients p 2177 N95-28326
MATERIALS SCIENCE
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-94-022] p 2246 N95-27699
Research activities of the Solid State Sciences Committee in the development of a Federal initiative on advanced materials and processing
[DE95-009328] p 2445 N95-28179
An overview of activities and accomplishments of the Metals and Ceramics Division
[DE95-007020] p 2241 N95-28560
MATERIALS TESTS
Integrating the QMR method with first principles material science application code
[DE95-007380] p 2408 N95-27456
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 3
[NASA-CP-3275-PT-3] p 2466 N95-27629
An overview of the Evaluation of Oxygen Interactions with Materials 3 experiment: Space Shuttle Mission 46, July-August 1992 p 2210 N95-27630
Evaluation of Oxygen Interactions with Materials 3: Mission and induced environments
p 2210 N95-27631
Spacecraft materials studies on the Aerospace Corporation tray on EOIM-3 p 2210 N95-27632
Exposure of LDEF materials to atomic oxygen: Results of EOIM 3 p 2210 N95-27633
LEO degradation of graphite and carbon-based composites aboard Space Shuttle Flight STS-46
p 2199 N95-27636
Orbital atomic oxygen effects on materials: An overview of MSFC experiments on the STS-46 EOIM-3
p 2419 N95-27637
Effects of atomic oxygen on polymeric materials flown on EOIM-3 p 2242 N95-27638
Thermal control materials on EOIM-3
p 2242 N95-27639
Solid film lubricants and thermal control coatings flown aboard the EOIM-3 MDA sub-experiment
p 2242 N95-27640

Evaluation of space environmental effects on metals and optical thin films on EOIM-3 p 2210 N95-27641
Analysis of selected specimens from the STS-46 Energetic Oxygen Interaction with Materials-3 experiment p 2210 N95-27642
Alternate use of rocket propellants as ingredients in commercial watergel explosives p 2176 N95-28321
Recovery and reuse of rocket motor propellant ingredients p 2177 N95-28326
Proof test methodology for composites p 2193 N95-28445
Impact damage resistance of composite fuselage structure, part 1 p 2138 N95-28482
NASA-ACEE/Boeing 737 graphite-epoxy horizontal stabilizer service p 2138 N95-28489
Nonlinear optical studies of surfaces [DE95-006574] p 2428 N95-28557
Material characterization system [AD-D017385] p 2210 N95-28584
In situ dynamic material property measurement system [AD-D017387] p 2210 N95-28585

MATHEMATICAL LOGIC
Digital systems validation. Chapter 20 Artificial Intelligenge with applications for aircraft. Handbbook, volume 2 [AD-A288492] p 2380 N95-26638
A case study in automated theorem proving: A difficult problem about commutators [DE95-008392] p 2392 N95-28173
Absolute logics [ISBN-951-41-0775-6] p 2397 N95-28238

MATHEMATICAL MODELS
Manual for SHOCK3D, version 2.0. Computer program for non-linear shock response [AD-A288631] p 2307 N95-26342
A finite element propagation model for extracting normal incidence impedance in nonprogressive acoustic wave fields [NASA-TM-110160] p 2400 N95-26394
Simulation model of the integrated flight/propulsion control system, displays, and propulsion system for ASTOVL lift-fan aircraft [NASA-TM-108866] p 2139 N95-26412
Quantitative modeling and analysis in environmental studies [AD-A288451] p 2326 N95-26431
FREZCHEM: A chemical-thermodynamic model for aqueous solutions at subzero temperatures [AD-A288456] p 2200 N95-26432
Atomic and electronic structure of clusters from Car-Parrinello method [DE94-634463] p 2403 N95-26437
Massively parallel self-consistent-field calculations [DE95-004128] p 2376 N95-26441
User's guide: Computer program for analysis of beam-column structures with nonlinear supports (CBEAMC) [AD-A289031] p 2307 N95-26464
Nonlinear scalespace via hierarchical statistical modeling [AD-A289057] p 2394 N95-26478
Development of a nonlinear simulation for the McDonnell Douglas F-15 Eagle with a longitudinal TECS control-law [AD-A288610] p 2128 N95-26481
The 1994 updated National Airspace System performance assessment for year 2005 [AD-A288652] p 2125 N95-26485
Development of an acuity-based nurse staffing system for the post anesthesia care unit [AD-A288831] p 2352 N95-26494
Intelligent computer based reliability assessment of multichip modules [AD-A288833] p 2259 N95-26550
A mathematical framework for an improved search model [AD-A288858] p 2358 N95-26552
Distributed computation of Pareto solutions for two decision makers [PB95-185047] p 2396 N95-26613
Theoretical studies of reaction surfaces [AD-A288458] p 2404 N95-26632
A parallel complexity model for functional languages [AD-A288589] p 2365 N95-26656
Development and validation of a blade-element mathematical model for the AH-64A Apache helicopter [NASA-TM-108863] p 2118 N95-26710
Numerical investigation to S-inlet flows (Numerical simulation study of S-inlet flows) [AD-A289590] p 2120 N95-26713
Joint services electronics program [AD-A289594] p 2260 N95-26716
Radiation production from stagnating compact toroids employing a nonequilibrium radiation diffusion model . [AD-A289602] p 2429 N95-26720
Numerical simulation of the flow about the F-18 HARV at high angle of attack [NASA-CR-197755] p 2121 N95-26735
Statistical model for molecular internal energy exchange in DSMC method for rarefied flow analysis [ISAS-R-654] p 2274 N95-26741
Soil moisture prediction during freeze and thaw using a coupled heat and moisture flow model [AD-A289343] p 2336 N95-26753
Progress towards computer simulation of NiH2 battery performance over life p 2272 N95-26786
Photoacoustic chambers for studying solids and gases: Theory and practical examples [IFTR-39/1994] p 2143 N95-26837
Study of damage evolutions in composite plates subjected to bending loads using micro-macro analysis [AD-A288523] p 2308 N95-26839
A numerical model to predict the fate of jettisoned aviation fuel [AD-A289336] p 2242 N95-26842
Viscoplastic characterization and fatigue modeling of titanium based metal matrix composites [AD-A289430] p 2181 N95-26868
A model of bubble evolution during decompression based on a Monte Carlo simulation of inert gas diffusion [AD-A289400] p 2353 N95-26885
Calculation of suspended sediment transport by combined wave-current flows [AD-A289368] p 2346 N95-26904
Control of a large space structure using multiple model adaptive estimation and control techniques [AD-A289309] p 2162 N95-26916
A gain scheduling optimization method using genetic algorithms [AD-A289306] p 2381 N95-26920
Design and characterization of resonant cavity light-emitting diodes [AD-A289307] p 2261 N95-26921
Aircraft nosewheel steering simulation p 2118 N95-26944
A state-space model of a large, lightly damped space structure using the Eigensystem realization algorithm [AD-A289251] p 2163 N95-26970
A brief history of laser guided lightning discharge models and experiments [AD-A289448] p 2295 N95-27022
Computing NORAD mean orbital elements from a state vector [AD-A289281] p 2146 N95-27033
Implementation and demonstration of a multiple model adaptive estimation failure detection system for the F-16 [AD-A289301] p 2131 N95-27042
Modeling of trapping and abrupt doping effects in MESFET's using R-dynamic element [PB95-184891] p 2262 N95-27050
A study of internal damage of metal matrix composites by neutron diffraction [DE95-005157] p 2182 N95-27080
Space modeler: An expanded, distributed, virtual environment for space visualization [AD-A289409] p 2461 N95-27131
A methodology to assess the utility of future space systems [AD-A289414] p 2144 N95-27133
Modeling considerations in the prediction of residual strength in composite laminates [AD-A289128] p 2182 N95-27142
A multi-attribute-utility-theory model that minimizes interview-data requirements: A consolidation of space launch decisions [AD-A289421] p 2164 N95-27144
Assessment of the AN/FPS-118 Ionospheric model and proposed improvements [AD-A289439] p 2337 N95-27146
A finite element based technique for simulation helix TWT interaction circuit thermal behavior [AD-A289552] p 2262 N95-27152
Probabilistic material strength degradation model for Inconel 718 components subjected to high temperature, high-cycle and low-cycle mechanical fatigue, creep and thermal fatigue effects [NASA-CR-197832] p 2214 N95-27167
Flow control [AD-A289262] p 2279 N95-27197
Mathematical simulation of three-dimensional magnetic field of spectrometric magnet SP-40 [DE95-608736] p 2398 N95-27239
Effects of bearing cleaning and lube environment on bearing performance p 2158 N95-27285
Ball bearing vibrations amplitude modeling and test comparisons p 2158 N95-27286
Model of a single impurity in a wide bandgap semiconductor describing electric field screening [AD-A289322] p 2264 N95-27296
Analysis of gas absorption to a thin liquid film in the presence of a zero-order chemical reaction p 2280 N95-27348
Features and applications of the Groove Analysis Program (GAP) p 2281 N95-27349
RTE: A computer code for Rocket Thermal Evaluation p 2177 N95-27355
A probabilistic model of a porous heat exchanger p 2282 N95-27359
A verification procedure for MSC/NASTRAN Finite Element Models [NASA-CR-4675] p 2131 N95-27371
Improved numerical solution of mixed H2/H(infinity) optimization with applications [AD-A289315] p 2386 N95-27400
Micromechanical modeling of damage and inelasticity of composite materials in macroscopic structural analysis [DE95-003666] p 2182 N95-27421
A new finite element formulation for incompressible flow [DE95-007141] p 2284 N95-27454
A case for dynamic sets in operating systems [AD-A289354] p 2454 N95-27529
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 3 [NASA-CP-3275-PT-3] p 2466 N95-27629
An overview of the Evaluation of Oxygen Interactions with Materials 3 experiment: Space Shuttle Mission 46, July-August 1992 p 2210 N95-27630
Theoretical and experimental models of the diffuse radar backscatter from Mars [NASA-CR-198650] p 2463 N95-27700
Crossover integral equation theory for the liquid structure study [DE95-609155] p 2218 N95-27757
Flight Mechanics/Estimation Theory Symposium 1995 [NASA-CP-3299] p 2146 N95-27763
Evaluation and modeling of autonomous attitude thrust control for the Geostation Operational Environmental Satellite (GOES)-8 orbit determination p 2146 N95-27765
Accurate orbit determination strategies for the tracking and data relay satellites p 2147 N95-27768
Attitude determination using an adaptive multiple model filtering Scheme p 2148 N95-27772
An automated method of tuning an attitude estimator p 2148 N95-27774
An MME-based attitude estimator using vector observations p 2148 N95-27775
Post Kalman progress p 2148 N95-27776
Optimal attitude maneuver execution for the Advanced Composition Explorer (ACE) mission p 2149 N95-27778
Use of nonlinear identification in robust attitude and attitude rate estimation for SAMPEX p 2149 N95-27781
Earth horizon modeling and application to static Earth sensors on TRMM spacecraft p 2150 N95-27783
Telemetry down-link Doppler as an attitude sensor for spin stabilized spacecraft p 2150 N95-27785
Application of non-coherent Doppler data types for deep space navigation p 2151 N95-27788
A magnetic hysteresis model p 2153 N95-27801
A microstructurally based model of solder joints under conditions of thermomechanical fatigue [DE95-006226] p 2309 N95-27837
Vibration analysis of a split path gearbox [NASA-TM-106875] p 2302 N95-27855
Load transfer in the stiffener-to-skin joints of a pressurized fuselage [NASA-CR-198610] p 2310 N95-27865
Tungsten carbide fragmentation: Experimental characterization and numerical modelling [DE95-008521] p 2236 N95-27879
A diagram technique for strongly interacting fermion systems. One-and two-band Hubbard models [DE95-609437] p 2410 N95-27881
Precision landing system mathematical modeling study report for Andrews Air Force Base, runway 19L, Camp Springs, MD [AD-A289015] p 2127 N95-27903
A summary documentation of the AMIP models [DE95-008343] p 2338 N95-27931
Collected papers on wind turbine technology [NASA-CR-195432] p 2321 N95-27970
Large HAWT wake measurement and analysis p 2289 N95-27973
Preliminary analysis of dynamic stall effects on a 91-meter wind turbine rotor p 2124 N95-27975
Comparative wind tunnel tests of NACA 23024 airfoils with several aileron and spoiler configurations p 2124 N95-27976
Comparative performance tests on the Mod-2, 2.5-mW wind turbine with and without vortex generators p 2124 N95-27978

Design of a real-time wind turbine simulator using a custom parallel architecture p 2322 N95-27979
Aeroelastic stability of wind turbine blade/aileron systems p 2124 N95-27981
UEDGE and DEGAS modeling of the DIII-D scrape-off layer plasma, revision 1
[DE95-008052] p 2433 N95-28065
Testing the correlation between seismic stratigraphy, diagenesis and physical rock properties: Evaluation of fluid flow during early and late diagenesis
[DE95-008338] p 2338 N95-28083
Beyond transition state theory: Rigorous quantum approaches for determining chemical reaction rates
[DE95-008483] p 2208 N95-28086
Deformation limits on two-parameter fracture mechanics in terms of higher order asymptotics
[AD-A289113] p 2310 N95-28098
Whirl plus tilt
[DE95-007948] p 2399 N95-28108
One dimensional global and local solution for ICRF heating
[DE95-007984] p 2392 N95-28110
Anomalous cloud absorption? A critique of the paper entitled Absorption of Solar Radiation by Clouds: Observations Versus Models
[DE95-007703] p 2331 N95-28121
Beam-beam interaction working group summary
[DE95-007824] p 2422 N95-28123
Comprehensive numerical model for CW vertical-cavity surface-emitting lasers
[DE95-007758] p 2299 N95-28132
An introductory guide to uncertainty analysis in environmental and health risk assessment. Environmental Restoration Program
[DE95-008097] p 2354 N95-28136
Accuracy issues in modeling superplastic metal forming
[DE95-008934] p 2222 N95-28163
The real structure of columnar pinning centers in heavy-ion-irradiated cuprate superconductors
[DE95-003948] p 2445 N95-28186
Fowler DMO and time migration for transversely isotropic media with explicit operators
[DE95-007671] p 2339 N95-28194
Operator modeling in commerical aviation: Cognitive models, intelligent displays, and pilot's assistants
[NASA-CR-198609] p 2138 N95-28203
Aeroelasticity and structural optimization of composite helicopter rotor blades with swept tips
[NASA-CR-4665] p 2136 N95-28262
Analysis of aircraft engine blade subject to ice impact
p 2141 N95-28277
Higher order finite element analysis of thick composite laminates p 2186 N95-28282
OB/OD treatment: The effective use of measured field data and air modeling to support an environmental assessment p 2170 N95-28296
Use of SURFACE CHEMKIN to model multiphase atmospheric chemistry: Application to nitrogen tetroxide spills p 2172 N95-28305
Modeling the shock response of submerged structures
[AD-A289082] p 2288 N95-28351
Effect of the fiber-matrix interphase on the transverse tensile strength of the unidirectional composite material
p 2190 N95-28425
Structural design optimization with survivability dependent constraints application: Primary wing box of a multi-role fighter p 2137 N95-28440
Uncertainties in obtaining high reliability from stress-strength models p 2193 N95-28442
Proof test methodology for composites
p 2193 N95-28445
Measurement-based MESFET model in APLAC
[PB95-195483] p 2269 N95-28448
Designers' unified cost model p 2194 N95-28464
Local design optimization for composite transport fuselage crown panels p 2137 N95-28473
Nonlinear dynamics and aeroelasticity of rotorcraft in forward flight
[AD-A291714] p 2136 N95-28504
Visualization methods for the exploration of high dimensional data
[AD-A291717] p 2393 N95-28507
Structure of high-speed sprays
[AD-A291696] p 2288 N95-28523
Stochastic control and topics in applied probability
[AD-A291712] p 2395 N95-28526
Bilateral force feedback for hydraulically actuated systems
[AD-A291632] p 2387 N95-28545
Models used to forecast agricultural corn crops in the micro-region of Ribeirao Preto-SP
[INPE-5513-NTC/309] p 2315 N95-28554
Visualization of finite element model solutions for defibrillation voltage and current distributions
[AD-A289836] p 2400 N95-28579
Development of a TECS control-law for the lateral directional axis of the McDonnell Douglas F-15 Eagle
[AD-A289771] p 2142 N95-28598
Critical behaviour of spin models: A transfer-matrix approach
[PB95-192456] p 2418 N95-28638
Simulation of burning tokamak plasmas
[PB95-195426] p 2435 N95-28654
Chua's circuits: Phenomena and applications
[AD-A291638] p 2271 N95-28666

MATHEMATICAL PROGRAMMING
Improved numerical solution of mixed H2/H(infinity) optimization with applications
[AD-A289315] p 2386 N95-27400
Solving recursive domain equations with enriched categories
[AD-A289358] p 2371 N95-27418
Building an electronic book on the Internet. CSEP:An interdisciplinary syllabus for teaching computational science at the graduate level
[DE95-006526] p 2375 N95-28632

MATRICES (MATHEMATICS)
Performance evaluation of a new parallel preconditioner
[AD-A288563] p 2376 N95-26529
Structures for time-reversed inversion in filter banks
[AD-A289238] p 2261 N95-26964
A path-oriented knowledge representation system: Defusing the combinatorial system p 2386 N95-27395
Estimation of attitude sensor timetag biases
p 2153 N95-27799
Symmetries of the KAC-Peterson modular matrices of affine algebras
[PB95-190138] p 2392 N95-28010
Computational and matrix isolation studies of (2- and 3-furyl)methylene
[AD-A280085] p 2178 N95-28154
Coordinates of the quantum plane as q-tensor operators in U(sub q) (su(2) * su(2))
[DE95-007100] p 2397 N95-28234
Applications of boundary element methods on the Intel Paragon
[DE94-014135] p 2393 N95-28393
The structure of the Hurwitz transformation
[DE95-608759] p 2397 N95-28518
Modeling helicopter blade dynamics using a modified Myklestad-Prohl transfer matrix method
[AD-A289891] p 2136 N95-28626

MATRIX MATERIALS
Design of a unidirectional composite momentum wheel rim
[NASA-TM-106911] p 2164 N95-27761

MATRIX METHODS
Analysis and development of finite element methods for the study of nonlinear thermomechanical behavior of structural components
[NASA-CR-195354] p 2307 N95-26387
Modified eigenvalue problems with applications to structural dynamic re-analysis on parallel computers
[AD-A288257] p 2307 N95-26547
The effects of finite element grid density on model correlation and damage detection of a bridge
[DE94-018895] p 2309 N95-27305
Modeling helicopter blade dynamics using a modified Myklestad-Prohl transfer matrix method
[AD-A289891] p 2136 N95-28626

MATRIX THEORY
Do we fully understand the symmetric Lanczos algorithm yet?
[AD-A289614] p 2368 N95-26855
The surface of liquid He-4 at nonzero temperatures
[DE95-607841] p 2207 N95-27880

MATTER (PHYSICS)
Lattice calculation for lepton capture from vacuum-pair production in relativistic heavy-ion collisions
[DE95-007392] p 2413 N95-28077

MAXIMUM ENTROPY METHOD
Truncated Gaussians as tolerance sets
[NASA-CR-197732] p 2395 N95-27417
Stationary neutrino radiation transport by maximum entropy closure
[DE95-006579] p 2463 N95-28558
A study of heart rate and heart rate variability during rapid decompression to 50,000 ft
[AD-A291598] p 2355 N95-28561

MAXIMUM LIKELIHOOD ESTIMATES
Balanced data focusing: Direction of arrival estimation with maximum likelihood performance
[AD-A288252] p 2248 N95-26407
A method to determine the structure of an unknown mixture using the Akaike Information Criterion and the bootstrap
[AD-A288295] p 2394 N95-26415
Fast multidimensional density estimation based on Random-width bins
[AD-A288286] p 2394 N95-26457
Low-angle tracking in the presence of ducting, coherent and incoherent multipath
[AD-A289838] p 2258 N95-28580

MAXIMUM PRINCIPLE
Stochastic control and topics in applied probability
[AD-A291712] p 2395 N95-28526

MAXWELL EQUATION
Matrix kernels for MEG and EEG source localization and imaging
[DE95-005238] p 2354 N95-27426
The origin of spurious solutions in computational electromagnetics
[NASA-TM-106921] p 2391 N95-27726
Time-dependent model for vertical-cavity surface-emitting laser
[DE95-007880] p 2298 N95-28027
Finite pulse effects in self-amplified-spontaneous emission
[DE95-006585] p 2298 N95-28104

MCDONNELL AIRCRAFT
Performance study for inlet installations
[NASA-CR-189714] p 2140 N95-28227

MCDONNELL DOUGLAS AIRCRAFT
Strategy in the commercial aircraft industry in the United States: A comparison of decisionmaking by McDonnell-Douglas and Boeing aircraft companies from 1977-1983
[AD-A288289] p 2117 N95-26409

MCMURDO SOUND
Live from Antarctica: The coldest, windiest place on Earth
[NASA-CR-197737] p 2335 N95-26595
Live from Antarctica, volume 4
[NASA-CR-197828] p 2335 N95-26596
Subsurface radar investigations at the Pegasus Glacial-ice Runway and Williams Field, McMurdo Station, Antarctica
[AD-A289323] p 2144 N95-27297
FY 1994 ambient air monitoring report for McMurdo Station, Antarctica
[DE95-008565] p 2331 N95-28149

MEAN SQUARE VALUES
The fBm Interpolator
[AD-A288996] p 2388 N95-26459
Study of parity and time reversal violation in neutron-nucleus interactions
[DE95-005158] p 2405 N95-27081
Situation in study of electric polarizability and mean square charge radius of the neutron
[DE95-608869] p 2415 N95-28247

MEASURE AND INTEGRATION
Adaptive finite element method I: Solution algorithm and computational examples
[AD-A288979] p 2389 N95-26609
Robust integration schemes for generalized viscoplasticity with internal-state variables. Part 1: Theoretical developments and applications
[NASA-CR-195452-PT-1] p 2310 N95-28031
Robust integration schemes for generalized viscoplasticity with internal-state variables. Part 2: Algorithmic developments and implementation
[NASA-CR-195453-PT-2] p 2310 N95-28032

MEASURING INSTRUMENTS
Flutter clearance flight tests of an OV-10A airplane modified for wake vortex flight experiments
[NASA-TM-109168] p 2117 N95-26381
Split pipe testing device for the measurement of bond of reinforcement under controlled confinement
[AD-D017258] p 2245 N95-26500
Nondestructive testing apparatus for determining the orientation of reinforcing bars within a concrete structure
[AD-D017267] p 2245 N95-26508
Rheological measurement methods for fibre filled plastics
[PB95-190088] p 2226 N95-26744
Multi-channel electronically scanned cryogenic pressure sensor
[NASA-CASE-LAR-15062-1] p 2291 N95-27138
Load measurement system with load cell lock-out mechanism p 2159 N95-27291
The gluon propagator in non-Abelian Weizsaecker-Williams fields
[DE95-006877] p 2449 N95-27547
The orbital debris detector consortium: Suppliers of instruments for in-situ measurements of small-particles in the space environment p 2294 N95-27670
Search for exotic particles at CDF
[DE95-008383] p 2411 N95-27933

MECHANICAL DEVICES
Ultra-high, resolution, modular optical angle encoder for space-based opto-mechanical applications
p 2156 N95-27270
Development of a high force thermal latch
p 2157 N95-27275
The Solar X-ray Imager Vacuum Door Assembly
p 2157 N95-27280

FORTE antenna element and release mechanism design p 2157 N95-27282
Development and testing of the rack insertion device p 2158 N95-27289
Linear Proof Mass Actuator p 2158 N95-27290
Automatic locking knee brace joint
[NASA-CASE-MFS-28997-1] p 2360 N95-27501

MECHANICAL DRIVES
Testing of Uninterruptible Power Supplies with nonlinear loads
[AD-A289353] p 2262 N95-27067
Direct drive options for electric propulsion systems
[NASA-TM-106576] p 2168 N95-27861
Control system design for the MOD-5A 7.3 mW wind turbine generator p 2306 N95-27985
Variable speed generator application on the MOD-5A 7.3 mW wind turbine generator p 2273 N95-27989
Low-power, parallel photonic interconnections for Multi-Chip Module applications
[DE95-008518] p 2267 N95-28147

MECHANICAL ENGINEERING
Intelligent computer based reliability assessment of multichip modules
[AD-A288833] p 2259 N95-26550
Getting it right, making it better
[NONP-NASA-VT-95-49118] p 2451 N95-27206
NIST: Information management in the AMRF
[NONP-NASA-VT-95-49120] p 2454 N95-27208

MECHANICAL IMPEDANCE
One dimensional global and local solution for ICRF heating
[DE95-007984] p 2392 N95-28110

MECHANICAL MEASUREMENT
Power train torque measurement
[AD-A289577] p 2301 N95-26688

MECHANICAL PROPERTIES
Determination of the cyclical properties of 18G2A steel on the basis of skeleton curves for a planar stress state
[IFTR-32/1994] p 2211 N95-26359
Material modeling in the CRALE code. Users' manual
[AD-A288988] p 2178 N95-26712
Mechanical performance of fiber reinforced metal matrix composites and microstructural development of polycrystalline alumina fibers synthesized from liquid precursors
[AD-A289518] p 2181 N95-26847
Effects of helium pre-implantation on the microstructure and mechanical properties of irradiated 316 stainless steel
[DE95-007162] p 2214 N95-27086
Fatigue behavior of a cross-ply ceramic matrix composite subjected to tension-tension cycling with hold time
[AD-A289418] p 2182 N95-27134
Bimaterial interlaces and their role in the mechanical performance of the in-situ composites
[AD-A288973] p 2182 N95-27188
Current programmes on physical metallurgy and related areas in BARC
[DE95-607939] p 2214 N95-27255
Review of activities in USA on HTS materials
[DE95-006404] p 2234 N95-27468
ECR plasma-assisted deposition of Al2O3 and dispersion-strengthened AlO2
[DE95-007743] p 2235 N95-27687
Using hob offset to balance dynamic strength in spur gears
[NASA-TM-106934] p 2302 N95-27698
Prediction of material strength and fracture of glass using the SPHINX smooth particle hydrodynamics code
[DE95-004869] p 2236 N95-27943
Trace elements and the mechanical properties of intermetallic compounds
[DE95-007378] p 2220 N95-28046
High temperature Hexoloy(trademark) SX silicon carbide
[DE95-007290] p 2221 N95-28075
Through-the Thickness(R) braided composites for aircraft applications p 2185 N95-28273
Designing for time-dependent material response in spacecraft structures p 2166 N95-28292
Functionalized block copolymers as adhesion promoters
[DE95-008158] p 2239 N95-28400
Mechanical properties of Hysol EA-9394 structural adhesive
[DE95-008187] p 2240 N95-28405
Application of advanced material systems to composite frame elements p 2191 N95-28432

MECHANICAL SHOCK
Manual for SHOCK3D, version 2.0. Computer program for non-linear shock response
[AD-A288631] p 2307 N95-26342

MECHANICS (PHYSICS)
Stability and thermal influences in nonlinear continuum mechanics and material science
[AD-A288333] p 2448 N95-26563

MEDIAN (STATISTICS)
Variability study of foF2 for an equatorial station
[DE95-608080] p 2337 N95-27157

MEDICAL PERSONNEL
Aerospace medicine
[AD-A289691] p 2353 N95-26763

MEDICAL SERVICES
Development of an acuity-based nurse staffing system for the post anesthesia care unit
[AD-A288831] p 2352 N95-26494
Aerospace medicine
[AD-A289691] p 2353 N95-26763

MEDITERRANEAN SEA
Deep convection in the Mediterranean Sea
[AD-A288497] p 2346 N95-26647

MELTING
Tensile properties of Fe-16 at. % Al alloys
[DE95-007102] p 2215 N95-27450
Electrolyte effects in Li(Si)/FeS2 thermal batteries
[DE95-001614] p 2264 N95-27474
Surface crystallization and thin film melting in normal alkanes
[DE95-006694] p 2440 N95-27535

MELTING POINTS
BIPM project: Intercomparison of water triple-point cells
[PB95-185237] p 2398 N95-26614
Electrolyte effects in Li(Si)/FeS2 thermal batteries
[DE95-001614] p 2264 N95-27474
High energy electron beams for ceramic joining
[DE95-006316] p 2420 N95-27480

MEMBRANES
Investigation of the interface between immiscible electrolytes applied to membrane electrochemistry
[AD-A288887] p 2199 N95-26350
Template synthesis of electronically conductive polymer nanostructures
[AD-A288373] p 2225 N95-26472

MEMORY
Codes of processing and multiple resources: Model and methodology
[AD-A289583] p 2355 N95-26691
Subjective workload assessment in a spatial memory task
[AD-A289491] p 2356 N95-26825

MEMORY (COMPUTERS)
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-019] p 2270 N95-28565

MENTAL PERFORMANCE
Performance enhancing ration components program: Supplemental carbohydrate test
[AD-A288560] p 2358 N95-26558
Codes of processing and multiple resources: Model and methodology
[AD-A289583] p 2355 N95-26691
Handbook of perception and human performance, volume 2. Cognitive processes and performance
[AD-A289587] p 2355 N95-26692
Subjective workload assessment in a spatial memory task
[AD-A289491] p 2356 N95-26825
Change, Learning and Mental Work in Organizations: Working papers of the 3rd Otaniemi-Dresden Workshop
[PB95-184941] p 2356 N95-26909

MERCURY CADMIUM TELLURIDES
Electronic characterization of defects in narrow gap semiconductors: Comparison of electronic energy levels and formation energies in mercury cadmium telluride, mercury zinc telluride, and mercury zinc selenide
[NASA-CR-197835] p 2437 N95-26780

MERCURY LAMPS
Radiant exchange considerations in design and scaleup of photocatalytic reactors for purification of nitroglycerine-contaminated air p 2171 N95-28300

MERCURY TELLURIDES
Electronic characterization of defects in narrow gap semiconductors: Comparison of electronic energy levels and formation energies in mercury cadmium telluride, mercury zinc telluride, and mercury zinc selenide
[NASA-CR-197835] p 2437 N95-26780

MESOMETEOROLOGY
Fluxes across the west coast resolved by Picket Fence observations during stormfest
[AD-A288511] p 2341 N95-26653
Three-dimensional forecast models for emergency response management p 2172 N95-28303

MESONS
Preliminary heavy-light decay constants from the MILC Collaboration
[DE95-005685] p 2409 N95-27552
The physics program and status of the SLAC B-Factory and detector
[DE95-006562] p 2409 N95-27676
Excited Charm States
[DE95-005749] p 2409 N95-27747
Phenomenology from 100 large lattices
[DE95-006349] p 2442 N95-27994
Measurement of the reaction C(nu(sub mu), mu(-)) X near threshold
[DE95-007888] p 2412 N95-28063
Polarization as a probe to the production mechanisms of charmonium in (pi)N collisions
[DE95-008136] p 2414 N95-28142
Aspects of strange matter
[DE95-008316] p 2414 N95-28170
Some aspects of the OZI-rule violation in the reaction anti-pp yields phi pi(0)
[DE95-608853] p 2415 N95-28245
Constraints on the anomalous WW gamma couplings from b vector s gamma
[DE95-608866] p 2415 N95-28246
Weak matrix elements efforts on the lattice: Status and prospects
[DE95-007701] p 2416 N95-28355
Production and decay of hybrid mesons by flux-tube breaking
[PB95-192837] p 2418 N95-28640

MESOSCALE PHENOMENA
Indexing meso-beta surface wind site representative
[AD-A288501] p 2341 N95-26650
Fluxes across the west coast resolved by Picket Fence observations during stormfest
[AD-A288511] p 2341 N95-26653
Three-dimensional forecast models for emergency response management p 2172 N95-28303

MESSAGE PROCESSING
Two implementation relations and the correctness of communicating replicated processes
[PB95-195640] p 2375 N95-28645

MESSAGES
Replacing the message service component in an integration framework
[AD-A289928] p 2375 N95-28628

METAL BONDING
Theoretical studies of reaction surfaces
[AD-A288458] p 2404 N95-26632

METAL CLUSTERS
Atomic and electronic structure of clusters from Car-Parrinello method
[DE94-634463] p 2403 N95-26437
Particle-like absorption spectra in small transition metal clusters
[DE95-007082] p 2218 N95-27752
Experimental determination of cluster geometrical structure
[DE95-007089] p 2409 N95-27753

METAL COATINGS
Effect of surface coating on one-dimensional system subjected to unit step pressure wave
[AD-A288237] p 2308 N95-26625
Weightless Environment Training Facility (WETF) materials coating evaluation, volume 1
[NASA-CR-188366-VOL-1] p 2239 N95-28385
Surface scanning techniques to locate and study defects in painted zinc and zinc alloy coated steels
[DE95-006099] p 2240 N95-28547

METAL CRYSTALS
The high strain rate deformation of tungsten single crystals
[AD-A288874] p 2223 N95-28189

METAL FATIGUE
Changes in the anisotropy parameters of an aluminum alloy caused by cyclical deformation
[IFTR-27/1994] p 2212 N95-26666
Comparison of life theories for rolling-element bearings
[NASA-TM-106585] p 2301 N95-26774
Viscoplastic characterization and fatigue modeling of titanium based metal matrix composites
[AD-A289430] p 2181 N95-26868
Adhesively bonded composite patch repair of cracked aluminum alloy structures p 2132 N95-27507
A new Cu-8 Cr-4 Nb alloy for high temperature applications
[NASA-TM-106910] p 2218 N95-27728
Fatigue properties of an A356 (AlSi7Mg) aluminum alloy for automotive applications: Fatigue life prediction
[PB95-196424] p 2224 N95-28660

METAL FILMS
Elastic properties of metallic superlattices
[AD-A288699] p 2212 N95-26490
Toward molecular selectivity with chemically modified electrodes: Can electroactivity and permeability through an overlaying metallopolymer film be controlled via rational manipulation of internal architecture?
[AD-A288719] p 2403 N95-26491
Bimaterial interlaces and their role in the mechanical performance of the in-situ composites
[AD-A288973] p 2182 N95-27188
Evaluation of space environmental effects on metals and optical thin films on EOIM-3 p 2210 N95-27641

Cesium/oxide interactions for ultrathin films on (alpha)-Al2O3(001) and (alpha)-Al2O3(1(bar 1)O2)
[DE95-008159] p 2238 N95-28358

METAL FINISHING
Precision parts cleaning with supercritical carbon dioxide p 2229 N95-27114
Plasma source ion implantation of ammonia into electroplated chromium
[DE95-006275] p 2444 N95-28125

METAL FLUORIDES
Muon spin relaxation in antiferromagnets: A study of RbMnF3 based on the coupled-mode theory of paramagnetic and critical spin fluctuations
[PB95-192878] p 2418 N95-28642

METAL FOAMS
Indentability of conventional and negative Poisson's ratio foams p 2195 N95-28472

METAL FOILS
Composite heat pipe development status: Development of lightweight prototype carbon-carbon heat pipe with integral fins and metal foil liner
[NASA-TM-106909] p 2283 N95-27369
Characterization of defects in deuterium-implanted beryllium
[DE95-005688] p 2217 N95-27553
Development of an optical trap as an ultra-sensitive analytical tool
[DE95-007843] p 2426 N95-28022

METAL HYDRIDES
Calorimetric evaluation of commercial Ni-MH cells and charges p 2272 N95-26790
Nickel metal hydride LEO cycle testing
p 2272 N95-26791

METAL IONS
Plume measurements with the T5 xenon ion thruster
[AD-A288697] p 2167 N95-26489
Non-covalent immobilization of proteins and enzymes on polymerized lipid assemblies
[AD-A288234] p 2225 N95-26526
Ethyl lactate as a solvent alternative for cleaning metal parts p 2229 N95-27112
Defect characterization of electronic conducting pseudo-perovskite systems
[DE95-007487] p 2220 N95-28049
Mutagenesis in human cells with accelerated H and Fe ions
[NASA-CR-198599] p 2351 N95-28177
Lithium ion rechargeable systems studies
[DE95-006810] p 2268 N95-28200
Development of an ultra-safe rechargeable lithium-ion battery
[AD-A288959] p 2269 N95-28349
Characterization of solid state laser and nonlinear optical materials
[AD-A291684] p 2300 N95-28458
A model of the diurnal variation in magnesium ion density and radiance in the thermosphere
[AD-A289824] p 2339 N95-28575

METAL MATRIX COMPOSITES
Concurrent engineering research center
[NASA-CR-197726] p 2362 N95-26386
Mechanical performance of fiber reinforced metal matrix composites and microstructural development of polycrystalline alumina fibers synthesized from liquid precursors
[AD-A289518] p 2181 N95-26847
Ductile - ductile beryllium aluminum metal matrix composite manufactured by extrusion
[AD-A289519] p 2181 N95-26848
Fatigue behavior of a cross-ply metal matrix composite at elevated temperature under strain controlled mode
[AD-A289425] p 2181 N95-26865
Viscoplastic characterization and fatigue modeling of titanium based metal matrix composites
[AD-A289430] p 2181 N95-26868
A study of internal damage of metal matrix composites by neutron diffraction
[DE95-005157] p 2182 N95-27080
Design, analysis, and testing of a metal matrix composite web/flange intersection p 2191 N95-28433

METAL OXIDE SEMICONDUCTORS
Comparison of the resistance of the MOS integrated circuits with various types of nuclear radiation
[DE95-608623] p 2261 N95-27023
Microwave characterization of sub-micron N- and P-channel MOSFET's fabricated with thin film silicon-on-sapphire
[AD-A289296] p 2438 N95-27040

METAL OXIDES
Material analysis using combined Elastic Recoil Detection and Rutherford/Enhanced Rutherford Backscattering Spectrometry
[DE95-005415] p 2205 N95-27681
Defect characterization of electronic conducting pseudo-perovskite systems
[DE95-007487] p 2220 N95-28049

METAL POWDER
Lattice parameters and Debye-Waller factors of gamma-TiAl alloys
[AD-A288843] p 2213 N95-26681
Ultra high purity, dimensionally stable INVAR 36
[NASA-CASE-NPO-19358-1-CU] p 2213 N95-26862
Electrolyte effects in Li(Si)/FeS2 thermal batteries
[DE95-001614] p 2264 N95-27474

METAL SURFACES
Ethyl lactate as a solvent alternative for cleaning metal parts p 2229 N95-27112
Corrosive effects of supercritical carbon dioxide and cosolvents on metals p 2224 N95-27113
Precision parts cleaning with supercritical carbon dioxide p 2229 N95-27114
Fluid dynamic effects on precision cleaning with supercritical fluids p 2232 N95-27129
Laser ultrasonic generation at the surface of a liquid metal
[DE95-004999] p 2216 N95-27477
Simulations of metal dissolution and corrosion
[DE95-007486] p 2218 N95-27748
Hydrogen induced C-C, C-N, and C-S bond activities on Pi and Ni surfaces
[DE95-006251] p 2206 N95-27838
Pulsed ion beam surface treatment for preparing rapidly solidified corrosion resistant steel and aluminum surfaces
[DE95-007741] p 2221 N95-28116
Plasma source ion implantation of ammonia into electroplated chromium
[DE95-006275] p 2444 N95-28125
The role of hydrogen in the hydrogenation and hydrogenolysis of aniline on the nickel single crystal surfaces: Its implication on the mechanisms of HDN reactions
[DE95-006687] p 2222 N95-28134
Surface scanning techniques to locate and study defects in painted zinc and zinc alloy coated steels
[DE95-006099] p 2240 N95-28547
Nonlinear optical studies of surfaces
[DE95-006574] p 2428 N95-28557
Mechanism of deposit formation on fuel-wetted hot metal surfaces
[AD-A289847] p 2210 N95-28621
TV-holography at high temperatures: In situ observations of the oxidation of advanced materials
[PB95-195343] p 2294 N95-28651

METAL VAPOR LASERS
Characteristics of thermal lens in a copper-vapor laser
[AD-A289545] p 2294 N95-26874

METAL VAPORS
Theoretical studies of reaction surfaces
[AD-A288458] p 2404 N95-26632
Copper CVD using liquid coinjection of (hfac)Cu(TMVS) and TMVS
[DE95-008155] p 2237 N95-28089

METAL WORKING
Forming metallurgy: Supervised drawing course, NTH
[PB95-196507] p 2219 N95-27934
Accuracy issues in modeling superplastic metal forming
[DE95-008934] p 2222 N95-28163

METAL-METAL BONDING
Development of an ultra-safe rechargeable lithium-ion battery
[AD-A288959] p 2269 N95-28349

METALLIC GLASSES
The structure of lead-indium phosphate glass
[DE95-007130] p 2237 N95-27967

METALLIC PLASMAS
A continuous emissions monitor for airborne metals
p 2174 N95-28313

METALLIZING
Magnetically controlled deposition of metals using gas plasma
[DE95-007248] p 2430 N95-27237
Low resistivity ohmic contacts to moderately doped n-GaAs with low temperature processing
[DE95-008507] p 2445 N95-28144
Non-destructive inter-level dielectric via in-line process monitoring by atomic force microscopy
[DE95-008516] p 2267 N95-28146

METALLURGY
Current programmes on physical metallurgy and related areas in BARC
[DE95-607939] p 2214 N95-27255
Improved hardness RHA weldability and material property testing
[AD-A289127] p 2221 N95-28102

METALS
Corrosive effects of supercritical carbon dioxide and cosolvents on metals p 2224 N95-27113
Molecular approach to mesoporous metal sulfides
[DE95-005418] p 2202 N95-27137
High energy electron beams for ceramic joining
[DE95-006316] p 2420 N95-27480
The role of edge dislocations in the deformation of BCC metals
[DE95-609157] p 2219 N95-27759
A diagram technique for strongly interacting fermion systems. One-and two-band Hubbard models
[DE95-609437] p 2410 N95-27881
Forming metallurgy: Supervised drawing course, NTH
[PB95-196507] p 2219 N95-27934
A continuous emissions monitor for airborne metals
p 2174 N95-28313
On the synthesis of mixed-metal and mixed-pnicogen13-15 ring-systems
[AD-A288869] p 2223 N95-28332
Investigation of HE driven cylindrical liner
[DE95-007866] p 2311 N95-28539
An overview of activities and accomplishments of the Metals and Ceramics Division
[DE95-007020] p 2241 N95-28560

METASTABLE STATE
AEM investigation of tetrahedrally coordinated Ti(4+) in nickel-titanate spinel
[DE95-006624] p 2215 N95-27473

METEORITE COLLISIONS
Tracking and impact prediction of Earth-Crossing-Objects (ECO's) on a collision course with Earth
[AD-A289321] p 2461 N95-27303

METEOROID CONCENTRATION
Orbiting meteoroid and debris counting experiment
p 2463 N95-27668

METEOROLOGICAL BALLOONS
Live from Antarctica, volume 4
[NASA-CR-197828] p 2335 N95-26596

METEOROLOGICAL PARAMETERS
Weather And Radar Processor (WARP) Test and Evaluation Master Plan (TEMP)
[AD-A288280] p 2340 N95-26453
Meteorological and oceanographic data collected during the ASREX 91 field experiment
[AD-A289492] p 2342 N95-26826
VOCAR: An experiment in Variability of Coastal Atmospheric Refractivity
[AD-A289202] p 2253 N95-27006
The distribution of cloud cover over the former USSR as derived from the RIHMI 223-Station 3-hourly meteorological database
[DE95-007046] p 2343 N95-27920
Models used to forecast agricultural corn crops in the micro-region of Ribeirao Preto-SP
[INPE-5513-NTC/309] p 2315 N95-28554

METEOROLOGICAL RADAR
Weather And Radar Processor (WARP) Test and Evaluation Master Plan (TEMP)
[AD-A288280] p 2340 N95-26453
Assessment of the AN/FPS-118 Ionospheric model and proposed improvements
[AD-A289439] p 2337 N95-27146
Report to the Chairman and Ranking Minority Member, Committee on Science, House of Representatives. Weather forecasting: Radar availability requirement not being met
[GAO/AIMD-95-132] p 2342 N95-27912

METEOROLOGICAL RESEARCH AIRCRAFT
Design of a high altitude long endurance aircraft with manufacturing considerations p 2119 N95-26947

METEOROLOGICAL SATELLITES
Reconstruction of an infrared band of meteorological satellite imagery with abductive networks
[SAIC-94/1062] p 2345 N95-27389
Earth horizon modeling and application to static Earth sensors on TRMM spacecraft p 2150 N95-27783
Contingency designs for attitude determination of TRMM p 2154 N95-27803

METEOROLOGY
Live from Antarctica: Then and now
[NASA-CR-197829] p 2335 N95-26594
An observational study on the onset of the summer monsoon over eastern Asia in 1979
[AD-A289637] p 2341 N95-26723
Emerging applications of probability (stochastic models in geosystems)
[AD-A289117] p 2313 N95-28099
Site scientific mission plan for the Southern Great Plains CART site, January-June 1995
[DE95-008393] p 2344 N95-28340

METHANE
Coupled chemistry/climate issues
[DE95-006443] p 2327 N95-27532
Transient studies of low temperature catalyst for methane conversion
[DE95-007913] p 2205 N95-27692
Mars Sample Return mission utilizing in-situ propellant production
[NASA-CR-188371] p 2145 N95-28261

METHODOLOGY
Fundamental concepts of integrated and fiber optic sensors
[NASA-TM-106920] p 2426 N95-27906
METHYL ALCOHOL
Corrosive effects of supercritical carbon dioxide and cosolvents on metals p 2224 N95-27113
Molecular approach to mesoporous metal sulfides
[DE95-005418] p 2202 N95-27137
NQR-NMR studies of higher alcohol synthesis Cu-Co catalysts
[DE95-007926] p 2205 N95-27680
FTIR studies of CH3OH on porous silicon
[AD-A289038] p 2207 N95-27904
Comparison of bridged polysilsesquioxane xerogels prepared from methoxy- and ethoxy-silyl monomers
[DE95-005422] p 2240 N95-28532
METHYL CHLORIDE
Atomically resolved STM study of the adsorption and dissociation of methyl chloride on Si(001)
[AD-A289218] p 2438 N95-27061
METHYL COMPOUNDS
Atomically resolved STM study of the adsorption and dissociation of methyl chloride on Si(001)
[AD-A289218] p 2438 N95-27061
On the synthesis of mixed-metal and mixed-pnicogen13-15 ring-systems
[AD-A288869] p 2223 N95-28332
Poly(N-arylenbenzimidazoles) via aromatic nucleophilic displacement
[NASA-CASE-LAR-14939-1] p 2179 N95-28360
METHYLENE
Computational and matrix isolation studies of (2- and 3-furyl)methylene
[AD-A280085] p 2178 N95-28154
METHYLHYDRAZINE
High pressure Earth storable rocket technology program: Basic program
[NASA-CR-195449] p 2166 N95-26390
A new method for measuring hypergol scrubber emissions p 2174 N95-28312
METRIC SPACE
Hyperkaehler metrics associated to compact Lie groups
[PB95-185161] p 2388 N95-26514
Nonexistence of bilipschitz parameterizations and geometric problems about A(sub infinity) weights
[PB95-185187] p 2396 N95-26538
An image quality analysis of ANVIS-6 night vision goggles
[AD-A289398] p 2359 N95-26883
METRICATION
Standards for excellence
[NONP-NASA-VT-95-49096] p 2451 N95-27202
METROLOGY
Standards for excellence
[NONP-NASA-VT-95-49096] p 2451 N95-27202
Getting it right, making it better
[NONP-NASA-VT-95-49118] p 2451 N95-27206
Methods development for measuring and classifying flammability/combustibility of refrigerants. Task 2: Test plan
[DE95-007066] p 2234 N95-27481
MICROANALYSIS
Positron microscopy
[DE95-007042] p 2410 N95-27874
Analytical electron microscopy of nanometer-sized particles
[AD-A289124] p 2413 N95-28101
MICROBEAMS
Analytical electron microscopy of nanometer-sized particles
[AD-A289124] p 2413 N95-28101
MICROBIOLOGY
Live from Antarctica: The coldest, windiest place on Earth
[NASA-CR-197737] p 2335 N95-26595
Environmentally Benign Cleaning and Degreasing Technology: JANNAF Safety and Protection Subcommittee and Propellant Development and Characterization Subcommittee Joint Workshop
[CPIA-PUBL-611] p 2227 N95-27101
Bioremediation of chlorinated organics: PCBs, TCE, HCFCs p 2179 N95-27117
Microbial treatment for shipboard collection, hold ing, and transfer system tanks p 2179 N95-27119
MICROCOMPUTERS
Magnetic field measurement for the spectrometric magnet of the ISTRA-M setup
[DE95-606560] p 2362 N95-27162
An ugly duckling becomes a swan (hor ellipsis): How an organization becomes customer focused through listening
[DE95-004974] p 2454 N95-27461
Control system design for the MOD-5A 7.3 mW wind turbine generator p 2306 N95-27985
MICROCRACKS
On the thermally-induced residual stresses in thick fiber-thermoplastic matrix (PEEK) cross-ply laminated plates p 2187 N95-28285
MICROCRYSTALS
Surfactants and desensitizing wax substitutes for TNT-Based systems
[AD-A289652] p 2243 N95-28634
MICROELECTRONICS
Microengineered conducting composites from nanochannel templates
[AD-A289573] p 2180 N95-26686
Microelectronics in Japan p 2263 N95-27227
Japan's technology and manufacturing infrastructure p 2263 N95-27229
The 77 K operation of a multi-resonant power converter
[NASA-TM-106941] p 2264 N95-27374
Manufacturing tailored property ceramic composites
[DE95-006303] p 2237 N95-27993
Swords to plowshares: Shock wave applications to advanced lithography
[DE95-008154] p 2299 N95-28223
JTEC Panel report on microelectromechanical systems in Japan
[NASA-CR-197831] p 2268 N95-28239
MICROGRAVITY
Design and development of experimental facilities for short duration, low-gravity combustion and fire experiments
[NASA-CR-195458] p 2244 N95-26709
Device and method for screening crystallization conditions in solution crystal growth
[NASA-CASE-MFS-28985-1] p 2245 N95-26888
Apparatus for diffusion controlled dialysis under microgravity conditions
[NASA-CASE-MFS-28986-1] p 2245 N95-27500
Two-phase flow research using the learjet apparatus
[NASA-TM-106814] p 2284 N95-27854
Tank pressure control in low gravity by jet mixing
[NASA-CR-191012] p 2243 N95-28001
Microgravity science and applications. Program tasks and bibliography for FY 1994
[NASA-TM-4677] p 2245 N95-28460
MICROGRAVITY APPLICATIONS
Microgravity science and applications. Program tasks and bibliography for FY 1994
[NASA-TM-4677] p 2245 N95-28460
MICROMECHANICS
Micron Accuracy Deployment Experiment (MADE), phase A. Volume 1
[NASA-CR-197792] p 2144 N95-26426
Micromechanical prediction of tensile damage for ceramic matrix composites under high temperature
[AD-A288238] p 2180 N95-26626
Study of damage evolutions in composite plates subjected to bending loads using micro-macro analysis
[AD-A288523] p 2308 N95-26839
Micromechanisms for optimism seismometer p 2159 N95-27292
Micromechanical modeling of damage and inelasticity of composite materials in macroscopic structural analysis
[DE95-003666] p 2182 N95-27421
Contact micromechanics in granular media with clay
[DE95-006566] p 2340 N95-28583
MICROMETEOROIDS
LDEF: 69 Months in Space. Third Post-Retrieval Symposium, part 3
[NASA-CP-3275-PT-3] p 2466 N95-27629
Orbiting meteoroid and debris counting experiment p 2463 N95-27668
MICROMETEOROLOGY
A study of lightning in winter thunderstorms and the analysis of thunderstorm overflight data
[NASA-CR-198577] p 2343 N95-28191
MICROMINIATURIZATION
JTEC Panel report on microelectromechanical systems in Japan
[NASA-CR-197831] p 2268 N95-28239
MICROORGANISMS
Bioremediation of chlorinated organics: PCBs, TCE, HCFCs p 2179 N95-27117
Microbial treatment for shipboard collection, hold ing, and transfer system tanks p 2179 N95-27119
Investigation on energy conversion technology using biochemical reaction elements, 2
[DE95-759250] p 2321 N95-27940
MICROPARTICLES
The 18th Asilomar Conference on Polymeric Materials
[AD-A291721] p 2240 N95-28508
MICROPOROSITY
Superior catalysts for selective catalytic reduction of nitric oxide
[DE95-007903] p 2205 N95-27691
Evaluation of microporous carbon filters as catalysts for ozone decomposition
[DE95-006498] p 2331 N95-28548
MICROPROCESSORS
Micro-time stress measurement device development
[AD-A289511] p 2361 N95-26845
MICROROCKET ENGINES
Micro electric propulsion feasibility
[NASA-CR-189139] p 2168 N95-28000
MICROSCOPES
The in situ observation of epitaxial diamond thin film nucleation and growth using emission electron microscopy
[AD-A289841] p 2447 N95-28618
MICROSCOPY
Determining nanoscale physical properties of materials by microscopy and spectroscopy
[AD-A289532] p 2201 N95-26870
Positron microscopy
[DE95-007042] p 2410 N95-27874
Nonlinear optical microscopy for imaging thin films and surfaces
[DE95-007872] p 2426 N95-28018
MICROSEISMS
Very low frequency seismo-acoustic noise below the sea floor (0.2-10 Hz)
[AD-A289164] p 2347 N95-27011
MICROSTRUCTURE
Process control of microstructure in manufacturing
[AD-A288291] p 2245 N95-26410
Characterization of Ultra-Low Carbon Baintic steels for use as weld wire consumables
[AD-A288292] p 2212 N95-26411
Survey of sub-micrometre powder size measurement for ceramic and cermet powders
[PB95-190104] p 2227 N95-26746
Mechanical performance of fiber reinforced metal matrix composites and microstructural development of polycrystalline alumina fibers synthesized from liquid precursors
[AD-A289518] p 2181 N95-26847
Effects of helium pre-implantation on the microstructure and mechanical properties of irradiated 316 stainless steel
[DE95-007162] p 2214 N95-27086
Current programmes on physical metallurgy and related areas in BARC
[DE95-607939] p 2214 N95-27255
Non-metallic oxide inclusion formation in C-Mnlow alloy steel welds
[DE94-019160] p 2215 N95-27319
Engineered materials for appliation in severe metallurgical environments: Tantalum-carbon alloy development
[DE95-006838] p 2216 N95-27488
Radiation-induced segregation: A microchemical gauge to quantify fundamental defect parameters
[DE95-005720] p 2216 N95-27492
Advances in welding science: A perspective
[DE95-006745] p 2302 N95-27545
LEO degradation of graphite and carbon-based composites aboard Space Shuttle Flight STS-46 p 2199 N95-27636
Effects of atomic oxygen on polymeric materials flown on EOIM-3 p 2242 N95-27638
ECR plasma-assisted deposition of Al2O3 and dispersion-strengthened AlO2
[DE95-007743] p 2235 N95-27687
Study of the phase transformations and microstructures of uranium rich alloys of the binary uranium-gallium system
[DE95-609624] p 2217 N95-27713
Ceramic fiber-reinforced monoclinic celsian phase glass-ceramic matrix composite material
[NASA-CASE-LEW-15714-1] p 2183 N95-27717
Micromagnetics and microstructure of epitaxially grown Co and Co-Cr films for perpendicular magnetic recording
[DE95-004681] p 2441 N95-27720
A microstructurally based model of solder joints under conditions of thermomechanical fatigue
[DE95-006226] p 2309 N95-27837
Sintering of textured YBa2Cu3O(7-x) under intensive Co-60 gamma irradiation
[DE95-007098] p 2442 N95-27950
Phase separation and ordering in InGaAsP and InGaAs materials
[DE95-007493] p 2443 N95-28050
Pulsed laser deposition of zeolitic membranes
[DE95-006274] p 2298 N95-28124
Cavity formation and impurity gettering in He-implanted Si
[DE95-007744] p 2444 N95-28127
Solid-state sintering of tungsten heavy alloys
[DE95-007749] p 2222 N95-28130

TEM characterization of Al/Al2O3 composite fabricated by reactive metal infiltration
[DE95-008508] p 2184 N95-28145
New developments for sol-gel film and fiber processing
[DE95-008175] p 2240 N95-28404
Local texture and grain boundary misorientations in high H(C) oxide superconductors
[DE95-007004] p 2447 N95-28606

MICROWAVE AMPLIFIERS
High power, broadband folded waveguide Gyrotron-Traveling-Wave-Amplifier
[AD-A288847] p 2259 N95-26433

MICROWAVE ATTENUATION
The attenuation of microwave radiation by fog and rain
[AD-A288326] p 2249 N95-26562
An optoelectronic attenuator for the high-speed control of microwave integrated circuits
[AD-A289579] p 2260 N95-26690
Prediction of rain attenuation and total atmospheric attenuation for low-availability satellite communications in Europe
[PB95-184925] p 2252 N95-26908

MICROWAVE CIRCUITS
Microwave circuit simulation using higher-order dynamic elements
[PB95-185088] p 2259 N95-26496
An optoelectronic attenuator for the high-speed control of microwave integrated circuits
[AD-A289579] p 2260 N95-26690
Characterization of microwave MESFET circuits under laser illumination. Applications to phased array radar, microwave communications, and digital clock control
[AD-A289181] p 2261 N95-27015

MICROWAVE EQUIPMENT
Survey on step recovery diode and its applications
[PB95-184974] p 2260 N95-26646
New trends and ideas in the fields of microwave technology
[AD-A291663] p 2257 N95-28453

MICROWAVE FREQUENCIES
Ring-plane traveling-wave tube slow-wave circuit design simulations at V-Band frequencies
[NASA-TM-106949] p 2371 N95-27370

MICROWAVE IMAGERY
Millimeter-wave imaging radiometer data processing and development of water vapor retrieval algorithms
[NASA-CR-198593] p 2343 N95-27997
Modeling and retrieval of snow and sea ice characteristics in the frequency range 6 to 90 GHz
[PB95-195467] p 2316 N95-28656

MICROWAVE LANDING SYSTEMS
An integrated GPS/INS/BARO and radar altimeter system for aircraft precision approach landings
[AD-A289280] p 2127 N95-26985
Precision landing system mathematical modeling study report for Andrews Air Force Base, runway 19L, Camp Springs, MD
[AD-A289015] p 2127 N95-27903

MICROWAVE RADIOMETERS
Radiometer measurements of snow in Sodankylae, 1991-1993
[PB95-184966] p 2313 N95-26645
Design, construction, test and evaluation of a frequency scanning radiometer for measuring oil slick thicknesses
[AD-A290040] p 2293 N95-28389
Modeling and retrieval of snow and sea ice characteristics in the frequency range 6 to 90 GHz
[PB95-195467] p 2316 N95-28656

MICROWAVE SCATTERING
Precision landing system mathematical modeling study report for Andrews Air Force Base, runway 19L, Camp Springs, MD
[AD-A289015] p 2127 N95-27903
Studies of radar backscatter as a function of wave properties and the winds in the turbulent marine atmosphere
[NASA-CR-198608] p 2315 N95-28209

MICROWAVE SENSORS
Millimeter-wave imaging radiometer data processing and development of water vapor retrieval algorithms
[NASA-CR-198593] p 2343 N95-27997

MICROWAVES
The attenuation of microwave radiation by fog and rain
[AD-A288326] p 2249 N95-26562
A 3-D finite difference time domain investigation of microwave propagation through inhomogeneous biological materials
[AD-A289431] p 2251 N95-26869
Microwave characterization of sub-micron N- and P-channel MOSFET's fabricated with thin film silicon-on-sapphire
[AD-A289296] p 2438 N95-27040
A numerical study of ultra-short-pulse reflectometry
[DE95-008070] p 2266 N95-28015
New trends and ideas in the fields of microwave technology
[AD-A291663] p 2257 N95-28453
Data acquisition software for DREO's near-field antenna measurement facility
[AD-A289819] p 2258 N95-28573

MID-OCEAN RIDGES
Seismic constraints on shallow crustal processes at the East Pacific rise
[AD-A289055] p 2338 N95-28094

MIE SCATTERING
Soot particle density determination from a laser extinction multipass technique
[AD-A288551] p 2423 N95-26532
The attenuation of microwave radiation by fog and rain
[AD-A288326] p 2249 N95-26562

MIGRATION
A demonstration of client-server technology using remote procedure calls with an application in file migration using heuristics
[AD-A289467] p 2255 N95-27149
Depth migration in transversely isotropic media with explicit operators
[DE95-007670] p 2337 N95-27442
An investigation of the chemical and physical properties of pristine, electrochromically damaged, and photochromically damaged KTiOPO4 (KTP) using surface analytical and optical spectroscopic techniques
[DE95-007865] p 2443 N95-28023

MILITARY AIRCRAFT
Digital systems validation. Chapter 20 Artificial Intelligenge with applications for aircraft. Handbbook, volume 2
[AD-A288492] p 2380 N95-26638
Naval Aviation System TEAM mapping, charting, and geodesy handbook
[AD-A288590] p 2314 N95-26841
A review of Australian and New Zealand investigations on aeronautical fatigue during the period Apr. 1993 - Mar. 1995
[AR-009-202] p 2136 N95-27918
Aircraft IR/acoustic detection evaluation. Volume 2: Development of a ground-based acoustic sensor system for the detection of subsonic jet-powered aircraft
[NASA-CR-189705-VOL-2] p 2402 N95-28073

MILITARY HELICOPTERS
AH-1F COBRA rewire program MANPRINT analysis
[AD-A289190] p 2130 N95-27018
Report to Congressional Committees. Comanche Helicopter: Testing needs to be completed prior to production decisions
[GAO/NSIAD-95-112] p 2135 N95-27910
Construction and wind tunnel test of a 1/12th scale helicopter model
[AD-A288487] p 2123 N95-28331
Tie-down trials involving a Sikorsky S-70B-2 helicopter
[DSTO-TR-0132] p 2136 N95-28567

MILITARY OPERATIONS
The value of simulation for training
[AD-A289174] p 2143 N95-26556
Digital systems validation. Chapter 20 Artificial Intelligenge with applications for aircraft. Handbbook, volume 2
[AD-A288492] p 2380 N95-26638
Air cushioned landing craft (LCAC) based ship to shore movement simulation: A decision aid for the amphibious commander. A (SMMAT) application
[AD-A289635] p 2246 N95-26722
Aqueous degreasing, precision cleaning, and cleanliness verification p 2231 N95-27121

MILITARY SPACECRAFT
Assessment of long-distance HF radio and satellite communication assets for RNLAF out-of-area operations
[AD-A288633] p 2247 N95-26344

MILITARY TECHNOLOGY
The design and implementation of the Military Applications of Shiptracks experiment on Space Transportation System - 65
[AD-A288488] p 2160 N95-26634

MILITARY VEHICLES
Improved hardness RHA weldability and material property testing
[AD-A289127] p 2221 N95-28102
Thermal analysis of PANSAT batteries and Electrical Power Subsystem
[AD-A290013] p 2269 N95-28388

MILLIMETER WAVES
High power, broadband folded waveguide Gyrotron-Traveling-Wave-Amplifier
[AD-A288847] p 2259 N95-26433
Millimeter-wave imaging radiometer data processing and development of water vapor retrieval algorithms
[NASA-CR-198593] p 2343 N95-27997
Quasi-optical millimeter wave power combining
[AD-A291767] p 2270 N95-28529
Data acquisition software for DREO's near-field antenna measurement facility
[AD-A289819] p 2258 N95-28573

MIMD (COMPUTERS)
Algorithms for parallel flow solvers on message passing architectures
[NASA-CR-197758] p 2274 N95-26588

MINERALOGY
The biodegradation of fuels in soils and sediments: Differences as a function of mineralogy
p 2230 N95-27116

MINERALS
Synchrotron X-ray scattering studies at mineral-water interfaces
[DE95-008303] p 2440 N95-27542

MINIATURIZATION
Multi-channel electronically scanned cryogenic pressure sensor
[NASA-CASE-LAR-15062-1] p 2291 N95-27138
Microelectronics in Japan p 2263 N95-27227

MINIMA
Prediction of fatigue crack growth under constant amplitude and random loading using specimens with multiple cracks
[AD-A291614] p 2136 N95-28409

MINKOWSKI SPACE
Mean value theorem in topological vector spaces
[DE95-608753] p 2390 N95-27331
Quantum k-Poincare 1994
[DE95-608754] p 2448 N95-27332
Photon rockets and gravitational radiation
[PB95-190161] p 2397 N95-28174

MIR SPACE STATION
Analysis of solar receiver flux distributions for US/Russian solar dynamic system demonstration on the MIR Space Station
[NASA-TM-106933] p 2169 N95-28036
Analysis of shadowing effects on MIR photovoltaic and solar dynamic power systems
[NASA-TM-106940] p 2169 N95-28213

MIRRORS
Preliminary design study of the beam collapser and certain optomechanical aspects of the siderostat
[AD-A288423] p 2423 N95-26549
Frame selection performance limits for statistical image reconstruction of adaptive optics compensated images
[AD-A289240] p 2424 N95-26965
SXI Prototype mirror mount
[NASA-CR-196613] p 2301 N95-27244
High-performance reactionless scan mechanism
p 2158 N95-27288
Specification of the figure and finish of EUV mirrors in terms of performance requirements, revised Nov. 1994
[DE95-005689] p 2425 N95-27490
Evaluation of space environmental effects on metals and optical thin films on EOIM-3 p 2210 N95-27641
Effects of the LDEF orbital environment on the reflectance of optical mirror materials
p 2428 N95-27651
Effects of low earth orbit on the optical performance of multi-layer enhanced high reflectance mirrors
p 2428 N95-27652
Laboratory high-energy astrophysics on lasers
[DE95-008062] p 2462 N95-28013
Particle fallout/activity sensor
[NASA-CASE-KSC-11687-1] p 2293 N95-28362
Cryogenic BRDF measurements at 10.6 micrometers and 0.63 micrometers on contaminated mirrors
[AD-A291611] p 2427 N95-28408

MISALIGNMENT
Local texture and grain boundary misorientations in high H(C) oxide superconductors
[DE95-007004] p 2447 N95-28606

MISSILE DEFENSE
Reusable launch vehicle development research
[NASA-CR-196614] p 2154 N95-27245

MISSILE STRUCTURES
Development of a low-cost, modified resin transfer molding process using elastomeric tooling and automated preform fabrication p 2184 N95-28268

MISSILE TRAJECTORIES
Parallel block implicit integration technique for trajectory parallelism
[AD-A288961] p 2379 N95-28335

MISSILES
User documentation of the CTA program
[AD-A289508] p 2121 N95-26854
Improved numerical solution of mixed H2/H(infinity) optimization with applications
[AD-A289315] p 2386 N95-27400

MISSION PLANNING
The development of infrared detectors and mechanisms for use in future infrared space missions
[NASA-CR-197819] p 2290 N95-26702

Micromechanisms for optimism seismometer p 2159 N95-27292

Limits to ground control in autonomous spacecraft p 2383 N95-27381

A rule-based shell to hierarchically organize HST observations p 2384 N95-27384

Electric propulsion for geostationary orbit insertion [NASA-TM-106942] p 2168 N95-27727

Operational considerations of using GPS for spacecraft navigation p 2152 N95-27794

Contingency maneuver strategies for the Total Ozone Mapping Spectrometer-Earth Probe (TOMS-EP) p 2152 N95-27796

Summary of EOS flight dynamics analysis p 2152 N95-27797

ORION: A Supersynchronous Transfer Orbit mission p 2154 N95-27804

Mission to Planet Earth. Strategic enterprise plan, 1995-2000 [NASA-TM-110620] p 2145 N95-27919

MISSION TO PLANET EARTH

Mission to Planet Earth. Strategic enterprise plan, 1995-2000 [NASA-TM-110620] p 2145 N95-27919

MIST

Engineering photochemical smog through convection towers [DE95-007727] p 2328 N95-27686

MIXERS

Apparatus for diffusion controlled dialysis under microgravity conditions [NASA-CASE-MFS-28986-1] p 2245 N95-27500

MIXING

Apparatus for diffusion controlled dialysis under microgravity conditions [NASA-CASE-MFS-28986-1] p 2245 N95-27500

Tank pressure control in low gravity by jet mixing [NASA-CR-191012] p 2243 N95-28001

MIXING LAYERS (FLUIDS)

Basic studies in turbulent shear flows [AD-A289145] p 2277 N95-26998

MIXING LENGTH FLOW THEORY

Supersonic coaxial jet noise predictions [NASA-TM-106917] p 2401 N95-26801

MIXTURES

Ultra high purity, dimensionally stable INVAR 36 [NASA-CASE-NPO-19358-1-CU] p 2213 N95-26862

A summary of ODS replacement technologies at Litton Poly-Scientific p 2228 N95-27105

MOBILE COMMUNICATION SYSTEMS

The evolution and impact of PCS technology [AD-A288606] p 2255 N95-27249

MOBILITY

Interfacial mobility and its effect on flexural strength and fracture toughness in glass-fiber fabric reinforced epoxy laminates [AD-A288344] p 2180 N95-26572

A systems engineering approach to electro-mechanical reconfiguration for mobility autonomy [AD-A289479] p 2301 N95-26926

Measurement of N2(+) mobility He via Fourier transform emission spectroscopy [AD-A289266] p 2404 N95-26979

MODELS

A process improvement model for software verification and validation [NASA-CR-197761] p 2367 N95-26814

Unification of LARCH and Z-based object models to support algebraically-based design refinement: The Z perspective [AD-A289234] p 2369 N95-26962

A knowledge highway for integrated modelling from manufacturing to design [AD-A288872] p 2247 N95-28187

Efficient modeling of interconnects and capacitive discontinuities in high-speed digital circuits [NASA-CR-198728] p 2270 N95-28570

MODULATION

Fundamental concepts of integrated and fiber optic sensors [NASA-TM-106920] p 2426 N95-27906

Method of space-time sequence transform used to measure acousto-optic deflection and modulation [AD-A289612] p 2402 N95-28671

MODULATORS

Valve mechanism for an acoustic modulator [AD-D017263] p 2300 N95-26504

Full complex modulation using two one-parameter spatial light modulators [NASA-CASE-MSC-22255-1] p 2427 N95-28384

MODULES

Low-power, parallel photonic interconnections for Multi-Chip Module applications [DE95-008518] p 2267 N95-28147

MODULUS OF ELASTICITY

Elastic properties of metallic superlattices [AD-A288699] p 2212 N95-26490

Fatigue behavior of a cross-ply ceramic matrix composite at elevated temperature under tension-tension loading [AD-A289250] p 2182 N95-26969

MOISTURE

Bonded composite repair of thin metallic materials: Variable load amplitude and temperature cycling effects p 2132 N95-27509

MOISTURE CONTENT

Soil moisture prediction during freeze and thaw using a coupled heat and moisture flow model [AD-A289343] p 2336 N95-26753

Remote sensing of hydrologic variables in boreal areas, phase 2 [NASA-CR-198717] p 2314 N95-27998

MOLDING MATERIALS

Japan's electronic packaging technologies p 2263 N95-27230

MOLECULAR ABSORPTION

CO, HCO(+) and HCN absorption in the gravitational lens candidate B0218+357 at z=0.685 [PB95-185146] p 2461 N95-26522

Search for molecular absorptions with the Fourier Transform Spectrometer [NASA-CR-198648] p 2462 N95-28222

MOLECULAR BEAM EPITAXY

Fabrication of long wavelength array by in-situ molecular beam epitaxy [AD-A288599] p 2423 N95-26679

Pseudomorphic semiconducting heterostructures from combinations of AlN, GaN and selected SiC polytypes: Theoretical advancement and its coordination with experimental studies of nucleation, growth, characterization and device development [AD-A289550] p 2437 N95-26756

Materials Research Society Symposium Proceedings. Volume 339: Diamond, SiC and nitride wide bandgap semiconductors [AD-A288690] p 2437 N95-26818

MOLECULAR BEAMS

Fabrication of long wavelength array by in-situ molecular beam epitaxy [AD-A288599] p 2423 N95-26679

Molecular beam scattering from C-13 enriched Kapton and correlation with the EOIM-3 carousel experiment p 2419 N95-27643

MOLECULAR BIOLOGY

Third international congress of plant molecular biology: Molecular biology of plant growth and development [DE95-006482] p 2352 N95-28496

MOLECULAR CLOUDS

Molecular cloud content of early-type galaxies. V. CO in elliptical galaxies [PB95-185153] p 2461 N95-27320

Search for molecular absorptions with the Fourier Transform Spectrometer [NASA-CR-198648] p 2462 N95-28222

MOLECULAR CLUSTERS

Atomic and electronic structure of clusters from Car-Parrinello method [DE94-634463] p 2403 N95-26437

Photoemission and optical properties of C60 fullerites [DE95-006588] p 2425 N95-27539

Laser ionization of molecular clusters [DE95-007011] p 2296 N95-27550

Self-assembly of low-dimensional molecular nanoclusters on Au(111) surfaces [AD-A288936] p 2178 N95-28334

MOLECULAR COLLISIONS

Statistical model for molecular internal energy exchange in DSMC method for rarefied flow analysis [ISAS-R-654] p 2274 N95-26741

MOLECULAR DYNAMICS

Atomic and electronic structure of clusters from Car-Parrinello method [DE94-634463] p 2403 N95-26437

Theoretical studies of reaction surfaces [AD-A288458] p 2404 N95-26632

A density functional/molecular dynamics study of the structure of liquid nitromethane [AD-A289224] p 2404 N95-26960

Modeling the growth of electronic materials [AD-A289137] p 2438 N95-26997

Simulating the production of free defects in irradiated metals [DE95-007165] p 2214 N95-27088

Molecular dynamics simulations of Gay-Berne nematic liquid crystal: Elastic properties from direct correlation functions [DE95-609149] p 2441 N95-27740

A new shared-memory programming paradigm for molecular dynamics simulations on the Intel Paragon [DE95-007289] p 2378 N95-28019

Beyond transition state theory: Rigorous quantum approaches for determining chemical reaction rates [DE95-008483] p 2208 N95-28086

Infrared spectroscopy of nonclassical ions and their complexes [DE95-008487] p 2413 N95-28091

Analysis of forward and inverse problems in chemical dynamics and spectroscopy [DE95-009309] p 2209 N95-28164

Optimization strategies for molecular dynamics programs on Cray computers and scalar work stations [AD-A289574] p 2418 N95-28648

MOLECULAR ENERGY LEVELS

High resolution Fourier transform spectroscopy of the first overtone of the N-O stretch in nitrosyl bromide [AD-A289318] p 2203 N95-27295

Analysis of forward and inverse problems in chemical dynamics and spectroscopy [DE95-009309] p 2209 N95-28164

MOLECULAR EXCITATION

Fellowship in physics [AD-A291691] p 2446 N95-28522

MOLECULAR GASES

Applications of Second Harmonic and Sum Frequency Generation to graphite and silica type interfaces [AD-A288228] p 2201 N95-26544

Infrared spectroscopy of nonclassical ions and their complexes [DE95-008487] p 2413 N95-28091

Self-assembly of low-dimensional molecular nanoclusters on Au(111) surfaces [AD-A288936] p 2178 N95-28334

MOLECULAR ORBITALS

Computational and matrix isolation studies of (2- and 3-furyl)methylene [AD-A280085] p 2178 N95-28154

MOLECULAR RELAXATION

Fellowship in physics [AD-A291691] p 2446 N95-28522

MOLECULAR STRUCTURE

Template synthesis of electronically conductive polymer nanostructures [AD-A288373] p 2225 N95-26472

Toward molecular selectivity with chemically modified electrodes: Can electroactivity and permeability through an overlaying metallopolymer film be controlled via rational manipulation of internal architecture? [AD-A288719] p 2403 N95-26491

Molecular object liquid crystals: An approach to new materials [AD-A288905] p 2437 N95-26553

Theoretical studies of reaction surfaces [AD-A288458] p 2404 N95-26632

Structural oxidation state studies of the manganese cluster in the oxygen evolving complex of Photosystem II [DE95-008488] p 2409 N95-27744

Experimental determination of cluster geometrical structure [DE95-007089] p 2409 N95-27753

Crossover integral equation theory for the liquid structure study [DE95-609155] p 2218 N95-27757

Surface structure of MX-chains studied by atomic force microscopy [DE95-007881] p 2447 N95-28541

MOLECULES

Near-resonant properties of nonlinear organic materials for optical devices [AD-A288339] p 2178 N95-26570

Molecular approach to mesoporous metal sulfides [DE95-005418] p 2202 N95-27137

International journal of quantum chemistry [AD-A291633] p 2352 N95-28546

Monte-Carlo simulation methods for finite flat plate winding flows [AD-A289842] p 2289 N95-28619

MOLLUSKS

Use of mussels in biomonitoring of environmental impacts of propellants, projectiles, explosives, and pyrotechnics p 2170 N95-28298

MOLTEN SALTS

Molten Carbonate Fuel Cell (MCFC) product development test [DE95-007345] p 2316 N95-26543

Materials considerations for molten salt accelerator-based plutonium conversion systems [DE95-006743] p 2217 N95-27544

MOLYBDENUM

High energy electron beams for ceramic joining [DE95-006316] p 2420 N95-27480

MOLYBDENUM DISULFIDES

Advanced solid lubricant films by Ion-Beam Assisted Deposition [AD-A288866] p 2225 N95-26499

Optical features of nanosize iron and molybdenum sulfide clusters
[DE95-005417] p 2202 N95-27136

MOLYBDENUM SULFIDES
Optical features of nanosize iron and molybdenum sulfide clusters
[DE95-005417] p 2202 N95-27136

MOMENTS OF INERTIA
A quantitative feedback theory FCS design for the subsonic envelope of the VISTA F-16 including configuration variation
[AD-A289221] p 2141 N95-26958
The calculation of the mass moment of inertia of a fluid in a rotating rectangular tank
[NASA-CR-197777] p 2278 N95-27165

MOMENTUM
Performance analysis of bullet trajectory estimation: Approach, simulation, and experiments
[DE95-007949] p 2399 N95-28109

MOMENTUM THEORY
Rarefied gas effects on aerobraking/reentry vehicles with wakes
[NASA-CR-196586] p 2164 N95-27093

MOMENTUM TRANSFER
Magnetic viscosity by localized shear flow instability in magnetized accretion disks
[DE95-006879] p 2433 N95-28111

MONITORS
Model-based monitoring and diagnosis of a satellite-based instrument p 2166 N95-27390
Lessons learned from the introduction of autonomous monitoring to the EUVE science operations center
p 2385 N95-27393
Prototype development and test results of a continuous ambient air monitoring system for hydrazine at the 110 ppb level p 2173 N95-28310
A continuous emissions monitor for airborne metals
p 2174 N95-28313

MONOCHROMATIC RADIATION
Quantum effects induced by a gap in the spectrum of atom-bath coupling constants: Freezing of atomic decay and monochromatic collective radiation
[DE95-609037] p 2416 N95-28251

MONOCHROMATORS
Optical design and performance of the inelastic scattering beamline at the National Synchrotron Light Source
[DE95-007679] p 2422 N95-28195

MONOMERS
Design strategies for the preparation of polymeric organic superconductors
[AD-A289022] p 2436 N95-26462
Poly(N-arylenbenzimidazoles) via aromatic nucleophilic displacement
[NASA-CASE-LAR-14939-1] p 2179 N95-28360
Polybenzimidazoles via aromatic nucleophilic displacement
[NASA-CASE-LAR-14924-1-CU] p 2179 N95-28361
Functionalized block copolymers as adhesion promoters
[DE95-008158] p 2239 N95-28400
Porosity in hexylene-bridged polysilsesquioxanes: Effects of monomer concentration
[DE95-005421] p 2240 N95-28531
Comparison of bridged polysilsesquioxane xerogels prepared from methoxy- and ethoxy-silyl monomers
[DE95-005422] p 2240 N95-28532

MONOMOLECULAR FILMS
Electrocrystallization of an ordered organic monolayer: Selective epitaxial growth of beta(ET)213 ongraphite
[AD-A288942] p 2178 N95-26569

MONOPLANES
Incorporating biplane wing theory into a large, subsonic, all-cargo transport p 2120 N95-26956

MONOPOLES
Compactification of moduli spaces of monopoles
[PB95-185179] p 2388 N95-26515

MONOPULSE RADAR
Polarization sensitivity of monopulse radar boresight error induced by large, ogive radomes
[AD-A289254] p 2252 N95-26972

MONSOONS
An observational study on the onset of the summer monsoon over eastern Asia in 1979
[AD-A289637] p 2341 N95-26723
Synoptic features of the Yunan rainy season before the onset of the tropical monsoons
[AD-A289641] p 2342 N95-26724

MONTE CARLO METHOD
Analysis of fatigue fractographic data of a rod end housing using a Monte Carlo simulation
[NAL-TR-1225] p 2307 N95-26521
Monte Carlo study of electron-plasmon scattering effects on hot electron transport in GaAs
[DE95-607768] p 2403 N95-26542
Statistical model for molecular internal energy exchange in DSMC method for rarefied flow analysis
[ISAS-R-654] p 2274 N95-26741
Anomalous collision rate in the time counter scheme of the direct simulation Monte Carlo method for rarefied gas flow analysis
[ISAS-R-653] p 2275 N95-26742
A model of bubble evolution during decompression based on a Monte Carlo simulation of inert gas diffusion
[AD-A289400] p 2353 N95-26885
Modeling the growth of electronic materials
[AD-A289137] p 2438 N95-26997
A case study of view-factor rectification procedures for diffuse-gray radiation enclosure computations
p 2281 N95-27353
Recent advances in PDF modeling of turbulent reacting flows p 2286 N95-27892
Remote measurement of ground temperature and emissivity
[DE95-008055] p 2314 N95-28053
Performance analysis of bullet trajectory estimation: Approach, simulation, and experiments
[DE95-007949] p 2399 N95-28109
Stationary neutrino radiation transport by maximum entropy closure
[DE95-006579] p 2463 N95-28558
Measurement of alpha(s) in e(+)e(-) annihilation at E(cm) = 29 GeV
[DE95-006486] p 2417 N95-28594
Monte-Carlo simulation methods for finite flat plate winding flows
[AD-A289842] p 2289 N95-28619
Exploiting parallelism in a Monte Carlo image-matching algorithm
[AD-A289872] p 2374 N95-28625
Chua's circuits: Phenomena and applications
[AD-A291638] p 2271 N95-28666

MONTMORILLONITE
Contact micromechanics in granular media with clay
[DE95-006566] p 2340 N95-28583

MOORING
An in situ evaluation of TOPEX/Poseidon altimetric measurements versus meaurements made by moorings and inverted echo sounders for sea surface height
[NASA-CR-198621] p 2347 N95-27805

MORPHOLOGY
Boron-induced morphology changes in silicon CVD growth: A scanning tunneling microscopy study
[AD-A289275] p 2290 N95-26982
Simulations of metal dissolution and corrosion
[DE95-007486] p 2218 N95-27748
Effects of interlayers on the scratch adhesion performance of ultra-thin films of copper and gold on silicon substrates
[DE95-007367] p 2220 N95-28044
Self-assembly of low-dimensional molecular nanoclusters on Au(111) surfaces
[AD-A288936] p 2178 N95-28334

MOSSBAUER EFFECT
Iron oxides characterization by Moessbauer spectroscopy
[DE95-607869] p 2202 N95-27199

MOTION SIMULATION
Air cushioned landing craft (LCAC) based ship to shore movement simulation: A decision aid for the amphibious commander. A (SMMAT) application
[AD-A289635] p 2246 N95-26722

MOTION SIMULATORS
Collected papers on wind turbine technology
[NASA-CR-195432] p 2321 N95-27970
Design of a real-time wind turbine simulator using a custom parallel architecture p 2322 N95-27979

MOTIVATION
ELVIS: Eigenvectors for land vehicle image system
[AD-A289297] p 2381 N95-27041

MULLITES
TEM characterization of Al/Al2O3 composite fabricated by reactive metal infiltration
[DE95-008508] p 2184 N95-28145
Development of low-expansion ceramics with strength retention to elevated temperatures
[DE95-005760] p 2239 N95-28397

MULTIDISCIPLINARY DESIGN OPTIMIZATION
Structural design optimization with survivability dependent constraints application: Primary wing box of a multi-role fighter p 2137 N95-28440

MULTIGRID METHODS
introduction to multigrid methods
[NASA-CR-195045] p 2388 N95-26395
A 3D agglomeration multigrid solver for the Reynolds-averaged Navier-Stokes equations on unstructured meshes
[NASA-CR-195073] p 2390 N95-27029
Multigrid techniques for unstructured meshes
[NASA-CR-195070] p 2391 N95-27433

MULTIMEDIA
Transparent access to distributed, heterogeneous environmental information systems
[DE95-007268] p 2454 N95-27483

MULTIPATH TRANSMISSION
Adaptive beamforming in frequency-dispersive multipath environments
[AD-A289206] p 2254 N95-27009
A high performance totally ordered multicast protocol
[NASA-CR-197765] p 2371 N95-27252
Precision landing system mathematical modeling study report for Andrews Air Force Base, runway 19L, Camp Springs, MD
[AD-A289015] p 2127 N95-27903
Low-angle tracking in the presence of ducting, coherent and incoherent multipath
[AD-A289838] p 2258 N95-28580

MULTIPHASE FLOW
Computation of three-dimensional mixed convective boundary layer flow p 2280 N95-27347

MULTIPHOTON ABSORPTION
Laser ionization of molecular clusters
[DE95-007011] p 2296 N95-27550

MULTIPLE TARGET TRACKING
A mathematical framework for an improved search model
[AD-A288858] p 2358 N95-26552

MULTIPLEXING
Multipurpose bus interface utilizing a digital signal processor
[AD-D017264] p 2248 N95-26505
Experimental definition for implantation of the AFIT cortical multielectrode array
[AD-A289216] p 2354 N95-26991
Characterization and redesign of the AFIT multielectrode array
[AD-A289295] p 2354 N95-27039

MULTIPLIERS
On compact multipliers of topological algebras
[DE95-608751] p 2390 N95-27092
Spectral properties of multipliers on topological algebras
[DE95-608747] p 2390 N95-27299

MULTIPROCESSING (COMPUTERS)
Parallelism detection and scheduling strategies for reliable and efficient execution on multicomputers
[AD-A288370] p 2376 N95-26471
Grain size management in repetitive task graphs for multiprocessor computer scheduling
[AD-A288575] p 2377 N95-26551
Design tool for multiprocessor scheduling and evaluation of iterative dataflow algorithms
[NASA-TP-3491] p 2366 N95-26685
Second International Conference on Software for Multiprocessors and Supercomputers Theory, Practice, Experience
[AD-A289474] p 2368 N95-26820

MULTISPECTRAL BAND SCANNERS
Conversion of sunflower multiband radiometer polarization measurements to polarization parameters
[NASA-CR-197774] p 2314 N95-26815

MULTIVARIATE STATISTICAL ANALYSIS
A method for simulating correlated random variables from partially specified distributions
[AD-A288820] p 2393 N95-26347
Parallelizing locally-weighted regression
[AD-A288294] p 2394 N95-26414
A method to determine the structure of an unknown mixture using the Akaike Information Criterion and the bootstrap
[AD-A288295] p 2394 N95-26415
Wavelet analysis and its applications
[AD-A291735] p 2387 N95-28527

MUON SPIN ROTATION
Muon spin relaxation in ferromagnets: Theoretical results for paramagnetic EuO and EuS
[PB95-192860] p 2418 N95-28641
Muon spin relaxation in antiferromagnets: A study of RbMnF3 based on the coupled-mode theory of paramagnetic and critical spin fluctuations
[PB95-192878] p 2418 N95-28642

MUONS
Search for SUSY at CDF
[DE95-005109] p 2407 N95-27430
Search for the top quark in dilepton decay modes at D(PHI)
[DE95-007764] p 2409 N95-27689
Measurement of the reaction C(nu(sub mu), mu(-)) X near threshold
[DE95-007888] p 2412 N95-28063
B-Physics results from D0
[DE95-005126] p 2417 N95-28495
Muon spin relaxation in ferromagnets: Theoretical results for paramagnetic EuO and EuS
[PB95-192860] p 2418 N95-28641

MUTATIONS
Mutagenesis in human cells with accelerated H and Fe ions
[NASA-CR-198599] p 2351 N95-28177
MYLAR (TRADEMARK)
An overview of the Evaluation of Oxygen Interactions with Materials 3 experiment: Space Shuttle Mission 46, July-August 1992 p 2210 N95-27630

N

N-TYPE SEMICONDUCTORS
Photoluminescence spectroscopy of 4H- and 6H-SiC
[AD-A289326] p 2202 N95-26896
Defect characterization of electronic conducting pseudo-perovskite systems
[DE95-007487] p 2220 N95-28049
Low temperature deposition and characterization of N- and P-type silicon carbide thin films and associated Ohmic and Schottky contacts
[AD-A289107] p 2237 N95-28097
NACELLES
Application of fiber-reinforced bismaleimide materials to aircraft nacelle structures p 2137 N95-28278
NARROWBAND
Analysis and simulation of narrowband GPS jamming using digital excision temporal filtering
[AD-A289328] p 2127 N95-26898
High pressure optical studies of semiconductors and heterostructures
[DE95-007119] p 2410 N95-27927
NASA PROGRAMS
Probabilistic risk assessment of the Space Shuttle. Phase 3: A study of the potential of losing the vehicle during nominal operation, volume 1
[NASA-CR-197808] p 2159 N95-26398
AIAA Techfest 20 Proceedings
[NIAR-94-1] p 2118 N95-26941
The high speed civil transport and NASA's High Speed Research (HSR) program p 2118 N95-26945
The aerospace database: An introduction to AIAA'S computerized source for identifying scientific and technical information p 2119 N95-26950
Spaceflight revolution: NASA Langley Research Center from Sputnik to Apollo
[NASA-SP-4308] p 2474 N95-27685
Mission to Planet Earth. Strategic enterprise plan, 1995-2000
[NASA-TM-110620] p 2145 N95-27919
Research and Technology Objectives and Plans Summary (RTOPS)
[NASA-TM-108574] p 2475 N95-28002
Overview of the ACT program p 2193 N95-28463
NASA/DOD Aerospace Knowledge Diffusion Research Project. Report 35: The use of computer networks in aerospace engineering
[NASA-CR-198170] p 2456 N95-28600
Software process improvement in the NASA software engineering laboratory
[AD-A289912] p 2374 N95-28627
NASA SPACE PROGRAMS
Reusable launch vehicle development research
[NASA-CR-196614] p 2154 N95-27245
Briefing Report to the Ranking Minority Member, Subcommittee on Space and Aeronautics, Committee on Science, House of Representatives. Cassini Mission: Estimated launch costs for NASA's mission to Saturn
[GAO/NSIAD-95-141BR] p 2145 N95-27856
NASTRAN
A NASTRAN-based computer program for structural dynamic analysis of Horizontal Axis Wind Turbines
p 2312 N95-27980
Applications of a damage tolerance analysis methodology in aircraft design and production
p 2197 N95-28483
NATIONAL AIRSPACE SYSTEM
The 1994 updated National Airspace System performance assessment for year 2005
[AD-A288652] p 2125 N95-26485
NATURAL GAS
Research on combustion processes relevant to burners in HVAC systems
[PB95-179735] p 2208 N95-28006
NATURAL LANGUAGE (COMPUTERS)
TRAINS: Dialogue transcription tools
[AD-A289869] p 2259 N95-28624
NAVIER-STOKES EQUATION
Computational analysis of forebody tangential slot blowing on the high alpha research vehicle
[NASA-CR-197754] p 2129 N95-26591
Turbulence modeling
[NASA-CR-197751] p 2274 N95-26665
SUPG finite numerical element solutions for non-compressible Navier-Stokes equation sets
[AD-A289600] p 2274 N95-26718
Progress in incompressible Navier-Stokes computations for propulsion flows and its dual-use applications
[NASA-CR-197746] p 2275 N95-26766
A 3D agglomeration multigrid solver for the Reynolds-averaged Navier-Stokes equations on unstructured meshes
[NASA-CR-195073] p 2390 N95-27029
Development of numerical methods for overset grids with applications for the integrated Space Shuttle vehicle
[NASA-CR-197759] p 2160 N95-27154
Flow control
[AD-A289262] p 2279 N95-27197
Effect of turbulence models on criticality conditions in swirling flows p 2282 N95-27356
A Navier-Stokes boundary element solver
p 2283 N95-27361
Turbulance boundary conditions for shear flow analysis, using the DTNS flow solver p 2283 N95-27362
Multigrid techniques for unstructured meshes
[NASA-CR-195070] p 2391 N95-27433
A new finite element formulation for incompressible flow
[DE95-007141] p 2284 N95-27454
A numerical method for solving the three-dimensional parabolized Navier-Stokes equations
[NASA-CR-198159] p 2287 N95-27917
Study of potential aerodynamic benefits from spanwise blowing at wingtip
[NASA-TP-3515] p 2124 N95-28669
Numerical study to assess sulfur hexafluoride as a medium for testing multielement airfoils
[NASA-TP-3496] p 2124 N95-28674
NAVIGATION
Operator modeling in commerical aviation: Cognitive models, intelligent displays, and pilot's assistants
[NASA-CR-198609] p 2138 N95-28203
NAVIGATION INSTRUMENTS
Flight evaluation of GPS/DGPS sensor systems installed in NAL Do228
[NAL-TR-1230] p 2126 N95-26585
NAVIGATION SATELLITES
Development of welded solar arrays for DMSP and GPS satellites
[AD-A289512] p 2318 N95-26846
Analysis and simulation of narrowband GPS jamming using digital excision temporal filtering
[AD-A289328] p 2127 N95-26898
Determining GPS average performance metrics
p 2128 N95-27791
NAVIGATION TECHNOLOGY SATELLITES
A demonstration of unified TDRS/GPS tracking and orbit determination p 2151 N95-27792
NAVIGATORS
An analysis of the KC-135 three-person cockpit
[AD-A289540] p 2130 N95-26873
NAVY
Naval Aviation System TEAM mapping, charting, and geodesy handbook
[AD-A288590] p 2314 N95-26841
Navy composite maintenance and repair experience
p 2193 N95-28446
NEAR FIELDS
Data acquisition software for DREO's near-field antenna measurement facility
[AD-A289819] p 2258 N95-28573
NEAR WAKES
Effects of three-dimensional imposed 3-D disturbances on bluff-body near wake flows
[AD-A289553] p 2121 N95-26757
Unsteady base pressure measurements in the near wake of a cylinder with imposed three-dimensional disturbances
[AD-A289498] p 2276 N95-26827
The near-wake flow behavior of an oscillating airfoil with modified trailing edge p 2119 N95-26953
NEGATIVE IONS
Molecular approach to mesoporous metal sulfides
[DE95-005418] p 2202 N95-27137
NEODYMIUM LASERS
Trident as an ultrahigh irradiance laser
[DE95-006345] p 2297 N95-27850
NERVES
Peripheral innervation patterns of vestibular nerve afferents in the bullfrog utriculus p 2349 N95-26730
NERVOUS SYSTEM
A model of the neural basis of the rat's sense of direction
[AD-A289678] p 2350 N95-26761
NETWORK ANALYSIS
The reliable multicast protocol application programming interface
[NASA-CR-197762] p 2363 N95-26388
Reference manual: Naive physics simulator
[PB95-184917] p 2369 N95-26907
An analysis of Bayesian networks as classifiers
[AD-A289316] p 2382 N95-27293
An architecture and protocol for communications satellite constellations regarded as multi-agent systems
p 2166 N95-27377
Linear and nonlinear trending and prediction for AVHRR time series data p 2385 N95-27391
Non-linear resistive grid kernel estimator useful in single feature, two-class pattern classification
[AD-D017394] p 2271 N95-28614
NETWORK CONTROL
The reliable multicast protocol application programming interface
[NASA-CR-197762] p 2363 N95-26388
An architecture and protocol for communications satellite constellations regarded as multi-agent systems
p 2166 N95-27377
NEUMANN PROBLEM
A probabilistic model of a porous heat exchanger
p 2282 N95-27359
NEURAL NETS
Using machine learning to derive efficient cost and performance estimates in VLSI CAD designs
[AD-A288254] p 2363 N95-26408
Joint Services Electronics Program (JSEP)
[AD-A288299] p 2345 N95-26419
Integration of video and radiation analysis data
[DE95-004165] p 2379 N95-26443
Self-organizing artificial neural networks in dynamic systems modeling and control
[PB95-185120] p 2379 N95-26449
Digital systems validation. Chapter 20 Artificial Intelligenge with applications for aircraft. Handbbook, volume 2
[AD-A288492] p 2380 N95-26638
Embedology and neural estimation for time series prediction
[AD-A289312] p 2394 N95-26892
Long-term variability of electron radiation dose in geosynchronous orbit
[AD-A289335] p 2162 N95-26902
An exploratory application of neural networks for airfoil design p 2118 N95-26943
Using virtual active vision tools to improve autonomous driving tasks
[AD-A289175] p 2356 N95-27 13
Evolving cascade-correlation networks for time-series forecasting
[AD-A289197] p 2390 N95-27020
A modified backpropagation algorithm for training neural networks on data with error bars
[DE95-608729] p 2381 N95-27025
ELVIS: Eigenvectors for land vehicle image system
[AD-A289297] p 2381 N95-27041
Higher-order probabilistic perceptrons as Bayesian inference engines
[DE95-608730] p 2381 N95-27044
Reducing network depth in the Cascade-Correlation learning architecture
[AD-A289352] p 2382 N95-27066
Head related transfer function approximation using neural networks
[AD-A289422] p 2382 N95-27145
An analysis of Bayesian networks as classifiers
[AD-A289316] p 2382 N95-27293
Diagnosis of helicopter gearboxes using structure-based networks
[NASA-TM-106932] p 2302 N95-27373
Stable adaptive neurocontrollers for spacecraft and space robots p 2384 N95-27385
Linear and nonlinear trending and prediction for AVHRR time series data p 2385 N95-27391
Direct ultrashort-pulse retrieval using frequency-resolved optical gating and a computational neural network
[DE95-007148] p 2425 N95-27482
Classification of RF transients in space using digital signal processing and neural network techniques
[DE95-006287] p 2256 N95-27840
Neural network error compensation of machine tools
[AD-A289300] p 2387 N95-28217
Ultrashort Pulse retrieval using FROG trace irradiance moments and the adaptive neural networks backpropagation algorithm
[DE95-007153] p 2299 N95-28220
Neural networks versus linear regression: Research into the value of neural networks in meteorological practice
[KNMI-TR-165] p 2343 N95-28236
Cognitive networks for ATR: The roles of bifurcation and chaos
[AD-A289010] p 2387 N95-28336
Optical implementation of inner product neural associative memory
[NASA-CASE-NPO-18491-2-CU] p 2427 N95-28363
JPRS report: Science and technology. Central Eurasia
[JPRS-UST-95-019] p 2270 N95-28565

Neural networks in the classification of uses of the soil in satellite images
[INPE-5478-PRE/1777] p 2316 N95-28672

NEURONS
Research activities on somatosensory (SI) cortical neurons
[AD-A288794] p 2348 N95-26360
Cognitive networks for ATR: The roles of bifurcation and chaos
[AD-A289010] p 2387 N95-28336

NEUROPHYSIOLOGY
Research activities on somatosensory (SI) cortical neurons
[AD-A288794] p 2348 N95-26360

NEUTRAL ATOMS
Low energy neutral atom imaging: Remote observations of the magnetosphere
[DE95-006342] p 2337 N95-27848

NEUTRAL GASES
Neutral gas compression in the Alcator C-Mod divertor. Experimental observations
[DE95-007762] p 2432 N95-27688

NEUTRALIZERS
Experimental studies to test simple flexural neutralizers fitted to beams
[ISVR-TR-239] p 2309 N95-27846

NEUTRINOS
Measurement of the reaction C(nu(sub mu), mu(-)) X near threshold
[DE95-007888] p 2412 N95-28063
Neutrino oscillations in strong magnetic fields
[DE95-608876] p 2416 N95-28249
Threefold maximal lepton mixing and the solar and atmospheric neutrino deficits
[PB95-196259] p 2465 N95-28500
Stationary neutrino radiation transport by maximum entropy closure
[DE95-006579] p 2463 N95-28558

NEUTRON BEAMS
Reflection of neutrons from an optical grating
[DE95-007145] p 2411 N95-28004

NEUTRON COUNTERS
Solar-geophysical data number 604, December 1994. Part 1: (Prompt reports). Data for November, October 1994, and late data
[PB95-181848] p 2465 N95-28087

NEUTRON DIFFRACTION
A study of internal damage of metal matrix composites by neutron diffraction
[DE95-005157] p 2182 N95-27080
Neutron diffraction studies on recrystallization of solution derived lead zirconate titanates
[DE95-004771] p 2439 N95-27429
Stoichiometry, structure, and properties of La2NiO(4+(delta)) and La(2-x)Sr(x)NiO(4+/-(delta))
[DE95-007682] p 2439 N95-27443
Crystal structure, short-range oxygen defects, and water adsorption in La- and Nd-modified ZrO2
[DE95-007134] p 2439 N95-27452
Crystal and magnetic structure of stoichiometric YFe2O4
[DE95-006627] p 2440 N95-27487
Magnetic structures in RNi2B2C (R = Ho, Er) superconductors
[DE95-008370] p 2442 N95-27932
Structural chemistry of some phases in the YC-Ni-B system
[DE95-007403] p 2447 N95-28537

NEUTRON EMISSION
Bilateral intercomparison of the neutron emission rate of a (252)Cf spontaneous fission source between the National Physical Laboratory, Teddington, UK and the Physikalisch-Technische Bundesanstalt, Braunschweig, Germany
[PB95-190120] p 2404 N95-26748

NEUTRON IRRADIATION
Simulating the production of free defects in irradiated metals
[DE95-007165] p 2214 N95-27088
Determination of the first hydrolysis constant of Europium (3) in 3 M of ionic strength
[DE95-607912] p 2405 N95-27211

NEUTRON SCATTERING
Rotor phases in compound semiconductors
[DE95-004139] p 2436 N95-26442
Variation of solvent scattering-length density small-angle neutron scattering as a means of determining structure of composite materials
[DE95-005394] p 2183 N95-27428
Observations of CEF-split intermultiplet transitions in optically opaque EuBa2Cu3O7 using inelastic neutron scattering
[DE95-007135] p 2408 N95-27453
Spin-density-wave magnetism in dilute copper-manganese alloys
[DE95-005121] p 2215 N95-27462
Small angle neutron scattering study of the micelle structure of amphiphilic block copolymers
[DE95-006625] p 2234 N95-27486
Technical progress report to the Department of Energy on the Solid State Sciences Committee (SSSC)
[DE95-007113] p 2441 N95-27925
The structure of lead-indium phosphate glass
[DE95-007130] p 2237 N95-27967
Off-specular scattering in neutron reflectometry
[DE95-007835] p 2412 N95-28057
Recent neutron scattering results on high-temperature superconductors
[DE95-007028] p 2413 N95-28066
Research activities of the Solid State Sciences Committee in the development of a Federal initiative on advanced materials and processing
[DE95-009328] p 2445 N95-28179
Situation in study of electric polarizability and mean square charge radius of the neutron
[DE95-608869] p 2415 N95-28247
Future opportunities and present possibilities for coherent inelastic single crystal measurements on pulsed neutron sources
[PB95-195798] p 2418 N95-28657
Using COLETTE. (A simple guide)
[PB95-195806] p 2375 N95-28658

NEUTRON SOURCES
Bilateral intercomparison of the neutron emission rate of a (252)Cf spontaneous fission source between the National Physical Laboratory, Teddington, UK and the Physikalisch-Technische Bundesanstalt, Braunschweig, Germany
[PB95-190120] p 2404 N95-26748
Advanced neutron source materials surveillance program
[DE95-005700] p 2215 N95-27464
Intermediate energy neutrons at WNR. Spin-isospin and energy dependence of the NN interaction and the nuclear response
[DE95-006291] p 2408 N95-27466
The structure of lead-indium phosphate glass
[DE95-007130] p 2237 N95-27967
Future opportunities and present possibilities for coherent inelastic single crystal measurements on pulsed neutron sources
[PB95-195798] p 2418 N95-28657
Using COLETTE. (A simple guide)
[PB95-195806] p 2375 N95-28658

NEUTRON SPECTRA
Abrasion-ablation model for neutron production in heavy ion reactions
[NASA-TM-4656] p 2420 N95-27372
Intermediate energy neutrons at WNR. Spin-isospin and energy dependence of the NN interaction and the nuclear response
[DE95-006291] p 2408 N95-27466

NEUTRON SPECTROMETERS
Future opportunities and present possibilities for coherent inelastic single crystal measurements on pulsed neutron sources
[PB95-195798] p 2418 N95-28657

NEUTRON STARS
Neutrino oscillations in strong magnetic fields
[DE95-608876] p 2416 N95-28249
Stationary neutrino radiation transport by maximum entropy closure
[DE95-006579] p 2463 N95-28558

NEUTRONS
Abrasion-ablation model for neutron production in heavy ion reactions
[NASA-TM-4656] p 2420 N95-27372
Intermediate energy neutrons at WNR. Spin-isospin and energy dependence of the NN interaction and the nuclear response
[DE95-006291] p 2408 N95-27466
Reflection of neutrons from an optical grating
[DE95-007145] p 2411 N95-28004
Error analysis of the quartic nodal expansion method for slab geometry
[DE95-007373] p 2412 N95-28045
A new algorithm for generating highly accurate benchmark solutions to transport test problems
[DE95-007397] p 2373 N95-28047
Situation in study of electric polarizability and mean square charge radius of the neutron
[DE95-608869] p 2415 N95-28247
Functionalized block copolymers as adhesion promoters
[DE95-008158] p 2239 N95-28400

NEVADA
Recovery, evaluation, and decontamination of landfilled pentaborane cylinders, former liquid propellant rocket engine test facility, Washoe County, Nevada
p 2171 N95-28302

NEW ZEALAND
A review of Australian and New Zealand investigations on aeronautical fatigue during the period Apr. 1993 - Mar. 1995
[AR-009-202] p 2136 N95-27918

NEWS
Index to NASA news releases and speeches 1994
[NASA-TM-110650] p 2452 N95-26673

NICKEL
Calorimetric evaluation of commercial Ni-MH cells and charges p 2272 N95-26790
Atomistic calculations of hydrogen interactions with Ni3Al grain boundaries and Ni/Ni/Ni3Al interfaces
[DE95-006497] p 2408 N95-27534
Evaluation of space environmental effects on metals and optical thin films on EOIM-3 p 2210 N95-27641
Particle-like absorption spectra in small transition metal clusters
[DE95-007082] p 2218 N95-27752
Hydrogen induced C-C, C-N, and C-S bond activities on Pi and Ni surfaces
[DE95-006251] p 2206 N95-27838
The role of hydrogen in the hydrogenation and hydrogenolysis of aniline on the nickel single crystal surfaces: Its implication on the mechanisms of HDN reactions
[DE95-006687] p 2222 N95-28134
Structural chemistry of some phases in the YC-Ni-B system
[DE95-007403] p 2447 N95-28537

NICKEL ALLOYS
Ultra high purity, dimensionally stable INVAR 36
[NASA-CASE-NPO-19358-1-CU] p 2213 N95-26862
Surface energy driven crystallization of amorphous Ni69Cr14P17 alloy
[DE95-005543] p 2438 N95-27085
Atomistic calculations of hydrogen interactions with Ni3Al grain boundaries and Ni/Ni/Ni3Al interfaces
[DE95-006497] p 2408 N95-27534
A new technique for measuring the separation of closely spaced dislocations using residual contrast conditions
[DE95-007147] p 2219 N95-27968
Trace elements and the mechanical properties of intermetallic compounds
[DE95-007378] p 2220 N95-28046
Electronic structure of ordered and disordered transition metal aluminides
[DE95-609034] p 2223 N95-28250

NICKEL CADMIUM BATTERIES
The 1994 27th Annual NASA Aerospace Battery Workshop
[NASA-CP-3292] p 2317 N95-26785
Alternate charging profiles for the onboard nickel cadmium batteries of the Explorer Platform/Extreme Ultraviolet Explorer p 2272 N95-26796

NICKEL COMPOUNDS
Nickel metal hydride LEO cycle testing
p 2272 N95-26791
Experimental determination of cluster geometrical structure
[DE95-007089] p 2409 N95-27753
High temperature oxidation of nickel concentrates
[PB95-195566] p 2224 N95-28644

NICKEL HYDROGEN BATTERIES
The 1994 27th Annual NASA Aerospace Battery Workshop
[NASA-CP-3292] p 2317 N95-26785
Progress towards computer simulation of NiH2 battery performance over life p 2272 N95-26786
Long life 80Ah standard IPV NiH2 battery cell
p 2272 N95-26787
High-rate/high-temperature capability of a single-layer zicar-separator nickel-hydrogen cell
p 2272 N95-26788
Air Force Ni-H2 cell test program: State of Charge test
p 2272 N95-26789
The 50 Ah NiH2 CPV qualification tests
p 2272 N95-26792
Unique features of a new nickel-hydrogen 2-cell CPV
p 2272 N95-26793
Hubble Space Telescope nickel-hydrogen battery testing: An update p 2272 N95-26794
Adiabatic charging of nickel-hydrogen batteries
p 2272 N95-26795
A review of nickel hydrogen battery technology
[NASA-TM-106918] p 2167 N95-27177

NICKEL OXIDES
Atomistic study of energy and structure of surfaces in NiO
[DE95-005207] p 2215 N95-27446

NIGHT VISION
An image quality analysis of ANVIS-6 night vision goggles
[AD-A289398] p 2359 N95-26883

NIMBUS 7 SATELLITE
Contingency maneuver strategies for the Total Ozone Mapping Spectrometer-Earth Probe (TOMS-EP)
p 2152 N95-27796
Solar UV flux measurements from the SBUV2 monitor on the NOAA9 satellite. Part 1: Mg II h and k line core-to-wing ratios for 1986-1988
[PB95-181962] p 2464 N95-28007
NIOBIUM
Particle-like absorption spectra in small transition metal clusters
[DE95-007082] p 2218 N95-27752
Femtosecond OPO's at 3 microns and beyond: Design and performance issues related to the crystal properties of KTP and similar materials
[DE95-007286] p 2446 N95-28242
NIOBIUM ALLOYS
FENIX experimental results of large-scale CICC made of bronze-processed Nb3Sn strands
[DE95-007965] p 2222 N95-28167
NITRATE ESTERS
Biodegradation of nitrate esters p 2171 N95-28299
NITRIC ACID
Absorption of sparingly soluble gases by reactive media in self-aerated gas-liquid contactors: A scale-up procedure
[DE95-006429] p 2206 N95-27707
Measurement of high acidity using a renewable-reagent fiber optic sensor
[DE95-006327] p 2425 N95-27734
NITRIC OXIDE
Mechanisms of hypertension after cross-linked hemoglobin blood-substitute transfusion
[AD-A289558] p 2352 N95-26680
High resolution Fourier transform spectroscopy of the first overtone of the N-O stretch in nitrosyl bromide
[AD-A289318] p 2203 N95-27295
Laser ionization of molecular clusters
[DE95-007011] p 2296 N95-27550
Superior catalysts for selective catalytic reduction of nitric oxide
[DE95-007903] p 2205 N95-27691
Absorption of sparingly soluble gases by reactive media in self-aerated gas-liquid contactors: A scale-up procedure
[DE95-006429] p 2206 N95-27707
NITRIDES
Materials Research Society Symposium Proceedings. Volume 339: Diamond, SiC and nitride wide bandgap semiconductors
[AD-A288690] p 2437 N95-26818
First-principles calculations for AlN, GaN, and InN: Bulk and alloy properties
[DE95-006822] p 2219 N95-27958
NITROBENZENES
A novel sensitive detector of atmospheric nitrocompounds based on laser photofragmentation/ionization spectrometry
p 2174 N95-28314
NITROGEN
Hydrogen induced C-C, C-N, and C-S bond activities on Pi and Ni surfaces
[DE95-006251] p 2206 N95-27838
The minimum pore size obtainable in a silica gel during drying
[DE95-008162] p 2239 N95-28401
Cryogenic BRDF measurements at 10.6 micrometers and 0.63 micrometers on contaminated mirrors
[AD-A291611] p 2427 N95-28408
NITROGEN IONS
Plasma source ion implantation of ammonia into electroplated chromium
[DE95-006275] p 2444 N95-28125
NITROGEN OXIDES
High pressure Earth storable rocket technology program: Basic program
[NASA-CR-195449] p 2166 N95-26390
Coupled chemistry/climate issues
[DE95-006443] p 2327 N95-27532
Absorption of sparingly soluble gases by reactive media in self-aerated gas-liquid contactors: A scale-up procedure
[DE95-006429] p 2206 N95-27707
FY 1994 ambient air monitoring report for McMurdo Station, Antarctica
[DE95-008565] p 2331 N95-28149
NITROGEN PLASMA
Plasma source ion implantation of ammonia into electroplated chromium
[DE95-006275] p 2444 N95-28125
NITROGEN TETROXIDE
Development test of a liquid Apogee engine for the ETS-6
[NAL-TR-1250] p 2167 N95-26799
Chemical reactions identified in the Titan 2, Titan 4, and Delta 2 propellant systems and their application to source modeling p 2172 N95-28304
Use of SURFACE CHEMKIN to model multiphase atmospheric chemistry: Application to nitrogen tetroxide spills p 2172 N95-28305
A new method for measuring hypergol scrubber emissions p 2174 N95-28312
NITROGLYCERIN
Biodegradation of nitrate esters p 2171 N95-28299
Radiant exchange considerations in design and scaleup of photocatalytic reactors for purification of nitroglycerine-contaminated air p 2171 N95-28300
NITROMETHANE
A density functional/molecular dynamics study of the structure of liquid nitromethane
[AD-A289224] p 2404 N95-26960
Probe molecule studies: Active species in alcohol synthesis
[DE95-003514] p 2203 N95-27420
NITROSYLS
High resolution Fourier transform spectroscopy of the first overtone of the N-O stretch in nitrosyl bromide
[AD-A289318] p 2203 N95-27295
NITROUS ACID
Absorption of sparingly soluble gases by reactive media in self-aerated gas-liquid contactors: A scale-up procedure
[DE95-006429] p 2206 N95-27707
NITROUS OXIDES
A novel sensitive detector of atmospheric nitrocompounds based on laser photofragmentation/ionization spectrometry
p 2174 N95-28314
NOAA SATELLITES
The design and implementation of the Military Applications of Shiptracks experiment on Space Transportation System - 65
[AD-A288488] p 2160 N95-26634
NOISE INTENSITY
Analysis of filter tuning techniques for sequential orbit determination p 2146 N95-27764
NOISE MEASUREMENT
Attitude determination using an adaptive multiple model filtering Scheme p 2148 N95-27772
NOISE PREDICTION
A numerical study of fundamental shock noise mechanisms
[NASA-TM-110608] p 2401 N95-27908
Measurement and prediction of broadband noise from large horizontal axis wind turbine generators
p 2324 N95-27990
Flow structure generated by perpendicular blade vortex interaction and implications for helicopter noise predictions
[NASA-CR-198590] p 2123 N95-28193
Response of multi-panel assembly to noise from a jet in forward motion
[NASA-CR-198164] p 2289 N95-28673
NOISE PREDICTION (AIRCRAFT)
Aircraft noise prediction program theoretical manual: Rotorcraft System Noise Prediction System (ROTONET), part 4
[NASA-TM-83199-PT-4] p 2400 N95-26392
Supersonic coaxial jet noise predictions
[NASA-TM-106917] p 2401 N95-26801
NOISE PROPAGATION
Very low frequency seismo-acoustic noise below the sea floor (0.2-10 Hz)
[AD-A289164] p 2347 N95-27011
NOISE REDUCTION
Electromagnetic devices and processes in environment protection
[AD-A288656] p 2141 N95-26487
Supersonic coaxial jet noise predictions
[NASA-TM-106917] p 2401 N95-26801
The noise reduction potential of dual-stream coaxial rectangular improperly expanded jet flows
[NASA-CR-197820] p 2277 N95-26995
Reconstruction of an infrared band of meteorological satellite imagery with abductive networks
[SAIC-94/1062] p 2345 N95-27389
Evaluation of a doubly-swept blade tip for rotorcraft noise reduction
[NASA-CR-189677] p 2402 N95-28264
SAR noise reduction through the utilization of robust filters
[INPE-5504-PRE/1787] p 2258 N95-28569
Noise exposure reduction of advanced high-lift systems
[NASA-CR-195077] p 2402 N95-28670
NOISE SPECTRA
Effect of noise on Frequency-Resolved Optical Gating measurements of ultrashort pulses
[DE95-007149] p 2298 N95-27969
Measurement and prediction of broadband noise from large horizontal axis wind turbine generators
p 2324 N95-27990
Observed acoustic and aeroelastic spectral responses of a MOD-2 turbine blade to turbulence excitation
p 2324 N95-27991
NONDESTRUCTIVE TESTS
Synthesis and characterization of polymeric materials
[AD-A288613] p 2225 N95-26482
Nondestructive testing apparatus for determining the orientation of reinforcing bars within a concrete structure
[AD-D017267] p 2245 N95-26508
Characterization of corrosion and development of a breadboard of a D sight aircraft inspection system, phase 1
[AD-A288347] p 2125 N95-26527
Combined investigation of Eddy current and ultrasonic techniques for composite materials NDE
[NASA-TM-110599] p 2306 N95-26778
Assay of weathering effects on protective polymer coatings using positron annihilation spectroscopy
[DE95-007040] p 2236 N95-27962
Physical interpretation and development of ultrasonic nondestructive evaluation techniques applied to the quantitative characterization of textile composite materials
[NASA-CR-198591] p 2306 N95-28034
Non-destructive inter-level dielectric via in-line process monitoring by atomic force microscopy
[DE95-008516] p 2267 N95-28146
AMCC casting development. Volume 1: Executive Summary
[NASA-CR-196597] p 2247 N95-28419
NONEQUILIBRIUM CONDITIONS
Anomalous collision rate in the time counter scheme of the direct simulation Monte Carlo method for rarefied gas flow analysis
[ISAS-R-653] p 2275 N95-26742
NONEQUILIBRIUM FLOW
Viscous shock-layer analysis on hypersonic flow over reentry capsule with nonequilibrium chemistry
[ISAS-R-656] p 2274 N95-26739
NONEQUILIBRIUM RADIATION
Radiation production from stagnating compact toroids employing a nonequilibrium radiation diffusion model
[AD-A289602] p 2429 N95-26720
NONFLAMMABLE MATERIALS
Design considerations in supercritical fluid technology
p 2232 N95-27126
NONLINEAR EQUATIONS
Development of a nonlinear simulation for the McDonnell Douglas F-15 Eagle with a longitudinal TECS control-law
[AD-A288610] p 2128 N95-26481
General purpose finite element solver
[PB95-185062] p 2388 N95-26495
An easy way to analyze longitudinal and lateral-directional trim problems with AEO or OEI
p 2119 N95-26949
Nonlinear problems in fluid dynamics and inverse scattering: Nonlinear waves and inverse scattering
[AD-A289148] p 2278 N95-27001
Nonlinear problems in fluid dynamics and inverse scattering: Langmuir circulations and spiral flows
[AD-A289194] p 2278 N95-27019
Nonlinear stability of non-stationary cross-flow vortices in compressible boundary layers
[NASA-CR-189184] p 2279 N95-27242
A Navier-Stokes boundary element solver
p 2283 N95-27361
Dithering transitions in resistive pressure-gradient-driven turbulence
[DE95-006737] p 2431 N95-27536
An invariant measure for a nonlinear Schroedinger equation
[DE95-610166] p 2391 N95-27714
Using the scalable nonlinear equations solvers package
[DE95-008323] p 2378 N95-28071
NONLINEAR EVOLUTION EQUATIONS
Nonlinear problems in fluid dynamics and inverse scattering: Propagation and capturing of singularities in problems of fluid dynamics and inverse scattering
[AD-A289146] p 2277 N95-26999
NONLINEAR FILTERS
Edge detection by nonlinear dynamics
[DE95-008076] p 2373 N95-28168
NONLINEAR OPTICS
Wake fields in semiconductor plasmas
[DE94-634523] p 2429 N95-26439
Near-resonant properties of nonlinear organic materials for optical devices
[AD-A288339] p 2178 N95-26570
Design, fabrication, modeling, and optical characterization of organic polymer nonlinear directional couplers
[AD-A289327] p 2227 N95-26897

Growth and evaluation of nonlinear optical crystals for laser applications: Lithium borate, barium borate and silver gallium selenide
[AD-A289147] p 2277 N95-27000
Edge detection by nonlinear dynamics
[DE95-008076] p 2373 N95-28168
Vibrational spectroscopy of water interfaces
[DE95-006592] p 2209 N95-28218
Low power limits in ultrashort pulse measurement using Frequency-Resolved Optical Gating
[DE95-007150] p 2299 N95-28219
Ultrashort Pulse retrieval using FROG trace irradiance moments and the adaptive neural networks backpropagation algorithm
[DE95-007153] p 2299 N95-28220
Passive spatial beam control, appendix
[AD-A288913] p 2300 N95-28333
Phase retrieval and time-frequency methods in the measurement of ultrashort laser pulses
[DE95-006499] p 2300 N95-28549
Nonlinear optical studies of surfaces
[DE95-006574] p 2428 N95-28557
Nonlinear dynamics of a coherent polariton-biexciton system
[DE95-609150] p 2417 N95-28607

NONLINEAR SYSTEMS
Analysis and development of finite element methods for the study of nonlinear thermomechanical behavior of structural components
[NASA-CR-195354] p 2307 N95-26387
A class of stabilizing controllers for flexible multibody systems
[NASA-TP-3494] p 2161 N95-26428
Nonlinear dynamics of global atmospheric and earth system processes
[NASA-CR-197926] p 2326 N95-26429
The phenomena of subharmonic bifurcations, runaway, and transition to chaos in a non-linear oscillator: perturbation methods and a numerical experiment
[IFTR-16/1994] p 2398 N95-26518
Stability and thermal influences in nonlinear continuum mechanics and material science
[AD-A288333] p 2448 N95-26563
A gain scheduling optimization method using genetic algorithms
[AD-A289306] p 2381 N95-26920
On the nonlinear stability of the unsteady, viscous flow of an incompressible fluid in a curved pipe
[NASA-CR-195065] p 2278 N95-27028
Nonlinear instability and chaos in plasma wave-wave interactions. I. Introduction
[DE95-005529] p 2429 N95-27084
Vector algorithms for solving 3D nonlinear magnetostatic problems
[DE95-608737] p 2399 N95-27298
Stable adaptive neurocontrollers for spacecraft and space robots p 2384 N95-27385
Linear and nonlinear trending and prediction for AVHRR time series data p 2385 N95-27391
A new finite element formulation for incompressible flow
[DE95-007141] p 2284 N95-27454
An invariant measure for a nonlinear Schroedinger equation
[DE95-610166] p 2391 N95-27714
Using the scalable nonlinear equations solvers package
[DE95-008323] p 2378 N95-28071
Nonlinear dynamics and aeroelasticity of rotorcraft in forward flight
[AD-A291714] p 2136 N95-28504
Non-linear resistive grid kernel estimator useful in single feature, two-class pattern classification
[AD-D017394] p 2271 N95-28614
Non-linear viscoelastic behaviour
[PB95-192811] p 2199 N95-28639

NONLINEARITY
Process control of microstructure in manufacturing
[AD-A288291] p 2245 N95-26410
Nonlinear scalespace via hierarchical statistical modeling
[AD-A289057] p 2394 N95-26478
A new growth technology for highly non-linear, optical quality organic films: Organic vapor phase deposition
[AD-A289006] p 2178 N95-26567
Near-resonant properties of nonlinear organic materials for optical devices
[AD-A288339] p 2178 N95-26570
A state-space model of a large, lightly damped space structure using the Eigensystem realization algorithm
[AD-A289251] p 2163 N95-26970
Characterization of optical polymers for multi-layered electro-optic devices
[AD-A289255] p 2227 N95-26973
Investigation into the behavior of geometrically nonlinear composite arches
[AD-A289258] p 2308 N95-26975
Testing of Uninterruptible Power Supplies with nonlinear loads
[AD-A289353] p 2262 N95-27067
A study of internal damage of metal matrix composites by neutron diffraction
[DE95-005157] p 2182 N95-27080
Nonlinear signal processing schemes for robust target detection in radar
[AD-A288449] p 2255 N95-27185
Micromechanical modeling of damage and inelasticity of composite materials in macroscopic structural analysis
[DE95-003666] p 2182 N95-27421
Integrating the QMR method with first principles material science application code
[DE95-007380] p 2408 N95-27456
Parallel plasma fluid turbulence calculations
[DE95-006741] p 2431 N95-27537
